It is with much satisfaction that we observe that there is a growing manifestion of public interest in that very important subject, the preservation of our forests. One great proof of this is the frequent discussion of this matter recently in the columns of the press, which is a sure index to the direction of public opinion. In this number we give extracts from the *Globe*, *Mail* and other journals, and we might have given many more of a similar character, for we notice one paper after another, without regard to their political colour, calling attention to the threatened extirpation of our forests at no distant period, and to the necessity of husbanding our sylvan wealth.

We particularly invite notice to the article we have quoted from the *Globe*, and more especially to the last portion of it. We can heartily endorse its suggestion of a commission to enquire into the whole subject of forestry, for we believe it would be of the greatest benefit. The Agricultural Commission has collected and published much valuable information in regard to this matter, but much more is required, and the question should be looked at from other points of view. A commission especially appointed for this purpose, might for instance obtain information and report upon the forest regulations and administration of other countries, thus being enabled intelligently to suggest such a modification of them as might be adopted by us with advantage under the special circumstances of this country. We have much to learn in regard to this, and we should not defer taking a lesson from other countries till it is too late.

TRANSPORTATION NOTES.

LUMBER FREIGHTS from East Saginaw, Mich., to Buffalo are expected to open at $3. Saginaw Bay is still frozen solid in every direction as far as the eye can reach.

A SERIOUS break occurred in the Erie canal at Lockport when the two lower locks of the ten combined caved in and became a mass of ruins. It will be some time before the damage is repaired. The ten combined locks were completed on October 26th, 1825, and have long been looked upon as one of the finest pieces of masonry in the State.

THE statement has been made so distinctly that lumber shippers were willing to pay $1.25 for cargoes from Toronto to Oswego, that it was considered there could be no doubt about it. A shipping firm sends a note to the *Globe*, however, stating that the *Jane McLeod* has been chartered to load lumber for Oswego, as soon as she arrives here, at $1.20. The note contained the observation also that $1.25 had not been refused. This may be strictly correct; but it would have been more explicit to have said that $1.25 had not been offered. And, in any event, the statement is from one firm only; which leaves it quite possible that $1.25 has been offered by other parties, which we believe to have been the case. The rate of $150 is certainly far from being assured.

THE Chicago *Tribune* of the 5th has the following observations:—"Considerable enquiry for grain carrying vessels is developing. The shippers in the market do not care to pay over seven cents on corn to Buffalo, and as a rule carriers decline to accept this figure, being impressed with the idea that eight cents will be freely paid before navigation opens through the straits. Agents anticipate a good demand before the 15th inst., when the winter storage ceases. They agree with the owners of vessels that eight cents on corn to Buffalo may be obtained. On Friday Mr. Geddes chartered the Canadian schooner *Manzanilla*, through Messrs. Atkins & Cecdwith, to load with 23,000 bushels of corn for Kingston. The agents decline to make public the rate allowed per bushel, but assure parties enquiring that it is better than has been paid to a Lake Ontario port prior to the opening of navigation for several seasons. They claim also that the freight allowed is better than seven cents to Buffalo. From other sources pointers have been obtained which seem to indicate that the *Manzanilla* gets about 11 cents per bushel."

BASS RIVER, N. B.

THE WEATHER.—Although not exactly accurate in all his predictions, Vennor has in some degree redeemed his credit by giving us on the North Shore a remarkably severe winter, with snows of unusual depth, and much broken weather. The log crop, however, in spite of these drawbacks, will be a fair one, both in quantity and quality.

LOSS OF LIFE.—A number of very serious accidents occurred, one by which Thos. Cail, one of our leading lumber operators, lost his life.

THE DRIVES.—The prospects for brook drives is excellent, and no doubt seems to be felt of the stuff coming down.

OUR LUMBERMEN.—Our leading operators in Kent are as nearly as possible in the following order:—George McLeod, S. & A. Dunn, J. & W. Brent, E. Walker, R. N. Doherty, J. Ford, Cail Bros., T. Curran, H. O'Leary, Thomas Coats, Robinson Bros., Peters Bros., T. & R. Atkinson, and W. Bowser.

THE STUMP ACT, ETC.—Some dissatisfaction is expressed at the way the stumpage tax is collected. It in effect offers a premium to successful fraud. An effort should also be made to stop the destruction of the hemlock now going on.

C. C. C.

March 16th, 1881.

SAINT JOHN, N. B.

STOCK OF LUMBER.—The stock of deals at this port is unusually low. In past years we generally commenced the winter season with a stock of sixty to eighty million superficial feet, whereas at the beginning of the winter just past, only about one-third of that quantity was held. Several cargoes have been shipped during the winter, and when the loading of the ships now in port (as referred to below) shall be completed, the stock will be pretty well exhausted.

WORK IN THE WOODS.—The past winter, upon the whole, has been favorable for lumbering operations, but was cut somewhat short by the uncommonly mild weather throughout the month of March, causing the lakes and streams to break up very early, and therefore shortening the work in the woods several weeks, curtailing the supply of logs to that extent, which will amount to a considerable quantity in the aggregate.

THE STREAMS.—The ice in the river had wasted to such an extent that it was expected to be clear by the 1st of April, but a sudden change in the weather to severe cold for the last ten days has so hardened the ice that it will probably not run out much earlier than the usual time, the latter part of this month. The great waste of snow and ice so early causes some uneasiness regarding the prospects for stream driving, and much will depend upon the rains at the right time as to the quantity of logs that may be brought to market.

FREIGHTS.—We have now in port two ships of over 1,500 tons register each, loading for Liverpool, two loading for other ports in England, and three for Ireland. Freights rule very low; one of the above ships is chartered at 56-3 c.d. for Liverpool, and another at 57-6 c.d. for Bristol Channel.

STANBRIDGE, MISSISQUOI.

THE FORESTS EXHAUSTED.—The lumbering business in this vicinity is fast dying out. I stood by its cradle and should not need to live long to be at its funeral. The extensive pine forests on the shores of Lake Champlain and its tributaries, together with those along the banks of the Yamaska River, disappeared with a rapidity that leaves us nothing but regret. The first and best of this timber went to Quebec for a very low price, the last and poorest to New York. Then began the slaughter of hemlock and spruce, which, I think, we realized more from, than we did from the good pine. Nearly all the lumber we make now is for home use, but fifty miles or so north and east of here, we are told, that along the lines of the new railroads, our "brethren" are doing a smashing business. I say "brethren," for all my working days were spent in this line either as a laborer or proprietor in a small way. From long association with this industry, I have a fellow-feeling for all who are engaged it it. We are not the men who get up "corners" in wheat, coal oil monopolies, nor are we money changers, making nothing for use or luxury, but for all we ask of the public we give a fair equivalent. Every blow the axe-man strikes means some good to mankind, and every plank from the hands of the sawyer, the same. The "shantyman" prefers honest labor to loafing round all winter in idleness or something worse. These is the true ring in every man engaged in our business. The operator, or even his subordinate boss, if need should be, are fit for generals. The management of Starks of Bennington, and Brown of Lundy's Lane, are cases in point.

E. CHANDLE.

RUSSIA.

From recent reports from the interior of the country we gather that, in consequence of the unusual quantity of snow in the forests this winter, it is doubtful whether the entire quantity of timber contracted for by the lumbermen can be prepared. The cutting and sledging of the timber are carried on with great difficulty. The frost continues severe at Cronstadt. The ice is thick and the snow deep, and the opinion of a late opening continues to prevail.—*Timber Trades Journal.*

HAGYARD'S PECTORAL BALSAM; a few doses relieves the most distressing cough, and a twenty-five cent bottle has cured many a sufferer from Asthma, Bronchitis, Croup, Influenza, Hoarseness and Soreness of the Chest. It is the grand specific for all throat and lung complaints leading to consumption.

Trade Notes.

DUTTON.—Mr. Daniel McKee, of Dutton, Elgin Co., Ont., has hardwood logs on hand equal to 400,000 feet for this season's cut.

SIMCOE.—Mr. A. McCall has two steam sawmills in operation this season, and will cut about three million feet of pine and hardwood.

IONA.—Mr. Britton, Iona, County of Elgin, Ont., has leased his mill to Mr. McClandress, who will cut about two million feet of hardwood this summer.

AN exchange says:—Hall & Co's barges of Ogdensburg have contracted to bring lumber to Oswego this season at 90c. a thousand, which is he same as they received last year.

PORT DOVER.—Mr. J. Jackson, of Simcoe, will raft about 7,500,000 of logs to Tonawanda from Port Dover. Mr. Wm. Tisdale, saw log contractor, Normandale, will also raft 60,000 feet of pine and 60,000 feet of oak for Tonawanda.

BUFFALO parties have chartered three boats which will carry 1,750,000 feet of lumber each trip, and these boats will ply all the season between Pequaming, Mich., and Buffalo in the lumber trade. The charter is for $3.87½ per 1,000 feet.

LAKE ST. CLAIR.—On the south side of Lake St. Clair, west of River Ruscon, and east to Stoney Point, there is now ready to be rafted for Detroit, about 3,000,000 feet of elm logs; 300,000 feet basswood logs; 100,000 feet white ash, besides a considerable quantity of square timber. The contractors are Messrs. Berry & Co., Moses W. Field, Salliote & Roup, and B. Hall.

AT Saginaw lumber freights are expected to be much better than last season. There are 250,000,000 feet of lumber on the docks, a large proportion of which is sold. to go forward, and should the season open late there will be a pressure for capacity to meet the requirements of the business. It is thought that freights will not open less than $3.25 to Buffalo.—*Toledo Blade.*

LAKE ERIE.—Large quantities of saw logs and square timber are uow in readiness at different points on Lake Erie to be rafted and shipped. Mr. S. Wigle, of Windsor, Ont., has taken out this winter, and has ready for shipment, 80,000 cubic feet of oak, about 4,000 feet of white wood, and 3,000 ties (equal to three vessel loads) from the County of Essex. In Michigan he has 50,000 feet of oak, and in Ohio 220,000 feet of oak, all to be shipped by vessel to Quebec and Europe. The Ohio oak will be shipped from Toledo.

THE Montreal *Gazette* of April 2nd, says that Oscar Fulton, M.P., of the firm of Fulton & Wyatt, Avonmore, who is now in the city, we hear, has made sale to local manufactures of 700,000 to 800,000 feet of basswood, black ash and soft elm on p.t. The current rates are, however, from $10.50 to $14.50 per thousand feet, f.o.b., at shipping point. Everything points to an extensive trade in lumber of all kinds during the coming season. Americans have been in the field making large purchases for some time past in the different lumbering regions of Canada as the requirements for the States this year it is said will largely exceed those of any former season.

The *Argus* comments as follows on the Albany market:—"We have not any change to note in the tone or the condition of the market for pine, hard, or coarse lumber. The shipments continue free, and the market is somewhat strengthened by the large quantity of lumber sold at Cambridge (Mass.) on Sunday last to the fire insurance companies. The market is more quiet than it was a week or ten days ago on account of the continued cold weather checking building operations, and thus keeping buyers out of market. The shipments of old and new sales are rapidly depleting our stocks, which will be at a very low figure before the canal will be opened for navigation; the opening this year, in consequence of the ungenial weather, will be later than usual, certainly not before May 1st, and it may be delayed to May 10th."

LUMBERMEN will be interested to learn that a new shanty cook-stove, manufactured by Adam Hall, Peterboro', is taking well wherever used.

BUSH FIRES.

THEIR DANGER AND DESTRUCTIVENESS—A SUGGESTIVE SITUATION.

A Kingston correspondent, "Agricola," writes very sensibly to the *Globe* on the subject of bush fires. His sentiments are entertained by many others, and hence the interest which attaches to the publication of his letter. He remarks:

An examination of the files of any paper published in the Province for twenty-five years will show that except in years of extraordinary rainfall the particulars of disastrous bush fires during autumn are given with remarkable yearly regularity; that the same charges of "carelessness" and "negligence" are preferred to account for them; and that year in and year out the one opinion is expressed that something should be done to prevent them. Unless this opinion amounts to a deep-rooted conviction that the destruction of property involved is something enormous, which is really the case, and that something must be done to prevent further havoc, the regular occurrence of autumnal bush fires will but serve to illustrate the law that the direst calamities are endurable if men are accustomed to submit to them.

I estimate the destruction, total at that, of standing timber and fuel—pine, hemlock, cedar, oak, poplar, tamarack, beech, and maple—in the county of Frontenac by bush fires during the past twenty-five years, at 50,000 acres. If now standing this would be worth at least half a million of dollars, and converted into square timber, sawn lumber, bark, ties, and cordwood, would be worth $1,500,000. Frontenac has not been specially visited, Gastings, Addington, North Leeds, Lanark and Renfrew, and more or less the whole of the Laurentian region, so far as settlement extends, have suffered equally in Frontenac. It is within the mark to put the loss to individuals throughout the province at $12,500,000 during the past twenty-five years. I do not take into account the loss to the public from the destruction of timber on the Crown domain.

It is utterly useless to grapple with the causes of this calamity by calling on the Government to inspect, prosecute, fine or imprison. The remedy is the obvious application of the principle that the member of a community is entitled to the protection of his goods and person by that community. Where the means of protection, owing to the defective administration of the law, are inadequate, the commuuity should satisfy the damage done to a member. For example:. The township will not hire night-watches to prevent my sheep being worried by prowling dogs, and if I must hire a night-watch I shall have no profit in sheep farming. I cannot detect the prowlers, but if I have my remedy for the destruction of my sheep against the township it will be my neighbor's interest to see that his tax bill is not made heavier by the possession of a cur. As the law now stands it is no concern of mine—that is, it is not my interest to visit a fire on my neighbor's farm for the purpose of seeing that he uses due precaution to prevent its spread, unless I have reason to apprehend danger to my property. If that danger passes me unhurt it is not within the scope of my duty to visit the fire to see that there is no chance of danger to another, else in a newly settled district I mght find full occupation as a watchman for the community to the neglect of my own affairs. But if the value of the timber on a few hundred acres destroyed by fire were assessed on the township and collected from the ratepayers, there would soon be organized Vigilance Committies of the most efficient kind. There is another direction in which such a method would be useful. The fires caused by cinders from passing locomotives are known to be frequent. If my stables are burnt, and fires runs into my wood lot, it will pay me better to submit to the loss than to engage in a lawsuit with a wealthy corporation, who, not content with injuring me to the extent of $50 or $100 by their neglect to put bonnets on the smoke stacks and to erect wire fences, would drag me to the Supreme Court before they would "give in," and probably take away my farm from me to satisfy their bill of costs. The municipalities could better take up a case of this kind than a private person.

Unless rural communities are incited to action in the way pointed out, just as the inhabitants of the English hundreds were made to see it was their interest to raise a hue and cry against a thief rather than bear a tax for his robbery, it is idle to hope for anything else than the permanent institution of autumnal bush fires.

Freights from Ottawa.

A recent dispatch from Ottawa says that the coming season of navigation, so far as rates are concerned, promises to be for the boat-owners the best which this section of country has seen for years, and forwarders are in correspondingly good spirit. The contracts already made are at good rates and the prospects is that the men not now employed will have all they can do at prices equally good if not better. At the present date it is not possible to tell in many cases what the opening of the season may bring, several transactions being now pending, which may change individual bargains. The carrying capacity of the various forwarders has been considerably enlarged, but the freight to be carried has increased in greater proportions, so that they virtually have matters in their own hands. If they do not become too greedy they will find all they can do as long as the season lasts. There can be no denial of the fact that boating this season promises, to those who understand the work, to be as great a bonanza as it used to be some 10 or 14 years ago. Several contracts have already been made for large shipments between this port and Quebec, New York, White Hall and Burlington. Murphy & Co. have closed for the transportation of a million and a quarter feet.

THAT Marvellous Purifyer BURDOCK BLOOD BITTERS, will speedily change the sallow face to one of freshness, health and beauty. It regulates the Bowels, acts promptly on the Liver and Kidneys and strengthens the system when broken down by nervous and general debility. Ask your druggist for a trial bottle, the cost is only 10 cents. Large bottles $1.00.

THE RUSSELL HOUSE,
OTTAWA.
JAS. A. GOUIN, - - PROPRIETOR.
Is the Favourite Resort of Leading Public men of the Dominion attending the annual Session of Parliament.
Ministers of the Crown, Senators, Members of Parliament, Public Officials, as well as those having business with the various Departments of the Government. It is also the headquarters of those having dealings with the princely Lumber Manufacturers in the Great Pine Valley, of which Ottawa is the acknowledged centre.
THE RUSSEL HOUSE being central, almost abutting on the magnificant PARLIAMENT and DEPARTMENTAL BUILDING—the pride of the Country—is thus conveniently situated for those visiting the City on public business. But the location is also everything that could be desired alike for the man of business and the man of pleasure. A few minutes walk brings the guest of the Hotel within reach, not only of all the principal business resorts, but also of the most splendid Mountain and Valley Scenery that can be seen anywhere, as also of the two almost unrivalled Waterfalls—the Chaudiere and Rideau—and of the extensive Manufacturing Establishments and Depots of the leading Lumberman. But, besides the beautiful scenery, which, it may be mentioned, includes the magnificant Ottawa and two of its grand tributaries—the Rideau and Gatineau—there are in the immediate neighborhood, beautiful Lakes and apparently never-ending woods, which afford opportunities for the finest Fishing and Shooting that can be obtained on the Continent.
THE RUSSELL HOUSE affords excellent accommodation for 300 guests; its table is abundantly supplied with Viands of the choicest description, in season, and nothing is left undone to make every visitor feel comfortably "at home."
Omnibusses meet the Arrival of every Train and Boat. b26

LUMBERING IN THE NOR'-WEST.

We take the following from the report of the Department of the Interior for the year 1880:—

THE TIMBER SUPPLY.

"Although it is, of course, an admitted fact that there are large prairie areas which are but indifferently provided with wood, yet the more the Territories are explored, the more apparent does it become that the timber supply is not so limited as was at one time supposed, that properly husbanded it is sufficient for all practical requirements, that within a reasonable distance of the treeless plains there is plenty of building and fencing timber which can be procured at no very great cost, when the the means of internal communication have been improved, and that on the north slope of the valley of the Saskatchewan River there are, easily accessible to the lumberer, continuous forests of fir timber, for the manufacture and transportation of the products of which that river and its tributaries afford facilities.

"The demand for manufactured timber has increased very greatly in Manitoba and the settled portions of the Territories, and within the past two years a sub-branch of the Dominion Lands Office has been organized, under the supervision of which the forests on the public domain have been protected from the systematic plunder from which they previously suffered, and have become the source of a large and rapidly growing revenue."

THE SAWMILLS.

The following statement shows the names of owners of all the sawmills in Keewatin, Manitoba and North-west Territory, and where situated, kind of power, capacity per 12 hours, when erected, kind of timber cut, and kind of lumber manufactured:—

KEEWATIN.

Adams & Schneider, Pine Falls, Winnipeg River. Water power. Capacity 10,000 feet. Erected 1879. Spruce—Lumber, shingles and lath.

Walkley & Burrows, Mouth of Winnipeg River. Steam power. Capacity 6,000 feet. Erected 1878. Spruce—Lumber and lath.

Shore & Co., Big Black Island, Lake Winnipeg. Steam power. Capacity 8,000 feet. Erected 1876. Spruce—Lumber and lath.

Brouse, Stevens & Co., Bad Throat River. Water power. Capacity 10,000 feet. Erected 1879. Spruce—Lumber and shingles.

Dick & Banning, Whole River (moved from Sandy Bar Creek). Steam power. Capacity 6,000 feet. Erected 1879. Spruce—Lumber.

Brown & Rutherford, Moose Island, Lake Winnipeg. Steam power. Capacity 10,000 feet. Erected 1880. Spruce—Lumber.

Keewatin Lumbering & Manufacturing Co., Keewatin Mills, Winnipeg River. Water power. Capacity 120,000 feet. Erected 1880. Red and white pine—Lumber, shingles and lath.

Smart & Co., Hawk Lake, Keewatin. Steam power. Erected 1880. White pine—Shingles.

Joseph Whitehead, Whitemouth River, C.P. R. Steam power. Capacity 8,000 feet. Erected 1880. Spruce and tamarac—Lumber. Removed from St. Boniface.

S. H. Fowler, Fort Francis. Steam power.

MAITOBA.

W. J. M. Pratt, Totogon. Steam power. Capacity 10,000 feet. Erected 1879. Spruce—Lumber, shingles and lath.

W. P. Smith, Portage la Prairie. Steam power. Capacity 7,000 feet. Erected 1879. Poplar and oak—Lumber.

A. A. Taylor, High Bluff. Steam power. Capacity 10,000 feet. Erected 1874. Poplar and oak—Lumber and shingles.

Hon. C. P. Brown, Gladstone. Steam power. Capacity 5,000 feet. Erected 1875. Spruce—Lumber.

Wesley Smith, Section 33, Township 14, Range 11, West. Steam power. Capacity 5,000 feet. Erected 1880. Oak—Lumber and shingles.

David Bryce, Little White Mud River. Water power. Capacity 5,000 feet. Erected 1879. Poplar—Lumber.

John Moonie, Squirrel Creek. Steam power. Capacity 2,000 feet. Erected 1879. Poplar—Lumber.

Belmont & Co., Nelsonville. Steam power. Capacity 6,000 feet. Erected 1879. Oak and poplar—Lumber, and flour mill.

Nelson & Sons, Mountain City. Steam power. Capacity 4,000 feet. Erected 1879. Oak and poplar—Lumber, and flour mill.

D. Kilgour, Lizard Lake. Steam power. Capacity 2,000 feet. Erected 1878. Oak and poplar—Lumber.

J. Preston, Preston. Steam power. Lumber.

Hon. James McKay Estate. Point du Chene. Steam power. Capacity 6,000 feet. Erected 1876. Spruce and poplar—Lumber and flour mill.

Dick & Banning, Winnipeg. Steam power. Capacity 10,000 feet. Erected 1872. Oak—Scantling and building material, planing mill.

Brown & Rutherford, Winnipeg. Steam power. Capacity 10,000 feet. Erected 1872. All kinds—Scantling and planing mill.

Jarvis & Berrige, Winnipeg. Steam power. Capacity 25,000 feet. Erected 1872. Pine—Lumber and lath, and planing mill.

Daniel E. Sprague, Winnipeg. Steam power. Capacity 7,000 feet. Erected 1880. Pine—Lumber.

Josiah Cohoe, Section 19, Township 7, Range 7, East. Steam power. Capacity 2,000 feet. Erected 1880. Spruce—Lumber.

Abraham Frieser, Stinbach. Steam power. Capacity 4,000 feet. Erected 1879. Spruce and poplar—Lumber.

Peter Tows, Section 22, Township 7, Range 6, East. Steam power. Capacity 1,500 feet. Erected 1880. Spruce and tamarac—Lumber, (portable.)

NORTH-WEST TERRITORY.

Robert McIntosh, Rapid City. Steam power. Capacity 7,500 feet. Erected 1879. Spruce—Lumber and shingles.

George Balkwell, Township 13, Range 19, West. Water power. Capacity 2,000 feet. Erected 1878. Poplar—Lumber and flour mill.

Alexander Cameron, Rolling River, Township 16, Range 18, West. Water power. Capacity 6,000 feet. Erected 1878. Spruce and poplar—Lumber.

D. W. Cummings & Co., Bird Tail Creek, Birtle. Steam power. Capacity 6,000 feet. Erected 1880. Spruce—Lumber and shingles.

Donald Gunn & Bro., Bird Tail Creek, Birtle. Water power. Capacity 2,000 feet. Erected 1880. Spruce—Lumber.

E. Roberts, Little Saskatchewan, Big Bend. Steam power. Capacity 6,000 feet. Erected 1880. Spruce—Lumber and shingles; building flour mill and planing.

Armitage & McCulloch, Little Saskatchewan, Minnedosa. Steam power. Capacity 6,000 feet. Erected 1880. Spruce—Lumber and shingles; flour mill.

Hon. Hudson's Bay Co., Riding Mountain House. Steam power. Capacity 3,000 feet. Erected 1880. Spruce—Lumber; building flour mill.

Mitchell, Byers & Co., Section 23, Township 10, Range 16, West. Steam power. Capacity 3,000 feet. Erected 1880. Spruce and tamarac—Lumber.

W. McKay, Section 23, Township 10, Range 15, West. Steam power. Capacity 3,000 feet. Spruce—Lumber.

R. H. Little, Littleton. Steam power. Capacity 4 to 5,000 feet. Poplar, spruce and tamarac—Lumber; building flour mill.

R. Z. Rogers, Millford. Steam power. Capacity 5,000 feet. Erected 1880. Spruce—Lumber; building flour mill.

Stobart, Eden & Co., Duck Lake, North-west Territory. Steam power. Capacity 5,000 feet. Erected 1880. Pine, small—Lumber and shingles; flour mill (portable.)

Captain Moore, Prince Albert, North-west Territory. Steam power. Capacity 10,000 feet. Erected 1875. Spruce—Lumber and shingles; flour mill.

Hudson's Bay Co., Edmonton, North-west Territory. Steam power. Capacity 10,000 feet. Erected 1880. Spruce—Lumber and shingles.

Morris, McLeod & Belcher, Two miles east of Edmonton, N.W.T. Steam power. Capacity 10,000 feet. Spruce—Lumber, shingles and lath; flour mill.

Government Mill, Sixty miles west of Edmonton, N.W.T. Steam power. Idle.

Williams & Harrison, Section 29, Township 1, Range 18, West. Steam power. Capacity 5,000 feet. Erected 1880. Poplar—Lumber.

D. McFayden, Odanah. Steam power. Capacity 5,000 feet. Erected 1880. Spruce—Lumber and shingles; planing mill.

A NEW HEATER.

The latest apparatus for heating purposes is the invention of Prof. Webster Wells, Professor of Mathematics in the Massachusetts Institute of Technology:—

The principle of this machine is friction, and the simplicity of construction and adaptability to every place where waste power can be utilized are remarkable. It consists only of an iron cylinder, 2 feet long and 1 foot in diameter, having a fixed plate of hardened iron in one end, and a second plate, attached to a revolving shaft, which presses lightly or closely upon the fixed plate, as circumstances require. The cylinder is filled with water, the shaft revolves, and from the friction of the plates the water in an incredibly short time is heated, and by means of steam pipes can be carried to great distances for heating purposes.

The construction of the machine is such that it is easily adapted to every place where there is waste power, as in mills, factories, public buildings, and cars. In fact, in every place where any power is used the machine can be applied, since the power required for its operation is so slight as to be of almost no account. Thus, to carry a machine with 36 square inches of friction plates—the ordinary size—one-half horse power only is required; while a machine with 225 square inches of friction surface will require at most but four horse power, and will heat a room 60x200, or 126,000 cubic feet. In steam cars the machine is easily and cheaply adjusted to the axles, the power being taken directly from the wheels, so that in case of accident, such as started the train of thought which resulted in this invention, all danger from fire is entirely eliminated.

This machine has already been in practical operation for some months, and has demonstrated that with 36 inches of friction surface a room of 10,000 cubic feet can be heated more uniformly and quicker than by the use of coal, wood, or steam, and without expense save the wear of the friction plactes and the cost of extra coal under the boiler.—*American Engineer.*

THE STAMPAGE TAX.

The Newcastle *Advocate*, which improperly calls Mr. George McLeod's letter a "rabid" one, says in defence of the conduct of the Surveyor General:—

"It is well known that as a rule lumber operators are very much opposed to the payment of the stumpage tax, looking upon it as a grievance, and that to further their own interests they sometimes form a 'ring' to keep down the prices of the lands bid in by them. Even though Mr. McLeod's charges are true, (which we shall not believe until they are substantiated in the proper quarter), we ask if it is right for a number of men to combine to lessen the value of our Provincial lands—our best source of revenue—would it be looked upon as wrong for those interested in the welfare of the Province—those charged with the duty of administering its affairs—to step in and break up such a combination?"

This does not meet, explain, or deny Mr. McLeod's most damaging statement against the Surveyor General's honor, to the effect that he (the S.G.) told McLeod that some parties had applied for his land and that he forgot their names, when it appeared as a matter of fact that there was no such application. Further than this when the Government put their own upset price on the land it is a most dangerous thing for them to bid on the land themselves over and above that price.—*St. John, N.B., Globe.*

The Ottawa District.

The Hull *Despatch* speaking of the lumber trade, estimates the cut of logs in the Ottawa district at 12,000,000, or an increase of 33⅓ per cent. on last year's operations. The cut of square timber last year was only 2,000,000 feet, but this year it will probably be 12,000,000. Raftsmen are very scarce this spring and some difficulty will be experienced in getting a sufficient number for the drives.

IMPROVED DRYING KILN.

A cheap and economical apparatus for drying lumber, staves, and other material, has been long needed, and a great deal of time and money has been expended in experiments in this direction without corresponding results. Messrs E. & B. Holmes have perfected a dry kiln which seems to combine all the necessary requisites for a successful drying apparatus.

This dry kiln is composed of several sections, more or less as desired. In the bottom of each of these sections are placed two sets of steam coils of novel construcfion, one above the other, for radiating the heat, and on the side of each section is a thin apartment containing condensing pipes filled with cold water, supplied by a pump or otherwise.

The air in the bottom of the kiln, being heated by the steam coils, passes up through the material to be dried, to the top of the kiln, carrying the moisture with it. Here it enters the thin condensing apartment and passes down, leaving the moisture upon the condensing pipes, and, being cooled, again passes downward under and through the steam coils, where it is reheated, when it again rises up through the material, and so on. In this manner a very rapid circulation is secured, which carries the moisture from the material to be dried and deposits it upon the condensing pipes, from which it runs into a conductor and passes out of the kiln, the same air being used over and over.

Car tracks pass through the kiln, and extend far enough in each direction outside of the kiln to allow of loading, drying, and unloading at the same time. In this way the kiln is kept open long enough to pass one car out and another in, and as only one section is opened, the others are not affected or cooled by it.

The doors of the kilns are made double thickness with an air space between, and are swung on cranes, so that one person can handle them with ease.—*Scientific American.*

A SINGULAR CASE.

From the Woodstock *Times* we learn that a rather singular case was before the Police Court in that place on Tuesday, 29th March. John Dobbyn, of the Township of Euphemia, in the County of Lambton, who is an extensive lumber dealer, preferred a charge against John W. Adams, of Ingersoll, alleging that he had stolen three car loads of lumber. A warrant was issued and placed in the hands of Constable Hall, with instructions to hunt down his man, which he succeeded in doing before daylight the next morning in Ingersoll. The examinations showed that at a conversation between prosecutor and prisoner, the latter was to meet Mr. Dobbyn at Thamesville, in the County of Kent, to cull over three car loads of lumber, which he was to buy for James Stark, of Ingersoll, representing himself as Mr. Stark's agent. At the time appointed, the parties met, but the cars did not come. They separated with the understanding that as soon as prisoner could get cars he would telegraph to Mr. Dobbyn to meet him again, when they would cull, measure and load the lumber. Some days after Mr. Dobbyn accidentally learned that prisoner had been there without letting him know, and had taken away three car loads of his lumber. Upon further inquiry he found that prisoner had shipped the lumber to his own order, and on tracing the matter up he found that two car loads had been sold to one Hays, of Ingersoll. The prisoner was committed to Chatham jail to await his trial for larceny.

Birch for Cabinet Work.

The small value of birch wood for fuel, and its lack of toughness and strength, except in the smaller twigs, have led to its general neglect in the arts. Our more enterprising builders of railway cars, however, have discovered that its light weight, close grain, and rich finish make it admirably suited for certain applications where fine finish and bright effects are desired. The contrasts presented when white birch and light colored ash are relieved by the red of the cherry birch, are said to be peculiar but very pleasing.

THE growing trade in Maryland in the shipment of ivy and swamp-briar roots to the northern cities, where they are made into pipes, whip and cane handles and poor knobs.

Chips.

A MATCH FACTORY has been established in Gridley, Cal., with a capacity of 1,000,000 matches daily.

THREE black bears were killed on March 14, at Sargent & Pendleton's, Beaver Creek, Wis., camp, one of which weighed 400.

A GENTLEMAN of Pensacola, Fla., has patented a timber crib designed to prevent loss from the breaking asunder of timber rafts.

LESS timber than was expected reached Beaumont, Texas, on the recent rise in the river. The mills now have about a four months' stock on hand.

IT is said that the late Lord Seafield planted no fewer than sixty millions of trees on his estates in the counties of Elgin, Banff, and Inverness during his tenure of them.

THE Duluth *News* says that the mills that are now running in that vicinity are so busy that timber for the new Northern Pacific docks is being hewed instead of sawed.

SKIDDING has been so difficult in some of the Michigan pineries, that gangs that before have skidded 100 logs or more per day, this season have been able to skid but from 25 to 30.

The mills of Stillwater, Minn., and its vicinity expect to cut 132,000,000 feet of lumber this season. The general quality of their stock of logs is said to be above the average of four or five years past.

IT has not been an unusual thing for the mills on the Penobscot River, Me., to be idle for want of logs until the spring drive got down. This year the mills have a good stock of old logs, and will get an early start.

OPERATORS in the woods of St. Joseph's Island, Canada, during the past winter, got out 91,000 cedar railway ties, 45,000 cedar posts, 11,000 telegraph poles, 40,000 tamarack ties, besides large quantities of pine and hardwood.

ROBERT BOGART, of Pittston, felled a tree the other day which was about eight inches in diameter. Hanging to a limb about thirty feet from the ground he found a very old fashioned gun, stocked full length, and which, it is supposed, grew up with the tree.

THE Montreal *Witness* says:—Passenger traffic on the Grand Trunk is now very heavy. It is said that it is now carrying more lumbermen from Michigan to Canada than ever before in its history. The camps are breaking up and the men are returning to their homes.

ALL the log driving on Muskoka rivers will this year be under the control of the Muskoka Slide, Dam and Boom Co., and it is expected that the logs will be passed through with more despatch than heretofore and not obstruct steamboat traffic to the extent they have in the past.

THE business in timber at Hamilton will be something enormous this spring. Several rafting shanties are being erected and binding poles in thousands are piled along the G.W.R. docks. Some of the timber there at present is pronounced the finest that has ever been laid there for rafting purposes.

MR. D. B. CHARLESON, of Sarnia, who is one of the heaviest lumber dealers in Western Canada, has had delivered at Brigden station, on the Canada Southern, for shipment east, 70,000 feet of square timber and a large number of staves. It will require 250 cars to convey all this material to its destination.

THE lumber and forest products transported on the railways of Minnesota in 1880 amounted, in weight, to 710,863 tons, and if reduced to feet, at three pounds to the foot, would be 177,516,000 feet. The St. Paul, Minneapolis & Manitoba road carried a greater amount than any other one.

A CHOPPER, James Melville, employed on the Menominee river, Mich., lodged a tree that scaled 4,500 feet on another tree 20 feet away, tied his axe to his waist and climbed the tree to the height of 80 feet, where, standing between two limbs he cleared the obstruction away.

THE St. Thomas correspondent of the London *Free Press* says that a large quantity of timber is being forwarded from this section, at present, and to such an extent has the business reached this season that two timber trains are constantly working on the Air Line Railway, both east and west of this city. A large force of men is employed, an average of twenty cars *per diem* being loaded by each train.

A PARCEL of 2,000 doors, which were sent to London from Canada via Boston for the Canadian timber company, were disposed of readily; the quality being reported as very satisfactory. Another lot was expected in a few days and a large business in the doors is expected during the forthcoming season.

A GREAT deal of work for Manitoba is being done in the factories in Hamilton. The firm of Robin & Sadler is exhibiting here a unique specimen of their belt manufacture, which they have made for a sawmill of the Hudson Bay Company. It is claimed to be the first belt made in Canada in one solid piece in the breadth throughout. Owing to its uniformity of strain and greater durability, it ensures freedom from accidents. It is thirty-six inches wide by 88½ feet long, and required in its manufacture fifty selected hides.

THE Goderich *Star* says that Mr. Joseph Kidd bought at Georgian Bay, a few days ago, 3,000,000 feet of pine logs, ready to be boomed and brought down as soon as navigation opens. He has also about 1,000,000 of hemlock, elm and basswood, up along the shore. These he intends bringing down by his new boat, the *Josephine Kidd*. He is about to have the telegraph wire extended to his office at the works, as soon as the frost is out of the ground. It will be of the greatest convenience, since his son commands the electric key.

THE Grand Traverse *Herald* says: There has been an unwonted activity in the cedar market this winter. This is a timber that has hardly had a "market" yet, but the near future will open up one for it. Cedar timber is to-day, at the prices at which it can be bought, the best investment to be had in the timber line. Northern Michigan has a mine of wealth in its low lands covered with this, now seemingly worthless, timber. Lumbermen and manufacturers are already directing their attention to this matter.

A RECENT despatch from Albany, N.Y., says: "A large amount of lumber has left the yards during the week, employing all the boats and barges that have arrived there. A steady demand has been realized, and still continues. The yards begin to show the effect of the shipments when no arrivals by canal fill the vacant spaces. There is still a fair amount of nearly all kinds for sale, without any change from the opening prices, but the probability is that the yards will be nearly bare before receipts by canal will again give new stock and assortment."

THE *Indian Agriculturist* states that Messrs. Shaw, Finlayson & Co., of Calcutta, are desirous of starting a sawmill in the Upper Dehing Forest, and the Planters's Stores Company are going to establish one also in the same locality. Sir Steuart Bayley says of these:—"The establishment of sawmills, two of which it is hoped will very shortly be opened in Upper Assam, should create a demand for timber suitable for tea boxes, and thus replace with indigenous produce, to the profit of the province, the present expensive and circuitous method of importing teak planks for the purpose from Burmah. Scarcity of local labor, not want of good wood for tea boxes, is the sole explanation of the latter, and the mills, if judiciously worked, should do a good business."

THE Farwell *Register* says: There was unloaded at this place last week a new logging railroad engine for Norris & Uhl, of Grand Rapids, to be used on the new logging railroad about 15 miles north of this place. This engine was placed on runners and was drawn by four span of horses up the Ionia and Houghton Lake State road to the Gerrish railroad, and from thence again on runners to Norway Lake, T. 18 N. of R. 5 W., where the new road commences and runs to the Muskegon river, a distance of three miles. Norris & Uhl, as agents for the Warren estate, have about 45,000,000 feet of logs to put in in the vicinity of Norway Lake. The logs are put in to the lake, and from thence hauled by the engine to the Muskegon river.

THE *Lumberman's Gazette* says:—One and a half million feet of logs for the lumber manufacturers of the eastern shore of Michigan to begin work on when the cutting season opens, is about the outlook. By which it is not meant they will all be in the booms, but the log crop, all told, from the Straits to the Saginaws, will amount to about that sum. The crop will not be a cheaply got in one, for not only have wages been higher, but the labor of hauling has been increased, especially toward the latter part of the season, since there began to be so much snow. The addition to the cost of getting in the logs is estimated all the way from 10 to 25 per cent. The new cut of lumber ought, therefore to bring more than the old, but there will be no advance unless the market warrants it.

MAINE'S LUMBER TRADE.

The logging season will come to a close next week. A Penobscot lumberman says there are still two and a half feet of snow in some parts of the woods, but the brooks are rising rapidly and overflowing the roads, driving the loggers out. About two-thirds of the West Branch operators are out and the rest are coming. The cut on the Penobscot and tributaries will be about 140,000,000. Orders are moderately plenty, and it is expected that the demand will soon be large. Freights are fair; we notice one charter to Boston at $1.60 per M. on lumber and $2.50 per M. on bricks. Considerable short lumber has been shipped to Boston by rail this winter, but now the natural channel is open and brisk times are looked for soon. The lumber mills on the Penobscot are starting up. The 20,000,000 of logs now on hand on the river will suffice to keep them busy until the new logs arrive. The large boom on the "Saco" about a mile up the river, will soon be filling up with about 15.000,000 feet of logs cut during the winter. Of this amount 12,000,000 feet comes to Joseph Hobson of Biddeford.—*St. John Globe, March 28,*

THE SONG OF THE SAW.

BY J. W. FITZMAURICE.

A song, a song for the millman's saw,
That whirls with endless din,
Bringing work and wealth to the sons of toil
With its busy whirl and spin.
Though others may boast of the loom or plough,
We value them not a straw,
For our daily strife in the battle of life
Is fought by the millman's saw.

It gives no theme for the poet's dream,
Nor story nor song does it mean;
But the pioneer's saw in the foremost rank
Of the world's grand march is seen.
The forests so brown, at its whirl go down,
And cities spring up where they fell;
While work well done, and wealth well won,
Is the record it loves to tell.

So a song for the saw, the millman's boast,
Our emblem honest and good;
We sing to the din of its noisy spin,
Our lay as workers in wood;
The slaves of the lamp, the forge or the mine,
Must follow wherever we draw,
For ours still is the place, to be first in the race,
That is won by the whirl of the saw.

Why Ice Breaks Down Trees.

A gentleman recently had his curiosity aroused while the trees were covered thickly with ice, as to the relative weight of the ice and the wood it surrounded. So he cut off a limb, and found it weighed two and three-quarter pounds; after the ice was melted it weighed two ounces. Two hours later another trial was made; at first the limb weighed four and a half pounds; after the ice was removed it weighed three ounces. Another trial showed a weight of thirty-two pounds, while the limb alone weighed two pounds, making thirty-two pounds of ice.

Deserves Success.

THE CANADA LUMBERMAN has become the property of Messrs. Toker & Co., publishers of the REVIEW at Peterborough. Its typographic appearance and general make-up is a great improvement on what it was previously, while the information it contains is of much interest to all in the lumber trade as well as commercial men generally, being devoted to trade matters. The LUMBERMAN is made up in pamphlet form, 16 pages, and will be published semi-monthly at $2 per annum. It deserves success.—*Ottawa Free Press.*

Queen's Hotel,

BRACEBRIDGE.

JOHN HIGGINS, Proprietor. The proprietor (late of Georgetown,) having lately purchased the above hotel,) will endeavor to make it one of the best houses in the District of Muskoka. Tourists and hunting parties will receive every possible attention. Free 'bus to and from steamboat wharf. Terms, $1 per day. b20

Fraser's Hotel,

GRAVENHURST, ONT.

HENRY FRASER, proprietor, (successor to Dougland Brown.) Mr. Fraser having purchased and thoroughly renovated and refitted that old established hotel, so long and popularly kept and owned by Dougland Brown, in the Village of Gravenhurst, is now in a position to attend to the wants of the travelling and general public. Parties *en route* to the Muskoka District, will find "Fraser's" a comfortable stopping place. The Bar and Larder are well furnished. Convenient Sample Rooms for Commercial Men. Good stabling and attentive hostler. Free 'bus to and from trains and steamboats, b26

Market Reports.

OFFICE OF THE CANADA LUMBERMAN,
PETERBOROUGH, April 12, 1881.

Although the spring movement has hardly begun yet, owing to the lateness of the season, the demand from the United States is good and most shippers have large orders to fill. The stock of last season's cut is rapidly disappearing in the chief centres of trade, so that those who held their lumber over are likely to realize good prices for every board they hold.

Chicago.

CHICAGO, March 30, 1881.—While the weather during the past week has been an improvement on that which has prevailed for several weeks previous, it has not brought the much needed relief in the melting of snow and the clearing away of obstructions to the successful prosecution of business. The country which is dependent upon Chicago for its lumber supply, is yet too much loaded with snow to enable the railroads to freely transport, or the yard dealers to handle, the stocks which the country demands, and as a result, while orders are reported in large volume, the railroads are unable to supply sufficient cars for the transportation of the ordered product. This seems just now the greatest drawback to trade, and we hear many dealers complaining loudly of their inability to fill orders on this account. Fears are expressed that customers will get impatient and recall their orders in many cases, although as the evil is one which is general rather than local, it is difficult to see how customers can better their condition by exhibiting an undue degree of impatience.

We hear no one venture to express a hope that the first cargo will, this year, put in an appearance before the middle of April, and few look for any arrivals before May 1, and it is hardly probable that navigation will be fully open before the middle of that month. This will have the effect to shorten up the season materially. Stocks are daily reducing, and many dealers are already anxious to obtain supplies. Prices are reported well maintained under the present list, but we hear of no suggestions looking to any further advance at present. —*North West Lumberman.*

Glasgow.

It will be observed from the import list that our market continues to be well supplied with pitch pine, about 3,000 loads having arrived at Clyde ports during the past week. This wood has rapidly grown into favor, being clean and of large dimensions. It is now indispensable for our ship-building, etc.

AUCTION SALE.

On the 15th inst., at Glasgow, Messrs. Singleton, Dunn & Co., brokers :—

Miramichi yellow pine deals (mixed qualities)—

9 to 21 ft.	19/21×3	1s. 4d. p. c. ft

Liverpool Timber Sales.

On Wednesday last Messrs. James Smith & Co. held their auction sale. There was a numerous attendance, both at the sale and at the luncheon which preceded it, but the majority of actual buyers were local merchants, only a few country dealers being in the list. The goods offered consisted of one cargo of Savannah pitch pine hewn timber and deals, one cargo of Pensacola sawn pitch pine timber and and deals, and one cargo of Miramichi spruce deals ; also to be sold without reserve a cargo of Bay Verte spruce deals, 320 pieces Quebec 2nd quality pine deals, 3,000 Halifax spruce deals, 297 logs of Quebec oak, and sundry other goods.

The hewn pitch was offered first, but did not meet with much demand, and only about 70 logs out of 168 were sold at from 16d. to 19d. per ft.; but the planks, 1,500 pieces, were withdrawn. The cargo of Pensacola sawn pitch pine timber, averaging 31 ft. cube, was all sold as follows :—

20 to 45 ft. 14 to 18 in. deep,	17½d. per ft.
19 " 43 " 14 " 17 "	17½d. "
24 " 46 " 12½ to 13½ "	15½d. to 16d. "
40 ft. and upwards, 12 in. and under,	16d. "
All under 40 ft. 12 "	15d. to 15½d. "
Pitch pine planks, chiefly 4×9 to 12,	15d. "
" " 3×11 to 13,	14d. "
" " 3×9 & 10,	13½d. "

The Richibucto spruce deals sold as follows :

		£.	s.	d.		£.	s.	d.
15 to 24 ft.	3×11	7	7	6				
12 " 14 "	3×11	6	17	6

Wrought Iron Shanty Cook Stoves

The Best Article ever offered to the Trade.

I have much pleasure in drawing attention to my **WROUGHT IRON COOKING STOVE, for Shanty, Hotel and Boarding House use.** These Stoves are made of **Heavy Sheet Iron,** the top and lining of the fire-box being of **Heauy Cast Metal** and all the connecting parts of substantial **Wrought Iron Work.** The dimensions of these Stoves are as follows :—

SINGLE OVEN STOVE

Top surface contains six 10-inch holes, with ample room between, and one oven 16 x 24 x 26.

DOUBLE OVEN STOVE

The Double Oven has a top surface containing twelve 10-inch pot holes, with two ovens, each 16 x 24 x 26. One fire-box of suitable size for area to be heated. Below will be found Testimonials from some of the leading Lumbermen, who have used my Wrought Iron Cook Stoves since I commenced manufacturing them. They are the names of gentlemen who are well known and reliable, and will carry more weight than any recommendation of my own could do.

The Best Stove I have ever Used.

PETERBOROUGH, May 31, 1880.

ADAM HALL, Esq., Peterborough. Dear Sir,—I have used your Wrought Iron Cooking Stove in our lumbering operations since its introduction here, and have no hesitation in saying that I prefer it to any other. For durability, economy and efficiency, where a large number of men are employed, it is the best stove I have ever used. You can, with confidence, offer it to hotels, boarding houses and lumbermen.

Yours truly, THOS. GEO. HAZLITT.

The Stove for Lumbermen.

PETERBOROUGH, June 1st, 1880.

ADAM HALL, Esq., Peterborough. My Dear Sir,—We have used your Wrought Iron Cooking Stove and find it is very satisfactory for lumber operations, especially so on drives. We can recommend it highly.

Yours truly, IRWIN & BOYD,

Gives the Greatest Satisfaction.

PETERBOROUGH, June 3rd, 1880.

A. HALL, Peterborough. Dear Sir,—I have had the Wrought Iron Cook Stove, purchased from you, in constant use ever since last fall, and it gives the greatest satisfaction in every respect. I can recommend them highly to any one who is in the lumber business. Very truly yours, GEO. HILLIARD, M.P.

b15 WINDSOR, ONT

THE GENUINE SILVER-STEEL,

Lance Tooth

CROSS-CUT SAW!

It stands without a rival, and is the fastest cutting saw in the world. It has beaten the best Canadian and American made saws 33⅓ per cent in every contest. Its superiority consists of its excellent temper. It is tempered under the secret Chemical Process, which toughens and refines the steel. It gives a finer and keener cutting edge, and will hold it twice as long as any other process. We have the sole right for this process for the Dominion of Canada.

None genuine that are not like the above cut, with registered trade mark with the word "The Lance," and Maple Leaf with our name. Price $1 per foot.

CAUTION.—Beware of Counterfeits. There are inferior counterfeits on the market, which are intended to be sold at a high price upon the reputation of this saw. We will send to any address a saw exactly like any counterfeit, warranted equal in quality or no sale, at 60c. per foot. Therefore do not be humbugged into paying a first-class price for a second-class saw. A fact to bear in mind is that if the material and temper are not of the very best quality the shape of the teeth amounts nothing. A saw, like a knive, will not cut fast without it will hold a keen, cutting edge. We have cut off a 14-inch sound basswood log in eight seconds with this saw. Manufactured only by

WITH THE TOMLINSON

(PATENT)

BARREL MACHINE

One man and two boys can turn out

One Hundred and Fifty First-class Flour Barrels in Ten Hours,

made from veneered wood of two thicknesses. The inside is one solid sheet of veneer running around the barrel, making in reality one hoop from top to bottom, and in the outside thickness the grain is reversed, running up and down, finished with five hoops two inches wide, reversed again, making the barrel almost three thicknesses, which gives the package superior strength, tightness and durability over the ordinary hand-made flour barrels, yet with all its many advantages cost less than the old style of package. My barrel machine is arranged to make all sized packages from a large barrel down to small nail kegs, butter packages and cheese boxes. I am open to prove at any time the superior strength of my barrel. That one will stand more hardship by any actual test than one hundred of the old ordinary flour barrels. M. Covel's Latest Improved Automatic Saw Sharpener!

Is the Most Perfect Machine that has ever been Introduced into Mills for that purpose.

CIRCULAR SAW STEAM FEED!

I would also call special attention to my

Heavy Circular Saw Mills

and for STEAM MILLS, would recommend the Steam Feed, having put in several which are giving the best of satisfaction, as will be seen by the following testimonials:—

GRAVENHURST, August 20th, 1880.

WM. HAMILTON, ESQ., Peterborough.

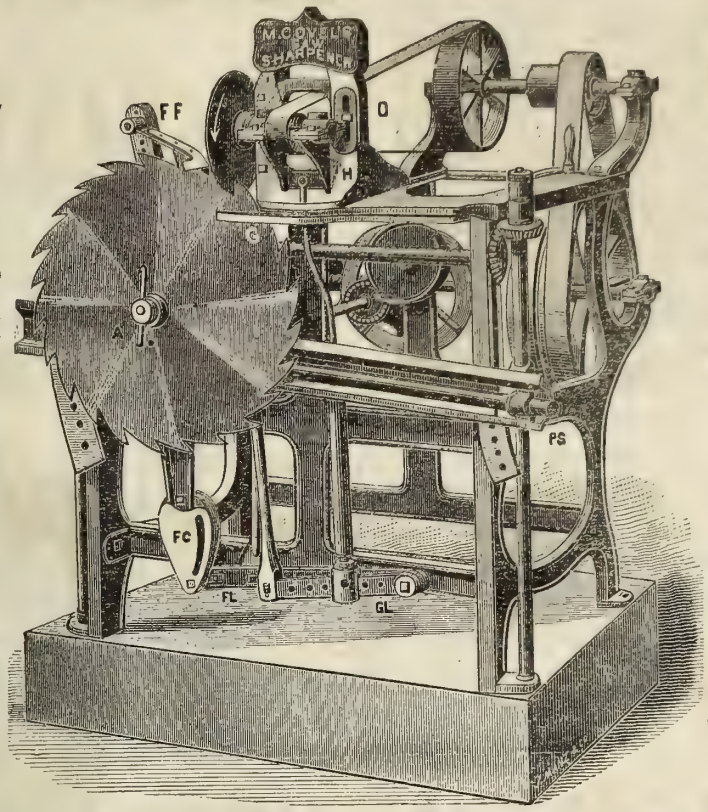
DEAR SIR—I have used your Steam Feed for near four months, and it has given me perfect satisfaction in every way; it is admitted by every person who has seen it work to be the best feed ever invented. Since I put it into my mill, I have not lost ten minutes time fixing anything belonging to it. I can cut 18 boards 13 ft. long in one minute. It can do much smoother and better work than the pinion feed. It is easily governed and reverses the carriages instantly. I am thoroughly satisfied with it and can recommend it to any person who has a Circular Saw Mill for cutting long or short logs. I consider I have cut more lumber than will pay for the Steam Feed since I got it than I would have cut had I not put it in.

Yours respectfully,
WILLIAM TAIT,
Lumberman, Gravenhurst.

TORONTO, August 11th, 1880.

WM. HAMILTON, Peterborough, Ont.

DEAR SIR—The Steam Feed you put in is working splendidly. Yours, &c.,
THOMPSON, SMITH & SON.

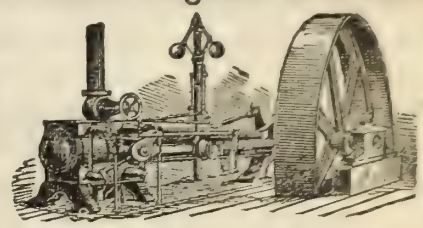


MILL MACHINERY!

I am also manufacturing Saw Mill Machinery, for all sizes of Gang or Circular Mills, Span or Double Circulars for Slabbing Small Logs. My Patent Jack Chain for drawing logs into Saw Mills, acknowledged by all to be the Cheapest and best ever got up; also, my Patent Lumber Markers, different sizes of Edgers, Gang Lath Mills, Trimmers, Power Gummers, and all Machinery used in a first class Gang or Circular Saw Mill; also, small Hand Gummers for use in the woods, for Cross-cut Saws. Rotary Pumps of different sizes, for Fire Protection in Mills, &c.

Horizontal Engines and Boilers

CORLISS ENGINES



Where economy of fuel is the great consideration, along with uniformity of speed, such as is required in Grist and Flouring Mills, Woollen and Cotton Factories, or large Factories of any kind, I supply the Corliss Engine. I feel justified in saying that our Style, Workmanship and Finish on this Engine will be no discredit to its renown, and certainly is not equalled in this country for economy of fuel. I have them working at 2½ pounds of coal per horse-power per hour. L10

TO DEALERS & CONSUMERS.

STOCK OLEVINE, Equals Castor Oil, and Warranted not to Gum.

STOCK OLEVINE, Equals Castor Oil, and Warranted not to Gum.

It will give the subscriber much pleasure to forward, post free, to any address, on application, a pamphlet, containing instruction and information that have been found of the greatest practical use to dealers and consumers of machinery oil in Canada. It contains the fullest information as to the different kinds of oils, their qualities and uses, thus enabling the consumer to make choice of the very oil best adapted to his wants, and also enables the merchant to select the kinds most likely to be in demand in his neighborhood. The pamphlet shows conclusively that oils properly manufactured from petroleum, are vastly superior to any *animal* or *vegetable* oil. I am now making the same qualities of "Extra" and "XX" oils I manufactured from 1870 to 1873. They are *guaranteed not to thicken with extreme cold*, and warranted to give satisfaction in every particular. Beware of Agents soliciting your orders without my trade-marked order-book.

Only Medal for Parlor Organ..Industrial Ex., 1879
And Gold Medal.....at Sydney Australia, 1880

The Bell Organ Manufactory is the Largest and Oldest in the British Empire, and the fact that we have sold nearly 15,000 proves that they are the best in the market. ☞We guarantee all our Organs for five years. Correspondence invited. Illustrated Catalogue mailed free.

W. BELL & CO.

b16 **41 to 47 East Market Square, GUELPH, ONT.**

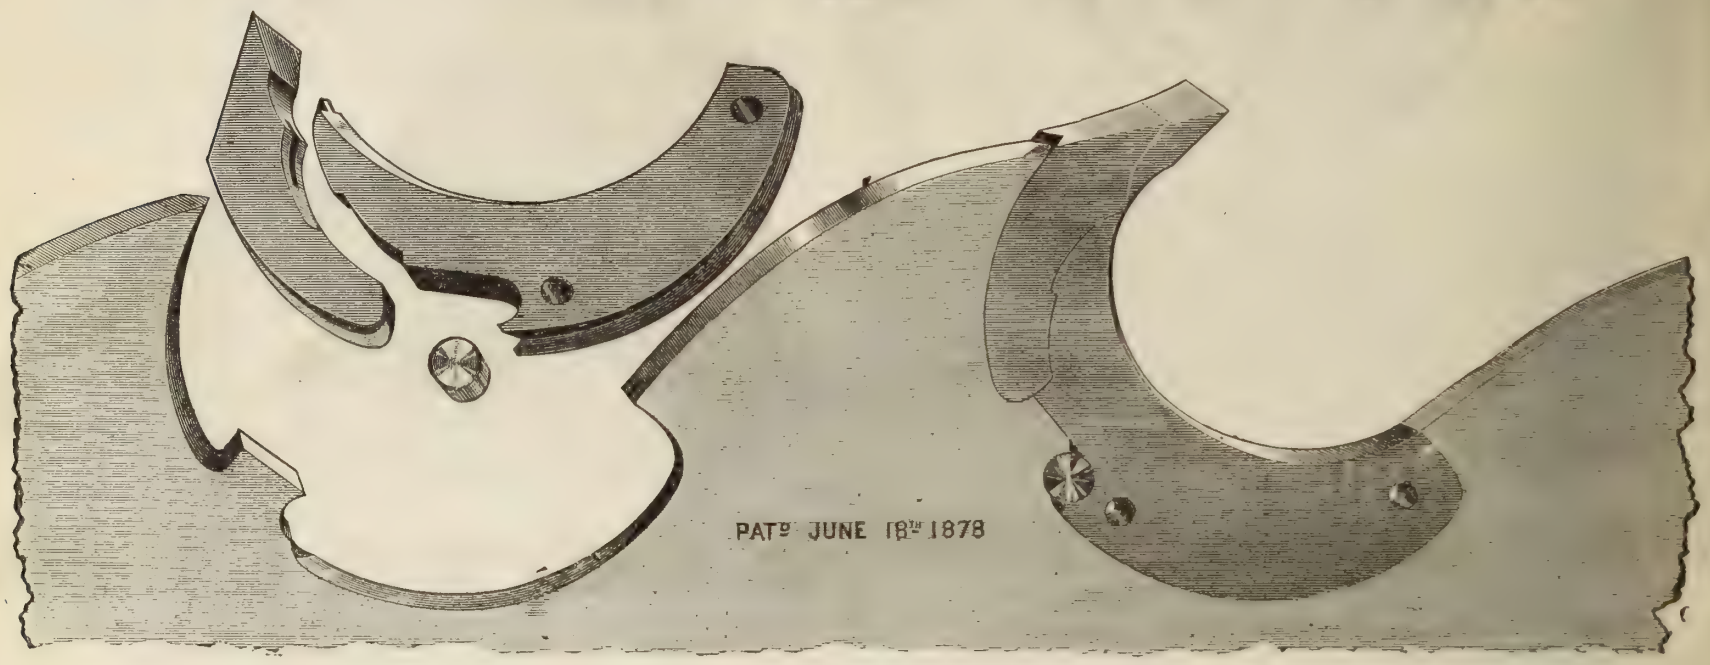
AMERICAN SAW COMPANY, TRENTON, N. J.

MANUFACTURERS OF

Every Variety of Circular, Mill and Gang Saws

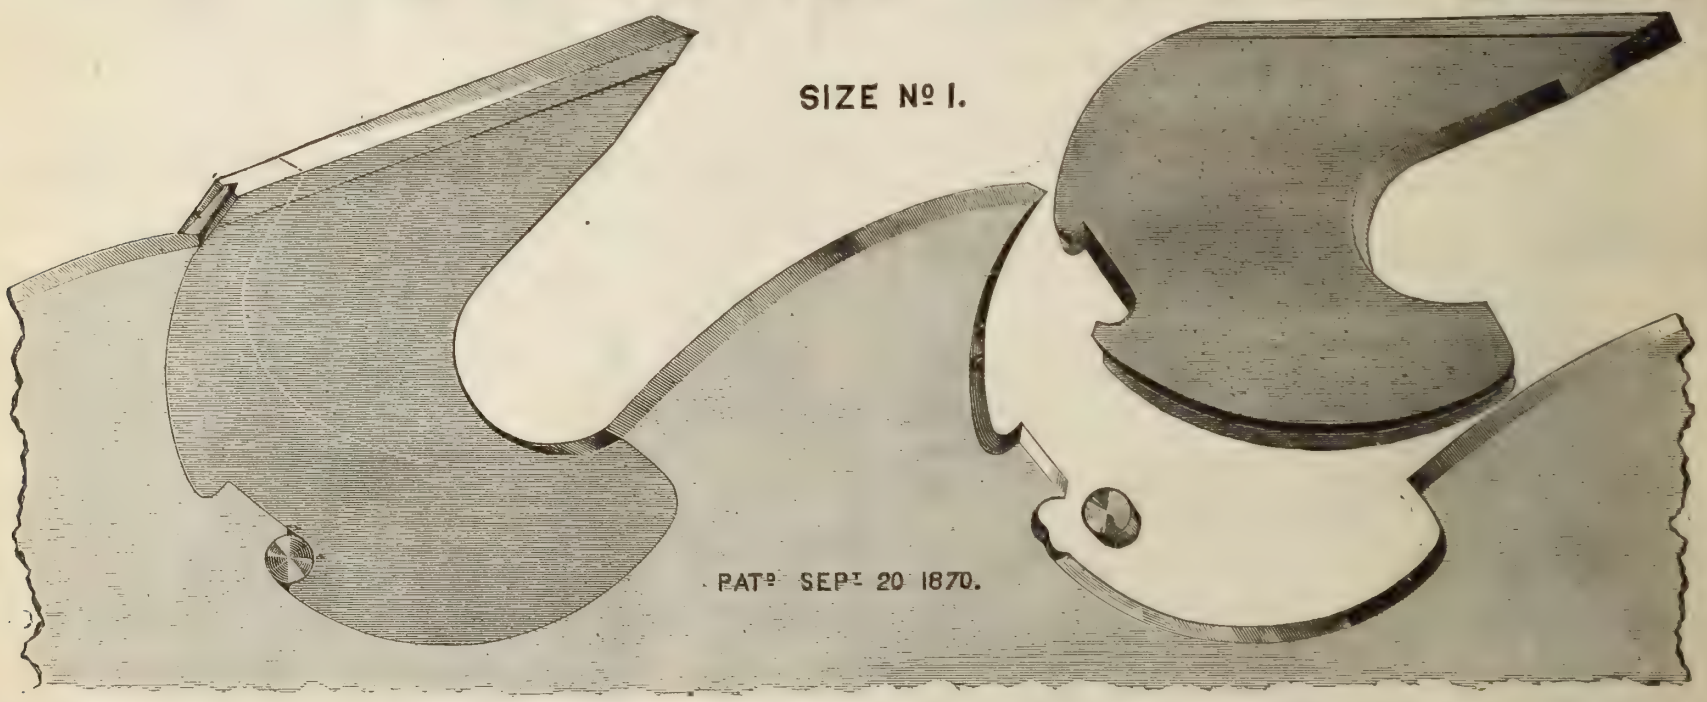
EXCLUSIVE MANUFACTURERS OF

THE "BROOKE BIT" SAW



AND

THE "TRENTON TOOTH" SAW.



The BROOKE BIT will cut more and better Lumber at Less Cost than any other Tooth. The TRENTON TOOTH is Warranted to stand in frozen timber. The BROOKE BIT and the TRENTON TOOTH fit in the same socket, enabling the Sawer to use either Tooth.

FORESTRY AND ABORICULTURE.

BEING THE FOURTH CHAPTER OF THE REPORT OF THE ONTARIO AGRICULTURAL COMMISSION.

Tree Planting—Ages and Dimensions of Trees.

Hitherto, the observations made have applied more particularly to the case of persons owning timbered lands of lesser or greater extent, and to whom the economical handling and management of their bush is of very great importance. The subject of tree planting will next receive some attention. It is probable that not a few farmers neglect the work of planting forest trees from the notion that their growth will be so tardy as to make the outlay of time and a little money worthless to them in their day and generation. The idea of handing down a fine estate to their sons is not so constantly present to the minds of Canadian farmers as to those of men in older countries, and a craving to achieve—even at some loss—immediate returns, is one of the weaknesses of the times. But it is possible to show not only that very speedy benefits of a practical nature may be conferred by tree planting on the soil itself, but also that, in actual money receipts, the investment will in a few years be a paying one. Horace Greeley has some very excellent advice to give under this head, and it may not be out of place to quote his utterances here. Greeley was, it will be seen, an advocate for the gradual substitution of new woodland plantations for the old forests—a very wise policy in most cases when carefully carried out. His first remarks are in that direction. He says:—

"I have said that I believe in cutting trees as well as in planting them. I have not said, and do not mean to say, that I believe in cutting everything clean as you go. That was once proper. It is still advisable in forest-covered regions, where the sun must be let in before crops can be grown; but in nine cases out of ten, timber should be thinned or culled out rather than cut off; and for every tree taken away at least two should be planted or set out.

"Why do not farmers infer readily, and generally, that growing indifferent timber where the best and most valued would grow as rapidly, is a stupid and costly blunder? It seems to me that whoever has attained the convictions that apple trees should be grafted, ought to know that it is wasteful to grow red oak, beech, white maple, and alder, where oak, hickory, locust, and white pine might be grown with equal facility, in equal luxuriance, provided the right seeds were planted, and a little pains taken to keep down for a year or two the shoots spontaneously sent up by the wrong ones.

"North of the Potomac and east of the Ohio, and, I presume in limited districts elsewhere, rocky, sterile woodlands, costing $2 to $50 per acre according to location, etc., are to day the cheapest property to be bought in the United States, even though nothing were done with them, but keep out fire and cattle, and, let the young trees grow, as they will. Money can be more profitably and safely invested in lands covered by young timber, than in anything else. The parent who would invest a few thousands for the benefit of his children, or grandchildren, still young, may buy woodlands which will be worth twenty times their present cost within the next twenty years. But better even than this would it be to buy up rocky, craggy, naked hillsides and eminences, which have been pastured to death, and shutting out cattle inflexibly, scratch these over with plough, mattock, hoe, or pick, as circumstances shall dictate; plant them thickly with chestnut, walnut, hickory, white oak, and the seeds of locust and white pine."

He then meets the difficuly above suggested. He says:—

"Many farmers are averse to planting timber, because they think nothing can be realized therefrom, for the next twenty or thirty years, which is as long as they expect to live. But this is a grave miscalculation. Let us suppose a rocky, hilly, pasture lot of ten or twenty acres, rudely scratched over as I have suggested, and thickly seeded with hickory nuts and white oak acorns only; within five years it will yield abundantly of hop-poles, though the better, more promising half be left to nature, as they should be; two years later, another and larger crop of hop-poles may be cut, still sparing the best; and, henceforth, a valuable crop of timber may be taken from that land; for, if cut at a proper season, at least two thrifty sprouts will start from every stump; and, so that wood will yield a clear income each year, while its best trees are steadily growing and maturing. I do not advise restriction to those two species of timber; but I insist that a young plantation of forest trees may and should yield a clear income in every year after its fourth."

In the Report of Dr. Hough, already referred to, and from which the quotation from Mr. Greeley is made, is a statement bearing upon the same subject, made by Mr. O. B. Galusha, in the course of a lecture delivered at the Industrial University of Illinois, in 1869. Mr. Galusha snys:—

"Let us estimate the expense of raising a growth of ten acres planted with white ash and black walnut, five acres of each. These varieties grow at about the same rate, and are about equally valuable for lumber.

"A good way is to plant in rows eleven feet apart, running north and south, and three feet eight inches (in the marks for corn). This will secure straight trees, being closer, and they may be thinned out to eleven feet each way when large enough to use for grape-stakes, bean or hop-poles. This will give 300 trees per acre, or 3,000 trees in all, allowing for some vacancies, though in all cases of tree planting, whether in groves or screens, a supply of good plants grown elsewhere should always be in readiness to use in filling vacancies, which should be done at the end of the first year.

"The preparation of the ten acres at $5 per acre would be $50. Average cost of seed, 50 cents per acre, $5. Planting, $25. The cultivation during the first five years will be paid for in the crops grown between rows. For cultivation from fifth to ninth years (four years), with horses only, $30 per year, $120. After this time no cultivation or care will be needed. This makes the entire cost, in seed and labor, of the ten acres of trees, $200. These trees will at twenty-five years of age, average sixteen inches in diameter at the ground, and about ten inches at the height of sixteen feet. This will give, deducting waste in sawing, 120 feet of lumber per tree. Allowing one-sixth for damage by the elements and loss from other causes, we have in round numbers, 360,000 feet of lumber, which, at $50 per thousand would amount to $18,000. The value of the tree tops for fuel would be equal to the cost of preparing the logs for the mill, and the expense in sawing would not exceed $5 per thousand. This, added to the cost of producing the trees, and the amount deducted from the value of the lumber, leaves $16,000 for the use of ten acres of land for twenty-five years and the interest upon the amount expended in planting and cultivating the trees. This statement may be deemed incredible perhaps, by those who have not previously turned their attention to the subject; but after much study and many years observation and measurements of growths of different varieties of trees, I am convinced that in all well-conducted experiments in growing artificial groves upon our large prairies, the profits will not fall far, if at all, short of the rates above stated."

As the owner of a large farm and other landed property, Senator Allan has taken a deep interest in this particular question. He has been able to fix with considerable certainty the exact age of several varieties of forest trees, and gives the results in the letter already referred to. What the size and quality of the tree may have been, and how far it would have been marketable at earlier stakes of its growth may be inferred from its measurements at maturity. The Senator says:—

"In enumerating the trees which I consider desirable for planting, I have named only those which could generally be obtained without any great difficulty or expense, in almost any part of Ontario, and I shall now give some data, which will show what growth these trees will attain within a specified time, taken from memoranda kept by myself, or which have come into my possession, and for the accuracy of which I am prepared to vouch.

"Elm trees taken from the woods as young trees of about 6 inches round the stem, and between 8 and 9 feet high, have attained, in forty-five years, a height and girth round the stem at 3 feet from the bottom, in several instances as follows: One 60 feet high, 8 feet in circumference at 3 feet from the ground: one 65 feet high, 8 feet 2 inches in circumference at 3 feet from the ground; one 60 feet high, 7 feet 9 inches in circumference at 3 feet from the ground. Another elm planted about fifty years ago, a small tree from the nursery gardens, has now grown to height of 70 feet, with a girth at 3 feet from the ground of 8 feet 6 inches.

"A red oak, planted as a sapling about forty-eight years ago, is now nearly 50 feet high, and measures 5 feet 8 inches round the stem at 4 feet from the ground.

"A maple of the same age, is 6 feet 5 inches round the stem, and nearly 60 feet high, and two others planted within the same period, are 6 feet in girth at four feet from the ground, and between 50 and 55 feet high.

"All three of these were, when planted in their present position, young trees about 6 or 7 feet high—just the size at which they can be most safely transplanted when taken from the woods.

"Of beech I have no record that I can entirely depend upon, but I believe one that I measured, which gave nearly 4 feet as the girth at about the same height from the ground, and was about 38 feet high, has been planted over forty years.

"A butternut between forty-seven and forty-eight years old, measured 6 feet round the stem (4 feet from the grouod), and has attained a height of 75 feet.

"Of two ash trees planted fifty years ago, on is 60 feet high, with a girth of 6 feet 5 inches; the other about 55 feet high, girth a little over 6 feet (3 feet from ground).

"It will be seen from this memorandum that the elm has made the most rapid growth of all these trees, and the maples come next; although the ash is close upon them.

"Of evergreens (native), I can only give with certainty the white pine. Two of these—both planted fifty years ago—have reached, one a height of nearly 70 feet; the other a little over 60 feet. One measures 6 feet 6 inches: the other a little over 5 feet, at four feet from the ground.

"It will be seen, therefore, that, within an averge of fifty years, trees transplanted at just such a size as they can be safely and conveni ently taken up when growing in the woods (say from 5 to 6, 8, or 10 feet high) have attained dimensions, which render them very valuable as firewood, as well as being perfectly sufficient for many useful purposes about a farm for which timber of a moderate size is suitable and requisite.

"I do not think that, with such facts as these, it can be said that there is anything visionary or impracticable in the means I have suggested for meeting the coming scarcity o timber in Ontario, and supplying the wants which will soon make themselves felt, even by

the present generation of farmers, and will certainly press heavily upon their children, if not provided for in some way or other."

On this very interesting subject, other witnesses before the Commission also gave evidence.

An indication of the periods at which hickory and walnut will be of marketable value may be obtained from remarks made by Mr. Beadle. He says :—

"Hickory trees might be planted quite close together, say three or four feet apart, with a view of thinning them out after they get as large around as a man's arm, because wood of that size would be valuable for many purposes. Black walnut would require to be planted farther apart, because they would be of no use until they were about as large around as a man's leg. Besides it is rather umbrageous in its style of growth, while the hickory is upright."

Mr. Beall, of Lindsay, has experimented with the black walnut. These trees, in fourteen years *from the seed*, have attained a growth of some eighteen to twenty-one inches in circumference, are twenty feet high, and have borne nuts for five years. He says :—

"I would consider black walnut the most valuable of all trees for forest planting. I know it will grow and succeed in this district. I do not know of any person who has grown it or attempted to do so but myself. I have about fifty very fine trees. I have some that will measure from six to seven inches in diameter, and are about twenty feet high. I have grown them from nuts planted in 1866. I know of no tree that will grow so easily, so rapidly and with so little trouble. The trees I mention are bearing nuts now, and I think I observed nuts on them five years ago."

Mr. Leslie says of the American elm and European larch :—

"The American elm, and European larch, would also be suitable for this purpose. The latter makes the best railway ties of any wood in the world, as it is almost indestructable. It is a very rapid grower, and in ten or twelve years' time the wood is of merchantable proportions, and useful for many purposes. Of course it would not be fit for railway ties by that time, but suitable for manufacturing purposes."

Of the butternut and hickory, he says :—

"The butternut is a very fine tree, and a quick grower, a little more rapid in its growth than the black walnut, and is useful in many ways. It makes capital wood for veneering. The hickory is hardy as far north as Peterborough, but is a slow grower, though it can be used for many purposes when three-quarters of an inch or an inch in diameter."

Mr. Caldwell, M.P.P., says on this subject:

"I would plant elm, maple, ash, and basswood, all fast growing trees, mingled with spruce and cedar as evergreens, as well as pine. I think an elm would be forty to fifty years in attaining to ten or twelve inches in diameter. The soil would have some effect on the growth, but I do not think that either ash, maple or basswood would grow much faster than the elm. A maple eight inches in diameter might be tapped for sugar; I think it would then be twenty-five to thirty years old. I have not experience enough to speak positively on that point. Lombardy poplars twenty-two years old, measured by me, are from six feet to eight feet four inches in circumference."

Mr. Henry Ives, quoted by Dr. Hough, gives, in the spring of 1876, his experience in a communication to the New York Farmer' Club. He says :—

"Five or six years ago, I planted two acres with four-year-old seedlings of white elm and soft maple into forest rows sixteen feet apart, and three feet apart in the row. Now the best of them are twenty feet high and twelve inches in circumference, and for thinning out the rows. I sell trees for more money than wheat would have brought grown for these years, and can continue to sell so until they are so large that I can take them for firewood, and I am growing a good crop of orchard grass between the rows. So that these trees in forest timber are paying as well, and are likely to pay as well for years to come, as any other acres on the farm. I am cutting now the second crop of wood, where the first or original timber was taken off about twenty-five years ago, and last winter 1,000 rails were taken by a neighbor from one-third of an acre of growth, besides a quantity of timber from the top, and timber not making rails. Another neighbor used nice black walnut lumber in building a fine farm-house, sawed from the trees he had helped to plant when a boy."

The value of the white ash has been specially noticed. In a paper, published in the Transactions of the Northern Illinois Horticultural Society, it is shown that, in a ten-acre plantation, raised from seed, at the end of twelve years, with good culture for the first four years, and proper soil, the grove would have 12,000 trees on the ten acres, averaging eight inches in diameter.

THE AUSTRALIAN TRADE.

Messrs. Gemmell, Tuckett & Co., of Melbourne, report under date of February 15th, as follows :

We have to report a steady demand during the month for most descriptions of building materials. The amount of business carried through at auction and privately has equalled our anticipations; and prices realized support late quotations.

Canadian Wood—The cargo ex Republic was placed at auction on the 11th inst. Spruce deals realized an average of about 3 7-16d. per foot of 9x3; clear pine 2 inches, £17 12s. 6d., and 12x1, £14 per M. super.; 6x$\frac{7}{8}$ spruce t. and g. flooring, 8s. 3d. per 100 feet lineal, being an advance on recent rates. The cargo ex Undaunted, from St. John's was offered at auction on the 4th inst. Prices not being equal to vendor's limits, the bulk was withdrawn.

Messrs. C. S. Ross & Co., of Melbourne, also report as follows :

Spruce Deals—Imports—Canada and United States, 50,027 pieces; United Kingdom, 5,219 pieces. The principal arrivals have been the Veritas, from London; Republic, from Saguenay, and Undaunted from St. John. The Undaunted arrived via. Adelaide, and it is inexplicable (in face of the bulk of the cargo ex R. B. Fuller having been sold in December last at an average of 3$\frac{3}{8}$d. per foot. 9x3), why her cargo was not discharged in that port. The offerings for the past four weeks have been parcels of 4,000, ex Veritas, which being held far above market, resulted in sale of 600 pieces only; cargo ex Undaunted resulting in sale of 1,800 boards, at from 4d. to 3$\frac{1}{2}$d., and 8,922 battens, at from 3 1-16d. to 3d. per foot, 9x3; and all the spruce deals and boards in the Republic at from 3$\frac{3}{4}$d. to 3$\frac{1}{2}$d. per foot, 9x3. The imports for seven months foot up 119,729 pieces, 30,000 pieces more than has been landed here during any year for past seven, and 600,000 pieces more than the annual consumption.

A NEW DEPARTURE IN THE TIMBER TRADE.

The Ottawa correspondent of the *Globe* writing on April 18th, says that there has been no rain in this section for six weeks. The water in the Ottawa and its tributaries is in consequence very low, and there is felt to be considerable doubt as to the logs and timber cut during the winter being got down. Arrangements have been made by the Scotch Lumber Company with the Canada Central and Occidental Railway Companies for the shipment of their entire winter's cut of square timber on the Temiscamingue from Mackay's Station to Quebec, a distance of 475 miles. It is stated that the rate of freight agreed upon is five cents per foot Special trains will mauage the service, as there will be some twelve hundred car loads in all. Business on the railway lines named will thus continue to boom right along. This shipment of square timber by rail from the limits through to Quebec marks a new era in the trade.

OTTAWA.

Mills at Work.—Gilmour & Company's steam mills commenced work on Monday afternoon. They give employment to several hundred hands.

Navigation Opened.—The Lower Ottawa Navigation Company's passenger steamers commenced their regular trips on Monday last.

Shipping.—Lumber shipping has commenced in real earnest.

Busy in the Yards.—The Chaudiere yards are all bustle and excitement.

THE U. S. TIMBER CENSUS.

Chicago, April 16.—Since the announcement that the census will report only 81,650,000,000 feet of standing pine in the three States of Michigan, Wisconsin and Minnesota, the log cut of this season becomes a question of much interest. Admitting the correctness of the Government figures, a simple calculation shows that the lumber industry of those States at its present volume will extend over a period of only twelve years. Take into account the natural increase and the years will be reduced to ten. Such calculations would be more interesting had not Maine many years ago been set down as a State whose forests in a few years would be cut away; yet to-day she is as much of a pine tree State as ever, and is producing as much lumber as she ever did, though of an inferior quality. Still more interesting would the calculations be were it not that the figures were made largely by pine land owners, who are not likely to take the "bear" side of the question when their own interests are at stake.—*N. Y. Tribune.*

WESTERN ONTARIO TIMBER.

The Ailsa Craig correspondent of the London *Free Press* says :—Large numbers of men are now at work rafting, and will find full work all summer. The quantity of timber got out in Western Ontario the past winter is the largest for 20 years, and the prices paid the highest during that period. Many supposed that the supply of timber was exhausted, but it would seem that there was a large reserve. Many farmers who have been holding for fancy prices for a long time parted with their trees this season. The railways will have a busy time moving the accumulations at the several depots.

Elm, oak, cherry, pine, ash, beech, walnut and birdeye maple are the varieties of timber got out this season. Elm is scarce, also ash. Walnut is fairly exhausted. Holders of pine are obliged to part with it, as the old trees are dying. Another season like the last will certainly finish the timber business in Western Ontario. It will be almost impossible to repeat the transactions of the past winter.

Two Thousand Dollars.

The easiest, cheapest and best way to secure the above amount is to apply for membership in the Mutual Benefit Association of Rochester, N.Y. Pay Dr. S. B. Pollard, 56 Bay Street, one dollar for four medical examinations, he will send your application to the head office, if you are accepted as a member they will issue a certificate of membership, which, on payment of eight dollars, entitles you to full benefits as a member, should you die to-morrow, next day, next week, next month, or any time within three months, this Association will pay to your heirs, or assigns, the sum of two thousand dollars. At the expiration of the three months all you have to do is to pay your pro rata amount, which is from 20 to 75 cents on the death of some other member, who has done nothing worse than to die during the three months just past. By paying your assessments on deaths, you keep your certificate alive, and at the commencement of the second year you are assessed two dollars per thousand to keep up office expenses, etc., for the next year. No easier, surer or better schemes to carry two thousand dollars has ever been devised than the Mutual Benefit Associates, of Rochester, N.Y.
5-l-13

Messrs. R. Collart & Co., of Liverpool, say that the stock of yellow pine timber is about double that held at the same time last year, but the deliveries from the yard have been on a fair scale; sales have been by retail only. The consumption of red pine has increased, but the stock held is excessive. For oak there has been less inquiry, and the consumption compares unfavorably with the very large consumption of the corresponding month last year, but the stock is not heavy; there are no sales to report. Elm and ash have been in fair request during the month. The stock of Quebec pine deals consists of 10,088 standards, against 4,033 standards at the same time last year; the consumption has been small, and prices are barely maintained. Birch is heavy in stock, but the consumption during the month has been on an increased scale.

LUMBERING IN NEW BRUNSWICK.

A correspondent of the Montreal *Herald*, writing from Newcastle, sends a report of the lumber operations in the Miramichi district for the present season. He estimates the amount cut this year on the north-west and south-west branches and the Lower Miramichi at 112,000,000 feet of lumber—13,000,000 feet less than the estimate already published. He states that quite a large percentage of the quantity credited to the south-west Miramichi was cut last season but "hung up" by the lowness of the fall freshet, and should, therefore, not be included in the estimate. The most of Mr. William Richard's drive was "hung up," and other lumbermen had more or less logs left in the streams. The quantity of logs cut on the south-west branch this year our correspondent places at 52,000,000, which is 8,000,000 or so more than was cut in the winter of 1879-80. On the north-west he thinks 17,500,000 feet of spruce was cut —or 2,500,000 more than the previous year's harvest. On the main Miramichi he places the the quantity at 25,000,000—which would be an increase of 5,000,000 feet.

FOREST FIRES.

Ottawa, April 25.—Bush fires have started in this vicinity.

Boston, Mass., April 25.—Forest fires are raging in Woonsocket. Cumberland, and the adjoining townships.

Woonsocket, R. I., April 25.—Extensive forest fires are raging along the Providence and Worcester road near the towns of Woodstock, Cumberland and Lincoln, and hundreds of acres have been burned over. The damage will be heavy.

Middleton, N.J., April 25.—Forest fires have broken out in numerous places in this vicinity.

Milford, Pa., April 25.—Large forest fires are raging in Sussex county, N.J. Fires are reported in the back townships of Pike county doing considerable damage.

Little Rock, April 25.—A family named Dement camping on the mountains in Stone county were surrounded by forest fires, and a woman and two children perished. Dement was badly burned in endeavouring to rescu them.

New Brunswick Items.

Messrs. Hayford & Stetson have made extensive improvements in their, in a very large furnace, also a new boiler, making eight in all. The furnace will consume sawdust and other refuse. Their engine has been thoroughly overhauled, and the building generally repaired. They expect to cut about 12,000,000 feet this year. Much of their logs is now in the Fredericton booms and will be rafted as soon as possible. They start sawing some time next week.

Randolph & Baker's mill has been sawing steadily since March 30th.

The steam saw mill at Barnesville, K. C. which was owned by Samuel Currie, was burned to the ground on the 8th of April. A considerable quantity of lumber was also destroyed, The mill had only started the day previous, and the loss will be a severe one to Mr. Currie, who had no insurance. The mill and contents were valued at about $2,000.

Doing the Work Well.

The Canada Lumberman has come into new hands and we are glad to see that it is doing well the work which it proposes to itself, and for which there is ample room in the Dominion. Messrs. Toker & Co., of Peterborough, are the new proprietors of the paper.—*Canadian Illustrated News.*

They all do it.—Everybody uses "Teaberry" for the teeth and breath, the newest, brightest, cosiest little toilet gem extant. Try a 5 cent sample.

Dyspepsia.—Strenthen your digestion—tone the stomach for utilizing and assimilating every atom of food you take; the body needs it for strength and vigor. *Zopesa* cleanses the entire system, stimulates the Liver, keeps you regular, and able to eat ten-penny nails. Letters and postal cards come in daily, telling of cures and help from *Zopesa*, from Brazil. *Positive proof* of the health and vigor it gives in a ten cent sample. Ask your druggist.

In cases of Chronic Diseases which doctors have failed to cure, Burdock Blood Bitters has achieved its greatest triumph. All diseases of the Blood, Liver and Kidneys, Scrofula, Dyspepsia, Nervous Debility, Rheumatism, Piles, Female Complaints, and all forms of lost vitality, are promptly cured by this great renovating Tonic. Trial bottles only cost 10 cents.

Trade Notes.

Canadian.

THE Parry Sound mill commenced sawing on the 6th of April.

BUILDING operations in Montreal during the summer promise to be exceedingly active.

THE rate from Brockville to Oswego is 90 cents per 1,000.

THE average rate for lumber from Toronto to Oswego seems to be $1.25 per 1,000.

THE harbor of Duluth is not expected to open before the middle of May.

8,000,000 feet of lumber awaits the opening of navigation to be shipped from Parry Sound.

GODERICH rates are quoted fifty per. cent. higher than last year, and a charter has been made.

THE schooner *Denmark* has been loaded with timber at Toronto—an unusual proceeding as it is generally rafted.

A GENTLEMAN who arrived at Ottawa from the Black river on the 22nd of April, reports a foot of snow there.

THE saw mill owned by Alex. Carson, at Gorrie, was destroyed by fire on the morning of the 23rd April. Loss, $4,000; no insurance.

A FIRE in Hall & Brown's lumber-yard, Berlin, Ont., on the 18th April, destroyed $300 worth of lumber before it was subdued.

THE steam barge *Tecumseh*, has been chartered to take ties from Cockburn Island to Chicago at 10 cents each and cedar posts at 6½ cents each.

THE shipment of lumber from the Chaudiere docks commenced on Monday last. The quantity to be shipped promises to be larger that that of any previous season since 1872.

THE scow *Onward*, of Buffalo, has been chartered to carry five loads of about 160,000 feet each, from Port Hope to Wilson and Oak Orchard, N.Y., at the rate of $1.50 per 1,000.

THREE lumber barges are being built at Ludington, each 168 feet long, 36 feet beam on deck and 8½ feet deep in centre. They are to be towed by a steam barge and will carry 600,000 feet of lumber.

FOURTEEN lots of hop-poles, sufficient to make many car loads, have been deposited along the railway track east of the Trenton station. The poles are the property of Messrs. Rathbun & Son, and are intended for shipment southwards.

American.

THE Chicago *Tribune* says if the cheap rates on the railroads are continued, vessels may have to accept 4 cents per bushel for wheat to Buffalo.

THE Grand Rapids lumbering firm operating in Kent county, has bought a Monitor portable farm engine to use in loading logs upon cars in the pineries.—*Detroit News.*

HIRAM SIBLEY, of Rochester, N.Y., has purchased 9,500 acres of pine lands on the Au Gres River of D. Wright & Co., for the sum of $180,000, This tract it is estimated will furnish 100,000,000 feet of timber.

MR. G. W. HOLT, of Buffalo, manager of the commercial line of propellers, has concluded a a contract with the Grand Trunk Railway Company, according to which the boats of this line will carry during this season the up freight of the railway from Port Huron to Chicago. The contract, however, does not cover east bound freights.

THE *Northwestern Lumberman* says that maple flooring continues in good demand in Chicago, and we doubt if there will be much of it left in stock by the opening of navigation. There is some that comes by rail from Wisconsin, but the bulk of it reaches here by water from Michigan. The season of navigation will bring to light a large stock, but we look for it all to be wanted. Building operations will be exceedingly brisk in this city during the year, and maple flooring is constantly growing in favor.

A COMPANY has been organized for the purpose of constructing a railroad through the timber counties of Wisconsin, to be known as the Great Northern Timber Belt Railroad Company. The road will pass through the counties of Oconto, Shawano, Langdale, Marathon, Taylor, Chippewa, Lincoln, Price, Barron, Polk, Burnett and Douglas. The east end of the projected road commences at some point on Green Bay, either Oconto or Marinette.—*Lumberman's Gazette.*

LAST fall the lumbermen of Duluth organized a company to improve the St. Louis River, with a capital of $50,000. The contract to do the work was let to the well known railroad contractors, DeGraff & Co., of St. Paul, who have done a most thorough job. The river is now in fine condition for log driving, and there will be no difficulty in filling the mill booms at Duluth this spring from last winter's crop. We congratulate our Duluth neighbors upon their successful enterprise. Pluck, energy, enterprise and work win!—*Ashland Press.*

British.

THE deliveries of both hewn and sawn pitch pine have been large, and prices have been steady throughout the month; there has only been one cargo sale, the arrivals having been almost entirely on contract.

THE result of Messrs. Churchill & Sim's late sale is regarded as being generally satisfactory to holders of stock. Certainly the effect of the sale upon the better qualities of redwood stock is likely to be eminently satisfactory to holders.

MANY of the London agents are now on the coast, endeavoring to effect sales, but so far we do not hear that their efforts have been crowned with much success, as buyers are still holding off, in the expectation that prices may possibly come down. It is reported that two cargoes of Uleaborg deals and battens have been sold at prices decidedly low as compared with those ruling during the past season.

THE consumption of spruce deals has been about the same as last year, but stocks are too heavy for us to expect any early improvement in value; imports during the spring months, however, are likely to be on a very small scale compared with previous years, as stocks are unusually low at the shipping ports. Pine deals are moderate in stock, but the demand is limited. Birch, notwithstanding the large stocks, has fully maintained its value, but there cannot be much improvement until stocks are reduced.

"WHAT'S in a name? The rose by any other name would smell as sweet." We do not dispute that point with the poet, but certainly spruce, by any other name, does not sell as well as that which is called Quebec. The next in esteem seems to be that from St. John, N.B., which went at 30s. to £2 lower than Quebec, and Miramichi 10s. to a pound below that of St. John. It is true Miramichi pine deals went badly here, but that does not alter the case, for our Liverpool correspondent tells us there appeared to be no demand for pine deals at all, and very few were sold at the auction aforesaid, while here in London 1st bright Quebec pine deals went better than they have done for some time past up to £23 5s.

ONE of the noticeable eventualities of the great sale last week wss the way that Quebec spruce held its ground, in spite of the enormous quantity of other kinds thrown on the market, at the same time and place, to go at any price that could be obtained for it. It may be said that, instead of suffering from this competition, it beat it, and triumphed over it, for quite as good prices were obtained at this great sale as had been previously reached when smaller quantities were before the buyers to choose from. We have more than once expressed our regret at seeing 1st quality Quebec spruce of eligible dimensions going at £10 to £10 10s. per standard; but on this occasion such sizes and quality realized £10 15s., and 2nd quality went up to £9 5s., while some 3rd 3×11 obtained £8 15s. and nothing in short lengths and batten sizes went under £7.

Excellent Style.

We have received the March number of THE CANADA LUMBERMAN, published by Messrs. Toker & Co., of Peterborough. As this is the only Journal published in Canada devoted to the interest of lumbering in its various branches, we hope to see it receive that patronage which will enable the enterprising proprietors to continue its publication in the excellent style they have shown in the present issue. For neatness, clearness of print and quality of matter it will rank as high as any paper we have seen, which advocates the same business. Success to T. & Co.—*Omemee Herald.*

ZOPESA.—A healthy man never thinks of his stomach. The dyspeptic thinks of nothing else. Indigestion is a constant reminder. The wise man who finds himself suffering will spend a few cents for a bottle of *Zopesa*, from Brazil, the new and remarkable compound for clensing and toning the system, for assisting the Digestive apparatus and the Liver to properly perform their duties in assimilating food. Get a 10 cent sample of *Zopesa*, the new remedy, of your druggist. A few doses will surprise you.

Wanted.

A SECOND HAND DOUBLE EDGER; also a LATH MACHINE, both in good repair. Reply stating lowest cash terms or particulars to Box 1002, Peterborough. L10

For Sale.

A 40 INCH LEFFELL WHEEL and COMPLETE CIRCULAR RIG, all in good order, suitable for a fifteen foot head. Apply to Box 1002, Peterborough. L10

Reid & Co.,

WHOLESALE LUMBER DEALERS. Lumber, lath, shingles, &c. Car lots to suit customers. Best Culls in the market at from $6 to $7 per M.

OFFICE ON DOCK.—Esplande, foot of Shelbourne Street, Toronto b15

Hardwood Timber Land

FOR SALE.

FOR SALE, 1200 ACRES HARDWOOD TIMBER LAND near Nipissing Railway, Coboconk. Easy terms. OSHAWA CABINET CO., Oshawa. b13

Situation Wanted.

A Book-keeper of first-class experience desires a situation with a lumber firm. An opportunity of acquiring knowledge of the lumber trade more of an object than the amount of salary. Unexceptional references both as to character and ability.

b15 Apply to the Editor of THE CANADA LUMBERMAN.

The Stewart House,

Headquarters of Lumbermen in Peterborough, corner of Hunter and Water Streets. Good accommodation. Terms, $1 per day. Free 'bus at trains.

b15 T. CAVANAGH, Proprietor.

Allandale Junction Hotel

Travellers by Northern Railway have 15 to 20 minutes by all trains, for refreshments. Solid meals. Tea and coffee at counter. Fine brands of Liquors and choice Cigars. b17 E. S. MEEKING, Proprietor.

Orillia House,

ORILLIA.

New and Commodious Brick Building; best north of Toronto; splendid sample rooms; centrally located; free 'bus. b20 JOHN KELLY, Proprietor.

The Queen's Hotel,

TORONTO, CANADA.

McGAW & WINNETT, Proprietors. Patronized by Royalty and the best families. Prices graduated according to room. b20

St. Lawrence Hall,

PORT HOPE.

Is noted for its superior home-like comforts—a well kept table, equalling the best hotels in Toronto, and large, well-furnished rooms. Good sample rooms on ground flour. Walton Street, Port Hope.

b26 WM. MACKIE, Proprietor.

St. Louis Hotel.

THE RUSSELL HOTEL CO., Proprietors.

WILLIS RUSSELL, Pres., Quebec.

This hotel, which is unrivalled for size, style and locality in Quebec, is open throughout the year for pleasure and business travel. b18

Queen's Hotel,

BRACEBRIDGE.

JOHN HIGGINS, Proprietor. The proprietor (late of Georgetown,) having lately purchased the above hotel,) will endeavor to make it one of the best houses in the District of Muskoka. Tourists and hunting parties will receive every possible attention. Free 'bus to and from steamboat wharf. Terms, $1 per day. b20

Fraser's Hotel,

GRAVENHURST, ONT.

HENRY FRASER, proprietor, (successor to Dougland Brown.) Mr. Fraser having purchased and thoroughly renovated and refitted that old established hotel, so long and popularly kept and owned by Dougland Brown, in the Village of Gravenhurst, is now in a position to attend to the wants of the travelling and general public. Parties *en route* to the Muskoka District, will find "Fraser's" a comfortable stopping place. The Bar and Larder are well furnished. Convenient Sample Rooms for Commercial Men. Good stabling and attentive hostler. Free 'bus to and from trains and steamboats. b26

Flexible Board Rules,

With Steel Head, either Cleveland or London make, at $1.75 Each.

GEORGE STETHEM,

1L PETERBOROUGH.

Hotel Ottawa,

No. 21 North Side King Square,

ST. JOHN, N. B.

E. COSMAN, PROPRIETOR

Terms $1.00 to $1.50 per day.

TRUSSES.

CLUTHE'S PATENT SPIRAL TRUSS all attachments improved. No more buckles, all on solid brass casting. Book on rupture and human frame free. Send address in full post card. Best true information about rupture and deformities. CHAS. CLUTHE, Surgical Mechanist, 118½ King Street west, Toronto.

MAIL CONTRACT.

TENDERS, addressed to the Postmaster General, will be received at Ottawa until Noon, on Friday, 6th May, for the conveyance of Her Majesty's Mails, on proposed Contracts for four years, once, and three times per week each way respectively, between

Apsley and Cheddar, and Peterborough and Apsley,

from the 1st July next. Conveyance to be made in a public or other vehicle. Printed notices containing further information as to conditions of proposed Contract may be seen, and blank forms of Tender may be obtained at the Post Offices of Peterborough and Apsley.

GILBERT GRIFFIN,
Post Office Inspector's Office, Kingston, 25th March, 1881 } Post Office Inspector.

MEERCHAUM and AMBER GOODS repaired in first-class style. b17

77½ King St. West, Toronto, Ont.

THE RUSSELL HOUSE,

OTTAWA.

JAS. A. GOUIN, - - PROPRIETOR.

Is the Favourite Resort of Leading Public men of the Dominion attending the annual Session of Parliament.

Ministers of the Crown, Senators, Members of Parliament, Public Officials, as well as those having business with the various Departments of the Government. It is also the headquarters of those having dealings with the princely Lumber Manufacturers in the Great Pine Valley, of which Ottawa is the acknowledged centre.

THE RUSSEL HOUSE being central, almost abutting on the magnificant PARLIAMENT and DEPARTMENTAL BUILDING—the pride of the Country—is thus conveniently situated for those visiting the City on public business. But the location is also everything that could be desired alike for the man of business and the man of pleasure. A few minutes walk brings the guest of the Hotel within reach, not only of all the principal business resorts, but also of the most splendid Mountain and Valley Scenery that can be seen anywhere, as also of the two almost unrivalled Waterfalls—the Chaudiere and Rideau—and of the extensive Manufacturing Establishments and Depots of the leading Lumberman. But, besides the beautiful scenery, which, it may be mentioned, includes the magnificant Ottawa and two of its grand tributaries—the Rideau and Gatineau—there are in the immediate neighborhood, beautiful Lakes and apparently never-ending woods, which afford opportunities for the finest Fishing and Shooting that can be obtained on the Continent.

THE RUSSELL HOUSE affords excellent accommodation for 300 guests; its table is abundantly supplied with Viands of the choicest description, in season, and nothing is left undone to make every visitor feel comfortably "at home."

Omnibusses meet the Arrival of every Train and Boat. b26

"SPARE THAT TREE."

The *Lumberman's Gazette* says that when articles are written about the preservation of the timber of this country, they are always directed toward the consideration of the pine, and eloquent language flows from pencil points, and arrays of figures are marshaled to show how great is the urgency in that behalf. But the larger body of other sorts of timber is forgotten as of no consequence, or not subject to the depleting process. There is, nevertheless, and has been constantly going on since the first settlement of the country, a remorseless war upon the oak and ash, elm, poplar, hemlock, maple, and every other variety of wood growing in the grand forests with which this goodly land was covered. Thus far this waste has doubtless been unavoidable. To reduce the virgin land to fruitful fields the forests must needs be felled, for grain could not be grown under the branches of the trees. In the undeveloped condition of the western world there was no other course to pursue but to reduce even the best timber to ashes. Thus a vast offering in oak and ash and walnut, and every other goodly tree, was sacrificed on the log-pile of the settler to the spirit of development. There were no means of getting the timber to market had there been demand for it anywhere. But there is no longer a reason or excuse for the sacrifice. The land is divided by railroads almost as a farm by fences. There is scarcely ten miles of territory intervening between the lines of track in most of the northern and western states, and a mighty tonnage afloat upon our rivers, lakes and canals. Fifty millions of people now, and hereafter the mightiest nation the world has ever known, will require more timber than has ever before been used by any civilization that has preceded the generation of men now bustling in this restless world. Think of the multitudinous uses of timber, calculate the immense quantity required to meet the vast consumption. Figures need not be given. To say twenty billion feet does not convey any impression except of an incomprehensible number, but it is given as the consumption of American timber in 1880. Consider the uses of timber, the fifty millions of population in the United States, and estimate the value of timber twenty years from this date. Pine is not alone of value. Not a pine tree should be wasted, it is true, but it is equally true that he is a ruthless disregarder of the rights of posterity who needlessly and wantonly destroys an oak, an elm, a hemlock, an ash or a maple tree, or any other species of timber. The tide of development must roll northward over the peninsulas of Michigan and lay low her noble forests, but there need be no vandalism, no indifferent waste such as has marked the past. Be not in haste to denude the land. The hardwood of Michigan is to-day of more value than the pine, and it will increase in value as the years go by. The same is true of other states. The hemlock of every state where the tree grows is worthy of preservation; it is a useful timber wood and its value in some of the states will increase five fold within as many years. Let the old refrain be taken up, "Woodman, spare that tree."

IMPORTANT DECISION.

An exchange reports a decision by the Court of Queen's bench, for Ontario, involving the right of a landlord to seize upon the property of a third party, temporarily upon his premises, for the payment of rent. The suit was one for damages by the owner of certain sawlogs, which had been taken to a saw-mill to be converted into lumber in due course of the business of the mill. The defendant was the landlord of the premises, and distrained upon these logs to satisfy his claim for rent against the tenants. The court held this distress illegal, and the logs exempt from any liability. The court further held that it made no difference that one of the tenants appeared to have an interest in the sawlogs jointly with the plaintiff. This decision is of considerable importance to the large class of Canadians interested directly and indirectly in the lumber business, and it is a matter for congratulation that the courts have been able to hold these goods exempt. Their liability to seizure for rent would introduce a considerable element of uncertainty into this kind of business.

SPARK ARRESTERS.

There have been many devices offered to the public for the purpose of arresting sparks from chimneys, but like many devices for arresting the progress of sparks in every day life, the old original plan seems to work the best. This embraces a wire screen or bonnet, made either permanent with an enlarged arm above the stack, or with a hinge joint on a flat opening at the top. This latter is but a modification of the close top of the former, which, if of a small enough mesh to hold cinders, is apt to become clogged after a time, and prove annoying. The hinged opening at the top obviates this, so long as the wire rope connection with the ground, used for opening and closing the trap, remains intact, and when this is broken it is no great trick to restore it. A patent device embracing an inclined shelf inside the stack, so arranged that cinders removed from the direct influence of the upward draft would fall of their own gravity upon the shelf, which is connected on the outside of the stack with a pipe or area sufficient to pass them to the ground, has been tried by many mill men, but has not met with sufficient favor to come into extended use. Probably the best system of arresting sparks is found in so enlarging the area of the chimney that while a good draft is obtained, the heat will not rush up with sufficient velocity to carry cinders to the top. A small stack just large enough to create the required draft under the boilers, is a most prolific source of danger, as the velocity of the current of heated air is sufficiently great to overcome the gravity of the cinders. Tall, brick stacks of sufficient area, seldom emit cinders of a size to be dangerous to surrounding property. Give your stack a height and diameter exceeding the actual requirements of your grate surface, and you can find no more effective measure for arresting sparks, which, rising to a height where the current of air becoming somewhat weakened in its force can no longer overcome their gravity, fall into the ash pit at the rear of the arch. Confine the heated air to a small compass, and its force will invariably carry sparks or heavy cinders over the top of the stack.—*Northwestern Lumberman.*

SPEED OF CIRCULAR SAWS.

Nine thousand feet per minute, that is, nearly two miles per minute, for the rim of a circular saw to travel, may be laid down as a rule. For example, a saw 12 inches in diameter, 3 feet around the rim, 3,000 revolutions; 24 inches in diameter, or 6 feet around the rim, 1,500 revolutions; 3 feet in diameter, or 9 feet around the rim, 1,000 revolutions: 4 feet in diameter, or 12 feet around the rim, 750 revolutions; 5 feet in diameter, or 15 feet around the rim, 600 revolutions. Of course it is understood that the rim of the saw will run a little faster than this reckoning, on account of the circumference being more than three times as large as the diameter. The following table, which has been compiled as an authority on the subject, nearly covers the whole ground:—

Size of saw.	*Revs. per min.*
8 in	4,500
10 in	3,600
12 in	3,000
14 in	2,585
16 in	2,222
18 in	2,000
20 in	1,800

—*Industrial World.*

HAGYARD'S PECTORAL BALSAM; a few doses relieves the most distressing cough, and a twenty-five cent bottle has cured many a sufferer from Asthma, Bronchitis, Croup, Influenza, Hoarseness and Soreness of the Chest. It is the grand specific for all throat and lung complaints leading to consumption.

WILSON'S ELECTRIC LIGHT.

It will be of interest to lumbermen and saw mill owners, who operate on a large scale, to learn that Mr. T. L. Wilson, of Hamilton, Ont., has invented an electric machine which affords a steady light at a small cost, and is of simple construction. Reference has already been made in the LUMBERMAN to the advantages which would accrue to river-drivers should they be able to use the electric light during the night in sorting logs, as often during the day the weather is unfavorable. Mr. Wilson's invention will doubtless be suitable, as it only require a two-horse power to run the apparatus, which could easily be carried from place to place. An exhibition of the light was given in Hamilton lately and is referred to as follows by the *Times* of that city:—

"On approaching the building one was obliged to notice the bright illumination from the windows, which made posters on the adjacent fences as legible as in daylight. Mr. Sanford, who has taken great interest in Mr. Wilson's experiments, contributing the funds necessary for their carrying on, met the visitors and exhibited photographs printed by this electric light. The *Times* representative was able to read solid minion and nonpareil print without difficulty at a distance of twenty feet from the lamp. The apparatus is by no means intricate in design. The motive power is an engine running at two horse power, and the electricity is transmitted to the lamp through copper wire. The burner is made of coke and molasses, the parts being held in position by a clock-work attachment, which works automatically. Mr. Sanford explained that the apparatus was about one-fifth the weight and could be manufactured at much less cost than any electric machine in New York. The light, including carbons, which consume at the rate of 1½ inches per hour, and power from the engine, will cost about 2 cents per hour. One light like the one exhibited would suffice for a large floor of a warehouse or manufactory. By attaching the wire to a machine contrived for the purpose—and which occupies little space—about 85 per cent. of the original engine power can be utilized for any manufacturing work, rendering the apparatus useful by day as well as by night. The inventor has labored long and faithfully to perfect his invention, and it is understood that a proposition to organize a joint stock company for the construction of the machines, etc., will be laid before the citizens of Hamilton at an early day."

COMMERCIAL VALUE OF WOODS.

The following are furnished by Messrs. Oliver & Co., as the present prices for the different kinds of lumber on board cars on the different lines of railroad nearest to the mills. The prices given are, per thousand, board measure:

Walnut, best quality, according to thickness and lengths	$60 to $70
Walnut, common	50
" culls	30
Cherry, best quality, clear of hearts, large knots and shakes,	22
Butternut, " " " "	22
Whitewood, " " " "	21
Chestnut, " " " "	18
White Oak, " " " "	17
White Ash " " " "	17
Hickory, " " " "	16
Rock Elm, " " " "	13
Sycamore, " " " "	12
Balm of Gilead, " " "	12
Birch, " " " "	11
Black Oak, " " " "	11
Grey Oak, " " " "	11
Black Ash, " " " "	11
Basswood, " " " "	10
Maple, " " " "	10
Beech, " " " "	10
Soft Elm, " " " "	9

CEDAR—HEMLOCK—TAMARACK.—For railway ties from these woods the railway companies pay as high as from $20 to $30 per 100.

Really First-Class.

THE CANADA LUMBERMAN has changed hands, Mr. Begg having sold out his interest to Messrs. Toker & Co., who now issue that journal from their office in Peterborough. Under the new management the LUMBERMAN promises to be a really first-class paper, if we may judge from the first number sent out by them.—*Muskoka Herald.*

HUMBUG IN BUILDING.

There is a great deal of sham building in this country—building that is intended to catch the eye and give an appearance of solidity and finish which in reality it does not possess. Sometimes this kind of work is intentionally made, with a view to making cheap houses that will sell for a dear price, and sometimes it is furnished by the contractors on a contract, where they have engaged to put in good work but do not. Of course, where the owner sets out to build cheap and flashy houses, there is no one to blame but himself. But when a man contracts for good work and in place of it gets sham work, he certainly has good cause for complaint. But in very many instances there are extenuating reasons, which, while not exactly exculpating these builders who violate their engagements, furnish them with a partial excuse for their actions One of the chief causes for this kind of unfaithful work rests in the system of competitive bidding on jobs. A person desires to build a house, and forthwith he gets half a dozen carpenters and contractors to bid against each other for the job. These men, thus competing against each other, are, in nine cases out of ten, induced to put in their bid at figures below what good work, or work according to the specificaiions, can be done for. The result is that the party taking the contract at such ruinous terms begins to "cut the corners" at once. Whenever he can slight the work and not be detected he does it. He furnishes, when he can, inferior and cheaper material than he should, and in every way possible tries to make up for the "cutting rate," which by competition he was forced into giving in order to obtain the work. When he comes to turn the house over to the owner, if the latter has not had experience in building, he is quite likely to accept it as a good job, or if he detects the "little game" of the contractor, a law suit generally ensues. We do not mean to say that carpenters, or builders, do not sometimes willfully violate their contracts and cheat and deceive, when they are not induced to do so by competition. Unfortunately they often do.

Frequently poor work is put into buildings because the owners are too careless or too ignorant to furnish the proper plans and specifications, and make them a part of the contract. Thus, the contract may name certain kinds of work, but omits to mention the quality of the lumber, or the paint, or the styles and kinds of hardware to be employed, As might be expected, the builder, insted of putting in lumber that should cost $40 a thousand, contents himself in using that which costs but $30, and so through the work, wherever anything is left to his judgment or discretion, it is likely that he will figure for his own interest.

What is the remedy? A very simple and sensible way to build a house is for the party so building, to just find out what kind of a house he wants. Then ascertain how he desires it finished in detail. If he is able, he would do well to employ a competent architect to draw his plans and furnish him with the specifications. Then ascertain as nearly as possible by inquiry and observation, what good labor is worth, after which, take his plans and specification to a reliable builder and let him make his bid, giving him to understand that good work would be required. In almost every instance, it will be safe to assert, reasonable figures will be made. We mean reasonable figures for good work, but not as close as figures would be envolved by a process of competitive bidding. Good work cannot be had for nothing, and a good house cannot be built without good work. The dearest of all kinds of labor is that slipshod kind of carpenter work, the evidences of which are left in so many of our houses. But a good, solid, substantial, well-made building can be erected at reasonable figures, and by men of limited experience in building, provided they employ honest builders and give them a chance to obtain a fair renumeration for their labor and time, without compelling them to resort to the tricks of the trade to get it.—*Industrial World.*

ON Sunday morning, April 17th, between one and two o'clock, a fire broke out in Hall & Brown's lumber yard at Berlin, and before it was subdued some $300,000 worth of lumber was consumed. There was no insurance and the cause is unknown.

COST PRICES.

We have often urged upon our manufacturers and merchants the need of a close analysis of expenses, when making up the cost of their goods. And not long since, in an article upon Agricultural Machinery, we urged greater caution in fixing selling prices, which are not always sure of returning the ratio profit which makers imagine. We find in the *Book-Keeper* a very interesting paper upon the subject of cost prices, by Mr. James Howard, of Bedford, England, president of the Agricultural Engineer's Association, and consider it well worth the careful attention of every Canadian manufacturer:—

"If a history were written of the rise and progress of our most successful mercantile establishments," says Mr. Howard, "it would doubtless be recorded, as a prominent feature in each case that a careful system of account-keeping had been adopted. Indeed, it may be said that without efficient book-keeping the success of any commercial enterprise is insecure, and instances are not wanting where apparently thriving concerns have been made shipwreck by violating the first prineiple of commercial economy. In a manufacturing business, by far *the most important point* in account-keeping is that of ascertaining the exact cost of articles when ready for delivery to the customer. To arrive at this may at first sight appear a very easy matter, but in order to obtain even approximate accuracy several conditions must be fulfilled. In the first place, every useful system of cost prices is dependent upon the correctness of the general accounts of the concern—an obvious fact when it is remembered that the measure of business success is simply the difference between the totals—payments for materials, wages, and establishment charges, and the net amount received in payment of sales.

Referring for a moment to the question of selling prices, is it not unusual to see agricultural machines offered at prices which evidently have been fixed at random. In some such cases the practiced eye can see at a glance that after the usual trade allowances have been deducted from the nominal selling prices, very little profit, if any, is left for the maker. Again, if the lists of the different manufacturers be taken for certain articles, it is singular to notice now nearly the figures agree. This seems to show that the practice of fixing prices by the list of others is not uncommon, those of the foremost houses being generally taken as the standard. Firms which adopt this practice would appear to say to themselves. 'It pays so-and-so to sell at such-and-such a price, and so it will us.' It may be true that the price of one firm must conform to some exient to the price of other firms; but it is none the less true that there is insecurity in simply following the lead of others without investigation. I have known even first-class houses which have not troubled themselves to go into the cost of certain articles which they manufacture. Again, it does not always follow that because a given article can be produced at a certain establishment and sold at a given price with a profit, at another establishment the same thing can be done; the mode of manufacture, the extent of the demand, the facilities and cost of transit, and the general policy adopted in the conduct of the business may vary so much as to make the result in one instance a fair profit, and in another an actual loss.

"A popular impression prevails that small makers can afford to sell goods at lower prices than large manufacturers, the idea being that the expense of the former are proportionately less. Apart from the fact that the expenses of the small maker are, as a rule, relatively higher han his larger rival, there are other considerations."

Any plan of arriving at prime costs, says the writer quoted, to be of reliable value must of necessity take note of every element of expense, both in production and sale. To arrive at these elements, it is *absolutely necessary* that the general cash-book should contain a detailed account of all payments, and that every item should be posted under the heading to which it belongs. For instance, payments in respect of any one of the following matters should be carried to separate accounts:—

Materials, Wages, Foremen's salaries, Clerks' salaries, Travelling and Public Exhibitions, Expenses of Forwarding Department, Rent, Rates, & Taxes, Plant, Repairs of Factory, Patents, & Royalties, Horses & Vehicles, Fuel & Gas, Advertising, Legal Expenses, Printing, Stationery, Stamps & Postage.

Furthermore, accounts should be kept of the lors upon returned goods or exchanges, cost of experiments, banking expenses, bad debts. "From an analysis of these items of expenditure—say for three years—a tolerably safe guide as to the percentage upon the returns of the business is obtained." These several items may be grouped under three heads; the first includes the purchase of raw materials and all articles used in the manufactory; the second deals with the articles produced and the cost prices of the same; and the last relates to the costs and charges incidential to the sale of the goods manufactured.

"The establishment-charges in the case of my own firm are calculated upon the average cost per cent. on the returns of three years, and the charge of the carriage of goods is estimated at the average cost per ton of sending to the several points of delivery. In respect of the cost of melting pig iron and delivering the same to the moulders for casting, the practice of my firm is periodically to adopt a test—say for a fortnight; the whole of the materials and the produce of clean castings, runners, wasters, etc., being weighed. The labor for moulding is charged in the cost price in the same way as for other departments. The same experiments are also utilized to show the total cost per ton of the finished castings produced in the period.

"The foregoing remarks on cost prices would be very incomplete if I were not to touch upon a point in connection with the subject which does not always receive the attention due to its importance. I refer to the question of stock, viz., raw matertials, stores and manufactured articles. It cannot be too prominently kept in mind that to its original cost five or ten per cent. is added to stock by keeping it the year round. Hence, it may be taken for granted that profuse buying of materials and over-production of manufactured articles are prolific sources of loss and waste; but, on the other hand, a sufficient stock for the requirements of current business is absolutely necessary, in order to prevent delay in the execution of orders and to make a business run smoothly. In the endeavor to overcome the difficulties of this question and strike the happy mean, it has long been the practice of my firm to keep accurate accounts of the stock in hand of finished implements and all parts thereof, which are corrected to the first of each month. From the data thus obtained the stock is equalized and a sufeguard provided against the evils referred to."

There are many points in this address which Canadian manufacturers may ponder with advantage. It will be seen from the exhaustive survey which Mr. Howard makes, that the discovery of the cost of an article made, involves a great number and variety of considerations. And as no manufacturer in this country any more than in the old land, can ignore the many sources of leakage and loss, and yet arrive at an accurate estimate of prime cost. Too many among us, we fear, are governed in fixing their selling price by what their neighbor charges, instead of laboriously calculating the cost, each for himself.—*Monetary Times.*

Room for the "Lumberman."

The Canada Lumberman is the name of an excellent sixteen page paper, devoted to the in terests of the lumber and timber industries of the Dominion. It is full of valuable information and interesting reading for those interested in lumbering operations, as well as others. We believe there is room for such a paper in Canada, and it should receive the support of every person interested in the trade. It is printed by Toker & Co., publishers of the Peterborough Review. The subscription price is two dollars a year, which is very cheap.—*Sherbrooke Gazette.*

Hagyard's Pectoral Balsam is composed of the most healing balsams and gums. The balsams, which enter into its composition, were used by the natives when America was first discovered, and are combined with other vegetable tonics, so blended together, that it is a specific for all affections of the throat and lungs. Thousands of bottles are used annually, and is considered one of the standard preparations of the day.

THE ART OF WOOD WEAVING.

The manufacturing district of the Austrian empire lies in the north of Bohemia, where miniature Birminghams and Manchesters are congregated together by the dozen, and hundreds of thousands of "hands" are actively and ceaselessly employed. For miles the high road is bounded by houses, chiefly one-storied wooden buildings with roofs of tatch or shingle, where the rattle of looms may be heard without intermission from early dawn till late at night. In some of the towns numberless chimneys pour forth volumes of black smoke by day, while by night the windows of the large factories glow with light as if there were a general illumination. One of the busiest of these little towns and villages is Ehrenberg, which lies close to the Saxon frontier, and is distinguished from the rest by a peculiar industry, which appears to be carried on in only two other places besides. The peculiar industry for which Old Ehrenburg is distinguished is wood weaving, *sparterie* work, as it is called, which was introduced something more than a century ago by a carpenter named Anton Menzel. The threads used for weaving are no thicker than writing paper, and vary in width from the fifth to the twenty-fifth part of an inch. The aspen is the only tree whose wood is sufficiently tough and pliable to supply these threads in the required lengths. The aspen was formerly indiginrus in Bohemia, but has now almost entirely disappeared, or at all events does not exist in sufficient quantities to supply the demand in any degree. Consequently the raw material for the *sparterie* work has to be brought from Russian Poland, which is both a laborious and expensive process. The wood merchants go to Poland twice every year, in the early spring and in the autumn, the only times at which the wood can be cut with advantage, as none can be used at once but that in which the sap has not yet risen, or from which it has departed. Wood cut during the summer has to lie in water for a year, otherwise it is red and useless. It must be quite free from knots, as the smallest defect or irregularity, such as as ordinary persons would hardly notice, makes the fibres quite unfit for weaving purposes. Arrived in Ehrenberg, the wood is planed and divided into pieces nearly 2½ inches wide. When they have been made perfectly smooth they are divided again by an instrument resembling a plane, but furnished with a number of fine knifeblades, which mark the wood at regular distances according as the strips are to be 1-25 or 1-5 of an inch in width. This process requires the utmost dexterity and nicety, as it is absolutely essential that the divider should exactly follow the diretion of the fibre; and for this reason among others it must always be done by hand. The divider makes incisions 1-5 of an inch deep; the wood is then carefully planed, and comes off in this paper like stripes, some of which are not wider than a stout thread. They are gathered up as they fall by women, who examine them and pick out any defective pieces; and, in spite of all care taken in the selection and manipulation of the wood, there i a good deal of waste in the process. The threads or fibres, being now ready, must be tied in couples at one end before they can be woven. This is done by children, and in Ehrenberg little creatures of four years old and upwards are employed at it, and earn fourpence a day. The weaving is done chiefly by women, and in looms which differ considerably from those in ordinary use, the fibre being, as before mentioned, not more than from 39 to 50 inches in length. The longer fibres form the warp, the shorter (28 to 32 inches) the woof, which is passed in and out by means of a little instrument with an eye like a needle. Until within the last few years this concluded the whole process—the "foundations," as they are called, were complete, and nothing more was done, except that a few hats and caps were made of them; but these were of the very simplest description, and anything but becoming. Moreover, they were glued together, which made them very unpleasant to wear in hot or wet weather, and accordingly they fetched but fifteen pence or 2s. and 4d. per dozen, and were worn only by the very lowest classes. Within the last few yesrs, however, a great change for the better has taken place, thanks probably in part to the interest shown by the Government in the manufacture, in part to the establishment of an enterprising firm, and in part perhaps to the fact that the Ehrenbergers have at last become alive to their own interests. At present Ehrenberg sends out not only the raw material but ready made goods—fashionable hats of kinds, and a variety of fancy articles skilfu concocted out of the wood fabric: ladies' hats of every possible description and the latest fashion such as no one need be ashamed to wear made entirely of wood, and sold at astonishing low prices. Men's hats are to be had of all shapes, from the Panama hat—not a whit inferior to that bought in Paris—to the common hats exported in large quantities in China, and the linings or foundations which give stiffness to the fez of the Turkish soldier. The export trade embraces all Europe, from Spain to Russia, extends beyond the Caucasus to India and China, and maintains active relations with North and South America, as well as Australia. The manufacturers are in direct communication with the four quarters of the world, and their goods are being introduced into Africa by French and English traders.—*Cassell's Family Magazine.*

THE PETCHORA TIMBER-TRADING COMPANY.

From Mr. H. Seebohm's work on "Siberia in Europe," we gather that Alexievka is the shipping port of the above company. It is a group of houses built upon an island in the delta of the great river which empties itself into the Arctic Ocean, nearly opposite Nova Zembla, and where the ships are laden with larch for Cronstadt. The larch is felled in the forests 500 or 600 miles up the river, and roughly squared into logs varying from 2 to 3 ft. in diameter. It is floated down in enormous rafts, the logs being bound together with willows and hazel boughs. These rafts are manned by a large crew, some of whom help to steer them down the current with oars and poles, and others sre hired for the season to assist in loading the ships at Alexievka. Many of the men bring their wives with them to cook for the party. Sleeping huts are erected on the rafts, and it becomes to all intents and purposes a little floating village, which is frequently three months in making the voyage down the river. Marriages have been known to take place on these rafts. Occasionally a funeral has to be performed, and sometimes all hands are engaged in helping to keep the raft from running ashore or grounding on a sandbank. Sometimes in stormy weather it is necessary to moor the raft under the lee of an island, or a promontory, to avoid the danger of having it broken up by the violence of the waves. With the greatest care in the world, this will sometimes happen. The Russian has a good deal of the fatal facility to blunder which characterizes the Englishman, and shiploads of stranded logs of larch are strewed on the islands of the delta, and on the shores of the lagoon of this great river.

Woods for Heating.

The *Globe* has the following:—In Toronto, as elsewhere, the consumers of wood for fuel esteem the hard maple as the most valuable for the purpose. This is an erroneous notion. All the oaks yield, more heat than maple does, and so, among the other woods accessible, does yellow birch. Here is a table based of American experiments made several years ago, and showing the value of different kinds of wood for firing. Shell-bark hickory is taken as the standard:—

Shell-bark hickory	100	Hard Maple	59
Pignut hickory	95	White elm	58
White oak	84	Red cedar	56
White ash	77	Wild cherry	54
Dogwood	75	Yellow pine	54
Scrub oak	73	Butternut	51
Red oak	69	White birch	43
Birch	62	White pine	40
Yellow oak	60		

Carefully Guarded.

The Canada Lumberman.—Toker & Co., of Peterborough, have purchased the Lumberman, and it will hereafter be published semi-monthly by them. In the introductory we are told that The Canada Lumberman will be purely a trade organ and will be absolutely non-political. If the number before us is a fair specimen of what it will be in the future, we have no hesitation in saying that the interests of the lumbermen of Canada will be carefully guarded by it.—*Lindsay Warder.*

Travelling Agent.

MR. A. L. W. BEGG has been appointed agent for the CANADA LUMBERMAN, and is authorized to collect subscriptions and grant receipts therefor and to make contracts for advertisements appearing in its columns.

The Canada Lumberman

DEVOTED TO THE LUMBER AND TIMBER INTERESTS OF THE DOMINION.

PUBLISHED SEMI-MONTHLY BY

TOKER & Co. PETERBOROUGH.

Terms of Subscription:

One copy, one year, in advance	$2 00
One copy, six months, in advance	1 00

Advertising Rates:

Per line, for one year	$0 90
Per line, for six months	50
Per line, for three months	30
Per line, for first insertion	10
Per line, for each subsequent insertion to 3 mo's.	05
Cards not occupying more than 12 lines (1 inch) per annum	8 00
Cards not occupying more than 12 lines (1 inch) for six months	5 00
Cards not occupying more than 6 lines per annum	5 00
Cards not occupying more than 6 lines, for 6 mo's	3 00

Special rates will be made for page, half page and column advertisements.

Advertisements intended for insertion in any particular issue should reach the office of publication at least three clear days before the day of publication, to insure insertion.

All communications, orders and remittances should be addressed and made payable to TOKER & Co., Peterborough, Ont.

Communications intended for insertion in the CANADA LUMBERMAN, must be accompanied by the name of the writer, not necessarily for publication, but as a guarantee of good faith. Communications to insure insertion (if accepted) in the following number, should be in the hands of the publishers a week before the date of the next issue.

PETERBOROUGH, Ont. MAY 2, 1881.

THE Quebec *Chronicle* learns that owing to a lack of water in the various small streams of the lumbering districts, several hundred thousand logs in the Province of Quebec are likely to remain in the woods owing to the impossibility of driving them.

MAPLE flooring is meeting with a steadily increasing demand in the Chicago market. Does this not suggest that Canadians might, with advantage, turn some of their attention to this wood, of which there are large supplies in many districts.

THE Three Rivers *Concorde* asserts that in Quebec pine saw logs, 12 to 15 inches in diameter, which formerly paid dues at the rate of 10 cents, now pay 12 cents; that those of 17 inches and over now pay 25 cents as against 15 cents formerly; and spruce logs which were rated at 5 cents now pay 6 cents. This is certainly a very substantial increase.

AN accident occurred at Ottawa on the 15th of April, which, had it not been for the timely arrival of medical aid, would have resulted in the death of Mr. Peter McLaren, a wealthy lumberman of Perth, Ont. Mr. McLaren had been confined to his room at the Russel House through illness. That morning his medical adviser ordered a new prescription, to be used internally. At the same time he was using an external application of belladonna and iodine. Through some accident Mr. McLaren took a heavy dose of the latter, but fortunately discovered his mistake in time to save his life.

AN Ottawa dispatch informs us that the drive prospects at present are uncertain. On the main streams no trouble will be found in getting down the logs, and from all accounts there is plenty of water in Indian river and its tributaries. On the north side of the Ottawa Valley there is no cause to fear but that all will go well, and any trouble that may arise will be on the south side, and along the creeks that flow from that direction. If, however, the run, which may be naturally looked for at this season comes, the only trouble which the lumbermen fears this season will be taken off his mind.

MR. J. J. DONOUGH, of Surrency, Georgia, furnishes us the following report of the cut of one of the American Saw Company's 56-inch Trenton Tooth Saws:—

14	Pieces	pitch pine,	3×9	883 feet
176	"	"	12×12	71,880 "
71	"	"	9×12	13,068 "
87	"	"	2-inch plank	3,820 "
37	"	"	1½ "	1,122 "
			Merchantable	90,773 feet
			Boards	20,000 "
				110,773 feet

Worked eleven hours. Sawed 230 logs.

While Messrs. Bentley, Meyer & Southwick, of Rochester, N.Y., say that they have sawed about 1,000,000 feet of the hardest white swamp oak and any quantity of pine with their inserted tooth saw, and that it did its work equal to the best gang sawing.

THE *Timber Trades Journal* of the 6th April, under the head of Liverpool, says:—"Another week has passed without bringing forth any signs of a return to a more active condition of business than has prevailed for some time past. The winter has at last departed sufficiently to admit of building operations proceeding, but this has not yet affected our trade in any noticeable degree, for orders come in slowly, and when they do come are competed for eagerly on all sides. All rumors from Canada that have reached this side point to a maintenance of the prices that were paid early in the present year, but we cannot find many buyers in this district willing to operate at the rates demanded by shippers. The outlook for the coming season is far from bright, for the present state of trade in the country is not brisk, and there is now on hand a stock equal to the probable demand for the next five or six months. In the face of this, it is most difficult to understand why such high prices should be demanded abroad, and still more difficult to comprehend why they should be paid, seeing that, so far as this port is concerned, the tendency of the market has been downward, not only for one or two articles, but for nearly every class of wood goods imported.

FOREST CONSERVANCY.

The English *Journal of Forestry* has called attention, as we learn from an extract which will be found elsewhere in this issue, to the marked advance in forest conservancy in the colony of South Australia. It seems that the government has instituted a system of forest reserves, and that an important addition was made last year to the area thus reserved by the Forest Board. By natural regeneration and by the formation of new plantations they are thus wisely and with prudent foresight, providing against the extirpation of their forests and the arrival of a period when they must depend upon importations from abroad for their supply of timber.

South Australia is a comparatively new colony. Men who are not of advanced age can remember its formation and settlement. New Zealand, which is also one of the younger dependencies of the British empire, has very sensibly under wise administrators adopted a similar system. Is it creditable to Canada, being as it is one of the oldest settlements and the most important in wealth and population of the colonial members of the British empire, to lag behind these minor and younger communities, and show less common prudence or foresight on such a vital point? It may be said that we were so richly endowed with forests that it did not seem seem necessary to take such precautions. Even if such an excuse were valid as regards the past, it is utterly without weight now. At present it is generally conceded that our forests are far from inexhaustible, that indeed the period of their duration, at the present rate of consumption, is limited to a generation at the furthest, so we would do well without delay to follow the example thus offered to us.

MR. HENRY ATKINSON, of Etchemin, opposite Quebec, has been successful in forming an English joint stock company, which takes over the lumber business formerly conducted by the firm of H. Atkinson & Co., including all their mill property and limits, as well as the limits belonging to the Bank Nationale.

FOREST LANDS.

We were glad to receive from Mr. Jack, a New Brunswick lumberman, the letter which we publish in another column, endorsing what we have urged as to the necessity of discriminating between the lands which are fit for settlement, and those which should be preserved as forests. It greatly strengthens our argument to find that not only in Ontario and Quebec, but also in New Brunswick, and we may fairly presume in other provinces of the Dominion of Canada, people are waking to a sense of the importance of this subject of forest preservation, and to the folly of opening indiscriminably for settlement districts which are not adapted for agriculture, and where the settler, without doing any good for himself, brings additional risk of the speedy destruction of our fast diminishing sylvan wealth.

The present wasteful and unphilosophical system of administration of our forests, will never, we are convinced, be remedied till there is a separate department for the supervision of woods and forests. We find many who individually will assent to this, and we call upon them to unite their efforts, which though separately impotent would collectively be most powerful, and to urge the adoption of a more sensible and prudent management of this very important portion of the capital of the country.

THE LOG CROP.

The *Northwestern Lumberman* of the 16th April contains an article on "The Log Crop' and one on "Last Year's Work of the Mills," from which we gather the following figures bearing upon the present position and future prospects of lumber for the current season.

With regard to the log crop, the *Lumberman* claims that the following figures are nearer correct than "any statement that has ever been made up" for the districts to which it refers. The item of "new logs" includes the estimated amount banked to April 15th, and that of "old logs" those left over from other years, either in mill booms, store booms, or in the streams:—

District.	*New Logs.*	*Old Logs.*	*Total.*
Miss. Valley	1,673,000,000	568,500,000	2,241,500,000
Lake Superior	147,500,000	5,000,000	152,500,000
Lake Michigan	1,664,000,000	287,500,000	1,951,500,000
E. Michigan	1,582,200,000	217,250,000	1,799,450,000
Wolf River	115,000,000	20,000,000	135,000,000
Total	5,181,700,000	1,098,250,000	6,279,950,000

The foregoing figures do not, of course, include the logs that will be put into streams and taken out by the railroad mills during the summer. Under average circumstances these are estimated to foot up 150,000,000 feet, while another 1,000,000,0000 feet may be added for stocks to be supplied by mills not included in the above estimate, bringing the total log stock of the Northwestern States up to 7,455,000,000 feet for the season. Of last year's stock however, about 1,250,000,000 feet must have been carried over, and it is not unreasonable to assume that, for various reasons, at least as much will remain uncut at the close of the present season, leaving about 6,250,000,000 feet as the probable production of the saw mills in the north-west for the present year.

Turning now to the *Lumberman's* elaborate statistics with regard to the lumber product of the same territory for the last eight years, we find it was in:—

Year.	*Lumber.*	*Shingles.*
1873	3,993,780,000	2,277,433,550
1874	3,751,396,000	2,473,216,555
1875	3,968,553,000	2,515,838,240
1876	3,879,046,000	2,900,530,725
1877	3,595,333,496	2,693,856,755
1878	3,629,472,759	2,561,490,750
1879	4,806,943,000	2,859,112,750
1880	5,651,295,006	2,972,912,160

These figures show a large increase in the supply during the last two years, but that it has not been more than the demands of consumers required is proved by the fact that the stock on hand on the 1st January of the four years named stood as follows:—

Year.	*Lumber.*
1878	2,018,384,901
1879	2,121,323,513
1880	2,313,823,437
1881	2,836,954,969

Doubtless if these figures were brought down to the present it would be found that owing to the lateness of the season the available stock is quite as low now as it was this time last year.

NEW BRUNSWICK TIMBER LANDS.

FREDERICTON, N.B., April 15, 1881.

GENTLEMEN,—I enclose you the statistics which you have asked me for.

Allow me to congratulate you on the very valuable character of the information given to the public by THE CANADA LUMBERMAN.

Your remarks on fires resulting from settlers locating on lands unfit for settlement are very applicable to New Brunswick. It is time that our mill-owners should receive a little of that attention which has been so lavishly and often unwisely spent upon the settler, and that the public should learn to discriminate between lands which ought and those which ought not to be settled, in which matter great ignorance prevails.

Yours truly,

EDWARD JACK.

Messrs. Toker & Co., Peterborough.

NEW BRUNSWICK.

The following are the receipts from Woods and Forests and Crown Lands since Confederation:—

Year.	*Woods and Forests.*	*Crown Lands.*
1867	$ 24,467 50	$ 12,832 29
1868	20,565 00	15,632 84
1869	18,464 80	16,959 87
1870	21,043 85	12,995 51
1871	27,945 07	26,645 34
1872	45,776 11	29,577 51
1873	41,178 25	17,447 26
1774	25,118 52	9,745 84
1875	52,802 65	6,938 13
1876	66,014 82	9,139 66
1877	94,569 08	6,288 98
1878	105,922 16	3,617 45
1879	60,683 01	3,846 93
1880	125,630 39	17,782 15
Total	$739,181 21	$189,449 76

ST. JOHN, N.B.

EARLY NAVIGATION.—Navigation has opened earlier than was expected at the time of our last writing. The ice is out of the river so as to enable the steamers to commence running on the 11th inst., which is the earliest for many years past, the usual time being from 20th April to 1st of May.

LOW WATER.—The weather continues very cold and dry, and in consequence, the water is unusually low in the river for the season, and the anxiety as regards the prospects for stream driving are not diminished.

LOGS MOVING.—A few rafts of logs of last year's production, and frozen in last fall, are now coming forward, and some of the mills are commencing to saw, but it will be some weeks yet before logs in any quantity will be available.

WEATHER.—In this section during the past winter, and the spring thus far, the weather has been in marked contrast with that of very many places both on this continent and in Europe. We have had no violent storms, no severe frosts, no heavy thaws, no floods—but a steady course of fine weather of medium temperature, varied with light falls of snow. During the month of March we had but one snow storm, and that on the last day of the month, when a few inches fell, which all disappeared in two days after.

SHIPMENTS.—Shipments of deals and other sawn lumber for fortnight ending this date, say:

For Europe	5,962,000 Sup. ft.
" United States	1,486,000 "
" West Indies	263,000 "

FREIGHT RATES.—Freights are without material change; we quote, Liverpool and London 57/6: Bristol Channel 60/; Dublin 58/9; Boston $2.25; New York and Philadelphia $3.

St. John, N.B., April 21st, 1881.

New York Exports.

The *Real Estate Record* gives the following as the exports of lumber from the port of New York:—

	This Week, feet.	*Since Jan. 1, feet.*
West Indies	979,000	13,[illegible],284
South America	536,723	7,191,154
East Indies, Africa, etc	112,952	1,719,400
Europe, Continent	.....	[illegible],150
Europe, United Kingdom	98,500	1,460,375
Total	1,727,175	24,460,363

THE Hamilton & Northwestern Railway is doing a lively business in timber this spring. Timber trains arrive in Hamilton every day and it is being shipped by vessel as fast as possible.

EMERY WHEELS FOR SAW GUMMING!

Solid Emery Wheels are now almost in universal use for the purpose of gulletting and gumming saws. Statistics show from 25,000 to 30,000 saw-mills in the United States. Many of these run only a single saw each. A one-saw mill would use one or two wheels a year, costing $3 to $4 each, and when such small mills order single Emery Wheels from the factory, the express charges often equal the cost of the wheel. There was a time when the quality of Emery Wheels was so uncertain, and the demand so fickle, that storekeepers could not afford to carry them in stock. Now, however, Saw Gumming Wheels have become as staple an article as Files, and every dealer in saws, Hardware and Mill Supplies can afford to carry a few dozen standard sizes in stock. Large dealers order stocks of $500 to $750 worth at a time. Saw Gumming Wheels are used with the edge (or face) square, round, or beveled. Probably seven-eigths of all in use are beveled.

Tne principal sizes are:

$8x\frac{1}{4}$, $8x\frac{3}{8}$, $8x\frac{1}{2}$ — $\frac{3}{4}$ in. hole.

$10x\frac{1}{4}$, $10x\frac{3}{8}$, $10x\frac{1}{2}$, $10x\frac{5}{8}$ — $\frac{3}{4}$ in. hole.

$12x\frac{1}{4}$, $12x\frac{3}{8}$, $12x\frac{1}{2}$, $12x\frac{5}{8}$, $12x\frac{3}{4}$, $12x\frac{7}{8}$ — $\frac{3}{4}$, $\frac{7}{8}$ and 1 inch. Holes,

Probably more wheels $12x\frac{3}{8}$, $12x\frac{1}{2}$ and $12x\frac{3}{4}$ are used than all the other sizes together. Saw Gumming Wheels are used, however, of all sizes up to $24x1\frac{1}{2}$. The most frequent complaint is that Emery Wheels harden the saw so that a file won't touch it. The answer is that you don't want a file to touch it. An expert workman will shape and sharpen the teeth with an Emery Wheel, leaving the teeth *case hardened*, in which condition the saw will cut about $33\frac{1}{3}$ per cent. more lumber than a soft saw will. Those who want to use the file, however, have only to touch the saw *lightly* a second time (after going all over it once), and this second touch will cut through the case-hardened scale.

A QUESTION OF QUALITY.

Thirteen years of experience as makers of, dealers in, and actual users of Emery Wheels, have led us to a decided opinion as to what quality is the best. We prefer for almost every use an "Extra Soft" wheel like the "Pocono." We believe that money lost through the rapid wear of the wheel is more than made up by the money saved on wages. As we cannot get every one to adopt our views, we make several qualities, so as to meet their views. We say to those who think they can only be satisfied with some other make of wheels (not Tanite), that we can furnish qualities *to match* any and every other make. If you have got used to some special quality of wheel, let us know what it is, and we can send you *a Tanite Wheel of similar quality*. Our *regular* classification of Saw Gumming Wheels is as follows:

CLASS 2. MEDIUM—HARD.—This Wheel is THE STANDARD Saw Gumming Wheel all over the world. Probably seven-eighths of all the Saw Gumming Wheels used are "Class 2." It cuts fast and keeps its shape well. Some think it too hard, some too soft. We prefer the "Pocono."

CLASS 3. MEDIUM—SOFT.—The same as to coarseness and fineness as "Class 2," but a *softer*, and therefor freer cutting wheel.

CLASS "POCONO." EXTRA SOFT.—This Wheel we prefer to all others. It is both *finer* in grain and softer than either of the above. As a Saw Gumming Wheel, Class "Pocono" is specially suited to those practical and experienced Sawyers who know how to grind with a light touch, and who want a free cutting wheel that will not create much heat.

Illustrated Circulars and Catalogue, showing Cuts of Saw Gumming Machines, and Shapes, Sizes and Prices of Wheels, sent free on application.

CANADIAN TRADE SPECIALLY SOLICITED.

M. Covel's Latest Improved Automatic Saw Sharpener!

Is the Most Perfect Machine that has ever been Introduced into Mills for that purpose.

CIRCULAR SAW STEAM FEED!

I would also call special attention to my

Heavy Circular Saw Mills

and for STEAM MILLS, would recommend the Steam Feed, having put in several which are giving the best of satisfaction, as will be seen by the following testimonials:—

GRAVENHURST, August 20th, 1880.

WM. HAMILTON, ESQ., Peterborough.

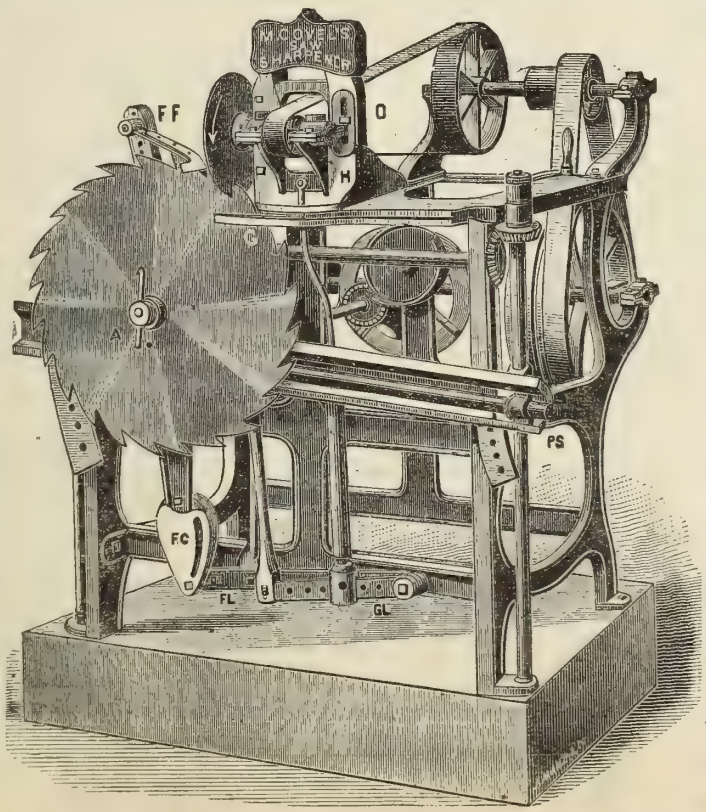
DEAR SIR—I have used your Steam Feed for near four months, and it has given me perfect satisfaction in every way; it is admitted by every person who has seen it work to be the best feed ever invented. Since I put it into my mill, I have not lost ten minutes time fixing anything belonging to it. I can cut 18 boards 13 ft. long in one minute. It can do much smoother and better work than the pinion feed. It is easily governed and reverses the carriages instantly. I am thoroughly satisfied with it and can recommend it to any person who has a Circular Saw Mill for cutting long or short logs. I consider I have cut more lumber than will pay for the Steam Feed since I got it than I would have cut had I not put it in.

Yours respectfully,
WILLIAM TAIT,
Lumberman, Gravenhurst.

TORONTO, August 11th, 1880.

WM. HAMILTON, Peterborough, Ont.

DEAR SIR—The Steam Feed you put in is working splendidly. Yours, &c.,
THOMPSON, SMITH & SON.

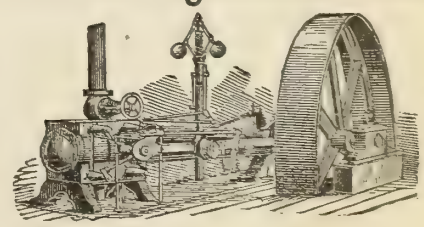


MILL MACHINERY!

I am also manufacturing Saw Mill Machinery, for all sizes of Gang or Circular Mills, Span or Double Circulars for Slabbing Small Logs. My Patent Jack Chain for drawing logs into Saw Mills, acknowledged by all to be the Cheapest and best ever got up; also, my Patent Lumber Markers, different sizes of Edgers, Gang Lath Mills, Trimmers, Power Gummers, and all Machinery used in a first class Gang or Circular Saw Mill; also, small Hand Gummers for use in the woods, for Cross-cut Saws. Rotary Pumps of different sizes, for Fire Protection in Mills, &c.

Horizontal Engines and Boilers

CORLISS ENGINES



Where economy of fuel is the great consideration, along with uniformity of speed, such as is required in Grist and Flouring Mills, Woollen and Cotton Factories, or large Factories of any kind, I supply the Corliss Engine. I feel justified in saying that our Style, Workmanship and Finish on this Engine will be no discredit to its renown, and certainly is not equalled in this country for economy of fuel. I have them working at $2\frac{1}{2}$ pounds of coal per horse-power per hour.

L10

WILLIAM HAMILTON - - PETERBOROUGH, ONT.

Chips.

THE mill belonging to the Ontario Bank at Parry Sound is being put in order and is expected to commence running about the 1st of May.

IN the manufacture of shoe lasts it is estimated that 500,000 cords of birch, beech and maple timber is used, and an equal quantity for small tools.

MR. ALEX. MCARTHUR, of Kinmount, is shipping birch lumber to the front. So is Mr. Geo. Cluxton. All the factories along the Grand Trunk are glad to get it.

THE lumber exports from St. John, N.B., for the past three months to trans-Atlantic ports reached 11,121,679 feet, not including 499 tons of birch timber.

A PINE TREE was recently cut in Clearfield county, Mich., that made three sticks of square timber, 62, 60 and 36 feet long respectively. At 36 feet from the stump the tree squared 27 inches.

THE large belt referred to in our last issue as having been made by Messrs. Robin & Sadler at their factory in Hamilton, should have been credited to Montreal as it is in the lattter city these gentlemen are located.

THE official statement of the banks of the Dominion for the month of March show an increase of $400,000 in circulation ; an increase in Dominion deposits both on demand and on time and an increase in assets of $1,000,000.

THE Omemee *Herald* says Mr. John Kincaid, of that place, manufactures a cedar shingle the surface of which is as smooth as if it had been planed or sand papered, and that the point and butt are cut perfectly true and square.

J. H. REIFFENSTEIN, D.L.S., who has just returned to Winnipeg from the Shell River district, where he has completed a subdivision survey of six townships, says it is principally a timber tract of country, consisting of poplar, balm of gilead, and spruce, a belt of the latter having been struck in the eastern part of the survey. Poplar trees averaged thirteen inches in diameter.

DURING the winter several improvements have been made in the Parry Sound Lumber Company's saw mill at that place, with a view to economising labor and increasing the capacity of the mill. A new iron burner has been erected, and upon trial, although the sawdust and wood thrown into it was mixed with large quantities of ice, it proved a complete success. The company expect to cut from fourteen to sixteen million feet during the season.

AN English paper predicts that wooden railway sleepers are to be replaced by steel, just as iron rails are being superceded by steel rails. Steel sleepers, it says, are very flexible, and will outlast the toughest rails, while their greater cost over timber sleepers will be compensated by their greater endurance, and the diminished expenditure of relaying. They are now manufactured in great quantities at Dusseldorf, and 70,000 tons have been laid down as an experiment in various parts of the continent.

A MANITOBA exchange suggests that it would be an interesting experiment if the farmers in Manitoba would enclose a few acres of prairie with a strong fence, carefully excluding cattle and other animals. The result would likely be a vigorous growth of young trees, perhaps mostly poplar. On a piece of ground which, for at least two years, was protected from cattle and fires, immense numbers of young poplars made their appearance last season. Claims for tree culture might, perhaps, in this way be retained. In any case a fine grove of trees at every farm house could be secured with very little trouble.

AT the installation of the officers of the Buffalo Board of Trade on the 15th April, the newly elected president said :—"There is no doubt but that our citizens with very few exceptions are in favor of a new reciprocity treaty, and are therefore desirous that a joint committee should be appointed on the part of Great Britain and our Government to take the matter into consideration, and devise a plan that would result in giving the people of Canada and this country a just and equitable treaty, one that would be so fair that the good resulting from it would be mutually advantageous to the people of both countries.

YELLOW PINE TIMBER.

The very best of yellow pine timber is not that of greatest density. Pitch pine is not as good for decks or deck frames as other fine-grained pine from the South. Before the war of 1861 there was a species of yellow pine grown about Wilmington, N.C., whose specific gravity equalled the best pine on our coast, the mean of which was ·637 = 39 lbs. 13 oz. when squared ; when round and in bark, ·781 = 48 lbs. 13 oz. The very best yellow pine timber is that in which the even fineness and firmness of the grain is continued to the centre or pith of the tree, ranging from 15 to 25 grains to the inch. By careful observation much information that is valuable may be obtained from the table of specific gravity. Notwithstanding the thickness of the bark of the yellow pine and its lightness (the specific gravity differing not materially from that of cork), we find that the pine timber in bark weighs much more than the square timber. This, to the casual observer, would hardly seem possible ; the man unacquainted with the nature of yellow pine sapwood would be likely to doubt the correctness of the table. But such is the nature of the exterior coating immediately under the bark of yellow pine, that we cannot find a substance more analogous than sponge; its retentive properties are very similar, and the turpentine with which this sapwood is saturated is the cause of its increased specific gravity above that of the squared timber when covered with bark.

The thinner the sap wood, the less the specific gravity.

There is an error in the prevailing opinion in relation to the durability of yellow pine timber. Our Government has become a heavy stockholder in this prevailing error, by acting on the supposition that yellow pine timber requires a great amount of seasoning. The consequence has been that large timber houses have been erected and filled with this timber, and kept for many years, and when in a state of decay it has been used for new vessels and vessels undergoing repairs. This is a very great mistake ; an equal number of months would have answered a better purpose than as many years, as regards the shrinkage and durability of yellow pine. When in pieces of any considerable size, it shrinks but little after the vessel is in active service ; when used as deck plank, they should be made narrow. Our judgment, based upon a large experience, leads us to the conclusion that yellow pine requires no seasoning to make it durable. The ebb and flow of the turpentine are through the sap, as the specific gravity will show ; hence we say that the capillary tubes of the heart would have no more of the resinous property if cut at the proper season than is required for strength and to render it durable.

The continued use of yellow pine timber in the private shipyards of New York has proved it incontestably. We could name ships built in this city more than thirty years ago that have their first yellow pine beams in their decks; and we could point to others that have exhibited a durability unknown to our navy. Proper care should be taken to clear the timber of all sap ; and as regards shrinkage in naval vessels, if the same measures were adopted as in private yards, making strakes of planks narrow, there would be no cause of complaint. The strakes of clamps, deck plank, bulwarks and ceiling of naval vessels are too wide by at least twenty per cent.—*American Ship*,

A New Water Wheel.

One of the novelties in water wheels, patented some time since, consists of an endless belt of any suitable construction, passing over an upper and lower pulley, and fitted with a number of water buckets whose upper portions are formed with a rearward curve to permit them to pass through the water easily at the bottom of the wheel, and whose lower ends are secured to the belt by elastic connections to permit them to turn easily over the pulleys. The weight of the water in the buckets operates directly to drive the upper pulley, which, being fixed to a shaft, furnishes the desired power. The inventor claims for this simple form of water wheel a larger percentage of efficient power, with a given flow of water, than is obtained by the best turbine wheels.

ANOTHER LARGE ROLLWAY.

A correspondent of the *Lumberman's Gazette* writing from Pinconning, claims there is the largest rollway on the bay at the termination of the Saginaw Bay and Northwestern railroad. This road runs west from Saginaw Bay through Pinconning a distance of 10 miles, then north 12 miles. It has several branches from one-half to two miles in length. At the bay there are two trestles, their united length being a trifle 3,000 feet ; they stand about 20 feet above high water mark. On the line there are 22 camps in operation—three camps belonging to Yawkey & Bradley, three to H. W. Sage, two to Folsom & Arnold, and four operated by W. J. Miller & Co., the last named getting out logs for T. H. McGraw. These camps run on an average about 80 men to a camp divided into two gangs, one working in the day and the other nights. At the bay there is about 80 men divided in the same way, the former to load cars and the latter to unload. The road has six engines, five in constant use night and day, two gangs to each train, in fact we have two gangs to every thing as we run day and night.

At the bay the logs are dropped off of the trestles and rolled a distance of 600 to 800 feet, and then tiered up, and as fast as they come we keep on piling them on top so we have them all in perfect straight tiers each mark by itself, and as every camp has a mark of their own, you can imagine how they look.

They claim that at Averill they had up to the 10th of this month, 14,506,318 feet, which I think is about the right figures. We can see them on that figure and go about 12,000,000 better, for we have banked at present about 25,000,000, and if any one wishes to see the largest rollway in Michigan, and I think in any State, tell them to come to Pinconning. It won't cost them anything from Pinconning to the bay, a distance of two miles, as W. J. Miller, general manager, is a very accommodating gentleman, and any train going to the bay will be at the service of visitors. Remember that the logs are all tiered up and not dumped like nails from a keg, as at Averill. The president of the company operating this road is W. S. Gerrish, of Muskegon ; W. J. Miller, general manager.

To Fasten Cloth on Wooden Surfaces.

The following is said to be an excellent method of fastening cloth to the top of tables, desks, etc. : Make a mixture of 2¼ pounds of wheat flour, 2 tablespoonfuls of powdered rosin, and 2 tablespoonfuls of powdered allum ; rub the mixture in a suitable vessel, with water, to a uniform, smooth paste ; transfer this to a small kettle over a fire, and stir until the paste is perfectly homogeneous without lumps. As soon as the mass has become so stiff that the stirrer remains upright in it transfer it to another vessel and cover it up so that no skin may form on its surface. This paste is applied in a very thin layer to the surface of the table ; the cloth, or leather, is then laid and pressed upon it, and smoothed with a roller. The ends are cut off after drying. If leather is to be fastened on, this must be moistened with water. The paste is then applied, and the leather rubbed smooth with a cloth.

Utilizing Tide Power.

When the venerable Peter Cooper was an apprentice he invented a water wheel to utilize the natural current of the tides. His plan was to cause the waterwheel to rise and fall with the tide, at any desired speed, by the action of its own machinery. It was so arranged that the whole power could be thrown on a mill, or be made to force compressed air into a reservoir to be used as a motive power to propel ferry boats across the river. This last was done by making the hull of a ferry boat to consist of two strong iron cylinders, to provide for the boyancy of the boat, and form at the same time a reservoir for the compressed air used to drive it across the river. The wreck of the model of this tide mill is still preserved in the garret of Mr. Cooper's house.

THAT Marvellous Purifyer BURDOCK BLOOD BITTERS, will speedily change the sallow face to one of freshness, health and beauty. It regulates the Bowels, acts promptly on the Liver and Kidneys and strengthens the system when broken down by nervous and general debility. Ask your druggist for a trial bottle, the cost is only 10 cents. Large bottles $1.00.

AUSTRALIAN FORESTS.

According to the London, Eng., *Journal of Forestry* there has been a marked advance in forest conservancy in South Australia during the past year. The extent of the forest reserves has been increased by 4,762 acres, the total area now reserved being 239,368 acres. The reserves are distributed throughout various parts of the colony, but chiefly in the northern and southern districts. During the year, 906 acres have been put under a crop of trees in these reserves by planting, seed sowing, and natural regeneration which, added to the 934 acres planted in previous years, gives 1,840 acres now inclosed and put under a crop of trees by special cultivation and designated plantations. This can only be called a small beginning, considering the immense area that still remains to be treated, but it is nevertheless highly creditable to the forest board of the colony that it has accomplished this much in the short time since the board was constituted.—*Northwestern Lumberman.*

Pine Forests in Georgia.

The wanton destruction of the pine forests of Georgia is creating considerable alarm. Georgia has untold wealth in her pine forests, and yet they are diminishing rapidly and bringing but a nominal return. Georgia contains an area 35,515,526 acres. The pine belt contains nearly one-third of this area, say 11,505,174 acres. Allowing about one-half of this amount to be already taken up and employed for cultivation, milling, and turpentine purposes, we have only 5,752,587 acres left in the original forest. There was consumed during the year 1880, as near as we can estimate, a little over 250,000 acres of timber. This timber found its way to foreign markets principally, leaving but little money in the country as compensation. At this rate, it will be seen that it will only require about twenty years to destroy the last original pine in Georgia, even if there is no increase in consumption. The supply, however, is not equal to the demand now, and new mills and turpentine farms are being brought into existence continually. Certainly such a showing is calculated to alarm any thinking man. We were told by a mill-owner in southern Georgia that it requires 2,600 acres annually to supply that one. All the merchantable timber for miles on either side of the railroads, rivers and creeks has been cut and sent to market. A section of unmolested pine timber will be a fortune to any man in less than twenty years.

Wash For Outside Walls.

I have long used for whitening my dwelling and also for barns and sheds the following preparation :—Dry zinc, 1 lb ; white glue, 1 oz ; or in the same proportion of ingredients for any quantity needed.

The zinc must be ground or pulverized and dissolved in water moderately hot, stirring it thoroughly during this process. The glue is to be dissolved in a vessel by itself in the usual manner and added to the zinc mixture while hot, stirring the same during the process and for some little time afterward. The object desired is a thorough admixture of the ingredients. The preparation when ready for use should be of the consistency of ordinary whitewash. It is best applied with a wide brush. Walls treated with this mixture, which have not been limed, will preserve a pure white for several years, and will not rub off. Twelve years since I applied this mixture to my barn and sheds, and to-day it is nearly as white as when first put on, and cannot be rubbed off with the hand. If tinting for border is desired, I have no doubt that a slight admixture of lamp-black would give a leaden color. I have not used it on newly dressed surface, and do not know whether it would adhere. A good quality of dry zinc should be purchased for from 6 to 7 cents per pound.

Strength of Insects.

At a meeting of the Maryland Academy of Sciences recently Dr. Theobald showed a species of a beetle and gave the following figures :—Weight of beetle, two grains ; weight moved by it 5½ ounces—2,540 grains, or 1,320 times the weight of the beetle. A man weighing 150 lbs., endowed with the strength of this insect, should therefore be able to move 198,000 pounds, or nearly 100 tons.

Chicago.

The volume of shipments has largely increased during the week, the reported shipments being over 7,000,000 feet greater than for the corresponding week of last season, and the actual shipments reaching 27,757,000, or an average of 4,500,000 feet per day. Prices are reported firm, and we can learn of nothing which should lead to a doubt of the correctness of the claim.

A buoyant feeling is manifest among the dealers and all are looking forward to a short and active season, the gross results of which will exceed anything heretofore known. This feeling so far as we can learn is shared by the trade everywhere.—*Northwestern Lumberman.*

Boston.

The distribution continues to gradually improve, and although the demand is not yet very large, dealers show no desire to dispose of any stock at "off" rates, and are continuing to make additions to their supply, especially in the finer grades. Nearly all of the inferior kinds have been in the market in sufficient quantities to give an easy tone to prices, although, as a general rule, dealers are more disposed to hold than to sell below "card" rates. The finer grades have been limited in quantity, and prices are firm. Hardwoods still continue scarce, and sell well at high prices.

British Imports.

The British Board of Trade Returns for February show the import of woods into the United Kingdom during the month ending February 28th, 1881, and in the two months ending February 28th, 1881, compared with the corresponding period of last year to be as follows:—

FOR THE MONTH OF FEBRUARY.

	Quantity.	*Value.*
Timber, (hewn) 1880	3,354,000 ft.	£132,019
do do 1881	3,500,200 "	256,900
Increase	148,200 ft.	£124,881
Timber, (sawn or split or dressed) 1880	2,773,850 ft.	£142,296
do do 1881	2,178,650 "	133,063
Decrease	595,200 ft.	£9,233

FOR THE TWO MONTHS ENDING 28TH FEBRUARY, 1881.

	Quantity.	*Value.*
Timber, (hewn) 1880	6,815,400 ft.	£263,632
do do 1881	7,172,250 "	404,512
Increase	356,850 ft.	£141,080
Timber, (sawn or split or dressed) 1880	5,314,150 ft.	£268,526
do do 1881	4,701,350 "	268,453
Decrease	612,800 ft.	£73

Freight Rates.

The rate of freight on lumber from Belleville to Oswego has not yet been established, as shippers only offer 90 cents while vessel-men are asking $1.25. There are plenty of vessels at that port, so that the latter will likely have to moderate their demands.

The English Wood Market.

James Smith & Co.'s Liverpool Wood Circular of April 5th says :—The arrivals since our last have been 17 vessels, 12,624 tons, against 30 vessels, 14,635 tons, in corresponding period last year ; and 8 vessels, 5,139 tons in 1879 :—

FROM 26TH JANUARY TO 31ST MARCH, 1881.

	Vessels.	*Tons.*
Quebec	1	921
St. John, N.B., &c	4	3,734
United States	18	19,458
Baltic	6	1,993
Total	29	26,106

FROM 26TH JANUARY TO 31ST MARCH, 1880.

United States	7	5,543
Baltic	26	9,056
Total	42	24,414

FROM 25TH JANUARY TO 29TH MARCH, 1879.

	Vessels.	*Tons.*
Quebec	*Nil.*	*Nil.*
St, John, N.B., &c	7	6,483
United States	9	8,630
Baltic	7	3,021
Total	23	18,134

Business during the month has been excessively dull, and buyers generally exhibit a want of confidence in the future ; therefore, sales both by private and by public auction have been unsatisfactory to sellers. It is now to be hoped that the fine weather may have some beneficial effect, although for some time to come the stock will be ample, and shippers should curtail supplies as much as possible. Freights are without change, and money continues cheap.

COLONIAL WOODS.—Of yellow pine timber there have been no fresh arrivals during the past month ; the stock is comparatively heavy, and the consumption has been moderate. The sales have been by private only, as the parcel of Quebec waney board recently offered at auction was not sold. Red pine is in dull demand, and the stock ample ; there are no sales reported. Of elm there is an ample supply, and the consumption during the month has been on a small scale. Of oak there has been an improved consumption, but the stock still remains heavy, being 444,000 feet against 361,000. A parcel of 650 planks, cut to waggon size, was offered at auction, but did not meet with a purchaser. Black walnut—There has been a good demand, and several parcels realized at auction 5s@6s per foot. Of birch there have been no fresh arrivals, but the stock, which consists of 140,000 feet, will be sufficient until the fresh import comes in. There have been no sales during the month. The parcel of 483 logs, which was offered at auction a few days ago, was withdrawn, and afterwards sold privately at 14¾d per foot. N.B. and N.S. spruce deals have been sold freely by private at from £6 17s 6d@£7 per standard for St. John's and other good shipments, all from the yard ; but for shipment under contract the sales have been at from £6 15s@£7 per standard, and Pugwash at £6 5s per standard c.i.f. By auction the cargoes (sold "without reserve") ex Minnie Gordon, from Richibucto, averaged £6 17s 6d per standard, and ex Gulnare, from Bay Verte, averaged £6 14s 6d per standard, and a few days ago the cargo of St. John's deals, ex Flying Foam (old deals), realized from £6 5s@£7 12s 6d, and averaged about £7 per stnadard. The stock is being reduced, and the consumption as compared with the same time last year has greatly improved. There is still a good inquiry from the Continent, and it is probable the present prices will now be fully maintained. Of pine deals the stock is light, but there is not much demand for these at present. A small lot from St. Margaret's Bay of 1st, 2nd and 3rd quality was sold at £7 per standard. Quebec pine deals are very heavy in stock, but the consumption is improving ; the sales have been by auction for 3rd quality at £9 10s@£11 12s 6d for board deals, and at £8@£9 7s 6d for 11-inch and under the 1st and 2nd quality were withdrawn unsold. Quebec pipe and West India staves are in fair demand. Palings and lathwood are easily disposed of ; the latest sales of palings were 70s for 5x1 inch ; and 55s for 4x¾ inch.

HEADACHE.—Why become a suffering martyr to Headache, when BURDOCK BLOOD BITTERS will surely cure the cause of all varieties of Sick and Nervous Headache, cleanse the system, regulate the secretions, relieve constipation of the bowels, purify the blood, renovate the liver and tone up the nervous system, and distressing headache will be unknown. Sample bottles 10 cents. Large bottles $1.00.

Liverpool Timber Sales.

On Friday, April 1st, Messrs. Farnworth & Jardine offered a cargo of spruce deals from St. John, N.B., stored in the yard, consisting of about 35,000 pieces, of which about two-thirds was sold by auction, chiefly to the local trade, and the remainder was probably closed by private treaty after the auction was over. Two or three parcels of Quebec pine deals were offered, chiefly 1st and 2nd quality, but there was no disposition to buy, and the goods were withdrawn. A parcel of 5,700 3rd quality bright sold as per particulars below :—

Spruce deals, St. John, N.B.—

Glasgow.

During the week several extensive auction sales have been held, as detailed below, and afford a good indication of the state of the market here. The first was held at Greenock on the 31st March, when a large amount of business was done—say about 1,000 pieces log timber and 70 lots deals changing hands.

At the sales of deals held here on the 6th April, there was a fair company, but merchants and consumers were evidently disposed only to buy sparingly (as regards pine deals especially), although tempting offers were made of some lots at very moderate rates. On the whole the market for pine deals here at present is by no means active. This state of things, however, may only be temporary, as the stock of ordinary useful deals is not large comparatively.

The spruce deals, particularly the long lengths and favorite breadths, met with fair competition. Some lots of the narrow sorts, or 7×3, were withdrawn :

Quebec 1st yellow pine deals—

12 ft. 17/20×3	2s. 10½d.	p. c. ft.
12 " 15/16×3 } 10 " 14/21×3 }	2s. 8d	"
12 " 15×3 } 11 " 14/21×3 }	2s. 7d	"
10 " 12/21×3	2s. 6½d.	"
12 " 14×3 } 9 " 15/21×3 }	2s. 6d	"
10 " 12/14×3	2s. 4d.	"
9 " 12/21×3	2s. 3½d.	"
12 " 10×3	2s. 2d.	"

Do. ends, 6 to 8 ft. 7/11×3, 1s. 11d, and 1s. 10½d. per cubic ft.
Do. floated deals, 9 to 11 ft. 9/10×3, 2s. p. c. ft.
Do. 3rd do., 12 ft. 15/20×3, 1s. 3½d. p. c. ft.

On 6th April, at Glasgow, Messrs. Hunter, Sheriff & Co., brokers (following Messrs. Geo. Gillespie & Co's sale) :—

St. John, N.B., spruce deals—

19 to 24 ft. 11×3	1s 0½d.	p. c. ft.
15 & 13 " 11×3	1s. 0½d.	"
16 " 11×3 } 10 to 22 " 13×3 }	1s. 0¼d.	"
11 " 21 " 14×3	1s.	"
9 to 12 & 14 " 11×3 } 9 to 22 " 12×3 } 17 " 23 " 9×3 } 12 " 9×3 }	11¾d.	"
13 & 14 " 11×3 } 16 " 9×3 }	11½d.	"
9 to 11 " 9×3	10¾d.	"
9& 10 " 7×3	9½d.	"
9 to 23 " 6×3	10d.	"
10 " 21 " 7×2½	10d.	"
9 " 22 " 3/6×3 & 2½	9½d.	"

Do. ends—

6 to 8 " 7/14×3	9¾d.	"
8 " 5 " 7/14×3	8¾d.	"

Do. 4th spruce deals—

9 to 22 ft. 11×3 } 9 " 22 " 9×3 }	9d.	"
9 " 22 " 12/14×3	8¾d.	"
9 " 23 " .7×3	8½d.	"

St. John, N.B., pine deals—

THE GENUINE SILVER-STEEL,

Lance Tooth

CROSS-CUT SAW!

It stands without a rival, and is the fastest cutting saw in the world. It has beaten the best Canadian and American made saws 33⅓ per cent in every contest. Its superiority consists of its excellent temper. It is tempered under the secret Chemical Process, which toughens and refines the steel. It gives a finer and keener cutting edge, and will hold it twice as long as any other process. We have the sole right for this process for the Dominion of Canada.

None genuine that are not like the above cut, with registered trade mark with the word "The Lance," and Maple Leaf with our name. Price $1 per foot.

CAUTION.—Beware of Counterfeits. There are inferior counterfeits on the market, which are intended to be sold at a high price upon the reputation of this saw. We will send to any address a saw exactly like any counterfeit, warranted equal in quality or no sale, at 60c. per foot. Therefore do not be humbugged into paying a first-class price for a second-class saw. A fact to bear in mind is that if the material and temper are not of the very best quality the shape of the teeth amounts nothing. A saw, like a knife, will not cut if set without it will hold a keen, cutting edge. We have cut off a 14-inch sound basswood log in eight seconds with this saw. Manufactured only by

SHURLY & DIETRICH,

Manufacturers of Saws, Plastering Trowels, Straw Knives, &c. &c.

GALT, ONTARIO. b15

This cut is a simile of Package.

The greatest tribute to its extraordinary merits is, that it was awarded First Prize and Diploma at

Toronto Exhibition, 1880.

Wrought Iron Shanty Cook Stoves

The Best Article ever offered to the Trade.

I have much pleasure in drawing attention to my **WROUGHT IRON COOKING STOVE, for Shanty, Hotel and Boarding House use.** These Stoves are made of **Heavy Sheet Iron,** the top and lining of the fire-box being of **Heauy Cast Metal** and all the connecting parts of substantial **Wrought Iron Work.** The dimensions of these Stoves are as follows:

SINGLE OVEN STOVE

Top surface contains six 10-inch holes, with ample room between, and one oven 16 x 24 x 26.

DOUBLE OVEN STOVE

The Double Oven has a top surface containing twelve 10-inch pot holes, with two ovens, each 16 x 24 x 26. One fire-box of suitable size for area to be heated. Below will be found Testimonials from some of the leading Lumbermen, who have used my Wrought Iron Cook Stoves since I ommenced manufacturing them. They are the names of gentlemen who are well known and eliable, and will carry more weight than any recommendation of my own could do.

The Best Stove I have ever Used.

PETERBOROUGH, May 31, 1880.

ADAM HALL, Esq., Peterborough. Dear Sir,—I have used your Wrought Iron Cooking Stove in our lumbering operations since its introduction here, and have no hesitation in saying that I prefer it to any other. For durability, economy and efficiency, where a large number of men are employed, it is the best stove I have ever used. You can, with confidence, offer it to hotels, boarding houses and lumbermen.

Yours truly, THOS. GEO. HAZLITT.

The Stove for Lumbermen.

PETERBOROUGH, June 1st, 1880.

ADAM HALL, Esq., Peterborough. My Dear Sir,—We have used your Wrought Iron Cooking Stove and find it is very satisfactory for lumber operations, especially so on drives. We can recommend it highly.

Yours truly, IRWIN & BOYD,

Gives the Greatest Satisfaction.

PETERBOROUGH, June 3rd, 1880.

A. HALL, Peterborough. Dear Sir,—I have had the Wrought Iron Cook Stove, purchased from you, in constant use ever since last fall, and it gives the greatest satisfaction in every respect. I can recommend them highly to any one who is in the lumber business. Very truly yours, GEO. HILLIARD, M.P.

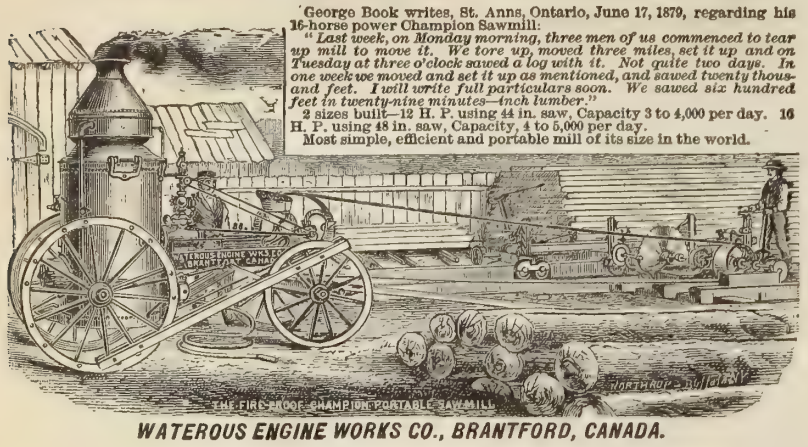
Champion Portable Saw Mills

ENGINES ON WHEELS.



George Book writes, St. Anns, Ontario, June 17, 1879, regarding his 16-horse power Champion Sawmill:
"Last week, on Monday morning, three men of us commenced to tear up mill to move it. We tore up, moved three miles, set it up and on Tuesday at three o'clock sawed a log with it. Not quite two days. In one week we moved and set it up as mentioned, and sawed twenty thousand feet. I will write full particulars soon. We sawed six hundred feet in twenty-nine minutes—inch lumber."
2 sizes built—12 H. P. using 44 in. saw, Capacity 3 to 4,000 per day. 16 H. P. using 48 in. saw, Capacity, 4 to 5,000 per day.
Most simple, efficient and portable mill of its size in the world.

FORESTRY AND ABORICULTURE.

BEING THE FOURTH CHAPTER OF THE REPORT OF THE ONTARIO AGRICULTURAL COMMISSION.

Replanting and Ornamenting Farms.

The method to be pursued by the intending tree-planter, as well as his outlay, will depend much both on the particular object he has in view and the money he has to spend.

"I would recommend,' says Mr. Beadle, "for forest planting, the hard maple, particularly as a tree which will be very valuable yet in our country. I am not particularly partial to the silver-leaved maple, though it is a most popular tree with most planters because it grows so rapidly. The hard maple is a more symmetrical tree, and the foliage is very clean and free from insect depredations."

In Kent, the Commissioners noticed that the maple had been very extensively planted on the field sides and concession lines, a circumstance that was the more remarkable from the fact that the original wood of the district had largely consisted of the elm.

Mr. Cochrane, of Kilsyth, County of Grey, says in his evidence :—

"I think in the matter of tree-planting we are in advance of the rest of the county. The planting by the road-side and along lanes is becoming quite general. The neighbor who lives adjoining my place has planted out, I dare say, 1,000 shade trees. The trees planted by him were chiefly silver maple and rock maple. The first he planted was ten years ago, and they were planted fourteen feet apart. They now meet."

Mr. Beadle says on this point :—

"For forest planting I would recommend maple, taking of course into account the variety of soil. The hard maple does not succeed in all soils, but where it does succeed I prefer it. It flourishes in a dry soil. In wet soil I would use the soft maple. Some little blocks of forest have been planted with maple trees, with a view to their sugar-producing qualities, and some of these have attained a diameter of six or eight inches and a height of thirty or forty feet. They have been planted some years. I do not think they received any cultivation after planting."

The cultivation of the black walnut in universally recommended. Mr. Leslie says :—

"In the nut trees, the black walnut grows very rapidly in its younger stages—almost as rapidly as the English ash, and, at fifteen years, the wood could be used for many purposes, particularly for cabinet-making. I think the black walnut would have to be confined chiefly to the front of the Province. I never saw it east of Cornwall, but the south-west portion of the peninsula is its home."

That the walnut is not a tree requiring an exceptionally mild climate is proved by the experience of Mr. Beall, at Lindsay. Mr. Roy too, at Owen Sound, says :—

"There is an idea that black walnut will not grow as far north as Owen Sound. Ten years ago I planted black walnut seeds, and at the present time two or three of the trees bear nuts. They are not only ornamental, but coming to be very useful trees. The diameter of two or three of them now will be as much as six inches. They were planted in a strong soil."

If the soil is at all good, Mr. Arnold recommends the planting of the black walnut on lands that may, for any other reason, be unavailable for agricultural purposes.

The butternut, as already noticed, is recommended by Mr. Leslie for planting. Senator Allan says of it:—"The butternut, if transplanted young, succeeds well."

It is somewhat more hardy than the walnut, and, as previously mentioned, is often used as a substitute for that wood.

The hickory is rather a slow grower, but can be used profitably at so early a stage in its existence that it is a profitable tree to plant pretty freely with the view to the sale of thinnings as the trees mature and crowd one another. Mr. Beadle says :—

"I have not the slightest doubt that plantations of hickory will pay in the near future."

The ash can be easily transplanted, and, as a fast growing tree, for the wood of which the demand is certain to increase with time, is one that should be cultivated. Mr. Beadle says of it :—

"The ash will always be valuable, particularly the white ash."

Mr. Leslie recommends the English ash as preferable to some Canadian varieties. He says :—

"For tree planting on waste lands, or hillsides, with an economical view, I would recommend the English ash as a most useful tree. I think it would come into the market earlier than any other tree that could be planted. It is largely used for handle-making, and about ten years' growth on ordinary soil would produce a tree that could be split into four pieces, each of sufficient size to make a handle. The English ash is not the same as our common black ash ; there is as much difference as between the European larch and our tamarack. It is a more rapid grower than the black ash, and the wood is better in every way."

Of the coniferous trees none is more beautiful, and none can be planted of a more certain economical value, than the native white pine. Mr. Beadle says of this tree :—

"I believe that plantations of white pine will eventually pay when our timber regions to the north become used up or burnt up. The white pine grows rapidly."

Mr. Dempsey says of it :—

"Pine makes rapid second growth in sections of the country where it flourishes."

Mr. Beall says of this tree :—

"We should not forget our native pine, for there is no more beautiful tree we can have, if taken from the woods when very young."

Where, however, it is desired to plant in uncultivable ground, few, if any, trees will be found of greater value than the European larch. Mr. Leslie, speaking of this tree, says :—

"I do not approve of our Canadian tamarack at all. The timber is poor, and if people desire to go to the expense of planting for timber, I would recommend them to plant the European larch, which is a splendid tree, a rapid grower, and will grow in any part of this country. It is not an evergreen, but it throws out a great number of small branches which are a great protection. It is a very rapid growing tree, even more rapid than the Norway spruce, growing more than four feet on an average every year, unless the ground is very poor, in which case of course the growth will be less. In five or six years the tree will be twenty-five or thirty feet high.'

After mentioning it as an ornamental tree for lawn planting, Mr. Leslie says further :—

"The European larch would also be suitable for this purpose (handle-making.) The latter makes the best railway ties of any wood in the world, as it is almost indestructible. It is a very rapid grower, and in ten or twelve years' time the wood is of merchantable proportions, and useful for many purposes. Of course it would not be fit for railway ties by that time, but suitable for manufacturing purposes.

"It would be decidedly pfofitable to railway companies, as well as beneficial to the country, if the waste lands connected with their lines were planted with European larch. From this source they could in time obtain an almost inexhaustible supply of railway ties, much superior to the kind now in general use.

"Another use to which the European larch can be put is the production of ' ships' knees,' as it can be trained when young to the desired bend."

It was the European larch with which successive Dukes of Athol carried out their extensive tree-planting operations in Scotland, extending at last to an area of 10,000 acres, and involving the planting of no less than 14,000,000 tress.

Mr. Roy, of Owen Sound, says of this tree :—

"I have tried the European larch, which is much more pendulous [than the pines]. I have had no difficulty in establishing it here. It is a most beautiful and ornamental tree. I obtained it from Scotland."

The larch is not an evergreen, but, when planted in groves or belts, several trees deep, offers, from its conformation, a very considerable resistance to the winds.

For a perfect thelter-belt for orchard or fields, however, nothing is more strongly recommended than the Norway spruce. Mr. Leslie says of it :—

"We consider the Norway spruce the most valuable tree there is for planting in shelter-belts. It is extremely hardy, very rapid in growth, and easily transplanted." He adds, "I prefer the Norway spruce wholly to deciduous trees and evergreens mixed, as in the latter case, the one checks the growth of the other."

But there are many native varieties of spruce, which, if not in every respect so desirable, are near at hand, and can be made to do duty very efficiently. Mr. Beall says :—

"By spruce I mean the kind that is called the Canadian or black spruce. It varies much in colour. I bought a thousand plants of Canadian spruce a few years ago. I consider it superior to the Norway spruce, because it is equally as pretty in shape and it has a better color. With the Canadian spruce we get almost every variety of shade, but the Norway is all one shade. I suppose the different shades are all of the one variety, but they differ during their life. They can be cultivated successfully in rows, with the branches interlocking in the way described by Mr. Beadle. I have a fine close-cut spruce hedge about five feet high, pyramidal in shape, and five feet across at the base. It can be pruned beautifully, and we have now every shade and color, from the palest yellow to the deepest green. It does not grow so fast in the open ground as the Norway spruce, though I have trees, planted twelve years ago, off of which I cut the tops five years ago, and they are now eighteen or twenty feet high. I do not know how the Canadian spruce compares with the Norway spruce in merchant able value. It will grow almost anywhere. I would plant it along with cedar or pine on hillsides or rocky places."

Of the Canadian white and black spruce, Mr. Leslie says :—

"We have found the white spruce, a native of this country, a most excellent tree for shelter belts, but it is not so rapid a grower as the Norway, and for that reason the latter is superior. We have a black spruce, but it is not a good variety, as it is apt to become poor at the bottom ; that is, in the early stages of the growth of the tree the lower limbs decay and are lost, while the white spruce and the Norway hold their foliage to the ground. When I speak of shelter, I mean shelter for farm buildings, orchards, etc."

A Mistake.

It is a great and often fatal mistake to take repeated drastic purgatives for constipation of the bowels, they induce piles and cause debility of the bowels. Burdock Blood Bitters is a safe and perfect regulator of the bowels, arousing the torpid Liver and all the secretions to a healthy action ; acting on the Kidneys, and renovating and toning the system in a most perfect manner.

LUMBERMEN'S BOARD OF TRADE.

We find in the Stillwater, Minn., *Lumberman* the following report, which we republish as showing the style in which the lumbermen work on the other side of the boundary and the extent to which they co-operate for their joint benefit :—

At the adjourned annual meeting yesterday, the treasurer's report was read, as follows :—Balance on hand, $356.19 ; received on assessments, $1,477.21 ; received of Walker, Judd & Veazie on account of scaling by river police, $76.54 ; received from agent of the board, $18,673.12. Disbursements : Paid orders of agent, $18,222.53 ; river improvements, $937.84 ; river police, $574.35 ; treasurer's salary, $225 ; miscellaneous expenses, $298.85. Balance in treasury, $325.49.

The Boom Company was requested to advertise for bids on all prize logs passing the boom this season.

John O'Brien was made a committee to report condition of booms above lower boom.

Officers were elected as follows :—W. G. Bronson, president ; Samuel Matthews, vice-president ; John S. Proctor, secretary and agent ; E. L. Hospes, treasurer. Directors—E. S. Brown, Samuel Judd, Smith Ellison, Albert Tozer, James Mulvey and David Bronson.

The directors elected Charles Murray to have charge of the river police, and authorized the employment of such assistance as may prove necessary.

TREES IN CITIES.

An interesting paper has been recently read by Dr. Phene at Edinburgh on the benefits to be derived from planting trees in cities. Among the benefical results to be obtained are, he stated, the relief to the optic nerve through the eye resting on objects of a green color. Just that which is effected by the use of green or blue glasses in strengthening and sustaining the power of sight, is attained, or at any rate, much aided, by the presence of green in nature ; and in streets the only method to procure this result is by planting trees. It was pointed out by the author that whenever opportunity exists nature provides green and blue (the latter being the same color minus the presence of the yellow), and that as the absence of color produces snow blindness, and in tropical calms, where the ocean presents only a white reflected light from a uniform glassy surface, reduced optical power soon follows a long continuance of the absence of blue color, which becomes immediately apparent on motion of the waves. So in the streets, to the occupants of houses having a northern aspect, the glare of the reflected light is injurious ; but the effect would be much modified by the coolness to the eye produced by the green trees. In ancient surgery, persons having weak or declining sight were advised to look at the emerald. In the old style of building, the streets being narrow, were both cooler from the sun not being able to penetrate them with direct rays, and less subject to noxious exhalations from the scouring and purifying effect of the searching air to which the narrow streets were subject, so that while there was no space for trees, there was also less necessity. Wide treets, on the contrary, are hotter, and require the shade of trees to cool them ; and, as the case in London, which has so far done without trees in its streets, it was pointed out that not are modern streets compulsory wide, but that the enormous increase in metropolitan buildings render every sanitary question one of importance ; and the chemical properties of trees as shown by experiment give an important standing, irrespective of ornament or the pleasure they produce. Some of Dr. Phene's experiments on this subject have existed over a period of 30 years, and he it was first tried the planting of trees in the streets of London. Since the reading of a former paper by him at Manchester, where the importance of the subject was pointed out, a number of streets in wealthy localities have been planted, and even Trafalgar Square, n the heart of the metropolis.

Do not let prejudice stand in the way of relief if you suffer from any lingering disease. Burdock Blood Bitters cure others, why should it not benefit you ? If it is a specific for all forms of Blood, Liver, and Kidney complaints. Nervous Headaches, General Debility, Scrofula and all diseases of the Secretory system. ial Bottles 10 Cents.

PAPER PULP FROM WOOD.

The following is a description of the process of making wood pulp : The wood, four feet in length, and of any thickness, is brought in at the basement of the manufactory, placed in the barking jack (one stick at a time), where two men with draw knives rapidly peel off the bark. It is then conveyed by an elevator to the first floor, sawed in two foot lengths with crosscut saws, and passed on to the rip-saw, where it is slabbed (that is, a small portion of wood on opposite sides taken off), to permit it resting firmly in the grinding engine. It is then passed to the boring machine (an upright 1½ inch auger, with foot attachment, driven by power), where the knots are bored out. The wood is then placed in racks of the same size as the receptacle in the grinding engine, and carried out to be ground. The grinding engines are upright, and receive at a filling one-twentieth of a cord of wood. The wood is placed in a receptacle, and by a simple variable, automatic feed process, is pressed flatwise between two outward revolving rolls, composed of solid emery, which are flooded with a spray of water, carrying off the fibrilized pulp in a stream through revolving screens to the tank or stuff-chest in the basement. It is then pumped into a vat which forms part of the wet machine. In this vat is constantly revolving a large cylinder faced with fine brass wire-cloth, which picks up the particles of pulp out of the water and places them on the felt (an endless piece of woolen goods which makes between rolls, for different purposes, a continual circuit of the wet machine). On the cylinder is turned a heavy roll, called the "couch ;" between the two, where they meet, the cylinder leaves the pulp, with most of the water pressed from it. The pulp now makes its appearance on the felt above the concha roll in a beautiful sheet, 38 inches in width, and is carried along in a steady flow a distance of about 8 feet, where it passes between (the water here being pressed from it) but not beyond two heavy rollers, the upper one iron, the lower one wood ; it adheres to the upper roll, which is constantly turning, wrapping it up, and when a sufficient thickness is attained, is cut off by a knife being pressed to the roll, which is attached to the machine for that purpose. It now leaves the roll in a thick white sheet, 36x38 inches, where it is received by a boy in attendance on a table conveniently attached to the machine, and folded into a sheet 16x26 inches. It is then placed on scales until the weight is 100 pounds, when it is placed in a press and firmly tied into square, compact bundles. It is now ready for shipment to the paper mill.

Preservation of Lumber.

A correspondent writes as follows to the *Mill* :—"The question of the preservation of lumber from decay attracts considerable attention just now. It would be well, I think, for the Committee on Works to adopt the plan which has been well tried and is the least costly. The combination of lime with the other ingredients it is mixed with appears to be a ready method, and should take precedence of any other. The appearance of the streets at the present time suggests some other and more durable plan, especially the sidewalks and crossings, and it would be well to consider the most economical plan. The application of coal tar does not answer, as it necessitates the use of well-seasoned lumber, and is far more costly, inasmuch as inward decay sets in by the tar filling up the interstices of the wood, and forms a crust outside, preventing free ventilation. The lime admixture leaves the fibre clear, takes out the sap or fungi, and secures the material from all rot, either from sandy or clay soil.

A Wonderful Improvement.

THE CANADA LUMBERMAN.—This paper, formerly published in Toronto, has been purchased by Messrs. Toker & Co., of the Peterborough REVIEW, and will in future be published in the latter town. The first number under the new management is before us and shows a wonderful improvement in the paper. THE CANADA LUMBERMAN will be purely a non-political trade organ and will contain such valuable information as should render it indispensable to all interested in lumbering operations.—*Cobourg Sentinel-Star.*

CORRESPONDENTS.

All correspondence is of value to a paper, but it is often of more value to the man who writes it, or the town whence it is sent. When we are informed by a subscriber, as we often are, that he would not do without the *Lumberman* even if he had to pay $50 a year for it, we feel that the benefit of this great mass of imparted information is not so great to us as to others. There is plenty of matter relating to the lumber business with which to fill a larger paper than this one, but we want facts from practical men. Such matter is what makes any paper valuable. The effusions of a theorist are not worth the snap of a finger to anybody. A man who recently engaged in manufacturing said to us, "I read 'Grimshaw on Saws' from beginning to end, but a hard-handed, rough-looking old sawyer over in Michigan told me more about saws in twenty-five minutes than I could ever learn from the book."

We are frequently told by men that they do not feel competent to write for publication, but if they knew the true inwardness of every experienced newspaper man they would not make such an excuse. A newspaper wants news, and it welcomes it from any source. It is easier to find ten smooth writers than one good newsgatherer. Every man living in a lumber region knows something of the country, the amount of business done, prices, and the outlook. Information regarding any of these points, although expressed in words wrongly spelled and sentences wrongly constructed, is of worth. It is nothing to put matter in shape for publication —*Northwestern Lumberman.*

Lubrication of Bearings.

When a shaft bearing is at rest in its box, the oil is pressed out from under it ; either out of the box altogether, or upward to the space above the shaft, between shaft and box. No doubt the metal of the shaft then settles down to actual contact with the metal of box. In starting a lot of machinery into motion, the metal of the shaft must actually drag, for a short distance, in contact with the metal of the box, making the machinery hard to start. But as the bearings make part of a turn in their boxes, the oil adhering to the surface of shaft bearings is dragged in between the box and shaft underneath, thus floating the bearing upon a sea of oil. This sea is, however, not very broad or deep ; but there can be no doubt of flotation. As flotation takes place, the bearings rotate much more easily than when the metal drags in contact. This explains why starting friction is greater than friction of motion in machinery. When heavy pressures are brought to bear at the boxes, the oil is hindered from entering freely between the surfaces ; and if, at the same time, the two surfaces are not nearly parallel, there may possibly, or even probably, be metal contact at the prominences. The high resistance thus caused will produce heat at the rubbing parts ; which, by continuous motion, is sure to become excessive, resulting in destruction of lubricant, abrasion of metal surfaces, waste of power, etc.

Useful Hints.

The firm of Messrs. Oliver & Co., give some excellent practical advice to farmers. They say :—

"The kinds of hardwood lumber most in demand, either in the Dominion or for export, are walnut, cherry, butternut, chestnut, white ash, white oak, whitewood and basswood, all of which are now in good demand, as manufacturers are increasing their works and new ones are springing up in every part of the country. In the course of a few years these woods will become very scarce, and some of them will become entirely absorbed. This will cause the more common kinds, such as maple, birch, soft elm and black ash, to take their places.

"Our farmers, who own timber lands, cannot be too careful of them, and should use them with a sparing hand, for in the course of a few years their value will be largely increased.

"Our export trade is confined to the States and Great Britain, the former taking our sawn lumber and the latter being supplied in the shape of square timber."—*Ontario Agricultural Commission Report.*

THE OTTAWA VALLEY.

The *Citizen* of May 5th says :—According to present appearances there is every indication that the water in the Ottawa River will be unusually low this spring, much below the average height of ordinary years. In addition to the fact that the depth of the snow in the lumbering regions was much below the average during the past winter, the early thaws have melted away nearly all that was on the ground, and the water thereby formed has nearly all ran off. In thick swamps, however, there still remains some snow and ice, although much less than usual. Consequently, unless we have heavy rains during the next two months, indications support the conclusion that the water in the Ottawa and its tributaries will be much below its ordinary height on the 15th of May, when the highest water generally appears. Low water will be a serious obstacle to getting out the large quantity of fine logs made during the past winter, which would be a great disadvantage to the trade, now that sawn lumber sells at such good prices. However, if lumbermen can manage to get their timber out of the small creeks into the main channel before the water begins to fall, they may succeed in bringing it to its destination.

New Rust Preventive.

A new method of protecting the surface of iron from rust has been brought forward by Mr. Ward, of London. The new "inoxidizing' process, as it is termed, consists in combining a silicate with the metal by the aid of heat. Cast or wrought iron objects are first coated, by painting or dipping, with a silicate glaze, which quickly dries, and the articles are then passed through a furnace, or rather oven. In this way the silicate composition is said to be fused and absorbed into the metal, which upon cooling is found to have assumed a dull black appearance. The coating is said to be so far homogeneous with the metal as to protect it from any change from long exposure to the atmosphere ; and at the same time the silicate is not liable to disintegrate or separate from the iron. The articles treated in this manner may be ornamented by combining the silicate wash with any vitrifiable colors. Thus smooth polished colored surfaces may be produced upon iron, which, while possessing features distinct from ordinary enameling, yet present superior and more durable results than those obtainable by ordinary painting and varnishing.

Changes in the Diameter of Trunks of Trees.

According to the *Gardener's Chronicle*, MM. Kraus and Kaiser have been making some researches, from which it appears that the trunks of trees undergo daily changes in diameter. From early morning to early afternoon there is a regular diminution till the minimum is reached, when the process is reversed and the maximum diameter attained at the time of twilight ; then again comes a diminution, to be succeeded by an increase about dawn—an increase more marked than that in the evening. The variations in diameter coincide, therefore, with those of the tension, but they are shown to be inverse to the temperature, the maximum of the one corresponding roughly to the minimum of the other, and so on.

Mountain Mahogany.

This wood is indigenous to Nevada, The trees do not grow large ; one with a trunk a foot in diameter is much above the average. When dry the wood is about as hard as boxwood, and of a very fine grain. It is of a rich red color and very heavy. When well seasoned it would be a fine material for the wood carver. In the early days it was used in making boxes for shafting, and in a few instances for shoes and dies in a quartz battery. Used as a fuel it creates intense heat, it burns with a blaze as long as ordinary wood would last, and is then found (almost unchanged in form) converted to a charcoal that lasts about twice as long as that of ordinary wood.

If you suffer from any chronic disease arising from Impure Blood, Sluggish Liver, disordered Kidneys or inactivity of the Bowels ; if your Nervous System is deliberated from whatever cause arising, do not despair, but procure a trial bottle of Burdock Blood Bitters ; it will only cost 10 cents. Large Bottles $1,00, For sale by all medicine dealers.

ARBOR DAY.

Nebraska has established a custom which every one of the Western States, and many which are not included in that category, would do well to follow. For a number of years it has annually set apart a special day, called Arbor day, which the inhabitants devote to planting trees. The custom has been from its first inauguration very generally observed, and the result is that the bleak, naked surface of this Prairie State has become diversified with myriad groves, which relieve the monotony of the landscape and refresh the eye with the beauties of woodland growth, while they form a barrier against the winds and are developing into valuable preserves of timber. At the same time, in the cities and towns, and about residences in in the country, ornamental trees of fine stature are affording the comforts of shade and the æsthetic pleasures of graceful form and handsome foliage. In fact Nebraska is being rapidly transformed from a treeless to a wooded country through the maintenance of its annual Arbor day.

Two Thousand Dollars.

The easiest, cheapest and best way to secure the above amount is to apply for membership in the Mutual Benefit Association of Rochester, N.Y. Pay Dr. S. B. Pollard, 56 Bay Street, one dollar for four medical examinations, he will send your application to the head office, if you are accepted as a member they will issue a certificate of membership, which, on payment of eight dollars, entitles you to full benefits as a member, should you die to-morrow, next day, next week, next month, or any time within three months, this Association will pay to your heirs, or assigns, the sum of two thousand dollars. At the expiration of the three months all you have to do is to pay your pro rata amount, which is from 20 to 75 cents on the death of some other member, who has done nothing worse than to die during the three months just past. By paying your assessments on deaths, you keep your certificate alive, and at the commencement of the second year you are assessed two dollars per thousand to keep up office expenses, etc., for the next year. No casier, surer or better schemes to carry two thousand dollars has ever been devised than the Mutual Benefit Associates, of Rochester, N.Y.

5-1-13

Should be in the Hands of all Interested.

THE CANADA LUMBERMAN.—This is the title of a 16-page semi-monthly newspaper, devoted to the Lumber and Timber Industries of Canada, the tenth number of which has just reached us. THE CANADA LUMBERMAN was first published in Toronto, by Mr. Alex. Begg, but has now come into the possession of Messrs. Toker & Co., publishers of the Peterborough REVIEW, and like everything else sent out from that office, presents a very neat and tasty appearance. It is intended to be a purely trade organ, and entirely non-political. Special attention will be given to market reports, and the most trustworthy information possible will be obtained from each locality of the production of lumber and timber, and of the stock on hand. The number before us contains a large amount of useful information, and should be in the hands of every one interested in the lumber trade. Published by Messrs. Toker & Co., Peterboro', at $2.00 per annum.—*Trenton Trent Valley Advocate.*

A CORRESPONDENT writing from Beef Slough, the great sorting ground of the Chippewa river of Wisconsin, on the 26th of April, says the logs handled to date had been 3,500,000 feet, consisting of "pick-ups" or logs that had been hauled in off the bottoms. Last year the amount hauled was 200,000,000 feet, and it is not expected that more than that amount will be handled this season, though more logs have been put in on the stream. At the date of writing logs were coming into the boom at the rate of 2,000,000 feet a day, with a slow current. There is a lack of storage room at the works, but it is believed this will be obviated in a great measure by the large addition to the fleet of tow boats, so that logs can go out about as fast as they are rafted. There are about 400 men employed on the boom.

THE MISSISSIPPI.

Regarding the situation on the Mississippi river the Minneapolis *Lumberman* says:—The floods in the river during the last week have amounted to an embargo on commerce of every description in the west, especially in lumber. It is hard to tell just where so much lumber has gone to as the reported shipments of last week indicate sold. From the upper Missouri through to Chicago and down to Cairo the railroads have been damaged and suspended, while all reporting points show an advance upon last years' business. But for the week handling lumber on the Mississippi is almost impossible and only such lumber as is regarded unsafe is being moved and none sold. Great damage has been done already to lumber yards along the river as well as mills, booms, etc., by the floods. These things are adding to the cost of lumber this year and also reducing slightly the amount to be cut, both of which strengthen the market. From reports it is thought that nearly all the lumber held on the Missouri river will be lost and several million on the Mississippi, beside the large quantity of logs which have and being carried away.

Adventure in the Cave of Cacahuamilpa.

A serious but fortunately not fatal termination came to a recent excursion from the City of Mexico to the Cave of Cacahuamilpa, in honour of some American visitors. About fifty persons left Mexico, but the party received so many accessions by the way that when the cave was reached there were as many as 500 persons in the company, including the military guard.

It appears that Senor Carlos Quaglia, Governor of Morelos, had ordered a banquet to be prepared in that portion of the grotto which bears the name of "The Organ Salson," on account of the stalactites which have there assumed the form of an organ. The place was illuminated by electric lights, yet there were also many torches of resinous wood burning. The *elite*, who numbered perhaps ninety persons (there were also a great many servants), occupied the Organ Salon. In close proximity were placed several shelter tents for the ladies and children to sleep in. These were filled with sleepers, and along one side of the banqueting hall many gentlemen were lying on mattresses, mats, or blankets. A few of the more animated guests lingered over the table until two o'clock in the morning, and were chatting, when Governor Quaglia fainted. All efforts to restore him to consciousness seemed futile. While he remained in this condition some ladies complained of illness, others were asphyxiated, and a gentleman suggested that all this might be due to mephitic axhalations. Mothers at once hastened to their children, and, finding some in a stupor, comprehended the danger. A panic ensued. General Diaz ordered an instant retreat from the grotto. General Ord and others instructed the soldiers to carry out the ladies and children. Ex-Governor Romero Vargas aided Senor Marical, Minister of Foreign Relations, to scramble over the rocks. In fact, all who had strength assisted those who were asphyxiated, and every person was removed to a purer atmosphere. Some persevered until they reached the entrance of the cave (three miles distant) and threw themselves down on the bare ground, almost exhausted with fatigue, but safe.

Wild Cherry Wood.

Wild cherry is a wood for which a large demand has sprung up in the United States. In supplying the place of walnut, cherry is very valuable, and care should be taken of the growing trees. It is used extensively in making ebonized furniture. It has a very close grain, takes the best stain, and is capable of high polish. Cherry is also used in the internal fittings of cars and buildings. It is common in Michigan and other States, and is probably as enduring as walnut.—*Lumber World.*

CHEBOYGAN *Democrat*: The Pine river bridge at St. Martin's bay was carried away by the flood and 600,000 feet of logs came down into the lake. The logs were the property of the Mackinac Lumber Company, and their tug, the *Saugatuck*, is now engaged in picking them up, and all will probably be saved.

SALE OF TIMBER LIMITS.

An extensive sale of timber limits took place at the Russell House on Thursday afternoon, May 5th. They were what is known as the Cook & Waddell limits on the Kippewa. Mr. I. B. Tackaberry was the auctioneer. There was a good attendance of lumbermen, and bidding was quite active. The following were the sales effected:—

No. 1 limit—68 square miles, to Mr. S. S. Cook, for $88,400, being $1,300 per square mile.

No. 2 limit—50 square miles, $40,000, knocked down to Mr. J. T. Lambert for Gilmour & Co., being at the rate of $800 per mile.

No. 3 limit—50 square miles, $650 per mile, $32,500; Mr. Lambert for Gilmour & Co.

No. 4 limit—38 square miles, bought by E. B. Eddy at $170 a mile, $6,460.

The total receipts of the sale, therefore, amounted to $167,360 for the 206 square miles of limits. This is one of the largest sales in amount ever effected in Ottawa, at public auction.—*Ottawa Free Press.*

Brother Gardner on Labor and Capital.

The Lime-Kiln Club is a facetious creation of the Detroit *Free Press*, and the reports of the imaginary meetings of the club, under the imaginary presidency of Brother Gardner, furnish the readers of the *Press* with perennial supplies of wit. The following is a specimen:

The Secretary read the following:—

"CHICAGO, March 30, '81.—*Bro. Gardner*—Please inform your friends whether you sympathize with capital or labor, and oblige a

"WORKINGMAN."

"In the fust place, dar' am no call for me to sympathize with either," replied the old man in answer. "One am jist as necessary to the odder as two wheels to a wagun. Capital cl'ars away a spot an' builds a factory an' gins fifty or a hundred men a chance to airn a fa'r support fur demselves an' families. Dat factory wouldn't be dar' 'cept fur capital, an its wheels can't move without labor. If dis' workin' man wanted to draw me out on the question of strikes I has on a word to say. I believe dat the average employer pays his help a f'ar price an' all he kin afford to. I b'lieve he knows his business, an' am mo' competent to run it dan de men who labor fur him. If I can't work fur a man fur de price he offers I stan' aside. If I hire a man I pay him de goin' price, an' I doan' let him tell me dat I mus' do thus an' so. Men strike bekase dey can't dictate, but the same men wouldn't be willin' that deir employers should dictate to dem how much rent to pay, what close to buy, and how to spen' deir wages. As I soid befo' dar am no call fur smypathy in de case. De mo' strikes we have de less money will be put into manufactures. When a capitalist kin loan his money at good interest he am foolish to put it into a factory whar' demagogues kin haris an' ruin him. Jist you remember what I'm talkin'. De mo' unions de less factories. De mo' strikes de less work. Do you fink I'm foolish 'nuff to take my $800 out'n de bank, whar' principal an' interest am safe as a rock, an' put it into a coopershop, whar' three workmen could sink de hull of it in one strike bekase I couldn't pay mo' fur making de barl's dan the same would sell fur? Shoo! Fings am comin' to a putty pass when de man wid a shovel on his shoulder kin boss de man whose factory turned out that identical toole!"

A Compendium of News.

THE CANADA LUMBERMAN.—We have received No. 10, of THE CANADA LUMBERMAN, formerly published by a firm in Toronto, but now edited and published by Toker & Co., of the Peterborough REVIEW. Whatever this publication may have been previous to its transfer, the number before us is certainly a credit to its present publishers, in typographical appearance, in the description, quantity and quality of its reading matter, and get-up generally, and furnishes a compendium of lumbering and commercial news of the utmost importance to lumbermen and commercial men generally. We congratulate the publishers upon their enterprise, and sincerely hope that the LUMBERMAN may prove prosperous and profitable in their hands.—*Norwood Register.*

Wanted.

A SECOND HAND DOUBLE EDGER; also a LATH MACHINE, both in good repair. Reply stating lowest cash terms or particulars to Box 1002, Peterborough. b10

For Sale.

A 40 INCH LEFFELL WHEEL and COMPLETE CIRCULAR RIG, all in good order, suit[able] foot head. Apply to Box 1002, Peterborough.

Reid & Co.,

WHOLESALE LUMBER DEALERS. Lumber, shingles, &c. Car lots to suit customers. Highest Cash price in the market at from $6 to $7 per M.

OFFICE ON DOCK.—Esplande, foot of Shelbourne Street, Toronto. b15

Hardwood Timber Land

FOR SALE.

FOR SALE, 1200 ACRES HARDWOOD TIMBER LAND near Nipissing Railway, Coboconk. Easy terms. OSHAWA CABINET CO., Oshawa. b15

Situation Wanted.

A Book-keeper of first-class experience [desires] ation with a lumber firm. An opportunity [to] knowledge of the lumber trade more of an [object] the amount of salary. Unexceptional [references] as to character and ability.

b15 Apply to the Editor of THE CANADA LUMBERMAN.

The Stewart House,

Headquarters of Lumbermen in Peterborough, corner of Hunter and Water Streets. Good accommodation. Terms, $1 per day. Free 'bus at trains.

b15 T. CAVANAGH, Proprietor.

Allandale Junction Hotel

Travellers by Northern Railway have 15 to 20 minutes by all trains, for refreshments. Solid meals. Tea and coffee at counter. Fine brands of Liquors and choice Cigars. b17 E. S. MEEKING, Proprietor.

Orillia House,

ORILLIA.

New and Commodious Brick Building; best north of Toronto; splendid sample rooms; centrally located: free 'bus. b20 JOHN KELLY, Proprietor.

The Queen's Hotel,

TORONTO, CANADA.

McGAW & WINNETT, Proprietors. Patronized by Royalty and the best families. Prices graduated according to room. b20

St. Lawrence Hall,

PORT HOPE.

Is noted for its superior home-like comforts—a well kept table, equalling the best hotels in Toronto, and large, well-furnished rooms. Good sample rooms on ground flour. Walton Street, Port Hope.

b26 WM. MACKIE, Proprietor.

St. Louis Hotel.

THE RUSSELL HOTEL CO., Proprietors.

WILLIS RUSSELL, Pres., Quebec.

This hotel, which is unrivalled for size, style and locality in Quebec, is open throughout the year for pleasure and business travel. b18

Queen's Hotel,

BRACEBRIDGE.

JOHN HIGGINS, Proprietor. The proprietor (late of Georgetown,) having lately purchased the above hotel,) will endeavor to make it one of the best houses in the District of Muskoka. Tourists and hunting parties will receive every possible attention. Free 'bus to and from steamboat wharf. Terms, $1 per day. b20

The American Hotel,

BARRIE, ONT.

Collier Street, Adjoining the Market.

RATES REASONABLE, CENTRAL LOCATION, FREE BUS TO AND FROM ALL TRAINS.

☞ Every accommodation for Commercial and LUMBERMEN.

L14 W. D. McDONALD, Proprietor.

Fraser's Hotel,

GRAVENHURST, ONT.

HENRY FRASER, proprietor, (successor to Dougland Brown.) Mr. Fraser having purchased and thoroughly renovated and refitted that old established hotel, so long and popularly kept and owned by Dougland Brown, in the Village of Gravenhurst, is now in a position to attend to the wants of the travelling and general public. Parties *en route* to the Muskoka District, will find "Fraser's" a comfortable stopping place. The Bar and Larder are well furnished. Convenient Sample Rooms for Commercial Men. Good stabling and attentive hostler. Free 'bus to and from trains and steamboats. b26

PILING LUMBER AT THE MILLS.

It is now some four or five years since the *Lumberman* first called the attention of the mill men cutting lumber for this market to the advantage of piling and drying their lumber at the point of production, over the plan then almost exclusively in vogue of shipping it to this city green and seasoning it in the yards. In that time, the methods of making and handling lumber have undergone marked changes; the facilities for sawing have improved, and the average annual output of the mills in what is known as the Chicago district has very largely increased. The process of lumber making is in hardly any respect exactly what it was in 1877, and, similarly, we find that in handling the mill product, improvements have been introduced that have materially lessened the expense and added to the profits of manufacturers. A good many mill men have followed the advice of this paper, and have made a practical test of the plan of piling at the mills, and shipping the lumber to Chicago dry. The fact that none of them have found the scheme impracticable or have abandoned it after a fair trial, is pretty reliable evidence that it had in it, in the first place, nothing that was wild or visionary. Some figures printed in connection with our Annual Review of the production in this district last year give a pretty good notion of the increase in mill piling in the last four years. Comparisons of the amount carried over at the close of 1880 and 1877, with the amount sawed by the mills in those years, prove that while the increase in the cut for last year over the earlier one was less than 60 per cent., the gain in the quantity wintered over was fully 115 per cent., or nearly double. These figures demonstrate conclusively that the operators who have tried the plan of piling at the mills have found it profitable, and have continued to follow it.

The *Lumberman's* attention has been directed to this matter by the fact that several of the largest manufacturers who own yards in Chicago have lately been maturing plans to pile a considerable part of their cut at the mills, instead of occupying so much yard room here. The advance in dock rents is so great that it is becoming an important matter for the lumbermen to take up as little space in this city as they can, and, as a means of escaping a portion of this tax on their stock, a number of them are preparing to pile and dry at the mills. We are informed that several of the Menominee river operators are already making preparations to pile a large part of this season's product on the mill docks, with the intention of holding a good deal of it over for shipment early in the spring, when dry lumber is wanted and is generally scarce. They expect in this way to escape the necessity of enlarging their facilities here, which, with dock rents at $9.50 per foot, is an important consideration. The example of these operators is likely to be followed by others who have the accommodations at their mills for piling, and probably the close of the present season will find on the mill docks the largest stock that has ever been carried over.

It would seem that the advantages of cross-piling at the place of sawing hardly needs consideration at this time. They are pretty generally understood and admitted by saw mill men. For manufacturers who do not own yards at this point, the plan seems especially desirable. By adopting it they will escape many of the annoyances and losses that arise from the shipment of the lumber just as it comes from the saw, and its sale on commission here, by reason of which allowances have often to be made to the buyer which might have been avoided if the manufacturer could have sold his lumber in pile where the purchaser could see exactly what he was buying. A man can always sell his own lumber, moreover, to better advantage than some one else can sell it for him, which is another good reason why producers should, as far as possible, endeavor to hold their lumber at the mills and dispose of it themselves.

It is true, unquestionably, that the new plan, if it may so be called now, requires a larger and longer investment of money than the old one of turning the lumber into cash as soon after it leaves the saw as possible. In order to pile his cut, a mill man must be content to expend something in the way of interest, insurance, and, possibly, taxes; but the returns are sufficient to make this a paying investment. There is a nominal difference of fully $1 in the value of green and dry stock, and, actually, the difference is much more, for the fact that lumber is dry implies that it can be handled and freighted at a much less cost than if it were full of sap and water. There is something saved at nearly every point in its progress from the mill to the buyer's yard, and all this economy contributes to the profit of the man who dries it. Besides, if there were any doubt remaining as to the profit to be derived from seasoning lumber, it could not stand against the fact that lumber is bought and seasoned in Chicago where rents are high, taxes excessive, and labor much more costly in proportion than it is at producing points, and the process made to pay those who undertake it fairly, if not handsomely.

There is one other fact that should not be lost sight of in this connection; namely, that the manufacturer who piles his lumber occupies a comparatively independent position toward those who buy. He does not stand in mortal fear of a break in prices, or run the chance of sending a heavy consignment to the cargo market at the wrong time, and having to stand the consequent loss, because of the impossibility of doing anything with his lumber but selling it after he gets it there. If the market happens to weaken temporarily he need not suffer by it, unless he chooses to do so. He has his stock where it will keep, and he is prepared with the facilities for holding it; so that if prices are down to-day and there is reason to think they will improve shortly he can withhold his stock from sale long enough to cover the interval of weakness.

We shall be much disappointed if, as we said once before, there is not a considerable increase in the amount of piling at the mills this season, over what has been done in this way heretofore. Our reasons for so thinking are, first, that the plan is a thoroughly practicable and profitable one in itself, and one that is looked upon with favor by the shrewdest of our mill men, and, secondly, that the mill owners and operators are generally in better shape to take advantage of it than they ever were before. There is no doubt about the fact that they made money last year, and that they enter upon the present season with greater financial resources than they have ever had. They are therefore prepared, with few exceptions, to conduct their business just as they want to, and with a view to getting out of it all that it holds for them, and it is not to be assumed that they will overlook so important a source of profit as this. We do not hope to see all manufacturers cross-pile their lumber; we know very well that many of them cannot do it, because of inadequate dock facilities, or because of other obstacles in the way; but we are equally well aware of the faet that there are many others who do not labor under such disadvantages, and of such we look for a considerable proportion to try the plan of piling and drying their lumber at the mill.—*Nothwestern Lumberman.*

Spruce Deals.

There is no doubt but spruce deals are on the decline in the London market. The cargo of the St. Julien, from St. John, N.B. (which usually stands next in favor to Quebec), was sold a few weeks since at a decided fall in value. A cargo from the same port sold last year—about the latter part of March—fetched at the Baltic rooms on an average about £7 10s., now the highest price for the best lengths and sizes unsorted was £6 15s., and the average was in fact not more than £6 7s. 6d. all through. A couple of lots, about 3,000 pieces, 3x11 in., were knocked down at £6 5s., good lengths, varying from 18 to 25 feet. The freight charges would not be much short of £4 per standard, and if we deduct this and other expenses attached to these goods, we shall find very little left to go towards the first cost at St. John. Last fall spruce was in great request at the shipping ports, and for the best sorts at one time as much as £8 was paid. Shippers this season will think twice before consigning there again.

Yellow Oil is *par excellence* the remedy for Pain, Lameness, Rheumatism, Croup, Deafness, Burns, Frost Bites, Stiff Joints, and all flesh wounds. Any medicine dealer can furhish it.

TREE CULTURE.

Important as is tree culture with us, the subject is an insignificant one in the older Provinces compared with the position it assumes in the daily life in the North-West. Our prairies are not so bare of trees as are those farther south, and therefore the question has not the life-and-death importance it has in parts of Minnesota and Dakota. Yet if our pioneers are wise they will, after their first needs are satisfied, plant the seeds of trees in shelter belts over a space equal to several acres. The railroad company may properly be called upon to introduce to our territory the liberal policy in vogue in the North-Western States. A good rebate should be given on the price of all land that is put under trees, and young trees should be carried free of charge. To give an idea of the indispensableness of trees, we quote a few sentences from a letter by Mr. S. M. Emery, who, the St. Paul *Tribune* says, knows as much of the subject of North-Western tree culture as any man living. Mr. Emery says:—

"One-third of the money expended by the railroads in this State during the past ninety days in shovelling snow, saying nothing of loss of life, destruction of property, and the general loss in the shrinkage of revenue in freights, would plant sufficient wind-breaks on every rod of prairie storm-infested railroad in the State. Suppose the six lines of railroad crossing the State from east to west were protected by vigorous, strong-growing shelter-belts of cottonwood, white willow, or larch, and that these were supplemented by planting shelter-belts along all highways, and that the hundreds of timber-claims were covered with a vigorous growth of young timber, as required by law, could we fail in controlling the effects of these terrible blizzards? The intensity of the winds would certainly be modified, and a corresponding degree of comfort and safety be the result. This is not a matter of idle speculation, but it is susceptible of tangible, ample proof. In many places the shelter-belts along the line of the Manitoba Railroad are packed full to the topmost twigs, rendering great assistance in protecting the road-bed from the immense drifts, in spite of the fact that these belts have not had anything like reasonable care for several years."

Mr. Emery suggests that railroads which are subject to snow blockades should put a rod of land on each side of their line in trees.—*Globe.*

Which Way to Run the Splice of a Belt.

A new England journal is allowing the discussion of whether there is a wrong way to run a belt with regard to "splices." The general answer to this question is: Put the belt on so that the pully in slipping on the face of the belt shall run with and not against the spliecs. But if the belt slips on both pulleys, of a belted pair, then there can be no difference which way the splices of the belt lie, for the motion of one pulley will be against and the motion of the other will be with the splices, which is the true state of the case, but which does not often hapen; there will mostly be conditions favoring slippage on the one or other of the pulleys, when it is known which one it is, then put the belt on to suit this condition. In the cases where there is no slipping, if the driving pulley acts favorably on the splices, then the driven pulley is sure to be against them, and so it may be said there is really nothing in the advice directing the way a belt should be run, except for the cases of known slippage. So says Mr. John H. Cooper, who is certainly competent authority, in a recent communication.

Appreciated.

COTE ST. ANTOINE,
Montreal, May 4th, 1881.

MESSRS. TOKER & Co., Publishers of THE CANADA LUMBERMAN, Peterborough, Ont.

GENTLEMEN,—You, or some friend, has been forwarding me your periodical I think from its first issue, and you will please receive enclosed $2 to pay for it for the year, since I first received it, the date of which you will no doubt be able to ascertain. I like the paper very much. It is in my opinion the best published on the subject in America, and is far away ahead of the *Timber Trades Journal* of London, England.

Yours,
JAMES LITTLE.

FILING OR SHARPENING THE TEETH OF SAWS.

The greatest wear of a saw is on the under sides of the teeth. File nearly to an edge (but not quite), leaving a short bevel of, say 1-32 of an inch wide on the under side of the point. But in no instance file to a fine point and thin wire edge.

First.—Be sure that the saw hangs properly on the mandrel.

Second.—The saw must be in proper line with the carriage, and the carriage run true.

Third.—The mandrel must be level and run tight in the boxes.

Fourth.—Round off the saw so that all teeth will cut the same amount, and be sure that the very points of the teeth are widest.

Fifth.—Do nearly all the filing on the upper sides of the teeth and see that they are well spread at the points; file square and have them project alike on both sides of the saw.

Sixth.—If the saw heats in the centre when the mandrel runs cool in the boxes, cool it off and line it into the log a little.

Seventh.—If the saw heats on the rim and not in the centre, cool it off and line it out of the log a little.

Eighth.—Do not try the experiment of bending each alternate tooth for the set, when using inserted toothed saws.

Ninth.—File the teeth hooking, so that the swsge will spread them at the points.

Tenth.—Use a light hammer in swaging, say three-quarters to one pound weight.

In filing solid toothed circular saws, keep the throats or roots of the teeth round, or as the saws are when new. Angles, or square corners filed at the roots of the teeth, will almost invariably cause a saw to crack; the filing of such angles or square corners will cancel the warrant on any saw. The back or top of the tooth leads or guides the saw, and should be filed square across. The under side of the teeth may be filed a little beveled on the teeth of saws that are bent alternately for the set so as to leave the outer corners of the cutting edge longest. These directions, if carefully followed, will not only put the saw in excellent condition for cutting, but will, to a great extent, serve to keep it true in circumference, and even in balance. They have been prepared by J. E. Emerson, of Emerson, Smith & Co., who is, as our readers know, a practical saw maker.

LABOUR ON THE OTTAWA.

The Ottawa *Daily Citizen* in a review of the prospects of lumbering in that valley says:—The labor question in all of the lumberman's operations, is one of the greatest importance, and there seems no chance of a clash between labor and capital this season. Among the employers there seems a general idea that a slight advance in wages will take place, but no one of them seem to apprehend the slightest difficulty in obtaining all the hands they may require for any kind of work, and among the men so far, even those who are over sanguine as to what the season may produce, there seems no inclination to force the price of their toil above its fair market value. The Upper Ottawa Improvement Company, which owing to the fact that work is steady on it the whole season through, can get men cheaper than most private firms for the drive; are paying $3,000 per month more than they did last season. In the mills, however, it is not probable that much over a dollar a day will be paid for day hands, and the usual rules will be observed in regard to night hands. Men on the drives, especially the short drives, are now commanding high wages, in some cases $30 per month and found being paid, and in a very few exceptional cases first-class men on difficult work have secured a higher figure.

Fire Proof Buildings.

There if practically no such thing as a fire proof building. Brick comes nearer to being a fire proof material than any other substance. Iron is treacherous and almost worthless in many places where it is commonly used. A good oak pillar is far better as a support in case of fire than iron. None of the building stone generally in use is of any value in case of severe fire, amd granite is the worst, or least reliable of all.

THE RELATION OF FORESTS TO CLIMATE AND SOIL.

Mr. F. C. Zimmerman, who is connected with the United States Consulate at Berlin, in a late report to the state department at Washington, gives some valuable information upon this subject, which is becoming a very important one to the people of this country. He says that the influence of forests upon the climate and the fertility of the soil is most carefully studied at the forest academies and stations in Prussia, and the conclusions that are reached there can hardly fail to be of value to those in this country who are interested in tree growing. As warnings to wood destroyers, large tracts of land are pointed out in various countries which formerly were covered with forests within whose borders were springs and brooks, where now, man having thoughtlessly stripped the land of its trees, the eye looks in vain for a grass plot. The sunbeams unhindered strike the naked earth and raise the temperature of it and the neighboring air to a high degree; in the night, however, this heat is quickly and freely given out into space and the temperature suddenly sinks. Sufficient rain does not fall, nor does it fall regularly, but pours down in torrents and no good comes of it. The arid ground cannot retain the moisture, but from the dry surface, the fallen water evaporates like ether, and vegetation receives but little assistance in its effort to grow.

These students are now satisfied that the forest moderates the extremes of temperature and ameliorates the climate. It is especially worthy of note that the daily temperature of forests does not reach so high a point in summer as that of open fields, nor in winter does it sink so low. Changes of temperature do not occur so suddenly in the forest, for ground shaded by trees becomes warm more slowly than uncovered land, and does not cool off so quickly.

If one examines the statistics furnished by the Prussian meteorological stations, relative to the temperature of the surface of the earth and the neighboring atmosphere in their districts, it will be found that the rise and fall of the same are quite gradual, and that the extremes of temperature are reached somewhat later in the forests than in the open fields. This gradual rise and fall of temperature is one of the chief requisites for the proper growth of forest trees as well as for plants generally. Young trees are often injured by sudden changes of temperatue, and some species cannot thrive unless some protection from such changes is furnished them. The leaves of the trees retain a great deal of water, which is evaporated and thus given back to the air, the humidity of which is thereby increased, and the supply of moisture to the soil is rendered more equal and regular. That the soil receives is absorbed and evaporated very slowly. Much of the rain that falls upon open fields is wasted, the supply being often greater than the requirement for the time being. Forests, moreover, directly induce rain. The air within the forest becoming warm by the absorption of heat, both from the ground and the air next above it, leaves over the forest a current considerably colder than the neighboring air, and rain-clouds passing over are, in most cases, condensed by coming into contact with this colder atmosphere. To exercise such an influence, however, on atmospheric temperature, the forest must be of very considerable extent. Authorities on the subject of forest culture in Prussia are unanimous in the opinion that rainfall is more abundant and regular in districts well wooded than in bare lands. In this connection it is worthy of remark that the forests are generally rich in springs and brooks. This alone goes a great way toward showing the intimate relations between woods and water.

And further, while the forest tends to moderate climate, while it regulates the supply of moisture, the forest land is continually receiving a supply of the richest soil through the yearly fall of leaves. This soil increases the capacity of the ground for warmth, its moisture-retaining properties, and furnishes all the requirements necessary for the growth of plants. The important influence of forests on climate and the fertility of the soil having long been recognized, it has, therefore, often been attempted to forest lands sterile because of unfavorable conditions of climate. These attempts have often been crowned with success. The foresting of the Luneberg heath, a sandy plain near Hanover, was successful, though accomplished at great expense and in the face of various difficulties. In like manner the foresting of sandy stretches of land in Brandenberg and other Prussian provinces has resulted very favorably; the aim in all these cases being, of course, to counteract the influence that these sterile tracts exercised over the neighboring fertile soil and to convert them into useful and productive prossessions.

Again, referring to the fact that considerable moisture is necessary for the growth of trees, it is proper to remark that when it is deemed desirable to change the course of a stream or rivulet, in order to irrigate fields designed for cultivation, it should be carefully ascertained by noting the rainfall, remaining springs, brooks, etc., whether such a change can be made without detriment to such woodland in the neighborhood as may be in part dependent on such waters for moisture.

Draining too much of the water from forest lands destroys the forests, as deforesting often dries up streams. In Prussia this is so well understood and appreciated that before any such course is pursued, very careful consideration is given to the subject. and the forest officials are called upon for, and they submit, reasons *pro* and *con*. A few years ago, for instance, it was desired to reclaim certain bog land near Chorin, in Brandenberg, but in order to do so, it was found that it would be necessary to reduce the Paarsteiner lake a square mile or more. To this the forest authorities strenuously objected, because they feared that such a reduction of the water surface would so materially lessen the moisture of the air and soil, that the very existence of the neighboring forests would be hazarded. The project was therefore not carried out. This one instance shows how thoroughly the science of forest culture is appreciated in that kingdom.

The proper hygrometric and electric equilibrium for successful farming can only be maintained, it is estimated, when at least 20 per cent. of the total area is forest land. Mirabeau estimated, in 1750, that 32 per cent. of the land in France should be woodland. Reutzsch estimated that in the interior of Germany the proportion of woodland to the entire surface should be 23 per cent., while near the coast, where the air is supplied with humidity by evaporation from the sea, 20 per cent. would be sufficient and proper In this connection one writer very pertinently inquires: "If the German states require 23 per cent. midway between the North sea, the Baltic, and the Mediterranean, what is demanded for the great area between the Mississippi and the Rocky Mountains, almost without water from the Gulf of California to the Polar sea?"—*Northwestern Lumberman.*

To Harden and Temper a Saw.

Fix it by its hole to a bar or rod, as though it was an arbor. Heat evenly over a charcoal fire to a good cherry red. Dip it evenly in a horizontal—level—position into a bath of whale or lard oil, moving it horizontally until it is cool. Remove it, and with the oil on it heat it over the fire until the oil flashes or flits over the surface. Do not allow the oil to burn. In all cases the saw must be hardened horizontally not vertically. Experiment has proved this method to be a perfect success.

Steel Bands for Transmitting Power.

A patent recently granted in Vienna and Berlin uses bands of steel, tempered and hardened, to transmit motion from one pulley to the other, the faces of the pulleys being turned perfectly flat and then faced with a varnish of resin, shellac and asphalt. The fastenings of these belts are of a peculiar structure and can not properly be described without engravings.

Invaluable to the Trade.

THE CANADA LUMBERMAN.—This paper, which was formerly published in Toronto, will in future be published in Peterborough, Messrs. Toker & Co., of the REVIEW, having become the proprietors. The LUMBERMAN, being a purely trade organ, and devoted exclusively to the lumbering interests, will contain information such as will render in invaluable to those engaged in that business.—*Hastings Star.*

TARIFF OF RATES.

To be levied during the ensuing season (1881) by the Upper Ottawa Improvement Company, in connection with the undermentioned works:

I.—THROUGH DES JOACHIM BOOM.

	Tolls Per piece.	Working expenses Per piece.
Saw logs, 17 feet and under	½ cent	2 cents
Red and White Pine, Tamarac, Spruce and Hemlock, round or flatted, over 17 feet and under 25 feet long	4-9 ct.	2⅔ cts.
do do 25 to 35 feet long	5-9 ct.	3½ cts.
do do 35 feet and upwards in length	8-9 ct.	5½ cts.
Red and White Pine, Tamarac, Spruce and Hemlock, square	1⅓ ct.	8 cts.
Oak, Elm and other hardwood, square or flatted	2 cts.	12 cts.

II.—THROUGH FORT WILLIAM BOOM.

Saw logs, 17 feet and under	½ ct.	1 ct.
Red and White Pine, Tamarac, Spruce and Hemlock, round or flatted, over 17 feet and under 25 feet long	4-9 ct.	1⅓ ct.
do do 25 to 35 feet long	5-9 ct.	1⅔ ct.
do do 35 feet and upwards in length	8-9 ct.	2⅔ cts.
Red and White Pine, Tamarac, Spruce and Hemlock, square	1⅓ ct.	4 cts.
Oak, Elm and other hardwood, square or flatted	2 cts.	6 cts.

III.—THROUGH ALLUMETTE BOOM.

Same as No. II.

IV.—THROUGH MELONS CHENAL BOOM.

Saw logs, 17 feet and under	1-10 ct.	1 ct.
Red and White Pine, Tamarac, Spruce and Hemlock, round or flatted, over 17 feet and under 25 feet	2-15 ct.	1⅓ ct.
do do 25 to 35 feet long	1-6 ct.	1⅔ ct.
do do 35 feet and upwards in length	4-15 ct.	2⅔ cts.
Red aud White Pine, Tamarac, Spruce and Hemlock, square	2-5 ct.	4 cts.
Oak, Elm and other hardwood, square or flatted	3-5 ct.	6 cts.

V.—PASSING LAPASSE BOOM.

Tolls same as for No. IV. No charge for Working Expenses.

VI.—THROUGH IMPROVEMENTS IN MISSISSIPPI CHENAL, CHATS RAPIDS AND QUIO BOOM OR ANY ONE OF THEM.

Saw logs, 17 feet and under	¼ ct.	1½ ct.
Red and White Pine, Tamarac, Spruce and Hemlock, round or flatted, over 17 feet and under 25 feet long	4-9 ct.	2 cts.
do do 25 to 35 feet long	5-9 ct.	2½ cts.
do do 35 feet and upwards in length	8-9 ct.	4 cts.
Red and White Pine, Tamarac, Spruce and Hemlock, square	1⅓ ct.	6 cts.
Oak, Elm and other hardwood, square or flatted	2 cts.	9 cts.

VII.—THROUGH IMPROVEMENTS FROM DESCHENES TO HEAD OF HULL SLIDE, NORTH SIDE.

Saw logs, 17 feet and under	1 ct.	
Red and White Pine, Tamarac, Spruce and Hemlock, round or flatted, over 17 feet and under 25 feet long	1⅓ ct.	
do do 25 to 35 feet long	1⅔ ct.	
do do 35 feet and upwards in length	2⅔ cts.	
Red and White Pine, Tamarac, Spruce and Hemlock, square	4 cts.	
Oak, Elm and other hardwood, square or flatted	6 cts.	

VIII.—THROUGH IMPROVEMENTS IN THOMPSON'S BAY.

Saw logs, 17 feet and under	¾ ct.	1 ct.
Red and White Pine, Tamarac, Spruce and Hemlock, round or flatted, 17 feet and under 25 feet long	1 ct.	1⅓ ct.
do do 25 to 35 feet long	1⅓ ct.	1⅔ ct
do do 35 feet and upwards in length	2 cts.	2⅔ cts.
Red and White Pine, Tamarac, Spruce and Hemlock, square	3 cts.	4 cts.
Oak, Elm and other hardwood, square or flatted	4½ cts.	6 cts.

IX.—THROUGH IMPROVEMENTS IN LIMEKILN EDDY.

Saw logs, 17 feet and under	¼ ct.	
Red and White Pine, Tamarac, Spruce and Hemlock, round or flatted, over 17 feet and under 25 feet long	⅓ ct.	
do do 25 to 35 feet long	5-12 ct.	
do do 35 feet and upwards in length	⅔ ct.	
Red and White Pine, Tamarac, Spruce and Hemlock, square	1 ct.	
Oak, Elm and other hardwood, square or flatted	1½ ct.	

X.—THROUGH BOOM BELOW THE OUTLET OF HULL SLIDE

Same as No. IX.

Mothers who are startled at the hour of midnight by that ominous hoarse cough of your little ones, what would you not give for a prompt and certain means of relief from that dread destroyer of your children, Croup? Such a means you may have for the trifling cost of 25 cents. It is Hagyard's Yellow Oil, the great Household remedy for all inflammatory and painful diseases. Do not rest over night again without it.

FOREST FIRES.

Forest fires are numerous during this month and too stringent measures cannot be taken to prevent carelessness on the part of [illegible] and incendiarism by tramps. In New York such offences are criminal. Under the [illegible] statutes of that State, every person [illegible] setting fire to his own woods, or negligently suffering a fire kindled upon his own [illegible] fallow land to extend beyond his own land, is to be deemed guilty of a misdemeanour, and, on conviction, is liable to a fine not exceeding a thousand dollars or imprisonment for a term not exceeding one year. A peculiar rule also [illegible] to civil suits for damages occasioned by [illegible] fires in Suffold county. Wherever a person [illegible] has kindled a fire on his own land permits it to extend beyond, to the land of another, he is deemed to have done so negligently [illegible] law imposes upon him the burden of proving "beyond every doubt"—these are the words of the statute—"that there was no negligence on his part, and that the fire extended from his own land from causes entirely beyond his own control." These laws are found to have a wholesome effect.—*Mail.*

A Wood-Splitting Machine.

A novelty in mechanics is a wood-splitting machine, which E. W. Peck has used near Cambridgeburgh, Vt. It acts exactly upon the guillotine principle. An enormous axe, weighing with its fixtures, 200 pounds, runs up and down between two uprights, and is controlled by a pair of levers. As the section of a log drops from the buzz saw, it rolls down an incline to the splitter. Here a workman places it under the axe, which, descending, splits it with incredible ease and despatch. The toughest and knottiest "old settlers," which it would take a man half a week to split with an ordinary axe, are disposed of in a second. The rapidity with which it works may be imagined from the fact that it can split wood as fast as it can be sawed in a mill. It does as much work in a given time as twenty men could accomplish.

Timber Seasoning and Preserving.

A foreign exchange describes a method which it says has been utilized to a large extent in France. By this new process, the antiseptic properties of carbolic and other tar acids are carried through the heart ane the innermost pores of the largest log, all the free water and fermentable sap being extracted by superheated sted steam. It is said that all kinds of wood may be preserved. A noteworthy thing reported is, that the timber if first so softened by the process, under appropriate treatment, it may be pressed into various shapes, after which it hardens and resists the attacks of fungi or of insects. As licenses have been taken out in England, we hope for fuller information as to the process itself and it practical results.

Growth of Trees.

As the result of observation and from the testimony of reliable men, the following is about the average growth in twelve years of the leading desirable varieties of trees when planted in belts or groves and cultivated:—White maple, one foot in diameter and 30 feet high; ash-leaf maple or box elder, one foot in diameter and 20 feet high; white willow, one and a half feet in diameter and 40 feet high; yellow willow, one and a half feet in diameter and 35 feet high; Lombardy poplar, 10 inches in diameter and 40 feet high; blue and white ash, 10 inches in diameter and 25 feet high; black walnut and butternut, 10 inches in diameter and 20 ft. high.

Sharpening Old Files.

The edge produced on files by acid does not hold; a recut file differs from a new one in temper, as drawing and replacing the temper injures the steel, the original temper seldom being attained. The only method of sharpening a file and making it as good as new, is by the application of the sand blast. I have been using this in my shop about six months, and can sharpen an old file equal to new (without disturbing the temper) in from one to three minutes. I prefer old files thus treated to any new files, as it makes them keener and smoother cutting, and preventing breakage of teeth.—*W. A. Foster in Blacksmith and Wheelwright.*

Travelling Agent.

MR. A. L. W. BEGG has been appointed agent for the CANADA LUMBERMAN, and is authorized to collect subscriptions and grant receipts therefor and to make contracts for advertisements appearing in its columns.

The Canada Lumberman

DEVOTED TO THE LUMBER AND TIMBER INTERESTS OF THE DOMINION.

PUBLISHED SEMI-MONTHLY BY

TOKER & Co. PETERBOROUGH.

Terms of Subscription:

One copy, one year, in advance	$2 00
One copy, six months, in advance	1 00

Advertising Rates:

Per line, for one year	$0 90
Per line, for six months	50
Per line, for three months	30
Per line, for first insertion	10
Per line, for each subsequent insertion to 3 mo's.	05
Cards not occupying more than 12 lines (1 inch) per annum	8 00
Cards not occupying more than 12 lines (1 inch) for six months	5 00
Cards not occupying more than 6 lines per annum	5 00
Cards not occupying more than 6 lines, for 6 mo's	3 00

Special rates will be made for page, half page and column advertisements.

Advertisements intended for insertion in any particular issue should reach the office of publication at least three clear days before the day of publication, to insure insertion.

All communications, orders and remittances should be addressed and made payable to TOKER & Co., Peterborough, Ont.

Communications intended for insertion in the CANADA LUMBERMAN, must be accompanied by the name of the writer, not necessarily for publication, but as a guarantee of good faith. Communications to insure insertion (if accepted) in the following number, should be in the hands of the publishers a week before the date of the next issue.

PETERBOROUGH, Ont. MAY 16, 1881.

THE saw log drive belonging to Fowls Bros., Hastings, Ont., arrived at Lakefield on Wednesday morning, and that of J. Z. Rogers, of Ashburnham, at Youngs' Point.

MESSRS. R. & G. STRICKLAND are very busy cutting up about a million feet of basswood, ash, etc., at their Lakefield water mill, which has lately been thoroughly overhauled and is now doing better work than it ever did before. Too little attention has hitherto been paid to the getting out of hardwoods in this section of Ontario.

THE Tanite Company, of Stroudsburg, Monroe Co., Pa., compelled by the increased demand for their celebrated emery wheels and grinding machinery, are about enlarging their already extensive works. Plans and specifications were perfected for a building 24x64 feet, four storeys high. In consequence of the lateness of the season, however, it is impossible to get out the lumber in time. The original plans are therefore modified temporarily, and a building of two storeys, 24x32 feet, will be erected, which, at a later period, will be enlarged to the original designs.

As most of our readers know it is one thing to get out logs during the winter and another to get them to the mills in good time during the summer. In the last two or three issues of THE CANADA LUMBERMAN we have given various estimates of the expected supply of lumber for the season, but none of these estimates, so far as we are aware, made any allowance for the logs which, although banked, were either not likely to reach the mills this summer, or to reach them so late as to prevent the lumber manufactured from them being put upon the market until next spring. That more than the usual quantity of logs will be hung up this season is now more than probable. Not only is the opening of the streams unusually late, but little or no rain has fallen, to make up for the water which has been quietly slipping away without taking a log with it. Unless, therefore, unusual provision were made last fall for holding back a supply of water on the small streams, the probabilities are that the estimated supply for the current season will be considerably reduced from this cause, although we think it would be rather injudicious to make bets, as the *Lumberman's Gazette* says is being done in the west, that the supply of lumber will be from ten to fifteen per cent. less this season than it was last, on account of the dearth of water.

TIMBER ON ROAD ALLOWANCES.

In compliance with the request of a correspondent we publish the 3rd, 4th, 5th and 6th (as amended last session) sections of chap. 26 of the Revised Statutes of Ontario, which relate to the rights of license holders and municipalities to the timber growing upon road allowances included within the bounds of any license:

3. Every Government road allowance included in any Crown timber license, heretofore granted, or which may hereafter be granted under section one of this Act, shall be deemed and taken to be and to have been ungranted lands of the Crown, within the meaning of said section, and liable as such to be included in such license. 34 V. c. 19, s. 1.

4. The licensee or nominee named in any such license shall be deemed and taken to have, and to have had, all the rights in respect of every such road allowance, and the trees, timber and lumber thereon, or cut thereon, as were or, by the second section of this Act, may be conferred upon him in respect of any other Crown lands embraced in such license, and the trees, timber and lumber thereon, or cut thereon, except that he shall not be entitled to take or keep exclusive possession of any such road allowance. 34 V. c. 19, s. 2.

5. No by-law passed, or to be passed by any Municipal Council for preserving, selling, or otherwise appropriating or disposing of the timber or trees, or any part thereof, on any Government road allowance or allowances included in any such license, shall be deemed or taken to have had or have any force or effect against any such license. 34 V. c. 19, s. 3.

6. In case the council of any township organized as a separate municipality, or the council of any united townships, have passed or hereafter pass any by-law for preserving or selling the timber or trees on the Government road allowances within such townships or united townships, and included in any such license, the corporation of such township or united townships shall be entitled to be paid, out of the consolidated revenue fund of the Province, a sum equal to two per centum of the dues received by Her Majesty for or in respect of the timber or saw-logs which, during the existence of such by-law, were cut within the said township or united townships, under the authority of such license; but no corporation shall be entitled to such per centage of the dues received for timber or saw-logs cut during the times or seasons when any timber or trees on any such road allowances were cut or removed, for which cutting or removal such corporation had, before the fifteenth day of February, one thousand eight hundred and seventy-one, obtained a verdict against any such licensee or nominee.

With regard to the timber growing on road allowances not within the limit of any license, sub-section 4 of section 509 of the Municipal Act provides that "the Council of every county township, city, town, and incorporated village may pass by-laws for preserving or selling timber, trees, stone, sand or gravel on any allowance or appropriation for a public road" subject to the provisions which we have just quoted.

FOREST CULTURE.

The Toronto *World* is another paper that is sharing in the growing interest felt in forest preservation. In an editorial it says:—"The forests of Canada are, next to her farms, the chief source of her wealth. But these are being rapidly depleted, and scarcely a move has been made in any quarter to re-plant or conserve them. At the present rate of consumption our supply will become exhausted in fifteen years, while the supply of the United States east of the Rocky Mountains will not last ten years. Much may be done by judicious care and oversight to provide for future wants, as may be learnt from a study of forest culture in Great Britain and the countries of the continent, more especially Germany and France. This work ought to begin now; to wait ten years or five years would be to lose invaluable opportunities.

OUR FORESTS.

Our readers will be pleased to learn that the Council of the Agricultural and Arts Association of Ontario at its last meeting decided to offer two prizes of $30 and $20 for the best essays on "the best methods of preserving our forests and the varieties of trees best suited for planting," and that these essays are to be read and discussed at a public meeting of all who chose to attend, to be held on the evening of the first Wednesday during the Provincial Exhibition in London, next September. It is to be hoped that these prizes will not only be the means of calling forth some valuable information and suggestions with regard to this very important subject, but that the opportunity, which the public meeting is designed to afford, will be taken advantage of by many of the readers of THE CANADA LUMBERMAN, to place their views—particularly with regard to the preservation of our present timber supply—before the public. In connection with this subject may we not ask: Why should not the lumbermen of this Province form an association, and receive a grant from the Provincial Treasury to aid them in promoting so laudable an object as the preservation of our forests? The Provincial Government now give grants to several associations which have been formed for similar public purposes, and why not to the lumbermen, who represent an interest, second to that of the farmer, but of far greater importance than any other.

FOREST STATISTICS.

In the United States we learn that important branches of the census work have been committed to the charge of special agents, who are experts in their several departments. Among these Professor Charles S. Sargent has charge of the subjects of "Tree-covering, Forest Wealth, and the Lumbering Industry." This gentleman will no doubt collate the scattered statistics on these subjects, and publish them in such a shape as to give very valuable information. We might well follow the example of our neighbors in this respect, for the small expenditure incurred would be amply repaid, by our better knowledge of our forest areas and forest wealth. This is only one instance out of many of the interest which our neighbors south of the line are taking in their forests, in which respect we lay somewhat behind them.

HALIBURTON.

TIMBER.—A very large drive of square timber belonging to Messrs. Irwin & Boyd is running through this village. It will be rafted in Head Lake, where, with other timber which has already been brought up the lake, there will be some 2,000 pieces. This drive consists of 1,100, among which are some fine timber, the largest being 41 feet in length, and squaring 30x31 inches. A timber slide for loading it has been built near the new wharf, and the first train load left on the 6th *via* the Victoria and Midland railroads for Port Hope.

SCARCITY OF WATER.—The lumbermen are complaining very much of the want of water. A vast number of logs will have to be left in the small creeks, adjoining the large creeks and lakes, there not being sufficient water to run them out. There has not been any rain in this part since the first part of February. Water is lower than last fall.

Haliburton, May 9th, 1881.

Deserves Success.

THE CANADA LUMBERMAN.—Messrs. Toker & Co., the enterprising publishers of the Peterborough DAILY REVIEW, have purchased THE CANADA LUMBERMAN, and will henceforth publish it twice a month. It is the only paper published in Canada in the interest of lumbermen, and will, we are sure, guide and guard their interests faithfully and well. The LUMBERMAN is purely a trade organ, and will not be allied with any political party. We wish Messrs. Toker & Co. the success they deserve, and if they get that they will have no reason to grumble, as every person interested in lumber or timber should subscribe for THE CANADA LUMBERMAN at once.—*Stratford Herald.*

JAKE BOGART'S saw mills, Ufford, have again been overhauled and are in first-class order.

ST. JOHN, N.B.

THE FRESHET.—The water in the river continues very low for the season of the year, owing to the protracted dry and cold weather; the same may be said of the smaller streams, operating adversely to stream driving operations.

SAW MILLS.—Sawing has commenced at the greater number of our milling establishments, both in the city and in the country districts, but it is doubtful how long they can all be kept in operation unless we have more favorable weather for the streams soon.

Freights.—The rates of freight rule about the same as at the date of our last. A large business in chartering has been done however in the past fortnight, some 16,000 tons of shipping having been placed, chiefly for Liverpool and Bristol Channel, at 57/6.

SHIPMENTS.—The following shipments of deals and other sawn timber have been made during the two weeks past, say:

For Europe	6,029,000 Sup. ft.
" United States	2,227,000 "

St. John, N.B., May 5th, 1881.

OTTAWA.

SHIPPING.—Shipping of lumber is going on briskly by the river and by the St. Lawrence & Ottawa Railway, and by the Canada Central Railway.

RAFTING.—A. & P. White, of Deux Rivieres, have a large gang of men rafting their timber at that place and expect to be ready to start for Quebec at an early date. The water in the Ottawa and many of the other streams is very low, and great fears are entertained that there will be many logs left in the creeks this season.

DRIVING.—Bronson & Weston's drive is near out of the Schyon; the water is as high as it was any time at this season of the year. Fraser & McCanchan's drive on the same stream is also doing well. They expect to be in the Ottawa River about the 12th of May. The tug *Walter B.*, owned by Mr. Thibaudeau, is to begin towing logs from Des Joachim to Fort William on the 28th.

CLOSED.—Mr. J. A. Gouin has closed the Russell House until the 15th of June next. The old stone building is to be taken down and a handsome new front built. Mr. Gouin has conducted the Russell House for the past eighteen years, and as he has been a popular landlord, he will doubtless have the continued patronage of the travelling public when the superior accommodation which will be afforded by the contemplated improvements is completed.

BIG TREES.

Referring to big trees, the *American Register* tells us that a grove in California, consisting of 1,680, contains not one which measures less than six feet in diameter. A rare and magnificent white oak is to be seen in the Quaker burying ground in Salem, New York. It is more than two hundred years old, and is remarkable for its enormous branches, which have a spread of 112 feet. A remarkable chestnut tree is growing on a farm in Berks, Pennsylvania. It is nearly forty feet in circumference at the base, and the top of the tree can be reached by steps fastened between the limbs. Most remarkable of trees with a history is a russet apple tree in Skowhegan, Maine, which was planted in 1762. In its branches a play-room for children has been built for half a century. The tree is seven feet from the ground to the branches, five in number, all of which are very large, and average 30 feet in length, covering a space of ground 63 feet in diameter. It is more than 4½ feet in diameter, and has yielded an average of thirty bushels each year.

On the Subject of Wagon Tires.

The question has been asked why people persist in the use of narrow wagon tires where the roads are of clay and mud, or where loads have to be drawn over ploughed or mellow ground. A broad tire will not sink so far as a narrow one, consequently the narrower the tire the deeper the wheel will sink into the field or road, and greater power will be required to draw the load. While narrow wheels are desirable for vehicles for fast driving, it is very desirable that the breadth of tire used on our lumber and farm wagons should be materially increased.

Trade Notes.

THE schooner *J. Norris* gets $80 per 1,000 for timber from Amhurstburg to Kingston.

TRAFFIC on the Erie Canal is not expected to be fully open until about the 17th inst.

MR. ROBT. CAMP'S new steam saw mill at Dwight commenced cutting logs on the 14th ult. The machinery worked well.

THE Moira river is falling rapidly, making owners of logs on that stream apprehensive about getting them to the mills this year.

AN individual named Hitchman was fined $10 and costs, at Huntsville, for having stolen timber from the farm of the poet Churchill.

ALTHOUGH the rate on lumber from Toronto to Oswego is still quoted at $1.25, a charter, however, has been made at $1.15.

THE steamer *Conqueror*, of Quebec, has been chartered for towing timber on Lake Ontario. She has been guaranted eleven rafts.

THOMPSON & MCARTHUR, Fenelon Falls, are preparing to erect a large steam saw mill on the north side of the village, on the shore of Cameron Lake.

WE understand that the drives on Gull and Burnt Rivers are making good progress, and will soon be out of danger, but on the smaller streams drivers have their hands full.

THERE is a good opening for a planing mill and sash factory at Lakefield, Ont., as there is none within nine miles of that place, and it is surrounded by a good country.

THE Muskoka Slide Dam and Boom Company have about 220 men employed, to whom they are paying an average of $26 per month. Last year the average was $24.

FROM the St. Ignace *Republican* we learn that the Mackinac Lumber Co., put in during the past winter 14,000,000 feet of logs, held over from last year 3,000,000 feet and have 1,500,000 feet of lumber on their docks and expect to manufacture 16,000,000 feet this season.

FROM two groves of maples in North Harpersfield, Delaware County, New York, the yield this year has been seven tons of maple sugar. The groves contain 4,200 trees. In 1875 the town of Harpersfield produced 200,000 pounds of sugar, an amount which this year's crop is thought to exceed.

MESSRS. G. W. TAYLOR & Co., are putting in two gangs consisting of 64 saws in their saw mill, on Muskoka Bay, which will make its cutting capacity much greater than any mill in the Muskoka district. They are also building two additions to their mill, one for lumber and the other for lath.

ON the 30th ult., while superintending the breaking of a vast dump of logs on the Tequin river, Mr. Joseph Calverlie got entangled among the falling logs, and as a result, a few broken ribs, an ugly contused wound on the right temple, and a general bruising all over, from which, however, nothing serious is apprehended.

DURING the past 12 years there has been 1,686,650,816 feet of logs cut from the Menominee nd tributaries. The cut of the past winter will ggregate about 306,500,000 feet, which, added to 20,000,000 feet of old logs on hand, gives a total stock of 326,500,000 feet. The log cut of the past winter exceeds that of the last previous one nearly 66,000,000.

AN Ottawa dispatch says that the tug *Allan Gilmour*, with eight barges of lumber, got into the Long Sault on the night of May 8th, and it was found necessary to cut five barges loose, which were badly wrecked in going through the rapids. J. A. Kirby, of this city, is owner of the barges; the loss is estimated at $4,000, on which there is an insurance of $1,000.

LAKE freights on lumber are quoted at $1.50 from Muskegon to Chicago; $1.50 from Grand Haven; $1.25 from Manistee. No rates have been named yet for ports that are not open. The vessel market is pretty firm, and under the impression that there will be plenty of stuff to carry this season, owners expect to command paying figures.

THE Somo River (Wis.) Improvement Company has had about sixty men engaged for some time in building dams and otherwise improving the stream, to facilitate the driving of logs. The dams have been thoroughly repaired and two ones built, making five in all. There are about ten million feet of logs to come out of that stream, about four millions of which will be run to Stevens' Point.

THE Toronto *Globe* says that it is proper to have it understood by vessel-men that there will be nothing done in this port for a week in lumber charters. The canal at Oswego will not be open till the 17th, and the docks at Oswego are overcrowded. It is said by shippers that there will be a month's good sailing when the season commences. It is hoped that rates will be maintained as they are at present.

IT is learned from the *News and Reporter* that the Ducey Lumber Company with a capital of $50,000 has been organized at Muskegon for the transaction of a general lumber business. P. A. Ducey is president; John Lynch, vice-president, and E. C. Misner, secretary-treasurer. The company has purchased the new mill of the Torrent & Arms Lumber Company, for $40,000. The new firm is a strong one and will do a successful and profitable business.

MR. JOHN OLIVER, of John Oliver & Co., Toronto, Ont., has been in Chicago for the past two weeks buying and selling hardwoods. Mr. Oliver has so much faith in the prospective value of certain kinds of wood, that even at present prices he would rather buy than sell. He has men in Indiana and adjoining states, buying extensively. The firm does an immense business, and is the only one in the Dominion in the hardwood trade exclusively.

THE small value of birch wood for fuel, and its lack of toughness and strength, except in the smaller twigs, have led to its general neglect in the arts. Our more enterprising builders of railway cars, however, have discovered that its light weight, close grain, and rich finish make it admirably suited for certain applications where fine finish and bright effects are desired. The contrasts presented when white birch and light colored ash are relieved by the red of the cherry birch, are said to be queer looking, but very pleasing to the eye.

THE Caughnawaga Indians consider their remuneration not high enough. They are engaged in piloting rafts of timber down the Lachine rapids during the open season, for which they are paid $2 per day. They now demand $2.50, and add the presumptuous condition that no white man be employed in this peculiar but dangerous calling. The redskins went the length of assaulting a lumberman's agent who had some French-Canadians engaged on the work. Of course they will have to pay for their obstreperousness.

LOUISVILLE, KY., enjoys a very respectable lumber trade of some fifteen to twenty million feet, half of which is sawed there. In the report of the Board of Trade for 1880, the number of establishments in this branch of manufacturing is mentioned as three; capital employed $300,000; number of hands, 132; wages, $1.35 to $2.50 per day; number of saws, 126; number of circular saws and lath mills, six; value of logs, $124,000; value of material, $126,375; lumber produced, 10,500,000 feet; number of lath and pickets, 3,342,500; value of products, $212,500. The Ohio Falls Car Manufacturing Company, on the Indiana shore, at Jeffersonville, uses 50,000 feet per day, or as much as is sawed in Louisville, principally Michigan pine. The car receipts in the city amount to about 3,000 cars per year, while considerable more comes by river.

We have received from Messrs. Toker & Co., publishers of the REVIEW, Peterborough, the tenth number of THE CANADA LUMBERMAN, a paper devoted to the interests of the timber and lumber industries of the Dominion. The first nine numbers of this publication were issued in Toronto by Mr. Alexander Begg, but the copy before us shows that it has changed hands and come under the able management of Messrs. Toker & Co. The LUMBERMAN will be purely a trade organ, non-political in its character—a paper for the dissemination of facts and figures concerning the trade; and in the interests of our woods and forests, it will sustain an able part. The contents of the LUMBERMAN are of so much value that we believe every one interested in that upon which it professes to treat, should become a subscriber. It will be sent to any address for $2.00 per year.—*Campbellford Herald.*

Lack of Air.

Some workmen think themselves "tired" when they are only poisoned. They labor in factories, breathe air without oxygen, and live in an atmosphere of death. They are, too often, allowed to smoke, and thus add fuel to the flame which is consuming them. They knock off work "tired" and listless, when they are merely weakened by foul air and made dull and heavy by an atmosphere charged with disease. They keep the windows shut and close the door on health, while they lift the gratings of the tomb by breathing and re-breathing the poison from their own lungs, and the floating particles of matter about them. Open the windows—let in the sunshine and the breeze, stop smoking, and you will soon find that it is the poison of confinement, and not labor, that wearies and tires.—*Montreal Herald and Star.*

THE celebrated cypress tree that had stood near the city of Sparta, Greece, for over 2,800 years, and was described by Pausanius 400 years before the coming of Christ, has been destroyed by a band of strolling gypsies, who camped beneath it and left their fire burning. It was 75 feet high and 10 feet in diameter near the ground.

SAWYER, ENGINEER & MILLER

A PRACTICAL MAN to take charge of a Saw Mill, Shingle Mill, one run Flour Mill, with power sufficient to run alternately, situated on Duck Lake, N. W. T., 500 miles west Winnipeg. Engagement for a year and expenses paid. Apply immediately, stating experience, reference, salary expected, when could leave. A man accustomed to our machinery preferred,

L14 WATEROUS, BRANTFORD.

ONTARIO
Electro and Stereotyping Foundry

We have added to our plant all the latest improved machinery for Electro and Stereotyping, and the manufacture of Printers Furniture, facilities for executing work which no other establishment in the Dominion possesses, and not excelled by any on the continent. A large assortment of various cuts constantly on hand.

FLEMING & SON,
L14 26 Colborne St., Toronto.

CANOES!

The undersigned keeps Canoes suitable for LUMBERMEN, SPORTSMEN and others constantly on hand. Price List on application.

WILLIAM ENGLISH

8L14 PETERBOROUGH, ONT.

THE STEAMER "NORSEMAN."

(R. CRAWFORD, MASTER.)

Will make her regular trips on this route commencing on Wednesday, the 20th of April, 1881, leaving Cobourg every morning at 7.30 and Port Hope at 9 o'clock, on arrival of Grand Trunk Railway trains from the East and West, connecting at Rochester with the New York Central, Northern Central, and Erie Railways. and the Lake Ontario Division of the Rome, Watertown and Ogdensburg Railway for all points east, west and south.

RETURNING,—Will leave Charlotte (Port of Rochester) daily at 9 o'clock p.m., except Saturdays, when she will leave at 3 p.m. for Port Hope direct.

Dealers in stock will find this the cheapest and most expeditious route to Oswego, Boston, Albany, New York. etc., etc. For further information apply to

Burdock Healing Ointment should be used in connection with Burdock Blood Bitters for curing Ulcers, Abscesses, Fevers, Sores, &c. Price 25 cents per box. T. MILBURN & CO., SOLE AGENTS, TORONTO.

SCHOOLS OF FORESTRY.

Mr. David D. Thompson, of Cincinnati, who has taken much interest in all forestal subjects. gives some valuable information concerning the schools of forestry established in Europe. In order to secure the best results from the culture and care of forests, says this writer, which require a carefully planned system of regulations, with competent agents to look after their application, the European governments, with two or three exceptions, have established schools of forestry, most of which are now in a flourishing condition. The students in these schools have entered that they may thoroughly qualify themselves for the work they will have to perform, and the importance of which they appreciate. For them the salary is not the all-important question—as is usually the case with scientists.

These schools of forestry are of two kinds:—First, those designed for the study of forest sciences and collateral branches, which are called in German, *Forstakademie;* and, second, the *Allgemeine Hochschule*—colleges or polytechnic institutions in which forestry is only a a department. Before entering the *Forstakademie,* students are required to have taken a course in some preparatory or other school; and in some schools to have had, in addition, a practical experience in forest planting and management under the direction of skilful forester. Practical experience in the care of forests is, in all schools, an important feature in the regular course. The rules governing admission are very strict. Either a certificate of graduation from a responsible institution or other evidence of efficiency is always required; and in the service of the state certain conditions as to age, nativity, etc., must be complied with. The object is to give such instruction as is needed in the planting and care of forests. The course of study embraces whatever will be of use for such a purpose. It includes the natural sciences, and the numerous details of administration required. Its usual result is to impress the student with the responsibilities of his work and develop a habit of close observation.

One of the oldest and best schools of forestry in Europe in at Nancy, France, and to it the department of Muerthe, of which Nancy is the capital, owes much of its rare rural beauty. The school is liberally supported, and is fully supplied with cabinets, museums, apparatus, and appliances of every sort. To those who prepare for state forest service instruction is free. The importance of this service may be inferred from the fact that the state forests cover an area of nearly 3,000,000 acres, with a gross revenue of nearly $7,000,000, and a a net revenue over all expenses of over $5,000,000. The total expense for board, lodging, uniform, instruments and pocket money is between $400 and $500 a year. Foreign students are admitted, with a moderate special charge. The English government usually has several students at Nancy training for forest service in India.

The course of study occupies three years. Every student is required to devote 1,500 hours to study each half year. Lectures are delivered on the exploitation of forests; relation of forests to climate; natural history of different kinds of trees; management of forests; conversion of one form of forests into another; desirable qualities and defects of woods, etc. A large number of lectures of an hour and a half each, and the same amount of time allotted for preparation of the topic of the lecture, are devoted to botany and mathematics. There are also lectures and lessons in road and bridge building, in forest law, and in the German language, together with some military instructions and drill, and practice in horsemanship. During the summer session, about a month is spent in botanical and professional excursions in the Vosges, the Jura and other mountains, in which are visited forests in all stages of treatment and exploitation, and where the students are required to practice in the mensuration of wood and timber. Of all these observations and experiments each student must prepare a report.

In addition to the branches enumerated in the third year, attention is given to zoology, especially to entomology, the ravages committed by insects upon forests, the means of averting or destroying them, and of recovering a forest ravaged by them; the fixation of sand dunes, the reclamation of barren wastes, and the reforesting of denuded mountains; the geology and mineralogy of the mountains of France, mountain torrents, their causes and the means of preventing them; the chemistry of vegetation and all that relates to the production and assimilation of atmospherical and terrestrial elements.

In Germany are found the oldest, the best endowed, and, in some respects, the best managed schools of forestry in the world. In the latter part of the eighteenth century, occasional lectures on forest science was given in the Berlin University. As early as 1821 an academy for forest instruction wss established in Berlin, but, on account of the absence of suitable forests in the neighborhood of that city, it was, in 1830, removed to Neustadt Eberswalde, where was abundance of forests, and the name changed to the High Institution for Forest Science. The course of study embraces chemistry, physics, meteorology, mineralogy, geognosy, botany, anatomy of plants, vegetable physiology and pathology, microscopy, zoology, entomology, geodesy, wood measuring, surveying, plan drawing, public economy and finance, cultivation of forests, forest improvements, forest botany, protection of forests, calculation of the value of forests and forest statistics, administration of forests, redemption of rights of usage, forest history, civil law, criminal law, jurisprudence, construction of roads, hunting and shooting.

There is connected with this school a drying house for seed, beds, and nurseries, specimens of a great variety of trees for botanical study, and a museum containing specimens of birds, insects, and animals found in forests, all neatly arranged in cases. Specimens of the branch, leaf, bark, wood, or cone of trees damaged by animals or insects, are exhibited side by side with the same parts in a healthy state, in order to teach the student to know at a glance the nature of any injury to a tree, and the animal, bird, or insect causing it. Stuffed squirrels, beavers, rats, and mice are so placed as to represent the same in nature, gnawing at the bark, grubbing at the roots, etc.; and insects are shown in the several stages of larvæ, chrysalis, caterpillar or moth, with all all their ramifications in the stems or branches of trees. Besides these are specimen blocks of almost all descriptions of timber. A number of other schools of forestry have been established in Austria, Italy, Spain, Portugal, Denmark, Sweden, Finland, and Russia.

The American people ought certainly to be wise enough to profit by the sad experience of other countries, and not only regulate the necessary, and put a stop to the unnecessary, destruction of their forests, but imitate their example in endeavoring to restore them. This may be accomplished in almost innumerable ways, if only the people can be made to realize the necessity for it, and a desire awakened to have it done.—*Northwestern Lumberman.*

THE CATALPA.

A western paper believes that the railway tie of the future will be of this wood. The Fort Scott, Texas and Gulf railroad has planted 300 acres of young trees, and the Iron Mountain railroad 100 acres, near Charleston, Mo. On the roadbed of the latter company, ties of this wood have lain in the muddy silt of the Mississippi for 12 years, and are still in a good state of preservation. They have outlasted two sets of white oak ties, and bid fair to survive the third. Fence posts in Indiana and Illinois are now sound after having been in service 40, 50, and even 75 years. In the muddy regions about Cairo, where it is grown extensively, it is used as corner stones for the most substantial building. It is of an elastic nature, but not so soft and light as cottonwood. Dr. John A. Warder, President of the American Forestry Association, claims for the catalpa a durability and power of resistance to the influences of the elements possessed by no other wood. It is found in the Mississippi valley, and on the shores of the tributaries of the great river. It bears a large, white, highly-perfumed flower, and grows rapidly.

Ask your druggist for a trial bottle of BURDOCK BLOOD BITTERS, it will only cost you 10 cents, and a few doses will prove its efficiency as a health restoring Tonic-regulator of the Bowels, Liver and Kidneys. It is a specific for all diseases arising from impure blood and disordered secretions.

THE GROWTH OF TREES.

Trees, says Elizur Wright in an eastern paper, record their own history. The stump not only tells the age, but in what years the departed grew vigorously and in what it did little more than hold its own. I not long ago, in Ohio, measured the stump of a sugar maple, recently cut, and found it thirty inches in diameter. The tree had lived 125 years. In the first sixty-three years, while it had stood in the dense forest, it had acquired but nine inches in diameter. After the forest was cut away, and it was left with only a few scattering companions, it soon assumed a superior rate of growth, which it maintained till nearly the last, so as to add twenty-one inches of diameter in sixty-two years. The rings averaged about seventeen-hundredths of an inch in thickness, whereas, in the first sixty-three years they had averaged but seven-hundredths.

In Sweden it is ascertained that a forest of mixed wood on medium soil grows about a cord of wood a year on an acre of land. If much more than a cord is removed from an acre in a year, the production is reduced. But to keep the production from diminishing, it makes all the difference in the world what trees you take away, whether you take those which are beginning to decay, or those which are in the rapidest stage of growth. It is only by the best judgment in thinning out that the capital of growth can be kept whole after a forest has become well established.

If we take two trees of the same species—say an oak sapling that is four inches in diameter, and sixteen years old, and twenty feet high, and a tree that is twenty-four inches in diameter, ninety-six years old and sixty feet high—a little calculation will show us, supposing the thickness of the rings now equal, that the sapling is making 2.18 of a cubic foot of wood in a year, while the tree is making 3.924 cubic feet in a year. It will take between thirty-two and thirty-three such large trees on an acre to make a cord of wood in a year; and it will take about 590 of the saplings, of nearly four to the square rod; and it would take more than seventy to be cut to make a cord, so that in so young a forest a cord cannot be taken away without trenching on the capital. It is not, in fact, till a forest is made 100 years old that it can yield so much as a cord an acre without trenching on the capital of growth. But when it gets of that age, if the right care is taken, the average cord it yields is much more valuable than mere firewood. The larger and more perfect the sound tree the more valuable per cubic foot.

The forest I have supposed, consisting of thirty-two two-foot trees to the acre, would make only between forty and fifty cords of wood to the acre, if all cut at once. But that would be a destruction of capital which it would take nearly 100 years to restore; a capital which, if kept up by replacing every tree cut, will continue forever to yield a net profit of $10,000 per acre yearly.

A forest, not to be ruined must be managed very much as death manages the human race. Trees must not be taken out faster than they spring up, nor all of one age or sex; only those that are ripe, sickly, and in the way. By adapting the species to the soil, even the poorest soils will yield immense returns. The rocky hills of Massachusetts, which will not grow very large oaks or walnuts, will cover themselves with enormous pines and hemlocks, if they have an opportunity. As evergreens do not, like other trees, perpetuate themselves by sprouts from the stumps, when a forest of them is slaughtered by the axe, their tender seedlings are prevented from replacing them by the sun, frost and cattle; while the hardier seedling of the deciduous woods—such as birch, maple and ash, and the sprouts of such oaks and hickories as may have been mixed with the evergreens—have a better chance, and thus take the place of the resinous woods on a soil not so well adapted to them. With a little judicious care and forethought, a wood of scrubby oak or hop-pole hickory may be converted into a glorious pinery, yielding masts for navies. But, as the individual man has, on the average, a life shorter than that of a tree, it requires the state, which does not die, to do this.

The Middlesex Fells is a tract of nearly 4,000 acres within six or seven miles of Boston, of which more than 3,000 consist of rocky and blue-gravel hills, once covered with lofty pines and hemlocks, nearly all of which have given place to oaks and hickories, living lives of semi-starvation and devastation by frequent forest fires. There are about 140 proprietors, assessed at an aggregate sum between $200,000 and $300,000, and deriving an income from the fuel of a good deal less than one per cent. over the taxes. And this is taking annually more than is replaced; so that the tract, in spite of its woody green foliage in summer and rainbow tints in autumn, is growing every year more desolate.

It has been proposed that the citizens of the towns within whose territory this mostly unoccupied tract lies, and others interested in forest culture, should purchase this tract and give it to the state for the purpose of inaugurating a scientific and common-sense system of care for the trees. Should this be done, plainly, in 100 years from now the state might be enjoying from this tract alone a revenue of $30,000 a year, while it would be a source of health and recreation quite beyond the power of money to measure.—*Northwestern Lumberman.*

WEIR MEASUREMENTS.

Within the past few years much has been said and written for and against the reliability of measurements of water flowing over weirs; this has arisen through the great diversity of results obtained by different persons, who have used the same formula for computation of data. Turbines of almost every make, tested by their builders, have seemingly given highly useful effects; while in actual use some of them have not proved economical in the use of water. This has had a tendency to discredit weir measurements, but unjustly so, as may readily be explained, for the matter is one of great simplicity, notwithstanding the complications thrown around it by those who have supposed a long array of decimals denote profundity and accuracy. Any weir under exactly the same conditions will repeat results invariably; but a formula based upon certain conditions, will not give correct results if those conditions are changed. All brooks and rivers vary much in width and depth, yet the same water flows through the narrow as well as the wide places, the velocity, of course, varying with the cross section of the stream. The velocity, however, does not cease immediately upon entering a wider or deeper part, but continues until the momentum is lost, and the general level attained; this of itself would prove the necessity of placing a weir at a considerable distance from the discharge of a higher head. The Francis formula is based upon the natural flow of the water, which for a depth of one foot over a weir is about three feet four inches per second; and it must be evident that such formula is entirely inapplicable where the velocity is four or five feet per second, as it may be if the weir is placed close to the discharge of a poor turbine, where the water leaves the wheel with half the velocity due the head; or where a cross section of pit or stream approaches the weir is but little greater than the capacity of the weir itself. It is plain that under such conditions the velocity will vary according to the useful effect of the wheel, and equally plain that no reliable correction for velocity can be applied. Had this been considered, much trouble and expense might have been saved the past twenty-five years; for it is not likely any builder would have knowingly continued the manufacture of forty per cent. turbines. The cross section of a pit or stream, up stream from a weir, should be at least five times the cross section of the stream flowing over it; and for a discharge of two thousand cubic feet per minute, the weir should be fifty feet from the discharge of the turbine or opening into pit. Racks should never be used, as they obstruct and raise the water so that it passes through with renewed velocity. If there is a horizontal discharge towards the weir, check the current by zig-zag breakwaters. For measuring the flow of a river the weir or dam cannot be too large; but it may be for measuring the discharge from a mill where a governor is used, as the varying discharge, caused by adding or throwing off machinery, may prevent accuracy if too much time is required for the water to nd its proper level.—*James Emerson.*

Chicago.

CHICAGO, May 4th, 1881.—The cargo market opened firmly, as the *Lumberman* predicted it would. Within the last week a considerable number of cargoes have reached the Franklin street docks, and all of them have been placed at prices that may, without exaggeration, be called good. There has been but little variation as yet in the figures. Green piece stuff of good quality has brought $10.25 without difficulty, the poorer grades ranging as low as $9.75. Common inch has sold at $10.50@11, and the sale of one cargo of a better sort is reported at $16.25. No really choice stock has yet come to the market, so that a quotation of it cannot be made. Shingles open very firm, the standards at $2.40 @2,50, and extra A's at $2.60@2.70. Only one cargo of lath has arrived. It was not of fair quality, and the price received for it—$1.75—cannot be said to fix their market value.

CARGO QUOTATIONS:

Joist and scantling, green	$ 9 75@10 25
Mill run, medium, "	12 00@16 00

1880	138,461,000	78,810,000	169,129,000	30,313,900

Some of the yards are having all the business they can do, but the general report is that trade is not as active as it might be.

In certain directions there is a very stubborn feeling against the high prices of the cargo market. It is asserted by a portion of the dealers that if the opening prices are sustained it will be an exception in the history of the trade, and they do not propose to swap much of their money for lumber at present prices. They do not want piece stuff at more than $8.50, and some of them at $8. That they will be able to buy it at such figures they feel confident, while others feel as confident that the opening prices are as low as any that will be seen this season, and believe that their erring brethren will regret their procrastination.

Regarding shingles there seems to be but one opinion outside of the men who are interested in their manufacture, and that is that they ought to sell for less money. Some of the dealers whose yards have not a shingle in them are getting along by borrowing and buying from their neighbors, and swear by an uplifted hand that they will continue so to do for a while before they will lay in anything of a stock at present cargo rates. The market is pretty clean of standards, and it will require heavy arrivals to make a full stock.

Most of the stock sold has been that wintered over at the mills, which is called dry in some cases and partly dry in others, depending on its condition. Dry lumber generally ranges about $1 above green, though a smaller difference is made on some consignments whose condition is not much better, so far as seasoning goes, than that of stock fresh from the saw. A good many mills are running now, and it is thought that another week will bring to the market a fleet that will afford a better test of the temper of buyers and sellers than any received up to this time.

The *Lumberman* is obliged to admit that the feeling among the frequenters of the wholesale market is difficult to describe. The sellers talk firmly enough, and profess to believe the situation and outlook of trade warrants the expectation that prices will be maintained; but on the other hand some of the buyers, at least, are holding off, hoping that they will be able to secure what they want at lower figures. They characterize the present prices as exorbitant, and declare themselves unable to figure out any way in which the lumber can be handled through the yards without netting them a loss. One dealer informed us that though he had a number of men under pay, with nothing to do, he thought it the better plan to let them stand idle than to give them lumber to shove at present prices. Our readers will observe from this that there are two opinions about the future, and that it is not by any means certain which is the correct one.—*Northwestern Lumerman.*

THEY ALL DO IT.—Everybody uses "TEABERRY" for the teeth and breath, the newest, brightest, cosiest little toilet gem extant. Try a 5 cent sample.

Albany.

The Albany *Argus* says a fair business is reported for the past week. The stock wintered, notwithstanding the steady demand, shows a good assortment on hand, and this being at present the acknowledged low priced market, the wonder is that it has not been more thoroughly reduced. However, the temptations which low prices offer to the buyer may, possibly, before the opening of the canal on the 17th inst., lessen materially what is on hand.

The complaint is becoming daily more general among the lumber merchants here that they cannot bring lumber from points of supply and realize any profit out of the transaction at today's quotations, the price asked by the manufacturer and the price baid by the buyer being too close, leaving no margin for the distributor.

The determined attitude of the Michigan and Canadian manufacturer to get his price for his lumber, together with the unquestioned certainty of very high lake freights should demonstrate beyond a doubt that much higher prices must prevail; and it is noticeable that those who thirty days ago proclaimed their opinion as otherwise, now seriously acknowledge the importance of an immediate advance; and the sooner the fact is recognized that the manufacturer's cry is "no surrender"—and he means it—the sooner will the business of the Albany Lumber Market assume its proper commercial tone. The purchases made in the fall of 1879 were favorable to the buyer, and those made in 1880 on a largely increased price founded the prosperous results of last season; but the stock coming into market this year has no such talisman to help it out.

Stocks of spruce and hemlock are very light; receipts are taken as fast as they arrive by rail. Mills on the North River are all shut down on account of high water. The lakes on the Upper Hudson are still full of ice. The recent loss by fire of the Bloomingdale Morœ mill will reduce the supply from that source considerably.

New York.

The *Real Estate Record* says that on the wholesale market everything appears to be in very good shape and the expressions generally are cheerful and confident, the few grumblers previously referred to merely serving as a shading picture. Consumption on local account is daily increasing and there is quite a little few of out-of-town orders from parties who have a trade on special lines of stock, but cannot use a general assortment to advantage. They therefore find it more to their advantage to select here than to take full cargoes, etc,, and saddle themselves with a large percentage of unsaleable rejections. The pressure of supplies seeking a market here has also been pretty well received wherever it existed and receivers manifest a more determined spirit in resisting attempts to force down values. From primary points the advices indicate pretty good supplies of nearly all the leading descriptions of stock, but orders also plentiful and in surplus probably for some time to come.

Spruce of desirable and attractive quality has a pretty steady position and the feeling among sellers is comparatively cheerful. Dealers still have their piers pretty well filled with recent receipts, and in the majority of cases it would be difficult to attract demand, yet quite a number of buyers failed to "get in" on the late break and are now a little anxious to negotiate. Receivers think it would be a very poor cargo not to command $14.00 ₱ M, and on specials $16@17.00 are asked with extra difficult at $18 ₱ M.

White pine shows very little change of a decided character. Prices generally very firm and supplies indifferently offered. We quote $17@19 ₱ M for West India shipping boards; $24.50 @26 for South American do.; $16@16.50 for box board; $17@17.50 for do. wide and sound do.

Yellow pine remains in the same firm and well supported position before noted, and the selling interest generally is confident. We quote random cargoes at about $23.50@25 per M; ordered cargoes, $26@27.75 do.; green flooring boards, $24@26 do.; and dry do. do., $25.50 @27. Cargoes at the South, $15@19 per M for rough, and $20@24 for dressed.

Shingles reported about as before, the demand proving fair on most regular outlets at a steady line of values and no serious accumulation of stock offering. We quote pine shipping stocks, $4 for 18-inch, and Eastern saw grades at $2.50 @4.50 for 16-inch, as to quality and to quantity. Machine dressed cedar shingles quoted as follows: For 30-inch, $16@22.25 for A and $28.75 @33.35 for No. 1; for 24-inch, $16.50@16 for A and $16.75@23 for No. 1; for 20-inch, $5@10.50 for A and $11.25@11.75 for No. 1.

Boston.

The demand continues to grow daily, and sellers are confident and are preparing for a large business. Dealers are putting their attractive grades in shape for the rush which is anticipated, and the small local yards are beginning to bestir themselves in a replenishing way. The mills are very busy getting stock in shape for the market. In fact, they are in some cases over driven, as they are working on orders extending into the fall months. All classes of stock are being more firmly held, especially the nicer grades. Hard woods are much sought for, and find a ready market. To use the expression of a prominent dealer, they are able to sell themselves as soon as they show up. Buyers, although taking hold pretty well, still evince a desire in some case to talk down prices, but dealers are firm and will probably continue so as long at least as the demand remains sufficient to keep accumulations within reasonable bounds. The movement in western pine has been good during the week, and eastern has exhibited considerable activity. Prices remain as before.—*Journal of Commerce.*

Bay City.

The *Lumberman's Gazette* of May 9th says:—The market has been more active the past week, and large amount of lumber has changed hands, one party reporting sales amounting to six million feet. Numerous other sales are reported and the entire sales would aggregate a handsome figure. Nearly all has been sold at market rates, although sales of ordinary stock have been made at $6.50, $13 and $30, which is somewhat under the market—$7.50, $15 and $35 being the figures for good stock. At these figures the most of the stock sold the past week has changed hands. There is a disposition among some holders of course stock to accept $6.50, $13 and $30 as the ruling rates.

Navigation is fairly open and a good deal of lumber has been shipped—perhaps 10,000,000 feet. All the barges on the river are loading and will, no doubt, be actively employed for the season. Freight rates at present are $3@$3.25 to Buffalo and Tonawanda, and $2.50@$2.75 to Chicago and Ohio ports, the outside figures being from the up-river ports.

Shingles are in active request at $1.90@$2.10 for clear butts, and $2.90@$3.25 for XXX. The mills are starting up, and the supply will be more liberal in the near future.

The saw mills are about all in operation and

well supplied with logs. An offer of $9 per M for 6,000,000 feet of pine logs was refused on Friday, which shows the prevailing confidence in the future of the market.

General quotations here are :—

Shipping culls	$ 6 75@ 8 00
Common	13 50@18 00
Three uppers	32 00@38 00

St. Louis.

The chief interest is centered about the accessible supply of dry lumber which is, all told, but limited, and the comparatively little in market is not nearly all available. Fully 45,000,000 feet are tied up by the floods, and large quantities besides are endangered by the still rising waters. In East St. Louis a large number of car loads are standing inaccessible; the railways being submerged, and the cars unapproachable by the ferryboats.

Buffalo.

We quote cargo lots :

Uppers	$35 00@40 00

Culls	15 00@17 00

London.

The *Timber Trades Journal* of April 16th says :—Buyers in London, who look to the sales only, are not supposed to trouble their heads about what goes on abroad. Whenever their business takes them through the docks they generally find them pretty full of all descriptions, and it matters little to them what fine plans the Swedes have for augmenting the supplies by further developing the resources of their country. They can rely pretty safely under any circumstances on London never running short of anything, and the same post that gives them the information that stocks abroad are short brings them a voluminous catalogue offering almost every description of timber and deals in suitable parcels which they can pretty safely rely on obtaining far cheaper than they could import. It is hard, therefore, to convince them that prices will improve as stocks diminish. while cargo after cargo that arrives is put up under the hammer that seldom leaves enough to the seller to cover the cost and freight.

It is true, nevertheless, that some classes of goods hold their own pretty well. The stocks of flooring at the close of the shipping season were heavily in excess of any previous year, and if a great come-down were likely, these were the goods upon which the effect would be most severely felt, but the demand has been exceptionally strong for this class of wood throughout the dead season ; consequently the spring prices are holding up—in fact, in most of the European stocks values seem steady to what they were in the spring of 1878.

Liverpool.

The *Timber Trades Journal* of April 16th says :—It is gratifying to be able to report that more business is being done than has been the case for such a long time past that we hope this improvement will be permanent, seeing that with the change of weather builders will now be able to proceed vigorously with their contracts.

At the same time there is plenty of room for a better demand, for the present rate of consumption makes but little impression upon our heavy stocks. It will be noticed from the stock list given last week that we have nearly double the quantity of yellow pine on hand compared with this time last year, or nearly twelve months' consumption at the rate of last March, and of pine deals we have also an excessive stock for the time of year ; this, however, is not a great drawback, as these goods are growing in favor with consumers from year to year, although it, of course, lessens the demand for log timber.

DYSPEPSIA.—Strenthen your digestion—tone the stomach for utilizing and assimilating every atom of food you take; the body needs it for strength and vigor. *Zopesa* cleanses the entire system, stimulates the Liver, keeps you regular, and able to eat ten-penny nails. Letters and postal cards come in daily, telling of cures and help from *Zopesa*, from Brazil. *Positive proof* of the health and vigor it gives in a ten cent sample. Ask your druggist.

Glasgow.

The *Timber Trades Journal* of April 16th says : The imports to note during last week are one cargo of pitch pine timber and parcels of staves and walnut, &c.

One public sale has been held, result of which is detailed below.

Apart from inferences which may fairly be drawn from the auction sales, it is at the same time to be borne in mind that important consumers, a good many being ship-boilder, buy as a rule privately. In this way large quantities, especially of pitch pine, have been going into consumption. The quarter's consumption of Quebec Yellow pine timber has been large, say 5,800 loads, but of waney boardwood and of red pine the amount consumed has been comparatively small. Of oak and birch timber the quarter's consumption amounts to 2,500 loads and 460 loads respectively, of Quebec staves, pipe and puncheon, 80 mille.

AUCTION SALE.

On the 12th of April, at Port Glasgow, Messrs. Hunter, Sheriff & Co., brokers :—

Quebec waney boardwood, 65 c. ft. av. per log, 2s. 6d. c. ft.

Leith.

Messrs. Brownlee & Co. held a sale on Tuesday in Springfield street, of American timber, deals, battens, etc. There was a fair attendanee, but buyers seemed to confine themselves to small purchases. The square yellow pine, which was of fine quality, fetched very good prices, ranging from 2s. 2½d. to 2s. 9d., the average being about 2s. 6½d. Quebec birch was not in demand ; indeed nothing else was to be expected, seeing the large quantities that have been thrown on the market at late sales held here, though the descriptions previously offered were of inferior quality. The following is a note of prices realized :—Square yellow pine, 2s. 2½d. to 2s. 9d. per cubic ft. Ash, 2s. 4d. to 2s. 9d. per cubic ft. American red pine, 19d. per cubic ft. First yellow pine deals, 2s. 9d. per cubic ft. Third yellow pine deals, 13⅓d. per cubic ft. ; 9x4 red deals, 3d. per lin. ft.; 6½ white battens 1 4-16d. per lin. ft.

Irish Markets.

DUBLIN.—The *Irish Times* says that there has been a considerable increase in the demand during the week, and there seems every probability that as the season advances there will be a great revival in the timber trade. Prices, however, have not altered, as stocks are at present heavier than usual at this period of the year. The following are the latest quotations :

St. John and Miramichi deals	£14 10s@00
1st Quebec deals	£19@22
2nd do	£14 10s@15
3rd do	£13 10s@00

ZOPESA.—A healthy man never thinks of his stomach. The dyspeptic thinks of nothing else. Indigestion is a constant reminder. The wise man who finds himself suffering will spend a few cents for a bottle of *Zopesa*, from Brazil, the new and remarkable compound for clensing and toning the system, for assisting the Digestive apparatus and the Liver to properly perform their duties in assimilating food. Get a 10 cent sample of *Zopesa*, the new remedy, of your druggist. A few doses will surprise you.

For all purposes of a Family Medicine, HAGYARD'S YELLOW OIL is at the head of the list. It is used with unprecedented success, both internally and externally. It cures Sore Throat, Burns, Scalds, Frost Bites, relieves, and often cures Asthma.

Wrought Iron Shanty Cook Stoves

The Best Article ever offered to the Trade.

I have much pleasure in drawing attention to my **WROUGHT IRON COOKING STOVE, for Shanty, Hotel and Boarding House use.** These Stoves are made of **Heavy Sheet Iron**, the top and lining of the fire-box being of **Heauy Cast Metal** and all the connecting parts of substantial **Wrought Iron Work.** The dimensions of these Stoves are as follows :—

SINGLE OVEN STOVE

Top surface contains six 10-inch holes, with ample room between, and one oven 16 x 21 x 26.

DOUBLE OVEN STOVE

The Double Oven has a top surface containing twelve 10-inch pot holes, with two ovens, each 16 x 24 x 26. One fire-box of suitable size for area to be heated. Below will be found Testimonials from some of the leading Lumbermen, who have used my Wrought Iron Cook Stoves since I ommenced manufacturing them. They are the names of gentlemen who are well known and eliable, and will carry more weight than any recommendation of my own could do.

The Best Stove I have ever Used.

PETERBOROUGH, May 31, 1880.

ADAM HALL, Esq., Peterborough. Dear Sir,—I have used your Wrought Iron Cooking Stove in our lumbering operations since its introduction here, and have no hesitation in saying that I prefer it to any other. For durability, economy and efficiency, where a large number of men are employed, it is the best stove I have ever used. You can, with confidence, offer it to hotels, boarding houses and lumbermen.

Yours truly, THOS. GEO. HAZLITT.

The Stove for Lumbermen.

PETERBOROUGH, June 1st, 1880.

ADAM HALL, Esq., Peterborough. My Dear Sir,—We have used your Wrought Iron Cooking Stove and find it is very satisfactory for lumber operations, especially so on drives. We can recommend it highly.

Yours truly, IRWIN & BOYD,

Gives the Greatest Satisfaction.

PETERBOROUGH, June 3rd, 1880.

A. HALL, Peterborough. Dear Sir,—I have had the Wrought Iron Cook Stove, purchased from you, in constant use ever since last fall, and it gives the greatest satisfaction in every respect. I can recommend them highly to any one who is in the lumber business. Very truly yours, GEO. HILLIARD, M.P.

M. Covel's Latest Improved Automatic Saw Sharpener!

Is the Most Perfect Machine that has ever been Introduced into Mills for that purpose.

CIRCULAR SAW STEAM FEED!

I would also call special attention to my

Heavy Circular Saw Mills

and for STEAM MILLS, would recommend the Steam Feed, having put in several which are giving the best of satisfaction, as will be seen by the following testimonials:—

GRAVENHURST, August 20th, 1880.

WM. HAMILTON, ESQ., Peterborough.

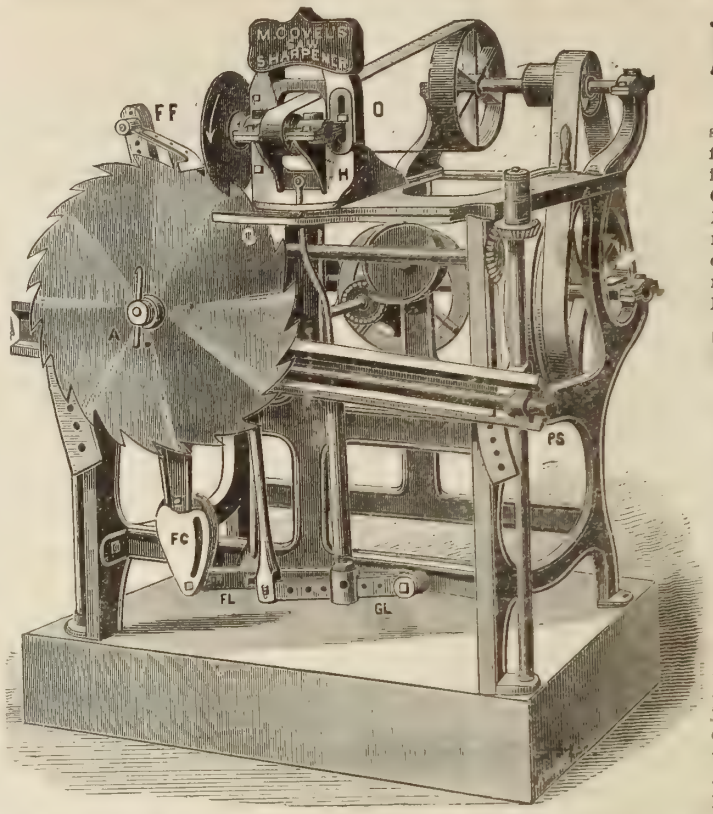
DEAR SIR—I have used your Steam Feed for near four months, and it has given me perfect satisfaction in every way; it is admitted by every person who has seen it work to be the best feed ever invented. Since I put it into my mill, I have not lost ten minutes time fixing anything belonging to it. I can cut 18 boards 13 ft. long in one minute. It can do much smoother and better work than the pinion feed. It is easily governed and reverses the carriages instantly. I am thoroughly satisfied with it and can recommend it to any person who has a Circular Saw Mill for cutting long or short logs. I consider I have cut more lumber than will pay for the Steam Feed since I got it than I would have cut had I not put it in.

Yours respectfully,
WILLIAM TAIT,
Lumberman, Gravenhurst.

TORONTO, August 11th, 1880.

WM. HAMILTON, Peterborough, Ont.

DEAR SIR—The Steam Feed you put in is working splendidly. Yours, &c.,
THOMPSON, SMITH & SON.

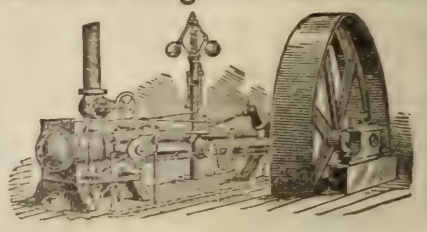


MILL MACHINERY!

I am also manufacturing Saw Mill Machinery, for all sizes of Gang or Circular Mills, Span or Double Circulars for Slabbing Small Logs. My Patent Jack Chain for drawing logs into Saw Mills, acknowledged by all to be the Cheapest and best ever got up; also, my Patent Lumber Markers, different sizes of Edgers, Gang Lath Mills, Trimmers, Power Gummers, and all Machinery used in a first class Gang or Circular Saw Mill; also, small Hand Gummers for use in the woods, for Cross-cut Saws. Rotary Pumps of different sizes, for Fire Protection in Mills, &c.

Horizontal Engines and Boilers

CORLISS ENGINES



Where economy of fuel is the great consideration, along with uniformity of speed, such as is required in Grist and Flouring Mills, Woollen and Cotton Factories, or large Factories of any kind, I supply the Corliss Engine. I feel justified in saying that our Style, Workmanship and Finish on this Engine will be no discredit to its renown, and certainly is not equalled in this country for economy of fuel. I have them working at 2½ pounds of coal per horse-power per hour. L10

THE GENUINE SILVER-STEEL,

Lance Tooth

CROSS-CUT SAW!

It stands without a rival, and is the fastest cutting saw in the world. It has beaten the best Canadian and American made saws 33½ per cent in every contest. Its superiority consists of its excellent temper. It is tempered under the secret Chemical Process, which toughens and refines the steel. It gives a finer and keener cutting edge, and will hold it twice as long as any other process. We have the sole right for this process for the Dominion of Canada.

None genuine that are not like the above cut, with registered trade mark with the word "The Lance," and Maple Leaf with our name. Price $1 per foot.

CAUTION.—Beware of Counterfeits. There are inferior counterfeits on the market, which are intended to be sold at a high price upon the reputation of this saw. We will send to any address a saw exactly like any counterfeit, warranted equal in quality or no sale, at 60c. per foot. Therefore do not be humbugged into paying a first-class price for a second-class saw. A fact to bear in mind is that if the material and temper are not of the very best quality the shape of the teeth amounts nothing. A saw, like a knive, will not cut fast without it will hold a keen, cutting edge. We have cut off a 14-inch sound basswood log in eight seconds with this saw. Manufactured only by

SHURLY & DIETRICH,
Manufacturers of Saws, Plastering Trowels, Straw Knives, &c. &c.

EMERY WHEELS FOR SAW GUMMING!

Solid Emery Wheels are now almost in universal use for the purpose of gulletting and gumming saws. Statistics show from 25,000 to 30,000 saw-mills in the United States. Many of these run only a single saw each. A one-saw mill would use one or two wheels a year, costing $3 to $4 each, and when such small mills order single Emery Wheels from the factory, the express charges often equal the cost of the wheel. There was a time when the quality of Emery Wheels was so uncertain, and the demand so fickle, that storekeepers could not afford to carry them in stock. Now, however, Saw Gumming Wheels have become as staple an article as Files, and every dealer in saws, Hardware and Mill Supplies can afford to carry a few dozen standard sizes in stock. Large dealers order stocks of $500 to $750 worth at a time. Saw Gumming Wheels are used with the edge (or face) square, round, or beveled. Probably seven-eigths of all in use are beveled.

The principal sizes are:

8x¼, 8x⅜, 8x½ } ¾ in. hole. 10x¼, 10x⅜, 10x½, 10x⅝ } ⅝ in. hole. 12x¼, 12x⅜, 12x½, 12x⅝, 12x¾, 12x⅞ } ⅝, ¾, ⅞ and 1 inch. Holes,

Probably more wheels 12x⅜, 12x½ and 12x¾ are used than all the other sizes together. Saw Gumming Wheels are used, however, of all sizes up to 24x1½. The most frequent complaint is that Emery Wheels harden the saw so that a file won't touch it. The answer is that you don't want a file to touch it. An expert workman will shape and sharpen the teeth with an Emery Wheel, leaving the teeth *case hardened*, in which condition the saw will cut about 33⅓ per cent. more lumber than a soft saw will. Those who want to use the file, however, have only to touch the saw *lightly* a second time (after going all over it once), and this second touch will cut through the case-hardened scale.

A QUESTION OF QUALITY.

Thirteen years of experience as makers of, dealers in, and actual users of Emery Wheels, have led us to a decided opinion as to what quality is the best. We prefer for almost every use an "Extra Soft" wheel like the "Pocono." We believe that money lost through the rapid wear of the wheel is more than made up by the money saved on wages. As we cannot get every one to adopt our views, we make several qualities, so as to meet their views. We say to those who think they can only be satisfied with some other make of wheels (not Tanite), that we can furnish qualities *to match* any and every other make. If you have got used to some special quality of wheel, let us know what it is, and we can send you *a Tanite Wheel of similar quality*. Our *regular* classification of Saw Gumming Wheels is as follows:

CLASS 2. MEDIUM—HARD.—This Wheel is THE STANDARD Saw Gumming Wheel all over the world. Probably seven-eighths of all the Saw Gumming Wheels used are "Class 2." It cuts fast and keeps its shape well. Some think it too hard, some too soft. We prefer the "Pocono."

CLASS 3. MEDIUM—SOFT.—The same as to coarseness and fineness as "Class 2," but a *softer*, and therefor freer cutting wheel.

CLASS "POCONO." EXTRA SOFT.—This Wheel we prefer to all others. It is both *finer* in grain and softer than either of the above. As a Saw Gumming Wheel, Class "Pocono" is specially suited to those practical and experienced Sawyers who know how to grind with a light touch, and who want a free cutting wheel that will not create much heat.

Illustrated Circulars and Catalogue, showing Cuts of Saw Gumming Machines, and Shapes, Sizes and Prices of Wheels, sent free on application.

FORESTRY AND ABORICULTURE.

BEING THE FOURTH CHAPTER OF THE REPORT OF THE ONTARIO AGRICULTURAL COMMISSION.

Cultivation of Forest Trees.

The mode of cultivating forest trees is the next matter to claim attention. This may be accomplished either by raising trees from the seed, or from cuttings, or by transplanting them from the nursery or the woods.

If it be desired to raise trees from the seed, attention must be paid to the time of gathering, management, and plantiug. The soft and silver-leaved maples and elm mature their fruit in June; the sugar, Norway, sycamore, and some other maples, ripen their seeds later in the season. Acorns, walnuts, chestnuts and other nuts ripen in the fall. All seeds should be sown as soon as gathered, but the fall seeds may, if more desirable, be kept in a box mixed with sand until the following spring. Acorns and nuts being liable to be disturbed by squirrels are often preserved in this manner. They should be kept in a cool place, and where they will not become too dry. The elm and maple if favorably situated will make very good growth in their first season, when sown immediately after gathering. Red cedar berries should be bruised in March, and mixed with a quantity of wet wood ashes. In three weeks the alkali will have cut the resinous gum, when the seeds can be washed clean from the pulp and planted.

But many people will prefer a less tedious and equally cheap method of acquiring a stock of young trees. Mr. Bucke, of Ottawa, gives some useful hints on this head:—

"There has been a good deal of talk before the Commission about growing trees from the seed, but if I were going to plant trees, and particularly maples, I would go into the woods and pull up seedlings a few inches high, as I am convinced they will succeed better than by any planting of seeds. I planted a number in that way, and they are the best lot of young trees I know of. I planted them in nursery rows, about six inches apart in the row, and I have succeeded in raising a large number without losing any. I trimmed the roots before planting. There are both hard and soft maple found in the ordinary maple bush, and I think birch could be propagated in the same way."

Mr. Bucke further stated he had collected and planted elm seedlings in the same way as the maple. Seedling trees thus taken early from the bush, should be kept in the nursery rows for a couple of years and then planted out. With regard to the spruces and other coniferous trees, Mr. Leslie says:—

"There is no difficulty whatever in transplanting these trees from the woods when young; it is simply a matter of keeping the roots moist while out of the ground. I would recommend that they should always be planted in nursery rows before being permanently placed in position, and if they have ugly tap roots these should be cut off. I would not recommend that the tops should be cut, there is no necessity for doing so, and it destroys the symmetry of the tree. There is no necessity for cutting the tops of deciduous tree seedlings."

Mr, Arnold says on these points:—

"Unless trees have been prepared by transplantation, the smaller they are planted the better. They should not be over a foot high unless they have been so prepared. After they are planted I would cultivate the soil the same as for corn or potatoes. I would plant the trees at first with a view to thinning them out. As to the cost per acre, the small trees could be supplied for five dollars per hundred. The planting would be about five dollars per hundred, that is, for nurseryman's trees, about one and a half feet high. I would not recommend the planting of such small trees, but I would have them properly prepared to plant when they were two or three feet high. They would then cost about twenty dollars a hundred when planted. Some varieties of oaks, walnuts, etc., could be raised from the seed by farmers if they attended to the matter, but I find it more profitable for me to send and buy my trees one or two years old from those who make a business of raising them. The raising of forest trees from seedlings is a business by itself. It would pay better to import some from France and England than to grow them, as they have to be shaded. Young trees should be grown in a seed bed, before being planted out, about two years, and then should be re-transplanted every two years until they are put where they are to remain."

Of trees of a larger growth than seedlings in their first or second year, Mr. Roy says:—

"In transplanting trees the smaller the better. If you get a tree four or five feet high you may replant it, but my experience is that the sooner you begin to transplant the trees the better. I usually transplant fruit and other trees in the fall. The strongest and almost only reason I have for transplanting them then is that I have more time to do the work then. I think it is a good thing to cultivate around a tree. I don't think it is good to cultivate around a peach tree in a rich soil, because the tree gets too much wood in the fall, and the frost comes on and kills it before the wood hardens. As regards forest trees, I think they would succeed better for a few years if cultivated around. After they get fairly growing I don't think cultivation would be required."

Senator Allan on the replanting of forest trees remarks:—

"Take, however, even an ordinary sized farm, say of 200 acres, and if planting is to be carried on to any extent, trees from the nurseries will be found rather too expensive a luxury, and the farmer must rely upon what he can obtain from the nearest woods.

"These—if carefully transplanted, and in the case of evergreens more especially, of not too large a growth, when moved—ought to succeed perfectly, or at least there should be a very small percentage of loss.

"Of our native evergreens, the white pine, black and white spruce, and white cedar, can all be easily transplanted.

"The red or Norway pine, than which there is no handsomer tree when allowed to grow singly and with plenty of room for the spread of its branches, is very difficult to move, and will not generally succeed, unless taken up with great care when very young.

"The hemlock spruce, one of the noblest and most picturesque of our native evergreens, is of very slow growth, and is also difficult to transplant, except when very young, but both it and the white cedar make most excellent hedges.

"Of our deciduous trees, the elm, ash, beech, oak, and maple, are the most generally and easily obtainable. The maple (both of the hard and soft varieties) bears transplanting remarkable well, and grows rapidly. The different varieties of elm can also be easily moved—so also the ash. The oak, both white and red, as well as other varieties, is difficult to move with safety, and is of less rapid growth than either the maple or the elm.

"The butternut, if transplanted when young, succeeds well, The walnut and sweet chestnut I have no experience of, except as transplanted nursery trees. Take, however, all the others I have named, both evergreen and deciduous, and they can generally be obtained in most parts of Ontario, without having to go any great distance to find them."

As the tree to be moved increases in size the more care is needed in its treatment. It is a good plan to select trees growing as near the edge of the woods as possible; their situation having been less sheltered, the exposure to which removal subjects them is less felt. As to the preparation and removal of forest trees Mr. Arnold says:—

"We prune the roots with a spade. In the case of trees which have not been transplanted, and trees, say four, five, or six feet high, which have not been moved lately, we send out a man in the spring to cut off the roots about a foot from the stem. In the fall, in digging them up you will find abundance of fibres, and unless this is done it is dangerous to remove them at that age. If people transplanting from the forest would go about this time (June) and cut off the roots a few inches from the stalk, and go next year and dig them up, they would find no difficulty. In moving trees it is better to cut off the tap roots. For instance in growing peaches it is the practice of many to put peach seeds in sand in the greenhouse until they germinate. There is a long tap root which we pinch off, and when we take it up afterwards we find a mass of fibres. In fact the tap root is not essential to the future growth of the tree. As to the branches, I would not touch them until I came to transplant. When we dig them up we have to cut off a portion of the roots, and it is necessary to take off about the same proportion of the branches. The root vessels cannot draw sap enough to supply all the leaves unless this is done. The reason I would give for pruning with a spade is, first, that it prevents injury to the root while the tree is being finally moved; second, it produces large growth of small fibrous roots within a limited space, and this adds to the nourishment of the tree."

The distances apart at which trees are planted, when set in rows for ornament, or shelter for cattle in fields, will have to be decided by the nature of the tree, and will run from ten to thirty feet, according to circumstances. For forest planting, the trees being in that case small, they may be planted from three and a half to four feet apart in each direction. This will admit of cultivation by horse power. As the trees grow they will be thinned out, any casualties, on the other hand, being supplied by new plantings.

In Dr. Hough's report the following table is given, showing the number of trees upon an acre at a given distance apart, and the number that might be left at dfferent ages, with the proportional value of the thinnings taken at the several ages:—

Age.	*Distance apart.*	*Trees to the acre.*	*Proportional value of each trimming to total trimming.*
	ft. in.		*per cent.*
10 years.....	3 9	3,097	3.4
15 "	4 0	2,792	5.2
20 "	4 3	2,411	6.5
27 "	4 7	2,077	10.5
35 "	5 6	1.440	23.6
43 "	6 6	1,031	23.7
51 "	8 0	680	27.5

In regard to the growth of woodland a high European authority remarks:—

"That, while an uncultivated woodland, taken for a long period, and counting interest and taxes, would yield almost nothing to the capital invested, it is well established that the same land, managed according to modern science, would, in the long run, yield a revenue both conspicuous and constant."

THE Fenelon Falls *Gazette* says: There is a big jam of logs in Burnt River between Johnston's Rapids and High Falls, a distance of over three miles, and a number of men were sent up early in the week to try and break it. The logs, fully 20,000 in number, belong principally to Mr. Ullyott and Mr. Boyd, and a large drive owned by Mr. R. C. Smith is detained at Kinmount, waiting for the obstruction below to be removed. The logs in the jam are fortunately not piled on each other, and a "flat jam," as it is called, is generally neither very difficult nor dangerous to start.

MUSKOKA.

Our correspondent, writing from Gravenhurst, the lumber capital of Muskoka, sends the following items :—

THE QUEEN'S BIRTHDAY.

MAY 24.—To-day, the anniversary of the birth of our Most Gracious Sovereign, the Queen, is being loyally spent by the people of Gravenhurst. The saw mills are not all shut down, although several of the working men are absent on leave for the day—some of them on a grand excursion up the Muskoka Lakes on the steamer *Nipissing*, and others south by the Northern Railway to see the great lacrosse match and games there.

THE MUSKOKA SLIDE, DAM, AND BOOM CO.

who have charge of the driving of logs, square timber, and shingle bolts this season, are getting ahead with the work remarkably well, notwithstanding the low water. The company was incorporated last winter for the purpose of acquiring, constructing and maintaining dams, slides, piers, booms, and all the other works necessary to facilitate the transmission of timber down rivers and streams in the district of Muskoka, and Parry Sound, and Nipissing, and in the County of Peterborough ; and for the purpose of blasting rocks and otherwise improving the navigation of such rivers and streams, and to operate the same for TEN years.

$50,000 CAPITAL STOCK.

The capital stock of the company, $50,000, is taken up by H. H. Cook, Richard Power, J. M. Dollar, G. W. Taylor, A. P. Cockburn, A. McKenzie, Chas. Mickle, Robt. Dollar, and Isaac Cockburn. The rates charged on saw logs per 1,000 feet, board measure, including sorting at the mouth of Muskoka River and at Georgian Bay are, from Muskoka to Georgian Bay, fifty cents ; to Gravenhurst, thirty cents. From Port Sydney to Georgian Bay, sixty cents ; to Gravenhurst, thirty-five cents. From Lake Vernon to Georgian Bay, fifty-five cents ; to Gravenhurst, forty cents, and so on from other points, making a difference of from fifteen to twenty-five cents in the cost of delivery per 1,000 feet, between Gravenhurst and Georgian Bay.

MOVE TO GEORGIAN BAY.

In view of the greater facilities for shipping, several of the mill owners around Gravenhurst are seriously contemplating removing their mills to the shore of the Georgian Bay. They think they could soon save as much in freight as would pay for the cost of removal. Complaints, loud and deep, are heard all around in reference to the exactions of the Northern Railway in rigidly adhering to the rule of 6,000 feet of green lumber and 7,500 feet of dry lumber for a car load. They complain of the great want of shipping accommodation and the present monopoly.

OUTLET BY KIRKFIELD.

There is a strong hope that a third rail will be laid on the Toronto and Nipissing Railway as far north as Kirkfield this summer, and that the road from that point will be extended to Gravenhurst forthwith, there to connect with the Ontario and Sault Ste. Marie Railway, about to be constructed. This would give a direct route from the North-West, either to Toronto or Port Hope ; and to Peterborough and Belleville as well, when the "missing link" at Omemee is supplied. Should this very probable railway extension be carried out, there will be no necessity for Gravenhurst mill owners to pull up stakes for the Georgian Bay.

MUSKOKA AND NIPISSING NAVIGATION CO.

This season the Muskoka and Nipissing Navigation Co., of which A. P. Cockburn, Esq., M. P., is manager, expect to tow about eighty million feet of logs, square timber, and shingle bolts, equal to about twenty million feet. A large proportion of the stock comes to Gravenhurst, which shows the importance of this place as a lumbering centre.

SHIPBUILDING AND LAUNCHES.

Yesterday Mr. Cockburn launched the harbor tug *Lake Joseph*, a trim craft of about 20 horse power, fitted with upper cabin for passenger traffic. On the 7th of this month the same company launched the *Muskoka*, a powerful tug of 100 horse power. The engines are made by Mr. Doty, of Toronto, and work like a charm. A local paper says :—"The *Muskoka* is built in the most substantial manner, of the best white oak, and, it is thought, will be good for twenty years' actual service. Her proportions are: length over all, 84 ft.; 18 ft. beam, with 7 feet hold. She has two powerful engines, 12×14 each, attached to two large screws, so it will be seen that her propelling power is immense. Her boiler weighs 11 tons, and is built to carry 100 pounds of steam constantly. She has nicely appointed cabins, both on deck and below, and is provided with all the latest improvements in the way of machinery, pumps, hose, etc." The new steamer *Inter-Ocean* was launched on Lake Nipissing last week, and is expected to be making regular trips early in June. So it is that this new country of ours is opening up, specially under the auspices of the lumbermen and their requirements.

WEST GRAVENHURST.

At West Gravenhurst, which is built on an arm of the bay enclosed by "The Narrows," several saw mills are built. The Woodstock Lumber Co. are adding to their former lumber, lath and shingle mill, a gang of saws, which commenced work to-day, the first in Muskoka. The gang is "the improved oscillating," and is expected to do excellent work. This company will cut six million feet this season. The bulk of their logs have reached Port Carling. The mill has capacity of 45,000 feet of lumber daily, 40,000 shingles, with proportions of lath, and 32 men are employed.

ANOTHER GANG.

Mr. W. G. Taylor is putting in a gang of saws in his mill, and is making considerable additions and improvements to overtake the summer's work. He has a large quantity of last season's stock on hand, not shipped, and will soon be crowded for piling room if it is not removed.

SHINGLE MILLS.

Mr. Bartholomew is leading the local business. His stock is in logs and bolts. Mr. Archie Brydon has a shingle mill near Mr. Taylor's saw mills. He is to try a new plan of cutting shingles with "the Excelsior Knife," (Goldie's patent) and will cut about six million. It is not certain yet how this will work. Mr. Brydon is manufacturing for Messrs. Thompson & Baker, of Hamilton, who supply the raw material. Mr. Hull is rigging up the mill lately occupied as a shingle mill by Thompson & Baker near the old steamboat wharf. He will cut lumber and shingles, and has another mill near Lethbridge, about four miles from Gravenhurst. Between the two mills he will cut about 5½ million feet of lumber this season.

WILLIAM TAIT'S MILL.

Mr. Wm. Tait, whose mill was burned down recently, has it rebuilt and nearly ready to commence sawing. He speaks highly of the promptitude shown by Mr. Hamilton, of Peterborough, and Mr. R. Brammer, of Orillia, in supplying machinery ordered according to agreement, but has been greatly delayed with other foundry men who have not come up to time with their work. Mr. Tate has a stock to cut of five million feet.

ALMOST A CONFLAGRATION.

Mr. Chas. Meikle had a narrow escape of the destruction of his mill by fire yesterday. It originated near the boiler, but was promptly extinguished by the men and neighbors without much damage being done to the building. Mr. Meikle will cut five million feet this season. He has made various important changes in his mill this spring, viz.: Slab cutter, carriers, new friction feed works, etc. The season's cut will be about 4½ million feet. The logs were taken out from seven townships.

AT MUSKOKA WHARF.

Mr. Thos. Boom's gang of men are engaged in putting Burton Bro's. square timber in shipping order, previous to being sent by rail to be rafted in Toronto and thence to Quebec. The men stand in the water and saw off the ends with cross-cut saws. The fragments of bark on waney sticks are carefully stripped of with draw-knives. Burton Bros. will have about 100,000 feet at this wharf when it all arrives—only about 25,000 feet have reached so far.

TASKAR'S MILL.

This is an excellent country mill about five miles from Gravenhurst. Mr. Tasker will cut about three million feet this season. He has nearly a million of old stock on hand not drawn, but purchased by Christie, Kerr & Co., Toronto.

THE BRITISH LUMBER CO.

This extensive company have taken out about 22 million feet of logs in Muskoka this season, and have got them all in the stream, except a small quantity in Brunel.

IN LOW WATER.

The section of country north of Huntsville traversed by Little East River seems to be the driest in this northern region. The Georgian Bay Co. has one million feet on this river which will not likely be got out this season. Mr. R. Power and the Muskoka Lumber Co. have also about one million feet on this same river which will probably not be floated, and it is said that Messrs. Cook Bros. have abandoned 350 pieces of square timber on Fisher's Creek, north of Huntsville, and unless heavy rains come on they will also have to hang up one million feet of logs.

THE MIDLAND MILLS.

J. M. Dollar has on the way 150,000 feet of square timber and 4,000,000 feet of logs, all afloat. He has 2,000,000 feet left over from last season.

COCKBURN'S MILL.

Mr. Isaac Cockburn is running this mill again. The cut this forenoon was 16,000 feet.

ST. JOHN, N.B.

From Our Own Correspondent.

STREAM DRIVING.—Up to a recent date, much uneasiness was felt with reference to the prospect of bringing the logs out of the streams for want of sufficient water, owing to the protracted cold and dry weather, but during the last two weeks we have had a liberal rain fall, and the stream driving, in consequence, is reported from all quarters as being very good. The prospect now is that the bulk of the logs in the streams will be got to market in good season.

SHIPPING.—A large supply of tonnage is now in port, and, as is frequently the case in such circumstances, shippers are much annoyed and inconvenienced by the "strikes" among the laborers. The wages of ship-laborers have advanced to $2.50 per day, and it is said they intend demanding $3.00 after the present week. The following is a list of the ships in port, with their tonnage and destination :—

Belle O'Brien, 1,902, Liverpool.
Lady Dufferin, 989, Penaith Roads.
British Queen, 1,195, United Kingdom.
Harold, 189, East Coast of Ireland.
Minnie Burrill, 1,440, Liverpool.
Coronet, 869, Liverpool or Bristol Channel.
Herbert Beech, 1,061, Belfast.
Arcadia, 788, Liverpool.
Prinds' Oscar, 662, Great Britain or Continent.
Ailsa, 454, East Coast of Ireland.
Annie Burrill, 897, Dublin.
Anna P. Odell, 380, Dundalk.
Grace E. Cann, 683, Belfast.
Belstane, 1,071, Liverpool or Bristol Channel.
Riverside, 1,234, Liverpool.
St. Julien, 1,049, Belfast or W. C. England.
Vestolinden, 459, E. C. Ireland.
Hafosfjord, 495, E. C. I. or B. Channel.
Prodomo, 477, Cork Quay.
Austria, 1,000, Liverpool or Bristol Channel.
E. Sutton, 545, Penaith Roads.
Equator, 1,272, Liverpool or B. Channel.
Jothington, S.S., 1,290, Liverpool or B. Channel.
Kate F. Troop, 1,100, Belfast or W. C. England.
Lizzie Burrill, 1,185, Liverpool.
David Anterson, 256, Jersey.
Maud Scammell, 593, E.C. Ireland.
Theobald, 981, Liverpool.
Deanfield, 1,072, Liverpool.
Sarah B. Cann, 707, Bordeaux.
Berlin, 757, United Kingdom.
Whitburn, S.S., 816, Liverpool or B. Channel.

FREIGHTS.—There has been very little done in chartering since the date of our last report. Two steamers were taken for Liverpool at 55/.

SHIPMENTS.—The shipments of deals and other sawn lumber have been as follows :—

For Europe	7,549,000	Sup. ft.
" United States	2,121,000	"
" West Indies	464,000	"

St. John, N.B., May 21st, 1881.

THE DRIVES SAFE.—The news from up the Ottawa indicates that all difficulties said to be in the way of this season's drive are at an end, and that the logs in all streams will come down without serious trouble. Even in localities where the outlook was the worst, the opinion now is that there will be abundance of water even if there should be no more rain for a time. The water in the Ottawa has been steadily rising for some days, and is now considerably higher than was expected a week ago.

MIDLAND.

From Our Own Correspondent.

The British Canadian Lumber and Timber Company's mill has been running for over three weeks and is doing good work, cutting about 130 M. in the twenty-four hours. They also have a mill at Old Fort, with a capacity of about 25 M. per day. With the two they expect to cut over twenty millions this season. Their tug has been busy towing since the opening of navigation, and is expected in to-night with a tow of 100 M. cubic feet of board pine from Shawinaga River, to be shipped over the Midland to Port Hope for Quebec, the property of J. M. Dollar, the first timber shipped from here this season. The Chew Bros. have moved and rebuilt their mill and have added much to its capacity. They had steam up yesterday and will start to cut to-morrow. They will cut out five million feet. Mr. William Chew was badly hurt the other day by falling with a scaffold from the mill. Chew & Weeks are also running their shingle mill. J. M. Dollar's mill has been running about two weeks, and is now running night and day, cutting 65 M. per twenty-four hours. He will cut out over six million feet. They all have plenty of logs on hand to keep the mills running until the drives come in. The weather has been very warm and dry here.

Midland, May 26th, 1881.

FORESTRY.

The Montreal *Star* publishes the following letter :—

SIR,—The State of New York allows a certain sum of money to the owners of property who plant trees, in front of such property, on the public highway. This is something that the law makers of this Province or of the Dominion might condescend to consider. We all cry out that our forests are being denuded of timber, but our legislators look calmly on. In Ontario it is said that in the older settled counties there is only one acre of timber to every hundred that has been cleared, and how we stand in Quebec I do not know. In any case it is time to seriously consider the situation, for the best authorities in the country tell us that in a few years timber will be as valuable and as scarce here as it is in some countries in Europe. I have some experience in planting walnut, chestnut and sweet hickory, and in all cases they have yielded a profitable return. Apart from the shades and home like appearance of trees on a farm, we must not forget the important meteorological effect trees have upon the atmosphere. I cannot give you a better illustration of this than what I have read lately about the town of Valencia in South America. The town is situated a mile and-a-half from a lake. Years ago this lake was surrounded by a dense forest. The people cut down the forest, and the waters of the lake *receded four miles and a-half in thirty years.* This was because of less rain-fall in consequence of the loss of the trees. The people seeing this, planted new trees, and in *twenty-two years the lake had assumed its original dimensions.* And this was all owing to the fact of the less trees the less rain, and *vice versa.* Now, as rain is just as necessary as sunshine to produce a good crop, it becomes a serious matter for the farmer to guard the forests and thus protect himself by securing a better chance of rainfall than could be the case if the land was bare of timber.

Encouraging Guarantee.

THE CANADA LUMBERMAN, a semi-monthly publication started recently by Mr. A. Begg, has passed into the hands of Toker & Co., of Peterborough, publishers of the REVIEW. We have received their first number, a neatly printed paper of sixteen pages. The important interest to which it purposes to give special attention will find this publication well worthy of hearty support, and from the ability and experience of its publishers a valuable and interesting journal may be looked for. We wish them abundant success in their enterprise.—*Lindsay Post.*

MR. H. H. SMITH has made a contract with the owners of the prop. *Arawa* and her consorts for the carrying of 8,000,000 feet of lumber from Lake Superior to Buffalo at $3.15 per thousand delivered on the rail.

Trade Notes.

American.

AT Stevens' Point, Wis., business "continues good."

TRADE is very brisk at Keokuk, Iowa, and prices are firm.

RATES of freight from Buffalo eastward by canal are quoted at $2.70 per 1,000 to Albany.

FROM Davenport, Iowa, trade is reported fair, while the demand for dry lumber is reported "fully equal to the supply."

A LARGE quantity of dimension timber, taken out by A. & P. White, is being cut into railway ties for the English market at Pembroke. This is a new departure.

THE dealers at Michigan City, Ind., report that they have plenty of orders on their books. Collections are good and everything promises a good season's business.

TRADE is said to be in a prosperous condition with firm prices at Philadelphia, Pa. There is an active demand from both city and country customers, with increased sales as compared with several preceeding years.

THE rate for lumber from Toronto to Oswego is quoted firm at $1.25, although we have heard it rumoured that a higher rate has been paid. It is also said that contracts have been declined at quotations,

AT Toledo, Ohio, trade is reported as very fair for the time of year, with every prospect of an unusually large demand from the surrounding territory, while dealers are at a loss to know how they are to replenish their stocks at present prices.

THE estimated stock of logs at Bangor, Maine, is 150,000,000 feet, consisting of spruce, hemlock, pine, cedar, etc. The drives generally are safe, while it is said "the demand is tremendous and would take twice the quantity that can be obtained."

FROM St. Louis, Mo., the report comes that prices are quite firm under a steadier demand than has been known for years, and none of the weakening of prices which is customery at this time of year is being experienced this season, and the only question asked in sending in orders is, "When can they be filled?"

THE *Northwestern Lumberman* under date of the 18th May, says: "It may be said without doing violence to the truth, that the general situation in respect to prices is more satisfactory than might have been expected. Weakness is decidedly the exception and seems to exist in fact nowhere outside of Chicago."

THE ERIE CANAL OPENED.

BUFFALO, May 17.—The locks on the eastern division of the Erie canal were officially opened at 12 o'clock last night. Up to 6 o'clock last evening about 20 boats had taken clearance papers. Most of these, and others which loaded and cleared last fall, moved down the canal during the day. The opening rates are 7 cents on wheat, 6½ cents on corn and 6 cents on flax seed to New York. Several loads of wheat were taken at the rate named. No lumber engagements were made, but the rate was understood to be $2.85 per thousand feet to Albany and 75 cents additional to New York.

A Very Respectable Appearing Paper.

THE CANADA LUMBERMAN.—The only paper published in Canada devoted to the Lumber and Timber Industries of the Dominion.—TOKER & Co., Peterborough.

The value of these industries as factors in the development of our country, should alone command for the publication cordial recognition and encouragement. It is a very respectable appearing paper of 10 four column pages; $2 per annum, $1 for 6 months.—*Canada Health Journal.*

ON Monday, May 9th, Mr. W. H. Escott, employed in Rathbun & Son's door factory, Deseronto, met with an accident that may yet prove fatal. While putting several panels through a sizing machine, by some means they got on top of the circular saw and were hurled backward. One of the pieces inflicted severe wounds on his arm, while another struck him on the chest, cutting through the clothing and making serious wounds. Inflammation has set in, and recovery is by no means certain.

NOT DONE YET.

The continent is not yet stripped of its timber, for there is a region in which the woodman's axe has never yet waked the echoes. If the Hudson Bay region be not misrepresented, the American continent may in the future draw its supply of timber from thence. The popular idea of it is that the region is given up to perpetual snow, ice, walruses and polar bears. But this is erroneous. Professor Bell, who has spent five years in exploring the Hudson Bay, gives, in glowing terms, an account of his wanderings in and about that great body of water, which, in his enthusiasm, he designates the Canadian Mediterranean. He states that Hudson Bay is in effect a thousand miles long, more than six hundred miles wide, and covers one million square miles. Instead of being, as is usually supposed, a part of the Arctic regions, its nearest shore is more southerly than London, and its farthest still remains within the north temperate zone. On the north-east coast there is little snow in winter, and little rain in summer. The tributaries of the bay are the Nelson, which discharges the waters of Lake Winnipeg; the Winnipeg, about the size of the Ottawa; the Saskatchewan 900 miles long pouring in from the west; and the Red River, coming, 500 miles from the south. All the central part of North America, from Labrador to the Rocky Mountains, drains into Hudson Bay. The largest tributary is the Nelson, about four times the size of the Ottawa at the capital; then comes the Churchill, the Big River, and the Albany. On the west side of the bay the southerly winds are the coldest that blow in the winter, and there is less snow and less intense of cold in the vicinity of York Factory and Ft. Churchill than in more southerly regions. During winter the temperature improves as one goes from Minnesota northward through Manitoba, and down the valleys to Hudson Bay, and bathing is found agreeable in July, August, and September. On the southern and western shore unlimited supplies of red and white pine, spruce, white birch, balsam, poplar, aspen, and tamarack are found. As Great Britain is now drawing her supplies from the North Sea and the Baltic, the United States may draw their timber from Hudson's Bay when the northwestern pine lands are exhausted. It will not be impossible to get the timber from the Bay, if necessity demands it. If Hudson's strait freezes over, railroads will be built into its forests or a ship canal be constructed by way of the Nelson River and Lake Winnipeg to the Mississippi River. It is all right now, about the timber. When the Saginaw river mills are silent and the salt center has been transferred to those wonderful licks on the Muskingum and Kanawa rivers, lumbering operations will be brisk on or about the 60th parallel, and there will be plenty of timber for bedsteads, cradles, tables and coffins, if we have to live in glass houses and dare not throw stones.—*Lumberman's Gazette.*

MESSRS. H. B. RATHBUN & SON'S drive of cedar, and Mr. T. P. Pearce's drive of saw logs have passed Lennon's bridge, Marmora. The late rains have helped them, as the water was low during the April drought.

HERDING LUMBER.

Judge Carey showed the greatest interest in these weird tales, and edged up to the group.

"These are curious yarns, gentlemen, but I believe them all. I had a dog once, back in Nebraska, that I kept to herd lumber."

"Beg pardon, Judge; did you say the dog herded lumber?"

"Yes, sir; cottonwood boards. We always kept a dog there to bring the lumber in at night."

Everybody now paid the closest attention, as they knew the boss was at work.

"It was this way. Cottonwood boards warp like thunder in the sun. A board would begin to hump its back about nine o'clock in the morning, and in half an hour it would turn over. By eleven it would warp the other way with the heat, and make another flop. Each time it turned it would move a couple of feet, always following the sun towards the west. The first summer I lived in Brownville over 10,000 ft. of lumber skipped out to the hills the day before I had advertised a house raisin'. I went to the county seat to attend a law-suit, and when I got back there wasn't a stick of timber left. It strayed away into the uplands. An ordinary board would climb a two-mile hill during a hot week, and when it struck the timber it would keep worming in and out among the trees like a garter snake. Every farmer in the state had to keep shepherd dogs to follow his lumber around the country, keep it together, and show where it was in the morning. We didn't need any flumes there for lumber. We sawed it east of the place we wanted to use it, and let it warp itself to its destination, with the men and dogs to head it off at the right time; we never lost a stick.—*Carson City Appeal.*

FINE SAW MILLS.

There are many fine saw mills in New Brunswick; there must be a number on the Miramichi, but the finest mill in the Maritime Provinces, according to the Chatham *Advance*, is that just completed at Chatham by the Hon. Wm. Muirhead to replace the one burned a few months ago. It is described as a two-gang steam mill 138 by 46, and 27 feet post, crown roof covered with asbestos; boiler-house and saw-dust kiln, 40x70 feet; engine house, 40x16 feet. The power is furnished by six boilers, arranged in two sections. Each is 35 feet long, three of them 3 feet 6, and three 3 feet diameter. A large steam chest counects with wrought iron throatpipes rivetted. The engine has double cylinders, inclined toward each other at the top, each 22 inches diameter and 2 feet stroke. The fly whnel—10 feet diameter—weighs five tons. A valve is provided by which in case of fire, volumes of steam can be blown into the building to extinguish flames. There is 1,200 feet of rubber belting used in the mill: one belt is 86 feet long, 16 inches wide, and "6-ply," another 75 feet long. The gangs are of steel, guide rods 4½ and 4¾ inches; stroke 26 inches, connecting rods 12 feet long. There are two double edgers. The most of the heavy machinery was made at the Miramichi foundry, the lighter work being prepared at Mr. Muirhead's own machine shop adjoining the mill.

Comparative Table.

SHADE TREES ALONG THE HIGHWAYS.

BY THE HON. B. G. NORTHROP.

An unusual interest is shown this season in planting trees along the roadside, and our nurserymen are busy in meeting this growing demand. The Legislature of Connecticut has just passed, unanimously in both houses, a law to encourage tree-planting on the public roads. A similar law has been passed in some of the comparatively treeless states west of the Mississippi; but Connecticut is believed to be the first state east of that river to offer so liberal a bounty from the state treasury for this purpose. This Act provides that any person planting or protecting forest trees one-quarter of a mile or more along any public highway may receive for ten years an annual bounty of one dollar for each quarter of a mile so planted; the forest trees to include the elm, maple, tulip, ash, basswood, oak, black walnut and hickory; the elms to be not more than sixty feet apart.

Under the stimulus of this state bounty, more trees ought to be planted this spring along the roads of Connecticut than in any former year, however much has been recently done in this direction. In some cases individuals are encouraging this work, by offering prizes for tree-planting. A citizen of Clinton has just offered a hundred dollars, in the form of prizes of $40, $25, $20 and $15, to the persons who may plant this spring the best and longest rows of trees along any public roads of that town, the award to be made by three non-resident experts and announced at the Agricultural Fair of Clinton, next October. Another gentleman offers a like amount, to be awarded in sums of $45, $30, and $25, for the best and longest rows of trees that may be planted this spring in the towns represented in the Falls Village Agricultural Association. Two hundred dollars offered in this way a few years ago stimulated an extraordinary interest in tree planting. I shall be most happy to co-operate with any liberal citizens who may wish to try a kindred experiment in their towns this season or next year. The time for this work is at hand, and whatever is done well this spring must be done quickly. In two or three days notices could be printed and circulated in almost any town in New England or New York. That service I will cheerfully perform for any such donor in Connecticut.

Nothing can add so much to the beauty and attractiveness of our country roads as long avenues of fine trees. One sees this illustrated in many countries in Europe, where for hundreds of miles on a stretch the road is lined with trees. With the liberal encouragement offered by this new law, no time should be lost in securing the same grand attraction to our highways. Growing on land otherwise running to waste, such trees would yield most satisfactory returns. The shade and beauty would be grateful to every traveller, but doubly so to the owner and planter, as the happy experience of hundreds of our farmers can now testify, for a good work in this direction is already well started. Having in abundance the best trees for the roadside, no class can contribute so much to the adornments of our public roads as the farmers. In portions of Germany the law formerly required every landholder to plant trees along his road frontage. Happy would it be for us if the sovereigns of our soil would each make such a law for himself.

The trees named in the Connecticut Act comprise the best roadside trees for New England and New York. The elm unites the two conditions of grace and grandeur more than any other tree. Michaux calls it "the most magnificent vegetable of the temperate zone." The Norway maple deserves a place with our fine American maples, being hardy, making rapid growth, and giving dense shade. The tulip, or common whitewood, deserves greater favor as an ornamental tree. Many fail with this tree, as with the hickory and oak, beceuse they transplant them too large. It has a deep root and should be taken from the nursery young. The owner of the largest nursery east of Syracuse said to me this week: "You will accomplish a grand result for arboriculture if you persuade the people to plant younger trees. It is a great mistake to plant big trees." Trees planted when large must be beheaded, and a tree never recovers from this unnatural process. Even the elm, however prone to assert its claim to beauty, never dévelops its full symmetry when thus maltreated. It gives you two limbs, and then, from three to six feet higher, two or three more, when you might otherwise have twenty growing out in graceful arches. No doubt the elm extends its roots into adjoining fields more than any other tree. On this account, the hickory, white ash, mountain ash, and especially the tulip, with its straight stem, that may be trimmed high, if need be, should be favorites with farmers for the roadside. Greater care should be taken to keep the roots of young trees moist and protected from the sun and drying wind till they are ready to be set.

This work of tree-planting has been cordially endorsed by the press and people of Connecticut. The editor of the Boston *Herald*, speaking of the influence of the rural improvement associations, now so numerous in Connecticut, says:—"They are doing a work which will entitle our prosperous neighboring commonwealth to the name of the Garden State.' Mr. P. M. Augur, pomologist of the Connecticut Board of Agriculture, says, in a New Haven paper: "The season for ornamental tree-planting is at hand. Allow me to second this effort to persuade every town and village in our state to organize for street ornamental tree-planting. Let the ladies, if need be, move in this matter. Let a suitable day be appointed, and every man be invited to plant trees according to a specified plan, and in the evening meet to report the day's results, and banquet at the hands of the fair sex. By so doing, we shall think more of home, town, state and country; yea, and think more of each other. And, in the distant future, many will delight, as they pass through the beautiful streets, to recount this good act of their ancestors."

In some towns an arbor day is set apart during the last of April or first week of May (sometimes "May-day") for this special work, when every citizen is invited to devote the day to public improvement or to "brushing up" each around his own frontage and residence. When every resident is thus stimulated to make his own grounds and wayside neat and attractive, the entire town becomes so inviting as to give new value to its wealth and new attractions to all its homes.—*N. Y. Independent.*

THE MISSISSIPPI FLOODS.

The *Lumberman and Manufacturer*, of Minneapolis, says that the floods in the river during the last week have amounted to an embargo on commerce of every description in the West, especially in lumber. It is hard to tell just where so much lumber has gone to as the reported shipments of last week indicate was sold. From the upper Missouri through to Chicago and down to Cairo the railroads have been damaged and suspended, while all reporting points show an advance upon last year's business, but for the week. Handling lumber on the Mississippi is almost impossible, and only such lumber as is regarded unsafe is being moved and none sold. Great damage has been done already to lumber yards along the river as well as mills, booms, etc., by the floods. These things are adding to the cost of lumber this year, and also reducing slightly the amount to be cut, both of which strengthen the market. From reports it is thought that nearly all the lumber held on the Missouri river will be lost and several millions on the Mississippi, besides the large quantity of logs which have been and are being carried away. The advance in lumber at Chicago is well maintained and it only needs a corresponding move in the Mississippi Valley to send it still higher in Michigan and Chicago. The advance has been much greater in Saginaw than in the West. Thus two years ago lumber was sold for $5, $11 and $18 which now brings $7.50, $17 and $35 there, while the advance has been about $3 on common and $5 on clears in the West.

Should Receive a Liberal Support.

We have received a copy of THE CANADA LUMBERMAN, an excellent journal devoted to the lumber and timber industries of Canada, and published by Toker & Co., Peterborough. It is very neatly printed, contains a large amount of interesting news, and should receive a liberal support,—*Winnipeg Times.*

THE BULLS AND THE BEARS.

The figth of the bulls and bears in the Chicago lumber market is becoming almost as celebrated as the regular warfare of their prototypes of the stock and gain exchanges. The contest, though an entirely bloodless one, is not lacking in interest, as well to outsiders as to the participants themselves. It usually engages the attention of a good part of the trade during the earlier weeks of the season, when, for obvious reasons the animals above mentioned are in a particularly belligerent frame of mind. It may be regarded as both a moral and physical impossibility for the representatives of the yard and mill interests in this city to dwell together in harmony at this particular time of the year. They take to fighting naturally, as if by a kind of instinct, and for a time they revel in its pleasures with as much apparent enjoyment as though the whole thing were a bit of a farce, like a Punch and Judy show. In the spring the dealer's fancy turns lightly to thoughts of sharpening up his claws, which operation he performs while indulging in pleasant anticipations of the firm grip he will thereby be enabled to get upon prices when he prepares to exert his muscular power in an effort to pull them down. And so the man with a mill, or some logs that he has arranged to have sawed by the thousand upon pretty favorable terms, gives an extra chuckle as he lets his imagination show him in advance how beautifully he will toss and gore poor bruin when he catches him with a lot of men on his pay roll with nothing to do, and undertakes to sell him the last cargo of lumber on the market. But after a month or two of hostilities both the bulls and the bears discover that there is something to live for besides war, and having worked off their surplus energy by means of their annual scrimmage, settle down to business and spend the balance of the season in making money.

To consider the matter more seriously, it may be said that this regular struggle between the two opposing interests among the lumber dealers in this market arises out of the peculiar way in which the business is transacted. That merchandise should be bought for as little and sold for as much as competition will admit of are among the first principles of business. The dealers simply control certain influences that may be brought to bear upon the prices at which they must buy their lumber, and they use them, so far as possible, to effect the purpose they naturally have in view, which is, of course, to get their stock for as little money as they can. They do not care whether the mill owner makes anything; that is his lookout, consequently the only thing they work for is to buy their lumber for the lowest prices that the sellers will accept. On the other side, the manufacturers, and those interested either directly or indirectly in the production and primary sale of lumber, have before them only one purpose—to get all they can for their property. It is no concern of theirs whether the buyer of the stock makes anything on it or not; as long as it passes out of their hands at a profit their duty is done, and their interest in it is at an end.

Notwithstanding the remarkable activity in trade during the last few weeks, we have unmistakable evidence that the battle of the boards will be fought this season as usual. Both parties to the fray are armed and equipped as their best judgment directs, and are in readiness for the struggle. Indeed, the contest has already begun. Anyone interested enough in what goes on in this market will observe that a skirmish of no small dimensions has occurred between the low-priced and high-priced elements in the trade. If we take their action as an earnest of what they both propose to do, we may safely look forward to some sharp fighting before the season gets so far advanced as to bring about harmony among the operators on both sides. The bears evidently mean to take something more than a protest against the prices the mill men seem disposed to demand for their products, and the latter, if their words and actions are to be taken as an indication of what they mean to do, are equally determined not to yield a point unless they are obliged to.

It must be conceded, we think, that the bears scored a decided victory, and if so, it is only fair that they should have the credit of it. They did not accomplish quite all they desired, which was evidently to induce the trade to postpone the issuing of a union list, and so permit them to make as low prices as they pleased. Perhaps they did not expect to attain this end, but only made the attempt as a a matter of principle. However this may be, they did establish one fact very thoroughly; namely, that they do not intend to buy their season's supply of lumber at the top of the market except as a matter of absolute necessity.

Anybody who could decide in advance whether it will become a matter of necessity for them to do so would make himself famous as a prophet, and settle a question that is puzzling a good many of the shrewdest lumbermen in the country. To successfully forcast the future of this market for the next sixty days, and be sure of hitting the nail squarely on the head, would be a good thing to do, but unfortunately, or otherwise, an impossible one. It will turn out according to the ability of one side to hold off and the other to hold on. If the dealers can keep from buying long enough, they will probably bring the manufacturers to terms, while, similarly, if the mill men can pile up enough of their lumber at the mill, and so keep it away from the market, they may force buyers to pay what they choose to ask. It might be asked what would be the result in case both should develop staying powers beyond the general expectation; but it is not a likely supposition that the enduring qualities of both sides will be exactly balanced. There are some dealers who must buy from day to day, and likewise some manufacturers who must sell; so that the market is almost certain to fluctuate, and move in either direction gradually, according to the necessities of the buyers force them to demand more lumber, or those of the manufacturers oblige them to offer more for sale.

The *Lumberman* would be very glad to give its readers a definite opinion regarding to probable course of the market, and of trade and prices generally, during the coming sixty days, but unfortunately it has none that it could recommend to them as thoroughly to be relied upon. Moreover, it has failed after a diligent search to find anyone not directly interested in one side of the question or the other, who has. Ask a dealer what he thinks of the situation, and he will tell you with all the confidence imaginable that lumber is going to be cheaper; put the same question to a man on the other side of the fence and he will assure you with the utmost gravity that, in his opinion, there is not the least reason for lumber selling any lower than it does to-day. There may be wisdom in multitude of counsel, but it is a fact, concerning which the *Lumberman* has no doubt, that the more counsel one takes in regard to the probable future of this market the less he is apt to know about it. The only thing he will find out beyond question is that one man knows no more about the matter than another, and that all, in point of fact, are in a state of profound and possibly blissful ignorance in regard to it. Perhaps the best thing we can say to those who are anxious to know something about the way the market will turn, is to recommend them to trust their own judgment and act in accordance with it. One opinion is as likely to be correct as another and to toss up a dime is probaby as good a way as any of deciding between them.—*Northwestern Lumberman.*

GREAT FIRE AT TRENTON.

GILMOUR'S MILL DESTROYED—400 MEN OUT OF EMPLOYMENT—LOSS $150,000.

TRENTON, May 18th.—This morning at six o'clock, as the night tower was coming off work at Gilmour's mill, and the day men going on, smoke was observed coming out under the roof at the western end of the boiler room, and in about ten minutes flames and smoke were coming out in immense volumes.

Under Mr. J. F. Burr's guidance, a bucket brigade was at once organized, and the fire alarm sounded. At this point the fire was gaining headway so rapidly that the steam was blown off for fear of an explosion, and seven powerful streams were brought to play on it from the large brick tank which was kept filled by the engine in the machine shop. In spite of all this the fire spread rapidly, and soon the main body of the mill, containg the saws and other machinery, together with the engine room, was in a blaze.

About this time the steam fire engine arrived, and two more powerful streams were turned on the fire, which was now raging among the sawdust and woodwork around the saws in the southern end of the mill and gaining rapid headway. But the men at this time, fired by the knowledge that their only means of support was being cut off, rushed into the interior of the mill with buckets and axes and commenced to tear out all the machinery they could get at, and as three streams were now got to play on the inside of the mill, the men began gradually to get control of the fire, and by eight o'clock, by almost superhuman exertions, they had it completely under control, and by nine it was out.

The boiler room is almost a total loss, but the boilers, which were entirely encased in masonry are supposed to be uninjured. The engine room, which was separated from the boiler room by a stone wall, but covered by the same roof, was badly gutted, but it cannot as yet be ascertained whether the engines are damaged or not.

The main body of the mill which adjoins the engine room, was badly damaged at the southern end, where the gangs of saws are situated, and where consequently a large amount of sawdust and other combustible material was accumulated. All the sawing gear and almost all the belting was totally destroyed, but most of the small machinery in the new wing (which was built during the winter), together with the gang itself was saved; and none of the lumber piles were burned.

It is known that the mill was insured for $75,000, but whether there was any more insurance we could not ascertain; but it is believthe loss will amount to $150,000. It is impossible to ascertain as yet the true extent of the damage.

The following is a complete description of the mills and their surroundings before the fire:—

Entering the mill yard by the main entrance on Mill street, the first object of interest that attracts our attention is a large enclosure containing several well kept stables for the housing of a large number of horses, which are used in the yard.

Further on we come to the repair shops and mill, the machinery of which is operated by a twenty-five horse power engine, situated in the boiler room, at the northern end. Close to the engine is a large planer, which is cabable of planing lumber on both sides at once, and thus saving a great deal of time. Opposite this is a large circular saw for general work, and further on we come to a row of lathes, and work benches, a drilling machine, a hand saw, a huge grindstone, and last of all a gigantic planer, which is used for planing large sticks of timber for framing purposes. A number of mechanics and millwrights are employed here, work being kept up until twelve o'clock at night, for several nights in the week.

Passing out through the patternshop (where patterns for all castings required for the mill are made) we cross over to the blacksmith's shop, which is fitted up with all the necessary machinery and tools and where three blacksmiths and several men are employed. Opposite to this is the immense water tank 60 feet high. The tank proper (which has an immense capacity) is situated at the top and is filled by a large steam pump situated in the machineshop. From this tank pipes lead to different points in the yard where hose can be attached in case of fire. To the right of the tank is the general business office which is connected with the town office by telephone. At the back of this in the same building is the gasometer which is capable of making sufficient gas to keep 75 lights burning all night. This is only used in the summer season when the mill is running night and day. Opposite, and a little to the left of the gasometer is the large sawmill which is driven by two horizontal engines of 75 horse power each, the steam for which is generated in 12 large log boilers situated at the right of the engine room. The furnaces are automatically, fed with sawdust, and require very little attention. The lower storey of the mill proper is entirely taken up with wheels, belts, etc., but all the sawing on the second floor, where the gangs of saws are situated, six in number and capable of sawing 300,000 feet of lumber per day of 24 hours. At the back of the saws are the edger, slash and cutting tables, lathe machines, etc., and further on still is a new wing, 60 feet long which has just been added, and in which will be placed several new gangs of saws, and other machinery, which will greatly increase the number of men employed and the capacity of the mill.

Leaving the large mill we proceeded along the shore of the bay (passing by the neat little office of foreman, Mr. Hall) until we come to the new cedar mill, which was built last summer and is now running constantly. This mill is driven by a very powerful engine at the eastern side, and is devoted to all kinds of sawing which cannot conveniently be done in the large mill. In the upper story is placed a very large circular saw which will cut through a large log, and is used for cutting long plank, square timber, etc. To the left of this is a small gang of saws, and further back a butting table and saws for cutting the rough side off the lumber.

To the east of and adjoining the cedar mill a large shingle mill is situtated, which is driven by the engine in the cedar mill.

About 400 men were employed at the time of the fire, and were all present. We could not ascertain whether Mr. Gilmour intends to rebuild at once or not, but it is supposed that he will.—*Belleville Intelligencer.*

Cannot Fail to be of Immense Benefit.

THE CANADA LUMBERMAN.—The Lumber and Timber industries of Canada, probably the most important in the country, have at last, we are pleased to notice, secured an influential and highly creditable organ in the THE CANADA LUMBERMAN, published by Messrs. Toker & Co., at Peterborough. The LUMBERMAN was founded in Toronto last year by Mr. Alex. Begg, and came into the hands of the present publishers only a month ago. It appears in an entirely new dress and will in future be published semi-monthly, at $2.00 per annum. It has a vast field and important work before it, and under its present able management we hope to see it live and flourish. It certainly deserves the support of every one interested in the lumber trade, to which it cannot fail to be of immense benefit. —*Madoc Review.*

A Mistake.

It is a great and often fatal mistake to take repeated drastic purgatives for constipation of the bowels, they induce piles and cause debility of the bowels. Burdock Blood Bitters is a safe and perfect regulator of the bowels, arousing the torpid Liver and all the secretions to a healthy action; acting on the Kidneys, and renovating and toning the system in a most perfect manner.

Mothers who are startled at the hour of midnight by that ominous hoarse cough of your little ones, what would you not give for a prompt and certain means of relief from that dread destroyer of your children, Croup? Such a means you may have for the trifling cost of 25 cents. It is Hagyard's Yellow Oil, the great Household remedy for all inflammatory and painful diseases. Do not rest over night again without it.

DYSPEPSIA.—Strenthen your digestion—tone the stomach for utilizing and assimilating every atom of food you take; the body needs it for strength and vigor. *Zopesa* cleanses the entire system, stimulates the Liver, keeps you regular, and able to eat ten-penny nails. Letters and postal cards come in daily, telling of cures and help frem *Zopesa*, from Brazil. *Positive proof* of the health and vigor it gives in a ten cent sample. Ask your druggist.

For all purposes of a Family Medicine, HAGYARD'S YELLOW OIL is at the head of the list. It is used with unprecedented success, both internally and externally. It cures Sore Throat, Burns, Scalds, Frost Bites, relieves, and often cures Asthma.

WANTED

A COMPETENT MAN, with thorough knowledge of Tram Railways, to go to Jamaica, to take charge of the laying and keeping in order the rails and road bed of a ten mile tramway, and when not employed to make himself otherwise useful. To a first-class competent man good salary will be paid.

BARREL MACHINE

One man and two boys can turn out

One Hundred and Fifty First-class Flour Barrels in Ten Hours,

made from veneered wood of two thicknesses. The inside is one solid sheet of veneer running around the barrel, making in reality one hoop from top to bottom, and in the outside thickness the grain is reversed, running up and down, finished with five hoops [illegible] wide, reversed again, making the barrel almost [illegible] thicknesses, which gives the package superior strength, tightness and durability over the ordinary hand-made flour barrels, yet with all its many advantages cost less than the old style of package. My barrel machine is arranged to make all sized packages from a large barrel down to small nail kegs, butter packages and cheese boxes. I am open to prove at any time the superior strength of my barrel. That one will stand more hardship by any actual test than one hundred of the old ordinary flour barrels. County rights for sale, and all information given by applying to

Advertisements intended for insertion in any particular issue should reach the office of publication at least three clear days before the day of publication, to insure insertion.

All communications, orders and remittances should be addressed and made payable to TOKER & Co., Peterborough, Ont.

Communications intended for insertion in the CANADA LUMBERMAN, must be accompanied by the name of the writer, not necessarily for publication, but as a guarantee of good faith. Communications to insure insertion (if accepted) in the following number, should be in the hands of the publishers a week before the date of the next issue.

PETERBOROUGH, Ont. JUNE 1, 1881.

IT is said that Messrs. Irwin & Boyd's square timber, which has just passed over the Victoria railway *en route* for Quebec, is the finest lot ever shipped from that district.

IT is reported that a syndicate of Vermont buyers have purchased large quantities of lumber from an Ottawa firm at an advance of 10 per cent. over last year's prices.

WE have received the Chicago edition of that King of Lumbermens papers—*The Northwestern Lumberman*—which is in itself a very complete hand-book of the lumber trade of that city. It extends to 72 pages, one-half of which is occupied by the advertisements of those in the trade, the other half is filled with statistical and other information which must be invaluable to the trade. Accompanying the number is also a map of the Chicago lumber district, with all the lumber yards laid out thereon.

MR. WILLIAM HAMILTON, of Peterborough, informs us that he has had substantial evidence of the advantage of advertising in the columns of THE CANADA LUMBERMAN, inasmuch as since the insertion of his advertisement he has received several orders, and numerous communications with reference to work, directly attributable thereto. We are of course glad to hear it, and trust other advertisers will be similarly benefitted. Readers of the LUMBERMAN ordering anything from its advertising patrons, could do us much good by stating in their orders that their attention had been called thereto by an advertisement in our columns.

THE Duluth *Lake Superior News* says: The amount of logs cut this past winter, will not fall so very far short of the figures given in the *News* on Jan. 6th. Some delay in getting the logs will be experienced, however, on account of the almost total lack of rain since spring opened. On the Nemadji and tributary streams the only drives that have come down clean, are those of Graff, Little & Co., and Hall, Norton & Co., about two million, and one and a half million feet, respectively. A. M. Miller and Duncan, Gamble & Co., will have to wait for almost all their logs on that stream until the June rise; Cutler, Gilbert & Pearson, are in the same fix on about four-fifths of their logs, and Peyton & Kimball on most of theirs.

WHERE TO DRY, HOLD AND SELL LUMBER.

Most of the manufacturers of boards, will we think, agree that the proper and best place to season, hold and sell lumber is at their own mill yards if circumstances will only permit them to do so. In years gone by circumstances unfortunately forbade their doing so and compelled them to forward their cuts direct, or nearly direct from the saw, in order that they might be enabled to keep things moving. While such a course did keep things moving it did so at the cost of much of the legitimate profits which should have accrued to the manufacturer and served to keep him in a state of semi-bondage to those to whom his lumber was forwarded and to whom it was hypothicated as soon as shipped if not before the trees were felled. For various reasons this state of affairs, is just now, happily, well-nigh extinct, and in the interest of the Canadian trade it is to be sincerely hoped that it will remain so. The necessity which caused it in the past no longer exists. Not only are those engaged in the trade stronger than they used to be, but our banks have ample means at their command to enable their customers to carry their lumber at the mills, rather than on the other side.

While we put forward our opinions with due diffidence it does seem to us that nearly all the advantages are with seasoning, holding and selling the lumber cut for the American market at the mills. So far as seasoning is concerned all the advantages are with its being done at the mill, because there yard room costs least, and space being valueless, as compared with that obtainable in commercial centres, it can be piled with a view to its rapid seasoning rather than to the space occupied. Then by drying at the mill it is dried at the point where the minimum amount of capital is invested, and finally it costs less (now that railways are charging by weight) to transport it to market after it is dried than before.

With regard to holding at the mill rather than sending it forward to be sold on commission after it is seasoned, we think the balance of advantage is also with the course we are venturing to recommend. As an article on the "Bears and Bulls" of the Chicago lumber market which we publish in another column, well says the great reliance of the Bears, in being able to break that market rests upon the fact that certain "needy" lumbermen will soon be compelled to sell for what they can get, and that by holding off now they will soon be able to replenish their depleted stocks at figures which while yielding them a handsome profit, will be obtained at the expense of the manufacturer. Inasmuch as the "Bear" interest predominates largely over that of the "Bulls" south of the lakes, and as the commission men are sure of their commission on our lumber once it is shipped to them, no matter where the shipper may come out, it seems to us the true policy of the Canadian manufacturer, and of his backers, the Banks, is to hold the lumber here until it is sold. To send it forward and add freight, etc., to the money locked up therein is only to add to the cost of carrying it in the way of interest, insurance, and storage, while the seller can always do better, when the buyer comes to him than when he goes to the buyer. It may be said that sales will be lost by not having it forward, but while this may be true when the market is getting overstocked, it would not be so when the demand was good, and the worst place in the world to have any commodity, in a dull or falling market, is in the hands of a commission merchant—especially if it has been drawn against. They are anxious to sell and their very anxiety to sell only still further depresses the market. Now that our banks are overflowing with money and our lumbermen are in a sound position, no better time could be taken to adopt the policy of selling from the mill yards. If stocks should accumulate under such a policy then they are pretty sure to accumulate some where, and it surely would be much better to have them accumulate in their own yards, where the least possible capital would be locked up, where they would cost comparatively little to hold and where they would serve as a timely warning to curtail production.

As we have already said, we place these views before our readers with some diffidence, but if they serve to draw attention to an important subject, and still more, if they serve to draw out the opinions of some of those who are so competent to discuss such a subject, this article will not have been written in vain.

THE LATE T. W. BUCK.

It becomes our duty in this number of THE CANADA LUMBERMAN to record the death of Theodore W. Buck, the late deservedly esteemed and popular manager of the Georgian Bay Lumber Compay's business at Waubaushene, Severn River, and Maganettewan. Although we have made several attempts to obtain such particulars with regard to Mr. Buck's career in Canada, as we were sure would prove interesting to our readers, we have been unable to other than what is contained in the following remarks which we find in an exchange as having been made by the Hon. W. E. Dodge at the conclusion of the funeral services at Mountoursville, Pa.

"I have been requested to add a few words to what has been spoken by the reverend gentleman, who, though a stranger, has kindly conducted the services. Mr. Buck has for some fifteen years past acted as agent for my sons and myself in conducting a large and important business, during which time I have had the opportunity of becoming well acquainted with his character as a man and a Christian. As a business man he was active, prompt, and most devoted and faithful to the interests of those for whom he acted, securing their respect and confidence, and to a very unusual degree that of those whom he employed to aid him in the important parts of his business. He was a man of marked business habits, securing in all ways constant order and system in every department, so that the villages under his control were models of sobriety and order. Strict rules of temperance were always maintained, and no one allowed to sell in any place where he had oversight. Mr. Buck's religious character was to be noticed in his simple but decided course in his family. God was honored at his table and at the family altar, or with his wife and children. He was active in securing the privileges of public worship and in keeping up the Sabbath School, acting either as teacher or superintendent. He enjoyed to an unusual extent the best kind of religious reading, and although not in any way forward in speaking of his own views, he was very decided in his religious character in conversation with those who had his confidence. God has been for the past two years preparing him for the change which, no doubt, he often considered as not far distant, and which came at last suddenly. Only the day he left Washington he said to a minister who came to see him, 'I am somewhat troubled at my entire calmness and freedom from anxiety about myself. Do you think I am doing wrong to do so? I have committed myself entirely into God's hands, and to Him I leave it all.' Thus he had been led step by step until he had, without hardly knowing it himself, came to the same point with Paul: 'For I know that if this earthly house of my tabernacle be dissolved, I have a building of God, a house not made with hands, eternal in the heavens.' I have seen Mr. Buck twice within a few weeks, and was gratified to see, in all his feebleness, a ready smile and cheerfulness, with no apparent feeling of anxiety as to the result. He said but little about his personal feelings, but did all he could to keep up his strength and spirits, yet it was very evident that he knew his strength was giving away. I feel perfect confidence that the God in whom, through Jesus Christ, he trusted for salvation, has been preparing him for that rest which remaineth for the children of God. I feel deeply for the dear wife he has left behind, for having been often with them in their own home, I know well the trial there was. It was the home of true love and affection. He never seemed so happy as when with his wife and children. It seemed as if he could never do too much to make his home pleasant for all. May the God of the widow ever be with the afflicted wife to comfort and snstain her in her efforts to train up the dear children in the fear and love of Him whom the husband and father tried to serve."

Mr. Buck's successor at Waubaushene, etc., is, we understand, Mr. G. S. Peckham.

THE RIVERS AND STREAMS BILL DISALLOWED.

It is announced that the Governor-General, on the recommendation of the Minister of Justice, has disallowed the Ontario Act for protecting the public interests in rivers, streams and creeks, passed during the last session of the Ontario Legislgture.

The proprietors of the Peterborough REVIEW have purchased THE CANADA LUMBERMAN from Mr. Begg, and now issue the paper in a greatly improved form. If the LUMBERMAN can be made to pay at all, the Messrs. Toker are the very men to do it. We wish them every success. —*Grip.*

TAXING SAW LOGS.

To the Editor of THE CANADA LUMBERMAN:

CARGILL P.O., May 23rd, 1881.

DEAR SIR,—As your paper is published in the interests of lumbermen, I, as well as some more of your subscribers, would like to know if saw logs are legally assessable as personable property, or if they are not exempt on the same ground as flour-mill men claim exemption on their stock of wheat? Also, if they can be assessed, what would be the maximum value which could be levied on them per M feet? If you can not get this answered in your paper this week, I would like you to write me, giving me your opinion. Also state if it is customary to assess logs in the neighbourhood of Peterborough. I have appealed against assessment on my saw logs, and the Court meets June 1st, so that I would like to have an answer before that date.

Yours truly,

HENRY CARGILL.

While we are quite ready to answer the questions put to us by our correspondent to the best of our ability he must not assume that we give them with the *ipse dixit* of one learned in the law. By reference to the revised statutes (Sec. 6, Sub-sec. 20 of the Assessment Act) we find that "So much of the personal property of any person as is equal to the just debts owed by him *on account of such property*, except such debts as are secured by mortgage upon his real estate, or are unpaid on account of the purchase money therefor" is *exempt* from taxation. As this section of the assessment Act has not been amended, so far as we are aware, and as "saw logs" in common with all other kinds of moveables, is personal property, they come under the operation of this section, and certainly cannot be assessed as such. Whether our correspondent is or is not liable to be taxed on his saw logs seems to us to depend upon whether he, like most lumbermen, obtained the money expended in getting them out from any of the Banks. If he did, clearly he has a perfect right to *deduct* the amount so borrowed from the *fair* value of the said logs—which would of course leave them worth nothing for assessment purposes. Of course if, on the other hand, our correspondent is in the happy position of being able to carry on his winter's operations without borrowing a dollar from anybody, then all his personal property, including his saw logs, is liable to municipal taxation. We have never heard of any of our millmen in this neighborhood being taxed on their saw logs. The idea as thrown out by our correspondent is an entirely new one to us, and one which we are inclined to think will not "hold water" before any of our County Judges. In the prosecution of the appeal which he has entered, the whole matter will, we doubt not, be practically decided by his filling up and making the following declaration for the amount of personal property which he considers himself liable to be taxed under the section of the Act which we have already quoted:—

I,———do solemnly declare that the true value of all the personal property assessable against me——— without deducting any debts due by me in respect thereof, is $———

That I am indebted on account of such personal property in the sum of $———and that the true amonnt for which I am liable to be rated and assessed in respect of personal property, other than income, is $———

TO OUR SUBSCRIBERS.

By reference to the label on each paper, subscribers to THE CANADA LUMBERMAN can see at a glance whether they are in arrears for their subscriptions or not. For instance, if they find after their name, *2 Oct., 81*, then, according to our books, they owe us their subscription for the year ending the 1st Oct. next. As all subscriptions are supposed to be payable in advance and as it has been a continual out-go, with little coming in, since the present publishers assumed the management of the LUMBERMAN, and as it will be necessary to still further increase the expenditure in order to bring the LUMBERMAN up to the standard at which the publishers are aiming, our subscribers would confer a favour, as well as materially assist us in our undertaking, by remitting the small amounts due by them individually, but which in the aggregate amount to a very considerable sum.

THIS increase of exports of $16,420,000 last year over 1879 is made up as follows:—

Products of the Forest	$3,593,048
Animals and their Produce	3,506,973
Agricultural produce	2,655,864
Manufactures	542,336

Chips.

OLIVER LATOUR'S raft of 90 cribs is on its way down the river from Lake Temiscamingue.

THE water in the Upper Ottawa is beginning to fall, having attained its highest level.

PARRY SOUND is to have regular steam communication with Penetanguishene and Midland.

THE Ottawa *Free Press* of the 26th ult., says: Several sales of sawn lumber have recently been made at an advance in price.

A RAFT of timber belonging to Oliver Lattimer, taken out on the Mattawa, has passed Pembroke on its way down.

BELL & HICKEY have finished the rafting of their timber on Lake Temiscamingue and started the same.

CAPT. YOUNG'S saw log drive has been got out in good shape and has been started from Lake Temiscamingue.

BARNET & MACKEY'S logs, taken out on Muskrat River, are now being run into the Ottawa, at Pembroke.

THE British Canadian Lumbering Co. are preparing to light their mills and yards in Midland with electric light.

TRAINS on the Canada Central Railway are expected to be running to the Mattawa by the end of July next.

THE first drive of logs down the Napanee river is over the falls and been towed to Deseronto. The drive consisted of 90,000 logs.

MESSRS. SCOTT & WAGAR'S planing mill and sash factory at Napanee, was destroyed by fire on the 8th of May. Loss, $1,200; insurance, $1,000.

THE log drive on the Upper Ottawa will soon be through. The logs have been got out in partly good form, not such a great quantity being still in the creeks.

THE barque *Vibilia*, which has just brought a cargo of sugar from the West Indies to Montreal, has been chartered to take a load of lumber to the River Platte.

THE *North Star* says: The total quantity of timber cut for the Stewart firm this season, in all parts of the Province of New Brunswick, is about 100,000,000 feet.

A COMPANY is about to be organized to utilize the sawdust produced by the different saw mills throughout the Province of Nova Scotia, by turing it into pulp, out of which paper is to be manufactured. The headquarters of the company will be at Bridgewater.

THE tides at Quebec have been very high of late, flooding some of the wharves in the city and the villages on the banks of the St. Charles. It is feared the logs on the Chaudiere, numbering some 40,000, are in danger. Should the booms give way great loss will result.

OF the 6,300,000 acres to be opened up by the Quebec and Lake St. John Railway Company, 3,000,000 acres are under license or permit to cut timber, and about 180,000 acres are cleared, leaving over 3,000,000 acres of land said to be well covered with spruce, tamarac, white pine cypress, white and black birch and cedar at the disposal of either the Provincial Government or private parties. The Assistant Commissioner of Crown Lands for Quebec in the letter from which the foregoing figures are taken, says that if that portion of these lands) where settlements cannot be established, is judiciously managed they will prove an everlasting source of revenue as it is well established in Canada that the tracts of lands covered with spruce, fit for saw logs, can be cut over every thirty or forty years.

MR. ADAM HALL'S wrought iron shanty stoves are rapidly winning their way into the public favour. Nearly every shanty and drive in this locality is now supplied with them and they always give the very best of satisfaction, as attested by the large number of flattering testimonials, voluntarily given, that have been received by the maker. It is not in this district alone that the stoves are known and appreciated, for on Wednesday last Mr. Hall shipped one to Winnipeg, Manitoba, and has about closed a contract for sixty more, all to be shipped to the same place, for use on the Canada Pacific Railway. He also shipped one on Friday to Penetanguishene, where several of them are already in use.

VENERATION FOR TREES.

There is an old tradition that Abraham planted a cypress, a pine, and a cedar, and that these three were incorporated into one tree, which was cut down for the building of the Temple of Solomon. Isidorus, who lived in the reign of Constantius, assures us that he saw, even in his time, that famous oak in the plains of Mamre under which Abraham is reported to have dwelt, and adds that the people looked upon it with a great veneration, and preserved it as a sacred tree. The heathens went still further, and regarded it as the highest piece of sacrifice to injure certain trees which they took to be protected by some city. The story of Erisicthon, the grove at Dondona, and that at Dolphi, are all instances of this kind.

If we consider the invention in Virgil, so much blamed by several critics in this light, we shall hardly think it too violent. Æneas, when he built his fleet in order to sail for Italy, was obliged to cut down the grove on Mount Ida, which, however, he durst not do until he had obtained leave from Cybele, to whom it was dedicated.

The goddess could not but think herself obliged to protect these ships, which were made of consecrated timber, after a very extraordinary manner, and therefore asked of Jupiter that they might not be obnoxious to the power of waves or winds.

Jupiter would not grant this, but promised that as many as came safe to Italy should be transformed into goddesses of the sea; which, the poet tells us, was accordingly accomplished. The common opinion concerning the nymphs, whom the ancients called Hamadryads, is more to the honour of trees than anything yet mentioned. It was thought the fate of these nymphs had so near a dependence on some trees, more especially oaks, that they lived and died together.

For this reason they were extremely grateful to persons who preserved those trees.

Apollonius tells up a very remarkable story to this purpose:—

"A certain man called Rhæcus, observing an old oak ready to fall, and being moved with a sort of compassion towards the tree, ordered his servants to pour in fresh earth at the roots of it, and set it upright. The Hamadryad, or nymph, who must neceesarily have perished with the tree, appeared to him the next day, and after having returned him her thanks, told him she was ready to grant whatever he should ask.

"As she was extremely beautiful, Rhæcus asked that he might be entertained as her lover.

"The Hamadryad, not much displeased with the request, promised to give him a meeting, but commanded him for some days to abstain from the witcheries of other and mortal maidens, adding that she would send a bee to let him know when he was to be happy.

"Rhæcus was, it seems, too much addicted to gaming, and happened to be in a run of ill-luck, when the faithlul bee came buzzing about him, so that instead of minding his kind invitation, he had liked to have killed him for his pains.

"The Hamadryad was so provoked at her own disappointment, and the ill-usage of her messenger, that she deprived Rhæcus of the use of his limbs. However, says the story, he was not so much a cripple as to be unable to cut down the tree, and consequently fell his mistress."

TIMBER NEWS.

During the week ending 21st of May, the undermentioned timber passed through the Madawaska slides:—

	Cribs.	*Pieces,*

THE GENUINE SILVER-STEEL,

Lance Tooth

CROSS-CUT SAW!

It stands without a rival, and is the fastest cutting saw in the world. It has beaten the best Canadian and American made saws 33⅓ per cent in every contest. Its superiority consists of its excellent temper. It is tempered under the secret Chemical Process, which toughens and refines the steel. It gives a finer and keener cutting edge, and will hold it twice as long as any other process. We have the sole right for this process for the Dominion of Canada.

None genuine that are not like the above cut, with registered trade mark with the word "The Lance," and Maple Leaf with our name. Price $1 per foot.

CAUTION.—Beware of Counterfeits. There are inferior counterfeits on the market, which are intended to be sold at a high price upon the reputation of this saw. We will send to any address a saw exactly like any counterfeit, warranted equal in quality or no sale, at 60c. per foot. Therefore do not be humbugged into paying a first-class price for a second-class saw. A fact to bear in mind is that if the material and temper are not of the very best quality the shape of the teeth amounts nothing. A saw, like a knive, will not cut fast without it will hold a keen, cutting edge. We have cut off a 14-inch sound basswood log in eight seconds with this saw. Manufactured only by

SHURLY & DIETRICH,

Manufacturers of Saws, Plastering Trowels, Straw Knives, &c. &c.

GALT, ONTARIO. b15

This cut is a simile of Package.

The greatest tribute to its extraordinary merits is, that it was awarded First Prize and Diploma at

Toronto Exhibition, 1880.

THE COARSER VARIETIES OF TIMBER.

An eminent philosopher, passing through a low attic upon one occasion, carried his head so loftily as to strike the collar beams which strengthened the rafters, whereupon a friend, who was with him, remarked that he who looked too high would not only run the risk of breaking his head, but would lose sight of a vast amount of beauty, which could be found only upon a lower level. That this truth applies to the experiences of every-day life is shown in the tendency of human nature to search for gold and diamonds because of a supposed superior reputation and value, leaving to the plodder and economist the task of looking for the baser metals of greater economic value. This truth applies with equal force to the searchers after wealth in the forest productions of the United States. The pine and the oak, together with black walnut and maple, have been the gold toward which the lumbermen has turned his eager eyes, and they have turned his vision away from the humbler, yet not less valuable, sources of forest wealth which exist in the hemlock, black ash, and beech, with which our forests abound.

In one of the timber growing States, there is now an estimated wealth of $87,500,000 in the growing pine timber, estimated at an average value of $2.50 per thousand feet for the standing tree. This is a vast source of wealth to the State in which it is growing, yet in the same State, unhonored and most lightly esteemed, even to such extent that its wanton destruction passes unnoticed, are to be found fully 7,000,000,000 feet of hemlock, which, in the near future, will be sought for at a price scarcely below the present value of the pine, for which it will be utilized as a most excellent substitute in many of the coarser uses of lumber. This hemlock is to-day utilized only in the production of bark for tanning purposes, and it bears to the timber wealth of the State only about the same relation that the hordes of buffalo upon our Western plains bear to the meat supply of our nation, as they are slaughtered by the thousand and stripped of their pelts for the use of the civilized world, while the carcass is left to the vulture, regardless of the fact that a race is being exterminated which can never again be propagated. The hemlock tree of the Northwest, like the buffalo of the plains, possesses a value, the extent of which will be realized only after the process of wasteful extermination has done its worst and no more remains to be utilized. The hemlock in one State, if placed at a value which it will bear before the expiration of five years from this date, would bring to its owners not less than $14,000,000; at the value which is placed upon it to-day it is worth not less than $2,000,000, and, in the endeavor to utilize the bark, the trunk of the tree, which might also add to the wealth of its owner, is left to rot upon the ground or to feed the insatiate forest fires which sweep away so much of our forest wealth every year.

But another despised factor presents yet more astounding revelations of timber wealth. Thousands upon thousands of acres of hardwood timber are yearly destroyed in the clearing of land for farms and the burning up of the forest growths which they contain. The hardwood of the State in question, if valued at but 25 cents per cord, is of the value of $175,000,000, or twice as much as the value of the pine timber. And yet but little account, comparatively, is made of this vast source of wealth. The furniture factories of a mighty nation, the vast commercial industries of the world, are ready and willing to pay gold for this timber, which, to a great extent, is suited to their needs; yet its owners fail to see the opportunity, and large quantities of valuable timber are consigned to the flames. The time is near at hand when a wiser policy must and will prevail, and the modest yet valuable timber growths now neglected for the more pretentious and popular pine, will receive the attention which they merit; and those who now esteem the gold mines more highly than they do the iron, will discover that in the latter is a more enduring source of wealth, toward which they will gladly turn while seeking the high road to prosperity.

The proneness of the human mind toward entering those avenues which give promise of sudden wealth is too well known to need comment. The land of gold will attract thousands; the discovery of iron excites hardly the slightest comment. Yet the iron is actually the more valuable in its adaptation to the wants of man, and in its ulterior effect in adding to his wealth. The careful, earnest, saving plodder of 25 years ago is the rich man of to-day, while the sons of his millionaire employer of the former time are his clerks, his porters, and his draymen. That which is common in every-day experience is neglected by the multitude in the mad rush after wealth, but the sons of the rag-picker and scavenger of to-day will perhaps be the merchant princes of the next generation, the foundation for their immense wealth being based upon the humble and despised occupation which by the multitude is neglected. These truths of every-day experience apply to the now neglected timber wealth of this country, and a wise conservation of the despised hemlock and hardwood growths of our forests will result in the accumulations of wealth far greater in extent than are the colossal fortunes which have been made by the operators in pine timber and lumber.—*Northwestern Lumberman.*

A GLUT OF TIMBER.

The Lancaster, Pa., *Examiner*, says:—Never before in the history of the great boom at Williamsport has it contained so many logs at one time as it does now, the estimate being put at a trifle over 300,000,000 feet. Not less than 50,000,000 feet is in the boom at Lock Haven and along the shores, making a total of 350,000,000 feet secured within a distance of 25 miles. Several of the mills will at once commence working their men a day and a-quarter, and they expect to continue this time all summer. The river has finally fallen to about five feet, and no danger to the logs is now apprehended. Many of the mills will be taxed to their utmost capacity to manufacture the stock now secured, during the season. The rafting business, too, has exceeded all former years. Up to the present time it is estimated that about 1,800 rafts of square and round timber reached Lock Haven, 1,200 of which were measured there. At least 1,500 have passed down the river, and on Saturday night it was reported that over 400 were lying at Marietta. Notwithstanding that such a large number has come down, it is estimated that between two and three hundred are yet back; but as many of them are wrecked, they are not expected to get down on the present water. Such a glut of timber has caused a dull market at Lock Haven. Buyers have purchased about all they wanted, and those who failed to sell early will have to hold on for a while. Such a large number of rafts brought hundreds of hardy lumbermen from the woods to Lock Haven, and for ten days that place has been very lively. Hotels had all they could do to accommodate the crowds of men. One hotel on the river, opposite Lock Haven, which made a specialty of entertaining raftsmen, furnished dinner to 400 men on an average for ten days, and one day the number ran up to 600.

Two Thousand Dollars.

The easiest, cheapest and best way to secure the above amount is to apply for membership in the Mutual Benefit Association of Rochester, N.Y. Pay Dr. S. B. Pollard, 56 Bay Street, one dollar for four medical examinations, he will send your application to the head office, if you are accepted as a member they will issue a certificate of membership, which, on payment of eight dollars, entitles you to full benefits as a member, should you die to-morrow, next day, next week, next month, or any time within three months, this Association will pay to your heirs, or assigns, the sum of two thousand dollars. At the expiration of the three months all you have to do is to pay your pro rata amount, which is from 20 to 75 cents on the death of some other member, who has done nothing worse than to die during the three months just past. By paying your assessments on deaths, you keep your certificate alive, and at the commencement of the second year you are assessed two dollars per thousand to keep up office expenses, etc., for the next year. No easier, surer or better schemes to carry two thousand dollars has ever been devised than the Mutual Benefit Associates, of Rochester, N.Y.

5-1-13

BROAD WAGGON TIRES.

AN INTERESTING STATEMENT FROM ONE WHO HAS GIVEN THEM A THOROUGH TRIAL.

A correspondent of the Chicago *Tribune* says: I am glad to see your paper speak on the subject of broad-tired wagons. I offer briefly my experience, which will answer some questions asked by your correspondents. We keep in repair a road three-fourths of a mile long, over which we haul 30,000 tons yearly, besides a small amount of public travel. While we used narrow-tired wagons, the repairs cost us $100 annually, and the road was bad fall and spring. Our loads then weighed one and a half to two tons. Since we changed to broad tires we haul two or three tons with the same ease and same expense for the trip, and the road is never bad, not in the worst weather, and the cost of keeping it in repair is never over $10 yearly.

Our narrow-tired wagons had an average life of two or three years. Our broad-tired wagons have run three years and show no signs of failure, although they have iron axles and are specially strong and heavy. We can haul loads over meadows and lawns without doing damage at any season. In hauling loads over plowed ground we can haul more than double the load we used to with the narrow tires.

If a new waggon is needed it is best to have it made extra heavy and strong, as well as broad-tires; and, while it costs say double the old style, it will save to the owner, by carrying double the load and not injuring road or farm the extra cost each year. Our tires are three-inch, which on moderately well-drained land is broad enough; four-inch tires are only needed on very sandy or very muddy bottoms.

The best way to fit up an old wagon is to get new wheels throughout, even if the wagon is old, for they will do for a new wagon when the old one is gone. To simply put broad felloes and tires onto old wheels is not to increase the general strength of the wagon, and the owner fails to get the strength necessary for the doubly heavy load which his team can easily haul on the broad-tires.

I am also one owner of a sawmill in a neighboring state. Last year we bought sets of new broad-tire wheels, and put on our old wagons to haul our lumber over the three miles of sandy road lying between the mill and wharf. The result was that, while we paid by the trip, one team took 900 feet of green lumber at a load instead of 600, at the same price, and just as easy, and kept the road in such good condition that the repairs cost almost nothing. The saving to us on each wagon per month was $11.25, which would very soon pay for the wheels.

I would not advise reducing the size of the wheels, for the larger the wheel the easier it surmounts an obstacle. One who has not tried it can hardly believe how heavy a load a team will haul on a broad-tire wagon. We have hauled on a good dirt road, already worn smooth with broad-tires, and having several rather easy grades, a steam boiler weighing five tons with a single team weighing 2,700 pounds on one of our heavy iron axletree, broad-tire wagons (tires, three inch). Such a load could not be moved on an ordinary wagon at all.

Now as to cost. The wagon I speak of has two and three-fourth inch arms, and weighs with box 1,360 pounds, and cost in a common wagon-maker's shop $135. It will last twenty-five years if kept painted and sheltered, though in constant use. It would last the ordinary farmer forty years or a lifetime. Three years' use of four of these wagons has not cost us anything for repairs save painting. They are too strong to break. Once again to farmers; Buy new wheels, very strong and heavy, with little or no dish; but them on your old wagons, and you will never buy any more wheels while you live. When your old wagon wears out have a new one made twice as strong and put these wheels on it, and you will never live to see it worn out if properly cared for. If you are to buy a new wagon, here are the sizes:—Take iron axles by all means, with 2½ to 2¾ arms, 2¼-inch spokes, 3 to 4-inch tire; bent felloes, ¼ inch narrower than tire; hind wheels only four inches higher than fore wheels. On this wagon a good 2,400-pound team on a fair road will handle easily two or three tons for long distances if no steep hills, and you may venture four tons for short hauls. The wagon itself will weigh 1,300 to 1,350 pounds, but your team will never feel the extra weight, for it moves on the surface and not from one to four inches deep in mud.

The reason why so much heavier loads can be hauled on broad tires is not alone because the tires do not cut down; there is another advantage equally great: Look at any old narrow tire and you will see that in wearing off at the corners it has acquired a round surface, as though made of half-round iron. Now when the wheel approaches a rut it tends to slide in and tips the wheel on the axle, causing friction on the end of the axle, and not on its whole length, which makes it turn very hard. You will always notice your team pulling harder when your wheels are trying to slide into a rut and can't get there. A broad tire always has enough flat surface, even when well worn, to stand up square and turn evenly on the arm. The use of broad tires in cities I need not speak of, as they are now so common that every one can see the demonstration. I would agree to furnish all the wagons for any city or state, free of cost, if I could be guaranteed the amount of money saved in repairing streets and the extra price of the greater weight hauled at each load by using broad tires, and would pay a round sum for the monopoly.

THE TIMBER TRADE.

Large quantities of square timber are coming down the Nipissing Railway. Between the Northern Elevator and Queen's Wharf five firms have their men at work forming the timber received per Northern and Toronto, Grey & Bruce Railways into rafts. The following is the business here of only one of these, and the others being pretty much on a par with it the total trade may be judged according to information supplied by the foreman:—They will send off five rafts altogether this season, all for the Quebec market. The timber to be used consists of 150,000 feet of rock elm and 15,000 feet of white pine, per the T., G., and Bruce. The Northern brings down for the same firm 30,000 feet of white oak, 15,000 feet of red do., 250,000 feet of white pine, 45,000 feet of ash, 500 traverses and 300 floats of tamarack, and about $1,000 worth of withes are used in binding these rafts. The foreman referred to says that the past year has been an extremely good year for the timber trade, plenty of snow in the bush for hauling, and enough water by the spring thaws to float the logs down the rivers to the shipping point. The men in his employ are thirty-five in number, and are all English-Canadians, with the exception of twelve, who are Frenchmen. The figures mentioned above are those of the whole season's business of the firm; as yet only a comparatively small quantity of timber has been received. So far the Northern Railway freight office officials report that no timber has as yet come down from Collingwood or Muskoka, 123,000 feet of white pine and 73,308 feet of hardwood comprising the total consignments of timber received; this is all from stations along the line between Toronto and Collingwood.—*Globe.*

Take a Pride in Supporting Liberally.

THE CANADA LUMBERMAN.—This paper, formerly published in Toronto, has been purchased by Messrs. Toker & Co., of the Peterborough REVIEW, and will in future be published in the latter town. The first number under the new management is before us and shows a wonderful improvement in the paper. THE CANADA LUMBERMAN will be purely a non-political trade organ and will contain such valuable information as should render it indispensable to all interested in lumbering operations. From the reputation of the new proprietors of the LUMBERMAN we are satisfied they will issue a publication which Canadian lumbermen may well take a pride in supporting liberally. It will be published semi-monthly at $2 per year. Address Toker & Co., Peterborough.—*Collingwood Messenger.*

ZOPESA.—A healthy man never thinks of his stomach. The dyspeptic thinks of nothing else. Indigestion is a constant reminder. The wise man who finds himself suffering will spend a few cents for a bottle of *Zopesa*, from Brazil, the new and remarkable compound for clensing and toning the system, for assisting the Digestive apparatus and the Liver to properly perform their duties in assimilating food. Get a 10 cent sample of *Zopesa*, the new remedy, of your druggist. A few doses will surprise you.

CLASS JOURNALISM.

We find the following valuable suggestions in the *Northwestern Lumberman* :—

The readers of the *Lumberman* are always demanding facts, and to meet this requirement is often a matter of serious and trying difficulty to the editor of their paper. Few of the uninitiated readers of trade journals can form any idea of the magnitude of the undertaking that requires a given amount of interesting and useful information every week or month, as the case may be, no matter in what condition of dullness the trade may languishing at the time of its issue. Like that celebrated character of Dicken's creation, Gradgrind, the demand is still and always for facts, and they must be supplied whether they apparently exist or not.

Were this better understood and appreciated, by the patrons of trade papers in general, less grumbling and faultfinding among them would be heard—and let us say that the *Lumberman* has no cause to complain on this point. Instead, they would, perhaps, aid their fellow craftsmen, as well as themselves, by sending items of interest, although they might not seem of such to themselves, to their paper, and among its readers many would be found who would appreciate them as news. Such items also often prove food for thoughts that would that would not otherwise have occurred to the mind of the editor, who, crowded, as he necessarily always is, with the worry and taxation of mind incident to newspaper publishing, cannot sit calmly down for an hour or two to cudgel his brain for the new and original ideas that require only the slightest hint from a correspondent to start to his mind of their own accord, and be brought forth in a column or so of thoughts and facts.

These, again, may reproduce themselves in the minds of others, each time receiving new additions and being improved upon, until, finally, some needed improvement or reform is produced that may prove the means of a saving and a benefit to the one who originally started the idea by sending an item that to him was of no import. Enterprising newspapers have many resources and spend large amounts of money annually searching for information, and although this enterprise and expenditure is bountifully rewarded by the gathering from far and near of all sorts of items, new and old, which the editor carefully sorts and prepares, there still remains plenty of room for more. And right here is where its patrons can aid it most, for a great number of exchanges have to be thoroughly gone over before sufficient matter of interest to its readers for a five-line item can be found. If you see anything in your paper that you think not worth reading, remember that you might have been able to supply the facts for something more interesting, thus making the paper much more readable for someone else, too.

A general newspaper and a trade journal are in widely different fields—although many so-called newspapers are paddled and stuffed with superfluous words and sentences, breathing tautology on every page, for the sole purpose of being known as the largest paper published in their neighborhood, thus wasting money, paper, and not only their own time, but also that of their readers, in their vanity. But they have a large scope to work in, embracing politics, news, science, theology and a hundred and one topics of general interest to the whole world, while the strictly class journal is confined to the few subjects directly connected with the trade it represents, and is compelled to harp on the same cord week in and week out and year in and out, with no variety and little change further than the advance of improvements furnishes, as it is not expected to be read by anyone not connected, directly or indirectly, with its particular field. This being the case, the *Lumberman* would urge its readers not to be backward with any items, no matter how small they may be, that could possibly be made of interest to any one. They can rest satisfied that they will receive all the attention they merit, and their senders will be kindly remembered by its editor.

Ask your druggist for a trial bottle of BURDOCK BLOOD BITTERS, it will only cost you 10 cents, and a few doses will prove its efficiency as a health restoring Tonic regulator of the Bowels, Liver and Kidneys. It is a specific for all diseases arising from impure blood and disordered secretions.

THE TIMBER LINE OF MOUNTAINS.

Some very interesting facts were brought out at a meeting of the Academy of Natural Science of Philadelphia, concerning the timber line of mountains. The highest Alpine vegetation consists for the most part of short stemmed perennials. Lower down are found dwarfed trees of species, which, still further down the mountain sides, form forests of considerable height, and which, as trees suited to merchantable purposes, make what is known to mountain travelers as the timber lines. In the mountains of Colorado the forests commence at about 7,000 feet above sea level, and continue up to about 11,000 feet, when they suddenly cease. At this point the coniferous trees are from thirty to forty feet high, and above the same species exist as stunted shrubs, seldom exceeding three or four feet in height, and often but a foot, though trailing widely over the ground. In this dwarfed condition they are often found some 1,500 feet higher up, or half way from the recognized timber line to the top of the mountain. On Mount Washington, in New Hampshire, which is a little over 6,000 feet high, the timber runs up to about 4,000 feet, while Mount Webster, a mountain forming the southern peak of the same chain, and about 4,000 feet high, has little timber above 3,000 feet. Roan Mountain, in North Carolina, is about 6,300 feet above the level of the sea, and on some parts of it timber extends to its summit. At a height of 6,000 feet a black oak was measured that was five feet in circumference at three feet from the ground, and forty feet high.

The question as to the peculiar course of the timber line is a mooted one. Until recently it has been referred wholly to climatic conditions, of which temperature and moisture have been regarded as the chief elements in producing the result. The objection urged to this theory is that the dwarfed and gnarled cone-bearing species, extending so many hundred feet up the mountain sides, never produce seed, which leads to the alternative of believing that the seeds have been carried up the mountain sides in enormous quantities and to great distances from the fruiting trees below by winds, or else that there were seed-bearing progenitors of these scrubby trees, beneath the tall protecting branches of which they had their earliest stages of growth. The result of an examination of different parts of Mount Washington favors the latter supposition. As is generally known, there is a railway running straight up the mountain side from the base to the summit. Near the timber line a cut about ten feet deep had to be made through an area covered by mature balsam firs. Under the trees moss and dead roots and old fir leaves had made an earthy strata of a foot in depth. The moss was still green from the rains, melting snows, and fogs of this elevated region, and sustaining the various kinds of low vegetation common to such heights. Young firs were springing up in great abundance, but all the larger trees were dead, though here and there might be seen a branch with a few lingering green leaves. This mass of dead, standing timber occupied several acres, and the reason of the death of the trees was evident. The cut showed that the forest stood on a mass of large but loose rock, through which the water from the mountain above rushed, carrying with it all the earthy matter on which the larger trees had subsisted, but leaving the tongh, turfy matter at the surface, on which the smaller trees of the same sort may live for many years. With the death of the larger trees there is an increase of light, and then the grasses and sedges speedily take possession, holding together the loose soil and permitting, in many cases, an increase of the earthy layer by holding much of the disintegrated rock which washes down from above.

A careful examination of the patches of scrubby spruces above the timber line not infrequently shows dark patches of vegetable mould, evidently the remains of larger trees that have been growing, where now only the masses of small scrubby plants exist. In some places a sharp stick may be pushed down among the dwarf firs and spruces, and the mass of roots intermixed with earth found to be but a foot or so deep over the loose rock from which the earth has been wholly washed away. Again, there are some places, often nearly an acre in extent, where the scrubby first are still standing, dead, from the earth having been washed away, not leaving enough for even the moderate demands of these small bushes.

It is evident that many of the dwarfed specimens are of a great age. Some that were examined were certainly fifty years old, though the stems at the ground were no thicker than a man's wrist, and, trailing on the ground, occupied but sixteen or twenty square feet of space. —*Northwestern Lumberman.*

Do not let prejudice stand in the way of relief if you suffer from any lingering disease. Burdock Blood Bitters cure others, why should it not benefit you? If it is a specific for all forms of Blood, Liver, and Kidney complaints. Nervous Headaches, General Debility, Scrofula and all diseases of the Secretory system. trial Bottles 10 Cents.

Wanted.

A SECOND HAND DOUBLE EDGER; also a LATH MACHINE, both in good repair. Reply stating lowest cash terms or particulars to Box 1002, Peterborough. L10

Market Reports.

OFFICE OF THE CANADA LUMBERMAN,
PETERBOROUGH, May 28, 1881.

From the full reports which we give this week from all parts of the country, it will be seen that the American market is decidedly firm and that "good and dry" lumber is being picked up wherever it is to be found. The reports from the English market are not, however, so promising, although our private advices lead us to believe that *good* timber will bring about the same prices in Quebec this year as last.

Toronto.

From Our Own Correspondent.

TORONTO, May 25th, 1881.—During the last two weeks shipments of lumber from this port has been exceedingly meagre compared with what might have been done could cars have been secured to convey the lumber awaiting shipment at the different points on the Northern, North Simcoe and Hamilton and North Western railways. The principal cause of the scarcity of lumber flats arises from the fact, that a large number of cars are being used in construction, preparatory to a change of gauge on the above roads, and after that has been completed there is no doubt but lumber will come forward more rapidly. There is no upward move in prices on lumber for shipment to record, but previous quotations remain firm, and freights seem to have now settled down at $1.25 per M to Oswego, and $2.00 per M for timber, although some charters have been effected at $1.20 per M.

The local market is fairly brisk, now that the question of wages has been settled, building has been vigorously resumed, and yard-men look forward to a busy summer, and as the mill-men are now demanding acceptances of sight drafts on account of their shipments, it may be fairly assumed that retailers will also have to curtail credits, and may thereby avoid making many of the bad debts so frequently made during past years, therefore the outlook on the whole for retail dealers are bright. There is also another reason why yard-men may look forward to a brisker trade. During the last five or six years wholesale men hurt the yard trade by bringing down cars of lumber ahead of orders, and then when the cars arrived, drummed the city for purchasers, knowing that demurrage for detention of cars would not be enforced, so that virtually the R.R. yards were made retail yards of to the loss of those who were paying rents, taxes, and insurance on yard property. This will now become a thing of the past. Unload quick has become the order of the day, and retailers who have borne the heat and burden of the last few years of hard times, will naturally rejoice somewhat at this additional feather in their hats.

Prices at the yards rule as follows :—

Scantling and joist, up to 16 ft	$11 00
" " " 18 ft	11 50
" " " 20 ft	12 00
" " " 22 to 24 ft	13 00
" " " 26 ft	14 00
" " " 28 ft	15 00
" " " 30 ft	17 00
Mill cull boards	$ 8 00@ 9 00
Shpping cull boards	10 00@11 00
" stocks firm at	$11 00
Dressing stocks	14 00
Dressed sheathing and flooring, 1-inch	20 00
" " " 1¼-inch	24 00
Dressed shelving	17 00
XXX sawn shingles, ₱ M	2 50
Lath	1 60

Car load prices rule $1.50 per M below retailers rates on rail here, and shingles firm at $2.25, and lath $1.30.

Boston.

The general features of the market remain substantially as last week, with a good demand and prices very firm. Local yards are continuing the increased call which was noted last week, and dealers report a number of larger orders at the same time. Both eastern and western pine are selling well. Hardwoods remain very scarce and hard to buy except at full rates. The amount of building going on is very large, and a lively call is anticipated during the month of June. Prices generally remain as before quoted.—*Boston Journal of Commerce.*

Chicago.

CHICAGO, May 18, 1881.—The cargo market is not so strong as it has been. Piece stuff has weakened noticeably since our last report, standard cargoes being sold to-day as low as $9.50 and $9.75, and inferior ones at $9.25. Yesterday a load of Manistee stuff was placed at $10, but this figure, so far as we can ascertain, was not reached in to-day's transactions. Medium mill run is also slightly weaker, though the range given covers the market. Common inch has not fallen off materially. Standard shingles have not been sold above $2.40 for some days, and that figure is now put down as the ruling price. Extra A shingles bring $2.50 and $2.60. It will be observed that there has been a slight decline in these, which is no doubt due to the determination of the buyers that they would not attempt to handle any considerable quantity of them at the figures first made. It is a question whether they will buy much more freely now, though sellers hope to get along without further concessions. Lath are steady at $1.75, none having been sold at any higher prices.

The stock of lumber for sale during the week was the largest that has been offered this season. Sunday and Monday a large fleet came in, and at the close of business to-day there was still some of it at the dock unsold. There are plenty of buyers around, or to put it a trifle more accurately, perhaps, plenty of people who would be buyers if they could get the sellers to come to their terms. The lumber arriving for sale has certainly not moved with as much celerity as would be desirable from the manulacturers' point of view, though the transactions seem to cover the larger part of each day's supply. Good inch lumber is said to be in demand, and the strongest thing on the market. Consignments of anything ranging from number one Muskegon stock upwards can be placed, it is said, without difficulty, and at about asking prices. One operator on the market reports a sale of 6,000,000 feet of lumber from number one logs at figures netting him fully $1 more than the same kind of lumber brought last year.

Indications of the course of the market for the next wesk or two are not very plenty. The bear element is hopeful because of what it has already done, and the bull side is cheered up by the reflection that its enemies have not accomplished as much as they expected to. Between the two it is hard to decide which has most reason to hope or fear. One commission man in speaking of the outlook expressed the belief that they would not be able to sustain present prices without some improvement in the demand; that is, of course, if the lumber continues coming in as rapidly as it has in the last few days. The *Lumberman* does not pretend to be able to predict the result, and it believes that is something no one can do now. What piece stuff and boards will sell for later on in the season, is emphatically one of the problems of the future.

While lumber is weakening, the prices exacted by the vessel men for bringing it from the points of manufacture are getting firmer, and even advancing somewhat. The rate from Manistee is reported at $2.25; from Ludington, $2; White Lake, $1.87½; Muskegon, $1.75; Grand Haven and Spring Lake, $1.75; Menominee and Cedar river, $2.25, and Oconto $2.50. Cedar post charters range from eight to nine cents for Green Bay and west shore ports, the posts to be delivered on the rail. These figures show a considerable advance over the prices ruling at the opening of navigation, and go to show that vessel owners, for whom the season must necessarily be a short one, propose to make it as profitable as they can.

Receipts and shipments of lumber and shingles for the week ending May 17 :—

1880	221,194,000	119,627,000	194,569,000	33,773,000

On the whole, orders are not coming in quite as freely as they did two weeks ago. Every man in the country who has bought is clamoring for the delivery of his purchase, many of them, seemingly, not understanding that an unsurmountable barrier has stood in the way. The slight falling off in orders in some directions is due, no doubt, to the fact that most of the lumber that is bought now is wanted for immediate use, and, it being known that prompt shipments could not be made from this market, purchases have been made at points where no railway difficulties have existed.

We learn of one cut list that has been sent out, but most of the dealers profess to believe that lumber is worth what the members of the Exchange say it should be sold for, and make no concessions. The lumbermen, it will be remembered, hold another meeting on Saturday, and probably they will decide then whether the list as it now stands can be maintained.

Sash, door and blind manufacturers report free orders from all points in the country within their reach, which is the best possible indication that building is general.—*Northwestern Lumberman.*

Albany.

The receipts of pine lumber, wintered over on the canal, and of new have been moderate; they have been turned in on sales made ahead, thus leaving the market temporarily bare, and as a consequence quiet. Prices are steadily maintained with a good demand, principally from New York, Long Island and New Jersey, and is largely for uppers—for which, also, there is some local speculative demand—on a market which for that grade is certainly the cheapest of any point. The Saginaw and Chicago markets are notably held very high on the upper grades with perfect confidence on the part of the trade that present prices will be maintained. The new cut at Saginaw continues to be sold largely ahead and at full prices, especially on upper grades.

From Canada, the advices are firm and active markets; logs are arriving freely, and there is not any further apprehension of shortage on that account.

Hard woods are in continued good demand and unchanged in price.

Canada lumber is arriving freely by canal, and has been largely absorbed by sales made some time ahead; new orders continue to come forward and there appears to be no let up to the demand, notwithstanding the deliveries from the Champlain are far ahead of those of any previous season; of course no accumulation of stock is looked for; prices are firmly held.

The exports of lumber from New York are very free; those for April were among the largest ever known, reaching nearly 10,000,000 feet; for the first four months the exports were 26,178,000 feet against 24,093,000 feet for the corresponding four months of 1880.

The receipts by canal at tide-water from the opening of navigation in 1881 (May 17th) and the opening in 1880 (April 20th) were :—

	Boards and Scantling, ft.	*Shingles, M.*	*Timber, cub. ft.*	*Staves, lb.*
1881	21,871,000	99	12,900	358,200
1880	65,951,900	312	38,000	2,824,000

Lake Ontario freights to Oswego, $1.00 from Port Hope; $1.25 from Toronto; from Oswego to Albany, $1.70.—*Albany Argus.*

If you suffer from any chronic disease arising from Impure Blood, Sluggish Liver, disordered Kidneys or inactivity of the Bowels; if your Nervous System is deliberated from whatever cause arising, do not despair, but procure a trial bottle of Burdock Blood Bitters; it will only cost 10 cents. Large Bottles $1,00. For sale by all medicine dealers.

Burlington, Vt.

Prices are firm at quotations. Assortments are quite broken, but will soon be replenished as the canal is now open. The first tow of the season arrived May 9th. The projected work throughout New England is reported to be very large, and we anticipate a good summer and fall trade. So far we cannot report as heavy a trade this season as last, for the corresponding time. Our planing-mills, box and door manufactories are having a large trade, some of the box shops running 12 hours per day. The Whitehall canal opened, May 12th.

clear	3 25
Lath, pine, per 1,000 pieces	1 70@ 1 80

Oswego, N.Y.

No change in quotations. The demand is good, but the assortment is poor. All the good lumber is out of market. Buyers have difficulty in getting the various kinds needed, and country dealers have run stocks down low. The volume of business is much larger than last year. Dealers are paying up well, many of them taking the advantage of allowance for cash who heretofore have taken the full time allowed. The general feeling among dealers is that prices for the present will be maintained. All the old cut is now in second hands. The yards are rapidly filling up, and shipments to tide water are brisk. Canal freights are firm at at $2.65 to New York. Lake freights, $5 from Saginaw and Cheboygan.

Quotations are as follows :—

Three uppers	$42 00@45 00
Pickings	32 00@35 00

Buffalo.

If lake freights should decline materially we think lumber will go lower, but not to remain very long. Trade is not quite as active as it was a few weeks ago, which is accounted for by the fact that the farmers are very busy getting in their spring crops. A busy season is however looked for.

We quote cargo lots :

Uppers	$35 00@40 00
Common	16 00@19 00
Culls	11 00@12 00
Dressing stocks	18 00@20 00
Dressing sidings,	17 00@19 00

Yellow Oil is *par excellence* the remedy for Pain, Lameness, Rheumatism, Croup, Deafness, Burns, Frost Bites, Stiff Joints, and all flesh wounds. Any medicine dealer can furhish it.

Saginaw Valley.

The *Lumberman's Gazette* says the market continues active and sales of good round lots at market rates are of daily occurrance. Confidence in the maintenance of present prices is unshaken, no reason appearing why there should be a decline. The supply of the finer qualities of lumber is limited and sales of coarser stock are more frequent. Among the sales reported are 1,500,000 at $7.50, $14 and $35, 1,200,000 feet coarse at $6.50, $13 and $32; 2,000,000 feet good stock at $7, $14 and $33; 1,000,000 feet at $8 straight; 700,000 feet at same figure; 500,000 feet at $7.25, $14.50 and $35; 2,000,000 feet coarse at $6.50, $13 and $30; 500,000 feet at $7.50, $15 and $35; 1,230,000 feet coarse at $9 straight. Several other sales at about the same range of prices have been reported, but these are sufficient to show the range of prices.

The slight change in prices at Chicago will have no effect on this market. The eastern and Ohio demand keeps this market steady.

Shingles are in good demand and the supply is not large. Sales have been made at $1.95@2.10 for clear butts and $2.95@3.10 for XXX. Some dealers give quotations at $1.95@2.15 for clear butts and $2.95@3.15 for XXX, but we hear of no sales at the outside figures.

Lake freights remain the same as previously quoted, namely $2.50@2.75 to Chicago and Ohio ports; $3.00@3.25 to Buffalo and Tonawando, the outside figures from Saginaw, inside from Bay City.

The shipments the past week have been over 20,000,000 feet of lumber, 6,000,000 shingles, 1,473,000 hoops, 229,400 staves and 500,000 lath. The shipments are over 100,000,000 feet behind last season.

General quotations here are:—

Shipping culls	$ 6 50@ 8 00
Common	13 00@18 00
Three uppers	32 00@38 00

Tonawanda.

The season is now fairly opened, the harbor being dotted with daily arrivals of incoming western craft, lumber laden. The arrivals of pine for the week have footed up: From Bay City, 3,976,000 feet; from East Saginaw, 700,000 feet; from Au Sable, 470,000 feet; total, pine, 5,146,000 feet; oak, 151,000 feet; shingles, 1,500,000. Lake freights have been $3, as reported last week in anticipation. Several have expressed their determination to hold off a little, being sanguine of a decline, expecting to pay $2.50, or thereabouts. The ice is now all out of the lake and river, and there are no obstructions to navigation. Wind and weather have been very favorable up to date.

Dealers report sales as only moderately brisk, corresponding in this respect with reports from all quarters, on account of spring work in all other departments, somewhat diverting the attention of consumers. Jobbers are waiting for the stocking up of Tonawanda yards, which is now preeminently in order, after a long winter's siege upon the piles. Another week will place the yards in much better shape to fill orders than they have been during the past two months. Prices still rule firm, and we hear of little if any dropping. The manufacturers having held firm, there seems to be no alternative for dealers to do otherwise than follow suit or lose. Present indications would seem to settle the outlook for the spring trade here, viz.: that prices will vary but little indeed.

We quote railroad freights as follows:—

Tonawanda to Boston or New England points, per ton	$3 50
New York and Hudson river points	3 00
Jersey City, Newark, etc	3 00
Philadelphia, Baltimore, Wilmington, etc	3 00

THE Montreal *Gazette* quotes deals to Liverpool at 60 shillings, and lumber to South America at $13@15 per 1,000.

Liverpool.

On Friday, April 29th, Messrs. Farnworth & Jardine offered by auction one cargo of St. John, N.B., spruce deals, about 20,000 Quebec pine deals, about 4,000 pieces of St. John, N.B., and Richibucto pine deals, with spruce boards, &c.

The attendance was limited to the local dealers, the country buyers, who usually form a good proportion, being conspicuous by their absence, and the competition for the spruce was of the most languid kind.

The autioneer went through the catalogue twice, but £6 15s. being the highest bid for any lot, the entire cargo of spruce was withdrawn. A parcel of 2-in. Quebec pine deals, 1st quality, was likewise withdrawn, £15 15s. being the highest offer, but at that price two lots of 2nd quality, 3 in. wide, 9 to 12 ft. long, found buyers. For 3rd quality there was more competition, and one consignment sold readily.

	Per standard. £ s. d.	£ s. d.
16 ft. 3×11	9 17 6	
13 " 3×11	6 11 6	
12 " 3×11	9 7 6	to 9 10 0
9 to 12 " 3×7 to 10	8 10 0	
13 " 16 " 3×12 " 22	10 2 6	

The St. John, N.B., pine deals were withdrawn, only £6 12s. 6d. being offered for them, and £6 2s. 6d. for the spruce boards, which also were taken in again.

A cargo of Halifax spruce deals, just arrived, sold at an average of £6 15s., and 800 to 900 logs of birch from same vessel at an average of 13¾d.

Glasgow.

On the 3rd of May, Messrs. Allison, Cousland & Hamilton, brokers:—

Halifax, N.S., birch timber, 500 logs, 14 to 15 in. average, sold at 1s. 2d. to 1s. 3¼d. per cub. ft., string measure—

Halifax, N.S., spruce deals—

15 to 23 ft. 15 to 19×3	1s.	per. c. ft.

THE TRENTON FIRE.

TRENTON, May 19.—Gilmour's mill, which was burned yesterday, was built in 1852, and has consequently stood for 29 years and during that time not a single conflagration of any magnitude occurred until yesterday. At one time no one had the slightest hope that any part of the mill could be saved, as the woodwork beneath the tin roof was all in a blaze, and the fire was raging among the machinery on the second floor, but the large force of men present, and several gentlemen from West Trenton, including the Mayor and firemen, determined to get control of the fiery element and worked with unflagging energy, some of them standing on the second floor in the very midst of the fire, doing their best to subdue it with buckets and hose.

On account of the tin roof no sparks flew, and consequently no damage was done to the lumber piles, although some of them were with. in 60 feet of the mill.

After the fire it was ascertained that not nearly as much damage was done as was at first anticipated, and it is now thought that the loss will be covered by the insurance, $75,000. All the boilers are intact, and only one of the engines damaged slightly by the roof falling in on it.

Mr. Gilmour left town yesterday for Quebec, it is said to confer with the other members of the firm with regard to the immediate rebuilding of the mill. In the meantime the new mill will be run night and day and employment will be given to a large number of hands preparing to rebuild.

The circulation of the CANADA LUMBERMAN is over 2,000 copies. Advertisers should note this]

Saw Mills, Grist Mills and Shingle Mills
DOUBLE EDGERS, LUMBER TRIMMERS.

THE MIXTER SAW GUMMER IS KING.

MORE GUMMERS and SWAGES sold the past year than ever before. The great and constantly increasing demand for the "MIXTER GUMMER" settles the question of its efficiency and superiority over **all other Gummers in Market.**

The following is a fair sample of the many flattering testimonials which are constantly pouring in upon us:—

WEST TROY, N. Y.

DEAR SIRS—Your Patent, Automatic, Self-Feeding Saw Gummer is a perfect success.
Yours, &c., E. MORS & CO., Lumber & Timber Dealers.

WATSON, EFFINGHAM Co., Illinois.

GENTS—I am using one of your Patent Automatic Self-Feeding Saw Gummers at each of my three mills, and I would not take one hundred dollars for it if I could not get another like it.
Yours truly, WM. ANDERSON.

CORINTH, Miss.

GENTLEMEN—The Patent Automatic Self-Feeding Saw Gummer we bought of you just fills the *bill exactly.* We gummed a sixty-inch saw with sixty teeth, cutting on an average of three-fourths inch deep to each tooth, with one cutter without sharpening it.
Respectfully yours, WHEELER & WILLIS.

THE CUTTER OR BURR referred to in the above, (⅜ in.) cost **90 CENTS**, it takes one-half minute to each tooth, and the saw is gummed without removing it from the mandrel. ALL SAWY ERS know this is a great advantage, besides a saving in time.

We challenge **ANY** saw tool manufacturer in the United States to produce such an array of unsolicited testimonials as we have received for our GUMMER AND SWAGE.

Of course we have not room here for an extended list.

Our goods are now so well established throughout the country, that information can be easily obtained as to their practical working from any of the **Several Thousand** Sawyers who have them in use.

In short the MIXTER GUMMER is pronounced by *all* to be the "**BOSS GUMMER.**"

Wrought Iron Shanty Cook Stoves

The Best Article ever offered to the Trade.

I have much pleasure in drawing attention to my **WROUGHT IRON COOKING STOVE, for Shanty, Hotel and Boarding House use.** These Stoves are made of **Heavy Sheet Iron,** the top and lining of the fire-box being of **Heauy Cast Metal** and all the connecting parts of substantial **Wrought Iron Work.** The dimensions of these Stoves are as follows:—

SINGLE OVEN STOVE

Top surface contains six 10-inch holes, with ample room between, and one oven 16 x 24 x 26.

DOUBLE OVEN STOVE

The Double Oven has a top surface containing twelve 10-inch pot holes, with two ovens, each 16 x 24 x 26. One fire-box of suitable size for area to be heated. Below will be found Testimonials from some of the leading Lumbermen, who have used my Wrought Iron Cook Stoves since I ommenced manufacturing them. They are the names of gentlemen who are well known and eliable, and will carry more weight than any recommendation of my own could do.

The Best Stove I have ever Used.

PETERBOROUGH, May 31, 1880.

ADAM HALL, Esq., Peterborough. Dear Sir,—I have used your Wrought Iron Cooking Stove in our lumbering operations since its introduction here, and have no hesitation in saying that I prefer it to any other. For durability, economy and efficiency, where a large number of men are employed, it is the best stove I have ever used. You can, with confidence, offer it to hotels, boarding houses and lumbermen.
Yours truly, THOS. GEO. HAZLITT.

The Stove for Lumbermen.

PETERBOROUGH, June 1st, 1880.

ADAM HALL, Esq., Peterborough. My Dear Sir,—We have used your Wrought Iron Cooking Stove and find it is very satisfactory for lumber operations, especially so on drives. We can recommend it highly.
Yours truly, IRWIN & BOYD,

Gives the Greatest Satisfaction.

PETERBOROUGH, June 3rd, 1880.

A. HALL, Peterborough. Dear Sir,—I have had the Wrought Iron Cook Stove, purchased from you, in constant use ever since last fall, and it gives the greatest satisfaction in every respect. I can recommend them highly to any one who is in the lumber business. Very truly yours, GEO. HILLIARD, M.P.

M. Covel's Latest Improved Automatic Saw Sharpener!

Is the Most Perfect Machine that has ever been Introduced into Mills for that purpose.

CIRCULAR SAW STEAM FEED!

I would also call special attention to my

Heavy Circular Saw Mills

and for STEAM MILLS, would recommend the Steam Feed, having put in several which are giving the best of satisfaction, as will be seen by the following testimonials:—

GRAVENHURST, August 20th, 1880.

WM. HAMILTON, ESQ., Peterborough.

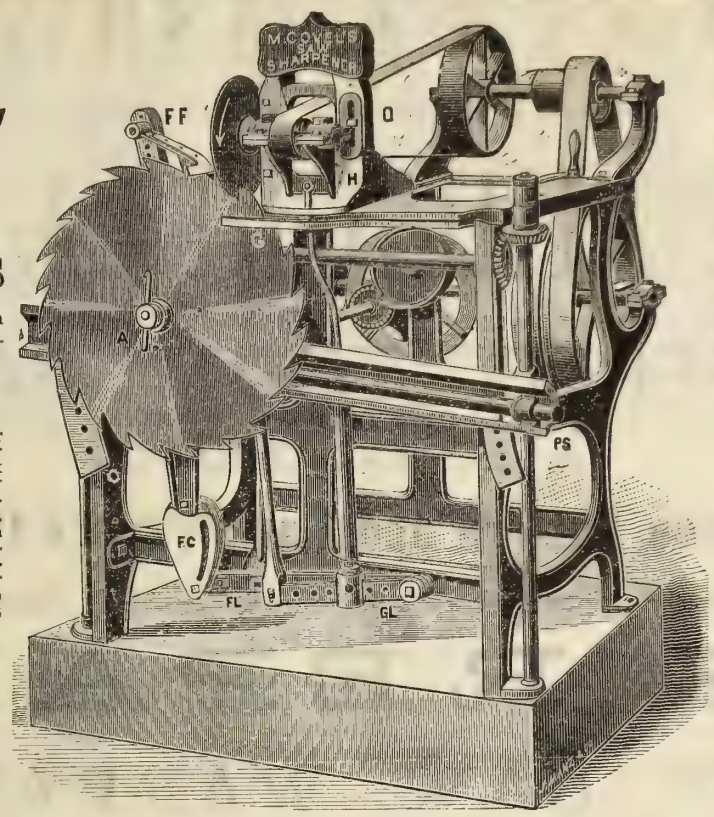
DEAR SIR—I have used your Steam Feed for near four months, and it has given me perfect satisfaction in every way; it is admitted by every person who has seen it work to be the best feed ever invented. Since I put it into my mill, I have not lost ten minutes time fixing anything belonging to it. I can cut 18 boards 13 ft. long in one minute. It can do much smoother and better work than the pinion feed. It is easily governed and reverses the carriages instantly. I am thoroughly satisfied with it and can recommend it to any person who has a Circular Saw Mill for cutting long or short logs. I consider I have cut more lumber than will pay for the Steam Feed since I got it than I would have cut had I not put it in.

Yours respectfully,
WILLIAM TAIT,
Lumberman, Gravenhurst.

TORONTO, August 11th, 1880.

WM. HAMILTON, Peterborough, Ont.

DEAR SIR—The Steam Feed you put in is working splendidly. Yours, &c.,
THOMPSON, SMITH & SON.

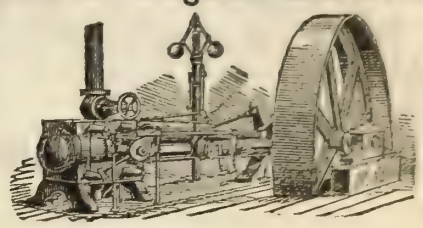


MILL MACHINERY!

I am also manufacturing Saw Mill Machinery, for all sizes of Gang or Circular Mills, Span or Double Circulars for Slabbing Small Logs. My Patent Jack Chain for drawing logs into Saw Mills, acknowledged by all to be the Cheapest and best ever got up; also, my Patent Lumber Markers, different sizes of Edgers, Gang Lath Mills, Trimmers, Power Gummers, and all Machinery used in a first class Gang or Circular Saw Mill; also, small Handgummers for use in the woods, for Cross-cut Saws. Rotary Pumps of different sizes, for Fire Protection in Mills, &c.

Horizontal Engines and Boilers

CORLISS



ENGINES

Where economy of fuel is the great consideration, along with uniformity of speed, such as is required in Grist and Flouring Mills, Woollen and Cotton Factories, or large Factories of any kind, I supply the Corliss Engine. I feel justified in saying that our Style, Workmanship and Finish on this Engine will be no discredit to its renown, and certainly is not equalled in this country for economy of fuel. I have them working at 2½ pounds of coal per horse-power per hour. L10

EMERY WHEELS FOR SAW GUMMING!

Solid Emery Wheels are now almost in universal use for the purpose of gulletting and gumming saws. Statistics show from 25,000 to 30,000 saw-mills in the United States. Many of these run only a single saw each. A one-saw mill would use one or two wheels a year, costing $3 to $4 each, and when such small mills order single Emery Wheels from the factory, the express charges often equal the cost of the wheel. There was a time when the quality of Emery Wheels was so uncertain, and the demand so fickle, that storekeepers could not afford to carry them in stock. Now, however, Saw Gumming Wheels have become as staple an article as Files, and every dealer in saws, Hardware and Mill Supplies can afford to carry a few dozen standard sizes in stock. Large dealers order stocks of $500 to $750 worth at a time. Saw Gumming Wheels are used with the edge (or face) square, round, or beveled. Probably seven-eighths of all in use are beveled.

The principal sizes are:

8x¼, 8x⅜, 8x½ } ⅝ in. hole. 10x¼, 10x⅜, 10x½, 10x⅝ } ⅝ in. hole. 12x¼, 12x⅜, 12x½, 12x⅝, 12x¾, 12x½ } Holes, ⅝, ⅞ and 1 inch.

Probably more wheels 12x⅜, 12x½ and 12x¼ are used than all the other sizes together. Saw Gumming Wheels are used, however, of all sizes up to 24x1½. The most frequent complaint is that Emery Wheels harden the saw so that a file won't touch it. The answer is that you don't want a file to touch it. An expert workman will shape and sharpen the teeth with an Emery Wheel, leaving the teeth *case hardened*, in which condition the saw will cut about 33⅓ per cent. more lumber than a soft saw will. Those who want to use the file, however, have only to touch the saw *lightly* a second time (after going all over it once), and this second touch will cut through the case-hardened scale.

A QUESTION OF QUALITY.

Thirteen years of experience as makers of, dealers in, and actual users of Emery Wheels, have led us to a decided opinion as to what quality is the best. We prefer for almost every use an "Extra Soft" wheel like the "Pocono." We believe that money lost through the rapid wear of the wheel is more than made up by the money saved on wages. As we cannot get every one to adopt our views, we make several qualities, so as to meet their views. We say to those who think they can only be satisfied with some other make of wheels (not Tanite), that we can furnish qualities *to match* any and every other make. If you have got used to some special quality of wheel, let us know what it is, and we can send you *a Tanite Wheel of similar quality*. Our *regular* classification of Saw Gumming Wheels is as follows:

CLASS 2. MEDIUM—HARD.—This Wheel is THE STANDARD Saw Gumming Wheel all over the world. Probably seven-eighths of all the Saw Gumming Wheels used are "Class 2." It cuts fast and keeps its shape well. Some think it too hard, some too soft. We prefer the "Pocono."

CLASS 3. MEDIUM—SOFT.—The same as to coarseness and fineness as "Class 2," but a *softer*, and therefor freer cutting wheel.

CLASS "POCONO." EXTRA SOFT.—This Wheel we prefer to all others. It is both *finer* in grain and softer than either of the above. As a Saw Gumming Wheel, Class "Pocono" is specially suited to those practical and experienced Sawyers who know how to grind with a light touch, and who want a free cutting wheel that will not create much heat.

Illustrated Circulars and Catalogue, showing Cuts of Saw Gumming Machines, and Shapes, Sizes and Prices of Wheels, sent free on application.

FORESTRY AND ABORICULTURE.

BEING THE FOURTH CHAPTER OF THE REPORT OF THE ONTARIO AGRICULTURAL COMMISSION.

Planting Waste Lands.

For planting on waste lands, either inaccessible to cultivation or of a soil too poor to repay cultivation, the European larch has already been mentioned. Mr. Leslie, referring to this tree, says :—

"It is suited to our climate, being perfectly hardy, and very easy to transplant in the spring. It requires early transplanting, though later in the season it will thrive if transplanted, provided the roots are kept moist. As a rule, however, it should be planted as soon as the frost is out of the ground, or as late in the fall as possible before the permanent freezing of the ground. It can be imported at about the same price as the Norway spruce.

"I would not recommend planting them after they attain a height of more than eighteen inches or two feet ; they are a little impatient of being moved after that time. There is not a large supply of them kept in this country ; we keep a fair supply ourselves. If very large quantities were required, as for instance, if railway companies should go into their cultivation, they would have to be imported to meet the demand.

"The firm of Douglas & Co., Waukeegon, in the States, grow them by the million. The prices in the old country, however, are less than those in the States, and in either case there is a duty on the trees when imported here."

For belts, Mr. Leslie would plant European larches three or four deep.

"Hitherto," he says, "the tree has been used more for shelter than anything else. I have no doubt of its success under good management. In our own place we have some trees thirty feet in height."

Cost of Tree Planting.

With regard to the cost of trees purchased from the nurserymen, Mr. Beadle says :—

"As to the cost per acre of such forest planting, young black walnut trees can be bought of the nurserymen who have been growing them, at about $12.50 or $12 per hundred for trees about four feet high. Chestnuts can be bought at about the same figure. I know of no plantations where the hard maple, could be bought at any figure. Nurserymen have confined themselves mostly to the horse chestnut and mountain ash for tree planting."

Mr. Leslie says :—

"The American elm, the Scottish elm, and the English ash are also very desirable. Those that I have named I regard as the very choicest. In large numbers I imagine these trees could be got for about twenty-five cents apiece when about eight feet in height, which I regard as the proper size for planting. They would be trees raised in this country, but they would have to be nursery grown, or transplanted from the woods."

Of the cost of Norway spruce Mr. Beadle says :—

"It is grown by nurserymen both in Europe and America by millions. They can be bought from one to two feet high for $10 to $15 a hundred, and if taken younger can be bought for still less."

Mr. Leslie, on the same point, says :—

"We sell these imported trees at from $30 to $40 a thousand—three or four cents apiece—that is to say the 15-inch ones. The 18-inch ones would be transplanted two years in this country and cannot be sold for less than $60 a thousand. If large numbers were taken they could be sold at a much cheaper rate, say 25 per cent. off. If we could depend upon getting them every year in the same condition, they could be sold cheaper still, but we have to take an average."

The difference in age and size is, of course, an important factor in calculating the cost. Dr. James Brown in his evidence says, with regard to the cost of imported trees :—

"I have been just now at Leslie's nurseries, and find there that such plants as the Scotch pine and other sorts of pine would cost about five cents each. To plant an acre at that rate would cost $50 for plants alone, independent of planting them. This rate is reckoned when planting the trees six feet apart. I think I would advise planting them as close as that. I don't think there is any reason why the price could not be greatly reduced by having extensive nurseries, in fact there is no doubt about it.

"Mr. Leslie said that if he had extensive orders for them he could afford to sell them cheaper, but at present he has no encouragement to do so. In the matter of reclothing the country with forest trees, the first thing essential is to establish large nurseries for the purpose of raising young trees. I think that trees suitable for replanting could be raised so as to sell on an average for $8 a thousand.

"You can get the same plants in Scotland for a third of that. The difference between the price here and there would be owing to the difficulty of rearing them here on account of the severity of the winter. In Scotland they require no protection, but they would require to be protected here while they were young."

In reference to the question of cost, Mr. Leslie in his own evidence repeated the remark he had made to Dr. James Brown. There can be no doubt that trees can in large numbers be grown at a very small cost indeed, but, so far, in Canada, between the very limited amount of planting that has been going on and the accessibility of woodlands affording a cheap supply of trees of some sort or condition, the nursery demand has been comparatively insignificant, and no sufficient encouragement has been given to induce nurserymen to raise forest trees in great numbers. As to the actual cost of planting a given area Mr. Leslie says :—

"The trees would cost about 5 cents each, say 6 cents with the planting. In other words, the north and west sides of the field could be protected at a cost of very little over $6 an acre, or say $7.50 with the planting."

In his evidence on general farming and other subjects, Professor Brown, of Guelph, gave the following as his estimate of the cost of planting out forest trees, and his opinion as to the mode of planting. He said :—

"Upon the subject of forestry, I will show you what it costs per acre to put down young trees taken from your own or a neighbor's bush, a method of replanting which can be adopted at the least possible expense, and I think with the greatest possible success.

"In selecting trees for replanting, it is best to keep on the small side. It is a great mistake to go into six or eight feet trees if you want rapid success. Two or three feet trees will ultimately do much better. I think it is an important point gained if we can show the Canadian farmer how he can be his own nurseryman and do his own replanting.

"There are thousands of young trees in every farmers' neighborhood which need cost him nothing but the expense of collecting them. If he has to pay ten cents to a nurseryman for every tree he plants, he will do very little in that way.

"I have been in the habit of planting one and a half million of trees a year and they did not cost more than ten shillings and sixpence a thousand, and if our Government or private parties took the nursery management of such trees, I think they could be produced in Ontario at less than eight dollars a thousand.

"I have started an experiment upon this subject upon the Model Farm at Guelph, and I have found the cost to be as follows per acre :—

Clearing and preparing the ground	$ 9 44
Digging pits	8 88
Fencing	4 75
Planting	11 50
Pruning	0 75
Mulching	2 25
Taking trees from the forest	18 50
Heeling	0 50
Total cost	$56 57

"If the farmer does not estimate the value of his own labour, and of the labour of his horses, you may reduce that about one-half.

"I do not believe in manuring forest trees—I have never seen any good effect from it, and I am expressing not only my own experience, but the experience of others dating fifty years back.

"We have had evidence of great weight that trees should not be planted less than six or eight feet apart, and that gives about 900 trees to the acre. We planted that number this season, and there are now 715 alive and doing well, showing an actual death-rate of one-fifth. The deaths, however, occurred principally among the pine and spruce, apart from these, the deaths were comparatively few.

"In planting strips of wood for the protection of crops, I cannot recommend anything but standard trees."

Effects of Forests on Moisture.

The effects of forests on rain and snow fall is a subject that has attracted much attention in some European countries, and is admitted to be one that is being practically illustrated in our own experience, although, up to the present time, no such system of experiments or inquiries have been adopted as to identify, with scientific accuracy, the relations of the clearing of the land to be diminished moisture. Still, everybody mentally attributes the latter result to the former cause. Something more may be said in regard to this matter when the evidence on meteorology in relation to agriculture is under review. Meantime, the following extracts from the report of Dr. Hough, already referred to, will describe, in a few words, the part played by forest trees in relation to this branch of nature's economy :—

"It is a matter of common remark that our streams diminish as the woodlands are cleared away, so as to materially injure the manufacturing interests depending upon hydraulic power, and to require new sources of supply for our State canals, and for the use of cities and large towns. Many streams once navigable are now entirely worthless for this use. The mode in which this influence operates will be readily understood when we consider the effects of forests upon the humidity and temperature of the air.

"A deciduous tree, during the season when in foliage, is constantly drawing from the earth, and giving off from its leaves a considerable amount of moisture, and in some cases this amount is very great. This change of state from a fluid to a gaseous condition, is a cooling process, and the air near the surface, being secured from the sun and from the winds, becomes, by this means, so humid that a rank, succulent vegetation often springs up and thrives, which in an open field would wither and perish in an hour. The air being thus charged with moisture and cooled, does not take up by evaporation the rains which fall, and the soil, being more open, readily allows the water from melting snows and from showers to sink into the earth, from whence a portion appears in springs and in swamps, which give rise to rills and streams.

"The air at all times holds more or less watery vapour in suspension, and its capacity for doing so is increased as the temperature is raised, not by a steadily gaining rate, but more rapidly as the heat is increased. There can be no evaporation when the air is saturated with

moisture, and no deposit of water in any form until the temperature is reduced to the point of saturation. It is not yet determined as to how far the cooling and moistening influence of a grove may extend. It must depend upon many circumstances, and especially upon the slope of the surface and the direction of the winds. The effect is often apparent to the eye from the freshness of the herbage in adjacent fields for many rods in width."

"The effect of woodlands in retaining snows where they fall, and in delaying their melting in the spring, has been everywhere observed in snowy countries. In such localities the snow cannot be drifted by the winds and when it melts it disappears slowly, sinking into the soil rather than flowing off upon the surface. The effect of this delay in checking a too-early appearance of fruit blossoms, cannot be mistaken. The result is in fact similar to that of considerable areas of water, such as our northern lakes, along the borders of which, and especially on the lee-side, fruits are found to flourish with the greatest success. In a country interspersed with clumps and belts of woodlands, the snows drift less and their melting more evenly over the surface cannot fail to be beneficial to the interests of agriculture, and more especially to meadows and pastures."

Concluding Remarks on Forestry.

The Commissioners during the progress of their investigations under this head, have been profoundly impressed, not less with the importance than with the magnitude of the subject. In fact, had the whole time devoted by them to the discharge of their varied duties been occupied in inquiring into the question of forestry in its many aspects, it might have been well spent. They feel that the evidence they have taken rather suggests further examination into, than exhausts the whole subject.

The arrangements and laws relating to forestry in Europe, as well as the progress of tree planting in the United States, in which direction an active movement has been going on for some years—would have been matters well worthy of close observation, and the Commissioners respectfully recommend that information thereupon should be obtained by such methods as may appear to the Government to be most convenient and effectual.

Possibly such information might assist in the solution of the question frequently raised in the course of this inquiry, By what means can tree planting by individuals or corporations be most successfully promoted?

Government assistance in the shape of money grants, exemptions of planted lands from municipal taxation, and the establishment by the Government of large forest tree nurseries have all in turn been suggested.

The Commissioners would be reluctant to advise the expenditure of any considerable sum of public money without having before them some scheme, the details of which had been carefully examined and worked out.

The subject is a new one to the minds of most of our people, and it is rather by the creation of public interest in the question, and a sense of personal responsibility with regard to it, that the ground work of any future plans must be laid.

Meantime the Commissioners are glad to be informed that the Fruit Growers' Association of Ontario, has included forestry and arboriculture in its programme of operations, and that the Government have given some encouragement to this step, while at the same time experimental tree planting has, under the auspices of the Association, been commenced at the Model Farm at Guelph. A few townships and urban municipalities have also offered inducements to the planting of streets and concession lines, All these are indications of a gradual awakening to a sense of the necessity of something effectual being done.

With the facilities that exist in all parts of Ontario, for obtaining a supply of materials close at hand, organizations in townships or school sections for planting a given number of trees, within a given period of time, and at the smallest possible cost, should not be difficult.

It has also been proposed that school-house lots, now usually presenting a most bare and uninviting appearance, might be planted with forest trees, and a small premium or reward be given to those schools, in a district, whose trees had been most successfully cultivated and best preserved for a given period.

It has further been suggested that interest might be excited, and information imparted, by lectures delivered by competent persons on forestry in connection, perhaps, with entomology and ornithology, so far as those topics affect the farmer and fruit grower.

Such lectures might be delivered in schoolhouses, under arrangements made by the county inspectors, the senior classes in the school, and the public generally, being invited to attend.

In treating of these subjects, however, pictoral illustrations would be indispensible, and a knowledge of the colours of leaves, insects, and birds would also have to be imparted. In order to accomplish this, and as the lectures would have to be delivered in the evening, the "magic lantern" might be brought into play, the novelty of such exhibitions assisting to ensure to the lecturer an audience.

The first cost of preparing transparencies would be considerable, but the other expenses of such a scheme need not be large, while the preparation for the work, of young men of ordinary ability and culture, would not be a difficult task, in view of the materials already at hand.

The objection raised to any proposal to add such studies to the already rather overcharged public school curriculum would be avoided, while parents, teachers, and children would, at one and the same time, be interested and instructed.

The Commissioners, in conclusion, may not travel beyond the bounds of their duty if they respectfully urge upon the Executive the propriety of steps being taken with regard to the preservation of the timber lands of the Province still in possession of the Crown, and not subject to the regulations affecting the pine timber forests.

Only by some action of this kind can waste and destruction be staid, and the stern necessity—which in other countrtes at this moment has to be faced—be avoided, of replacing, by slow methods and at enormous cost, what has been recklessly and unreflectingly destroyed.

A LUMBER OPERATOR'S DEFALCATION.

Charles Smith was operating during the past season for the firm of Guy, Bevan & Co., of St. John, for whom he had engaged men to stream-drive on the South-west Miramichi. These lumberers are even now oblivious of all that has happened, with regard to their prospect of receiving the slightest pittance for their whole spring work, and they are, perhaps, now toiling in the hope of getting wages which may never be paid, so that the money which was hard earned by them, in steady work for the whole spring, will, in all probability, be lavished away at the whim of a defaulter and absconder.

Smith had a contract with Guy, Bevan & Co. to get out logs by the thousand, and he drew upwards of $5,000 to pay driving wages. On Sunday last he left the city, his wife being very ill at the time, and drove to Woodstock, where he sold his horse and wagon to Mr. Glidden, and took the train for the West. Mrs. Smith died on Tuesday. Their son was at work on the drive, and on hearing of his mother's death, he went to Newcastle to get money to come home; but on finding his father had drawn it all, he was obliged to borrow enough from his fellow-workmen to come home with. Mrs. Smith was buried yesterday. Nobody suspected anything was wrong until after Mrs. Smith's death, when inquiries were made as to her husband's whereabouts, and the foregoing facts came to light.

A number of persons in this vicinity are losers by Smith. Among them is J. McCoy, of St. Mary's, to whom he owes $1,200 on a contract for logs. Mr. McCoy thinks he can hold the logs. Cameron & McCarthy lose about $400; S. D. Macpherson upwards of $100; J. McMurray $75, and others. Messrs. Balloch Brothers, of Florenceville, will lose considerable by him, as they had sent him a quantity of oats for sale, which he disposed of. Smith's son and daughter, who remain here, moved away all their furniture during last night.—*Fredericton Capital.*

WIRE ROPE FOR TRANSMITTING POWER.

BY HENRY EWING.

I suppose there is scarcely a manufacturing establishment in the country, where, at times, the ability to transmit or convey power to some isolated or distant building, would not only be of great convenience, but as well a source of profit to the owner. Under ordinary circumstances this is impossible, except by purchasing a small engine or water wheel, the expense of setting and operating which becomes a grevious tax. In such cases, wire rope becomes an invaluable aid, and as its capabilities and requirements are, really, but half understood, perhaps some of the readers of the *Lumber World* may find something in this communication interesting and of utility to them.

The distance to which power may be transmitted by wire rope ranges from fifty or sixty feet up to something more than two miles. It commences at the point where a belt becomes too long to be used profitably, and can thence be extended almost indefinitely. In point of economy, it costs only one-fifteenth of an equivalent amount of belting and the one-twenty-fifth of shafting. This method was first introduced, both in Europe and America, about the year 1850. The development it has received in this country is but trifling; in Europe, however, it has been immense, numbering at the present time over 2,000 permanent applications, and as many more of a temporary nature.

In many factories, long counter-shafting, with heavy bevel-gearing, can be saved by using a rope; the farther off the shaft we wish to drive, the better the arrangement will work.

When neighboring property cannot be bought, perhaps that across the street can—yet the trouble and expense of digging up the street to lay down a line of shafting is sufficient to deter one from the purchase. For such a case, a remedy is here presented. A little endless rope passing through a couple of slits in the window casing of an upper story, across to the story opposite, will do all the work, and none of the passers by will be any the wiser for it. A belt would require protection from the weather, but the rope does not, and can hang free in the air. From an engine in the basement, power can be readily conveyed to the upper storeys; it is necessary, however, that for a certain distance the rope should hang horizontally, in order to gain the required tension. The utility of this mode of transmission is so manifest, and the convenience afforded by it has been so strikingly exemplified in localities where hardly any other system would have been practicable, that it is justly attracting the attention of the manufacturing public more and more as its merits become known.

The range in the size of wire ropes is small, varying only from three-eighths inches to three-fourths inches diameter in a range of three to two hundred and fifty horse-power. The ropes are always kept on hand, and can be spliced endless at the factory; or else directions are given to splice them, whenever an endless rope cannot be put on direct. In regard to cost, they are the cheapest part of a transmission. For instance, a No. 22 rope, conveying, say twenty-five horse-power, costs nine cents per foot, whereas an equivalent belt costs about $1.40 per foot. Where a rope transmission has to be constantly at work, it is good policy to keep a spare rope on hand, ready spliced, so as to avoid delay. Their duration is from two and one-half to five years, according to speed. For the smaller powers it is advisable to take a size larger, for the sake of getting wear out of the rope; although it must be borne in mind that a larger rope is always stiffer than a small one, and therefore additional power is lost in bending it round the sheave. Small ropes are made with hemp core to increase their pliability.—*Lumber World.*

ZOPESA.—A healthy man never thinks of his stomach. The dyspeptic thinks of nothing else. Indigestion is a constant reminder. The wise man who finds himself suffering will spend a few cents for a bottle of *Zopesa*, from Brazil, the new and remarkable compound for clensing and toning the system, for assisting the Digestive apparatus and the Liver to properly perform their duties in assimilating food. Get a 10 cent sample of *Zopesa*, the new remedy, of your druggist. A few doses will surprise you.

Yellow Oil is *par excellence* the remedy for Pain, Lameness, Rheumatism, Croup, Deafness, Burns, Frost Bites, Stiff Joints, and all flesh wounds. Any medicine dealer can furhish it.

A WALL STREET A. B. C.

Never take the bull point in bear times, nor a bear point in bull times.

Buy on a heavy break and sell on a sharp advance.

Have margin enough to hold on to your "longs" or "shorts." Every dog has his day on the "street," and you will be sure to make money if your staying qualities are good.

During dull or bear times have nothing to do with clicked, unknown stocks, or those companies in which there is only a small number of shares, the merits of which are known only to a few; it is better to deal in securities for which there is always a market.

Confine your operations to two or three stocks of which you have made a study.

The most conservative way to speculate is to keep cash in hand and operate only three or four times a year, buying dividend-paying stocks outright when a break occurs, selling again when the market goes up. There are never less than two breaks in the course of a year, which occur usually in the spring and fall.

Remember that there is a rythmic motion in prices; whenever they go up very high they are sure to rebound, and *vice versa*.

A dull stock market is a weather breeder and generally brings on lower prices.

Sell on the rallies in a bear market and buy on the setbacks in a bull market. It is safer to be a bear over Saturday nights than a bull.

The accidents of the market are generally in favor of the bears.

In the long run it pays better to be a bull than a bear. We live in a prosperous era, in which money is cheapened and prices are advancing.

When any disaster occurs to any one property in a certain section, or representing a certain interest, it is safe to sell properties similarly situated. If there is a sudden drop in St. Paul, sell Northwest; if in Lacawanna, sell Delaware & Hudson.

For permanent investments or slight fluctuations, deal in bonds and securities of communities in which there are diversified industries, in preference to sections of the country where everything depends upon one interest. For instance, Central and Lake Shore will be steadier in price than the northwest and southwest stocks, which are high priced only when the agricultural classes are prosperous.

Depend upon your judgement rather than upon your special points, and do not believe anything you hear.

If you stand over the tape every day, you are pretty sure to lose your money. The commissions will eat you up.

If you have been unsuccessful in other business, Wall street is no place for you.

Pay little attention to the opinions of the newspapers; they are generally in the interest of big operators, not of the outside public.

All excited bull markets end in a break.

The close of a bear campaign is marked by a semi panic.

Look out for a reaction on the third day of a heavy break.

Finally, if you are wise and have any repectable calling, never buy what you can't pay for or sell what you have not got. In other words don't speculate.

It is reported at St. John that Chas. Smith, a well-known lumber operator who resided and operated on the Miramichi during last season for Messrs. J. & J. Stewart, has left the city. He is said to have drawn on Messrs. Stewart for upwards of $5,000 to pay drivers' wages, and the statement of many lumbermen is that they have not been paid. Mr. Smith is known to be largely indebted.

"Their Name is Legion"—the people who praise that matchless medicine, **Burdock Blood Bitters**. It acts at once upon the Secretions, the Bowels, the Liver, the Skin and the Kidneys. It purifies the Blood, dispels all foul humors, and strengthens the nervous and debilitated system. No known remedy can do more. Try it and be convinced.

A Cough is usually the effort of Nature to expel some morbid matter irritating the air passages of the lungs. It may, however, proceed from an inflamed or irritable condition of the throat, a slight rash or humor often being perceptible. Let the cause be what it may, the remedy should be Hagyard's Pectoral Balsam. A purely vegetable Balsamic throat and lung healer. For sale by all dealers in medicine, at 25 cents per bottle.

JOHN THOMPSON, OF LONGFORD.

We are indebted to the Orillia *Times* for the following notice of the late John Thomson, Esq., of Longford Mills, which we are sure will be read with more than a passing interest by the readers of THE CANADA LUMBERBAN, and especially by those of them, and they are not few, to whom Mr. Thomson was personally known. Short as the career of THE CANADA LUMBERMAN has been, the present publishers feel that by his death they have lost a good friend—one who showed his sympathy with our undertaking not by words, but by putting his hand in his pocket and sending us a year's subscription for half a dozen copies to be distributed amongst his employes.

No event in the history of Orillia has created a feeling of such intense gloom, of such universal and spontaneous regret as the death of Mr. Thompson, of Longford. When word came on Friday, the 27th ult., that he was ill in Toronto we were sorry that he should have been taken down away from home, but no one anticipated the sad termination which has so moved the sympathies of the people of this neighborhood. He left home on Thursday, the 26th, and as if to emphasize the generous character of the man it is now known that his last journey on earth was taken in the interests of a friend. He complained of slight illness before leaving, but it was not allowed to interfere with his plans. To some friends on the train on the way down he expressed a fear that he was going to be ill, and before reaching Toronto the symptoms had increased, but not sufficiently to alarm either them or himself. On the following day he was so much worse that a return to Longford was not thought advisable, and a telegram was despatched announcing his condition. Mrs. Thomson went down the same afternoon, and on the following day the eldest son, William, joined them. He continued to grow worse, and during Sunday and Monday was attended by the best medical skill the city afforded. On Tuesday he was considered better, so much so that William returned to Longford expecting that in a few days he would be so much improved as to permit of his return home. It was not until Thursday night that the worst was apprehended, and a special train was despatched to Longford for the children. The train passed here early on Friday morning, Mr. Millar going down with the others. They found their father conscious but dying. All day Friday the telegraph office here was besieged with anxious enquirers, and late at night they dispersed with the melancholy satisfaction of knowing that their friend was still alive, but with little hopes of the morrow. On Saturday afternoon more hopeful messages arrived, and for several hours it was thought that the crisis was past. Mr. Millar was attentive to every enquiry, and as each turn in Mr. Thomson's condition took place it was promptly telegraphed to the anxious hundreds at Orillia and Longford. About nine o'clock on Saturday evening all hope was abandoned, and at half-past eleven John Thomson passed from this world to the other. His last drive was down, the boom was cut, and the spirit of a noble lumberman floated out into the broad ocean of eternity.

It was not until Sunday morning that his death became generally known. A sense of personal loss was experienced by every one, both here and at Longford. It is impossible to express the full intensity of the feeling. Mr. Thomson was not only known and esteemed; he was loved. To all of us it was as if a brother was stricken down. About half-past two o'clock on Sunday afternoon a special arrived at Longford with his remains. All the mill employees and neighbors were at the station, and as the coffin was taken from the train strong men wept like children. It seemed so sudden and so terrible. Only a few days before he had gone away full of life and hope for the future, bright and cherry as he had been always, with his honest, manly countenance beaming with kindly good nature. And here he was back to us, a bit of lifeless clay. It was sudden, and it was terrible. Scores of people drove over from Orillia without any clear notion of why they went; it seemed as if they must go if only by their presence to testify to their great grief and misery to proclaim their sympathy. Early in the day flags were flying at half-mast all over town and at the mills at Longford.

On Monday morning the Mayor thoughtfully addressed a circular letter to the business men of the town, requesting that they would close their places of business during the afternoon of the funeral. The request was probably unnecessary, but it was none the less an indication of public feeling.

The funeral was the largest ever seen in this part of the country. Friends from a distance came in by the *Lady of the Lakes*, from north and south on the Northern, and from north and south on the Midland railways. Every place of business on Mississaga street was closed at twelve o'clock, and many of them heavily draped in mourning, including the leading hotels. Shortly after one o'clock the *Lady* put out from the wharf here with between two and three hundred on board. Mr. Sanson also ran the *Carriella*. Arriving at Longford it was found that a large number had already assembled. The employees, to the number of about one hundred and fifty, had provided themselves with badges of mourning and were massed together to take their place in the procession. Many of those who arrived by boat took advantage of the opportunity to view the remains, after which Rev. K. Creighton read a lesson from the Psalms and Epistles. The large congregation, who had assembled on the verandah and in the large space in front of the house, then joined in a hymn, which Mr. Gray announced to have been a favorite one of the deceased's. Rev. Mr. Beattie, of Port Hope, offered up a fervent and eloquent prayer. While a student Mr. Beattie had been placed over the Longford congregation for several months, and had thus an opportunity of becoming intimately acquainted with Mr. Thomson's family. A strong friendship was then formed, which has remained unbroken ever since. Both Mr. Beattie and Mr. Gray addressed a few words to those present, bearing particularly on the eminent virtues of their deceased friend and pointing out the lesson to be learned from an honorable, upright life. Rev. Mr. Currie closed the service by a short prayer. Soon after the pall-bearers appeared with the coffin, the line of procession was formed, and the large assembly of mourners and friends slowly wended their way to the wharf. Between five and six hundred returned on the boat. At the Orillia wharf an immense concourse had congregated, the larger proportion on foot, but many in carriages. The members of the corporation attended in a body. Here the procession was again formed, probably the most striking and suggestive feature of it being the horse and phæton used by Mr. Thomson in driving to and from the mills, led by the faithful Hughey. About fifty carriages brought up the rear. Mr. Gray conducted the short service at the grave, and all that was mortal of the lamented deceased was committed to the earth.

The pall-bearers were Messrs. R. D. Ewing, J. B. Smith and Capt. Wm. Hull, of Toronto; Robert Thompson, of Hamilton; Wm. Hamilton, of Peterborough; Jas. Macpherson, of Rama; and Dr. Corbett and Melville Millar, of Orillia. The lumbering interest was largely represented, among others being Mr. J. E. Craig, Albany, N.Y.; Messers. Silliman, McIntosh, E. A. Smith, Alex. Christie, Wm. Kero, McArthur Bros., Robert Smith, ex-Ald. Mutton, P. A. Scott, S. C. Kenedy, Joseph Oliver, McCool and Kent, of Toronto; Allan Gunn, Peter McIntosh and O. F. Wright, of Barrie; Geo. W. Taylor and Isaac Cockburn, of Gravenhurst; Jas. Scott, J. Else and Henry Lovering, of Waubaushene; A. Marshall and E. Robinson, of Washago. There were also present, Messrs. A. P. Cockburn, M.P., Muskoka; Geo. Wheeler, M. P., North Ontario; Thos. Paxton, ex-M.P.P., Isaac Gould and Widdifield of Uxbridge; Chas. Robinson, of Beaverton; J. McL. Stevenson, J. S. Carnegie, Bank of Commerce, Chas. Ross, A. Arnall, Fulljames, Wm. Boys, King, McDermott, Radenhurst, Barrie. The Northern Railway was represented by Major Greig and Messrs, Webster, Kerr, Harvie and Marpole. Mr. John Bertram, of Dundas, and Mr. George Bertram, Toronto, were also among the prominent friends of the deceased. The Rama Indians turned out in large numbers.

Mr. Thompson was born in Haddingtonshire, Scotland, in 1821. In 1854 he came to Canada, and settled at Peterborough, going into the mercantile business. He soon afterward engaged in the square timber trade, and in 1867, with Mr. Melville Millar as a partner, he came to Longford and established the timber business now so well and honorably known in every lumber market on the continent. With other lumbermen he went through the deep waters of the depression, and manfully and successfully struggled against the difficulties of that period. Having carefully and laboriously built up one of the finest and most profitable properties of the kind in the Province he had already contemplated retiring from business, and now it is an open secret that at the time of his death he was in negotiation with a company for the purchase of Longford at a price that would have enabled him to live the remainder of his days in affluance and free from every care. Mr. Thompson was a pronounced Liberal in politics, and at the recent convention in North Ontario was offered the unanimous nomination of the party as their candidate for the Local Legislature. We are in a position to state that had he accepted there would have been no opposition to his election.

Mr. Thompson leaves a wife and seven children to grieve over a loss that is yet imperfectly realized. It is impossible to conceive of a more united and affectionate family. Last January Mr. and Mrs. and Miss Thompson visited Scotland and England, the latter remaining with an uncle in Manchester, with whom it was intended to spend the summer. That was the first and only break in the family tie, and so strongly did Mr. Thompson feel it that it was with difficulty he was persuaded against returning to Manchester before sailing and bringing his daughter home with him. She is now on her way to Canada, alone, sad and grief stricken.

It will afford a great deal of satisfaction to many friends at a distance to be assured that Mr. Thompson's business affairs were left in good shape, and that his death will not interfere with nor complicate the management of the immense concern he had built up and conducted so successfully.—*Orillia Times.*

ST. JOHN, N.B.

From our Own Correspondent.

GENERAL REMARKS.—During the past fortnight there has been very little calling for special notice in our lumber business. As intimated in our last, the change in regard to water supply has resulted, so far as we can learn, in clearing the streams generally of their freight of logs, at least no complaints are being made from that quarter. Deals from the country mills are coming in freely and meeting ready sale at from $8.00 to $8.50 per M. sup. feet. In and about the city the operations of sawing and shipping are moving along in their usual steady course.

STEAMSHIPS.—One of the most noticeable features of the deal trade at this port the present season, is the large number of ocean steamships which have been engaged in loading deals here for various ports in Great Britain. It is true that deals have been shipped here by the regular "liners" for a number of years, but only in small quantities; whereas, the present season we have had the largest class of freight steamers carrying full cargoes of deals, varying between 600 and 700 Peterburg standards each, thus showing how steadily, but surely, steam and iron are supplanting our wooden sailing ships in the ocean carrying trade.

FREIGHTS.—The freight market continues very quiet, with no material change in rates.

SHIPMENTS.—The shipments of deals and other sawn lumber are as follows:—

For Europe	20,031,000	Sup. ft.
" United States	2,295,000	"
" West Indies	577,000	"

A BIG JAM.

30,000,000 FEET OF LOGS IN ONE JAM.

On the morning of May 22nd, there was considerable anxiety all along the Miramichi in reference to the probable effect of the freshet in the South West boom, which is the great receptacle of the lumber obtained on that branch of the river. There were about twenty million feet of logs in the boom in the morning, and the main river and Renous drives were coming along at such a rate as to make it plainly apparent that it would be necessary to jam the river. The lesee of the boom, Jas. Robinson, Esq., decided that the point of danger was reached, and he made the jam at Bryanton's shore. This was early in the forenoon. By half-past three ten millions feet of logs had run into the jam, when the accumulated mass bore so heavily on the boom and jam piers that the tops were swept off half a dozen of the latter, the boom was broken and the ten millions feet composing the jam left the twenty millions below it—in the part of the boom which still held good—and went on the run down stream at the rate of about four miles an hour. Persons who have lived on the river for a long time and have seen other breaks in the South-west boom say they never saw such a run of logs at one time before, and it seemed to them that a great loss was inevitable.

It happened that Messrs. R. A. & S. Stewart had completed the telephonic communication only the day before between their office in Newcastle and that of Mr. Andrew Morrison, surveyor, at Parker's just opposite the boom, so the condition of things as they transpired was made known in Newcastle. Messages were also sent through Mr. Miller's telephone at Derby *via* Newcastle to Chatham, and little time was last in making preparations to save the property now adrift.

The steamer *Andover*, with her owner, R. R. Call, Esq., on board, had started on Saturday forenoon on her regular trip up-river, but was prevented by the jam from proceeding to Indian Town. As it was known she was to be at the Hemlock Extract Factory wharf for some time, word was sent down, as soon as the danger of a break was seen, requesting that she be held ready for the emergency, and this was soon followed by the announcement of the break, carried by a man on horseback, and a call for both the *Andover* and *Derby*. Steam was got up on the latter, while the *Andover* proceeded up stream, meeting with and passing the logs, which her stern wheel enabled her to do, until the boom just below the rafting ground was reached. This had been unshackled by men of Mr. Robinson's rafting crew, who were working it down stream and the *Andover*, taking in tow, proceeded down the river. Much difficulty was experienced in running with the necessary speed down stream, for the logs were very thick and water was to be seen only here and there. The raftsmen who had got on board the steamer, as well as the hands belonging to the latter, were kept busy with their pike-poles shoving logs clear of the bow, and all who witnessed the race between the logs and the *Andover* for the South-West Railway bridge were gratified to see that the boat must win. They were properly anxious over the matter for unless the boom could be stretched across the river against the ice-breakers of the bridge the ten millions which had broken the boom as well as an additional twenty millions or more following would nearly all be lost. Fortunately the *Andover* got clear of the running logs and reached the railway bridge two miles in advance of them, so that before they came down the latter steamer, assisted by the *Derby*, stretched the boom across the spans, although it fell short of reaching each shore. It was made fast and the shore spans were also secured as well as the facilities at hand admitted of, when the mass of logs was borne down upon it by the current. This was a time of the greatest anxiety, for the shore ends of the boom at each side of the river let the logs slip through. The daring boom men, under Mr. George Parker, Mr. Robinson's foreman, were equal to the emergency, and a dozen of them ventured out on the moving mass of logs under the south span with the heavy lines, which they made fast to the logs in the second span of the bridge and around the base of the pier. The representative of the *Advance* who was present on the steamer *St. George*, which had run up from Chatham, describes the work done at this juncture as most hazardous as well as difficult. Our readers can imagine for themselves a mass of logs moving through a two-hundred feet span of a bridge as through a sluice, with the current running as fast as a man might walk, and a few men carrying a heavy six or eight inch line across from shore to pier, stepping and springing from log to log and then running back and down stream to clear the line as its bight was caught by the running lumber. Although some gallant fellow missed his footing or was obliged to let himself go down in his desire to clear the line, he would "up and at it again," while the on-looker wondered at the practised self-possession of these splendid men and the tenacity and pluck with which they hung to a task which few men are ever called on to perform—a task involving great physical endurance, special knowledge and experience and a strength of purpose which is a noble characteristic wherever found.

Success rewarded the efforts of the workers at the two shore spans, and just as the run was stopped, after letting, perhaps, about a million feet through, there was snapping and crashing at the third pier from the north shore of the river, caused by the boom breaking because of the mass of logs forcing it across the angular end of the granite ice-breaker there. As the broken boom ends and some logs drifted down from the direction of the pier where the break occurred, it was feared that the drift would escape, but the mass of logs above simply crushed in together, and not more than a hundred pieces escaped before the jam became self-sustaining. Similar breaks occurred afterwards, but the danger was practically over when the shore spans were made safe.

Of course much remained to be done after this in the way of prevention. Additional lines and hawsers had to be secured, and they were supplied by our merchants and others who had them, the *St. George* having taken up two and the *Andover* being run down to Newcastle and Chatham during the evening for more. The men worked all night and part of Sunday, when the jam was pronounced safe and the freshet had begun to fall off.

The logs which ran through under the bridge on Saturday—perhaps a million feet in all—were caught by temporary and other booms and by men in boats at points along the south side of the river, only about one hundred pieces going out to sea. The schooner *Claymore*, Captain Marquis, arrived on Sunday, and we base this estimate of total loss on report which he brought in. It will therefore be seen that the loss is trifling. Indeed the loss of logs on the Miramichi this spring has been unusually small, as compared with other seasons, and had it not been for the break of Saturday not a log would have been lost, a most unusual circumstance, due to the ice having melted instead of running out.

A meeting of the Directors of the Boom Company was held. All the parties interested in the logs were allowed to be present and take a part in the proceedings. After an exchange of opinions and suggestions, it was agreed that Mr. Robinson, lessee of the boom, proceed and raft out the jam at the bridge, with all possible dispatch. To facilitate his work the logs are to be rafted—in what is known as mixed rafts—for a fortnight, and deliveries are to be made to owners, in proportion to the logs they may have in the drift, a strict account of all to be kept, and any person receiving more logs of his neighbor than the latter receives belonging to him, is to return the same quantity to him or payment at the rate of $7 per thousand therefor, and two-thirds of that rate for undersized logs within a fortnight after the drift account is closed.

On Sunday, Monday, and the Queen's Birthday, the South-west Boom was visited by hundreds of people who had never witnessed such a jam of logs before in their lives and may never again see a similar one—there being now 30,000,000 feet in the jam.—*Miramichi Advance.*

Hagyard's Pectoral Balsam is a purely vegetable healing balsam. It cures by loosening the phlegm and corrupt matter from the Lungs and expelling it from the system. Croup, Asthma, Bronchitis, Hoarseness and all pectoral diseases yield to it promptly. It costs 25 cents a bottle.

STRIKES.

A recent number of the *Northwestern Lumberman* contained an article on the above subject from which we take the following sensible remarks :—

Notably in politics and religion there are men who ignore the fact that other men were born with brains, and seem to think that the Almighty has placed a special brand of superiority upon them, thereby giving them the supreme right to rule others, and to think for others. A marked specimen of this egotism has been on exhibition in the United States senate, and it does not take a long hunt to find it in the pulpit. This same disposition is manifest in nearly every business and profession. Men who imagine they were born to lead and not to work, are constantly engaged in the formation and direction of various unions, taking advantage of every ripple of dissatisfaction, sowing the seeds of discontent where before there was contentment, and all the while keeping their eyes straight on offices and high salaries. A while ago a gentleman in an eastern town made a wager with a friend that he could get a certain number of names to a petition praying that a covering be built over the sun dial on the public square. Such a petition, it would seem, would be the last one to be signed, for the dial, if not a necessity, was at least a curiosity, and one of the old landmarks of the park. No one in a sober moment, uninfluenced, would think of covering the dial, and under ordinary circumstances would call the covering of it an unheard-of and dastardly piece of business ; but specious arguments changed these latent views, and the gentleman returned with the required number of signatures and claimed the wager. The leaders of the unions understand this trait in human nature, and make capital of it. They are aware of the susceptibility of the average mind, and set themselves at work to make the most of it. They care little whether their followers recline at night on comfortable beds or in the alley, so long as their dues are regularly paid. They call themselves the workingman's friends, but they are the syphons that draw from the workingman's pockets his money. This is not always so, maybe, but it often is. The necessity of unions is a question which has been often discussed *pro* and *con*, and one that cannot be settled with a few strokes of the pen. But common sense dictates that when a man of the character described above is at the head of a union, the members of it should look upon him as a barnacle that should be removed from the bottom of the ship in which they sail. And it is a pertinent question for every workingman to ask himself, Is is right than any man, or men, should dictate to me where I am to work, and what wages I am to receive? Answered in the affirmative, it follows that a man does not best know his own needs, and is not at liberty to follow out his desires. The folly of submitting to such dictation was forcibly illustrated by the action of the striking switchmen in this city a few days ago. They asked for more money to buy food and pay rent with, then formed into line and hired a band of several pieces to escort them through the streets. The request and the act were paradoxical in nature. But they said they did it in order that the citizens of Chicago might see that they were an orderly lot of men. Of course, at that time, they were orderly. They had advertised that they would be orderly, and no one expected them to be otherwise. But a while after that, when they were hurling brickbats and coupling pins at the heads of men who were employed in their places, and who were innocently striving to earn an honest living, it might truthfully be said that they were not orderly. Had not these disgraceful proceedings been checked by the police, ere this their high-handed outrages would have been such that all the bands in the city would be unable to toot them into good repute.

Do strikes pay? It is a matter of history that generally they do not—that is, they do not pay the strikers, and could the loss to manufacturers and corporations be known it would be an argument against them that could not be appealed from. To ascertain how much the strikes this spring have cost this city in dollars and cents would involve intribate and profound calculations. But, of course, this is of no moment to the men who strike, for they go coolly and deliberately at work to occasion these losses. When they are losers themselves it does not serve to teach them better. Last summer the job members of the typographical union struck for an advance of $3 per week. The result was that many of them were idle in the streets during the remainder of the summer. In such cases there is, in addition, a prospective loss, that is liable in the future to assume tangible forms. There is such a thing as competence and stability receiving a suitable reward. There is a feeling that is possessed by business men that they do not care to keep employed, longer than really necessary, men who are unreliable and who, at any moment, do not hesitate to peril the business that their labor should sustain and make more valuable. There is an indisposition on the part of business men to avoid giving employment to men of such character. Money is not all the capital a man can have. The man who is competent, industrious and reliable is wanted for all he is worth by somebody. If he stands ready to cripple the business that not only feeds his employer but himself, he should not wonder if he is not wanted.

It is singular that there are so many men who think that in the matter of employment there is but one party to the bargain. They forget, or seem to forget, that one man is not obliged to employ another any more than one man is obliged to work for another. Labor is a marketable article, and capital cannot buy it unless it is willing to be bought. Those workmen are ill-advised who rant about the desire of capital to crush and belittle them ; if they were not so advised they would appreciate that capital and labor are dependent, one upon the other. If a man is thoroughly imbued with the idea that capital is his enemy, let him keep away from it. Let him paddle his own canoe. In this free country no man is obliged to work for a tyrant ; and the country is large enough for the exercise of any skill or talent that a man may possess.

There is no law, legal or moral, that prevents a man from asking for higher wages, or quitting work, so long as there is no contract verbal or written that binds him to continue longer. Thus far it is the privilege of employees to go ; farther than that it is the right of employers to say they shall not go. A striker has no more right to attempt to undermine the business of his former employer, because the latter refuses to pay a higher price for the labor he buys, than the employer has to undermine the house in which the laborer lives, because the latter will not work for a certain sum. A striker has no right to bulldoze, or what is worse, as is often done, physically injure a man who is willing to take a vacated place at the wages formerly paid. There is a law written in the statute books of several states, making riotous conduct a penal offence, and there is a growing desire on the part of order-loving people at large that the construction of the law should include the unruly element considered in this article, and a growing disposition on the part of many magistrates of the law to so construe it.

Two Thousand Dollars.

The easiest, cheapest and best way to secure the above amount is to apply for membership in the Mutual Benefit Association of Rochester, N.Y. Pay Dr. S. B. Pollard, 56 Bay Street, one dollar for four medical examinations, he will send your application to the head office, if you are accepted as a member they will issue a certificate of membership, which, on payment of eight dollars, entitles you to full benefits as a member, should you die to-morrow, next day, next week, next month, or any time within three months, this Association will pay to your heirs, or assigns, the sum of two thousand dollars. At the expiration of the three months all you have to do is to pay your pro rata amount, which is from 20 to 75 cents on the death of some other member, who has done nothing worse than to die during the three months just past. By paying your assessments on deaths, you keep your certificate alive, and at the commencement of the second year you are assessed two dollars per thousand to keep up office expenses, etc., for the next year. No easier, surer or better schemes to carry two thousand dollars has ever been devised than the Mutual Benefit Associates, of Rochester, N.Y.

5-1-18

THE RIVERS AND STREAMS BILL.

REPORT OF THE MINISTER OF JUSTICE—REASONS FOR THE DISALLOWANCE.

The following is a copy of the report of the Minister of Justice on the River and Streams Bill:—

DEPARTMENT OF JUSTICE,
OTTAWA, May 7th, 1881.

I have the honor to report with respect to an Act passed by the Legislature of the Province of Ontario at its last session, intituled:—"An Act for protecting the public interests in rivers, streams and Creeks."

Application for the disallowance of this Act has been made by Mr. Peter McLaren, of the Town of Perth, lumber manufacturer, on the ground that the Act in question deprives him of vested private rights without compensation, and practically reverses the decision of the Court of Chancery in a case brought by him against one Caldwell, whereby Mr. McLaren's exclusive right to the use of improvements erected by him or those through whom he claims on certain streams in the Province of Ontario was established by a decree of the court.

The Act by its first section declared that all persons have, and always have had, during the spring, summer, and autumn freshets the right to float and transmit saw logs, etc., down all rivers, creeks and streams, in respect of which the Legislature of Ontario has authority to give this power, and in case it may be necessary to remove any obstruction from such river, creek, or stream, or construct any apron, dam, etc., necessary to facilitate the floating of saw logs, etc., down the same, it shall be lawful for the person requiring to float down the saw logs, etc., to remove such obstruction, and to construct such apron, dam, etc.

The second section declares that in case any person shall construct in or upon such river, creek or stream any such apron, dam, etc., or shall otherwise improve the floatability of such river, creek or stream, such persons shall not have the exclusive right to the use or control thereof; but all persons shall have a right to use them, subject to the payment to the person who has made such constructions and improvements of reasonable tolls.

The third section extends the operations of sections one and two to all rivers, creeks and streams mentioned in the first section, and to all constructions and improvements made therein, whether the bed of the river, etc,, or the land through which it runs, belongs to the Crown or not.

The fourth section empowers the Lieutenant-Governor-in-Council to fix the amounts which any person entitled to tolls under the Act shall be at liberty to charge on saw-logs, etc.

The fifth section extends the previous provisions of the Act to all such constructions and improvements as may hitherto have been made, as well as to those hereafter constructed.

The sixth section gives to all persons driving saw logs, &c., down the streams, the right to go along the banks.

The seventh, and last, section declares that if any suit is now pending, the result of which will be changed by the passage of this Act, the court may order the costs of the suit to be paid by the party who would have been required to pay the costs if the Act had not been passed.

It is tolerably clear that this section refers specially to the suit of McLaren against Cald well above referred to. It appears that Mr. McLaren is the owner of certain streams and improvements on streams which he makes use of for the purpose of floating down saw logs from the timber limits from which he takes the same for the purposes of his business as a lumber manufacturer.

Mr. Caldwell is also a lumber manufacturer owning timber limits in the neighbourhood of those owned by Mr. McLaren.

He attempted to float his logs down Mr. McLaren's streams and through his improvements. To prevent his doing so, the suit in chancery above referred to was instituted, and a decree was made declaring Mr. McLaren exclusively entitled to the use of the streams and improvements and restraining Mr. Caldwell from floating his logs down the same.

That case has been appealed to the Court of Appeal. The effect of the Act now under consideration must necessarily be to reverse the decision of this suit.

Had this Act, instead of giving to any person desiring to make use of the streams the right to use the same upon payment of certain tolls absolutely expropriated the whole ownership of the streams for the public use, and provided a means of compensating the owners for the property so taken from them, it would be less objectionable in its features.

The effect of the Act as it now stands seems to be to take away the use of his property from one person and give it to another, forcing the owner practically to become a toll-keeper against his will, if he wishes to get any compensation for being thus deprived of his rights.

I think the power of the Local Legislature to take away the rights of one man and vest them in another, as is done by this Act, is exceedingly doubtful, but assuming that such right does in strictness exist, I think it devolves upon this Government to see that such powers are not exercised in flagrant violation of private rights and national justice, especially when, as in this case, in addition to interfering with the private rights in the way alluded to, the Act overrides a decision of a court of competent jurisdiction by declaring retrospectively that the law always was and is different from that laid down by the court.

In reporting upon a reserved bill of the Prince Edward Island Legislature in 1876, the then acting Minister of Justice reported to Council, and His Excellency was advised to withhold his assent from the bill, one of the grounds being that the bill was retrospective in its effect; that it dealt with the rights of the parties then in litigation, and that there was no provision saving the rights of private parties.

On the whole I think the Act should be disallowed. I recommend, therefore, that the Act passed by the Legislature of Ontario at its last session, intituled: "An Act for Protecting the Public Interests in Rivers, Streams, and Creeks," be disallowed.

(Signed)
JAMES MCDONALD,
Minister of Justice,
per J. A. M.

WHAT BURNS THE MILLS.

With the opening of the season, the saw-mill proprietor enters not only upon a period of active labor in the production of lumber, but upon a season fraught with the gravest apprehensions. He may not fear that through a low stage of water his supply of logs will be stranded upon the upper waters, or rather bars, of the river or creek upon which he has launched them; he may not fear that river pirates will snatch them from the drive, and put them upon the market before they can float within reach of his own ability to manufacture them; he may, in fact, be blessed with a boom full at the mill, and enough in a handy store boom at no great distance away to bid adieu to all apprehensions of a season's shortage; but the time of his peril as well as his profit is upon him, and from now to the close of the season he may well assert that "uneasy lies the head" of the man who owns a saw mill. If he could be about the mill through the night as well as through the day, and were he endowed with powers that did not need to seek recuperation in sleep, he could rest somewhat easy in his mind as he contemplated the risk attaching to his property, in the contemplation of the fact that his own eternal vigilance would prove the price of his safety from the danger of fire.

With the beginning of the present sawing season, come thicker and faster the reports of mills destroyed, and hopes of prosperity plasted. In fact, the number of saw mills thus far this season reported as gone up in smoke is remarkably large, and the fact calls for a more careful attention on the part of every saw mill owner, lest he too be called upon to part in an hour with the fruits of a lifetime, or at least of many years of labor.

It is not possible to point out all the causes of fire that lurk unseen around the saw mills of the country, only awaiting a favorable combination of circustances to make known their dangerous nature, but in calling attention to a few of them it may not be impossible that others will suggest themselves to the minds of our readers, leading to such examination of their premises as secure the adoption of safeguards which shall prove the ounce of prevention better than a pound or more of regret. Mill arches, which have stood all winter, are quite likely to settle somewhat, soon after a season's work begins, and the jar and rattle of the machinery develops the shell of weakness which has held them. Cracks in the wall to which no particular attention is paid, have proved a most serious source of danger in permitting sparks to escape upon the light dry dust which is almost certain to have accumulated upon the beams and timbers in the neighborhood of the engine room. These should not be permitted to "run a day or two longer" before having them fixed. Procrastination is not only the thief of time, but has destroyed many a good saw mill, and the only safe motto about a mill is found in the trite saying, "Never put off until to-morrow what it is needful and wise to do to-day."

Careless engineers and faithless watchmen are about the most dangerous things to be found about a mill. The former allows the sawdust to accumulate about the furnace doors or hearth, and if the truth were to be known about many a saw mill fire, it would be found to have its inception in this scattered sawdust, which ignited while the engineer had "just stepped out of the fire room for a minute." His call outside proves a most disastrous minute for the proprietor, though the resultant destruction could have been averted if the hearth had been well swept before he stepped out. Probably two-thirds of the fires which destroy saw mills in the day-time arise from this cause. It is no uncommon thing to see the engineer of a saw mill bank up his hearth doors with sawdust, when he shuts down at noon and goes to his dinner. Such an engineer is a most excellent subject for discharge from a man's employ, and if the mill does not take fire the first time he does it, the old adage about taking the pitcher to the well once too often is pretty sure to be verified before the season is over.

Night fires are more usually the result of a too implicit confidence in the watchman, than many suppose. We would not assert that all watchmen are unfaithful, but experience has proved the value of a proprietor's call at the mill at unseasonable hours of the night. If you find a wide plank or two laying across the top of your boilers, or suspiciously near to the arch, you may be pretty sure that a quiet visit to that locality in the small hours of the night, will find them occupied by a lodger whom you have paid to walk around and see that no marauders are threatening your property, and no incipient blaze is endangering its safety. It is a good thing to have an energetic man in your employ, but when you find your watchman always ready to fill an extra place during the day, and apparently able to do without sleep for an indefinite length of time, you can be almost positively sure that what sleep he dispenses with in the day-time is taken at your risk during the night. It is well to be suspicious of the faithfulness of the man who can watch all night and every night, and grow fat on it, while working half or three-quarters of the time during the day. It is at least a good plan to vist him occasionally when he least expects you, for by such visits you can often reduce the amount of your apprehension, if not the actual premium on your insurance.

The spark-catcher on your smoke stack may be all safe enough, for practical purposes; but when you find a little patch of fire here and there through the mill yark, on a hot day, it will pay handsomely to call in the boiler maker, or set your engineer at work to make the meshes smaller, or to put up a new wire screen in place of the damaged one, which will warm you some day with a hotter blaze than is healthy or profitable. Your fire pump may be a first-class one; but when you go into a mill and see a row of empty water buckets in the rack on the saw floor, you can rest assured that if a fire ever starts on those premises, the fire pump will be of very little service. Empty buckets are a pretty sure sign of lazy engineers and mill foremen, and a disabled pump. Uufortunately, when a fire starts on saw mill premises, it is usually in too much of a hurry to get through the contract it has taken in hand to allow a machinist to be sent for to put the pumps in order, or to repair the hose which has been hanging on a peg in the wall until it is ready to drop to pieces from decay. The truism that "a stitch in time saves nine," has often been correctly rendered, "a full bucket of water saves the mill." With the record of saw mill fires daily increasing, it well becomes all who are interested in this class of property, to give the subject of its safety from fire a little of the care that is taken to obtain a full stock of logs, or an extraordinary cut by the saws.—*Northwestern Lumberman.*

COMBINATION LUMBERING.

Regarding the recent combination of lumbering interests on the Chippewa river, Wis., of which some details were given some time since, the Minneapolis *Lumberman* says: The purchase of the immense property of the Chippewa Lumber & Boom Co., by the lumbermen of EauClaire and the Mississippi Logging Company is one of the largest transactions of the kind which ever occurred in this country. The total value of the property is $1,496,000. The realty costing $1,275,000 and the rest being for logs cut during the winter. A sort of syndicate has been formed between the Mississippi Logging Co. of Eau Claire by which it is intended to bring about entire harmony in all future lumbering operations on the Chippewa. The amount of property taken by the new combination including most of the property of the Chippewa Falls Co., and also certain improvement dams, etc., heretofore made by the Mississippi Logging Co., on the river above Chippewa Falls. The total property which goes into the hands of the pool is $1,232,000, which is divided up so that 492 shares go to Eau Claire and 738 goes to the Mississippi Logging Co. The shares at Eau Claire are divided up among the companies there. The significance of the great transactions to the trade lays in the fact that it means more economical production of logs on the Chippewa river by united and harmonious action. Experience has demonstrated lumbering operations on our rivers, (especially driving,) can be much more successfully carried on under a single management, than by scores of individual operators, each bent on getting the start or advantage of his neighbors. The trouble in the latter case being that every man knows that his plan of operation is the best and the rest cannot see it.

The lumbermen of the Chippewa river have been acquiring an education in these matters, and probably have spent as much as the present investment in finding out that they could do better in a friendly pool of common interests than by struggling for the ascendency. Hereafter there will be no more wars, or rumors of wars, on the raging Chippewa, and everybody should rejoice who lives this side of Chicago.

The Eau Claire *News* recently published the following on the same subject: It is rumored that a number of Fau Claire lumbermen have purchased two-fifths of the stock of the Chippewa Lumber & Boom Company, thus putting the control of lumbering operations on the Chippewa in the hands of one big corporation. The Chippewa Lumber & Boom Company, it will be remembered, is the owner of all the pine lands, town property, saw mills, dams, booms, etc., formerly owned by Peck & Barnard, successors to the Union Lumbering Co., valued at $1,275,000. The capital stock of this company consists of 1,230 shares of $1,000 each. Of this amount twelve firms on the Mississippi river own $738,000, and six Eau Claire concerns $492,000.

Although the Boom Company is not yet fully organized, it is understood that the stock taken here is as follows:—

Empire Lumber Co., $125,000; Eau Claire Lumber Co., $105,000; Valley Lumber Co., $73,000; North Western Lumber Co., $73,000; Daniel Shaw Lumber Co., $62,000; Badger State Lumber Co., $50,000.

If these rumors are true, and they seem to be well founded, it looks as though it was the intention of the lumbermen to act in harmony in the future and conduct their operations in a manner to subserve their combined interests. It is easy to see that such a powerful combination will be able to control in a great measure, all the lumbering operations on the river.

The circulation of the CANADA LUMBERMAN is over 2,000 copies. Advertisers should note this.

WANTED,

An efficient and reliable correspondent for the CANADA LUMBERMAN, in each of the following cities, viz. :

QUEBEC, OTTAWA,
MONTREAL, HAMILTON,
And LONDON.

All communications, orders and remittances should be addressed and made payable to TOKER & Co., Peterborough, Ont.

Communications intended for insertion in the CANADA LUMBERMAN, must be accompanied by the name of the writer, not necessarily for publication, but as a guarantee of good faith. Communications to insure insertion (if accepted) in the following number, should be in the hands of the publishers a week before the date of the next issue.

PETERBOROUGH, Ont. JUNE 15, 1881.

THE HARDWOOD TRADE.

While pine is undoubtedly the most valuable as well as chief product of our forests, it cannot be too frequently impressed upon our people that a vast field for the employment of labour and capital lies before them in the other varieties of timber which our forests produce.

With advanced prices for pine the tendency will be more and more to substitute the former for the latter. Already in the neighbouring States hardwoods, such as maple and beech, are taking the place of pine for the purpose of flooring, and various finishings in houses, while every ship, every wagon, every agricultural implement, every piano, every piece of furniture, every railway car, every nicely finished room calls for more or less hardwood, and inasmuch as this same call comes from a rapidly growing continent as well as from Europe, it is evident that in our hardwoods we have a source of national wealth and individual employment and prosperity that should not be despised. We observe that the hardwood trade of Chicago alone for 1880 is estimated at 250,000,000 feet, or about one-sixth of its pine trade, and that nearly 7,000,000 feet of hardwoods were cut in the Saginaw Valley alone in 1880, where its first manufacture dates only a few years back. In Michigan only a few years ago maple was valueless, and now every tree is husbanded as representing so much money. Birch too, which was a drug, is now anxiously sought after by furniture men, and so on through the round until you reach the despised poplar, which has found a commercial value for the manufacture of printing and wrapping papers.

While the field is a good one and prices of hardwoods like pine is booming, it will, however, be wise in those who think of embarking in the hardwood trade to proceed cautiously. Very much depends upon how it is manufactured and handled, while it requires time to season, and is of comparatively little value until properly seasoned.

HEMLOCK TREES AND BARK EXTRACT.

Our neighbors in New Brunswick are considerably exercised over the hemlock bark question. It appears that recently three representative men visited Fredericton, in the milling and lumbering interests of Northern Kent, to protest against the Local Government's policy of selling outright, to parties interested in manufacturing hemlock bark extract, portions of the timber lands licensed to them for general lumbering purposes. The Crown Lands Department has advertised for sale 1,000 acres of land on the Richibucto river under license to Mr. E. Walker, and from which he draws supplies from his mill on Bass river, and surveys have been made of other blocks on the Coal Branch, the Kouchibouguac and the Kouchibouguacis, affecting the other mill owners. There is a considerable number of hemlock trees on the streams named, and the Government claim that under the terms of the licenses granted to the mill-owners and lumberers these lands can be sold at any time. The St. John *Sun* says : "It may be justifiable to withdraw such lands from the lumbermen when they are actually required for actual settlement purposes, but it seems scarcely just or reasonable to refuse to sell these lands, so necessary to the supply of the saw mills of the country, to one class of lumbermen, and to sell them absolutely (not simply license them) to another class of lumbermen. In the one case the trees are cut down, hauled out, sawn into lumber and form a staple export of the country. In the other case, the trees are cut down and stripped of their bark, which alone is removed ; the trees themselves are left to rot in the woods ; the prosecution of other lumbering is greatly obstructed ; and the risk of forest fires is greatly increased." The *Sun* goes on to say : "We hope the Provincial Government will consider the whole question very fully before deciding to sacrifice an old and important industry for the sake of one which, with some good features, has a number of very bad ones. We regret to learn that the mill-owners' protests have not been favorably regarded by the Local Government, but there is still time for the Government to reconsider their original decision in the matter. We incline to the opinion that the country will say there is a practical grievance here which the Government cannot pass over without serious injury to the public interests."

Mr. Chas. A. D. Miller gives his views in the St. John *Telegraph* on the other side of the question. He says :—

"It is argued that the selling of a certain quantity of land in Kent County to a firm interested in the Bark Extract business on the sole condition that they erect one of their factories in the district will have the effect of seriously injuring saw mill owners in that part of the country, and that it is a great injustice to these gentlmmen. Now this is not all borne out by the facts of the case, as all unpredjudiced persons will readily admit, for the extract manufacturers do not want the spruce or pine (whatever small quantities of these may remain on these lands, they having been cut and culled over and over again for the last 30 years and more) but on the contrary are perfectly willing that the lumbermen should make use of what remains on the lands they may take up as heretofore, and in fact offer to the mill owners this lumber on condition that they give them in return the hemlock bark on what lands they (the lumbermen) may hold, which surely is fair enough. In fact the establishment of a bark extract factory in that part of the country will increase the value of mill property and provide them with work for many years to come, for the effect of such a factory will be to furnish them with an abundant supply of hemlock logs which otherwise would be too expensive to lay down at the mill, unless the bark were also utilized, and at the same time they will have their supply of spruce logs, etc., as intact as before.

"It must also be borne in mind that the spruce and pine in this district have now become so scarce, and what is left of them, so small, that it is very unprofitable work, and does not give their mills anything like full employment. Hemlock logs, on the contrary, at the prices at which they will, by the erection of the bark factories, be enabled to obtain them, delivered at their mills, will offer much more remunerative and constant employment.

"Now as regards the argument that this bark should be reserved for the use of tanneries in the future. What guarantee have we got that large tanneries will ever be established in this section? In this age of progress and discoveries can we be certain that hemlock as a tanning agent will not at any moment be superseded by some cheaper and more perfect tanning agent? Do not India and the Levant and other tropical countries produce tanning materials which grow up and are gathered every year in the form of nuts and a species of plum, etc., which are now being shipped to England and Europe generally in immense quantities, and which have almost entirely taken the place of oak bark for tanning purposes? The production of these articles can be forced at will and is enormously increasing, and whereas as hemlock bark only contains from 4 to 7 per cent. of tanning, these articles contain from 20 to 40 per cent. The effect already of the introducton of these materials, though hemlock and oak bark may be becoming scarcer, has been that tanning agents in the great markets of the world are cheaper to-day than they were 10 or 20 years ago, and this, too, notwithstanding that the tanning trade in the same time has enormously increased. There is an old saying that 'Hay should be made while the sun shines,' and surely the present generation should not be allowed to starve that a future one may have a merely prospective advantage.

"England does not prohibit the use of coal, though scientists unanimously declare that it must, ere long, be exhausted. The fact of the matter is that there will always be enough bark in New Brunswick, and to spare, to tan all domestic hides ; and as much money is expended per cord of bark used in the manufacture of merchantable bark extract, as in the case of a large tannery, which invariably has to look to a foreign country for its supply of hides, which is by far the largest item of expenditure in such an industry. In this respect it contrasts unfavorably with the hemlock extract business, in which the entire expenditure is made in the country."

HOW TO SPLICE BELTS.

Mr. W. McGrath, one of the employes of the Dickson Estate Mills, has sent us the following anent the item which appeared in a late issue of this journal with regard to the running of the splices of a belt :—

A belt should be put on so that the splices will run with the pulleys, not against them. Both pulleys, the driving and driven run the same way, consequently the splices act the same on both. In instances where a pulley is on both sides of a belt, as is the case when a tightner is used, put the belt on so that the splices will run with the smaller pulley. The grain side of the leather should be put next the pulley, as it is more close and will not stretch as much as the flesh side. It is also smoother and will not be so apt to slip under the strain of starting up.

McCLAREN vs. CALDWELL.

Since our last issue this case has occupied the attention of the Court of Appeal for several days. The lengthy arguments of the counsel having been concluded, judgment was reserved. Several minor moves have also been made on the legal chess-board with regard to the same, without, so far as we can see, any material benefit to either party.

PETERBOROUGH.

PETERBOROUGH, June 13.—The river here is full of logs. Some forty river drivers are camped at the Little Lake, and there are now between this point and Stoney Lake fully 500,000 logs bound for the mills.

WE are informed on excellent authority that the Dominion Bank recently sold their mill cut of last season (with mill culls out) for $12 per 1,000 f.o.b. at Longford mills. This lot could not be considered above an average one.

A SMALL MILLER'S COMPLAINT.

To the Editor of The Canada Lumberman :

FALKENBOURG, June 6th, 1881.

DEAR SIR,—I see in the current month you ask for correspondence under the head of "Class Journalism," from persons interested in the lumber trade. This brings to mind the case of small saw mill men, of whom, being one myself, I can speak "feelingly." Now, such men find it quite a feat, and a hard one too, to furnish and stock up a small mill with a few thousand logs, cut them into lumber, and get it to market without the loan, in most cases, of a cent from a bank, they are consequently forced to hurry their lumber to market and sell for anything they can get in order to meet running expenses, and, of course, they nearly always sell at great disadvantages. For instance take this case, such a man "ships" 2 or 3 carloads to Toronto say, when he gets there he has little cash, and can't wait, he must sell, the planing mill men know this, and they've got him ; they offer what they like, and a bargain is made, and the lumber is sold for sometimes a third less than its real value ; then in measuring, the buyer has the seller again, if a board is damaged in transit, it is culled, and a wide margin is taken for "checks," sun-dried boards, spoil lying on cars, docks, and waiting shipment, this margin in a few carloads is often thousands of feet ; these culls are rated as of no value, although firewood is $5 or $6 a cord in Toronto. All this reduces the price of the lumber to a low figure, that just allows the millman to live by a hard struggle, and he often breaks down after a short fight, and is bankrupt. Now, if a combination of small mill men was formed, a depot at some point formed under proper management at any good point for selling, where the lumber could be received and taken proper care of, and sold at a fair profit, how much better that would be for such men as I describe, and it would injure nobody, but would be a fair way of doing business, and the standing, etc., of the persons availing themselves of these arrangements could be learnt, and loans could be got from banks to enable a better winter's work to be done in stocking up and cutting, etc., better and more lumber could be made at a benefit to all round. This idea, no doubt, has occurred to many, but I have not seen it in print. If it interests any of your readers, well and good ; if not, no harm is done ; and as your paper is especially devoted to the trade, to which it is doubtless doing good service, I suppose one may consider the above named as a fair subject for thinking over by anyone concerned.

Yours truly,
W. MOORE.

[We shall be glad to hear from others on this or any other subject connected with the trade. One of the advantages to be derived from the publication of such a paper as THE CANADA LUMBERMAN, is that it will afford a medium for the expression of opinions, and thus secure the removal of grievances.—ED. LUMBERMAN.]

BRACEBRIDGE.

THE late rains have been the means of bringing out nearly all the logs that were expected to be "hung up" for the present season. The Little East drive is still moving, but it is slow work as the water is very low. The tail of the Muskoka Boom Company's drive is past Baysville, on the South Branch, and they are running into Mary Lake. On the North Branch the head of the drive is within three miles of the Georgian Bay, and the Company expects to begin delivering these the last of this month, which will be about a month earlier than usual. The water generally is very low and falling

BOBCAYGEON.

A scow load of poplar has passed through the Locks here on its way to the Napanee Paper Mills. At Lindsay it will be transferred to the cars and taken to Napanee. As poplar makes first-rate paper, the probabilities are that this will prove the pioneer shipment of many to follow from the same district.

THE steamboats are busy with the drives.

ULLYOT & SADDLER'S drive of 40,000 pieces, from the township of Anson, are now passing the slides *en route* for Harwood. They are a fine lot.

NOTES BY THE WAY.

LINDSAY.

Building operations, so far, have not been brisk in Lindsay this season. A few buildings are under contract, and the block of wooden buildings recently burned, covering an acre of ground, will have to be rebuilt, which will create some extra work.

One saw mill, known as "The Yankee Mill," (Bond, Downer & Co.) has been shut down for the past two seasons. The other two saw mills in Lindsay are running full time. Messrs. Needler & Sadler's mill, driven by water power, is running from six o'clock a.m. to eight p.m. The cut this season will amount to 100,000 feet custom work, and 700,000 feet from logs got out on their own account last winter. They had a new "burner" built last spring to consume sawdust and refuse. It is constructed after the pattern of a steam boiler furnace with ordinary smoke-stack, and answers the purpose well.

Mr. Thurston's mill is working full time in the various branches of sawing, shingle-making, etc., carried on by this enterprising gentleman. The stock of logs got out by him last winter has been, proportionately, considerably more expensive than that of former years, which must reduce the ultimate profits. The same rule applies more or less to stocks, generally, cut last winter.

Shingle manufacture is an extensive industry in Lindsay. Mr. Fee is engaged in completing his stock of cedar shingles before commencing the pine stock, as when the weather becomes dry the manufacture of cedar shingles is disagreeable on account of the impalpable dust which comes from the seasoned blocks; whilst, on the other hand, before the wood gets too dry the work is pleasant, and the aroma of the cedar which pervades the mill is healthful and agreeable. His cut of cedar shingles this season will amount to four million—pine shingles, one million. Mr. Fee exports to Oswego, Albany, Troy and other United States markets, and also does a large trade in fence posts and telegraph poles. He intends next season to retire from the milling business to his farm, near Lindsay, where he has this spring erected a large brick dwelling, and where he will carry on butter and cheese making on an extensive scale. As the mill is fitted up with powerful steam engine, circular saw for cutting lumber, planing machine, as well as the most improved shingle making machinery, Mr. Fee's retirement will make a good opening for some enterprising party acquainted with the lumber business.

Mr. Burke has a good shingle mill, on the upper side of the locks, which is turning out a fair quantity of first-class shingles daily.

The other principal industries of Lindsay are, two tanneries, a woollen factory, brewery, stave factory, chair factory, sash and door factory, a carriage factory, and a large flouring mill, working day and night, grinding 8,000 bushels of wheat, yet on hand of last winter's purchase. Over a dozen steamers of various sizes ply on the Scugog and Bobcaygeon waters, engaged in freight, lumber and passenger traffic between Fenelon Falls, Bobcaygeon, Lindsay, and Port Perry.

GALT.

The new saw mill recently erected by George Hespeler, Esq., (P. McGregor, manager,) has a stock of logs on hand to cut for the season of 800,000 feet of pine and 200,000 feet of hardwood. The machinery, 5 ft. circular saw, edger and butting saw,—all of the most improved pattern—are driven by a 35 horse-power steam engine from Goldie & McCulloch's establishment. The mill works well and will have the sawing finished early this summer.

HAMILTON.

The "Ambitious City" is full of business energy at the present time. Workmen of all kinds are in good demand and wages high. Railway freight trains daily bring in car after car loaded with square timber and lumber of all sorts and sizes. The demand is greater than the supply. Near the Great Western the harbor looks like one of the Quebec coves. Men are busy rafting. Withs and traverses are piled in heaps along the wharves. The old immigrant sheds are taken possession of by the jolly shanty men, who find them roomy and commodious dwelling places.

Messrs. Flatt & Bradley have made up and despatched two rafts of 100,000 feet each, which have arrived safe at Quebec. Another raft of 125,000 will be ready to leave on Monday (13th June.) The rafts are composed of oak, elm, ash, pine, whitewood, maple, cherry, walnut, and hickory, square and round. Messrs. Flatt & Bradley have yet to arrive by train about 300,000 from all parts of the surrounding country. They have about 40 men employed in rafting.

Messrs. McArthur Bros., of Toronto, have despatched two rafts from Hamilton, averaging about 100,000 feet each—mixed timber. Another raft, nearly ready, will take the balance they expect to have at this port.

Messrs. McCrae & Murphy sent one raft out early in May, and are making up another which will clean up their stocks. Timber mixed, oak, &c.

Mr. John Durkin, of Quebec, has sent away one raft—has another ready, and a small raft yet to make up.

Mr. J. Lattimer, Toronto, has one raft nearly ready, which completes his stock on hand,

Messrs. D. & J. McCrae are loading a vessel with staves and plank for Collins' Bay.

Messrs. Flatt & Bradley have shipped four cargoes this season of oak and hickory to Garden Island to be forwarded to Quebec.

Building operations are brisk. Mr. Robert Chisholm is making good progress with the large cotton factory now in course of erection. The main building is 362 ft. long by 50 wide, with a number of wings and additions. The engine-room is 45 ft. by 33. Picker house 52 by 40 ft. There are three floors in the main building, supported by 250 oak columns. The beams are 50 feet long, and 12 by 14 inches, formed of three pieces, beaded, 4 inches thick, and bolted with ¾-inch bolts 18 inches apart. Foors double laid on the joist, or beams, forming a ceiling. Messrs. Brennen & Son, lumber merchants and manufacturers, supply the lumber, doors, sash, etc. There are three hundred windows in the main building. Mr. Chisholm has just finished the Hamilton Provident and Loan Society's buildings—a magnificent block with two fronts of Ohio freestone. Another large building is being erected on King street, with two fronts of brown freestone from the Caledon or Georgetown quarries, said to be superior to the Ohio freestone in durability and facility of working.

The Emery Wheel Manufacture or Hamilton Hart Wheel Company, have very complete premises, and seem to be doing a large business. Corundum is used freely by this company, and is said to be superior to emery.

MR. LEACH'S shingle mill was burnt to the ground on May 31st. The fire caught from a smudge they had to chase mosquitoes.

Yours, &c., E. MORS & CO., Lumber & Timber Dealers.

WATSON, EFFINGHAM CO., Illinois.

GENTS—I am using one of your Patent Automatic Self-Feeding Saw Gummers at each of my three mills, and I would not take one hundred dollars for it if I could not get another like it.
Yours truly, WM. ANDERSON.

CORINTH, Miss.

GENTLEMEN—The Patent Automatic Self-Feeding Saw Gummer we bought of you just fills the *bill exactly.* We gummed a sixty-inch saw with sixty teeth, cutting on an average of three-fourths inch deep to each tooth, with one cutter without sharpening it.
Respectfully yours, WHEELER & WILLIS.

THE CUTTER OR BURR referred to in the above, (⅜ in.) cost **90 CENTS**, it takes one-half minute to each tooth, and the saw is gummed without removing it from the mandrel. ☞ALL SAWY ERS know this is a great advantage, besides a saving in time.

We challenge **ANY** saw tool manufacturer in the United States to produce such an array of unsolicited testimonials as we have received for our GUMMER AND SWAGE.

Of course we have not room here for an extended list.

Our goods are now so well established throughout the country, that information can be easily obtained as to their practical working from any of the **Several Thousand** Sawyers who have them in use.

In short the MIXTER GUMMER is pronounced by *all* to be the "**BOSS GUMMER.**"

NOTES BY THE WAY.

UXBRIDGE.

Mr. J. Gould cut last spring about 400,000 ft. of custom logs at his water saw mill, Uxbridge, 41 miles from Toronto. Of this about one-half was pine, and the balance hemlock and hardwood. He has, of his own stock, also cut 50,000 ft. of hardwood, 40,000 ft. basswood, and 250,000 ft. of pine—having yet on hand 350,000 feet pine to cut, which will be finished by the end of July.

Mr. Wheler, of Uxbridge, is getting through with cutting his stock of about 400,000 feet of pine. The demand is good, both locally and for export by the Toronto & Nipissing Railway, all along the line from Coboconk.

LONGFORD.

Two "burners" have been erected by Mr. W. Hamilton, of Peterborough, for the Longford Lumber Co., for the convenience and safety of consuming the refuse from the Longford mills. They are built of boiler plate. The larger of the two is 80 ft. high and 60 ft. in circumference at the base. They are bottle-shaped, and lined inside to the thickness of 18-in. and height of 32 ft. with fire brick, brought from Scotland. The largest burner is capable of consuming the refuse of the sawing of 80,000 ft. in a day of 11½ hours. The smaller burner is about one-fifth less than the other. Mr. Thompson, the manager, has 6,000,000 ft. of logs in the lake (St. John) at the mills, and 10,000,000 on the river. The mills are running at their greatest capacity and on full time. Twenty-seven loaded cars of lumber left the yard one day, week ending 31st May.

WASHAGO.

Mr. John Stewart's shingle mill, on lot 15 in 9th con. of North Orillia, was destroyed by fire on the 15th May. The machinery is being repaired at Brammer's, Orillia. Mr. Stewart is to have a circular-saw put in along with the shingle machinery, and expects to be running again the first week of June.

DARTMORE.

Mr. John Fleming, of Dartmore, Atherley station, Midland railway, had his shingle mill burned on the 24th May. The mill was driven by water, but the fire communicated from burning refuse. About $100 worth of shingles were consumed. No insurance. Mr. F. will re-build at once, and put in a circular-saw at the same time with the shingle machine.

GOODWOOD.

This is a lively lumber station, 34 miles from Toronto, on the Toronto & Nipissing Railway, having two good saw mills run by steam. Clark's mill will cut two million logs this summer. Mr. Davidson, manager, is filling two orders from the Dominion Government for lock-gates' material for the Welland and Lachine canals, viz.: Sawn timber, 30 ft. long and 7½ to 10×24½ in. wide. The timber is of excellent quality.

The other mill at Goodwood is run by J. & G. Besse & Co. They will cut 1¼ million feet this season, and are shipping daily to Toronto, with good demand for all they can get ready, and with orders ahead for next winter. There is also a planing machine connected with this mill.

ORILLIA.

Messrs. Miller & Vansickle have lately finished their new steam saw mill, near the Midland railway station, Orillia. It is fitted up with all the latest labor-saving machinery, and to those improvements are added some new contrivances invented by the proprietors of the mill. The present stock of logs at hand is being cut for the Flos Lumber Co.—Mr. Orr, manager, Barrie. The mill is running full time, and a shingle machine will soon be added to the lumber cutting machinery.

Mr. Andrew Tait is carrying on a lively trade in supplying lumber and shingles from his mill at Orillia, as well as from some smaller mills along the Midland, westward, which are furnished by him.

PARRY SOUND.

The logs of the Parry Sound Lumber Co. (J. C. Miller) are all afloat, and the mills are working to their utmost capacity. This spring a very large "burner" has been erected at those mills to consume the sawdust and refuse. It is shaped like a champagne bottle, and constructed of boiler plate and lined 30 ft. up with fire brick. The height of the "burner" is 100 feet, with a screen 17 feet high on the top, in all 117 feet. It is 22 feet in diameter at the bottom and 12 feet at the top, and gives the mills a business like appearance from the approach to the Sound.

Sales on the Georgian Bay are brisk.

The drives in Parry Sound and Muskoka districts are getting along slowly, and unless more rain falls soon on the North Seguin, a considerable quantity of logs will be left over.

On the North Seguin, the Ontario Bank will have about 20,000 pieces hung up, but on the South Seguin it is expected all will be got down. The Ontario Bank sold recently at their mills at Parry Harbor, about four and one-half million feet of lumber to J. C. Miller, at an average of $10 per M. cash.

SALE OF TIMBER LIMITS.

Berths Nos. 128, 136 and 137, on Serpent River, near Bruce mines, were recently sold by Mr. J. C. Miller to Mr. H. H. Cook for $20,000 net cash. It is stated that the same limits are now under offer to parties from Grand Rapids, Mich., at $40,000. The same parties have the refusal from Mr. Miller of berths 85, 92,107, 119 and 124 on the Spanish River, at $50,000.

On the 23rd of May, Mr. A. M. Spratt, of Alpena, Mich., purchased the north 37 square miles of the Township of Armour, in the Parry Sound district, from Mr. J. C. Miller for $15,000, and next day re-sold the berth to Messrs. Burton Bros., of Barrie, for $17,750. This was a handsome profit for Brother Jonathan to make on the bargain. The timber limits on the north shore of Georgian Bay are becoming very valuable, as the Muskoka region is getting thinned out.

THE CHAUDIERE PLANING MILLS AND MACHINE WORKS.

These industries were established many years since by Mr. A. H. Baldwin, Chaudiere Island, Ottawa, then one of the leading sawn lumber merchants and mill owners, who has since retired from business in favor of his son, Mr. W. H. Baldwin, and his son-in-law, Mr. James Parr, present proprietors.

The planing mill was started in 1870, the machinery of which, however, was removed in 1876 into a new building erected for the purpose, which is 80 ft. by 30, two storeys high, and contains three planers, moulding machine, re-sawing machine, turning lathes and the usual swing butting, edging and gig saws. Every description of house furnishing lumber is manufactured, such as clapboards, flooring, scroll work and mouldings of all kinds, etc., full assortments of which are kept in stock and stored in large sheds adjoining the mill. When we visited the works a quantity of water elm was being cut for the inside finishing of a public building at Winnipeg, Man.

The machine shop and foundry, laso run by Messrs. W. H. Baldwin & Co., which are built of stone, were erected and fitted up by Mr. A. H. Baldwin in 1868, and afterwards sold to the owners of the Victoria Foundry, but subsequently lapsed back to the original founder, remaining idle, owing to the depression, for three years.

The machine shop which is now in full operation, 30×60, three storeys high. The first and second flats are equipped with five lathes, two planers, two vertical drills, a large bolt cutter, shaping machines, etc. The upper flat is occupied as a store room for the various patterns kept.

The blacksmith shop has two forges and the usual other appliances.

The foundry, built also of stone, is 35×60, and contains a cupola, blast and cranes for lifting heavy castings.

The appurtenances are complete in every department of the works for the manufacture of every article required in general and mill and steamboat machinery, which is a specialty of the firm, who aim at promptness and durability both in new work and repairs.—*Our Cheerful Friend.*

The great Marvel of Healing—the grand climax of medicinal discoveries is Burdock Blood Bitters. It cures all diseases of the Blood, Liver, Stomach, Bowels, Skin and Kidneys, Female Complaints, Scrofula, General and Nervous Debility, and is a reliable Tonic in all broken down conditions of the system. Sample bottles 10 cents. Supplied by all dealers in medicine.

CONSUMPTION OF LUMBER IN TORONTO.

From Our Own Correspondent.

I have been endeavoring to collect a few statistics relating to the retail lumber trade in this city, but find it exceedingly difficult to procure figures that can be fully relied upon. The reasons for this may be explained as follows: Upon interviewing A. he gave me a long column of figures purporting to be a correct statement of his sales from the yard during the year 1880. Upon enquiry, however, I found that included in this statement are sales by car load, made by him to B. and C. who are also yard men, but had bought several cars from A. to retail from their yards, A. happening to have the particular kinds of lumber they needed. Upon making application to B. and C., they in turn informed me they had also sold considerable by car loads to other retailers, all of which was comprised in the figures handed me as being yard sales. Other retailers informed me they could not give me the quantities they had sold, but could give me the figures in dollars and cents, so that to obtain figures that may be taken as reliable is simply impossible. Another serious disadvantage under which the retailers labour here, is the want of organization or cohesion amongst themselves; they seem to view each other with a kind of suspicion and distrust, so that each man, so to speak, runs on his own track, heedless as to what his brother chip may be doing. As witness the following experience when visiting a few of the yards: Questioning the first I called upon as to what price he obtained for joisting and scantling up to 16 ft. lengths, his answer was $11.00 per M.; on repeating the question to No. 2, his reply was $11.50 per M., and No. 3 stated he would not sell under $12.00 per M., so that it virtually seems to be a matter of go-as-you-please amongst them. Now this is certainly not as it should be, and nothing tends more to demoralize the trade than such want of unity, but if a Lumbermens' Exchange was once in proper running order, so that grades could be properly established, prices regulated, and dead-beats shown up, and in short, a thorough interchange of ideas take place between one another, it would certainly be greatly to the advantage of all concerned.

Another evil under which retail men are laboring here, and one which could easily be abated by acting in concert, is the custom in vogue amongst mill men of supplying consumers by the car load, at rates as low, or nearly so, as that charged to the retail trade, even going the length of bringing down half a car for a consumer and disposing of the remaining half car to the retailer. Now, this is certainly unsatisfactory both in principal and common justice to the retail men, and the yard men could soon apply the remedy if thoroughly in earnest. Doubtless some of your readers will remember the tactics used by the retailers in Chicago to remove the same trouble and in which I believe they were thoroughly successful; it operated in something like the following manner: After notifying the wholesale men that hereafter, they, the retailers, would demand a royalty of $— per car according to grade on all lumber sold to consumers, they calmly waited and watched. Some of the wholesalers laughed and derided at the demand as something preposterous, but those who disregarded the demand soon found to their cost that they had not all the laugh to themselves. The retailers simply black-balled all such which meant nothing more or less than this: We purchase no more lumber from you until you accede to our demands; and in this way the remedy was prompt and efficient, and there is no reason why the same means could not be adopted and carried out here, and to the ultimate benefit of all concerned. The lumberman is generally termed the prince of good fellows, but sometimes there crops out amongst the best of them a slight disposition to grasp at all the trade within their reach, and this is more often the case amongst wholesale men, so that in dull times especially, the course taken by them in the matter of selling to consumers, has driven many of the retailers to the wall and has ultimately been a cause of considerable loss to themselves.

During the year 1880 there has been sold from the yards here in round numbers:—30,000,000 ft. lumber, 13,000,000 shingles, 15,000,000 sawn lath, and in addition to this there has been sold by car loads to consumers, direct, as much more, besides a considerable quantity sold by the factory men, who all do more or less of a retail lumber business, and the sales of the present year bids fair to far outstrip that of its predecessor, as buildings are springing up in every direction; and it is much to be regretted for the future of Toronto that many buildings now being erected by speculators, are of such material and workmanship as not to add to the future glory of this the Western Metropolis. Still there are a number of quite pretentious and substantial buildings now going up; and one thing to be noticed is, that the architects are now demanding that all lumber used in the construction of good buildings shall be fairly dry, so that this will necessitate a much larger stock of lumber to be kept on hand by retailers, to meet the demand in this respect. To sum the whole matter up, the building trade is now fairly booming and all concerned feel correspondingly jubilant.

HOW CHICAGO YARD PRICES ARE FIXED

At a recent meeting of the Lumbermens' Exchange in Chicago, the following were unanimously passed:—

Resolved, That on the 27th day of each month a meeting of the yard dealers shall be called to go through the price list, making such alterations as to them may seem wise; that said list, so amended on the 27th of each month, shall be in force on the first day of the succeeding month, and shall be the standard of prices at which orders shall be filled, until its successor comes out on each succeeding month; *Provided*, that should any change in prices be considered advisable prior to the 27th of any month, a meeting of yard dealers shall be called, and their action shall be binding on all orders received after a lapse of twenty-four hours.

Resolved, That when a price list is agreed upon and adopted at any yard dealer's meeting, it shall become obligatory on all yard dealers to issue no list, either printed or hektographed, nor to advertise in any newspaper at any less prices than established at said meeting; and should any firm think that prices as fixed at any time are higher than the market will justify, then, on notice to the president and secretary, a meeting of yard dealers shall be called, before any reduced list or advertisement is sent out.

YOUNG'S POINT.

From Our Own Correspondent.

SAW LOG DRIVE.—On the 27th ultimo a large drive of saw logs, consisting of 45,000 pieces, passed through here *en route* to Messrs. Ullyott & Saddler's mills, Harwood, under the charge of Mr. P. Bergin, foreman. The men on this drive were the best conducted that has passed through here for some years. The foreman is a shrewd business fellow, and the men under him seemingly work with a will.

Worth Preserving.

The following figures are worth remembering, as they will save a great deal of calculation and give approximately accurate results with a minimum of labor:—

A cord of stone, three bushels of lime and a cubic yard of sand will lay 100 cubic feet of wall.

Five courses of brick will lay 1 foot in height on a chimney. Nine bricks in a course will make a flue 8 inches wide and 20 inches long; and 8 bricks in a course will make a flue 8 inches wide and 16 inches long.

Eight bushels of good lime, 16 bushels of sand and one bushel of hair will make enough mortar to plaster 100 square yards.

One-fifth more siding and flooring is needed than the number of square feet of surface to be covered, because of the lap in the siding and matching of the floor.

One thousand laths will cover 70 yards of surface, and 11 pounds of lath nails will nail them on.

One thousand shingles laid four inches to the weather will cover 100 square feet of surface, and five pounds of shingle nails will fasten them on.

BUFFALO has in all sixty-six lumber dealers. Tonawanda has twenty-seven.

Chips.

B. YOUNG & Co. have completed the new chimney to their mill. They have in Half Way River Lake no less than 5,000,000 feet of logs.

MR. HUGH MACKAY, Crown Lands Agent and Collector of Customs at Parry Sound, died suddenly on the 28th ult., from the bursting of a blood vessel.

PRICE & Co., West Brook, are erecting a store at West Brook crossing. They have stopped sawing at their steam mill—their logs being for the present "hung up" for want of water.

SEVERAL rafts of cordwood were being unloaded near the foot of Broadway street, Winnipeg, on the 27th ult., where a number of men are working constantly in the water up to their waists for the purpose of fishing it out.

AN enterprising Vancouver, B.C., man, Mr. B. L. Morrison, has this season shipped to San Francisco 800,000 hoop-poles, and has 600,000 nearly ready for shipment and more coming. He has shipped as high as 2,000,000 in one winter.

A CORRESPONDENT of the *Country Gentleman* says that he saw 100 black locust posts which had been 22 years planted, and that they were sounder below the ground than above, and would be good posts for at least another 20 years.

A FLEET of nine flatboats of lumber, shingles, etc., arrived at Winnipeg on the 28th ult., from Moorhead, having been brought down by J. Morris. About two weeks were spent on the way. The freight was brought to Moorhead Minneapolis by rail.

LEWIS RIVERS, ESQ., of St. John, has become manager for Thos. L. DeWolf & Co., at their new mill, at Diligent River. This mill will be completed this fall. It will cost some $20,000. The firm have some 5,000 acres of land to log from and they have 3,500,000 logs out.

A FEW years ago the idea of exporting bobbins would have been considered extremely impracticable, but now the diminishing timber supply of the old world has forced her to call upon us for these articles. A Lawrence, Mass., firm is in receipt of large orders for them from England.

A STEAM saw mill near Oakland, Md., was blown to atoms by the explosion of a boiler. The fireman, Marshall Butler, was blown six hundred feet, and driven head foremost under some old logs. One boiler was carried one thousand feet up the hill side.

DURING 1879-80, Ontario has shipped to the United States $109,970 worth of house-hold furniture, and a little to the West Indies; Quebec sent $3,319 worth. Doors, sashes, and blinds were sent from both Provinces to Great Britain. Other manufactures of wood, unspecified, went from Ontario, Quebec, Nova Scotia, and New Brunswick to Britain, and the States and the Indies to the value of $262,000.

WE have had a visit from Mr. Little, an experienced lumberman, who some seven or eight years ago prophesied the extinction of the American lumber supply in ten or twelve years, and thereafter the accelerated extinction of our own. He still thinks, notwithstanding the extreme slackness of the lumber trade for the large part of the time since his pamphlet was published, that his calculation is not far from correct, and that in ten years from now America will have to look for her lumber in European forests. People in Canada are, as a rule, too busy to take up questions of this sort seriously. A rumor once started in England about the possible exhaustion of the coal supply created national alarm, and provoked parliamentary investigation. Mr. Little's warning of danger to our leading industry is more or less borne out by the opinion of all experts whom we have consulted on the subject, and it seems time that the matter should be looked into.—*Montreal Witness.*

A Good Location.

THE CANADA LUMBERMAN could not easily have got into a better "location' than the Peterborough REVIEW offices. Messrs. Toker & Co. will not spare either talents or money in rendering the paper all that its name impiles. The LUMBERMAN has been restored to its original size, 16 pages.—*Orillia Packet.*

STEAMSHIPS AND THE TIMBER TRADE.

The constantly increasing number of steamships in the timber-carrying trade will not be wondered at by those who take note of the immense quantity of steam tonnage annually turned out in this country from the great building yards in the north. The mystery will be, by and by, how sailing vessels are to get a living at all, in any trade, against the opposition of steam, which can accomplish so much more in less time and at a lower rate of freight than the sailer can live at. Mr. C. Moller's recently issued steamship circular furnishes some remarkable information on this important subject. From it we learn that since the 1st of January no fewer than 78 ships, measuring about 118,000 tons gross, have been added to the large fleet already afloat. Nevertheless, there were still at the beginning of April about 800,000 tons of shipping on the stocks, much of which is specially adapted for Atlantic service. The American trade is daily gaining more and more in importance, owing to the large increase in emigrants from Europe and live stock and provisions back. Of new ships there are not many offering for sale, and these can only be had at full prices; but by degrees, as the new ships become available, more second-hand boats are coming into the market, and many of them, having been supplied with new boilers, have become very useful ships, and can be bought at reasonable prices. Most of the principal builders are full of work for some time to come, but still orders can be effected on previous terms.

There will, of course, come a time when many of these ships will not be wanted for the trades on which they were intended to run. Some will fall out of it by age and disability, and others on account of being superseded by new ones of larger size or of greater suitability, and the timber trade will most likely pick up the stragglers, which will not require much alteration to adapt them permanently to the trade, and by and by others will be built, in all likelihood, of light draught of water to go anywhere, and to anything that a small coaster can now accomplish.

Though they are rather backward this spring, steam and iron together are creating a revolution in the timber-carrying trade, which is more and more obvious to us as every fresh season comes round. Two results may be expected from this change, which will be claimed as publicly beneficial—it will keep timber down in price, and prevent there ever being any scarcity of it.—*Timber Trades Journal.*

Carbonized Timber.

Herr Gopport has recently exhibited a piece of pine which has been submitted for two years to a pressure of 12½ tons in a Silesian mine. It had been compressed to one-fourth, and had been converted into a half-carbonized state through the action of pressure alone, as little moisture had access, and the temperature was never above that of the surrounding atmosphere. It had quite the appearance of a dark brown colored bituminous wood of the tertiary brown coal formation, but it was without the smell observed in burning bituminous wood. The change of volume was at the cost of the water-content of the wood. A considerable amount of oxygen and hydrogen had come off as water; and the composition approximated to that of peat of the older peat formations.

Chicago's Imports of Canada Lumber.

We learn from the *Northwestern Lumberman* that the imports of lumber into Chicago from Canadian ports during the last three years has been as follows:—

1878	7,751,000 feet
1879	837,000 "
1880	755,000 "

A Healthy Change.

THE CANADA LUMBERMAN has changed hands, and will hereafter be published at Peterborough by Messrs. Toker & Co., proprietors of the Peterborough REVIEW. Judging by the initial number under the new management, we must say that the change appears to be a healthy one. We wish our contemporary much success from their new aquisition.—*North Shore Miner.*

Market Reports.

TORONTO.

From Our Own Correspondent.

TORONTO, June 9th, 1881.—Since my last report, common lumber has advanced in price on this market, although I think it is more than questionable, if the advance can be sustained to the end of the season. The production of common lumber in proportion to clear and picks increase every year, and the stock of common lumber to be marketed this season will be far in advance of any preceeding year, and unless prices advance in the American markets a large quantity of common lumber must either be held over at the mills or placed on the Canadian market, so that should my impressions in the latter respect be verified, present prices will not hold out to the end of the present year.

Shipments from this port still languish, so that dock hands and vessel captains are not in the best of spirits, and considerable ill-temper is naturally displayed in consequence, but it is the general impression that the 1st of July will witness a more rapid movement of lumber, as by that time it is expected the change of guage on the lines of road (mentioned in my last letter) will have been made, and rolling stock supplied to meet all demands, a matter most devoutly to be wished for.

Since my last letter building matters have been making rapid strides, and over one hundred more buildings have been started in this city and the adjoining village of Parkdale. This would seem to indicate a rapid increase of population, although this cannot be taken as a proper guide in that respect, as many people prefer new houses and fresh localities, and as a consequence, there are a large number of the older houses tenantless.

Prices at the yards rule as follows :—

Mill cull boards and scantling	$ 9 00
Shpping cull boards, promiscous widths	11 00
" " 10 and 12 in. stocks	12 00
Scantling and joist, up to 16 ft	$12 00
" " " 18 and 20 ft	13 00
" " " 22 ft	13 50
" " " 24 ft	14 00
" " " 26 ft	15 00
" " " 28 ft	16 00
" " " 30 ft	17 00
" " " 32 ft	18 00
" " " 34 ft	20 00
" " " 36 ft	22 00
" " " 38 ft	26 00
" " " 40 to 44 ft	30 00
Cutting up plank and boards	16 00
Sound dressing stocks	15 00
Picks Am. inspection	24 00
Three uppers, Am. inspection	30 00
XXX sawn shingles, ₱ M	2 50
Lath	1 60
1½-inch dressed flooring	28 00
1¼ " " "	24 00
1 " " "	20 00
⅞-inch beaded and matched sheathing	20 00
Dressed clapboarding	12 50

Sixteen ft. lengths dressing stocks are scarce and in demand. Shingles will likely advance before long ; at present prices for lumber shingles should command at least $2.75 per M from the yards, and as the demand from the American market comes in later on, doubtless shingles will advance above present prices.

CHICAGO.

CHICAGO, June 1st, 1881.—The receipts of lumber at this port during the past week have aggregated 51,751,000 feet, and of shingles 24,062,000. Of these, a fair proportion has been sold on the market at the Franklin street dock, though by far the greater bulk has at once proceeded to the yards, for which it had been purchased before arrival. Taking the season as a whole, the receipts have not yet reached the aggregate to the same date last year by 11,299,000 feet of lumber and 20,395,000 shingles. For the week the receipts of lumber have been larger than for the correspondiug week of 1880 by 2,738,000 feet, the shingle receipts have fallen short 1,991,000.

Prices during the month of May at the cargo market were, as our readers know, somewhat unsettled, owing to the difference of opinion between buyers and sellers as to the value of lumber. For some time the market showed signs of weakness under the persistent endeavors of the bears to pull it down, dropping from $10 on piece stuff at the opening, to $9.50 on the 13th, and as low as $9.25 on the 23rd. The past week, however, prices have advanced to nearly, if not fully, the opening quotations. During the closing days of the month a decided firmness the ideas of values do not materially differ, for of feeling developed, and for the past two or three days, green piece stuff of ordinary length has sold up to $9.50 and $9.75, while a fair admixture of lengths above 16 feet, has readily commanded $10, and at this writing we may truthfully speak of the markets as firm and quiet at these quotations. This, in face of the fact that the receipts since Sunday have been larger than for some days, leads to the opinion that the tendency of the market is to still higher figures. Sales of one-inch lumber may be quoted at from $12.50 for ordinary green, to $14.50 on a better grade, while $16 and $17 have been paid for fair to good mill run. Dry lumber has brought $1 above these figures, and is quick at from $16 to as high as $22, according to richness in picking qualities and condition of seasoning. Shingles have participated in the firmness, and standards which have sold as low as $2.40, are now steady at $2.45@2.55. Extra A's, which have sold at $2.45@2.50 now command $2.55@2.65. Lath have not fluctuated so much, and we quote from $1.60@1.65 for green and Norway, to $1.80@1.90 for dry. Selected pickets have brought $11.75 ; common, $7 and $8.

The general tone of the cargo market is much firmer than at any time since the opening of navigation, and the opinion is expressed by both bulls and bears that the firmness will continue.

CARGO QUOTATIONS :

Joist and scantling, green	$ 9 50@ 9 75
Mill run, choice green	16 50@19 50
Mill run, medium, green	12 50@16 50
Mill run, common, "	10 50@12 50
Shingles, standard	2 45@2 55
Shingles, extra A	2 55@2 65
Lath	1 60@1 80

Trade at the yards is of a feverish nature. Nearly every dealer admits that doing business on the margin between cargo and price list figures is not profitable, just now, yet nine out of ten of them are doing business on even a smaller margin. It is safe to say that that proportion of the yard men are selling under the list, and if a dealer is not willing to say so, his neighbor is not backward saying it for him. Some declare that the cut is on undesirable stock only, others, in plain words, that a reduction is made in order to hold customers. We saw a bill of Number 2 fencing sold at $10.25, that is put down on the "re-affirmed" list at $11.50, and the buyer assured us he could purchase any quantity at these figures. Dimension that is billed at $13 we heard offered, and refused, at $11.50.

It is almost impossible, just at this time, to make a quotation of yard prices that will accurately represent the market. It is admitted by nearly everybody that lumber does not bring the prices named in the "official" list, but the dealers, as a rule, dislike to say what they really do get for it. It is claimed by some that the better qualities of stock, such as finishing lumber, wagon-box and stock boards, sell pretty nearly up to the quotations, while others maintain that the list is shaded from fifty cents to $1 on sales of any magnitude. We quote a range on dressed and matched flooring that we believe covers the market fairly. Occasionally the inside prices given may be cut a trifle more, but when this is done the trade is generally an exceptional one.

The cut in prices is, of course, brought about by everybody except the man with whom you are talking. Those who are bullishly inclined say the bears are bound to break the market, and the bears say the bulls stand ready to underbid them every time. Whoever is to blame, the bids on a bill of considerable size that went the rounds did not vary much. We think, however, there is no question but that in certain directions there is a firmer feeling than existed two or three days ago. The firmness of lumber by cargo affords the best reason for the belief that it cannot be bought from the yards much longer at present prices. There is certainly no money in handling lumber for those who have to buy it on the market, and unless there is a speedy decline there, which is something hardly anyone looks for, we do not see how they can afford to do it at the figures now ruling. The *Lumberman* is therefore inclined to to think that this market has about touched bottom.—*Northwestern Lumberman.*

COMMON BOARDS—ROUGH.

2x4 culls, all lengths, green	8 00

ALBANY.

ALBANY, June 7.—Pine Lumber has been in free receipt, with a good trade during the past week, mainly to New York and Brooklyn ; from Brooklyn a number of buyers have, within the last few days, been in the District. A large sale, but of which we have not any particulars, is reported to have been made yesterday for Greenpoint. Prices are held with much firmness on a freely moving market. From the Saginaw and from Canada, active markets are reported at very firm prices ; indeed at all manufacturing points the markets are stiff and buyers are meeting manufacturers at their prices.

In Hardwoods there is a steady trade at quotations.

Coarse Lumber is moving as brisk as ever ; the receipts are coming in free and going out, on sales ahead, as fast as received ; prices are very firm.

The receipts by canal at Albany from the opening of navigation to June 1st were :—

	Boards and Scantling, ft.	*Shingles, M.*	*Timber, cub. ft.*	*Staves, lb.*

NEW YORK.

Our wholesale market has fallen into a sort of rut from which it is difficult to draw many new features of interest from week to week. Business continues good all around, supplies are generally selling close to the offering, especially for near-by delivery, and prices are well maintained for all attractive goods and assortments. In fact, it is a good, healthy and cheerful market, with no reason to expect the favorable elements will vanish for some time to come. Consumption is unabated, indeed for building, stock tends toward an increase. Dealers are on the look out for additions to assortment and the interest of exporters is retained to a very fair extent, though on some grades the foreign demand has been diverted to parcels at primary points. Choice well-seasoned stuff of all kinds is becoming somewhat scarce, and holders who have anything of the kind in stock talk rather firmer.

Spruce still appears to be under very good control and sellers' views comparatively extreme, especially on full sizes, of which there is a very small amount within reach. Logs are more plenty at the mills, but a goodly number of orders have been awaiting them and the additional product will not disturb the condition of the market. Agents have been unwilling to quote randoms positively in the absence of business of a fairly testing character, but on a general range to cover all grades about $14.00@16, may be named, while on specials the line may be extended up to $17.00, to cover all sizes and deliveries, but no higher than the latter figure is now mentioned.

Piling is plenty and dull with values fluctuating slightly, though about 4c. per foot seem to be the average rate. Exactly what has possessed producers to send forward the stock they have this spring it is difficult to determine, as some of the winter accumulation still remains unsold and is difficult to work out.

White Pine does not appear to have changed in any important particular since our last. The demand from home sources continues good and general, all regular descriptions and sizes being wanted, and the orders coming from pretty much every source ordinarily represented. Larger quantities and better assortments are becoming available, but the limit of valuation is full and deficiencies here cannot be replaced at any reduction on cost. Exporters move with some showing of caution, but are pretty good customers still with dealers who cater to the foreign outlet, confident that their business will hold good. We quote $17@19 per M for West India shipping boards ; $24.50@26 for South American do. ; $16@16.50 for box board ; $17@17.50 for do. wide and sound do.

Yellow Pine continues to be reported in the same strong and cheerful manner by pretty much the entire trade, but shows no positively new features. Supplies immediately available are small and poorly assorted, the principal mills have orders to keep them busy for many weeks to come, even on an uninterrupted run of saws, and new orders and specifications are daily coming to hand. Agents are also figuring on a pretty good run of orders for shipment direct from the South. Prices strong and inclined to an advance if anything. We quote random cargoes at about $24@26 per M. ; ordered cargoes, $26@28 do. ; green flooring boards, $24.50@26.50 do. ; and dry do. do., $27.00@29. Cargoes at the South, $15.00@19.00 per M. for rough, and $20.00@24.00 for dressed.

Hardwoods continue quite generally in sellers favor, the good control of the desirable stock at primary points and the apparent wants of jobbers and consumers inspires much confidence among holders. No further positive additions to value, however, have of late been noted and indeed at the prices asked some buyers are refusing to operate as "there is no money in it." We quote at wholesale rates by carload about as follows : Ash, $35@38 per M. ; oak, $40@45 do. ; maple, $30@35 do. ; chestnut, 1st and 2nd, $30@35 do. ; do. culls, $18@20 do. ; cherry, $50@55 do. ; white wood, ½ and ⅝ inch, $25@27.50, and do. inch, $33@35 do.

Shingles have been selling to about the ordinary extent and without change in tone or prices. We quote : Pine shipping stocks, $4 for 18-inch, and Eastern saw grades at $2.50@4.50 for 16-inch, as to quality and to quantity.

Machine dressed cedar shingles quoted as follows: For 30-inch, $16@22.25 for A and $28.75 @33.25 for No. 1; for 24-inch, $6.50@16 for A and $16.75@23 for No. 1; for 20-inch, $5@10.50 for A and $11.25@11.75 for No. 1.

At the yards business is good and general and dealers appear to be having a first-rate season as a rule. Some complain of competition compelling them to sell on a very narrow margin.—*Real Estate Record.*

TONAWANDA.

TONAWANDA, N.Y., May 30.—Receipts by lake continue to come in very generously and acceptably, giving the yards here an opportunity to stock up with stuff that is much needed to enable them to fill orders, some of which have been on the books three and four weeks. The amount of lumber received at this point during the past week will foot up about 16,500,000 feet; one consignment of shingles, 1,600,000. The ruling figure from Michigan points has been $3 per thousand on lumber. Dealers here are chafing somewhat under this steady high rate, and some of the prominent ones are yet holding off, as that price is too much of a discrimination against their interests as compared with through rates by rail. Canal freights to Albany have dropped a trifle since last report, and are quoted to-day at $2.50 to Albany, and $3.25 to New York. Boats are coming in freely, and there is an active demand for the season. Sales are reported as being good, with no change in prices. We hear of an order for 250,000 feet dressed for New England parties; 350,000 feet of box for an eastern firm at $12.50; 1,000,000 shingles at $3.65 here; 600,000 shingles, clear butts, $2.75; and other equally favorable transactions. With the present condition of the trade there can be little or no change in prices. We quote as follows:—

CARGO LOTS—MICHIGAN INSPECTION.

Three uppers	$38 00@43 00
Common	17 50@20 00
Culls	11 50@12 50

We quote railroad freights as follows:—

Tonawanda to Boston or New England points, per ton	$3 50
New York and Hudson river points	3 00
Jersey City, Newark, etc	3 00
Philadelphia, Baltimore, Wilmington, etc	3 00

BOSTON.

The *Journal of Commerce* of June the 4th says:—

The general appearance of the market is about the same as last week, and dealers report the demand as very good. Prices are firm, and will probably remain for some time as now quoted, unless hardwoods advance in sympathy with the western markets. Reports from the west show seasoned hardwoods to be very scarce, and in some cases the supply is so low as to be hardly equal to the demand. As a consequence, whitewoods have advanced $2@$5, and ash $2.50@$7. Oak has also advanced, both in timber and flooring. The eastern markets, as yet, remain unchanged, and this upward turn at the west will probably subside as soon as shipments from primary points begin to come in and stocks are replenished. Below are carload quotations.

Heat in the Boiler Room.

H. G. Baker in the *Lumber World* says:—Excessive heat in your boiler room, while indicating a waste of fuel, or, in other words, a loss of power, is by no means beneficial to your engineer or firemen, and it presence causes them, perhaps unwittingly, to become careless in the performance of their duties, this carelessness resulting more to your detriment than theirs. A man overheated is not capable of exerting his best energies in the performance of any labor, physical or mental, and when your fireman or engineer begin to get careless, they, as everyone else, get more and more so, particularly if the conditions under which they labor are not changed. Ventilation in the boiler room is permissible if due precautions are taken to prevent radiation from your boiler and steam pipes. If these are properly protected, comparatively little heat will pass from them into the room, and ventilation, so long as strong currents or draft of air are not created, will not be hurtful. If your boiler or connections are not properly protected, don't ventilate, but shut your room up as closely and tight as possible, and keep it so. Put a man inside and keep him there to attend to the engine and fire, and when he is sufficiently baked, take him out and substitute another, It wont be quite as cheap as it would to protect your steam surfaces, but you can do it.

Growth of Timber.

As the result of observation, and from the testimony of reliable men, the following is about the average growth in twelve years of the leading desirable varieties of timber, when planted in belts or groves and cultivated: White maple, one foot in diameter and 30 feet high; ash, leaf maple or box elder, one foot in diameter and 20 feet high; white willow, one and a half feet in diameter and 50 feet high; yellow willow, one and a half feet in diameter and 35 feet high; Lombardy poplar, 10 inches in diameter and 40 feet high; blue and white ash, 10 inches in diameter and 25 feet high; black walnut and butternut, 10 inches in diameter and 20 feet high.

Manitoba.

Prittie's sixth party with sleeping cars attached, will leave on 29th June, per G.T.R. at 11.45 a.m., and continue every other week during the season, preceded two days before by their fast freight train. 30,000 acres of choice land for sale. Letters enclose 3c. stamp for reply. R. W. PRITTIE & Co., 64 King Street East, Toronto. L16

With the Approach of Spring, Biliary Complaints prevail that often lead to serious results. Guard against their attack in time by using Burdock Blood Bitters: the best Liver Invigorator, Kidney Corrector, Regulator of the Bowels and Secretions, and the purest, most permanent Tonic in the world. For sale by all dealers.

Flexible Board Rules,

With Steel Head, either Cleveland or London make, at $1.75 Each.

PETERBOROUGH, L16

Wrought Iron Shanty Cook Stoves

The Best Article ever offered to the Trade.

I have much pleasure in drawing attention to my **WROUGHT IRON COOKING STOVE, for Shanty, Hotel and Boarding House use.** These Stoves are made of **Heavy Sheet Iron,** the top and lining of the fire-box being of **Heauy Cast Metal** and all the connecting parts of substantial **Wrought Iron Work.** The dimensions of these Stoves are as follows:

SINGLE OVEN STOVE

Top surface contains six 10-inch holes, with ample room between, and one oven 16 x 24 x 26.

DOUBLE OVEN STOVE

The Double Oven has a top surface containing twelve 10-inch pot holes, with two ovens, each 16 x 24 x 26. One fire-box of suitable size for area to be heated. Below will be found Testimonials from some of the leading Lumbermen, who have used my Wrought Iron Cook Stoves since I ommenced manufacturing them. They are the names of gentlemen who are well known and eliable, and will carry more weight than any recommendation of my own could do.

The Best Stove I have ever Used.

PETERBOROUGH, May 31, 1880.

ADAM HALL, Esq., Peterborough. Dear Sir,—I have used your Wrought Iron Cooking Stove in our lumbering operations since its introduction here, and have no hesitation in saying that I prefer it to any other. For durability, economy and efficiency, where a large number of men are employed, it is the best stove I have ever used. You can, with confidence, offer it to hotels, boarding houses and lumbermen.

Yours truly, THOS. GEO. HAZLITT.

The Stove for Lumbermen.

PETERBOROUGH, June 1st, 1880.

ADAM HALL, Esq., Peterborough. My Dear Sir,—We have used your Wrought Iron Cooking Stove and find it is very satisfactory for lumber operations, especially so on drives. We can recommend it highly.

Yours truly, IRWIN & BOYD,

Gives the Greatest Satisfaction.

PETERBOROUGH, June 3rd, 1880.

A. HALL, Peterborough. Dear Sir,—I have had the Wrought Iron Cook Stove, purchased from you, in constant use ever since last fall, and it gives the greatest satisfaction in every respect. I can recommend them highly to any one who is in the lumber business. Very truly yours, GEO. HILLIARD, M.P.

EVERY STOVE GUARANTEED

All the necessary TINWARE and CUTLERY for Shanties suppied at the Lowest Prices.

ADAM HALL, Peterborough.

HOW SPOOLS ARE MADE.

The town of Drummondsville, Canada, on the St. Francis river, had the good fortune some years ago to be selected as the site of several factories for the manufacture of spools, the principal reason for the selection being the abundance of white birch in the immediate vicinity. This wood, though inferior for many purposes, is just the thing for spools, and the following account of the process of manufacturing these useful articles may be of interest.

The wood, after being delivered to the factories is first sawn into pieces about 4 feet long and from 1 to 1¼ inches square, according to the spool it is desired to make. These pieces are put into a dry-house and thoroughly dried, from whence they are taken into the factory and given to the rougher, who, in an incredibly short space of time, bores a hole in the centre a couple of inches deep, turns about the same space round, and then cuts off the length required for a spool. The machines used for this purpose are revolving plainers, in the centre of which is a revolving gimlet or bit, and immediately to the right a small circular saw with a gauge set to the proper size for the spools. The rougers receive 1¼ cents per gross for their work, and experienced men turn out from 100 to 130 gross per day. The round blocks pass from them to the finishers, who place them in machines which give them the shape of spools, and make them quite smooth. The spools are thrown loosely into a large cylinder, which revolves slowly, so that the spools are polished by the constant rubbing upon each other for some time. On being taken out of the cylinder, they are placed in a hopper with an opening at the bottom, through which they pass down a slide for inspection. Here the inspector sits and watches closely to see that no imperfect spools are allowed to pass, and a very small knot or scratch is sufficient to condem them. They are packed in large boxes, made the proper size, and no additional packing is needed. The packers receive one-fourth of a cent per gross for packing, and a smart boy who is accustomed to the work can pack about 200 gross per day. One proprietor ships over two million spools per month to England, and another firm ships over one million spools to Glasgow, Scotland.

Mean Velocity in Open Water Courses.

The discharge of open water courses may be found experimentally by observing the velocity of the current, and measuring the cross-sectional area of the stream. But to do this correctly, we require the mean velocity throughout the section, which cannot be obtained by observation. The velocity varies, being a maximum at the surface, and where the channel is deepest, which is usually near the centre of the width, diminishing from thence to the banks on either side and to the bottom, where it is a minimum. The best experiments we have, give the mean velocity throughout the section at 84 per cent. of the maximum central surface velocity, which is usually the velocity observed, being easily obtained by a float on the surface of the stream. Thus, if a channel has, by observation, a central surface velocity of 35 feet per minute the mean velocity will be 29.4 feet.

A Creditable Organ.

The Lumber and Timber industries of Canada, probably the most important in the country, have at last, we are pleased to notice, secured an influential and highly creditable organ in THE CANADA LUMBERMAN, published by Messrs. Toker & Co., at Peterborough. The LUMBERMAN was founded in Toronto last year by Mr. Alex. Begg, and came into the hands of the present publishers only a month ago. It appears in an entirely new dress, and will in future be published semi-monthly, at $2.00 per annum. It has a vast field and important work before it, and under its present able management we hope to see it live and flourish. It certainly deserves the support of every one interested in the lumber trade, to which it cannot fail to be of immense benefit.—*North Hastings Review.*

Hagyard's Yellow Oil is a perfect panacea curing by external and internal use all inflammation, pain and soreness; Rheumatism, Stiff Joints, Deafness, Colds, Kidney complaints, Burns, Frost Bites, and Flesh Wounds of every variety. For sale by all dealers.

Is the Most Perfect Machine that has ever been Introduced into Mills for that purpose.

CIRCULAR SAW STEAM FEED!

I would also call special attention to my

Heavy Circular Saw Mills

and for STEAM MILLS, would recommend the Steam Feed, having put in several which are giving the best of satisfaction, as will be seen by the following testimonials:—

GRAVENHURST, August 20th, 1880.

WM. HAMILTON, ESQ., Peterborough.

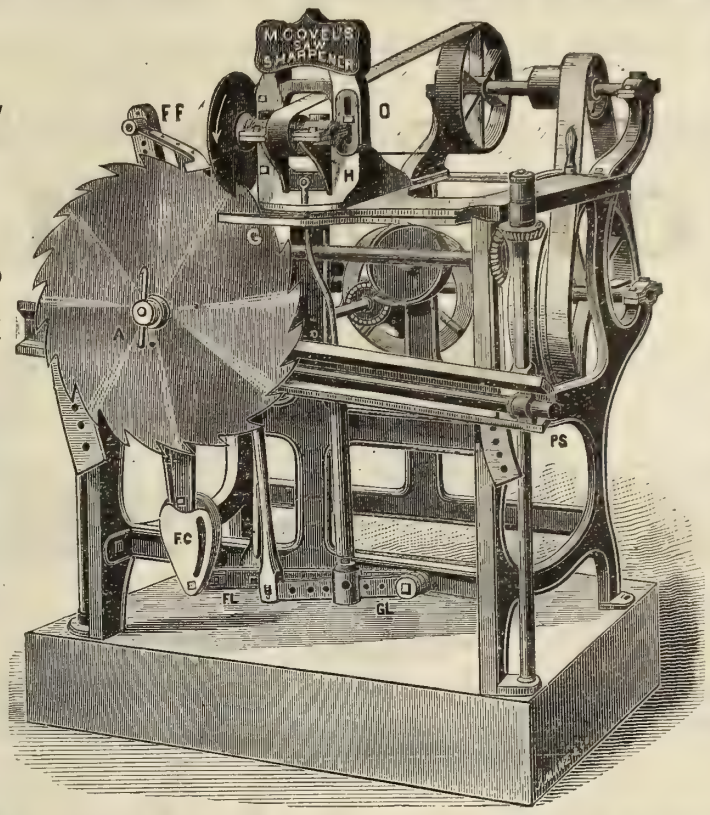
DEAR SIR—I have used your Steam Feed for near four months, and it has given me perfect satisfaction in every way; it is admitted by every person who has seen it work to be the best feed ever invented. Since I put it into my mill, I have not lost ten minutes time fixing anything belonging to it. I can cut 18 boards 13 ft. long in one minute. It can do much smoother and better work than the pinion feed. It is easily governed and reverses the carriages instantly. I am thoroughly satisfied with it and can recommend it to any person who has a Circular Saw Mill for cutting long or short logs. I consider I have cut more lumber than will pay for the Steam Feed since I got it than I would have cut had I not put it in.

Yours respectfully,
WILLIAM TAIT,
Lumberman, Gravenhurst.

TORONTO, August 11th, 1880.

WM. HAMILTON, Peterborough, Ont.

DEAR SIR—The Steam Feed you put in is working splendidly. Yours, &c.,
THOMPSON, SMITH & SON.

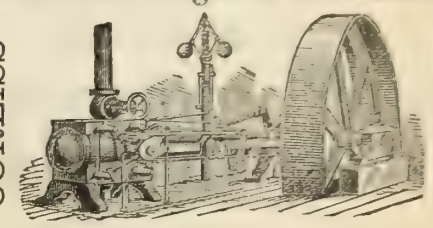


MILL MACHINERY!

I am also manufacturing Saw Mill Machinery, for all sizes of Gang or Circular Mills, Span or Double Circulars for Slabbing Small Logs. My Patent Jack Chain for drawing logs into Saw Mills, acknowledged by all to be the Cheapest and best ever got up; also, my Patent Lumber Markers, different sizes of Edgers, Gang Lath Mills, Trimmers, Power Gummers, and all Machinery used in a first class Gang or Circular Saw Mill; also, small Hand Gummers for use in the woods, for Cross-cut Saws. Rotary Pumps of different sizes, for Fire Protection in Mills, &c.

Horizontal Engines and Boilers

CORLISS ENGINES



Where economy of fuel is the great consideration, along with uniformity of speed, such as is required in Grist and Flouring Mills, Woollen and Cotton Factories, or large Factories of any kind, I supply the Corliss Engine. I feel justified in saying that our Style, Workmanship and Finish on this Engine will be no discredit to its renown, and certainly is not equalled in this country for economy of fuel. I have them working at 2½ pounds of coal per horse-power per hour. L10

EMERY WHEELS FOR SAW GUMMING!

Solid Emery Wheels are now almost in universal use for the purpose of gulletting and gumming saws. Statistics show from 25,000 to 30,000 saw-mills in the United States. Many of these run only a single saw each. A one-saw mill would use one or two wheels a year, costing $3 to $4 each, and when such small mills order single Emery Wheels from the factory, the express charges often equal the cost of the wheel. There was a time when the quality of Emery Wheels was so uncertain, and the demand so fickle, that storekeepers could not afford to carry them in stock. Now, however, Saw Gumming Wheels have become as staple an article as Files, and every dealer in saws, Hardware and Mill Supplies can afford to carry a few dozen standard sizes in stock. Large dealers order stocks of $500 to $750 worth at a time. Saw Gumming Wheels are used with the edge (or face) square, round, or beveled. Probably seven-eigths of all in use are beveled.

The principal sizes are:

8x¼, 8x⅜, 8x½ } ¾ in. hole. 10x¼, 10x⅜, 10x½, 10x⅝ } ¾ in. hole. 12x¼, 12x⅜, 12x½, 12x⅝, 12x¾, 12x⅞ } Holes, ¾, ⅞ and 1 inch.

Probably more wheels 12x⅜, 12x½ and 12x¾ are used than all the other sizes together. Saw Gumming Wheels are used, however, of all sizes up to 24x1½. The most frequent complaint is that Emery Wheels harden the saw so that a file won't touch it. The answer is that you don't want a file to touch it. An expert workman will shape and sharpen the teeth with an Emery Wheel, leaving the teeth *case hardened*, in which condition the saw will cut about 33⅓ per cent. more lumber than a soft saw will. Those who want to use the file, however, have only to touch the saw *lightly* a second time (after going all over it once), and this second touch will cut through the case-hardened scale.

A QUESTION OF QUALITY.

Thirteen years of experience as makers of, dealers in, and actual users of Emery Wheels, have led us to a decided opinion as to what quality is the best. We prefer for almost every use an "Extra Soft" wheel like the "Pocono." We believe that money lost through the rapid wear of the wheel is more than made up by the money saved on wages. As we cannot get every one to adopt our views, we make several qualities, so as to meet their views. We say to those who think they can only be satisfied with some other make of wheels (not Tanite), that we can furnish qualities *to match* any and every other make. If you have got used to some special quality of wheel, let us know what it is, and we can send you *a Tanite Wheel of similar quality*. Our *regular* classification of Saw Gumming Wheels is as follows:

CLASS 2. MEDIUM—HARD.—This Wheel is THE STANDARD Saw Gumming Wheel all over the world. Probably seven-eighths of all the Saw Gumming Wheels used are "Class 2." It cuts fast and keeps its shape well. Some think it too hard, some too soft. We prefer the "Pocono."

CLASS 3. MEDIUM—SOFT.—The same as to coarseness and fineness as "Class 2," but a *softer*, and therefor freer cutting wheel.

CLASS "POCONO." EXTRA SOFT.—This Wheel we prefer to all others. It is both *finer* in grain and softer than either of the above. As a Saw Gumming Wheel, Class "Pocono" is specially suited to those practical and experienced Sawyers who know how to grind with a light touch, and who want a free cutting wheel that will not create much heat.

Illustrated Circulars and Catalogue, showing Cuts of Saw Gumming Machines, and Shapes, Sizes and Prices of Wheels, sent free on application.

The Tanite Co. Stroudsburg, Monroe Co. Pennsylvania

CANADIAN TRADE SPECIALLY SOLICITED.

PUBLISHED SEMI-MONTHLY.

The only Newspaper devoted to the Lumber and Timber Industries published in Canada.

SUBSCRIPTION $2.00 PER ANNUM.

VOL. 1. **PETERBOROUGH, ONT., JULY 1, 1881.** **NO. 17.**

MESSRS. GILMOUR & CO. have settled with the Insurance Co., and set a gang of men at work rebuilding the mill. They have purchased a large lot of square timber from Mr. Buck to be used in the construction. They have placed a couple of gang saws and slab saws in the cedar mill, which is running night and day, turning out over eighty thousand feet in 24 hours.

GREAT preparations are being made at Rosseau to accommodate summer tourists. The Rosseau House is being repainted in first-class style. The proprietor of the Montreal House is making an addition to his house which will accommodate 150 guests. The work on the latter is being done under the supervision of Mr. M. Curtin, (formerly of Peterborough,) Mr. R. S. Macey, of Barrie, being the contractor, and Messrs. Kennedy and McVittie of the same place the architects. It is expected to be ready for the reception of guests by the 1st of July.

Sometime since the use of sawdust in mortar was recommended as superior even to hair for the prevention of cracking and falling off under the action of storms and frosts. A gentleman whose house is on the seashore, and necessarily exposed to long storms, says that mortar mixed with sawdust is the most durable he has ever used. The sawdust was first thoroughly dried and sifted through an ordinary grain sieve, to remove the larger particles. The mortar was made by mixing one part of cement, two of lime and two of sawdust with five of sand, the sawdust being first well mixed with the cement and sand.

A CURIOUS and interesting explanation of the absence of trees on the great western prairies was given at the meeting of the Academy of National Sciences by Mr. Thomas Meeham. Numberless theories have been advanced by the students in natural history why the great feeding grounds of the buffalo should be without such vegetation, the principle on which is supported by distinguished authors being that of climatic influences. Mr. Meeham's theory is that the absence of trees is due to artificial causes altogether. Taught by their necessities, the early Indians made it a practice annually to fire the high grass of the prairies, which had the effect of making the growth more luxuriant and consequently more inviting to the vast herds of buffalo, on which the aborigines depended chiefly for sustenance. It has been conclusively settled that no vegetation, save the hardy prairie grass, will appear on ground over which fire has swept, until another season, so that the yearly prairie fires extended the area of the plateau until they became almost measureless. Mr. Meeham cited several instances where trees have grown when the firing has been discontinued.

IF we may judge by our American exchanges, Lumbermen's Associations would seem to be the order of the day in all the lumbering districts on the other side of the line, and that every important district either has or soon will have its association. The object of these associations, is, of course, to secure the harmonious action of those operating in particular districts and on particulaar streams on matters common to them all. If they prove beneficial to the trade in the neighboring states, there would seem to be no reason why they should not prove equally beneficial to and worthy of the consideration of those engaged in the trade in Canada.

THE *Northwester Lumberman* gives an instance which brings into prominence the advantage of handling dry rather than green material. It gives as an instance of how one dealer made money while another lost, the following :—"Dry lath at Chicago prices, $3.25, with freight added, cost in a certain place $6.50 per thousand. They were sold at $6.60, leaving a margin to the man who bought at regular prices of only ten cents per thousand. The new competitor was not satisfied with this state of things, so he cast about for a more pleasant market to buy in and found it in Oshkosh. It is well known that, according to Chicago ideas of weights, dry lath weigh 500 pounds to the thousand pieces, and it was on this basis that the cost reached $6.50 in our western village. In Oshkosh, however, our close buyer found those who sold him the lath at $1.50, and guaranteed the weight to be only 400 pounds, which resulted to him in the neat little profit of $1.50 per thousand." Evidently the less water the manufacturer ships out of his yard the better for all concerned, unless it be for the railway companies who loose freight upon its transport.

AN Austrian inventor has lately brought out a new kind of wire belting, which is said to work very satisfactorily. The wire is wound on spindles, the diameter of which is as small as practicable, and is obtained, therefore, in the form of a long spiral spring. The main point to be observed in using these wire coils is to give them dimensions proportioned to the power to be transmitted, so that while flexible, they do not suffer undue elongation when in use. Practical trials have proved that the proper proportion between tenacity and elasticity of these coiled wire strings is obtained when the spindle, around which it has been wound, has a diameter equal to that of the wire. The two ends of a string or coil are hooked together, and each coil (the number varying according to the power transmitted) is laid in a groove on the pulleys. This method of transmission is reported to be cheap and effective. Another method of using wire for transmitting power has lately been patented by a man in Hartford, Conn. He makes a belt by weaving wire and cotton together to form a web, the warp being of wire and the weft of cotton. A double fabric is made, between which, or inside which, a number of single heavier wires are inclosed to take the tensile strain of the belt.

AT a meeting of the Chicago lumber dealers, held on the 11th June, it was decided by a vote of 24 ayes to 17 nays, to adhere to the existing price list until their next regular meeting to be held on the 27th June. The minority were in favor of an immediate advance, but the feeling of the majority seemed to be that before the list price was advanced they should cease cutting below it, as most of them had been doing, and it was stated that a strict adherence to the quotations of the existing list would be a *bona fide* advance of from fifty cents to a dollar per thousand all round. One thing is quite clear, that all attempts to break the Chicago market this spring have proved ineffectual, and that those who have attempted to do so by cutting prices are the only sufferers. The mill men are too strongly entrenched just now to be compelled to sell at any price the dealers choose to name, and as a consequence the latter have had to come to the terms of the former instead of the former to those of the latter. In fact the present state of stocks is all in favour of holding rather than of pushing sales owing to its wanting seasoning.

BUSINESS in the vicinity of Epping, N.H., according to a correspondent who writes from that point, continues remarkably good. The mills are in active operation, and are turning out large quanties of lumber. The supply of stock of last year's manufacture is entirely gone, and the mill men are shipping green and partly dry lumber to market to meet the demand, which is unusual for them to do. Prices are well sustained, and there is no immediate prospect of an unfavorable change in them. Hemlock for frames is scarce, and the Maine and northern New Hampshire mills are full of order for both hemlock and spruce timber. Large quantities of yellow pine timber is used in that and other parts of New England, especially for bridges and large buildings, to which purposes it is especially adapted.

IN repairing old boilers the mistake is often made of using for the patch thicker metal than that of which the boiler is made. A moment's reflection ought to show the absurdity of putting a five-sixteenths or three-eighths patch on an old one-quarter inch boiler shell ; yet it is not so rare an occurrence as one would imagine. A piece of new iron three-sixteenths of an inch thick, will, in most cases, be found stronger than a portion of a one-quarter inch old plate needing repairs.

HOW THINGS LOOK OUT WEST.

One of the *attaches* of the *Real Estate Record* has just returned from a flying visit to the West. In view of the interest which attaches to the crop question, a statement of what he saw and heard may be of some value to those who have interests in the stock and grain markets. Winter wheat is undoubtedly very seriously damaged in Ohio, Indiana, Illinois, Michigan and probably further West. At the best it cannot be more than a two-thirds crop. There is time enough for it to turn out somewhat better than the present promise, but heavy western grain men fear the worst and are bulls on the price of winter wheat.

The spring wheat crop, so far, looks fairly well. It promises an average yield, and the weather lately has been highly favorable. The return per acre will be about equal to last year. Still, it is too early to speak with any certainty about spring wheat. In view of the exceptional weather we are having all this year, the worst is to be feared.

The corn crop has been delayed in its planting several weeks and in many cases had to be replanted. The acreage will be large, but if we have a cool, wet summer, the crop will fall far behind that of last year.

All through the West it was noticeable that business activity was very great. There is a building mania under way, and in every city and town the number of new buildings is something extraordinary. All the railways seem to have as much traffic as they can handle. There was, however, cutting of rates on east bound passenger fares and freight. At any of the hotels, tickets from Chicago to New York could be bought for $15. There is a great deal of stock operating in the New York market on the part of operators in the Western cities. Just at present the Western operators are bulls on grain and bears on railway stocks. A great part of the immense short interest in Wall street is on Western orders. It is Europe and the East that are buying, the West is selling stocks.

Money is very abundant all through the West. At Rockford, Illinois, where only five years since money loaned at 8 and 10 per cent., now the banks find great difficulty in getting 6. At Newark, Ohio, farmers were reluctant to pay more than 5 per cent. for mortgages. In fact, there was a plethora of money everywhere. There was an expectation of an advance in prices, labor was increasing its demands, and hence all materials involving labor, are regarded cheap at present figures. The expectation was that the coming fall months would show a boom in merchandise and other commodities, including land and grain.—*New York Real Estate Record.*

Yellow Oil is *par excellence* the remedy for Pain, Lameness, Rheumatism, Croup, Deafness, Burns, Frost Bites, Stiff Joints, and all flesh wounds. Any medicine dealer can furhish it.

NOTES BY THE WAY.

MIDLAND.

The well equipped saw mills of the British Canadian Timber and Lumber Co., Messrs. Chew Bros., and J. M. Dollar, make Midland City a hive of industry during the summer season. The B.C.T. & L. Co. employ 120 men at their mills. The "cut" per day runs as high as 115,000 feet, and the season's work is expected to reach over 17 million feet. On Wednesday the 22nd inst., the burners and fixtures for the Brush electric light arrived at the mills. The engine to furnish the motive power for this new light has been in its place for some time, and in a few days the mills and yard will be lighted up, so that work can be carried on, sawing, piling, etc., by night as well as day.

At Wye River the B. C. T. & L. Co. have another mill, which saws on an average 40,000 per day. The season's cut is estimated at six million feet. The Company's powerful tug is kept constantly employed in towing.

The above mills, in connection with those of Messrs. Chew Bros. and J. M. Dollar, are immense feeders to the Midland Railway, which is taxed to its utmost capacity in transporting to Port Hope the millions of feet of lumber, shingles and lath thus so largely manufactured. The Midland Railway Company, however, are doing their part admirably, and their efforts are appreciated by manufacturers and shippers. The track is put in good order—in fact the Midland Railway, judging from outside appearances, is one of the best conducted and best paying railways in Canada.

A large and substantial wharf is also in course of construction by the Railway Company at Midland, which, when completed, will give that port facilities for shipping equal to any place on the Georgian Bay. To meet the prospective requirements of the trade, the Company are also erecting a mammoth elevator which will have a capacity of 250,000 feet, which is fully double of either the elevator at Port Hope or Collingwood. Its dimensions are 105 feet long 60 feet wide—height 110 feet. The tower is to be 22×23 feet, and 135 feet high. It is expected that grain will be brought from this point to Toronto next winter. or as soon as the gauge of the Toronto & Nipissing Railway is widened. As one of the principal ports on the Georgian Bay, with the best eastern outlet, a Custom House is required to facilitate the transaction of business. This is evident from the fact that the burners and other machinery for the electric light, already referred to, had to be sent from Woodville junction to the Custom House at Lindsay to be entered. Grain and other imports will require the attendance of an officer of Customs.

Mr. James Crossen is getting out a large quantity of oak and ash on the Georgian Bay for his car-works at Cobourg. Tanner's mill supplied him with 300,000 feet. The fire which occurred at Mr. Crossen's establishment recently, has necessitated an extra supply to meet the demand of his largely increasing trade. Passenger cars, as well as freight cars, of his manufacture are largely in use on the Grand Junction, the Midland and Credit Valley railways, In point of workmanship and comfort the passenger coaches are equal to those found on any of the other railway lines. A very great improvement is noticeable in the conductors' new vans on the Midland. They are furnished with cushioned seats, wardrobe, desk, and rack for conductor's papers, and at the same time are very comfortable for passengers.

PENETANGUISHENE.

Mr. McGibbon is getting out oak for Mr. Crossen at the rate of from 9 to 10 car loads per week. Mr. Christie is also furnishing dimension stuff from his mill at Sturgeon Bay, for the Cobourg car-works.

The Keene Lumber Co., Mr. Crossfield, manager, have erected a new mill on the bay. For piling grounds, sites for dwelling houses for workmen, etc., they have cleared twelve acres of the primitive forest. Seven dwellings and a store have been erected and nicely painted. The capacity of the mill is about 8 million feet. This season's cut will be 3½ million. The castings and machinery are from Craig & Cameron, Penetanguishene. A pan for evaporating maple sap and converting it into sugar is made by this firm. The pan will evaporate 450 lbs. of sugar at one boiling, and is something worthy of notice, being entirely unique in this northern part of Canada.

C. Beck & Co., who had their mill destroyed by fire last year, have erected a new mill—capacity 75 to 80,000 feet per day. The stock for this season will produce seven million feet. The mill is furnished with a circular and gang saws, with steam feed, the only arrangement of the sort north of Bradford mills.

GALT.

Another industry is to be added to those of this busy manufacturing town. Messrs. Beck & Co. are removing their cigar-box works from Baden to Galt, it being better provided with shipping facilities. The factory will be in a building erected by Geo. Hespeler, Esq., attached to his saw mill, which will furnish the driving power. Messrs. Beck & Co. will employ 20 hands. They use Spanish cedar and soft elm for the manufacture of the boxes.

Messrs. Cant & Gourlay have commenced the manufacture of the latest improved bicyle; and one of their workmen has underway, a tricycle which will be propelled by combined spring and lever, aided by the rider, who will sit comfortably between the two front wheels, as shown in an engraving in a recent number of the *Scientific American*.

BURK'S FALLS.

Mr. A. C. Manzer is erecting a steam saw mill at Burk's Falls, on the Maganetawan River. It is intended for local purposes. This part of the country is settling up rapidly.

A considerable quantity of logs belonging to the Maganetawan Lumber Co. is reported as "stuck" at Burk's Falls.

COBOCONK.

Coboconk is the northern terminus of the Toronto and Nipissing Railway, 88 miles from Toronto, situate on Gull River. It has a population of about 300, and is rendered famous as being the site of the celebrated Coboconk University, established there in 1874 by Professor Jimuel Briggs, D.B. The original University was destroyed last year by fire. Another building has been erected on the same foundation, named the "Coboconk University," a large hotel, having its rooms graduated according to the acquirements and requirements of the graduates, who are properly classified and attended to by the proprietor, Professor W. J. Chirpaw. Coboconk is also a place of importance from a lumbering point of view. There is a large steam saw mill near the railway station, in which the Dominion Bank has an interest, and which is managed by Mr. Jos. E. Gould. The mill has shipped this season over half a million feet of lumber, principally to Messrs, Christie, Kerr & Co., lumber dealers, Toronto, (Mr. Bond, inspector). The season's cut will amount to about 1,200,000 feet pine and 800,000 feet basswood. Lath is also manufactured at the mill, and a large trade is carried on by several parties in railway ties, telegraph poles, fence posts and cordwood—of the latter commodity about 2,000 cords are on hand awaiting shipment.

Logs and square timber in large quanties pass through the slide at Coboconk. This slide is fitted up with stop-logs, and, althongh put in its present state of good repair by the government, is free of tolls. It has a fall of about 15 feet, which furnishes an excellent water power, on which is a grist mill owned by Mr. McArthur, of Fenelon Falls. On the opposite side of the river from the grist mill stands an old wooden saw mill, which has not been in working order for several years. The advance party of a large drive belonging to the Dickson Estate, T. G. Hazlitt, manager, Peterborough, arrived at the slide about noon on the 20th inst. The party occupied three cribs—one for the accommodation of a span of horses, waggon, hay, &c.; another for the sleeping apartment of the gang, and the third for the cook, with kitchen, dining room and his paraphernalia of stove, flour, pork, tea, molasses, &c. After dinner the cribs were moored above the slide, and the work of dismantling at once commenced. Jehu, the driver, hitched up his sleek and tractable team of grey mares, and drove the waggon off the crib, over some immense boulders, across a short portage to the place of destination below the bridge. The stable and other buildings being constructed in sections, were taken down rapidly and placed in position for running the slide. The whole had to be scattered pretty well over the surface of the cribs to permit going under the bridge, which is a low shaky affair, and will soon tumble down if not repaired. All ready on the cribs, the stop-logs are raised, the boom timber runs down, and all pass over safely—the cook last but not least—amid the cheers of a large number of Coboconkers, who assembled on the bank of the river to witness the successful feat. The cribs are again moored. The work of reconstruction begins. Jehu ships his "greys" into their floating table, and the cook is at work preparing supper. The system is so complete that the whole is again in place before tea time.

The steamer *Coboconk*, which plies between Coboconk and Fenelon Falls, carrying passengers and towing, arrived during the afternoon with a cargo of ties, and returned the same evening to Fenelon Falls. The scenery along the water is delightful, and is taken advantage of by a large number of tourists from Toronto and elsewhere.

THE GEORGIAN BAY.

About four and a half million feet of logs taken out by J. Cockburn, on the Upper Maganetawan, for the Magnetawan Lumber Co., is reported "stuck" and abandoned for the season at Burk's Falls.

Six million feet belonging to the Ontario Bank is reported "hung up" on the North and South Seguin rivers. The men are still at work but have not made much progress for the past ten days.

The Georgian Bay Lumber Company are reported to have nearly three million feet yet to come down on several small streams in Muskoka.

Cook Bros. have 2,000 pieces board pine and 7,000 logs stuck on the Little East river, near Huntsville.

Thompson, Smith & Son are said to have a very large quantity "hung up" on Black River, and the Dominion Bank is also said to be in trouble with a large drive on the same stream.

Mr. M. McDougall, of Parry Harbor, recently sold a limit of 22 miles in Monteith, on the South Seguin, to J. C. Miller, of Parry Sound, for $6,250.

The Parry Sound Lumber Co. have shipped over seven million feet of pine lumber since the opening of navigation; about one-half of which was sold in Canada and the other in the United States.

The demand for coarse lumber this spring has exceeded anything known in the history of the trade. It is now difficult to find mill culls unsold, dry or green. Shingles and lath also scarce and in good demand. Prices firm on Georgian Bay.

THE business of hauling logs by rail from points in Clare county to Saginaw river points and Flint, is rapidly increasing. For the first five months of 1881 there was hauled a total of 68,053,260 feet. The total amount hauled by this road for the first five months of 1880, was 32,506,935 feet. It will be observed by these figures that the business this year, thus far, has more than doubled that of 1880 for a corresponding period.

SOME BIG CUTS.

The Mississippi Valley *Lumberman* says:—The daily cut of the mills at Wausau is as follows according to the Central:—

J. & A. Stewart & Co's mill, day and night:

Lumber, feet	2,000,000
Shingles	1,200,000
Lath	52,000
Pickets	75,000

B. G. Plummer's mill:

Lumber, feet	40,000
Shingles	70,000
Lath	18,000
Pickets	6,000

Clark, Johnson & Co's mill, daily:

Lumber, feet	800,000
Shingles	500,000
Lath	75,000
Pickets	5,000

J. C. Clarke's mill, daily:

Lumber, feet	1,700,000
Shingles	1,500,000
Lath	254,000
Pickets	42,000

Wausau Lumber Co's mill, daily:

Lumber, feet	1,300,000
Lath	200,000
Pickets	30,000

MR. GEORGE BRETT, a prominent lumberman of Whithall, N.Y., died on the 22nd ultimo.

IT is proposed to start a wood-pulp factory at Ottawa, and to put to use the sawdust that now goes to waste.

ON the 22nd of June the steam saw mills of Alexander Thompson, situated at Ettrick, London township, were burnt. The loss is about $4,000; insurance, 1,000.

THE *Country Gentleman* gives a statement showing that 35,435 lbs. of sugar was made last spring from 13,145 maple trees, which all stood within one mile of Lyndon Hill schoolhouse, Vt., by 18 persons. This was equal to an average yield of 29-13 pounds per tree.

ABOUT 12 o'clock on the night of the 24th ult., the saw mill in the village of Stayner, owned by Jones Bros. & Mackenzie, of Toronto, and occupied by Henry Allen, was discovered to be on fire. The fire brigade turned out promptly, but although they were furnished with a liberal supply of water, and in spite of the most strenuous exertion, the whole building, with a large quantity of lumber, shingles, and laths, was totally destroyed, throwing a number of hands out of work. Fortunately the night was calm, and the fire was prevented from spreading to the adjoining buildings. It is understood that there is no insurance on either buildings or contents. The cause of the fire is unknown.

THE *Brick, Tile and Metal Review*, of Pittsburgh, says: An immense quantity of lumber lies in the Allegheny river, in the vicinity of Herr's Island and below that point. Millions of feet of the finest pine logs ever felled have come down the Allegheny on the bosom of the present generous flood of water' and more are on the way. While most of the pine is in the form of logs, there is also a vast amount of lumber and shingles. It is said that the number of lumbermen who came down this spring is much larger than the several seasons past, while the amount of timber is also greater. Things are, therefore, lively in the boom on the upper Allegheny, and from the appearance of affairs our mill men and those below will have as much lumber as they want and at satisfactory prices.

Wrought Iron Shanty Cook Stoves

The Best Article ever offered to the Trade.

I have much pleasure in drawing attention to my **WROUGHT IRON COOKING STOVE, for Shanty, Hotel and Boarding House use.** These Stoves are made of **Heavy Sheet Iron,** the top and lining of the fire-box being of **Heauy Cast Metal** and all the connecting parts of substantial **Wrought Iron Work.** The dimensions of these Stoves are as follows:—

SINGLE OVEN STOVE

Top surface contains six 10-inch holes, with ample room between, and one oven 16 x 24 x 26.

DOUBLE OVEN STOVE

The Double Oven has a top surface containing twelve 10-inch pot holes, with two ovens, each 16 x 24 x 26. One fire-box of suitable size for area to be heated. Below will be found Testimonials from some of the leading Lumbermen, who have used my Wrought Iron Cook Stoves since I ommenced manufacturing them. They are the names of gentlemen who are well known and eliable, and will carry more weight than any recommendation of my own could do.

The Best Stove I have ever Used.

PETERBOROUGH, May 31, 1880.

ADAM HALL, Esq., Peterborough. Dear Sir,—I have used your Wrought Iron Cooking Stove in our lumbering operations since its introduction here, and have no hesitation in saying that I prefer it to any other. For durability, economy and efficiency, where a large number of men are employed, it is the best stove I have ever used. You can, with confidence, offer it to hotels, boarding houses and lumbermen.

Yours truly, THOS. GEO. HAZLITT.

The Stove for Lumbermen.

PETERBOROUGH, June 1st, 1880.

ADAM HALL, Esq., Peterborough. My Dear Sir,—We have used your Wrought Iron Cooking Stove and find it is very satisfactory for lumber operations, especially so on drives. We can recommend it highly.

Yours truly, IRWIN & BOYD,

Gives the Greatest Satisfaction.

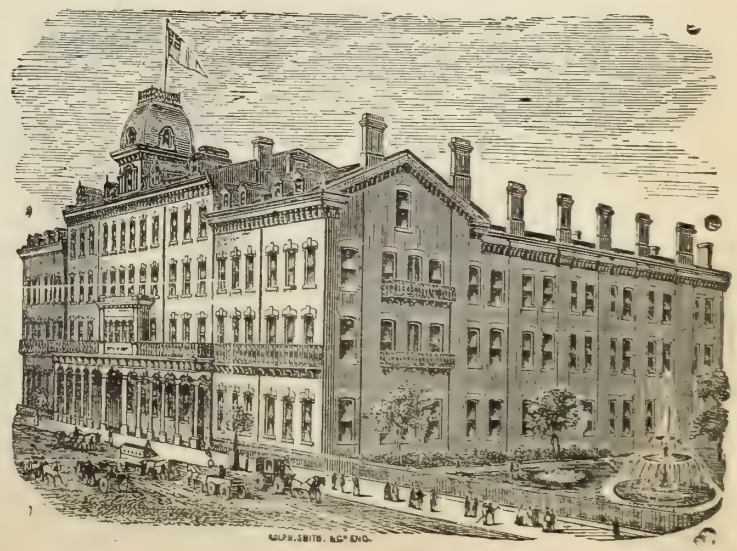
PETERBOROUGH, June 3rd, 1880.

A. HALL, Peterborough. Dear Sir,—I have had the Wrought Iron Cook Stove, purchased from you, in constant use ever since last fall, and it gives the greatest satisfaction in every respect. I can recommend them highly to any one who is in the lumber business. Very truly yours, GEO. HILLIARD, M.P.

EVERY STOVE GUARANTEED

All the necessary TINWARE and CUTLERY for Shanties suppied at the Lowest Prices.

ADAM HALL, Peterborough.



The QUEEN'S HOTEL, TORONTO, CANADA

McGAW & WINNETT, Proprietors.

☞ Patronized by Royalty and the best families. Prices graduated according to rooms. b17

THE DEMAND AND THE SUPPLY.

The question of how much lumber will be called for during a season, and how much will be forthcoming to meet this want, is always an interesting one to those engaged in manufacturing or selling this article. They spend as much of their time and thought in considering it as they venture to lay upon any other one thing connected with their business, and with a result that in most cases is probably as little satisfactory as any that attends their efforts. It is very rare that an adequate solution of the problem is reached in advance; it is even doubtful whether any is often possible. Operators may scan the horizon of their trade with the greatest care for indications, may figure up the visible stock of logs and lumber, may estimate as closely as it can be done, the probable or possible increase in consumption over what it was in former years,—they may take all these things into consideration most carefully, but when they have done so they are generally obliged to acknowledge themselves unable to reach any certain conclusions in regard to the quality they will have to sell, or the amount they will be able to dispose of to their customers. Both the demand for lumber and the supply of it depend largely upon circumstances concering which much more is known at the end of the season than at the beginning. The failure of the crops, the hanging up of the drives, or many other occurrences that cannot be foreseen, are liable to affect one or the other materially, and sometimes make all the difference between a busy and profitable season, and an inactive and unprofitable one. Any conclusions in regard to the probable demand or the probable supply, that are drawn from a study of the outlook, as it appears on either hand, must possess, therefore, to a certain degree, the nature and value of speculations are valuable, if not always absolutely accurate. They show what may reasonably be looked forward to, provided certain conditions exist, and, hence, afford some data from which an idea may be obtained within certain limits, as to what lumber, may be, or should be, worth.

Inquiry in regard to what the demand for lumber is likely to be in the immediate future comes at once upon certain facts in the present situation of the trade that are too important to be overlooked. We find that the sale of lumber at all principal points of distribution is larger than it ever has been at this time in the season; that country yards, as a rule, are buying freely, and that they are selling their stock more rapidly than usual; that in all parts of the country there is a remarkable activity in building operations; that preparations are making to carry out railway enterprises that were abandoned when the hard times began a few years ago, and have since laid dormant; that, in fact, everywhere the lumber trade and other lines of business intimately connected with it are in such shape as they have not been in before in many years. We find another thing. The immigration to the United States from other countries has been, and according to reliable reports will be, large beyond all precedent. Every vessel that reaches our shores from the opposite side of the Atlantic brings as many new settlers as she can carry, and it is well known that all the steamship accommodations for such passengers have been engaged months ahead. There is not the smallest chance to question the fact that the number of immigrants arriving this year will exceed the largest ever before placed on record; it is palpable and undeniable. Then, there is every reason to believe that the yield of grain and other crops in the agricultural districts will be such as to give farmers an abundance of means to carry out any improvements they may have in contemplation. The harvest may not be the largest we have had in proportion to the acreage planted, but we doubt whether it will be exceed by that of any former year in the aggregate quantity obtained, or in [illegible] mbination of [illegible] h or either of the latter considerably, but such a drawback is not more likely to be met with this year than in any other; so that we may assume the probability that those depending for their means upon the products of the soil will have, later in the season, a large amount of money, which they will be apt to invest in improvements requiring lumber in their construction. In addition to these important features in the situation, we find that universal confidence in the present and future permanence of the existing prosperity prevails, that capital is abundant and seeking investment, and that generally the country is in a state of remarkable prosperity.

Consideration of the facts we have just recited can hardly fail to leave, upon the mind of any lumberman who undertakes it, a very decided impression in regard to the future of his own business. It can hardly fail to convince him, we think, that the demand for the commodity in which he is interested is more than likely to reach a figure that will make the business of other prosperous years seem small by comparison. It is difficult to see how any other conclusion could follow, legitimately. We have a combination, apparently, of all the favorable circumstances required to make an active demand, and have it at a time when activity in business is decidedly the fashion, and when consumers are in the best condition imaginable for buying. From these circumstances, the *Lumberman* feels bound to conclude that the outlook for the trade during the coming summer and fall months is most flattering, and that the probabilities warrant the belief that, so far as the demand is concerned, it will be all that the most exacting lumberman could ask for.

In regard to the supply, the question that has most to do with the stability of the market is whether it will prove greater than the demand. The *Lumberman* is of the opinion that in reply to this question it may be truthfully said that it will not. If we restrict our inquiry for the moment to the Northwest, and the territory supplied from it, we have at our command reasonably accurate data upon which to base our calculations. Several weeks ago we published statistics of the logs obtained in all the important districts last winter, and those carried over in the streams, with estimates of what might be depended upon as the result of operations during the summer and along the various lines of railway running into the pineries, which, making allowance for logs that will be hung up or held over in booms, showed the amount that will probably be available for sawing this season to be, as near as possible, 6,250,000,000 feet,—an increase over last year's production of about 600,000,000 feet, or ten per cent. The actual cut may overrun this figure somewhat, but even allowing that it does so to the extent of increasing the excess as compared with 1880 one-half, or more, making it 900,000,000, or even 1,000,000,000 feet, we submit that the difference would not be greater than will be required to meet the demand. An increase of fifteen per cent. in the demand for the year, which is certainly not outside the bounds of probability, would use up all the excess in the output, and leave the lumbermen of the Northwest with no more stock on hand at the close than they brought from 1880. No one who remembers the trouble experienced last winter with broken assortments, and stocks too small for the amount it was necessary to sell from them, will venture the assertion that the total stock on hand, January 1, should not be increased at least twenty-five per cent. We do not see that there is much chance that it will be increased to that extent, or to any extent, this season. We do not see where the lumber is to come from. The logs to make it are not in sight, and if they were, all the saw-mill capacity in the Northwest would not avail to turn them into lumber. No talk of any excess in the supply over the probable legitimate demand, in the face of such facts as these would be simply ridiculous. The preceding figures and comparisons, to be sure, relate only to the Northwest; but in this case what is true of the Northwest is true of the whole country. Outside of this district there is no source from which any supply of pine lumber may be obtained that will in any way affect our conclusion, and as for the demand, it shows an equal likelihood of increased activity, east, west, north and south,—wherever lumber is sold, in fact,—which is all the more reason for believing that by no possibility can the supply exceed, or even equal, it.

These points being determined, there remains no question as to the probable condition of the lumber trade during the latter half of the season. It would be very strange, under such circumstances as are likely to exist, if it should not be active and satisfactory to a remarkable degree. With a good demand, and only just about enough lumber to supply it, operators ought to have things go as nearly their way as anybody could expect. They will certainly not be obliged to shade prices unless they choose to, they will not have to force sales in order to clear off surplus srock, and if they sell their lumber without making a fair profit on it, candid people, acquainted with the facts, will be very apt to say the fault is their own. There will be no occasion for practicing any of the tricks of the trade that are sometimes resorted to, for the purpose of securing customers, or getting some advantage over a competitor. As there will undoubtedly be business enough to keep every dealer fully occupied, no one need fear, if he is ordinarily industrious, but that he will get his full share of it, and, as the demand will call for pretty much all the stock that will be available, no one need worry himself about disposing of what he has or can get. It is not often that the demand and supply get into the respective positions in relation to each other that they now occupy. It is in all respects an exceptional occurrence, and lumbermen should make the most of it. We are inclined to think they will. When this market settles down upon a fair scale of prices, as it must sooner or later, we look for activity and firmness to rule all along the line, and for the members of the trade, individually and collectively, to make quick sales and good profits.—*Northwestern Lumberman.*

WOODEN IDOLS.

From that portion of the Apocrypha known as the "Wisdom of Solomon," the following quaint extract is made: Now a carpenter that felleth timber, after he had sawn down a tree meet for the purpose, and taken off all the bark skillfully round about, and hath wrought it handsomely, and make a vessel thereof fit for the service of man's life. And after spending the refuse of his work to dress his meat, hath filled himself. And taking the very refuse among those which served to no use, being a crooked piece of wood, and full of knots, hath carved it diligently, when he had nothing else to do, and formed it, by the skill of his understanding, and fashioned it to the image of a man or made it like some vile beast, laying it over with vermillion, and with paint, coloring it red; and when he has made a convenient room for it, set it on a wall, and made it fast with iron: for he provided for it that it might not fall, knowing that it was unable to keep itself, for it is an image, and hath need of help. Then maketh the prayer for his goods, for his wife and children, and is not ashamed to speak to that which hath no life. Again, one preparing himself to sail, and about to pass through the raging waves, calleth upon a piece of wood (an image) more rotten than the vessel that carrieth him. And verily desire of gain devised that (the ship) and the workman built it by his skill; therefore do men commit their lives to a small piece of wood, and passing the rough sea in a weak vessel are saved. For in the old time also, when the proud giants perished, the hope of the world governed by the hand, escaped in a weak vessel, and left to all ages a seed to generation. For blessed is the wood whereby righteousness cometh. But that which is made with hands (the image) is cursed, as well it as he that made it; he because he made, and it because being corruptible it was called god.

LUMBER SALES.

The Montreal *Gazette* says:—Our Quebec correspondent telegraphs as follows: On the street to-day I heard of the following sales: Joly's spruce deals mill cutting, $36, $26, $20 and $14, and charges 20 per cent, odd sizes, and a dram of McRae's elm at 28c. News from the other side indicates a dull market in the lumber trade.

A Cough is usually the effort of Nature to expel some morbid matter irritating the air passages of the lungs. It may, however, proceed from an inflamed or irritable condition of the throat, a slight rash or humor often being perceptible. Let the cause be what it may, the remedy should be Hagyard's Pectoral Balsam. A purely vegetable Balsamic throat and lung healer. For sale by all dealers in medicine, at 25 cents per bottle.

NOTES BY THE WAY.

WOODSTOCK.

This is a beautifully situated and well laid out town. The streets are wide, and, as well as the public parks, are planted with maple and other trees, which now (June 9th) are in full foliage. The town is surrounded by good farming land, occupied by an industrious class of people, chiefly from the north of Scotland. Many of the original settlers were those who were driven from their native glens at the time of the Sutherland evictions. Their descendants, however, have no cause to regret the event, though at the time, painful enough to the expatriated Highlanders. They are now amongst the most comfortable and independent of any farmers in Canada.

Railway accommodation is convenient and ample—the Credit Valley, the Grand Trunk and Great Western Railways, each give Woodstock a station.

Considerable manufacturing is carried on. Mr. F. B. Scofield is an extensive dealer in lumber. At his saw and planing mills in East Woodstock, he manufactures cheese boxes, wooden bowls, broom handles, etc. The establishment has the latest improved machinery. It is provided with a simple but ingenious contrivance, consisting of a rapidly revolving fan, which, being in connection with exhaust boxes or pipes leading to morticing, planing machine, etc., draws through itself, by the vacuum created, shavings, chips, and sawdust, into a general receiving pipe, thence into a box near the furnace of the engine, supplying the boiler with fuel and producing a cool and refreshing blast for the fireman. The sand-papering machine for finishing doors, etc., works like a thing of life.

There are several other planing mills and lumber dealers in Woodstock. James Hay & Co. carry on cabinet manufacturing on a large scale. Two organ factories are doing an extensive business. The largest black leather tannery (harness and upper) in the Dominion is here, operated by Messrs. J. & J. Grant. They also manufacture belting. About forty men are employed, and 1,500 cords of hemlock bark are used per annum at $5 per cord.

Another extensive industry, which competes with wood fencing, is largely carried on by the Metallic Spinning Co., Mr. J. G. Short, manager. This concern spins the steel barb fencing wire at a rapid rate. Five machines are employed in twisting the wire and inserting the barbs. Three men are kept busy finishing the coils of wire by putting them through various baths after leaving the machine previous to having them galvanized. The manufacturers claim that the material with which the wire is coated is not broken off when the galvanizing process takes place after the insertion of the barb between the stands. Large quantities of this material is sent to the North-West, where wood-fencing material is scarce.

Mr. Whitlaw, manufacturer of boilers, etc., has just completed a portable steam saw mill, with upright or muley saw, for M. F. Shaw, of Guatemala, Central America. Mr. Shaw has already been at Guatemala, and will bring his "rig" along with him. He proposes to cut mahogany and Spanish Cedar, which is found in abundance there, extending from the coast twenty miles into the country, and is in great demand. It is expected that several other portable saw mills will follow this trial machine.

SOMEONE who claims to have tried it asserts that boiled linseed oil and charcoal mixed to the consistency of paint, and applied to timber to be buried in the earth will give it almost the durability of stone or iron. It is claimed to make such woods as poplar, basswood, ash, etc., as good for fence posts as any that can be found. Basswood posts coated with this preparation have been taken up, after being seven years in the ground, as sound as the day they were set. The process is certainly very simple and inexpensive.

THE lumber establishment at Winnipeg of Clark & McClure, which Thos. Scott has managed for several years, has been bought out by H. Sutherland & Bro., who also purchased a quantity of lumber, shingles and laths now being flat-boated to Winnipeg by Clark & McClure.

THE ELECTRIC LIGHT.

MR. E. B. EDDY'S NEW ENTERPRISE—AN EVENT LONG TO BE REMEMBERED IN HULL.

On the 14th inst., the public of Ottawa and Hull had for the first time a full practical test of the value of the electric light. Much as has been written and said upon this subject, vivid as may have been the description of it, clever as may have been the themes advanced about it nothing could have brought its beauties and utility so lucidly home to the minds of the public at large as the grand exhibition of its powers as shown in the extensive works of the most enterprising and shrewdest business man of the Ottawa Valley, Mr. E. B. Eddy, of Hull. Mr. Eddy, in its adoption, has, of course, been actuated by a desire to have what was best at the cheapest rate. No false economy. In all his transactions he fully realizes that there is that which scattereth abroad, and yet increaseth. In nothing is found penny wise and pound foolish, and the success of the electric light in factories is another laurel added to his great and growing wreath. The fact that his mills and factories would, for the first time, be illuminated by electricity sufficed to draw a great crowd of visitors to the spot from the city, and the population of Hull was out *en masse* to see what would be the result of the last experiment of the active business mind which has almost built up the young city. There are few in Central Canada who will not acccpt his conclusions as correct, but even his most ardent admirers were hardly prepared for the sight that awaited them. Crossing to Hull from Ottawa just as twilight was fading away, the northerly bank of the city seemed bathed in a mellow moonlight, but as it was long before the hour of Luna to be on her course along the horizon, the effect could not be attributed to her gentle influence. On reaching the Union Bridge the cause was self-evident. Hull seemed to have instituted an independent "order of full moons." Three grand lights, in size larger than any star, with a wonderful brilliancy, and not less inviting to the eye than the moon, lighted up the whole scene, showing the fine tracery of the bridge, the fine spray of the Chaudiere, and the bold outlines of the buildings on both banks of the river with wonderful distinctness. Advancing towards Hull, the light became gradually brighter, the shadows defined more sharply, and faces and colors more easily distinguished, and even the most skeptical were fain to confess that the light was a grand success. It was, however, in the vicinity of Mr. Eddy's mills that the beauty and effect of the light was most brilliantly brought out. The wide spread yards were all as bright as day, the windows of all the shops showed as if suns were beaming inside them, while the lights in the other mills and the shop windows of the city wore a sickly glare, like the dying torches at the end of political demonstrations. In the big mill, in which all the machinery had been stopped, and which was thrown open to all visitors, the sight was a study. The buiding was crowded with visitors, and here better than anywhere else the purity of the light was visible. The most delicate colors were as plainly discernable as in the brightest sunlight. Among the dresses of the many ladies who crowded the place with very young children, the gayest toilets shone out in their full beauty. No confounding greens with blues, no turning delicate mauves into vulgar reds. It was no wonder that the expressions "*C'est beau*," "*C'est magnifique*," were frequent on the lips of the lady visitors. The work that Mr. Eddy has undertaken in introducing this light into his premises it would not be easy to rightly picture, and the best description of it will give but a feeble idea of its magnitude. The total number of lights employed is forty, extending from his residence at the corner of Main street and Brewery street to the river bank opposite the Parliament Hill, and all through the various apartments of his numerous factories, storehouses and mills. These lamps are located as follows:—One in the front of his private residence, which throws a brilliant light over the whole square down to the river's edge; four in the sash factory, two being on the first floor where the planers are situated, and two on the second floor which is occupied as the window-frame and cabinet makers' department; one is located in the box shop, by no means the least extensive of the premises; two others are in the circular sawmills; three more are found in the large sawmill; two on the upper platform; two more in the small sawmill; three under the main platform; four in the pail shop; one in the machine shop; five in the match shop; one in the washboard shop; two in the lower sawmill, one on the lower platform, and four in the lumber yard. Each of these lamps has an illuminating power equal to two thousand candles, and sheds a brilliant light, with strongly marked shadows, over an area of 12,000 square feet, the whole of the lamps having an illuminating power equal to 80,000 candles, and lighting a combined area of 480,000 square feet. The machinery from which this light is derived is placed in what was formerly the stone grist mills occupied by McCormack & Sons at the back of the match factory. The machine used is the "Brush dynamic electric," size number 8, and driven by a powerful turban wheel. Its dimensions are 89 inches in length, 28 inches in width, 36 inches in height, with a weight of 4,800 pounds. The electricity is generated from an armature, which revolves at the rate of seven hundred revolutions per minute, driven by a belt twelve inches wide over a pulley 20 inches in diameter. The armature is placed between four heavy relays of insulated copper wire, containing in all 20,000 feet lineal measure. The whole machinery is located in the electrician's room, and under the present charge of Mr. George W. Hoag, of Mr. Brush's electric works, of Cleveland, Ohio. In this room is also found the automatic governor, an ingenious invention which regulates the current of electricity according to the number of lights in use, thus enabling any number of the lamps to be shut off or used without altering the speed of the main portion of the machine. The lamps used are the size known as number 3, each carrying double rods, which enable them to be supplied with four carbons, each twelve inches long, copper-plated, for the better conducting of the electric current, manufactured according to the Brush patent from coke. The lamps are calculated to burn for 16 hours without a renewal of the carbons, and the cost of each lamp is calculated to be only one cent per hour, each lamp being supposed to burn from an inch and a-half to two inches per hour, the upper carbon position burning about double the quantity consumed by the negative. The apparatus is of the same kind as has been so extensively introduced into the United States by the Brush Electric Company of Ohio, and into Europe by the Anglo-American Light Company of London, England. The same sized machine, with its full power concentrated in one light, is now in use on one of the finest vessels in the British navy. Mr. Millan, Mr. Eddy's manager, will have the general management of the apparatus, assisted by Mr. Mousseau, head millwright of the establishment, when Mr. Hoag returns to the United States, as he will do in the course of a few days. The event will long be remembered in Hull, and it need not be wondered at that it was made a festival of in the city. During the evening the Hull band, led by Mr. Durocher, was out, and played for some two hours about the city and serenaded Mr. Eddy. The turning out of the corps was voluntary. In getting the best and cheapest light for his place that he could, Mr. Eddy has done the public as well as himself a benefit, for the Union Bridge and its approaches were never so well lit as they were last night by his "new order of full moons."—*Citizen.*

Beechwood for Paving.

The Edinburgh authorities are at present making a test of the capabilities of beechwood as a paving material, and for this purpose have laid a wide crossing at the junction of Melville street with Queen's Ferry street with well-seasoned blocks of this wood. A slip of chilled iron, grooved to afford a grip for horses, is introduced between each block, and the interstices are all filled in with creosote.

"Their Name is Legion"—the people who praise that matchless medicine, **Burdock Blood Bitters.** It acts at once upon the Secretions, the Bowels, the Liver, the Skin and the Kidneys. It purifies the Blood, dispels all foul humors, and strengthens the nervous and debilitated system. No known remedy can do more. Try it and be convinced.

THE MANUFACTURE OF WOOD PULP.

Wood pulp, which has of late years acquired some importance as a substitute for rags in the manufacture of coarse and fine papers, is obtained in two different ways:—1, mechanically, by the mechanical disintegration of wood; 2, chemically, by treating the wood with chemical reagents.

1. Preparation of cellulose by the mechanical method.—Wood lately felled and stripped of its bark is ground between heavy millstones beneath the surface of running water, passing thence through a sieve or bolter, as a fibrous mass, which can be used, with or without admixture of rags, as a substitute for ordinary paper pulp. The wet mass of woody fibre is deprived of its superfluous moisture by pressure and in that state is sent to the paper-mills. This compressed fibre, even when boiled, will not give a fine-grained paper, for which purpose an addition of 25 to 80 per cent. of rags is necessary. Wood paper acquires a yellowish or greyish tinge with exposure, for which reason also it is unsuited for finer purposes. Wood fibre is not pure cellulose, but contains a mixture of intercellular substance, which has held the plant-cells together. Pure cellulose forms 30 to 60 per cent. of ordinary wood pulp. Wood pulp is very short in the fibre, owing to the method in which it is prepared, whereas pure cellulose is longer in the fibre, felts better, and is more suitable for papermaking. Wood pulp is therefore employed for the coarser sorts of paper, whilst the chemically prepared cellulose is well adapted for the finer kinds.

In 1871 some experiments were made by O. Meyh, of Zwickau, in regard to grinding wood after steaming it in steam boilers. The results were most satisfactory, and the method is now used in the fabrication of brown papers. Independent experiments were made about the same time by E. F. Meisner, of Roth-Dannitz, near Stolp, Pommerania, in the boiling of wood with and without caustic lye, grinding, and preparing paper from wood fibre obtained by the first method, with and without an admixture of rags. A partnership was concluded between H. Voelter and O. Meyh for the working of certain of these new processes, which are now known in Germany as the Voleter-Meyh patent. Aug. Erfurt, manager of the wood pulp and paper works of Bezner & Co., endeavored to improve the process by the ebullition and prolonged immersion of the wood in soda lye. Erfurt subsequently varied this process by boiling the wood twice before cooking it in the caustic soda, a process which yielded wood pulph of a superior quality. The papers so produced have been gradually improved, and now packing-papers of excellent quality are thus manufactured, which can be used for a variety of purposes for which ordinary papers are more or less unsuited. For many purposes the natural brown colour of the paper is a recommendation, and not only for cartridge-cases, book covers, packages, and the like, but also for floor-papers it is found most useful. Erfurt prepares his "lignite pulp" in four qualities, which can be used separately or combined in different qualities of paper.

2. Preparation of cellulose by the chemical method.—The preparation of cellulose by chemical means has recently made greater progress, as a much finer and whiter product is thus obtainable than by the mechanical method; still there is, unfortunately, one great disadvantage common to all the processes yet adopted—the expense, costly machinery and processes being employed for an object really attainable by other means. These consist in the continuous action of chemical reagents, whereby the expenditure of fuel is rendered unnecessary, and the great wear and tear of plant involved by the use of high steam pressure avoided.

A fresh starting-point in cellulose manufacture was afforded by the establishment of the Manachunk Wood Pulp Works Company, at Philadelphia, in 1864, whose products were exhibited in Paris in 1867. At this establishment the cellulose is prepared by Houghton's and Coupier's methods, by boiling the wood in acetate of soda under very high pressure. This branch of manufacture has been further investigated and improved upon by various parties.

In 1868 the Gloucestershire Paper Company started a large cellulose and paper manufactory in England, for paper-making without rags, thereby affording demonstration of the fact that paper can be manufactured from cellulose without any admixture of rags. A heavy outlay, stated to amount to £25,000, was involved by the experiments of the company.

In 1870 a company of English and Swedish capitalists started five large cellulose manufactories in Sweden, on the American system in use at Cane Mills, Sydney, N.B.

On this system the five manufactories in question, and other English and American establishments, are now worked as well as six large manufactories in Germany. Some manufacturers have adopted other methods, and have engaged in fresh experiments and researches, chiefly with a view to remedy defects of construction in the apparatus employed.

In the different methods hitherto adopted acids (muriatic and nitric) are used, to the action of which the wood finely rasped is exposed until the fibre is laid bare, whereby a portion of the cellulose is converted into glucose, whence alcohol is obtained by fermentation; after this the wood is treated with acetate of soda until all the soluble matter is extracted, and finally is washed. This method does not admit of the acid being used again, and moreover requires the vessels employed to be of more than ordinarily indestructible materials.

In Watt & Burgess' method, finely-chopped wood is treated with acetate of soda of 4 degs. Reaumur, under a steam pressure of 60 lbs. to the square inch. Here very much depends on the shape of the wood: in a highly comminuted form, as sawdust, the circulation is impeded; shavings, on the other hand, take up too much space, so the wood is treated with the lye in a series of digestors, under high steam pressure, and the soda afterwards extracted from it by the action of steam. As the lye contained therein is removed by the steam and the residum calcined in ovens of special construction, it is obvious that the method adds considerably to the cost of the process, and it is preferable to use the acid once only and allow it afterwards to evaporate naturally in open pits or to remove it by heating in closed vessels so contrived as to entail no extra firing. Cellulose prepared in this way requires no mechanical manipulation, but is simply bleached with chloride of lime before use. Chemically prepared wood pulp is superior to that prepared by mechanical means, being more elastic and longer in the fibre, and as before mentioned, can be employed for paper-making without any addition of rags.

Two Thousand Dollars.

The easiest, cheapest and best way to secure the above amount is to apply for membership in the Mutual Benefit Association of Rochester, N.Y. Pay Dr. S. B. Pollard, 56 Bay Street, one dollar for four medical examinations, he will send your application to the head office, if you are accepted as a member they will issue a certificate of membership, which, on payment of eight dollars, entitles you to full benefits as a member, should you die to-morrow, next day, next week, next month, or any time within three months, this Association will pay to your heirs, or assigns, the sum of two thousand dollars. At the expiration of the three months all you have to do is to pay your pro rata amount, which is from 20 to 75 cents on the death of some other member, who has done nothing worse than to die during the three months just past. By paying your assessments on deaths, you keep your certificate alive, and at the commencement of the second year you are assessed two dollars per thousand to keep up office expenses, etc., for the next year. No easier, surer or better schemes to carry two thousand dollars has ever been devised than the Mutual Benefit Associates, of Rochester, N.Y.
5-1-13

ZOPESA.—A healthy man never thinks of his stomach. The dyspeptic thinks of nothing else. Indigestion is a constant reminder. The wise man who finds himself suffering will spend a few cents for a bottle of *Zopesa*, from Brazil, the new and remarkable compound for cleansing and toning the system, for assisting the Digestive apparatus and the Liver to properly perform their duties in assimilating food. Get a 10 cent sample of *Zopesa*, the new remedy, of your druggist. A few doses will surprise you.

Hagyard's Yellow Oil is a perfect panacea curing by external and internal use all inflammation, pain and soreness; Rheumatism, Stiff Joints, Deafness, Colds, Kidney complaints, Burns, Frost Bites, and Flesh Wounds of every variety. For sale by all dealers.

WANTED,

An efficient and reliable correspondent for the CANADA LUMBERMAN, in each of the following cities, viz. :

QUEBEC, OTTAWA,
MONTREAL, HAMILTON,
And LONDON.

For futher information, address

TOKER & CO.,

CANADA LUMBERMAN OFFICE, PUBLISHERS.
Peterborough, Ont., June 13th, 1881.

Travelling Agent.

MR. A. L. W. BEGG has been appointed agent for the CANADA LUMBERMAN, and is authorized to collect subscriptions and grant receipts therefor and to make contracts for advertisements appearing in its columns.

The Canada Lumberman

DEVOTED TO THE LUMBER AND TIMBER INTERESTS OF THE DOMINION.

PUBLISHED SEMI-MONTHLY BY
TOKER & Co. PETERBOROUGH.

Terms of Subscription :

One copy, one year, in advance	$2 00
One copy, six months, in advance	1 00

Advertising Rates :

Per line, for one year	$0 90
Per line, for six months	50
Per line, for three months	30
Per line, for first insertion	10
Per line, for each subsequent insertion to 3 mo's.	05
Cards not occupying more than 12 lines (1 inch) per annum	8 00
Cards not occupying more than 12 lines (1 inch) for six months	5 00
Cards not occupying more than 6 lines per annum	5 00
Cards not occupying more than 6 lines, for 6 mo's	3 00

Special rates will be made for page, half page and column advertisements.

Advertisements intended for insertion in any particular issue should reach the office of publication at least three clear days before the day of publication, to insure insertion.

All communications, orders and remittances should be addressed and made payable to TOKER & Co., Peterborough, Ont.

Communications intended for insertion in the CANADA LUMBERMAN, must be accompanied by the name of the writer, not necessarily for publication, but as a guarantee of good faith. Communications to insure insertion (if accepted) in the following number, should be in the hands of the publishers a week before the date of the next issue.

PETERBOROUGH, Ont. JULY 1, 1881.

WE desire to call the attention of our readers to the sale by tender of the extensive saw-milling property at Parry Harbor, belonging to the Ontario Bank. In addition to the saw-mill, which is very complete, there are extensive and valuable limits attached thereto, which, after all, should be the great *sine-que-non* of such properties.

A CORRESPONDENT of the *John O'Groat Journal*, in notes of a trip to Edinburgh from Wick, dated May 25th, says :—"The scenery at Blair Athole, as witnessed from the railway, is surpassingly grand. There the trees were in bloom, and the scent of the sweet briar was wafted around us like a cloud of incense. We were informed that the value of the growing timber, aged fifty years, on one hill crest, used chiefly for railway sleepers, would be about £30,000, (nearly $150,000.) One of the most profitable investments is this growth of oak, the bark of which is used largely for tanning purposes."

WE have a post-card asking for information as to where black walnut trees, suitable for transplanting, can be obtained, from someone whose signature we cannot make out. The writer says he desires to plant out a number as an experiment, as he understands that a gentleman in Quebec has already planted out some 400 with satisfactory results. Nursery men having black walnut trees suitable for planting would evidently find it to their advantage to advertise them in THE CANADA LUMBERMAN. We hope, too, that our correspondent will accept this as a reply to his card, as we do not know where he would get what he wants, and cannot address him personally for the reason already stated.

ORDERED HOME.

Perhaps no better evidence of the firmness of the western lumber market could be afforded than that which we have in the recent decision of the Chicago lumber dealers to order home, with the intention of keeping them at home, the gentlemen whom they now have on the road soliciting orders. These travelling salesmen were the outcome of a period of depression, when it was almost a matter of financial life and death to make sales, of many other things as well as lumber, at almost any price, and although the necessity of making such sales has passed away, the travelling salesman has become such a fixture that, however desirable, in the interests of sellers, it will be difficult to get rid of him entirely. It is generally conceded that this following of buyers into their own offices does more to break or keep down prices than anything else that can be done. They must shade prices to do business, because unless the retail dealer can buy, or be made to fancy he is buying cheaper from the travelling man than he otherwise could do, he is likely to withhold his order, until it suits his own convenience to send it to headquarters. Now, if these things be so, it follows that the withdrawal of these gentlemen of the road must not only do away with the evil tendencies which their visits are calculated to produce, but afford the most substantial evidence to consumers that lumber is no longer a drug, and that the holders thereof feel that they can afford to hold on until the consumer requires it at the price which he has put upon it. And this is the true position of every holder of lumber. It is not like butter, cheese or eggs, or like the ribbons and bonnets of the dry goods merchant. It will not, if properly cared for, spoil in a single season like the first, or become unfashionable and therefore worthless like the latter. If the production of a year has exceeded the legitimate demand, the true way to adjust demand and supply is to hold on to what you have got—it will be none the worse of a little more seasoning—and curtail production—the trees that are left standing another year will neither grow rancid or unfashionable.

THE NEW LAND REGULATIONS.

IN another column will be found the new regulations recently issued by the Dominion Government with regard to their lands in the North-West. A persual of them can scarcely fail to convince the most sceptical that they are eminently favourable to the settlement of that country, but less there should be any doubting ones in this respect, we cannot do better than transfer to our columns the following comparison of the prices charged for wild lands in Minnesota and Dakota, by the most prominent competitors of the Dominion Government and Pacific Railway Syndicate, with those now in force in our own Nor'-West, as we find them set forth in the columns of the *Monetary Times* :—

IN THE CANADIAN NORTH-WEST.

Government lands within the Railway Belt may be acquired as follows : A free homestead of 160 acres on condition of settlement and cultivation for three years ; also, a pre-emption of 160 acres adjoining at $2.50 per acre, by instalments covering ten years.

Government lands may be acquired, beyond the distance of 24 miles from the railway, as follows : A free homestead of 160 acres on the same conditions as above ; and also a pre-emption of 160 acres at $2.00 per acre cash, at the expiration of three years. In addition to the 320 acres thus acquired, a settler's wife may obtain 160 acres as a free grant, on condition of cultivating 10 acres thereof to forest trees, thus making 480 acres to man and wife.

IN DAKOTA AND MINNESOTA

Government lands may be acquired within any Railway Belt as follows : A free homestead of 160 acres, on conditions of permanent improvement and continuous residence for *five* years ; or (not *and*) a pre-emption of 160 acres, on condition of permanent improvement and continuons residence for one year, an $2.50 per acre cash. A settler may in addition to either homestead or pre-emption take up a free tree-culture claim, on condition of planting 10 acres thereof with trees.

Government lands outside the railway limits may be acquired on similar terms to the above, but the price for pre-emptions is $1.35 per acre instead of $2.50.

N.B.—It should be observed that the United States Government does not permit, as does that of Canada, the same individual to acquire both homestead and pre-emption claims. He must take one or the other—160 acres instead of 320.

IN THE CANADIAN NORTH-WEST.

The Canadian Pacific Railway Company asks for its lands, within 24 miles of the road, a uniform price of $2.50 per acre, payable by instalments, with a rebate of $1.25 per acre for substantial improvements and cultivation.

IN DAKOTA AND MINNESOTA.

The Northern Pacific Railway Company asks from $2.50 per acre upward, according to quality and location, and no rebate is promised to the settler who cultivates his farm. As a fact the prices of lands contaguous to the railway, range as high as $10 and $15 per acre.

The circulars of the St. Paul, Minneapolis and Manitoba Railway Company do not announce the prices of lands, and all the best farms adjacent to the line have now been taken up. In all sales, however, the company promises a "rebate of nearly one-half the purchase money for breaking and cultivating the land." The actual prices of farms are graduuted according to quality of the land and distance from a station.

AN ORANGE PEELED.

To the Editor of The Canada Lumberman :

MR. EDITOR,—A month or so ago I sent you a short sketch of all I thought would be interesting to your readers of this part of Canada, therefore, at this time, I can only present you, as it were, with a squeezed orange. The most interesting feature in your paper, to the general reader, is information about woods and forests. In my time we used to hate the timber because it stood between us and johnycakes, and moreover for the sweat it caused us to clear the land, but tastes change with time—nothing pleases us better now than the "forest primeval." Forty years ago one in this place could look in no direction without seeing scores of towering hemlocks, many of them "girdled" to accoplish their cheap destruction. They have all long since disappeared and left no traces of their existence—faded away like the red men under the fostering care (?) of Yankee legislation. In those days the havoc made of elm, maple, brown ash and basswood, for potash, is fearful to contemplate, but it was a case of life and death between the men and the trees. Although many of the inhabitants favored the forest by a "wooden look," they choose to be survivors.

The French mode of clearing low land west of here was by fire, which destroyed all vegetable life, and they have no taste for planting trees. A look across their level settlements reveals nothing but whitewashed houses and cedar rails. The want of wood has long since bore heavy upon the poor.

One of your correspondents speaks of the grievences of small dealers in lumber, owners, perhaps, of an old up-and-down mill. Now, I feel for those martyrs, having suffered a moral crucifiction in common with them. One of my townsmen, on the rack, that is, selling boards to an old farmer, after the torture was suspended, gave it as his deliberate opinion that anyone, after the long agony of dealing in lumber with those close-fisted, selfish specimens of humanity, should, without any further preparation, be entitled to enter into the blissful fields where the good niggers go. With the joiner and carpenter we have no difficulty, they know what they want and know what it is worth, but the potato-digger, in this business, seldom or never deviates into common sense and fair dealing. That anyone else has as good a right to an equivalent for his money as himself, never penetrates his agricultural skull. Our patience has often gave way, and forced the pig-breeder to "unload" and go his way. We have another customer far worse than the tight man, for the tight man, to his honor, be it said, means to pay, but the fellow, who, with malice aforethought, comes for a few boards is the man we mean. He wishes to be trusted a short time, of course. He banters you long on the price, to convince you that the debt will bear heavy on his conscience till settled. A year rolls away, but the slight indebtedness has long slipped from his memory ; if reminded of it, he views the transaction with the complacency of Wilkins Macauber on a similar occasion. You feel puzzled ; the law offers you no redress ; the man has no effects outside of exemption ; you don't know in what category to place your act ; it is too business-like for charity, and yet looks more like charity than business. Finally the unwelcome reflection forces itself upon you, that you have really given alms without the smallest right to claim the credit of it.

E. CHANDLER.

COUNTY MISSISQUOI, P.Q.

A NEW INDUSTRY.

O. A. Gould, who resides on the Pennoyer farm opposite this city, has established a new line of business that is of considerable import ance to the public. Mr. Gould has provided machinery by which he manufactures cedar strips for lining trunks, wardrobes, furniture, clothes-presses or for inside finishing for houses if needed. The machinery consists of a set of knives 6½ feet long, which commence on the outside of a cedar log and cut it in one continuous strip in any thickness required from the thirty-second part of an inch to half an inch in thickness, the strips of wood being delivered in a compact roll ready for use as soon as cut. The importance of this manufacture consists in the fact that cedar wood is a complete protection against all kinds of vermin, such as ants, cockroaches, moths, lice and worms of all kinds. The design is to use this cedar for ceiling in pantries, clothes-presses, store-rooms and all other places where these pests of the household congregate. It can also be used for flooring, if desired. Cedar wood neither shrinks nor swells under the influence of moisture or heat, and can be papered or washed without destroying any of its qualities. The objection to its use in building has been its smallness, making the lumber very narrow and imperfect when it is sawed in the usual manner, but by Mr. Gould's method of paring it off in a thin slice, the strips can be made 50 feet long, and it is so flexible that it will not break, and the imperfections in the grain do not appear to any extent in the sheets. For ceiling, it only requires that the edges be leveled and glued together, and the work can be made perfect.

Mr. Gould thinks it can be used in matrasses, thus making them always free from all danger of infection or vermin. This method of treating cedar wood will be a great benefit, and bring this hitherto almost worthless product of the forests into demand.—*Saginaw Herald.*

THE Toronto *Globe* says :—It is related that John Brower, a New York furniture maker of about sixty-five years back, who was the first to introduce the use of black walnut in his trade, found very great difficulty in inducing the public to use the wood. The current of fashion was then running strongly on mahogany, and it may be added fashion never decreed the use of a more beautiful or enduring wood. In those days there was plenty of black walnut in New York State, and the Erie Canal was much used as a "floatable stream" for the logs. Then Western Pennsylvania and Michigan became the great sources of black walnut ; after that, Ohio and Indiana, in which States fabulous quantities of the now precious wood were burnt up in clearing, or split into rails. In Western Ontario also, the same method prevailed of disposing of what was then deemed a cumbersome nuisance. At the present day it is necessary to go beyond the Mississippi for black walnut, and the price of the wood in New York is about $100 a thousand. No doubt, as black walnut gets scarcer, the furniture makers will endeavor to give dame fashion a twist backward into mahogany, or forward into the adoption of some of our splendid native hardwoods. Circumstances seem to point to the black birch as the supplanter to a great extent of the walnut. There are prodigious quantities of this wood in Ontario and Quebec. In large tracts of the Muskoka and Parry Sound districts it is the prevailing timber, and on the best land it grows to a great size. Farmers who have black birch standing in accessible situations would do well to cease cutting it for the present.

COOKING by electricity will be carried on at the French International Electrical Exhibition.

ST. JOHN, N.B.

From Our Own Correspondent.

STREAM DRIVING.—It our last reference was made to the favorable condition of the water in the rivers and streams for bringing out the logs. While it lasted the freshet was very favorable indeed, but coming so late in the season it fell off very rapidly,and considerable quantities of logs were "hung up" in consequence. The great bulk of the logs, however, were got out, and those left behind for the present will, no doubt, all come to market in the course of the season.

STEAMSHIPS.—Referring to this new element in our lumber carrying trade, its development appears to be quite rapid. Already this season eleven vessels of this description, of an aggregate tonnage of 12,076, have been cleared with deal cargoes. Another (the *Anny Dora*, 1,107 tons) is now loading, and we hear of five others recently chartered, which may be expected to arrive in a few days. Estimating these latter at 1,000 tons each, we have seventeen steamships of 18,183 tons engaged in this trade up to the present time.

FREIGHTS.—A large number of vessels have arrived in the last few days, and the freight market is much depressed. The latest transaction reported, was at 53/. for Liverpool, which may be quoted as about the market rate to-day.

SHIPPING LIST.—The following is the list of square rigged vessels in port, with their tonnage and destination :—

Riverside, 1,234, Liverpool.
Equator, 1,272, Liverpool.
Northumbria, 1,592, Liverpool.
Endymion, 1,298, Liverpool.
Alphens Marshall, 1,100, Belfast or W.C.E.
Edward Kidder, 1,014, Newport or Liverpool.
Arabia, 957, Liverpool.
Nettie Murphy, 1,373, Liverpool.
William, 998, Waiting.
Douglas Campbell, 845, Marseilles.
Granite City, 776, United Kingdom.
Effort, 378, U. Kingdom or Continent.
Ilma, 437, E.C. Ireland.
Africa, 1,130, Cardiff.
Loanda, 1,500, Liverpool.
Wanderer, 438, Ireland.
Huano, 843, Belfast.
Sverre, 404, United Kingdom.
Sverre, 600, E.C. Ireland.
Blanco. 343, discharging.
Josie Trop, 1,100, Gibralter, for orders.
Venus, 734, Ireland.
Cecilia, 334, France.
Nytghan, 1,254, waiting.
Liffey, 845, Liverpool.
Ashlow, 639, Cork or Limerick.
Charles, 1,500, Liverpool.
L. H. D'Veber, 615, Londonderry.
John Murphy, 1,479, Liverpool.
Bonito, 599, Galway.
Broderine, 453, Marseilles.
Anny Dora, S.S., 1,107, Liverpool, London or B.C.D.
Taganrog, 514, Marseilles.
Loining, 847, St. Nazaire.'
E. W. Gale, 320, discharging.
Revolving Light, 1,317, Liverpool.

SHIPMENTS.—The shipments of deals and other sawn lumber are as follows :—

For Europe.....15,639,000 Sup. ft.
" United States.....2,987,000 "
" West Indies..... 100,000 "

St. John, N.B., June 18th, 1881.

DULUTH.

The Duluth section will this year manufacture sixty million feet of lumber as follows :—

Peyton & Co.	5,000,000
Graff, Little & Co.	10,000,000
A. M. Miller	8,000,000
Payne & Co.	10,000,000
Grey & Co.	4,000,000
Knife Falls Lumber Co.	25,000,000
Total	62,000,000
Lovejoy & Co., shingles	14,000,000

This is nearly double the amount cut last year, and will be increased next year to nearly 100,000,000 feet by new mills and increasing capacity of those already built.

As freights rule low at present, and may continue to do so for a time, it is to be feared that shippers may be tempted by this to send cargoes on the open market to an extent greater than the present state of trade warrants. It is only by withholding every foot of timber as long as possible, so as to enable this market to right itself, that the business can be rendered profitable to those interested in it.

TIMBER NEWS.

During the week ending 18th June, 1881, the undermentioned timber passed through the slides mentioned :—

LIGHTING SAW-MILLS BY ELECTRICITY

The rapidity with which the electric light has advanced from the experimental to the practical stage is something remarkable, even in the present wonderful age. It has long been known to scientists that what is termed the voltaic arc, which is simply a continuous electric spark, afforded a light but little inferior to sunlight; but it is only within a few years that any attempt has been made to turn the fact to practical account. In the last half dozen years or so, electricians have spent a vast amount of time in studying the principles of electric lighting, and in experimenting with appliances for the successful and economical application of these principles in practice. That the time and money so employed have not been wasted, is evidenced by what has already been accomplished. We find now several different styles of light in use, and several more that have been tested by their inventors with very flattering results. The electric light, in fact, has passed the experimental part of its career, and appears now as something that has stood the test of use without failure.

The *Lumberman* pointed out to mill owners some months ago the possibilities of electricity as a means of illuminating saw-mills, planing-mills, furniture factories, and all woodworking shops that are, either all or part of the time compelled to run nights. The lack of a good light has been a serious obstacle in the way of night running in all kinds of mills and factories, and particularly in these that from the nature of the material operated upon are liable to damage by fire. Gas and oil have both been used, and in many cases the result has been the destruction of the mill by fire. And when no accidents have occured the light obtained has invariably been found to be of poor quality, rendering it impossible for employes to accomplish anywhere near what they would in daylight. Indeed, the inferiority of the best light hitherto obtainable, and the risk inseparable from its use, have led many manufacturers to prefer the alternative of doing less work to that of attempting to operate their mills or factories with such a dangerous and ineffectual means of illumination. We have been told by a good many saw-mill men that they would gladly run their mills night and day if they could find some way of lighting them without increasing the danger of fire, and in such a way that effective work could be done.

It seems to us that in electricity mill men of all kinds will find exactly the light they have been looking for. It is unquestionably the best light that has ever been invented, as far as its illumination power goes, and there is certainly no doubt about its superiority in point of safety. Besides, it is really the cheapest of all known methods of lighting large areas. The principal item is the first cost of the machines and the power; these once bought, there is nothing to do but to keep the engine running and supply the lamps with carbons, the latter forming even for a considerable number of lights, but a nominal item of expense. The cost of producing the light, after the electric machine and its motive power are obtained, would hardly amount to anything for the operator of a mill or factory. In all woodworking shops, at any rate, the means of producing power is so cheap that it practically cuts no figure, so that by adopting the electric light the expense of making the mill as bright as day is reduced to an exceedingly small sum. The wear and tear of the machines used, and of the lamps, we understand, is very slight, so that there is no lack of economy on this score. With electricity, all fear of fire, resulting from the lighting of a mill, would be groundless. The light is not a flame, but a spark, and as it develops no appreciable amount of heat it cannot set fire to anything; while any accident that disturbs the position of the light puts it out at once.

We do not well see how anything in the way of a light more perfectly adapted to the use of saw-mills, and all sorts of mills, in fact, could be devised. It is maintained altogether by power, which is an indispensable adjunct to every manufacturing establishment, and can in most cases be applied to an electrical machine at a very small cost. When the apparatus and lamps are once in position, the light is produced steadily and with but little expense and trouble. It is always ready when it is wanted, is lighted instantaneously by the mere shifting of a belt, and involves in its maintenance scarcely any extra trouble or expense. It emits no smoke or disagreeable fumes, is perfectly clean, and what is most important, is entirely free from danger, which cannot be truthfully said of any other means of turning darkness into light that is known to the world. It seems to possess all the advantages that any one could ask for, and so few and such unimportant disadvantages that they are hardly worth considering.

It is probably known to most of the *Lumberman's* readers that there are several kinds of electric light that have been perfected, though only one has yet been sold to any considerable extent. This one has been adopted by most of those who have already tried this sort of light, mainly, we suppose, because it has, until lately, been the only one of which the sale has been vigorously pushed. The principle in all the machines is the same. They all use dynamic electricity and carbon lamps, and so far are all alike; the difference in the systems is in the machines for generating the current, and in the devices for feeding the carbons in the lamps, by which various degrees of steadiness and perfection are produced in the light. It is important in selecting a machine that these differences should be understood and appreciated, lest one become prejudiced against the light because of faults that exist simply in the mechancism, or the manner of utilizing the current.—*Northwestern Lumberman.*

THE OUTLOOK FOR LUMBER.

Mr. Van Schaick, of the extensive lumber firm of Ludington, Wells & Van Schaick, expresses the following opinion of the condition and prospects of the market. He is as well qualified to speak on the subject as any man in the country :—

"Seriously, to me the lumber market has all the elements of strength rather than weakness, and it has fully met the expectations held since January by many engaged in it. I would beg to suggest for your consideration the following elements of strength: First, a demand fully equal to that anticipated early in the season. With the fact that no switching of cars has been done for about two weeks past, the output from city yards by rail from January 1 to May 18 is but 143,594 feet less than during the same time last year, and all will admit that the city consumption has been greatly in excess for the same time. Second, that with largely increased receipts by rail over last year from January 1 to May 18 there remained at that date a deficiency in receipts of lumber of 22,352,000 feet as compared with 1880. Third, that it was generally admitted at the lunch given by Vice-President Martin, that the receipts of this year would be greatly in excess of last year, and might reach a total of 1,800,000,000 feet. As the count now stands, to receive an amount equal to last year only, there must arrive 1,360,000,000 feet. To receive this you have 182 business days including December 15, and arithmetic will show that each business day the receipts must be 7,500,000 feet to equal last year's receipts. Anything above this would be a surplus over last year.

"Every lumberman can form his own estimate as to what the excess will be, but in my judgment the excess in sales for 1881 will fully equal the excess of receipts over 1880 from this time forward. It is unnecessary to enlarge by stating that lake freights, wages and all expenses are likely to add fully $1 per thousand to the cost of manufacture over last year. No exact amount can be arrived at; still, this will be an important factor in the current market value of the year. An opinion formed and a position taken on the value of a commodity so largely produced and consumed as lumber, should be backed by arguments and facts, as care should be taken not to mislead dealers and consumers by opinions based on personal interests. My impression now is that since the rate of interest began to decline in western centers a few years since, all business men who have taken the bear side on the value of any commodity have been disappointed in results, and that it is extremely dangerous in the present prosperous condition of the country to sell any commodity at a low price in regular business that the seller must immediately replace. The stock of logs cut during the past winter is not excessive at any point, nor beyond the ability of the owners to carry easily. Money is abundant at an exceedingly low rate of interest compared with former years, the general business is prosperous in all departments, and the indications point to a steady and large consumption of lumber, Demand and supply will probably adjust prices to the satisfaction of manufacturer, dealer and consumer."—*Lumberman's Gazette.*

We have received No. 10, Vol. 1, of The Canada Lumberman, a 16 page semi-monthly paper hitherto published in Toronto by Mr. Alexander Begg, but which has just been purchased by Messrs. Toker & Carnegie, proprietors of the Peterborough Review, to whom we are indebted for the copy before us, and whom we wish every success in their new venture. The Canada Lumberman will be a trade organ, absolutely non-political, and will not only contain those accurate statistics which are necessary to the trade as a basis of intelligent operations, but will afford a medium through which the lumbermen of the Dominion may explain their wants and wishes or exchange ideas on subjects of interest to them. It is beautifully printed with new type on heavy white paper, contains a large amount of reading and is only $2 a year in advance.—*Fenelon Falls Gazette.*

The circulation of the Canada Lumberman is over 2,000 copies. Advertisers should note this

MR. MOORE REPLIED TO.

To the Editor of The Canada Lumberman:

Dear Sir,—Having noticed in the last issue of The Canada Lumberman a communication from W. Moore, in which he complains of the treatment received by the so-called, small mill-men, at the hands of Toronto planing mill men. I am pleased to observe, however, that he does not include retail men proper, in his denunciations. I would ask Mr. Moore if small mill-men are not somewhat in fault in this matter? Mr. Moore evidently included amongst the number. To the writer's own knowledge, it is generally the custom of small mill-men to come to Toronto with their lumber with the express intention of making all they can of it, and therefore cast the retailer, or middlemen, to one side, and seek out the sash and door factories, thinking that by disposing of their lumber to the consumers they will realize the outside figure for their lumber, or in other words, get the profits that should go to the middleman, and in this expectation they are often deceived, and many will say, rightly served. Now, although I wish it to be distinctly understood that it is not my purpose to attempt to defend the factory men, as I doubt not they are well able to defend themselves, still I think Mr. Moore will hardly deny that it is extremely difficult to convince many small mill-men as to what constitutes a mill cull, and more difficult still, as to what is really clear lumber, and as to what is well manufactured or the reverse, most difficult of all. Their knowledge in this respect is often exceedingly defficient, and considerable difficulty is often experienced by the purchaser in getting a satisfactory settlement in consequence. There is still another fault made by small mill-men, and that is in the handling and piling their lumber. Many lumbermen can testify that it is quite exceptional to find clear, bright and properly piled lumber at small mills, but frequently so damaged by sap-staining as to be unfit for market, and so depreciated in value nearly one-half. Now, I will agree with Mr. Moore, that in this respect matters might be improved to the advantage of seller and buyer, by establishing a depot under proper management, as such evils as that I have referred to above might be remedied under the influence exerted by an efficient manager, and I conceive that is about the only advantage that would be gained by the combination advocated by Mr. Moore, as he must be well aware that there are plenty of reliable dealers here to whom he could consign his lumber, and save his travelling expenses, and realize all the market would afford; and if Mr. Moore has clear, properly manufactured lumber at present to dispose of, he can net $28.00 per M., which is not a bad figure, even for small mill-men.

Truly yours,
H.C.

Toronto, June 16, 1881.

ENCOURAGING.

The receipt of such letters as the following, we need scarcely say, is most encouraging to the publishers of The Canada Lumberman. We have already received not a few of this kind, but there is room for more :

Fort Frances, N.W.T., June 6th, 1881.

Messrs. Toker & Co., Peterborough.

Gentlemen,—Enclosed, please find the sum of $2.00, for one year's subscription to The Canada Lumberman. I have received two copies of your paper, and find that it contains a great deal of very useful information to lumbermen.

Yours truly,
S. H. Fowler.

Collingwood, June 18, 1881.

Messrs. Toker & Co.,

Dear Sirs,—Having accidently seen The Canada Lumberman newspaper published by you, and being somewhat in that line of business, I am quite pleased with the amount of information to be found in your periodical and having reference to that line of business, and would desire to become a subscriber. Please send me a copy on receipt, and consider me a subscriber for a year.

Yours truly,
David Fleming.

Dyspepsia.—Strenthen your digestion—tone the stomach for utilizing and assimilating every atom of food you take; the body needs it for strength and vigor. *Zopesa* cleanses the entire system, stimulates the Liver, keeps you regular, and able to eat ten-penny nails. Letters and postal cards come in daily, telling of cures and help from *Zopesa*, from Brazil. *Positive proof* of the health and vigor it gives in a ten cent sample. Ask your druggist.

Chips.

OWING to the large amount of hemlock bark to be peeled in New Brunswick, operators are offering $1 and $1.10 for men, and even at these figures can scarce make up their crews.

THE daily average number of pieces (logs, ties, bolts, timber, &c.) passed through the gap at the western side of the boom at Belleville is 6,000, yet such is the extent of the supply from the river that but little diminution is noticeable in the bulk collected at the river's mouth.

LOGAN'S tannery, Pictou, N.S., has been rebuilt. The new building is 200x150 feet, and more convenient and commodious than the one which was burned down in 1875. It turns out at present about 1,000 sides of leather per week, and using some 7,000 tons of hemlock bark per annum.

THE *Railroad Gazette* of June 10th, reports 1,574 miles of new railroad built thus far this year, against 1,590 miles reported at the corresponding time in 1880, 661 miles in 1879, 413 miles in 1878, 570 miles in 1877, 628 miles in 1876, 296 miles in 1875, 537 miles in 1874, and 1,171 miles in 1873.

THERE are huge jams of logs on the Kennebec River, N.B. The drivers start them by blowing them up with powder. Thousands of spectators are watching the proceedings. A young fellow sitting on a rock looking on was struck by a log, knocked in and drowned, as was his companion who tried to save him, the other day.

A PARTY of New York capitalists were in Montreal last week making enquiries with the view of establishing a factory for the manufacture of Vegetable Fibres. The capitalists referred to are extensively engaged in the same business in New York, and it is believed by their acquaintances here that they intend starting a factory in this city.

THE Hart Emery Wheel Co., of Hamilton, have lately built a new factory on Hunter street, the size of which is 60x25, two storeys high, with a wing in the rear for engine house, etc., all built of red brick. They are full of orders, and report a largely increasing trade. The wheel made by this firm has a wire web inserted which largely diminishes the risk of the wheel bursting, as often happens with the ordinary wheels.

A COVINGTON, Va., paper notes the shipment from that point recently of a large lot of walnut timber, which will go *via* Richmond to Europe. The consignment amounted to 500,000 fect. A bill of 50,000 feet of white oak lumber was also sent from the same town lately to England and Scotland, where it is to be used in car building. Such transactions as these show that the valuable hardwoods to be found in this country are in demand abroad as well as at home.

ACCORDING to one of the Lewiston, Me., local papers the lumber business there is in a very flourishing condition. The two steam mills cut something over 100,000 feet per day, and the shipments from the yards connected with them amount to nearly fifty cars per week. The mill men are said to be receiving orders faster than they can fill them, and, in consequence of the activity in business, have advanced the price of clapboards from $20 to $30 per thousand feet. Most of the lumber shipped from Lewiston goes to Boston, Lawrence and other Massachusetts cities, being purchased by lumber dealers and building contractors.

An ingenious person has just hit upon a new and original derivation for the term "jerry," as applied to "jerry buildings," the work of dishonest or impecunious individuals engaged in the erection of house property. The derivation is so obvious that it seems a wonder nobody ever hit upon it before. This amazing philologist reminds us that "Joshua, the son of Nun, walked round Jericho in the old time and caused trumpets to be blown, whereupon the walls fell down with such facility that the builders must have been greatly blamed," and so their work became proverbial. A "Jericho builder," therefore, got to be a byword of reproach, and in the progress of ages the phrase has easily and naturally been corrupted into our modern term a "jerry builder."

THEY ALL DO IT.—Everybody uses "TEABERRY" for the teeth and breath, the newest, brightest, cosiest little toilet gem extant. Try a 5 cent sample.

TANNING WITHOUT TAN.

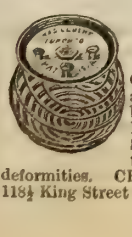
A company has lately been formed in Belgium for the purpose of working a new tanning process, invented by Dr. Heinzerling, of Frankfort, which has for its object to do away with all the drawbacks involved by the usual methods of tanning hides. The popular saying is that there is nothing like leather, but the making of it is more difficult than that of any other commodity in daily use. For several years past leather makers have found it difficult to meet the requirements of the leather sellers, owing to the increased consumption of the article, it became more and more difficult for the tanners to procure the necessary funds the figure of which rose in proportion to the constant rise in the price of tan, and then again, the immense amount of time it takes by the present process to make a skin into leather also over-handicapped the producers. All these difficulties are in a great measure overcome by the new system; so, at any rate, our contemporary *la Cote libre* tell us. Dr. Heinzerling tans leather without tan, that is to say without oak bark; using instead a mineral composition, by means of which he claims to work wonders. The company that has been formed in Belgium for the purpose of making leather according to his receipt, is to take over the works of M. Delattre Hallez, of Mons, whilst the remaining partners are to contribute 12,000*l.* towards the plant, fitting, and working. The tanning yard is already in full working order, customers are coming in in numbers, and those who have tried the new leather are all agreed that it is fully equal to the oak bark leather in quality, whilst its manufacturing price is very considerably lower. The new process only takes one hour, whilst the old require six hours, all other circumstances being equal. The promoters aver that the new leather will be a great commercial success.

The Willow.

Anybody who has the patience to wait five-and-twenty years for a large return upon a small expenditure should plant the willow tree. The demand for this wood during the last few years has been extraordinary, and the London dealers now readily wait upon any estate agent who has two or three fairly-grown willows for disposal. An average price for a good tree with plenty of top is £10. The wood is used for a variety of purposes. Boles just cut down, and free from disease and stain, are made into carriage bodies. Cricket-bats worthy of the name and the game are made of no other wood. It is the material also of many articles of modern furniture. The inferior parts of the tree serve for toys, for cotton or silk reels, or for conversion into charcoal. For many of the purposes we have named, the wood is first placed in scalding water, when it may be twisted, kneaded, cut, or stamped out, just like a piece of boiled cheese. Properly, of course, the willow should be grown upon the margin of a ditch or brook. It will grow more slowly and less perfectly in very moist and heavy soil. It should be planted in the spring or autumn. Those who want as rapid a development as the tree is capable of should not plant little sprigs, but a goodly-sized pollsrd lop, say from seven to nine feet long, and as thick as a man's wrist. If such a lop as this be placed three feet in the soil, failure is next to impossible.—*Land.*

The great Marvel of Healing—the grand climax of medicinal discoveries is Burdock Blood Bitters. It cures all diseases of the Blood, Liver, Stomach, Bowels, Skin and Kidneys, Female Complaints, Scrofula, General and Nervous Debility, and is a reliable Tonic in all broken down conditions of the system. Sample bottles 10 cents. Supplied by all dealers in medicine.

Hagyard's Pectoral Balsam is a purely vegetable healing balsam. It cures by loosening the phlegm and corrupt matter from the Lungs and expelling it from the system. Croup, Asthma, Bronchitis, Hoarseness and all pectoral diseases yield to it promptly. It costs 25 cents a bottle.



TRUSSES.

CLUTHE'S PATENT SPIRAL TRUSS all attachments improved. No more buckles, all on solid brass casting. Book on rupture and human frame free. Send address in full post card. Best true information about rupture and deformities. CHAS. CLUTHE, Surgical Machinist, 118½ King Street west, Toronto. 12L13

Department of the Interior,

OTTAWA, 25th May, 1881.

WHEREAS circumstances has rendered it expedient to effect certain changes in the policy of the Government respecting the administration of Dominion lands, public notice is hereby given:—

1. The Regulations of the 14th October, 1879, were rescinded by order of His Excellency the Governor General in Council, on the 20th day of May instant, and the following Regulations for the disposal of agricultural lands substituted therefor:

2. The even-numbered sections within the Canadian Pacific Railway Belt—that is to say, lying within 24 miles on each side of the line of the said Railway, excepting those which may be required for wood-lots in connection with settlers on prairie lands within the said belt, or which may be otherwise specially dealt with by the Governor in Council, shall be held exclusively for homesteads and pre-emptions. The odd-numbered sections within the said belt are Canadian Pacific Railway Lands, and can only be acquired from the Company.

3. The pre-emptions entered within the said belt of 24 miles on each side of the Canadian Pacific Railway, up to and including the 31st day of December next, shall be disposed of at the rate of $2.50 per acre; four-tenths of the purchase money, with interest on the latter at the rate of six per cent. per annum, to be paid at the end of three years from the date of entry, the remainder to be paid in six equal instalments annually from and after the said date, with interest at the rate above mentioned on such portions of the purchase money as may from time to time remain unpaid, to be paid with each instalment.

4. From and after the 31st day of December next, the price shall remain the same—that is $2.50 per acre—for pre-emptions within the said belt, or within the corresponding belt of any branch line of the said Railway, but shall be paid in one sum at the end of three years, or at such earlier period as the claimant may have acquired a title to his homestead quarter-section.

5. Dominion Lands, the property of the Government, within 24 miles of any projected line of railway recognized by the Minister of Railways, and of which he has given notice in the *Official Gazette* as being a projected line of Railway, shall be dealt with as to price and terms, as follows:—The pre-emptions shall be sold at the same price and on the same terms as fixed in the next preceding paragraph, and the odd-numbered sections shall be sold at $2.50 per acre, payable in cash.

6. In all townships open for sale and settlement within Manitoba or the North-West Territories, outside of the said Canadian Pacific Railway Belt, the even-numbered sections, except in the cases provided for in clause two of these Regulations, shall be held exclusively for homestead and pre-emption, and the odd-numbered sections for sale as public lands.

7. The lands described as public lands shall be sold at the uniform price of $2 per acre, cash, excepting in special cases where the Minister of the Interior, under the provisions of section 4 of the amendment to the Dominion Lands Act passed at the last session of Parliament, may deem it expedient to withdraw certain farming lands from ordinary sale and settlement, and put them up for sale at public auction to the highest bidder, in which event such lands shall be put up at upset price of $2 per acre.

8. Pre-emptions outside of the Canadian Pacific Railway Belt shall be sold at the uniform price of $2 per acre, to be paid in one sum at the end of three years from the date of entry, or at such earlier period as the claimant may acquire a title to his homestead quarter-section.

9. Exceptions shall be made to the provisions of clause 7, in so far as relates to lands in the Province of Manitoba or the North-West Territories, lying to the north of the belt containing the Pacific Railway lands, wherein a person being an actual settler on an odd-numbered section shall have the privilege of purchasing to the extent of 320 acres of such section, but no more, at the price of $1.25 per acre, cash; but no Patent shall be issued for such land until after three years of actual residence upon the same.

10. The price and terms of payment of odd-numbered sections and pre-emptions, above set forth, shall not apply to persons who have settled in any one of the several belts described in the said Regulations of the 14th October, 1879, hereby rescinded, but who have obtained entries for their lands, and who may establish a right to purchase such odd-numbered sections or pre-emptions, as the case may be, at the price and on the terms respectively fixed for the same by the said Regulations.

Timber for Settlers.

11. The system of wood lots in prairie townships shall be continued—that is to say, homestead settlers having no timber on their own lands, shall be permitted to purchase wood lots in area not exceeding 20 acres each, at a uniform rate of $5 per acre, to be paid in cash.

12. The provision in the next preceding paragraph shall apply also to settlers on prairie sections bought from the Canadian Pacific Railway Company, in cases where the only wood lands available have been laid out on even-numbered sections, provided the Railway Company agree to reciprocate where the only timber in the locality may be found on their lands.

13. With a view to encouraging settlement by cheapening the cost of building material, the Government reserves the right to grant licenses from time to time, under and in accordance with the provisions of the "Dominion Lands Act" to cut merchantable timber on any lands owned by it within surveyed townships; and settlement upon, or sale of any lands covered by such license, shall, for the time being, be subject to the operation of the same.

Sales of lands to Individuals or Corporations for Colonization.

14. In any case where a company or individual applys for lands to colonize, and is willing to expend capital to contribute towards the construction of facilities for communication between such lands and existing settlements, and the Government is satisfied of the good faith and ability of such company or individual to carry out such undertaking, the odd-numbered sections in the case of lands outside of the Canadian Pacific Railway Belt, or of the Belt of any branch line or lines of the same, may be sold to such company or individual at half price, or $1 per acre, in cash. In case the lands applied for be situated within the Canadian Pacific Railway Belt, the same principle shall apply so far as one half of each even-numbered section is concerned—that is to say, the one-half of each even-numbered section may be sold to the company or individual at the price of $1.25 per acre to be paid in cash. The company or individual will further be protected up to the extent of $500, with six per cent. interest thereon till paid, in the case of advances made to place families on homesteads, under the provisions of section 10 of the amendments to the Dominion Lands Acts hereinbefore mentioned.

15. In every such transaction, it shall be absolutely conditional:

(*a.*) That the company or individual, as the case may be, shall, in case of lands outside of the said Canadian Pacific Railway Belt, within three years of the date of the agreement with the Government, place two settlers on each of the odd-numbered sections, and also two on homesteads on each of the even-numbered sections embraced in the scheme of colonization.

(*b.*) That should the land applied for be situated within the Canadian Pacific Railway Belt, the company or individual shall, within three years of the date of the agreement with the Government, place two settlers on the half of each even numbered section purchased under the provision contained in paragraph 14, above, and also one settler upon each of the two quarter sections remaining available for homesteads in such section.

(*c*) That on the promoters failing within the period fixed, to place the prescribed number of settlers, the Governor in Council may cancel the sale and the privilege of colonization, and resume possession of the lands not settled, or charge the full price of $2 per acre, or $2.50 per acre, as the case may be, for such lands, as may be deemed expedient.

(*d.*) That it be distinctly understood that this policy shall not only apply to schemes for colonization of the public lands by Emigrants from Great Britain or the European Continent.

Pasturage Lands.

16. The policy set forth as follows shall govern applications for lands for grazing purposes, and previous to entertaining any application, the Minister of the Interior shall satisfy himself of the good faith and ability of the applicant to carry out the undertaking involved in such application.

17. From time to time, as may be deemed expedient, leases of such Townships, or portions of Townships, as may be available for grazing purposes, shall be put up at auction at an upset price to be fixed by the Minister of the Interior, and sold to the highest bidder—the premium for such leases to be paid in cash at the time of the sale.

18. Such leases shall be for a period of twenty-one years, and in accordance otherwise with the provisions of section eight of the Amendment to the Dominion Lands Act passed at the last Session of Parliament, hereinbefore mentioned.

19. In all cases the area included in a lease shall be in proportion to the quantity of the live stock kept thereon, at the rate of ten acres of land to one head of stock; and the failure in any case of the lessee to place the requisite stock upon the land within three years from the granting of the lease, or in subsequently maintaining the proper ratio of stock to the area of the leasehold, shall justify the Governor in Council in cancelling such lease, or in diminishing proportionately the area contained therein.

20. On placing the required proportion of stock within the limits of the leasehold, the lessee shall have the privilege of purchasing, and receiving a patent for, a quantity of land covered by such lesse, on which to construct the buildings necessary in connection therewith, not to exceed five per cent. of the area of the leasehold, which latter shall in no single case exceed 100,000 acres,

21. The rental for a leasehold shall in all cases be at the rate of $10 per annum for each thousand acres included therein, and the price of the land which may be purchased for the cattle station referred to in the next preceding paragraph, shall be $1.25 per acre, payable in cash.

Payments for Lands.

22. Payments for public lands and also for pre-emptions made in cash, or in scrip, or in police or military bounty warrants, at the option of the purchaser.

23. The above provisions shall not apply to lands valuable for town plots, or to coal or other mineral lands, or to stone or marble quarries, or to lands having water power thereon; and further shall not, of course, affect Sections 11 and 29 in each Township, which are public school lands, or sections 8 and 26, which are Hudson's Bay Company's lands.

J. S. DENNIS,
Deputy Minister of the Interior.

Market Reports.

TORONTO.

From Our Own Correspondent.

TORONTO, June 26.—There is nothing specially new in regard to the lumber trade in this city. Building still keeps active, and the first batch started in the early spring are nearly completed and the foundations for a large number more are now being laid. More especially does the adjoining municipality of Parkdale present a scene of activity in the building line, which would well repay a visit from persons at a distance who felt interested in the onward march of improvement.

Five years ago that which is now called the village of Parkdale, was only a farm, called the Col. O'Hara farm, now it numbers about two thousand inhabitants, and still rapidly increasing in numbers, and a large number of the houses erected there would do credit to any city in the Dominion.

An extensive system of drainage has also been begun, at which a large number of baborers are now engaged, so that altogether a busy sight is now presented in this village. There are three lumber yards in and adjoining the village, and two planing mills with sash and door factories combined, all of which are well taxed to meet the demand of this municipality alone.

One noticeable feature in the trade here at present is the extreme scarcity of shingles, the demand for which is far in excess of the supply; this may be accounted for, not only by the unusual demands for the local trade, but the demands of our western trade also, which, since the building of the H. & N.W. R.R., has been constantly growing, so that large quantities of lumber and shingles are diverted from their coarse at Barrie, to points as far west as London and Sarnia, and so far as I can learn, command better prices than that obtained here.

The want of cars is being felt severely here at present, but the R.R. Company are striving to meet the demand so far as lies in their power, and this want of sufficient rolling stock will doubtless be felt for some weeks yet to come, In consequence of the lack of lumber for shipment at this port, from causes before named, many vessels have deserted this harbor for other ports where freights are more easily obtainable, and former rates for lumber to Oswego are fairly maintained.

The views expressed in my former letter as to the advance in prices on common lumber being adhered to, already appear likely to be verified, and my firm convictions are, that as soon as lumber flats become more plentiful, prices will level down to about their former figures, on all the coarser grades of lumber; on the upper grades present prices will likely be fully maintained to the close of the season. If we could only succeed in obtaining a reduction of the duties on common lumber to one dollar per M., it would materially help matters, but so long as the present duties on the coarser grades of lumber are levied, a large amount of such lumber must be placed upon the home market, and low prices rule as a consequence.

Receipts of lumber here per N. R. R. are exceedingly small, owing to the change of gauge having only been completed as far south as Allandale, so that all lumber shipped north of that place for this city must be transhipped in order to reach here, and there is no lumber of any consequence this side of Allandale except that owned by Thompson, Smith & Son, therefore the receipts for shipment and the local trade is very meagre at present. Owing to the want of unity amongst the retailers, as mentioned in my last letter, prices keep fluctuating, each dealer watching the other for fear of being undersold in the market, and yet plenty for all to do, and a fair remuneration upon all sales made might as well be had as not. To show to what degree this feeling is carried, it is only requisite to notice the shingle trade as it exists at present. Manufacturers are demanding $2.10 per M. at the mills for XXX shingles, freight to Toronto 25c. per M. and cartage from cars to the yards 5c., so that the net cost to the retailer is $2.40, and the dealer retails them at $2.50 and requently the builders' paper taken at 90 days, and sight drafts accepted from the manufacturer. A more suicidal way of doing business in this one particular could hardly be imagined. The lath trade also is cut about as close as the shingle trade, and all for the same reasons, which is tantamount to saying we would rather do a trade for nothing than let our neighbor gain any advantage over us, and the sooner this state of things is abolished the better for the retailers' pocket. The shingle manufacturer demands all the state of the market warrants, and has, during the last six months, steadily advanced his prices from $1.80 at the mill to $2.10, the present quotation, and yet the yard-men sell at precisely the same figures.

The demand for cherry lumber in this market is much in excess of the supply, and good timber, especially if cut into 5×5, 6×6, 8×8, and 10×10 in., will bring good prices; the same remarks will apply to butternut cut into 1 in., 1½ in., 2-in. and 3-in. There is also a good demand for white and black ash lumber at fair figures.

Prices at the yards rule as follows:—

Mill cull boards and scantling	$ 9 00
Shipping cull boards, promiscous widths	11 00
" " 10 and 12 in. stocks	12 00
Scantling and joist, up to 16 ft	$11 50

Lath	1 55

OSWEGO, N.Y.

From Our Own Correspondent.

OSWEGO, June 24, 1881.—The demand for good lumber has been quite slack for the past two weeks, and there seems a disposition amongst some of the dealers to accept lower prices on uppers. Good mill run lots, however, are still in demand, and selling at prices quoted. The stock of dry lumber is ample for the present. The new cut is now arriving quite freely, and the yards will soon have a surplus of green lumber, which must be dried out some before it will be fit for the market; a calm time is now looked for until after harvest. Shingles are in good demand, the wet weather having caused dealers to anticipate an increased consumption; prices are still strong at the quotations, but no probability of any advance.

Lake freights from north shore ports, 90c. Canal, $1.60 to Albany and $2.20 to New York.

Shipments east to interior are quite light.

Receipts to date:—

1880	63,000,000
1881	50,000,000

Quotations are as follows:—

Three uppers	$42 00@45 00

SAGINAW VALLEY.

BAY CITY, Mich., June 21, 1881.—The *Lumman's Gazette* says the market continues active and prices steady and unchanged. Sales have been less numerous, the spring rush being about over. Another cause has operated to decrease the number of sales, and that is, the large amount of lumber on the river already sold, which is estimated as amounting to a quantity greater than can be sent forward in a full month. The figures are stated at 165,000,000 feet. That there should be a letting up in pur chases under the circumstances is not remark able. Still we hear of sales at market rates of lumber yet in the log. When stock is disposed of in this manner it is a sure indication of a firm market and unusual confidence in the situation remaining favorable for some time to come.

Shingles are in active demand with less than enough offering to supply the market. Prices are firm at the following quotations: Country brands $1.85@2.00 for clear butts and $2.85@3.00 for XXX; river brands $2.00@2.10 for clear butts and $3.00@3.15 for XXX.

Hoops are wanted at $3.30@3.25.

The shipments of forest products from Bay City by water for the week ending June 18th and for the season to same date were as follows:

BAY CITY—THE WEEK.

Lumber, feet	20,227,432
Hoops	1,719,000
Shingles	860,000
Lath	420,000
Staves	205,000
Timber, feet	24,000

FOR THE SEASON.

Lumber, feet	126,331,269
Shingles	16,371,000
Lath	3,258,000
Hoops	4,250,600
Staves	537,081
Shooks	104,000
Railroad ties	15,500
Cedar posts	1,847
Timber, feet	45,000

The shipments at Saginaw for the week were:

Lumber	8,786,000
Shingles	2,200,000
Lath	200,000

TOTAL FROM THE RIVER.

The total shipment of lumber, lath and shingles from the river to date, with comparisons, is as follows:

	1880.	1881.
Lumber	211,650,362	164,839,206
Shingles	35,320,000	31,558,600
Lath	12,969,650	2,746,000

Freights remain steady and unchanged at $2.50@2.75 to Ohio ports and $3.00@3.25 to Buffalo and Tonawanda, the outside figures being from up-river points.

General quotations here are:—

Shipping culls	$ 6 00@ 8 00
Common	12 00@16 00
Three uppers	30 00@36 00

RAILROAD FREIGHTS.

The following are the present railroad freight tariffs from the Saginaw Valley to principal points, for 10 tons, as reported by Mr. O. Waters, Commercial Agent M.C.R.R.:

Albany, N.Y	$52 00
Burlington, Vt	84 00
Buffalo, N.Y	33 00
Boston, Mass	68 00
New York City	58 00
New Haven, Ct	68 00
Portland, Me	68 00
Rochester, N.Y	43 00
Rome, N.Y	55 00
Syracuse, N.Y	53 00
Springfield, Mass	68 00
Schenectady, N.Y	52 00
Utica, N.X	56 00
Worcester, Mass	68 00

NEW YORK.

We still notice an absence of anything in the way of extravagant views or an inclination to talk "boom," but there is a well preserved tone of quiet confidence which carries strong conviction to searchers after information. In short, while receivers, dealers, &c., have really nothing positively new to report this week, they reiterate the former cheerful statements regarding the present and prospective condition of the market with such unanimous voice as to leave no room to doubt the healthy state of trade. Irregularities crop out occasionally as a natural result of any large business, and shrewd or lucky buyers will gain some advantage, but the changes are slight and generally only temporary, more especially on first-class goods, of which a scarcity prevails in all grades of lumber. The distribution of supplies is general, including building, manufacturing, domestic shipment and export, and the accumulation in hand said to be smaller than usual for this season of the year.

Spruce of good quality can find an outlet for all manufacturers appear ready to offer, and no very heavy concession on price would be necessary, except under an unusual liberal accumulation of cargoes. Shippers, however, who send in all sorts of cuts and assortments, with the schedules containing a large percentage of inferior stuff, and expect to find buyers ready to grab the offering as soon as made, will be sadly disappointed.

White pine has accumulated to some extent, but the amount is not sufficient to have the least influence upon the position of the market, indeed could be materially increased before attracting much attention.

Yellow pine does not vary greatly from the position noted last week. The pressure upon the mills has been somewhat relieved through the "catching up," on many of the heavier contracts, and all have more or less business on hand, and agents are in constant receipt of a fair run of new orders.

Hardwoods are firmly sustained and in good demand. Indeed buyers are more anxious if anything, and some who early in the season refused to submit to the rates asked on walnut now seem to regret their action, though the regret comes too late to secure much stock.

Shingles sell readily on most home outlets and at full rates with the supply not very abundant.

ALBANY.

We have not any change to note in our quotations for pine lumber; the market is firmly held with a steady business. The quantity of lumber moving from the district, from the river and canal sides, is about up to the average. Philadelphia was represented among the buyers in this district. The large and general consumption of lumber throughout the country gives much firmness to the market here and the confident expectation of high prices in the near future, especially for best grades. The Michigan and Canadian markets are very strong.

Hardwoods are steadily held with a good business.

Coarse lumber is in good demand at quotations, which are very firmly held; the Northern mills are without their needed supply of water; the condition of the Hudson river here shows how light the fall of rain has been on the upper branches of that stream.

The receipts of lumber by lake at Buffalo for the week ending June 20th, were 7,248,000 feet and by rail 110 cars.

The receipts by canal at Albany from the opening of navigation to June 15th were:

	Boards and Scantling, ft.	*Shingles, M.*	*Timber, cub. ft.*	*Staves, lb.*

RECEIPTS AND SHIPMENTS AT OSWEGO.

According to the Oswego *Palladium* the receipts and shipments of lumber, shingles, etc., during the fortnight ending and including Friday the 24th June, foots up as follows:—

	Receipts.	*Shipments.*
Lumber	13,287,443	12,875,058
Shingles	2,177,000	324,000
Lath	1,872,200	792,000
Posts	8,430	382,000

CHICAGO.

CHICAGO, June 22, 1881.—There has been a larger supply of lumber at the docks this week, but, though it moved rather slowly at first, at this writing is about all sold. The commission men claim that it sells readily, and attribute the slowness of the market the early part of the week to the fact that the yard docks were so well filled that there were few buyers who could find room for any more vessels.

There are some country buyers on the market, but they do not take many of the cargoes, owing, it is said, to the difficulty they have in getting transportation for them. Sales are therefore mostly on local account, though some lumber goes direct from the dock to points in this State, *via* the canal. The city dealers buy freely when they are able to give the vessel a dock.

The market appeared a shade weaker in respect to prices on Monday, but we have not learned of any sales below last week's quotations, and this morning the market is as firm as it has been. Inferior piece stuff brings $10, and standard is said by some to be quotable at $10.50, but there seems to be considerable doubt about this. Probably anything of ordinary length would not sell above $10.25, though an admixture of longer lengths would easily raise the price. We think $10@10.25 is as fair a quotation as could be made. Inch lumber is steady, and without quotable change in price. Good lumber is in demand, and choice cargoes, which are occasionally offered, sell easily on their merits, Shingles are quoted higher this week than they have previously been, standards selling at $2.55@2.60, and extra A's at $2.70@2.75. One exceptionally good cargo was held at $2.80, and we believe has been placed at that figure. Lath are without change.

There is some fear among buyers that an advance in yard prices at the meeting to be held on Monday will be followed by a similar change at the dock, but some of the commission men seem to be of a different opinion. They look for a rather quiet market for a couple of weeks, and regard an attempt to raise the present figures as inadvisable.

Freights are easier, but not so much so as to produce a definite change in rates. Shippers offered lower rates to-day, but we understand no vessel could be found to accept them, and we know of several parties who were obliged to pay the old figure.

Receipts and shipments of lumber and shingles for the week ending June 21:

CARGO QUOTATIONS:

Joist and scantling, green	$10 00@10 25

1881	505,171,000	219,401,000	327,059,000	57,178,000
1880	431,220,000	213,895,000	277,613,000	43,243,000

There is no doubt but that a majority of the yard men are having all the business they want to do. Many of them are free to admit that they do not solicit trade, have called home their travelling men, and cannot properly attend to their mail orders. Some of them are a month behind with their shipments, owing largely to the amount they have to get off, and in some cases, to a certain extent to the difficulty they have in picking up the amount and kinds required. Country dealers with whom we have talked say they never saw the dealers here so indifferent about making sales.

The figures presented above show that the week in the district has been a busy one. The shipments were 27,000,000 feet against 26,000,000 last week, and 17,000,000 for the corresponding week of last year. Heavy as these shipments are, our best advices show that, except in some of the larger towns, yards are not as yet being stocked, from which it is naturally deduced that there will be a still heavier trade later on in the season.

It may be said now that every dealer is selling up to the Exchange list, so far as they are able to do so. There are several dealers who have advanced prices, and have sent out lists to that effect. The ones we have seen quote inch and two-inch rough and dressed lumber fifty cents higher; scantling, 2x12 joist and timber, $1; siding and ⅜-ceiling twenty-five cents, and all grades of shingles fifteen cents.—*Northwestern Lumberman.*

TONAWANDA.

The *Northwestern Lumberman* says that trade is moderately active as regards sales, which are made at firm prices. Rrceipts are quite heavy for the past week, footing up 24,065,000 feet of pine, which is the largest amount yet reported this season. There is no change in lake frieghts. Canal frieghts to Albany and New York remain as at last report, $2.15 and $2.75 respectively. There has been no change in prices, either of lumber or shingles. The present condition of the market here very much affects sales, as dealers in the interior do not seem inclined to stock up very heavily at present rates.

An important business change has been effected here during the past week. The extensive lumber business of the late firm of McGraw & Co., and more recently of the late Ira S. Bennett, has been purchased by the Export Lumber Company (limited), of 87 Wall street, New York. It has a capital of $150,000, and is a large institution, doing mostly an export business, as its name indicates. The concern has bonded yards at Hunter's Point, Long Island, and Hochelaga dock, Montreal, in addition to its New York branches and its fine property in Tonawanda. The yards here will be stocked up at once with the product of western mills. The local manager, Mr. Mackintosh, arrived this morning, and has assumed control. The market quotations are as follows:—

CARGO LOTS—MICHIGAN INSPECTION.

Three uppers	$38 00@43 00
Common	17 50@20 00
Culls	11 50@12 50

MINNEAPOLIS.

The *Lumberman and Manufacturer* of June 23rd says that taking into account the supply, demand and prices, the lumber trade was never in a more satisfactory condition than it is now in the west. The volume of business seems to to be increasing daily and the tendency is toward better prices on all standard goods. There are some manifest discrepancies which should be adjusted, for instance, when common logs are worth $10@11 at Stillwater and ordinary mill run lumber in rafts bring $15@16, yard prices for first common boards and dimension should not stand at $12@13, nor 26 foot heavy stuff at $18.

The fight at Chicago over prices is keeping the bulk of the lumber away from the auction docks and sends it to the yards or keeps it at the mills. So far there has been no material break there from spring prices. The manufacturers are talking up an advance and a few have issued new lists 50 cents better.

St. Louis is selling more lumber than ever before, the trade now reaches nearly 10,000,000 feet per week. Some of the leading houses have been forced to Michigan and Chicago for dry sorts to fill up the yards, and prices are very firm. Heavy winds and storms during the last two weeks has kept back rafts and made receipts light.

There is now all over this region a strong disposition to advance prices from $1 to $2.

STEAM SAW MILL OWNERS!

Have your Boilers thoroughly Inspected and Insured against Explosion by the

CANADIAN

Steam Users' Insurance Association

HEAD OFFICE, 9 VICTORIA STREET, TORONTO.

SIR ALEX. CAMPBELL, President. GEORGE C. ROBB, Chief Engineer.
HON. JNO. McMURRICH, Vice-Pres. A. J. JONES, Secretary-Treasurer. 1yL17

LIVERPOOL.

The business of this port has been for the past week very limited, and has shown a marked decrease from the preceding portion of the month. Much of the large consumption and the busy aspect of affairs is attributable to the fact of large purchases being made by public companies in addition to the auction sales, and the forwarding of these goods alone is enough to give a lively appearance to the quays and wharves. Reading the quantities shipped during the past month in comparison with those of last year at the same time, the business done appears in a very favourable light, but when it is considered that much of it is the result of auction sales and of large orders from public companies, and taken also in conjunction with the fact that the stocks on hand are most excessive, it may be at once concluded that the present condition of the timber trade here is not what it ought to be.

The *Timber Trades Journal* of June 11th, says: There is no change to report in prices, either in retail or wholesale transactions. Freights from St. John, N.B., are low, and several steamers have been chartered for spruce deals, although only two are reported as coming to Liverpool.

These goods form nearly the only exception in the list given in our last, in which the stocks of this year are so greatly in excess of last year at this time, the quantities on hand being only 1,000 standards in excess, and there is a growing feeling that the prices now ruling are probably the lowest that will be touched; but, of course, much will depend upon the extent of the import.

GLASGOW.

The arrivals to Clyde ports for the week of American timber and parcels from Sweden and Norway amount to say 1,900 loads sawn and 1,630 loads hewn, consisting chiefly of pitch pine, with sundry parcels of deals and battens, &c.

The public sale held at Greenock on the 31st ult., was well attended, and a considerable quantity of wood of various descriptions was disposed of at fair rates.

During the past month the tonnage launched on the Clyde reached a high total, viz., 28 vessels, with an aggregate of 36,500 tons. For the previous month (April) the returns amounted to 30,000 tons, whilst since 1874 the largest figure for May has been 21,000 tons (in 1879). There is still a large amount of work on hand, and a few good orders were booked during the month.

With regard to housebuilding it may be observed that, although there is still a marked quietness in the city, some of the neighbouring towns and villages, especially districts having close railway connection, are fairly busy, and the wages of house joiners in these places are advancing.

The *Timber Trades Journal* of the 11th ult., says: The imports for the week have been three cargoes of pitch pine timber and a miscellaneous assortment of various woods per steamships, comprising several superior parcels of 1st quality broad pine deals from Quebec (Messrs. Edmiston & Mitchells, consignees,) and sundry lots of walnut, wainscot, and whitewood logs, and oak planks and staves, by the New York and Baltimore steam-liners. The imports at Grangemouth, from Norway and the Baltic ports, have been comparatively light as yet.

There has been no public sale here of the new arrivals of Quebec pine deals, but it is understood one is to be held next week, result of which will be duly reported.

Messrs. Singleton, Dunn & Co.'s Glasgow circular of June 9th says: Business continues languid, and prospects are far from encouraging. Although shipbuilding is brisk, the demand for timber for that trade is light, owing to purchases on an extensive scale having been made when contracts for ships were negotiated. Housebuilding and other industries are depressed, and, in consequence, the demand for timber suitable for their requirements is limited. North of Europe goods are not so firm; indeed, are distinctly lower in price, with a tendency to decline more. We trust that shipments of all kinds of Canadian wood goods will be restricted, as in the aspect of affairs just stated, it would be most injudicious to seriously augment the too large stock now being carried over. Auction sales during the last two months were only moderately successful.

MISCELLANEOUS.

AT Muskegon on the 11th June, the Torrent & Arms Lumber Company sold 4,000,000 feet of lumber, half at $15.75 and half at $9 per 1,000 D. A. Blodgett sold 1,000,000 feet piece-stuff at $8 per 1,000 feet on the dock.

IT is stated that the English capitalists who had proposed to buy out the Guelph Lumber Company for $1,000,000, have decided to back out from the enterprise after receiving reports from their experts.

MESSRS. CLINCH & SONS, Point Wolf, N.B., are getting a new engine for their mill. It is constructed by Waring, St. John, and has some new features in its construction. Since the recent rains, this firm has about seven million feet of logs in their pond.

ON Friday the 17th June, in Mr. William Tait's mill, Gravenhurst, while the saw was running free, and the guide about to be adjusted, both the saw pulley and the tightener pulley burst, a large piece of metal striking David Bone, jr., of Oro, in the neck, throwing him a distance of twelve feet, and instantly killing him. Another piece of the pulley, flying in an opposite direction, slightly wounded Thomas Donaldson on the arm and head. At the time of the accident the saw was not running at even ordinary speed, and but an instant before the pulleys were running true and smoothly, every precaution being taken by Mr. Tait, who was absent at the time, to ensure strength and prevent accidents. The deceased was much liked by those who knew him, and his funeral, which took place on Sunday, was largely attended.

PORTABLE

Saw Mills, Grist Mills and Shingle Mills

DOUBLE EDGERS, LUMBER TRIMMERS.

THE MIXTER SAW GUMMER IS KING.

MORE GUMMERS and SWAGES sold the past year than ever before. The great and constantly increasing demand for the "MIXTER GUMMER" settles the question of its efficiency and superiority over **all other Gummers in Market.**

The following is a fair sample of the many flattering testimonials which are constantly pouring in upon us :—

WEST TROY, N. Y.

DEAR SIRS—Your Patent, Automatic, Self-Feeding Saw Gummer is a perfect success.
Yours, &c., E. MORS & CO., Lumber & Timber Dealers.

WATSON, EFFINGHAM CO., Illinois.

GENTS—I am using one of your Patent Automatic Self-Feeding Saw Gummers at each of my three mills, and I would not take one hundred dollars for it if I could not get another like it.
Yours truly, WM. ANDERSON.

CORINTH, Miss.

GENTLEMEN—The Patent Automatic Self-Feeding Saw Gummer we bought of you just fills the *bill exactly.* We gummed a sixty-inch saw with sixty teeth, cutting on an average of three-fourths inch deep to each tooth, with one cutter without sharpening it.
Respectfully yours, WHEELER & WILLIS.

THE CUTTER OR BURR referred to in the above, (¾ in.) cost **90 CENTS**, it takes one-half minute to each tooth, and the saw is gummed without removing it from the mandrel. ☞ALL SAWY ERS know this is a great advantage, besides a saving in time.

We challenge **ANY** saw tool manufacturer in the United States to produce such an array of unsolicited testimonials as we have received for our GUMMER AND SWAGE.

Of course we have not room here for an extended list.

Our goods are now so well established throughout the country, that information can be easily obtained as to their practical working from any of the **Several Thousand** Sawyers who have them in use.

In short the MIXTER GUMMER is pronounced by *all* to be the "**BOSS GUMMER.**"

Send for circular and price list with cash discounts.

Penetanguishene Foundry

AND

MACHINE SHOP

CRAIG & CAMERON, Proprietors.

The undersigned beg to announce to the public that they are prepared to make all kinds of **Mill and Steamboat Brass and Iron Castings.**

All kinds of PLOW CASTINGS kept on hand. Plow Points and Landsides a specialty.

We have first-class machinery and are prepared to do all kinds of TURNING or PLANING on short notice.

We hope by strict attention to business and moderate charges, to merit a share of the public patronage.

☞All work guaranteed.

SALE BY TENDER

OF EXTENSIVE STEAM

Saw-Milling Property

AT

Parry Harbour, Georgian Bay, and Valuable Timber Limits in the Parry Sound District.

The SAW-MILL is complete in its appointment, and has a cutting capacity of 90,000 to 100,000 feet per day of twelve hours.

The LIMITS cover an area of 229 square miles in the Townships of Monteith, Humphrey, Christie, Ferguson, Hagerman, McKellar, Spence, and Shawanaga, besides the purchased rights to cut the timber from numerous lots in the same Townships, and contain a large quantity of standing pine.

The whole establishment is in complete condition and active operation, and is excellently situated for the manufacture, sale and shipment of timber.

Tenders for the whole property, including plant, will be received until the 20th August next, addressed to the General Manager, Ontario Bank, Toronto, by whom terms of payment and any further information will be furnished on application. No tender will be accepted unless satisfactory to the vendors. 4L17

M. Covel's Latest Improved Automatic Saw Sharpener!

Is the Most Perfect Machine that has ever been Introduced into Mills for that purpose.

CIRCULAR SAW STEAM FEED!

I would also call special attention to my

Heavy Circular Saw Mills

and for STEAM MILLS, would recommend the Steam Feed, having put in several which are giving the best of satisfaction, as will be seen by the following testimonials:—

GRAVENHURST, August 20th, 1880.

WM. HAMILTON, ESQ., Peterborough.

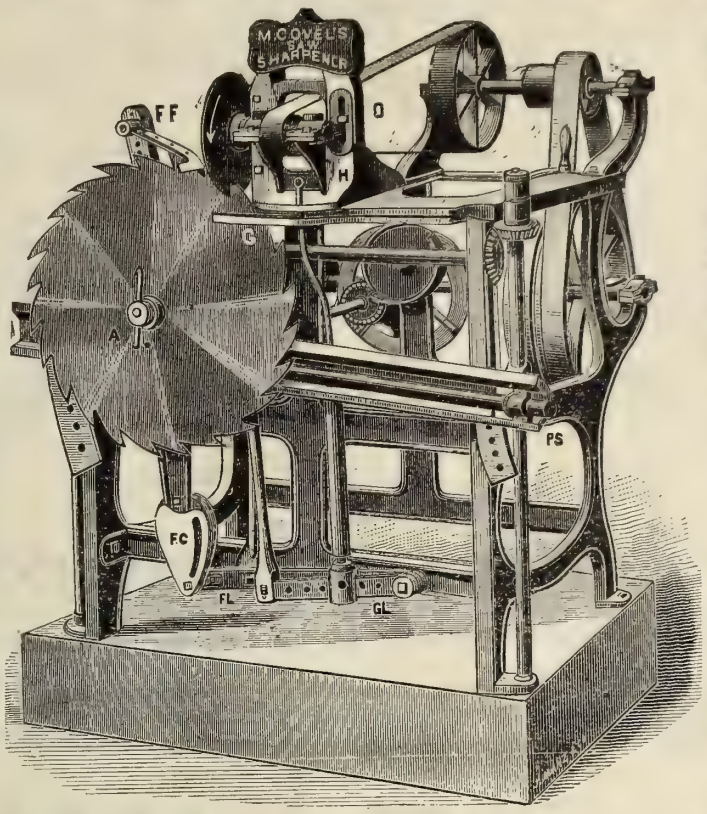
DEAR SIR—I have used your Steam Feed for near four months, and it has given me perfect satisfaction in every way; it is admitted by every person who has seen it work to be the best feed ever invented. Since I put it into my mill, I have not lost ten minutes time fixing anything belonging to it. I can cut 18 boards 13 ft. long in one minute. It can do much smoother and better work than the pinion feed. It is easily governed and reverses the carriages instantly. I am thoroughly satisfied with it and can recommend it to any person who has a Circular Saw Mill for cutting long or short logs. I consider I have cut more lumber than will pay for the Steam Feed since I got it than I would have cut had I not put it in.

Yours respectfully,
WILLIAM TAIT,
Lumberman, Gravenhurst.

TORONTO, August 11th, 1880.

WM. HAMILTON, Peterborough, Ont.

DEAR SIR—The Steam Feed you put in is working splendidly. Yours, &c.,
THOMPSON, SMITH & SON.

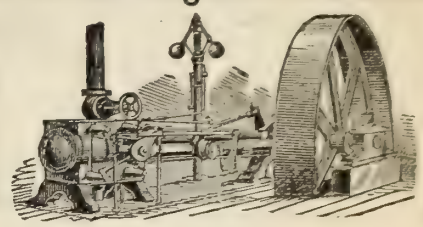


MILL MACHINERY!

I am also manufacturing Saw Mill Machinery, for all sizes of Gang or Circular Mills, Span or Double Circulars for Slabbing Small Logs. My Patent Jack Chain for drawing logs into Saw Mills, acknowledged by all to be the Cheapest and best ever got up; also, my Patent Lumber Markers, different sizes of Edgers, Gang Lath Mills, Trimmers, Power Gummers, and all Machinery used in a first class Gang or Circular Saw Mill; also, small Hand Gummers for use in the woods, for Cross-cut Saws. Rotary Pumps of different sizes, for Fire Protection in Mills, &c.

Horizontal Engines and Boilers

CORLISS ENGINES



Where economy of fuel is the great consideration, along with uniformity of speed, such as is required in Grist and Flouring Mills, Woollen and Cotton Factories, or large Factories of any kind, I supply the Corliss Engine. I feel justified in saying that our Style, Workmanship and Finish on this Engine will be no discredit to its renown, and certainly is not equalled in this country for economy of fuel. I have them working at 2½ pounds of coal per horse-power per hour. L10

EMERY WHEELS FOR SAW GUMMING!

Solid Emery Wheels are now almost in universal use for the purpose of gulletting and gumming saws. Statistics show from 25,000 to 30,000 saw-mills in the United States. Many of these run only a single saw each. A one-saw mill would use one or two wheels a year, costing $3 to $4 each, and when such small mills order single Emery Wheels from the factory, the express charges often equal the cost of the wheel. There was a time when the quality of Emery Wheels was so uncertain, and the demand so fickle, that storekeepers could not afford to carry them in stock. Now, however, Saw Gumming Wheels have become as staple an article as Files, and every dealer in saws, Hardware and Mill Supplies can afford to carry a few dozen standard sizes in stock. Large dealers order stocks of $500 to $750 worth at a time. Saw Gumming Wheels are used with the edge (or face) square, round, or beveled. Probably seven-eighths of all in use are beveled.

The principal sizes are:

8x1/4, 8x5/32, 8x1/2 } 3/4 in. hole. 10x1/4, 10x5/32, 10x1/2, 10x5/8 } 3/4 in. hole. 12x1/4, 12x5/32, 12x1/2, 12x5/8, 12x3/4, 12x1/8 } Holes, 3/4, 7/8 and 1 inch.

Probably more wheels 12x1/8, 12x1/2 and 12x1/4 are used than all the other sizes together. Saw Gumming Wheels are used, however, of all sizes up to 24x1 1/2. The most frequent complaint is that Emery Wheels harden the saw so that a file won't touch it. The answer is that you don't want a file to touch it. An expert workman will shape and sharpen the teeth with an Emery Wheel, leaving the teeth *case hardened*, in which condition the saw will cut about 33 1/3 per cent. more lumber than a soft saw will. Those who want to use the file, however, have only to touch the saw *lightly* a second time (after going all over it once), and this second touch will cut through the case-hardened scale.

A QUESTION OF QUALITY.

Thirteen years of experience as makers of, dealers in, and actual users of Emery Wheels, have led us to a decided opinion as to what quality is the best. We prefer for almost every use an "Extra Soft" wheel like the "Pocono." We believe that money lost through the rapid wear of the wheel is more than made up by the money saved on wages. As we cannot get every one to adopt our views, we make several qualities, so as to meet their views. We say to those who think they can only be satisfied with some other make of wheels (not Tanite), that we can furnish qualities *to match* any and every other make. If you have got used to some special quality of wheel, let us know what it is, and we can send you *a Tanite Wheel of similar quality*. Our *regular* classification of Saw Gumming Wheels is as follows:

CLASS 2. MEDIUM—HARD.—This Wheel is THE STANDARD Saw Gumming Wheel all over the world. Probably seven-eighths of all the Saw Gumming Wheels used are "Class 2." It cuts fast and keeps its shape well. Some think it too hard, some too soft. We prefer the "Pocono."

CLASS 3. MEDIUM—SOFT.—The same as to coarseness and fineness as "Class 2," but a *softer*, and therefor freer cutting wheel.

CLASS "POCONO." EXTRA SOFT.—This Wheel we prefer to all others. It is both *finer* in grain and softer than either of the above. As a Saw Gumming Wheel, Class "Pocono" is specially suited to those practical and experienced Sawyers who know how to grind with a light touch, and who want a free cutting wheel that will not create much heat.

Illustrated Circulars and Catalogue, showing Cuts of Saw Gumming Machines, and Shapes, Sizes and Prices of Wheels, sent free on application.

VOL. 1. PETERBOROUGH, ONT., JULY 15, 1881. NO. 18.

THERE is now brought into the city of New Orleans annually about 15,000,000 feet of timber, which is sawed into lumber by mills in the city, and there is received besides about 60,000,000 feet of lumber, 6,000,000 shingles, 40,000,000 cords of wood and 25,000,000 staves, a large portion of which is exported to foreign ports, and there seems to be no good reason why the wood trade of New Orleans should not be largely increased. Louisiana abounds in magnificient virgin forests with ample water facilities for transporting it to market. While its total area is 26,105,600 acres, but 3,700,000 acres are under cultivation, and 5,821,000 acres consist of prairie and sea marsh lands leaving 17,584,600 of almost untouched forest lands, abounding in red, white and black oak, hickory, ash, beech, dogwood, cypress, cottonwood, elm, pine, etc., etc. Evidently New Orleans is destined to become an important lumber centre.

THE *Northwestern Lumberman* of the 25th ult., says: There are now coming to this city (Chicago) about 60,000 cubic feet of walnut logs belonging to Ontario parties, and destined for the European market. The owners have had a force of men securing them, principally in Missouri. There will be three cargoes, and they will be forwarded from here to Quebec, thence to European ports. The chances for eastern buyers to obtain walnut in western Missouri are growing smaller every day. Manufacturers in that section have come to understand that the great stretch of country west of them will be calling for furniture continuously, and they have decided that it is better to manufacture it there than to ship the walnut east and in turn ship the furniture back. Of late a great many factories have been built in that state, and they make a lively effort to secure the walnut that grows in the surrounding country. At present they are paying from $40 to $50, log run.

THE business of 1881 thus far, presents to the mind of the observer two important features. The first is the fact that trade this season has practically escaped its usual attack of weakness. As a rule holders and sellers have been compelled to submit to a decline on the opening of navigation, and even to witness a regular break up in prices, but this year, except in Chicago, there has been no period of weakness, and even then it amounted to comparitively nothing Then, in the second place, it will have been observed that throughout the season it has been difficult to fill orders, and at no time during 1881 has there been lumber enough in the hands of dealers to meet the demands made upon them promptly. Broken assortments have been the rule, which is the best proof that instead of stocks accumulating they have moved off as rapidly as they were ready for consumption. So long as this state of affairs continue there need be no apprehension of any general decline.

SAW GUMMING.

There are several contrivances for the troublesome but necessary job of gumming saws. Files, burr gummers, punches, and grindstones have in turn been used, but nothing has proved itself so rapid and efficient as the Emery or Corundum Wheel. To perfect their operation, inventors have not been slow to place before lumbermen, machines to run these saw gumming emery wheels. Mr. W. Hamilton, Peterborough, is now supplying a machine for this purpose, and judging from the demand he has for them, the Covell Saw Sharpener must be a very efficient tool. Our readers will notice from our advertising columns that the celebrated Hart Emery Wheel, well known to American lumbermen as the "Detroit Wheel," is now being made in Canada. The manufacturers, whose headquarters are in Hamilton, claim to have given special attention to the wants of sawyers, and as a result are offering a Corundum or Emery Wheel thoroughly adapted in every respect to the work of saw gumming and saw sharpening. The prominent and well known firms to whom they refer, indicate that their efforts to produce a good article have been successful, and that they are well-deserving of a share of the trade. We understand that a guarantee of absolute efficiency accompanies each wheel.

THE STREAMS BILL.

We clip the following letter from the Toronto *Globe* of the 6th of July:—

SIR,—In both your own and the columns of your leading contemporary on the other side, there have been recently many letters and articles on the disallowed Streams Bill, No. 102.

As I am here on the spot in the district which would be, perhaps, most affected by the Bill becoming law, I think I am justified in writing a few lines thereon. I will avoid alluding to the partisan arguments which have been advanced on either side, so that my remarks may be as short as possible.

The Bill as a Bill is not to be admired, seeing that privileges and rights conferred on anyone thereby are granted only for and terminated by the spring, summer, and autumn freshets. Therefore, after any freshet is over these persons with their dams, piers, aprons, etc., would have to clear out or be treated as trespassers.

If the Ontario Legislature cannot procure to be drawn a simple Bill to carry the meaning they intend nearer than this, the sooner some member moves the Minister of Education into the Speaker's chair the better.

But joking apart the Bill is all right, excepting that it is all wrong, that is, the principle is right but the details are enormities.

It is just that streams should be considered highways, and that means should be provided to make them efficient, but it is wrong to place the power to govern, alter, and superintend in the hands of each and any private individual who desires their use.

By this Bill anyone who wishes to take a log or boat or raft—the latter definition might be satisfied by two sticks and a sheep hurdle—down any stream, may construct "aprons, dams, slides, gate locks, booms, and any other work therein or thereon necessary to facilitate the floating and transmitting of such logs, &c., &c.," and they have also the right to use all means usual amongst lumbermen, the damage being only restricted when it can be shown to be necessary to facilitate the passage of logs, rafts, crafts, etc. In the name of common sense is not this legislation gone mad? Any one who wishes to float sticks or walnut shells (timber and craft) down any stream, or when a stream is created during the freshets, may build dams and aprons or use any other diabolic means usual to lumbermen to facilitate the transit, and if they drown out 2,000,000 acres no one is entitled to claim a cent for damages. A single dam might drown out miles of country, and destroy on it the timber the property of the Crown; the destroyer falls back for protection on this Bill, which has for its object the public interest. If honest, the Ontario Legislature ought to be thankful that their production has been consigned to the limbo of the waste paper basket.

The fact yet remains,

1. That all permanent streams should be available as public highways for floatage of timber, *id est*, sawlogs, square timber, booms; ties, telegraph poles, and all like matters.

2. That any improvements or works constructed by any private owner should be available at fair tolls for public benefit.

But any damage caused by alterations should be made recoverable from the State, and in assessing damages the property must be considered as a whole, and in agricultural lands the raising of the water table—that is, the level at which the water stands beneath the soil—must be considered.

Lastly, the regulation of tolls should rather be left to arbitration than to the decision of the Licutenant-Governor in Council.

I have no more to say on this, I trust, moribund Bill, with the exception that I am surprised that the gentleman to whom the inhabitants of this district confided their interests at the last election should have permitted such a measure to pass the House without protest.

I am, Sir, your obedient servant,

E. G. MUNTTZ.

ALPORT, Muskoka, July 4, 1881.

THE MOST MISERABLE MAN IN THE WORLD is the dyspeptic, and dyspepsia is one of the most troublesome difficulties to remove, but BURDOCK BLOOD BITTERS always conquer it. It stimulates the secretions, regulates the bowels, acts upon the Liver, aids digestion, and tones up the entire system. Trial bottles 10 cents, large bottles $1.00.

THE TIMBER OF BRITISH COLUMBIA.

That section of British Columbia west of the Cascades and including Vancouver and Queen Charlotte Islands is, according to Professor Macoun, covered with, probably, one of the finest forests in the world. Chief amongst the trees is the Douglas fir *(Abies Douglasii)*, which is the chief forest tree, and which is used throughout the country for building purposes, and for export in the form of deals and spars.

White cedar *(Thuja gigantea)* is another giant, and in the Valley of the Fraser and up the coast attains to an immense size. The Indians use this wood altogether in the construction of their houses, and in building those large canoes which are the wonder of the eastern people.

The other trees are a species of yew, another of alder, two species of fir *(Abies Menziesii* and *grandis)*; two species of pine *(Pinus contorta* and *monticola)*; two species of maple *(Acer macrophyllum* and *circinatum)*; hemlock spruce *(Abies Mertensiana)* is a common tree on the mainland; while a species of oak *(Quercus Gayrrana)* is abundant on the island, but has not been detected on the continent. An evergreen tree *(Arbutus Menziesii)* is quite common along the coast of the island, and, both summer and winter, its foliage contrasts finely with that of the sombrehued Douglas fir.

In the second, or arid distrct, ai pine *(Pinus pondcrosa)* takes the place of the Douglas fir on the coast, and is a very valuable tree, growing to a large size, with clean trunk, and resembling the red pine of Ontario very much. The tops of the lower mountains and the sides of the higher ones support a heavy growth of Douglas fir, but it is far from being the beautiful tree of the coast.

The timber of the third region is not so good, and consists principally of poplar and black pine *(Pinus contorta)*, with occasional groves of Douglas fir on the higher hills. Black and white spruce, with a little balsam fir, make up the remainder.

The island of Vancouver is about 300 miles in length, with an average breadth of about 60, and probably contains 20,000 square miles. The soil is good, but the surface is so much broken by rock that it is altogether impossible to tell the amount of good arable land on the island. There is no doubt the day will come when Vancouver will support a large population—partly agricultural, and partly engaged in mining, lumbering, and fishing.

Burrard Inlet is situated on the Gulf of Georgia, a few miles from New Westminster. It is nine miles long—deep and safe. It is the port from which the lumber trade is chiefly carried on. It is very easy of access to vessels of any size or class, and convenient depth of water for anchorage may be found in almost every part of it.

McLAREN vs. CALDWELL.

JUDGMENT BY THE COURT OF APPEAL—THE DECISION OF V. C. PROUDFOOT OVER-RULED.

C. J. SPRAGGE delivered judgment in this case on Friday in the following terms :—

The plaintiff describes himself in his bill as a lumber merchant, lumber dealer, saw miller, and lumberman, and states that the defendant carries on the same branches of business. The bill enumerates some twelve parcels of land, of which it is stated that the plaintiff is the owner, and it states also that he is owner of large tracts of timber. The bill goes on to allege that the streams flowing through these parcels of land were not navigable streams, "nor floatable for logs and timber" while in the Crown, nor until after the improvements set forth in the bill were made on the said streams by the plaintiff, and that in their natural and unimproved state they would not, even during freshets, permit of saw logs or timber being floated down the same, but were useless for the purpose, and in the 10th paragraph there states his rights :—"The plaintiff is entitled, both as riparian proprietor and owner, in fee simple, of the bed of the said streams where they pass and flow through the said lots, respectivcly, to the absolute, exclusive, and uninterrupted uses of the said streams for all purposes not provided by law, and amongst other purposes to the absolute and exclusive right to the user of the same for the purpose of floating or driving saw logs and timber down the same." He then goes on to say that in various parts of the said streams, which run and flow through lands therein described, the plaintiff and those through whom he claims have expended a large amount of money in making certain specific and very valuable improvements, which he sets out in a number of the following paragraphs of the bill.

The complaint is in substance, that the defendants having got out several thousand saw logs, threaten, and intend to avail themselves of the improvements set out in the bill, and that in floating and running the timber and logs down the stream they are interfering with and obstructing the plaintiff in running and floating down his lumber and saw logs, and he takes this ground, that the defendants in so doing are wrongfully and forcibly, and without right, or colour of right, making use of the improvements made by the plaintiff, and those under whom he claims, and of which plamtiff is entitled to the exclusive and uninterrupted user.

Evidence was given at great length before V. C. Proudfoot. That learned judge considered that he ought to follow the case of Boale v. Dickson, and that he understood that case to determine that if any improvements are necessary to render the streams floatable, the statute does not apply; that it does not alter the character of the private streams, and that the owner of the land over which the stream flows has the right to prevent intrusion upon it. Upon the evidence he came to the conclusion that without the artificial means of which evidence was given neither of the streams upon which improvements had been made by the plaintiff could be considered floatable, even in freshets or high water.

That was the issue upon which the evidence in the cause was given, and that the proper issue of the construction placed upon the statute in Boale v. Dickson was the proper construction.

Upon the appeal to this court it is contended that the construction placed upon the statute in Boale v. Dickson was not correct. It becomes our duty, therefore, to consider and determine that question.

It is obvious from a perusal of the Acts (which are considered in c. 48 of the C.S.U.C.) that it was the policy of the Legislature to encourage the lumber trade of the province; and to preserve the fish in the streams. The Act of 1828-9, Geo. IV., c. 24, recites: "*Whereas*, it is expedient and found necessary to afford facility to the inhabitants of this province engaged in the lumber trade in carrying their rafts to market, as well as for the ascent of fish in various streams now obstructed by mill dams." Then follow two sub-sections, which are embodied in section 3 of the Consolidated Act.

The same policy is evidenced by 12 Vic., c. 87, the first section of which supplies what may be taken to have been an omission of the Act of 1828, viz., that aprons or slides to mill-dams should be so constructed as to afford sufficient depth of water for the passage of saw logs, lumber and timber—a provision embodied in sec. 4 of the Consolidated Act.

Then in sec. 5 of the same Act we find enacted what is embodied in secs. 15 and 16 of the Consolidated Act. The first clause of sec. 5 is in the same terms as sec. 15, beginning thus :—"And be it enacted that it shall be lawful for all persons to float saw logs" (and so to the end of sec. 15) "and other timber rafts and craft down all streams in Upper Canada during the spring, summer, and autumn freshets; and no person shall, by felling trees or placing any other obstruction in or across any such stream, prevent the passage thereof."

In Boale v. Dickson this opinion is expressed, "that the right so given extends only to such streams as in their natural state will, without improvements, during freshets permit saw logs, timber, etc., to be floated down them, to streams of a different class to those mentioned in the third section "Down which lumber is usually brought."

No such qualification of the right given by section 15 is to be found in the Act nor in any other previous Acts thereby consolidated. There is nothing in the context of any of these Acts showing or tending to show that such qualification was intended; and we know from what we find in the evidence taken in this cause, that confining the right given by section 15 to such streams as are described in the passage I have quoted from Boale v. Dickson would go far to defeat the avowed policy of the Legislature. Evidence was offered that in some of the streams in the province, at the date of passing of these Acts, saw logs, timbers, &c., could be floated down in their natural state without improvements, even during freshets. The evidence was stopped by the learned Vice-Chancellor upon the objection of the plaintiff's counsel after some evidence in that direction had been given. But from the evidence that was given in the cause it is apparent that if section 15 is to be read with the qualification given to it by Boale v. Dickson, a very large number of the streams in the province would be excluded from its operation.

I agree with what is said in Boale v. Dickson "that assuming the plaintiffs to be the owners of the bed of the river, and considering this Act to be a diminution of private rights, no greater right can arise to the defendant under it than a right to float timber, &c., down during freshets; it confers no right to in any way either improve or deepen the natural channel." I do not understand by this that a person to whom such right to float timber down is given, &c., may not remove fallen timber and such like obstacles to navigation as are referred to in Crell v. The G. T. R. Co. But taking what is said in the passage I have just quoted from Boale v. Dickson to be correct, it may well be conceded without affecting the constitution of the Act. It may be thought that the Legislature had over much regard for the interests of the lumbermen, and too little regard for the interests of riparian proprietors. Our province is to construe the Act and not to fail to give due effect to it under an idea that its provisions press over hardly upon one class of persons for the benefit of another class.

I do not feel pressed by the consideration that no right is conferred upon lumberers "to alter improve, or deepen the natural channel." It does not prove that it was not intended to confer upon them the privilege of availing themselves, in the floating of their logs and lumber, of improvements found by them to have been already made in the natural channels of the streams.

The statute makes no provision for compensation to those at whose expense improvements have been made. We may conceive that it would have been more just that provision should have been made for compensation. The Legislature, however, may have felt difficulty in the way of adjusting a scale of compensation, or may possibly have taken some view as this :—The different lumbermen make improvements on their respective properties, each for his own sake. By giving to all a common right over the property of all, we may make an approximation of doing justice to all. Some may be gainers by doing this more than others; but it is the only way of accomplishing that which is, with us, a paramount object, the fostering of the lumber trade. That this was a paramount object is evidenced by the recitals to the earlier Acts that I have quoted.

Apart from all these considerations, we have the plain unequivocal language of the Act. To adopt the construction put upon it in Boale v. Dickson, we must read "all streams" as meaning "some streams" and we look in vain in the Act for any class of streams defined as they are defined in Boale v. Dickson. If what is supposed in that case to have been included had been really intended, section 15 should have run thus, "All persons may float saw logs and other timber during the spring, summer, and autumn freshets, down," not all streams—"but such streams as in their natural state will without improvements permit saw logs, timber, &c, to be floated down them." It is too much to say that such an alteration of the Act is not construction, but legislation?

Reference is made in B. & D. "to streams of a different class to those mentioned in the third section," "down which lumber is usually brought." The streams mentioned in the third section are those down which lumber is usually brought, and on which a mill dam may be legally erected. That cannot be a stream down which in its natural state, without improvements, timber, lumber, etc., could be floated, because on such a stream a mill dam could not be legally erected. The words "all streams" could not be applied only to that class of streams. There is another class denominated "small streams," which certainly did not form the class, though they might be comprehended in the class to which the words "all streams" applied.

I am unable to concur in the construction put upon sec. 15 of the Act in Boale v. Dickson. There being no context, nor indeed anything whatever in any of these Acts on this subject, to control the ordinary grammatical meaning of the words used, we must read them in their ordinary grammatical sense; and should, therefore, construe sec. 15 as giving the privilege to all persons to float saw-logs and other timber down all streams in U. C. during the spring, summer, and autumn freshets.

It follows that, in my judgment, the issue tried before the learned Vice-Chancellor was not an issue that arises under the statute; but that the defendants had to have the right conferred upon them by sec. 15 of the Act, to float, during the freshets named in that section, their timber, rafts, and crafts down the streams down which they were causing them to be floated when their rights were called in question by the plaintiff's bill.

We, of course, do not question the propriety of the course taken by the learned Vice-Chancellor in accepting the interpretation put upon the Act in Boale v. Dickson. But being unable, after a careful consideration of the various Acts passed upon this subject, to concur in that interpretation my conclusion is that the plaintiff's bill must be dismissed.

For reasons which the Chief Justice gave at length, each party is left to pay their own costs.

DIFFERENCE OF OPINION.

In the foregoing decision delivered by the Chief Justice of Appeal, Patterson, J., and Morrison, J., concurred, but Burton, J., held different views. We publish his judgment below.

CHIEF JUSTICE BURTON'S OPINION.

In this case I have the misfortune to differ with my learned brothers, and if this had been a court of last resort, whilst not concurring, I should not have thought it proper to express my dissent, but under the circumstances I think it is but fair to the litigants and respectful to my collegues briefly to express the grounds on which I feel compelled to come to a different conclusion. The expiration of the general common law principles applicable to inland waters would seem to be well stated in the case of Waldsworth v. Small (2 Fairfield, 280), and to be consistent with the doctrine in the tract *de jure maris* sometimes, but it is said erroneously, attributed it to Lord Hall, viz. that those streams which are sufficiently large to bear boats or barges, or to be of public use in the transportation of property, are highways by water, over which the public have a common right, and the private property of the owner of the soil is to be improved in subserviency to the enjoyment of this public right; whilst, on the contrary, such little streams are not as floatable, that is, cannot in their natural state be used for the carriage of boats, rafts, or other property, are wholly and absolutely private, not subject to the servitude of the public interest, nor to be regarded as public highways by water, because they are not susceptible of use as a common passage for the public. Numerous decisions are to be found at a very early date in the United States to the effect that although the adaptation of the stream to such public use may not be continuous at all seasons, yet the public right attaches and may be exercised whenever opportunities occur. In the case of Thunder Bay River Company v. Speedily, 31 Mich., 343. Mr. Justice Cooley thus refers to the subject :—"Nor is it essential to the easement that the capacity of the stream in its natural state and its ordinary volume of water should be continuous, or, in other words, that its ordinary state at all seasons of the year should be such as to make it navigable. If it is ordinarily subject to periodical fluctuations in the volume and height of its water attributable to natural causes, and recurring as regularly as the seasons, and if its periods of high water and navigable capacity ordinarily continue a sufficient length of time to make it useful as a highway, it is a subject to the public easement—referring to Morgan v. King, 35 N.Y., 459, 18 Barbour 284, and 30 Barbour 9."

It would seem that this very reasonable view of the common law doctrine in reference to these streams had at a very early day been recognised by our own Legislature.

Thus we find in the first act passed in Upper Canada in reference to mill-dams, 9th Geo. IV., c. 4, that it was passed in the interest of persons engaged in the lumber trade, to afford facilities for the conveyance of their rafts and lumber to market, and that the owners of mill-dams, erected on the proprietor's own lands, across any stream down which lumber was usually brought, were compelled to make provision for its passage by the construction of sufficient aprons, and in several other Acts before we come to the 12th Vic. provision is made for floating down square timber and other manufactured lumber prepared for market.

The latter Act, though passed also evidently in the interests of lumbermen, made provision also for the protection of the mill owner so long as he complied with the conditions prescribed, otherwise the lumberman was at liberty to abate the dam as a nuisance if it interfered with his use of the stream.

In the same Act, however, we find the Legislature using language not only confirmatory of the view that the public had the right to use such streams as I have referred to, but declaring that all persons may during the spring, summer, and autumn freshets float sawlogs and other lumber, rafts, &c., down all streams, a provision which in my opinion was intended to be simply declaratory of the Common Law right of everyone to use every stream that was capable, in its natural state, and its ordinary volumes, of transporting in a condition fit for market the products of the forests or other propeprety, with an express statutory declaration superadded that it was not essential to the public easement that the capacity of the streams as those defined should be continuous, but that it should be exerciseable even though it could only be so exercised in times of freshet.

This was then the state of the law in several of the neighbouring States where lumbering operations were carried on to a very large extent, but it was not the universal rule there, the courts in some places holding that a stream which is not capable of being used at any time for the passage of boats or the floating of rafts and logs, except when swelled by rains or the melting of snow, is not in any legal sense a navigable stream, but is private property and not subject to the servitude of the public easement.

And this being the state of the authorities, it is not unreasonable to assume that a Legislature dealing with a similar state of things intended to place the question beyond dispute, and to declare that even though the stream

was not navigable at other times, if it became so in times of freshet the public right to pass at these times should be recognized.

If that is not the proper view to take of the enactment, but it was intended to declare these streams to be public highways, as my learned brother appeared to think, it would, I apprehend, follow that wherever the natural obstructions were removed by the owner of the soil so as to make those portions of the stream not previously navigable passable for boats or timber, the owner of the soil would not be in a position to exclude the public from the use or enjoyment of the stream so improved. The illustration given by my brother Patterson, of a portion of a concession line which is declared by law to be a common and public highway being impassable by reason of some physical obstruction, would then be applicable. It is because I am unable to find in any of these statutes language declaring these streams to be of that character that I am unable to concur in the conclusion of the other members of the court. I quite agree with them in their view of the doctrine laid down in Boale v. Dickson. I think there is nothing to warrant the qualified construction placed upon s. 15 of 12 Vic., c. 87, by the learned judge who delivered the judgment in that case, but I am unable to bring myself to the conclusion that the mere permission or the recognition of the right to float all stream during freshets make the entire stream *publici juris*, although in point of fact many portions of it may be quite impassable, even in times of freshet, for the smallest description of timber or other articles of merchandise. The language of a statute which would by a particular construction have the effect of interfering with the enjoyment of private property, or give the right to others to pass over it without compensation, ought to be very plain to induce a court to place upon it such an interpretation. I have pointed out what I conceive to be its proper meaning and intention, and full effect is given to the words by adopting that construction. If that be the correct interpretation, then I apprehend it will be still necessary to ascertain whether at the particular point where the stream passes through the plaintiff's land it was floatable when in a state of nature during freshets. If not, then in my view it is not floatable within the meaning of the authorities, but is wholly and absolutely private property. To illustrate my meaning as to what I conceive would be the effect of the statute if the judgment of my colleagues be correct, let us image a stretch of many miles above the place in question not only floatable, but navigable for larger vessels. A space than intervenes for say half a mile neither navigable nor floatable at any period of the year, followed by long stretch of navigable water to the mouth of the stream.

It is not necessary to the navigability of the stream that it should be navigable for its entire length. The public may use such parts of it as are navigable.

If, then, this intervening space had passed from the Crown into the hands of a private proprietor, and he has at his own charges made what was previous to the improvement his own in point of property, and non-navigable and non-floatable, to be passable for large vessels either by the deeping of the channel or the making of locks, can it be possible that under language similar to what is to be found in this statute the owners of steamboats and other large vessels could pass over such property of right; in other words, that a property which admittedly while it remained unimproved was strictly private property, unaffected by any public right whatever, lost that character and become *publici juris*, although made navigable entirely at his own and not at the public expense, because in an Act of Parliament it is declared that all persons may during the spring, summer and autumn freshets float saw logs, etc. down all streams. I venture, with considerable diffidence and doubt in the correctness of my own opinion, in consequence of the different view taken by learned brothers, to think that such a result could never have been contemplated by the Legislature. Yet such must be the result in the case suggested if the proper construction of the Act gives the defendant the power to float timber over these improvements of plaintiff as of right.

I repeat, then, that in my view of the statute it was intended to confer no new right, but to remove all doubts as to the right of lumbermen to use a stream passing through private lands, even though not at ordinary times, if it could be made useful at a time of freshet. If that be the proper construction of the section, then it would be necessary to examine the evidence for the purpose of ascertaining whether at the particular points where the stream passes through the plaintiff's land it was a floatable stream before the improvements, but as the other members of the court take a different view of the statute, it becomes unnecessary for me to do so. Upon the other appeal from the judgment of V. C. Ferguson it becomes unnecessary to offer any opinion, except with a view to the costs. I may say, therefore, that to my mind the 27th section of the Appeal Act can have no application to a case of this kind—there can be no execution of a decree necessary or possible in a case where the decree is, if I may use the term, executed as soon as made. There was nothing to be done under it, and nothing further would require to be done unless it were disobeyed, in which case I apprehend that without the formal issue of a writ of injunction the parties to the suit could be proceeded against for contempt.

I think, therefore, that the appeal should be dismissed with costs.

In the main appeal I am pleased to find that the other members of the court have seen their way to the allowance of the appeal, as a contrary conclusion could not have been otherwise than disastrous to one of the most important industries of the Dominion; the result is that the public become entitled to use the plaintiff's improvements without compensation, which was most properly secured to him under the Act which has recently been disallowed.

MISCELLANEOUS.

A CAR-LOAD of implements has been shipped by Mr. Watson, of Ayr, to Aberdeen, Scotland.

THE Keewatin Lumbering Company are at present shipping eight to ten car loads of lumber per week from Rat Portage to Winnipeg.

AN unusually large quantity of deals and other lumber has been shipped from Herbert River, N.B., this season.

MESSRS. BICKELL & WICKETT are going to build a tannery in Toronto, near the mouth of the Don, and the Council has promised to exempt the property from taxation for a term of five years.

A NEW steamship is building on the Clyde for the Dominion Steamship Company, which it is stated will exceed the burden of the Allan steamship *Parisian* by three hundred tons. The name of the new craft is to be the *Vancouver*.

BY an accident with a circular saw, Mr. W. Craig, foreman of Stevens, Turner & Burns, London, had a finger taken off, and a fellow-workman namad D. Bradley had three ribs broken by a flying piece of board from the saw.

BUSH fires have been doing considerable damage in several places in Quebec; not only has valuable timber been destroyed, but a great deal of fencing and in some cases farm buildings have become a prey to the flames.

THE *Scottish American* says: In New York State the replanting of forest trees has been attended with very good results, and it is noted that in one belt of country where replanting was general the rainfall has largely increased. In Kansas and Nebraska the results obtained from replanting are even more striking. The planted forest serves to break the force of the wind, and the influence of the woods' growth is seen in lessened periods of drought, and an increase in crops.

WHEN DOCTORS DISAGREE WHO SHALL DECIDE? The people often decide by "throwing physic to the dogs," and trying BURDOCK BLOOD BITTERS, and the result is always satisfactory. Burdock Blood Bitters is the *Multum in Parvo* of medical science, curing all diseases of the Blood, Liver and Kidneys. A trial bottle only costs 10 cents. A dollar bottle may save you many dollars in doctor's bills.

DYSPEPSIA.—Strenthen your digestion—tone the stomach for utilizing and assimilating every atom of food you take; the body needs it for strength and vigor. *Zopesa* cleanses the entire system, stimulates the Liver, keeps you regular, and able to eat ten-penny nails. Letters and postal cards come in daily, telling of cures and help frem *Zopesa*, from Brazil. *Positive proof* of the health and vigor it gives in a ten cent sample. Ask your druggist.

THE TRADE AND THE PUBLIC.

It is a peculiarity of all class periodicals that in advocating the rights of the interest they undertake to represent they seem to give themselves no concern about the public good, as if that might be left to take care of itself. One might almost fancy their objects were antagonistic, for, while the one is always lamenting when low prices prevail, the other rejoices in getting its commodities as cheaply as it possibly can, and people may be said to trouble themselves very little about the cost of production of the article they want, when they go to market to lay out their money to the best advantage.

What avails it that the dealer can show that he is offering his goods at the merest shadow above cost price, if the man over the way is willing to sell a similar and equally good material at a still lower figure? Ever since the second Sir Robert Peel's time, when he became the advocate of free trade (having previously opposed it with all his might), and gave out his celebrated precept, as if it were a happy thought to which he owed his conversation, that it was a first principle of trade "to buy in the cheapest market and sell in the dearest," all idea of taking into consideration the expenses incurred in producing the material we are inclined to deal in has been abandoned, as an exploded weakness with which free trade has no sympathy.

But there was nothing original in Sir Robert's plausible phrase, which became popular merely because he had uttered it, as a novelty, and it was taken up and repeated as the essence of wisdom which embodied in a few words the whole doctrine of free trade, and left nothing more to be said about it. It had, however, long before been practically adopted by those branches of business which the police are supposed to keep an eye on, and of which we have a well-known representative in the character of Mr. Fagin, the amiable patron, erewhile, of Oliver Twist, and that class of trader might almost justify his calling by proving it to be in strict accordance with Sir Robert Peel's rescript, and possibly its tendency has been in some degree to demoralize trade. We may be less scrupulous in looking for cheapness, as a sort of duty enjoined upon us by this modern law of trade, which does not suggest to us the necessity of ascertaining how the goods we are in pursuit of came to be so cheap. That duty is left to the teaching of the statutes at large, if people choose to run the risk of them, and place implicit confidence in the honesty of the seller, without asking any inconvenient questions as to his rights of proprietorship in the commodity he is willing to dispose of so much below the market price. And there is always the chance of escaping ill-consequences by appealing to Sir Robert Peel's apothegm. It is easy to plead that unless you "buy in the cheapest market and sell in the dearest"—that is, the dearest market available—business cannot be done at a profit under free trade.

If it has not lowered the standard of trading morality in some appreciable degree, at all events the term "connection," as applied to business, seems now-a-days to have a different meaning from that which it formerly possessed. In past times the word was understood to mean certain parties who dealt regularly with a certain house for certain goods, and mutual dealings in this way often continued for a lifetime; now it means little more in a general sense than correspondents and dealers you are known to, and with whom you have an occasional transaction when they cannot get the goods a fraction cheaper elsewhere.

Fortunately, however, in the timber trade we are less exposed to malversations of this kind than in almost every other. The bulkiness of the wares is a sort of guarantee for integrity in the manipulation of them. They cannot be hidden away in bags, boxes, or barrels, and pass muster in transmission as something totally different. There they are, conspicuous to all the world, wherever they go, indifferent to comment and criticism, and entirely independent of it.

Neither is the apparent neglect of the public's interest so real as at the first it might be accounted in treating only of the advantages to trade. The desire to see prices kept up to a fair paying level arises from a conviction, not necessary to be constantly obtruded, that it cannot be good for the community at large that any important and legitimate trade should be carried on at a loss. A price may be very moderate and yet be a paying one; on the other hand, it may seem rather high and yet the sellers may be getting nothing by it. Such has been the state of the timber trade in many parts of Britain latterly, where wholesale transactions have borne no profit because too much was paid at first hand, in comparison of the plentifulness of the supply, to bring the commodity to market. The duty of the journalist who has undertaken its cause is then to call the attention of the trade to this state of affairs by pointing out the sources of its difficulty, collecting and submitting to them the facts that bear upon it, and suggesting how the evil may best be mitigated. But in all this there is no implied disregard of the good of the public, who are supposed to gain what the trade is losing. There is nothing of the spirit of monopoly and desire to obtain more than the fair value of the goods brought forward, and for the rest the public is well able to take care of itself, and requires no special pleader to teach it how to make the hardest bargains, as we have intimated, without taking conscience at all into its calculations.

There is a disposition in fashion to insist that a fair day's work should be supplemented by a fair day's wages, but no one agitates for a fair profit to the man whose goods are fairly paid for. He must take his chance in the market against another who has perhaps not paid for the commodity he is selling, and never means to. Such are the *impedimenta* which come between a trader and his just expectations when he thinks he has laid out his money well, and is looking that it should yield him a reasonable return.

These thoughts have been suggested to us by the apparent necessity we have latterly been under of always harping on the same string. We look in vain for some encouraging news from the provinces, as to the solid revival of the trade for which the importers are waiting. If any of our correspondents speak cheerily, it is mostly after the manner of Captain Cuttle, at the *Wooden Midshipman*, in Leadenhall street, when he rubbed his hands, and thought business looking up, because somebody called and inquired the price of a pair of spectacles. The trade continues languid, and without hope of immediate improvement, though the manufacturing industries are reported as doing better than they were a little while back. Liverpool, Hull, Grimsby, Hartlepool, and Newcastle are all in suspense, and have no faith in obtaining satisfactory prices for the new arrivals, which are already coming forward in rather formidable proportions (especially in Liverpool), though they have not as yet materially affected home prices, because their effect was previously discounted, and people refrained from extending their orders abroad till they saw how their market would bear the new strain on them of their first importation.

On the other side of the Atlantic they are more hopeful of this season's trade than they are here, and our Chicago correspondent's letter (June 11, p. 361) draws a bright picture of the prospect before it out there, but not without a suggestion that the cutting of logs may be superabundant.

"A considerable increase is looked for by many in the amount of lumber turned out, as compared with the cut of other years. The majority of operators favor this view of the situation, and look for an abundance of lumber, though not more probably than the demand will call for."

The season has, it seems, been very favorable for getting the timber clear of the drives, and there is no anticipation of any difficulty in bringing the logs forward, as we learn from the concluding paragraph of the letter aforesaid. All idea, therefore, of any curtailment of our supply for this year has completely vanished, whether it be from Northern Europe or from America, and in its place a strong impression is gaining ground that our markets will be pretty severely tested on all sides.

In Liverpool it is expected that steamers will take a lead, even in the Atlantic timber trade, this summer, and as they will run at very moderate freights the shippers on that side are not unlikely to charter on speculation in the absence of orders; as in the worst case they will only have to hold stock on this side, instead of at home, with the chance of disposing of it during the winter, when if unshipped it would have to lie idle and useless until the following spring. It is the uncertainty which pervades the trade on these points that has kept it so quiet and unspeculative so long.

If the public gains by this kind of business, the trade does not like it.—*Timber Trades Journal.*

PRACTICAL ITEMS.

Loose pulleys require constant attention and much oil, and are very hard on the belt. It is best to have them a trifle smaller than the tight pulley, and with a step or flange running up to the diameter of the tight one. This takes the strain off the belt and the friction from the pulleys.

Where a mill is driven by mortise gearing, it has been recommended to use a mixture of pulverized chalk and linseed oil, for lubricating purposes. It is said that this mixture is much better for wooden cogs than oil, tallow or flour. The chalk for this mixture should first be pulverized and then sifted with a fine sieve.

Any sharp steel will cut glass with great facility when kept freely wet with camphor dissolved in turpentine. A drill may be used, or even the hand alone. A hole may be readily enlarged by a round file. The ragged edges of glass may also be thus smoothed with a flat file. Flat window glass can be readily sawed by a watch spring saw, by the aid of this solution. In short, the most brittle glass can be wrought almost as easily as wood, by the use of drilling tools kept constantly moist with camphorized oil of turpentine.

Ordinary white wood can be given the appearance of the finest black walnut. The wood first thoroughly dried and warmed, is coated once or twice with a strong aqueous solution of extract of walnut peel. When half dried, the wood thus treated is brushed with a solution compound of 1 part (by weight) of bichromate of potassa in 5 parts of boiling water, and after drying thoroughly is rubbed and polished. By this treatment, the color is said to be fixed in the wood to the depth of one-twelfth to one-sixth of an inch, and in the majority of cases the walnut appearance is declared to be very perfectly imitated.

So eminent an authority as Professor Sweet says, in reference to the question of economy by reduction of friction, that of two systems, one offering a saving of 10 per cent. by reduction of friction, and the other 20 per cent. in the use of steam, he would take that which led to a saving in friction, which of necessity implies saving in maintenance, attendance, repairs, delays, etc. The loss by attendance, repairs and delays is greater in small engines than in large. To get economy in friction, there should be generous wearing surfaces, well fitted, and properly lubricated, and the engine should be in absolute alignment. We often find shafts which are set in perfect line and remain so when at rest, but which are deflected by the strains put upon them while at work.

The *American Architect and Building News* says that maple is unquestionably better than the average yellow pine for flooring. It is very fine-grained and tough, though perhaps no harder than yellow pine, and is completely free from the liability to splinter, which injures much of the latter. Some years ago a number of Boston mill-owners made thorough tests o various kinds of material for flooring their factories, where the wear is very severe, and concluded that maple was superior to any other. Very possibly this experience may have led to the favor with which maple house-floors are regarded in that region.

Fourteen years ago a Mr. Sterling, of Monroe, Michigan, placed two gate posts of white oak in front of his residence. When they were set he bored into the top of each with an inch and a half auger a hole three inches deep, filled it with common salt, tightly plugged it, and coppered the posts. Having occasion recently to change the location of the posts, he found them as sound from top to bottom as the day they were planted.

HOW FORESTS PRODUCE MOISTURE.

Dr. Franklin B. Hough, United States Commissioner of Forestry, gives the following explanation of the effects of forests on moisture: It is a matter of common remark that our streams diminish as the woodlands are cleared away, so as to materially injure the manufacturing interests depending upon hydraulic power, and to require new sources of supply for our state canals, and for the use of cities and large towns. Many streams once navigable are now entirely worthless for this use. The mode in which this influence operates will be readily understood when we consider the effects of forests upon the humidity and temperature of air.

A deciduous tree, during the season when in foliage, is constantly drawing from the earth, and giving off from its leaves a considerable amount of moisture, and in some cases this amount is very great. This change of state from a fluid to a gaseous condition, is a cooling process, and the air near the surface, being secured from the sun and from the winds, becomes, by this means, so humid that a rank, succulent vegetation often springs up and thrives, which in an open field would wither and perish in an hour. The air being thus charged with moisture and cooled, does not take up by evaporation the rains which fall, and the soil, being more open, readily allows the water from melting snows and from showers to sink into the earth, from whence a portion appears in springs and in swamps, which give rise to rills and streams.

The air at all times holds more or less watery vapor in suspension, and its capacity for doing so is increased as the temperature is raised, not by a steadily gaining rate, but more rapidly as the heat is increased. There can be no evaporation when the air is saturated with moisture, and no deposit of water in any form until the temperature is reduced to the point of saturation. It is not yet determined as to how far the cooling and moistening influence of a grove may extend. It must depend upon many circumstances, and especially upon the slope of the surface, and the direction of the winds. The effect is often apparent to the eye from the freshness of the herbage in adjacent fields for many rods in width.

The effect of woodlands in retaining snows where they fall, and in delaying their melting in the spring, has been everywhere observed in snowy countries. In such localities the snow cannot be drifted by the winds, and when it melts is disappears slowly, sinking into the soil rather than flowing off upon the surface. The effect of this delay in checking a too-early appearance of fruit blossoms, cannot be mistaken. The result is in fact similar to that of considerable areas of water, such as our northern lakes, along the borders of which, especially on the lee-side, fruits are found to flourish with the greatest success. In a country interspersed with clumps and belts of woodlands, the snows drift less, and their melting more evenly over the surface cannot fail to be beneficial to the interests of agriculture, and more especially to meadows and pastures.

HEMLOCK RAILROAD TIES.

During November, 1866, the Rock Island railroad laid 2,000 hemlock cross ties that had been saturated with chloride of zinc in the road bed of the main line, some three-fourths of a mile west of Englewood, as an experiment. Last Saturday these ties were examined, and several of them brought to the company's office in Chicago. Some of them were found in good state of preservation, while others that had been rejected were found sound within, but were rotten on the surface where exposed to the wet. Hemlock is considered very poor as regards its preserving qualities. It is also claimed that it usually commences decaying in the center. Near these hemlock ties were some oak ties that were laid in 1873, some of which were badly decayed. Upon these specimen ties had been laid at the same time steel rails from England, where they still remain, they also having been placed there on test.

THEY ALL DO IT.—Everybody uses "TEABERRY" for the teeth and breath, the newest, brightest, cosiest little toilet gem extant. Try a 5 cent sample.

RAFTING OPERATIONS AT THE FREDERICTON BOOMS.

THE LUMBER CUT ON THE ST. JOHN AND ITS TRIBUTARIES.

One of the grandest sights to be seen in the Province and one that would well reward a journey of many miles, is the enormous mass of logs, estimated at over 50,000,000 feet, at present lying in the new boom of the Fredericton Boom Company at Sugar Island, above Fredericton. A fine view of the logs can be obtained from the Keswick bank, which, at this point, rises to a considerable height above the level of the river. Competent judges pronounce it to be the largest mass of logs ever collected together on the St. John. The logs lie in a natural pocket, the sides of which are formed by the mainland and the Island shore, with the base resting upon and being supported by enormous piers built up from the flat rock bottom of the river, a height of 28 feet, the larger ones being each loaded with over 150 cords of stone. There are some 14 piers all told, including side piers to which booms are hung to keep the logs off the low parts of the Island shore, and a few supporting piers on the main shore. The breaking up of the ice at an unusually early period last spring, prevented the completion of all the proposed piers, and it was feared by some that the boom would, therefore, prove too weak to hold the great run of logs, but these fears fortunately turned out to be groundless, though the boom was tested by one of the greatest freshets ever known on the river. When the grand rush of logs came, the current was so strong that after the boom had partially filled the logs began to "run under," and at such a rate that for three days there was little or no increase on the surface, million after million disappearing from sight as soon as they touched the edge of the jam—the consequence being that the logs as they now lie in the boom are piled to a depth of twenty-five feet. Had the water risen above the tops of the piers the booms would have been torn away and the great mass of logs, thrown into the current, would have swept all before it, wrecking the old Fredericton boom miles below, and strewing the shores of the river on down through Sunbury and Queens. As it was, the water came within a few feet of the top of the piers, which, though built on the flat sand-stone bottom of the river, were so strongly constructed and heavily weighted with stone that they nobly withstood the enormous and somewhat unexpected strain. It is the intention of the agent of the company, Stephen Glasier, Esq., under whose personal direction this boom (as well as all the others along the river) was constructed, to further strengthen it next winter, and to raise the piers five feet higher. The boom space at Sugar Island is from two to three miles long, and, if required, 100,000,000, or double the amount now in the boom, can be held there. The logs are conducted into the Sugar Island boom from the natural channel of the river by means of Pond's sheer booms, an invention that has to a great extent

REVOLUTIONIZED THE RUNNING AND DRIVING

of lumber on the St. John. Formerly the logs floated down with the current, great numbers being deposited on low lands where they were left high and dry by the receding freshet, only to be removed later in the season by the "stream drivers" with great labor and at considerable expense. In addition to the delay thus caused in getting the logs to market, the log owners had to indemnify the farmers for the damage to their intervale and island lands caused by the deposit and removal of the drift logs. Now, sheer booms, placed at various points along the upper St. John and its chief tributaries, keep the logs in the current of the river and carry them by the low lands, on which they would otherwise lodge. Not only is the work of stream driving thus reduced to a minimum, but the logs are hurried on to the Fredericton booms, and consequently to market, at a much earlier date than by the old method. The almost simultaneous arrival at the booms of the great mass of the cut on the upper waters has necessitated a radical change of operations on the part of the

FREDERICTON BOOM COMPANY,

which has been successfully carried out this season on a large scale. In former years the several booms below Fredericton on the Lincoln and Maugerville shores were sufficient to meet the demand, the first run being rafted so as to make room for successive arrivals, but when the drives began to come in more rapidly it was found necessary to provide more extended boom facilities. The old boom ground had been well chosen, though despite all precautions the booms were occasionally broken by the pressure of the run of logs in the spring, supplemented by high winds and heavy freshets, entailing an outlay for the recovery of the logs along the shores of Sunbury and Queens that materially reduced the profits of the company. There were other localities, of course, that might have been chosen for the booms, less exposed to the rake of the wind and sweep of the freshet currents, but they lacked one great essential—the current would carry the running logs away from, instead of into them. But even this seemingly insurmountable obstacle has been met and overcome by the application of Pond's sheer booms, an invention whereby the course of running logs can be directed towards either shore at will, despite the set of the current. After a series of experiments with the sheer boom, it was decided to locate a large boom on the Douglas shore, between the island and the main land, into which logs could be directed by a sheer boom placed at the head of the island. This boom is attached to thirteen jam and seven sunken piers, is about two and a half miles in length, and will hold nearly forty million feet. This venture proved to be a decided success, proving conclusively that the company acted wisely, when enlarging their facilities, in selecting a site at Douglas. Rafting operations were carried on there with great rapidity last summer, the only drawback being the delay caused by the unusual lowness of the water at one time. In addition to the booms there, the company put up suitable buildings for the accommodation of the men, a cook house, stables, business office, &c.

The addition of the Douglas boom enabled the company to successfully catch, hold and raft all the logs cut for the past two or three years; but the indications of an increased output for 1881 lead the company to make a still further enlargement to meet the requirements of this season's operations. To this end, the boom at Sugar Island, above described, was constructed last winter, and it has proved to be one of the best moves ever made by the company.

THE SEASON'S WORK.

The operations of the Fredericton Boom Company this season have been on an unusually large scale. They have, so far, received some 125,000,000 ft., divided as follows: 50,000,000 in the Sugar Island boom; 30,000,000 in the Douglas boom, and the balance in the Gill, Glasier, Sterling and Mitchell booms, below Fredericton. Some idea of the extent of their operations may be formed when it is stated that it is about 18 miles from the foot of the Mitchell boom in Lincoln to the head of the boom at Sugar Island. None of these booms in any way interfere with the free navigation of the river either above or below Fredericton. The company employ some 250 men this season, including drivers and sheer boom men. Rafting operations are carried on at Douglas, where 200 joints per day are made up, and at the Mitchell boom, below Fredericton, where the day's work averages about 140 joints. One hundred men are working at Douglas and about eighty men at the Mitchell boom. The logs in the Sugar Island boom will be run down to the Douglas boom, some little distance below, and rafted there as fast as possible. The Douglas boom is so constructed that rafts from the Keswick, at its head, can be floated down through into deep water below, for towing to market. It is expected that all the logs in the Mitchell boom will be rafted in about a week, when the crew of rafters will be transferred to the old rafting ground at the Glasier boom. The entire operations are in charge of Stephen Glasier, Esq., the veteran agent of the company, and so far this season without the loss of a single log.

It is estimated that there are about 20,000,000 yet to come down the river, though much more is hung up high and dry by the sudden fall of water in the main river and tributary streams.

OTHER OPERATIONS.

Mr. Alex. Gibson has done a heavy business on the Nashwaak during the past winter, confining his operations exclusively to that section. It was thought that he would get out some fifty millions, but the actual output will fall short of that figure. Finding the spruce dying out in one locality, he concentrated a large force there, having 90 span of horses hauling out to one landing, though over two roads. He has the Nashwaak so well provided with dams that he can get water enough to carry down his logs at any time desired. This season all his logs were got out early. They are being sawed at his mills on the Nashwaak, and at Morrison and Robinson's mills below Fredericton.

The output on the Keswick river this season is estimated at about five millions, all of which will be rafted on that river.

A careful estimate, based on the most reliable information, shows that independent of Mr. Gibson's operations, about two hundred million feet have been cut on the St. John and its tributaries during the past winter.

The tugboats of Messrs. D. D. Glasier & Son are all at work towing rafts down to this port.

The water is unusually low for the time of year, much to the annoyance of operators on small streams.—*St. John Sun.*

NEW INDUSTRIES.

Two gentlemen intend to apply to the Council at their next meeting for exemption for a term of years for an extensive tannery which they propose establishing in Toronto.

It is expected that in about four months an important new industry will be in full running order in this city. An application has been made for a charter to incorporate the "Toronto Grape Sugar Company," having a capital of $200,000, the applicants being the Hon. Thomas N. Gibbs, Oshawa; Messrs. James Michie, John Leyes, James McGhee, James S. Holt, Toronto; and E. P. Stikes, Buffalo. Plans are being prepared for a factory with a capacity to use 2,000 bushels of corn per diem, and so arranged that it could be enlarged to a capacity of 5,000 bushels. The factory will be erected on the Esplanade, on the water lots granted by the City Council three weeks ago to Mr. Holt for that purpose. Arrangements will be made so that corn and coal can be received direct into the factory from all the railways or by boat on the water side, and goods will be shipped in the same manner. The refinery will be eight stories high, with an elevator tower on top, and will be built of brick with stone foundations on piles driven into the rock. To get the buildings erected as rapidly as possible the electric light may be used, so that building operations may be carried on both day and night. The company will employ about 150 hands, and the best skilled experts have been secured. The latest patents and improvements will also be introduced. The property has been exempted from taxation by the City Council and a 21 years' lease of the water lots, 133 feet by 375 feet, obtained at a nominal rental.—*Toronto Globe.*

Two Thousand Dollars.

The easiest, cheapest and best way to secure the above amount is to apply for membership in the Mutual Benefit Association of Rochester, N.Y. Pay Dr. S. B. Pollard, 56 Bay Street, one dollar for four medical examinations, he will send your application to the head office, if you are accepted as a member they will issue a certificate of membership, which, on payment of eight dollars, entitles you to full benefits as a member, should you die to-morrow, next day, next week, next month, or any time within three months, this Association will pay to your heirs, or assigns, the sum of two thousand dollars. At the expiration of the three months all you have to do is to pay your pro rata amount, which is from 20 to 75 cents on the death of some other member, who has done nothing worse than to die during the three months just past. By paying your assessments on deaths, you keep your certificate alive, and at the commencement of the second year you are assessed two dollars per thousand to keep up office expenses, etc., for the next year. No easier, surer or better schemes to carry two thousand dollars has ever been devised than the Mutual Benefit Associates, of Rochester, N.Y.

Penetanguishene Foundry
AND
MACHINE SHOP
CRAIG & CAMERON, Proprietors.

The undersigned beg to announce to the public that they are prepared to make all kinds of **Mill and Steamboat Brass and Iron Castings.**
All kinds of PLOW CASTINGS kept on hand. Plow Points and Landsides a specialty.
We have first-class machinery and are prepared to do all kinds of TURNING or PLANING on short notice.
We hope by strict attention to business and moderate charges, to merit a share of the public patronage.
☞ All work guaranteed.
G. A. CRAIG.

WANTED,

An efficient and reliable correspondent for the CANADA LUMBERMAN, in each of the following cities, viz. :

MONTREAL, QUEBEC,

and HAMILTON.

For futher information, address

TOKER & CO.,

CANADA LUMBERMAN OFFICE, PUBLISHERS.

Peterborough, Ont., June 13th, 1881.

Travelling Agent.

MR. A. L. W. BEGG has been appointed agent for the CANADA LUMBERMAN, and is authorized to collect subscriptions and grant receipts therefor and to make contracts for advertisements appearing in its columns.

The Canada Lumberman

DEVOTED TO THE LUMBER AND TIMBER INTERESTS OF THE DOMINION.

PUBLISHED SEMI-MONTHLY BY

TOKER & Co. PETERBOROUGH.

Terms of Subscription :

One copy, one year, in advance	$2 00
One copy, six months, in advance	1 00

Advertising Rates :

Per line, for one year	$0 90
Per line, for six months	50
Per line, for three months	30
Per line, for first insertion	10
Per line, for each subsequent insertion to 3 mo's.	05
Cards not occupying more than 12 lines (1 inch) per annum	8 00
Cards not occupying more than 12 lines (1 inch) for six months	5 00
Cards not occupying more than 6 lines per annum	5 00
Cards not occupying more than 6 lines, for 6 mo's	3 00

Special rates will be made for page, half page and column advertisements.

Advertisements intended for insertion in any particular issue should reach the office of publication at least three clear days before the day of publication, to insure insertion.

All communications, orders and remittances should be addressed and made payable to TOKER & Co., Peterborough, Ont.

Communications intended for insertion in the CANADA LUMBERMAN, must be accompanied by the name of the writer, not necessarily for publication, but as a guarantee of good faith. Communications to insure insertion (if accepted) in the following number, should be in the hands of the publishers a week before the date of the next issue.

PETERBOROUGH, Ont. JULY 15, 1881.

THE Ottawa *Free Press*, in speaking of THE CANADA LUMBERMAN, says :—"It is a splendid industrial publication, devoted mainly to the lumbering business."

LUMBER is very firm at Davenport, and some lots are sold above present list; a few days of dry weather and the advance will become general on all common or low grades.

A MINNESOTA lumberman estimates that Manitoba alone will take 40,000,000 of lumber from that state this season. If that proves to be so, our friends of the saw in the west must be having a good time of it.

EASTERN buyers are reported as operating largely in the west just now, and are securing all the lumber they can in Michigan at an advance of from one to three dollars per thousand as compared with the prices ruling in January 1880.

THE *Northwestern Lumberman* is our authority for stating that manufacturers and buyers in the west have discovered that the lumber made from maple logs cut in winter and sawn before the 1st of July, is worth $2 a thousand more than if the sawing be done after the date named.

THE yards throughout St. Louis all report a fine trade, with brilliant prospects for the future. Figures on white pine grades are very firm, with a strong tendency toward advance. Quotations on yellow pine are very low, and still falling. The advance of from 50c. to $1 per 1,000 feet on white pine in Chicago, and a change will naturally be followed at St. Louis in the next ten or fifteen days, if not sooner.

A STEAM MILL is to be erected at Wood Point, by the Bay of Fundy Quarrying Co. The building will by 60x40, the engine 60 horse-power. It is the intention of the Company to saw dimensions and other lumber for the Boston and New York markets, to be shipped with their cargoes of stone.

FROM Manchester, N.H., we are informed that there is a large increase in the lumber trade in that section this year as compared with former years. Local mills are doing a large trade in hemlock and spruce which are still to be had in large quantities in the northern part of that State and in Vermont, while their chief supply of cedar shingles come from Sherbrooke, Quebec, and retail at $3.50 to $4.25 per 1,000.

MR. J. R. BARBER, of Georgetown, has paid the membership fee of the Mechanics' Institute of that town for forty of his employees. This is certainly commendable, and we know many employers who would not miss the amount thus expended. Indeed we are quite sure that if more encouragement were given young men there would be less carousing and drinking and more work performed.

WE have been aware for some time that negotiations were pending for the sale of the entire lumbering property of Messrs. McDougall & Co., Harwood, to Mr. R. C. Smith, of Fenelon Falls, and we are now in a position to state that the sale has been completed, and that Mr. Smith is now in full possession. We also understand that Mr. Smith has some idea of transferring the machinery now in the mill at Harwood to the French River, where he owns extensive limits.

A LARGE lumber business is being carried on by parties in Bridgewater, Nova Scotia. Messrs. E. D. Davison & Son's two mills will cut during the season 15,000,000 feet of lumber; Dufus & Co.'s mill at Summerside will cut 6,000,000; C. H. Chase expects to cut 2,500,000; Alex. Nelson will cut 1,000,000 ft.; Jas. A. Curll expects also to cut 1,000,000 feet, a total of 25,500,000 feet lumber, a gain of about eight per cent. This gives employment to 700 men, and supports 3,000 people. This is good for the County of Lunenburg.

OUR readers will have noticed that for some time past the universal cry from Britain has been a dull and drooping timber market. Notwithstanding that every market, except those depending upon the British market, on this side of the Atlansic has been firm with a decidedly upward tendency. Under such a state of affairs is does seem to us somewhat strange that our eastern shippers, and especially those of New Brunswick, do not turn their attention to the "booming" markets in the Eastern States. Even if they netted no more money by shipping to the latter market than they would by shipping across the Atlantic, such shipments would relieve the British market from its present glutted state, and doubtless secure for them better prices for what they did send there.

THE lumber business of McGraw & Co., at Tonawanda, has been transferred to the Export Lumber Company, (limited) of 87 Wall street, New York, having been purchased by that con cern. The company is a very extensive firm, and one of the largest buyers in the eastern market, and Tonawandians are jubilant over the acquisition to their business interests. The company possesses a capital of $150,000, and transacts mostly an export business, as its name indicates. It has leased, for a number of years, from the McGraw estate, the eligible and desirable docks and river front owned by them at Tonawanda, giving it excellent facilities for receiving lumber or forwarding it, either by rail or canal. The concern has bonded yards at Hunter's Point, Long Island, and Hochelaga dock, Montreal, in addition to its New York branches, and its fine property in Tonawanda. The yards at Tonawanda will be stocked up at once with the product of the western mills. Mr. Mackintosh is to be the local manager, and has already entered upon the duties connected with his position, and assumed control of the business.

EXPLORATIONS ON THE UPPER OTTAWA

We learn from the Toronto *Globe* that about the 20th of June Mr. Niven, P.L.S., of Haliburton, was despatched on an exploratory survey of the country north of Lake Nipissing. He took with him two exploring parties, and expects to occupy about three months in the work. The district to be explored commences about twelve miles north of the lake, and extends northward to Lake Tamagamingue, which lies half way between Lake Nipissing and Lake Tamiscamingue, where the Ottawa takes its rise. The Ottawa on the east and Wahnapitacping and the Wahnapitac River on the west are the utmost limits of this exploration, which includes an area of sixty miles in length between these limits, by a breadth north and south of twenty-four miles. An exploration of this kind has not been made in this Province for very many years, the work of filling in the rough outlines of the early explorers having occupied the attention of the Crown Lands Department.

THE OBJECT OF THE EXPLORATION.

The question of timber limits has no doubt something to do with the exploration, but the meagre information regarding the soil and climate of this territory has been such as to lead to a desire to know something definite regarding its capacity as a grain growing district. What little is known indicates that the soil is possibly better than on the Ottawa south of Matawan, and the climate sufficiently warm for the cultivation of wheat. In the instructions given to Mr. Niven the objects of the exploration are set forth as follows :—

1. To run the outlines in a block of certain townships, to act hereafter as a base in their subdivision.

2. To ascertain by exploration as far as practicable the general nature of the soil, timber, minerals, &c., in the field of operations.

MR. NIVEN'S INSTRUCTIONS.

Many of the instructions given Mr. Niven, are on minor details, which, however important to the department, have little interest for the public. Other instructions are of a general character, leaving much to the exercise of the common sense of the explorer. It is the intention of the Government to extend through this territory the same system of survery as is in existence on the north shore of Lake Huron, and this information is a guide for the general outlines to be mapped by Mr. Niven. The departing point of the exploring party is the north-east angle of the new township of Field. From this angle a line is to be drawn due north, and at intervals of six miles posts are to be planted, and other indications made to guide future surveyors in laying out townships. Six miles north of the angle referred to a base line is to be drawn to the west, and a similar plan adopted in marking for the north and south boundaries of the townships. By a base line to the east and other lines at right anges to it, the whole district is to be laid out as a base for future sub-divisions.

Mr. Niven is also instructed to explore for six miles on each side of his base lines, and for this purpose he is to select fit men, with a good knowledge of land suitable for agricultural purposes, and of trees suitable for merchantable timber. These men are also to have considerable facility in keeping notes of their explorations, and in the use of the pocket compass. The natural features of the country are to be shown, and Mr. Niven has also to examine the rock formation, collect small specimens of fixed rocks, attaching to each a number and notting in his field-book the exact locality in which each specimen has been found. If the rock is stratified its dip is also to be observed. He is also to ascertain by ostronomical observations the latitude of different points, and, if time permit, is to sketch in the position and extent of Lake Tamagaminque.

Reading the Ads.

Our readers will find items of interest in our advertising columns. Among our regular advertisers will be found such a variety of essentials, with the various other matters directly connected therewith, that a careful perusal will in nearly every case develope something in the way of information that must become directly valuable to our readers.

THE FUTURE OF LUMBER.

So much has been written and said concerning the rapidity with which our forests are being felled in lumbering operations that it would not be surprising if corners in the wood market were, ere long, attempted. It has in a number of cases, been "ciphered out" that our timber supplies will be exhausted within thirty years, if the present rate of lumber production is maintained, some writers have even placed the evil day no farther off than twenty years. Were these croakers in a position to verify their predictions, the situation would be, indeed, alarming, but, as the trade has not as yet experienced any lack of material with which to operate, it may be assumed by outsiders, that no grave apprehensions as to the future are entertained by those most vitally interested.

That our production and consumption of lumber is enormous, must be obvious to the most casual thinker; that our present sources of supply must eventually be abandoned is freely admitted, but the *Lumber World* does not anticipate that its children's children will be compelled to forego the comfort and elegance of a walking stick, or dine off cast iron tables. It should be remembered when "exhaustion of our timber supplies" is spoken of, that pine is generally referred to, but there is yet standing in the states of Wisconsin, Michigan and Minnesota a sufficient supply to meet the demands for a great many years to come. The timbered region of Texas is also immense, while Georgia is, and has been for many years, a great lumber producing state. Even Pennsylvania has thousands upon thousands of acres of timber lands in which the ring of the woodman's axe has never been heard, and away down in Maine large amounts of lumber are being, and for many years to come will continue to be, produced. It is true that the cost of log getting is yearly increasing, owing to the necessity for going farther and farther inland, away from the rivers and streams, and, because the distance logs must be hauled before banking, is yearly becoming greater. This, however, should by no means be accepted as indicating an alarming decrease in our timber supply, but, rather, as evidencing an increase in its value.

Our importations of Canadian lumber, while already of respectable proportions, are small in comparison to what they might, and in the not far distant future, probably will be. Were it not for our protective tariff, it is doubtful if western pine would command much attention in eastern markets, and it requires no prophet to see that if western pine becomes so scarce as to advance in price, beyond the limit at which the Canadian article, paying duty, can be profitably imported, then will Canadian pine usurp and hold the position of prominence, and, as one of our contemporaries puts it, immense as the present accessible sources of lumber in Canada are known to be, recent explorations have shown that the vast solitude to the south and west of Hudson Bay is an almost unbroken forest of white and red pine and their congeners. This region, which the imagination, in default of accurate information, has pictured as the mother of icebergs and the home of polar bears, is now found to be one highly inviting, if not to the farmer, at least to the lumberman. Ice and snow for one-half the year are his hand-maidens. Through their assistance he is enabled to "skid" and "bank" his logs along the streams on which, when the spring thaw comes, they are borne without appreciable cost to the point o manufacture on the coast.—*Lumber World.*

AN iron steamship of 1,500 tons, named the *Campana*, has been bought in England and is to be placed on the Lake Superior route from Collingwood to Duluth. She sailed from London on June 27th for Montreal, is of light draft, and generally adapted for lake traffic.

SEVERAL mills owners in the County of Simcoe have been fined for allowing sawdust from their mills to get into the streams, among them are Wm. Train, Thomsonville, and Tackaberry, of Tecumseth. The former was fined twice.

B. YOUNG'S saw mill at Apple River, N.B., was burned two weeks ago, with some lumber in proximity. The sleds and camps in the woods, used by the men, were fired at the same time. Incendiarism is believed to have been the cause.

IDLE CAPITAL.

La Minerve, of Montreal, calls attention to a very important question in the general interest. We refer to the very large amount of capital which has accumulated and is actually lying idle in our banks. And as our contemporary remarks, the evil continues to steadily increase, the deposits largely exceeding the amount of the paid up capital and revenue and constituting nearly the half of the general fund of our banks. According to the last report the state of the Quebec and Ontario Banks stood as follows:—

Capital paid up	$63,580,360
Notes in circulation	24,974,693
Deposits	83,830,645

The first of the above sums is the exclusive property of the banks themselves, and the shareholders are interested in its management. But the administration of the remainder is a subject of general interest; for the country at large is concerned in the deposits and circulation. It appears by the bank statements to the end of December that more than half of the general fund of the banks is held in reserve by them, or something more than the deposits. It is very much to be desired that a portion at least of this enormous amount of idle capital should find employment to benefit the country. We here touch upon a very great and delicate question—the monetary circulation. Can we believe that the hard times have passed away altogether, while so much money is laying idle, so to say, held captive by fear or the lack of advantageous issues? With prosperity already returned, what would be the state of affairs if all our resources were brought into play. It is true that the banks have only a limited control over deposits and that it was only with difficulty that they can touch them. And the proof that they hardly ever do so, and that they are always ready to pay them on call is to be found in the largeness of their reserves. In reality, these moneys are private property, only placed there as a measure of safety, and its owners would not allow the banks to risk it in an industry which they do not dare to invest it themselves. In the merntime, what might not be done for the good of the country with these vast hoards? It is to be hoped that as industry increases, confidence in industrial investments will revive and our capitalists will more largely place their money in them, instead of locking it up in the banks or converting it into bank shares.—*Quebec Budget.*

TRADES' UNION DESPOTISM.

It is practically demonstrated that the Trades' Union organization, so far as to increase the wages of employes, is a dead failure. The loss by strikes to the individuals is very serious in many families, and to the country at large it is enormous. Any effort that shall wipe out this heresy and open the eyes of the blind will be a great blessing. If manufacturers and employers generally would consult the interest of all concerned, by agreeing on a course of combined action to resist this most oppressive despotism, they would do a great service. Suppose first, that they would resolve to *give a preference* to non-union men in employing operitives, and suppose, secondly, that they would give as wages *ten per cent. more* to non-union men than to those belonging to the union. Non-union men are preferable, because they are not liable to be called off from work at any time when a strike is ordered. They are *their own masters*, and can stop work when they think best and not at the dictation of others. Look at the present strike in the city of New York—hundreds walking the streets, and instead of getting $10 to $20 per week, *get nothing* but a pittance handed to them as an act of *charity!* Instead of earning their support by honest work, they are lounging and others work to feed them! In fact, they fill the bill as first-class *paupers* instead of honest, industrious mechanics.

When men can lift themselves up by their thirt collars, then they may be able to increase their wages by joining unions. Supply and demand will ever, as it always has, fix the price paid for labor. It is inevitable, and the most ingenious combinations cannot prevent it. The door in this country is opened very wide to the industrious. On every hand industry is assured a good living, if not "roast beef and plum pudding every day," sufficient that is good and wholesome. Besides, there are millions of acres of land ready to yield an abundant supply of the necessaries of life. Who are those that get up trades' unions, pretending that capital is oppressing the laborer. Capital and labor must act in unison: one is necessary for the other; in fact, labor creates capital, why then should men attempt to array one against the other? Simply from interested motives! If each individual would take care of himself and not surrender, a willing slave, to stop work at command, he would not only be better off but independent. Why sacrifice our independence and move at the bidding of others. "Men and brethren, think of these things."—*Boston Journal of Commerce.*

READER HAVE YOU TRIED every known remedy for Chronic diseases, Impure Blood, disordered Liver or Kidneys, nervous and General Debility, Constipation of the Bowels, with the manifold sufferings pertaining thereto? Have you given up in despair? Try Burdock Blood Bitters; it will not fail you. A trial bottle only costs 10 cents, regular size $1. Any dealer in medicine can supply you.

Wrought Iron Shanty Cook Stoves

The Best Article ever offered to the Trade.

I have much pleasure in drawing attention to my **WROUGHT IRON COOKING STOVE, for Shanty, Hotel and Boarding House use.** These Stoves are made of **Heavy Sheet Iron**, the top and lining of the fire-box being of **Heauy Cast Metal** and all the connecting parts of substantial **Wrought Iron Work.** The dimensions of these Stoves are as follows:—

SINGLE OVEN STOVE

Top surface contains six 10-inch holes, with ample room between, and one oven 16 x 24 x 26.

DOUBLE OVEN STOVE

The Double Oven has a top surface containing twelve 10-inch pot holes, with two ovens, each 16 x 24 x 26. One fire-box of suitable size for area to be heated. Below will be found Testimonials from some of the leading Lumbermen, who have used my Wrought Iron Cook Stoves since I ommenced manufacturing them. They are the names of gentlemen who are well known and eliable, and will carry more weight than any recommendation of my own could do.

The Best Stove I have ever Used.

PETERBOROUGH, May 31, 1880.

ADAM HALL, Esq., Peterborough. Dear Sir,—I have used your Wrought Iron Cooking Stove in our lumbering operations since its introduction here, and have no hesitation in saying that I prefer it to any other. For durability, economy and efficiency, where a large number of men are employed, it is the best stove I have ever used. You can, with confidence, offer it to hotels, boarding houses and lumbermen.

Yours truly, THOS. GEO. HAZLITT.

The Stove for Lumbermen.

PETERBOROUGH, June 1st, 1880.

ADAM HALL, Esq., Peterborough. My Dear Sir,—We have used your Wrought Iron Cooking Stove and find it is very satisfactory for lumber operations, especially so on drives. We can recommend it highly.

Yours truly, IRWIN & BOYD,

Gives the Greatest Satisfaction.

PETERBOROUGH, June 3rd, 1880.

A. HALL, Peterborough. Dear Sir,—I have had the Wrought Iron Cook Stove, purchased from you, in constant use ever since last fall, and it gives the greatest satisfaction in every respect. I can recommend them highly to any one who is in the lumber business. Very truly yours, GEO. HILLIARD, M.P.

EVERY STOVE GUARANTEED

All the necessary TINWARE and CUTLERY for Shanties suppied at the Lowest Prices.

ADAM HALL, Peterborough.

The QUEEN'S HOTEL, TORONTO, CANADA

McGAW & WINNETT, Proprietors.

☞ Patronized by Royalty and the best families. Prices graduated according to rooms. b20

Chips.

When they build a new saw mill the first thing they do to popularize it is to send circulars around. That indicates business.

Some days ago Messrs. Hamilton & Dunlop, of Brantford, made a shipment of native wines to San Francisco. These wines are the growth of the Vin Villa Vineyard, and are becoming more popular as they are better known.

Robert Griffin, for some time in the employ of Messrs. H. B. Rathbun & Son as bookkeeper at Napanee, was arrested in Montreal on the 30th ult., on the charge of misappropriating monies passing through his hands. The deficit so far as known at the time of his arrest, footed up some $600.

It is an interesting circumstance, in connection with development of our manufactures, to learn that Messrs. Belding, Paul & Co., manufacturers of silk in Montreal, have brought to this country an experienced weaver from Coventry, the seat of silk weaving in England, and are beginning to make silk ribbons under his management.

The Messrs. Shaw, the great American tanners, have bought the Foundry block, near Woodstock, N.B., containing 8,500 acres, as well as another block north of it, for $30,000. They have bought this land on account of the hemlock trees which are growing on it. We understand that bark was lately worth on the cars in Massachusetts, $12 per cord.—*Capital.*

The pulp factory at Sherbrooke, of Messrs. Ferguson & Co., has met with marked success since its establishment, and is now running night and day, turning out thirty tons a week, nearly all of which goes to New England paper makers. Spruce lumber is used altogether for producing pulp, and the factory, which has 800 available horse-power, runs five "grinders" and three "wet machines."

A quantity of worsted combing machinery is being put into D. McCrae & Co's factory at Guelph, which is to work on Canadian wools. These machines are very valuable and have been brought from Great Britain specially for manufacturing yarns of the Canadian long wool, which formerly had to be sent to the United States to be made up. In order to make room for the new machinery the offices of the firm have been removed to an adjoining building.

Prof. N. H. Winchell, state geologist of Minnesota, estimates the amount of pine lumber suitable for manufacturing, still standing in that state, at 5,760,000,000 feet. This includes the several Indian reservations, on which are many millions of feet of excellent pine, and a tract on the Big Fork river, whose waters are now drained into the Rainy Lake river, and it seems from the facts obtained, the 250,000,000 or 300,000,000 feet on that stream, Bowstring Lake and the tributaries thereto, may be floated down the Mississippi.—*Lumber World.*

Messrs. A. W. Ogilvie & Co., of the Glenora Mills, Montreal, have just completed rebuilding their extensive mills on the Lachine Canal, and have adopted the new Hungarian Roller process in its entirety. The plans were made by Messrs. E. Pallis & Co., of Milwaukee, who have fitted out a large number of mills in the States, and the mill contains sixty-six of the new roller machines, with all the accompanying appurtenances, affording a capacity of 750 barrels a day. The Messrs. Ogilvie are erecting a mill at Winnipeg, intended to be a counterpart of the above.

The business of the Grand Trunk Railway was never more active than now, especially the portion of its lines in Western Ontario. A Stratford paper of last week describes the situation as especially lively on Tuesday, which, it avers, was the heaviest day ever known on the road. In addition to the regular trains between Sarnia and Stratford, there were 19 special freight trains, the total number arriving at and leaving Stratford station during the 24 hours being 144, of which 27 were passenger trains. This averaged one for every 23 minutes, and there was not an hour's detention, a record unprecedented for a single track, and creditable to the staff who handled such a bulk of traffic so expeditiously.

RE-SAWING LUMBER.

There is yet to be further improvement in the manufacture and distribution of lumber in this country, and there are some reasons for expecting it will come in the adoption of the English system of cutting timber into deals and the re-sawing nearer the point of consumption. While wood is so abundant and comparatively cheap as now, the present plan of cutting at the forest mills lumber of all the thicknesses desired in consumption will probably be continued. But when timber becomes scarcer and advances in price correspondingly, it will not do to waste one-fourth of the wood in cuting it into inch boards. Thinner saws will be required; saws cutting with greater regularity as to thickness and securing a surface that will not have to be cut away so much in planing. The circular saw, with its quarter inch set, its wasteful kirf and production of rough and furrowed surfaces, will be laid aside except for slabbing, and the gang saw alone be used in the forest mills for producing plank deals or cants. These will be transported to the lumber marts, or points of distribution, and re-sawed with the thinner and most perfect saws which can be produced. Every sixteenth of an inch sawed in the width of the kerf saves one thousand feet of lumber in every sixteen sawed. Another reason which will demand the production at the forest mills of deals instead of lumber cut to the various thicknesses in use, when timber shall become more valuable, will be the saving in the cost of transportation. As lumber advances in price the economy of handling and transportation will be a matter requiring more consideration. Deals can be transported more cheaply than inch boards, for one reason because they can be handled with less labor. Another advantage in re-sawing would be that the necessity of keeping on hand larger stocks in order to have the necessary assortments would be reduced, as the dimensions needed could be cut from deals on hand. Re-sawing will produce smoother lumber, because thinner saws may be used and run at a greater speed. The change in the manner of cutting and distributing lumber may not be immediately at hand, but it will take not many years hence. It will, no doubt, come on gradually; but as the manufacture of lumber recedes from the means of cheap transportation by water and the railroads have to be depended on, the cutting of their lumber at the mills will gradually cease, except for near-by-points.—*Lumberman's Gazette.*

DIRECTIONS FOR THE USE OF BELTS.

The putting on of belts should be done by a person acquainted with the use of belting, and too much judgment cannot be exercised in this respect, as the wear of the belt depends considerably on the manner in which it is put on, therefore the following suggestions, if practiced, will be of much service to person, in this capacity. The butts to be joined together should be cut perfectly square with the belt, in order that one side of the band may not be drawn tighter than the other. For the joining of belts, good lace-leather, if properly used, being soft and pliable, will always give satisfaction. Where belts run vertically, they should always be drawn moderately tight, or the weight of the belt will not allow it to adhere closely to the lower pulley, but in all other cases they should be slack. In many instances the tearing out of lace holes is unjustly attributed to poor belting, when, in reality, the fault lies in having a belt too short, and trying to force it together by lacing, and the more leather has been stretched while being manufactured, the more liable it is to be complained of. All leather belting should occasionally be greased with the following mixture, or it may become dry and will not adhere to the pulleys: 1 gallon of neat's foot or tanner's oil, 1 gallon of tallow, 12 ounces of resin; dissolve by heating and mix well together. During the winter season an extra quantity of oil should be added to the mixture. To obtain the greatest amount of power from belts the pulleys should be covered with leather; this will allow the belts to be run very slack, and give 25 per cent. more wear. More power can be obtained from using the grain side of a belt to the pulley than from the flesh side, as the belt adheres more closely to the pulley; but there is this about it—the belt will not last half so long, for when the grain, which is very thin, is worn off, the substance of the belt is gone, and it then quickly gives out; so that I would advise the more saving plan of obtaining power by driving with wider belts, and covering the pulleys with leather. Where belts are run in very damp places, or exposed to the weather, I would recommend the use of rubber belting; but for ordinary use it will not give the satisfaction which is so generally obtained from using oak leather belting, as it cannot be run on cone pulleys through forks or at half cross, and with fair usage would be worn out, while a leather belt was regularly performing the work allotted to it; for when the edge becomes worn, the belt soon gives out.—*Van Riper.*

THE CROSS-CUT SAW.

Ten years' experience in the use of cross-cut saws has proved to me that I have been working under many disadvantages until recently. My wish is for all to know the great advantage of a plan which I pursue. Take a new saw that has never been set, place it between two boards cut to fit the saw, clamp it tight on a bench or vice; take an iron wedge, file one corner to suit the set of the tooth when finished, then take a small hammer, hold the wedges with the left hand, strike the tooth lightly with the hammer until at the right place; then turn the wedge on the opposite side, and on the next tooth and set in the same way; now then you reach the third and most important tooth in the saw; leave it perfectly straight; pass on to the fourth tooth and set as you did the first; turn the wedge, set the fifth the other way; leave the sixth straight, and so on till you finish. Now take your file, dress the two teeth as you do the common saw; the third file perfectly straight and square, leaving it about one-twentieth part of an inch shorter than the others. Continue in that way until you finish, and you will find that it will cut twice as fast as the old way practiced by most of the farmers.

BLACK WALNUT TREES.

Eli Perkins, the great American delusionist, has struct a bonanza for lumbermen in Texas. Sim Graves, a native, has shown Eli a grove of black walnut trees, hand planted ten years ago, that have attained the respectable proportions of nine inches diameter, and which, he assured him, would be nineteen inches through within twenty years from the date of planting. Sim and Eli then sat down and figured out the value of this grove, which contains ten acres. Each acre contains two hundred trees, or the whole patch two thousand. Sim says these trees will yield him four hundred bushels of nuts this year, which at $2.50 per bushel will give him $1,000, and as this yield will increase instead of decrease, he reckons his future income at no less than this sum per annum until the trees are twenty years of age. When that time arrives, Sim expects to sell his grove for $25 per tree or $50,000. Eli concludes his narrative by advising the public to buy land at $25 per acre and settle down as black walnut farmers.—*Lumber World.*

Usual Excellent Style.

Messrs. Toker & Co., Peterborough, Ont., have become proprietors of The Canada Lumberman, the first nine numbers of which were published in Toronto by Mr. Alexander Begg. The Lumeerman will be purely a trade organ, and is the only newspaper published in Canada devoted to the interests of the lumber and timber interests of the Dominion. It will contain trade statistics, the markets, articles bearing on the important interests it represents, and must prove itself a most excellent and trustworthy medium through which lumbermen, millers, miners, etc., may elucidate and set forth their ideas, either individually or collectively, for the benefit of the trade at large. It is a large semi-monthly 16-page newspaper, and is printed from fine clear type, and the workmanship is in Messrs. Toker & Co's usual excellent style. The subscription price is only $2 per annum.—*Printers' Miscellany, St. John, N.B.*

Do Not Drug the System with nauseous purgatives that only debilitate. Burdock Blood Bitters is nature's own Cathartic, it acts at once upon the Bowels, the Skin, the Liver and the Kidneys, arousing all the secretions to a healthy action. It purifies the Blood and cures all Humors, even the worst form of Scrofula, and tones up the Nervous and Debilitated.

ARTIFICIAL SEASONING OF LUMBER.

Van Nostrands *Engineering Magazine* says on this important subject: To prepare timber for the sounding bords of musical instruments, so that they are not influenced by vibrations in temperature and atmospheric changes generally, Mr. C. Rene, pianoforte manufacturer, of Stettin, Germany, has devised a plan by which he makes use of the property of oxygen, particularly of that ozonized by the electric current, to artificially season the timber. The first impulse to experiments being carried out in this direction was given by the well-known fact that wood, which has been seasoned for years, is much more suitable for the manufacture of musical instruments than if used soon after it is thoroughly dried only. Mr. Rene claims that instruments made of wood which has been treated by oxygen possesses a remarkably fine tone, which not only does not decrease with age, but as far as experience teaches improves with age as does the tone of some famous old violins by Italian masters. We are further told that the sounding boards made of wood prepared in this manner have the quality of retaining the sound longer and more powerfully. A number of pianos manufactured at Mr. Rene's works, and exported to the tropics several years ago, have stood exceedingly well, and seem in no way affected by the climatic dangers they are exposed to. While other methods of impregnating wood with chemicals generally have a deteriorating influence on the wood fibers, timber prepared by this method, which is really an artificial agency, becomes harder and stronger. The process is, we understand, regularly carried on at Mr. Rene's works, and the apparatus consists of a hermetically closed boiler or tank, in which the wood to be treated by the process is placed on iron gratings; in a retort, placed by the side of the boiler and connected to it by a pipe with stop valve. Provision is made in the boiler to ozonize the oxygen by means of an electric current, and the boiler is then gently fired and kept hot for forty-eight or fifty hours, after which time the process of preservation of wood is complete.

SUMMER DRINKS.

The London *Chemist and Druggist* gives the following receipts for these seasonable beverages:—

(1) *Ginger Beer.*

Brown sugar	2 lbs.
Boiling water	2 galls.
Cream of tartar	1 oz.
Ginger bruised	2 oz.

Infuse the ginger in the boiling water, add the sugar and cream of tartar; when lukewarm, strain, then add one half pint good yeast. Let it stand all night; then bottle. If desired, a lemon may be added, and it may be clarified by the white of one egg.

(2) *Lemon Beer.*

Sugar	1 pound.
Boiling water	1 gall.
Lemon, sliced	1.
Ginger, bruised	1 oz.
Yeast	1 teacupful.

Let it stand 12 to 20 hours, after which it may be bottled.

(3) *Hop Beer.*

Sugar	4 lbs.
Hops	6 oz.
Water	q. s.
Ginger, bruised	4 oz.

Boil the hops three hours with 5 quarts of water, then strain; add 5 more quarts of water and the ginger, boil a little longer, again strain, add the sugar, and when lukewarm add one pint of yeast. After 24 hours it will be ready for bottling.

(4) *Spruce Beer.*

Hops	2 oz.
Sassafras, in chips	2 oz.
Water	10 galls.

Boil half an hour, strain, and add:—

Brown sugar	7 lbs.
Essence of spruce	1 oz.
Essence of ginger	1 oz.
Pimento, ground	½ oz.

Put the whole in a cask, and let cool; then add one half pint of yeast, let stand 24 hours, fine and bottle it.

Basswood is scarce in Chicago just now, and dealers state that they can readily place all the seasoned they can get hold of without meeting the demand.

ST. JOHN, N.B.

From Our Own Correspondent.

GENERAL REMARKS.—As usual at this season of the year, we have very little for special remark in regard to the progress of our lumber trade. Under these circumstances a few observations with reference to the character of our wood trade generally may not be altogether out of place.

As will be seen by reference to our periodical report of shipments, Europe (and especially Great Britain) is the principal wood market of this port; indeed the same may be said of the Province generally; our wood exports thence consisting very largely of spruce deals.

The lumber trade between this port and the United States is not altogether Canadian. It is almost exclusively in the hands of people from the States, who procure their logs from that portion of the State of Maine watered by the River St. John and tributaries, float them to St. John, where the lumber is manufactured and shipped to the United States as American lumber, and, consequently, free of duty, thus possessing a decided advantage over Canadian lumber, tending to the exclusion of the latter from the American market. There are some ten saw mills in this city and vicinity engaged in this business. The lumber is mostly pine, cut into boards and plank from one to two inches in thickness.

Our shipments to the West Indies, consisting of pine boards chiefly, are comparatively small, and mostly in the winter season.

FREIGHTS.—The freight market is extremely dull and rates very low. For Liverpool the latest quotation is 52/6.

SHIPMENTS.—The shipments of deals and other sawn lumber are as follows:—

For Europe	12,667,000 Sup. ft.
" United States	2,875,000 "
" West Indies	180,000 "

VESSELS IN PORT.—The following is a list of square-rigged vessels in port with their tonnage and destination:—

Nettie Murphy, 1,373, Liverpool.
William, 998, waiting.
Douglas Campbell, 845, Marseilles.
Granite City, 776, United Kingdom.
Effort, 378, United Kingdom or Continent.
Africa, 1,130, Cardiff.
Wanderer, 438, Ireland.
Huano, 843, Belfast.
Blanco, 343,——
Josie Troop, 1,100, Gibraltar, orders.
Venus, 734, United Kingdom.
Cecilia, 334, Continent.
Nylghau, 1,254, Liverpool.
Liffey, 845, Liverpool.
Charles, 1,500, Liverpool.
L. H. D'Veber, 615, Londonderry.
John Murphy, 1,475, Liverpool.
Bonito, 599, Galway.
Broderine, 453, Marseilles,
Taganrog, 514, Marseilles.
Loining, 847, St. Nazaire.
E. W. Gale, 320, Drogheda.
Revolving Light, 1,317, Liverpool.
Rebus, 845, Marseilles.
Mark Twain, 674, Bristol Channel.
Moss Glen, 893,——
Varbjug, 401,——
Acton, S.S., 1,066, W.C. England.
New City, 1,441, Liverpool.
Finsbury, S.S., 1,229, W.C. England.
Astracana, 1,193, Liverpool.
Arklow, 748,——
Waciasa, 809,——
Zebina Goudy, 1,100, Liverpool.

Habor, 300,——
Jennie Parker, 998,——

St. John, N.B., July 2nd, 1881.

ZOPESA.—A healthy man never thinks of his stomach. The dyspeptic thinks of nothing else. Indigestion is a constant reminder. The wise man who finds himself suffering will spend a few cents for a bottle of *Zopesa*, from Brazil, the new and remarkable compound for cleansing and toning the system, for assisting the Digestive apparatus and the Liver to properly perform their duties in assimilating food. Get a 10 cent sample of *Zopesa*, the new remedy, of your druggist. A few doses will surprise you.

SALE BY TENDER
OF EXTENSIVE STEAM
Saw-Milling Property
AT
Parry Harbour, Georgian Bay, and Valuable Timber Limits in the Parry Sound District.

The SAW-MILL is complete in its appointment, and has a cutting capacity of 90,000 to 100,000 feet per day of twelve hours.

The LIMITS cover an area of 229 square miles in the Townships of Monteith, Humphrey, Christie, Ferguson, Hagerman, McKellar, Spence, and Shawanaga, besides the purchased rights to cut the timber from numerous lots in the same Townships, and contain a large quantity of standing pine.

The whole establishment is in complete condition and active operation, and is excellently situated for the manufacture, sale and shipment of timber.

Tenders for the whole property, including plant, will be received until the 20th August next, addressed to the General Manager, Ontario Bank, Toronto, by whom terms of payment and any further information will be furnished on application. No tender will be accepted unless satisfactory to the vendors. 4L17

IRWIN & BOYD
Commission Lumber Dealers,
FORWARDERS,
Shipping and General Agents
PORT HOPE.

Department of the Interior,

OTTAWA, 25th May, 1881.

WHEREAS circumstances has rendered it expedient to effect certain changes in the policy of the Government respecting the administration of Dominion lands, public notice is hereby given:—

1. The Regulations of the 14th October, 1879, were rescinded by order of His Excellency the Governor General in Council, on the 20th day of May instant, and the following Regulations for the disposal of agricultural lands substituted therefor:

2. The even-numbered sections within the Canadian Pacific Railway Belt—that is to say, lying within 24 miles on each side of the line of the said Railway, excepting those which may be required for wood-lots in connection with settlers on prairie lands within the said belt, or which may be otherwise specially dealt with by the Governor in Council, shall be held exclusively for homesteads and pre-emptions. The odd-numbered sections within the said belt are Canadian Pacific Railway Lands, and can only be acquired from the Company.

3. The pre-emptions entered within the said belt of 24 miles on each side of the Canadian Pacific Railway, up to and including the 31st day of December next, shall be disposed of at the rate of $2.50 per acre; fourtenths of the purchase money, with interest on the latter at the rate of six per cent. per annum, to be paid at the end of three years from the date of entry, the remainder to be paid in six equal instalments annually from and after the said date, with intercst at the rate above mentioned on such portions of the purchase money as may from time to time remain unpaid, to be paid with each instalment.

4. From and after the 31st day of December next, the price shall remain the same—that is $2.50 per acre—for pre-emptions within the said belt, or within the corresponding belt of any branch line of the said Railway, but shall be paid in one sum at the end of three years, or at such earlier period as the claimant may have acquired a title to his homestead quarter-section.

5. Dominion Lands, the property of the Government, within 24 miles of any projected line of railway recognized by the Minister of Railways, and of which he has given notice in the *Official Gazette* as being a projected line of Railway, shall be dealt with as to price and terms, as follows:—The pre-emptions shall be sold at the same price and on the same terms as fixed in the next preceding paragraph, and the odd-numbered sections shall be sold at $2.50 per acre, payable in cash.

6. In all townships open for sale and settlement within Manitoba or the North-West Territories, outside of the said Canadian Pacific Railway Belt, the even-numbered sections, except in the cases provided for in clause two of these Regulations, shall be held exclusively for homestead and pre-emption, and the odd-numbered sections for sale as public lands.

7. The lands described as public lands shall be sold at the uniform price of $2 per acre, cash, excepting in special cases where the Minister of the Interior, under the provisions of section 4 of the amendment to the Dominion Lands Act passed at the last session of Parliament, may deem it expedient to withdraw certain farming lands from ordinary sale and settlement, and put them up for sale at public auction to the highest bidder, in which event such lands shall be put up at upset price of $2 per acre.

8. Pre-emptions outside of the Canadian Pacific Railway Belt shall be sold at the uniform price of $2 per acre, to be paid in one sum at the end of three years from the date of entry, or at such earlier period as the claimant may acquire a title to his homestead quarter-section.

9. Exceptions shall be made to the provisions of clause 7, in so far as relates to lands in the Province of Manitoba or the North-West Territories, lying to the north of the belt containing the Pacific Railway lands, wherein a person being an actual settler on an odd-numbered section shall have the privilege of purchasing to the extent of 320 acres of such section, but no more, at the price of $1.25 per acre, cash; but no Patent shall be issued for such land until after three years of actual residence upon the same.

10. The price and terms of payment of odd-numbered sections and pre-emptions, above set forth, shall not apply to persons who have settled in any one of the several belts described in the said Regulations of the 14th October, 1879, hereby rescinded, but who have obtained entries for their lands, and who may establish a right to purchase such odd-numbered sections or pre-emptions, as the case may be, at the price and on the terms respectively fixed for the same by the said Regulations.

Timber for Settlers.

11. The system of wood lots in prairie townships shall be continued—that is to say, homestead settlers having no timber on their own lands, shall be permitted to purchase wood lots in area not exceeding 20 acres each, at a uniform rate of $5 per acre, to be paid in cash.

12. The provision in the next preceding paragraph shall apply also to settlers on prairie sections bought from the Canadian Pacific Railway Company, in cases where the only wood lands available have been laid out on even-numbered sections, provided the Railway Company agree to reciprocate where the only timber in the locality may be found on their lands.

13. With a view to encouraging settlement by cheapening the cost of building material, the Government reserves the right to grant licenses from time to time, under and in accordance with the provisions of the "Dominion Lands Act" to cut merchantable timber on any lands owned by it within surveyed townships; and settlement upon, or sale of any lands covered by such license, shall, for the time being, be subject to the operation of the same.

Sales of lands to Individuals or Corporations for Colonization.

14. In any case where a company or individual applys for lands to colonize, and is willing to expend capital to contribute towards the construction of facilities for communication between such lands and existing settlements, and the Government is satisfied of the good faith and ability of such company or individual to carry out such undertaking, the odd-numbered sections in the case of lands outside of the Canadian Pacific Railway Belt, or of the Belt of any branch line or lines of the same, may be sold to such company or individual at half price, or $1 per acre, in cash. In case the lands applied for be situated within the Canadian Pacific Railway Belt, the same principle shall apply so far as one half of each even-numbered section is concerned—that is to say, the one-half of each even-numbered section may be sold to the company or individual at the price of $1.25 per acre to be paid in cash. The company or individual will further be protected up to the extent of $500, with six per cent. interest thereon till paid, in the case of advances made to place families on homesteads, under the provisions of section 10 of the amendments to the Dominion Lands Acts hereinbefore mentioned.

15. In every such transaction, it shall be absolutely conditional:—

(*a.*) That the company or individual, as the case may be, shall, in case of lands outside of the said Canadian Pacific Railway Belt, within three years of the date of the agreement with the Government, place two settlers on each of the odd-numbered sections, and also two on homesteads on each of the even-numbered sections embraced in the scheme of colonization.

(*b.*) That should the land applied for be situated within the Canadian Pacific Railway Belt, the company or individual shall, within three years of the date of the agreement with the Government, place two settlers on the half of each even numbered section purchased under the provision contained in paragraph 14, above, and also one settler upon each of the two quarter sections remaining available for Homesteads in such section.

(*c*) That on the promoters failing within the period fixed, to place the prescribed number of settlers, the Governor in Council may cancel the sale and the privilege of colonization, and resume possession of the lands not settled, or charge the full price of $2 per acre, or $2.50 per acre, as the case may be, for such lands, as may be deemed expedient.

(*d.*) That it be distinctly understood that this policy shall not only apply to schemes for colonization of the public lands by Emigrants from Great Britain or the European Continent.

Pasturage Lands.

16. The policy set forth as follows shall govern applications for lands for grazing purposes, and previous to entertaining any application, the Minister of the Interior shall satisfy himself of the good faith and ability of the applicant to carry out the undertaking involved in such application.

17. From time to time, as may be deemed expedient, leases of such Townships, or portions of Townships, as may be available for grazing purposes, shall be put up at auction at an upset price to be fixed by the Minister of the Interior, and sold to the highest bidder—the premium for such leases to be paid in cash at the time of the sale.

18. Such leases shall be for a period of twenty-one years, and in accordance otherwise with the provisions of section eight of the Amendment to the Dominion Lands Act passed at the last Session of Parliament, hereinbefore mentioned.

19. In all cases the area included in a lease shall be in proportion to the quantity of the live stock kept thereon, at the rate of ten acres of land to one head of stock; and the failure in any case of the lessee to place the requisite stock upon the land within three years from the granting of the lease, or in subsequently maintaining the proper ratio of stock to the area of the leasehold, shall justify the Governor in Council in cancelling such lease, or in diminishing proportionately the area contained therein.

20. On placing the required proportion of stock within the limits of the leasehold, the lessee shall have the privilege of purchasing, and receiving a patent for, a quantity of land covered by such lesse, on which to construct the buildings necessary in connection therewith, not to exceed five per cent. of the area of the leasehold, which latter shall in no single case exceed 100,000 acres.

21. The rental for a leasehold shall in all cases be at the rate of $10 per annum for each thousand acres included therein, and the price of the land which may be purchased for the cattle station referred to in the next preceding paragraph, shall be $1.25 per acre, payable in cash.

Payments for Lands.

22. Payments for public lands and also for pre-emptions made in cash, or in scrip, or in police or military bounty warrants, at the option of the purchaser.

23. The above provisions shall not apply to lands valuable for town plots, or to coal or other mineral lands, or to stone or marble quarries, or to lands having water power thereon; and further shall not, of course, affect Sections 11 and 29 in each Township, which are public school lands, or sections 8 and 26, which are Hudson's Bay Company's lands.

J. S. DENNIS,
Deputy Minister of the Interior.

LINDSAY RUSSELL,
Surveyor-General. 3L17

We have added to our plant all the latest improved machinery for Electro and Stereotyping, and the manufacture of Printers Furniture, facilities for executing work which no other establishment in the Dominion possesses, and not excelled by any on the continent. A large assortment of various cuts constantly on hand.

FLEMING & SON,
L14 26 Colborne St., Toronto.

TRUSSES.

CLUTHE'S PATENT SPIRAL TRUSS all attachments improved. No more buckles, all on solid brass casting. Book on rupture and human frame free. Send address in full post card. Best true information about rupture and deformities. CHAS. CLUTHE, Surgical Machinist, 118½ King Street west, Toronto. 12L13

Market Reports.

TORONTO.

From Our Own Correspondent.

TORONTO, July 9, 1881.—There is not much that is new in lumber matters to record since my last letter, only that the demand for cars has become more vociferous, and much of the language hurled at the heads of N.R.R. officials will hardly bear repeating, and in the present instance there actually seems to be just cause for complaint, as the long interval that has elapsed since the change of gauge from Allandale to the Northern extremity of the line should have been ample time in which to have completed the change south of the former place, and the delay at this period of the season has, no doubt, seriously inconvenienced shippers, as most of the manufacturers are anxious to get their lumber to market, and a few weeks delay may mean an advance in freights to Oswego and Albany, and it is claimed by some persons that a considerable quantity of lumber might have beeen brought over the Credit Valley line, and the owners of stocks thus delayed would sooner have paid something extra, in order to have got their stuff to market. It seems to me that the great mistake made by the company has been in delaying the work until the busy season set in. In the meantime, large quantities of lumber has been accumulating at different points of the road, and next week we expect a rush of lumber down that will gladden the hearts of the lumbermen.

The strange anomaly in regard to the purchasing and selling price of shingles as mentioned in my last letter, still continues; some dealers here selling XXX 16-in, shingles as low as $2.40 per M., which is fully as low as most of the manufacturers are willing to place them in this market for. One dealer to whom I pointed out the foolishness of such a proceeding, argued much in the same style as the old woman, who declared that she sold apples for less than cost, and in answer to the query as to how she managed to make a living under such circumstances, she declared it was owing to the large quantity she sold..

I would here intimate to any of your readers who may have cherry lumber for sale, that good prices may now be obtained in this market, especially if well manufactured. As high as $30.00 per M. by the car load has been paid for good cherry lumber, but it is useless for manufacturers to expect good prices for an inferior article. The great fault with many manufacturers is in leaving the heart in heavy plank and squares, so that before it gets to market it is so split up in consequence as to materially hinder its sale. A word to the wise will be sufficient. Take a piece of 4x4 out of the heart of the log and throw it away, if you have no better use for it, and the enhanced price you will obtain for the lumber you market, will fully repay the trouble taken. The same remark will apply to all hardwoods. There is another class of wood that commands ready sale, namely, black birch, and it should be cut into 5x5, 6x6, 8x8 and 10x 10. A large quantity of this class of lumber is now used for newel posts, cherry having become so scarce.

Stock boards of good quality for dressing purposes will now sell readily, both for local use and for shipment, but dry lumber sufficiently good for dressing purposes is scarcely obtainable at any price, and the inevitable result will be that the retail business will gradually drift into the hands of men who are possessed of sufficient capital to carry large stocks, so as to be able at all times to meet the constantly increasing demand for thoroughly dry lumber; that this will be the case becomes more apparent year after year, as mill men decline to hold their lumber any longer than is absolutely requisite to make it in a fit condition for shipment, so that it naturally follows out that the retailer will be bound to meet the demand for dry stuff.

Another inovation to be noted this season is the large quantity of 1-in. flooring being used instead of 1¼-in. as formerly, so that those holding large stocks of 1¼-in. flooring plank, find it difficult to market any considerable quantity. This should be noted by manufacturers for their future guidance, and if instead of cutting so much 1¼-in. flooring plank in the future, they would cut the same class of logs into 3-in. plank (especially 16-ft. lengths) it will command ready sale and at more remunerative prices, if held until partially dry. Sawn lath in this market are tending downwards in price, and are easily obtained at the yards at $1.40 to $1.50 per M. There is quite a large trade being done in walnut in this market at the present time. The largest dealers in this class of wood here are Messrs. Oliver & Co., who have especial facilities for handling and storing large quantities of this class of lumber, and the greatly increased value of this kind of wood would indicate that at no distant date other and less expensive woods will take its place. In a future letter I will endeavor to give you the quantity of walnut sold in this market, and I venture to predict it will surprise many of your readers.

Prices at the yards rule as follows:—

Mill cull boards and scantling	$ 9 00
Shipping cull boards, promiscous widths	11 00

Lath	1 55

OTTAWA.

From Our Own Correspondent.

The lumber trade this season is very encouraging. Sales have been good so far at prices somewhat in advance of those of last year. The output of logs this spring, on the Upper Ottawa, reached nearly two million, while three times as much square timber was taken out as in the winter of 1879-80. It is estimated that the cut of lumber by the mills in this immediate section the current year will reach 300,000,000 feet. Not more than one-half of the season's cut of lumber has been sold so far. The quotations at the present time are as follows:—

12-in. stock, ₱ M	$16 00@16 00
10-in. "	12 00@14 00
Sidings	20 00@20 00

These prices are about a dollar per thousand in advance of the prices of last year at the same period. Deals are dull sale, in fact very few lots have been sold since the winter. Two-thirds quality rate at from $30 to $33 per 100 standards on the Quebec basis. Second and first quality of deals rate in proportion to the quotation given.

THE DRIVE.

The Upper Ottawa drive is coming down first-rate, although about two weeks later than last year. Navigation opened early but there was a lack of rain at the time that the snow in the woods melted away. Notwithstanding this, the quantity of logs stuck in the small streams is not great, there not being so many as was at one time expected.

FREIGHT BUSINESS.

Business in the freight line is rather dull this season in comparison to last. This is owing to the fact that there are more boats engaged in carrying lumber. Last year a good many barges were engaged in carrying ice to New York, owing to the ice "famine" that existed there, besides which there has been quite an increase in the number of barges. The present rates are as follows: To Montreal, $1.10 to $1.25 per M.; to Quebec and Burlington, $2; to Whitehall, $2.25; to Albany, $3; and New York. $3.25. This is a decrease of fifty cents per thousand to Albany and New York. The rates to Whitehall, Quebec and Burlington are the same as last season, with a slight decrease in rate to Montreal.

OTTAWA'S FLEET.

The total number of vessels registered at the port of Ottawa is 122—42 being steam vessels and 80 being barges. The tonnage of the steamboats amounts to 4,208, and that of the barges to 9,366, making a total tonnage for the port of 12,774. The number of men and boys employed in working the fleet is, in round figures, 650, and the expenses foot up to about $100,000 or more for the season. About one-half of the vessels using steam are steam barges, and capable of carrying good loads as well as towing. Nearly all of the barges are engaged in the transport of lumber, often bringing return cargoes of merchandise from Montreal. The principal owners of vessels are Mr. J. R. Booth, Perley & Pattee, D. Murphy & Co., McNaughton & Co., Capt. Blanchard, Capt. S. Mulligan, Ald. Harris, and the Augur Shipping Co.

SQUARE TIMBER.

The quantity of square timber taken out on the Ottawa this season is about treble that of last year, but as the water is now falling fast it may be late in the season before it all gets through, and it is quite probable that some of it may have to be wintered over at points along the route, so a lumberman informs me. This season an innovation was made in the transport of square timber, Mr. Findlay and Mr. Mackie both shipping large quantities by rail, through from the Mattawa to Quebec, by the Canada Central and Occidental Railways. It saves time, and as the expense is very little greater it is altogether probable that the day is not far distant when the most of the timber cut on the Upper Ottawa will be sent to Quebec by rail instead of by water.

EDGINGS.

Mr. E. B. Eddy employs 150 men at the Nepear steam sawmill, which is located at the head of the Duchesne Rapids, on the Ontario side of the Ottawa. The mill is run night and day.

Conroy Bros. have put on a night gang at their mill, Duchesne Rapids, Quebec side, and are manufacturing a large quantity of lumber this season. The Occidental Railway Co. will run a branch of their line into the mill premises to facilitate shipment. The branch will be three-quarters of a mile in length.

The new saw mill of Lachlin Bros., Arnprior, is being finished and is said to be one of the finest on the continent. The building is a splendid one, being solidly and neatly built, while the machinery put in is of the very best.

It is probable that all the mills at the Chaudiere will shortly be lighted by electricity. Capt. Young has followed in the wake of Mr. E. B. Eddy, adopting the electric light, and the other mill men feel inclined to follow suit. The lights at Mr. Young's mill are on the Maxam system, furnished by the Canadian Electric Light Co., of Montreal.

The splint factory at Horseshoe Bay, twenty miles down the river from Ottawa, is running full blast. It is owned by the American firm of Swift, Courtney & Beecher, who have four large match factories in operation in the States, and is managed by Edward Prince. Nine barges of splints were shipped to the other side last season, and this year five barge loads have already been started, and Mr. Prince hopes to get seven or eight more barges away by the close of navigation.

Mr. Hebron Harris took out a large quantity of ties on the Gatineau the past season, and is now shipping them to Cape Vincent, having a contract with an american railway company.

LONDON, ONT.

From Our Own Correspondent.

JULY 11.—To begin this, my initial letter, with "nothing new," would not be likely to awaken any desire on the part of my readers to continue its perusal beyond the first few lines. To make manifest a letter of interest, it is as well to do it at the beginning, particularly if your correspondent is wishful to become popularly read by those most interested.

I must inform you then, at the outset, that in this market lumber of all grades is in very great demand, and a gradual advancing tendency is very apparent.

I am informed on very good authority that more lumber has come into this market for the present year than any year previous, and putting this fact, and the probability of higher figures, together, it would suggest something of what is now-a-days known as a "boom."

Several very large building contracts are now in process, and nearing completion.

The Roman Catholic Cathedral here, which is to cost in the neighbourhood of $90,000, is now some feet above ground level, and the masons are busy ten hours a day. The lumber contract for this building is possibly about $10,000, and is in the hands of a well known firm of this city.

The Masonic Temple, which will be opened about September, is beginning to present a fine appearance. The same firm which has the Roman Catholic Cathedral contract, has this also, which will not be far short of $10,000 in amount.

The contract for the Exhibition Grounds supply (for the Provincial Exhibition which is to be held here this year) is partly let, to the amount of about $6,000, with more to follow, and is in the hands of a well known lumber merchant here. A fine mansion is being built by Mr. Benj. Cronin. The contract for woodwork for which alone is $12,000.

The cedar block pavement which has just been completed on Dundas street from Ridout to Richmond, is a fine piece of work, and the contractors, Messrs. Stevens, Turner and Burns, have shown a wonderful mark of advancement in their increased facilities. They have had about fifty car loads of cedar posts from all over the country, principally, however, from places on the London, Huron & Bruce and Wellington, Grey and Bruce Railroads.

A very fine mansion is being built on Dufferin Avenue for Mr. McDonough, the contract for which is about $8,000 for woodwork.

The same complaint prevails here with regard to want of cars; an insufficient quantity for the demand is very apparent.

Shingles are very scarce, only two carloads have come into the city within the past four weeks, and one firm alone have told me they could have sold 30 carloads if they had had them.

Below I give you a list of London prices, which, however, must be understood as retail figures:—

Mill cut boards and scantling	$ 8 00
Shipping cull boards, promiscous widths	10 00
" " 10 and 12 in. stocks	10 50
Common boards, promiscous widths	13 00

" " " 18 ft	14 50
" " " 20 ft	15 50
" " " 22 ft	16 50
" " " 24 ft	18 00
Common stock	14 00
Common 2 in. plank	13 00
Cutting up plank and boards	18 00
Sound dressing stocks	17 00
Clear and picks	28 00
Three uppers, Am. inspection	35 00
½ inch dressed and matched flooring	20 00
1 " " " "	20 00
" " " "	20 00
Lath	1 55
XXX sawn shingles, ₱ M	2 75
Lath per 1000 feet	4 25

NEW YORK.

The *Real Estate Record* of July 9th says: All reports upon the wholesale market continue in the cheerful, hopeful strain so frequently recorded this season. Demand has shown some irregularity, and from a few sources was a little disappointing, but the evidences seem to show that the movements of buyers are checked by exceptional and temporary influences with every prospect of removal at an early date. On all leading descriptions values, too, are well maintained, and while it is not uncommon to find some reduction in cost at this season of the year, sellers are confident that if any shrinkage at all becomes necessary it will be much smaller than usual. Yard assortments are light and dealers are ready to handle anything likely to improve their stocks. The first six months of the year show a good full export movement, and there is hopes of keeping up the same average to the first of January next.

The following is a comparative statement of exports of lumber from this port for the first six months of the years named:

	1878. feet.	1879. feet.	1880. feet.	1881. feet.
W. Indies	11,606,513	12,706,138	14,521,399	22,325,427
S. America	5,527,498	11,518,237	9,659,177	13,583,747
E. Indies, etc	3,245,252	3,415,768	4,008,455	3,248,336
Europe	5,799,098	5,202,794	6,746,868	2,820,362
Total	26,178,286	33,824,867	34,935,899	41,977,832

The above table does not include the exports of hardwoods. The exports of the month of June will rank among the largest for any corresponding period and are one and one-half million feet less than for April last.

Spruce of attractive quality is scarce on the spot and not easy to engage for future, as most

of the mills are under contract for the product of all the suitable logs they are in any way likely to secure. Full rates are in consequence asked and the bids range well up, also, as buyers are in some cases quite anxious. On ordinary sizes the tone has been quite steady also. Some pretty heavy arrivals were of late reported, but the bulk appears to have been engaged. May be quoted at $14.00@16.00 on randoms; and $16.00@18.00 for specials.

White pine continues firm in price and has a good sale on all regular outlets. Large amounts have gone abroad this season, but dealers who make the foreign trade a specialty, seem confident that shippers may still be depended upon as good customers. Full home wants are assured and generally the market is in excellent shape. We quote $17.00@19.00 per M. for West India shipping boards; $24.50@26.00 for South American do.; $16.00@16.50 for box board; $17.00@17.50 for do. wide and sound do.

Yellow pine has a first-rate market still, and on all grades showing merit there is a firm tone at full prices. The local consumption is becoming larger, and, in some cases, has run ahead of deliveries, compelling contractors to seek supplies from yards while awaiting the arrival of detained cargoes. Quite a number of shipping orders are in hand, but negotiations on these prove a trifle slow. We quote random cargoes at about $24.00@26.00 per M.; ordered cargoes, $26.00@28.00 do.; green flooring boards, $24.50@26.50 do.; and dry do. do., $27.00@29.00. Cargoes at the South, $15.00@19.00 per M. for rough, and $20.00@24.00 for dressed.

Hardwoods do not accumulate. Supplies come to hand to some extent, but quickly disappear, and buyers find it quite as difficult as ever to hunt up an attractive assortment. Prices naturally are quite firm all around. We quote at wholesale rates by carload about as follows: Walnut, $77@85 per M.; ash, $35@38 do.; oak, $40@45 do.; maple, $30@35 do.; chestnut, 1st and 2nd, $30@35; do. do. culls, $18@20 do.; cherry, $50@55 do.; white wood, ½ and ⅝ inch, $25@27.50, and do. inch, $33@35 do.; hickory, $35@45 do., for Western, and $65@75 for good nearby stock.

Shingles show no great variation. Demand is fair, the supply under very good control, and holders generally quite firm in asking former rates. Machine dressed cedar shingles quoted as follows: For 30-inch, $16@22.25 for A and $28.75@33.25 for No. 1; for 24-inch, $6.50@16 for A and $16.75@23 for No. 1; for 20-inch, $5@10.50 for A and $11.25@11.75 for No. 1.

OSWEGO, N.Y.

From Our Own Correspondent.

OSWEGO, N.Y., July 9, 1881.—There has been no particular change in this market since our last, the receipts have been about as usual at this season of the year, always being somewhat effected by Dominion and Fourth of July holidays. The quantity received for shipment has not been as large as during the early part of June, more being held for distribution here. The yards are well stocked, though a good deal of it is of this year's cut, and must be held a while before it can be disposed of. No change in lake freights. There has been a decline in canal rates of ten cents. Current rates are: $1.50 to Albany, and $2.20 to New York.

Receipts to date from opening of navigation:

1880	68 millions.
1881	59 "

Quotations are as follows:—

Three uppers	$42 00@45 00

"WHERE HAVE YOU BEEN FOR A WEEK BACK?" enquired a man of his neighbor; "I have not a weak back," retorted he, "you misunderstand me," remarked his friend; "but if you ever get a weak back try Burdock Blood Bitters." It cures all debility arising from disordered Kidneys, Liver or Blood, and is the best purifying tonic in the world. All medicine dealers supply Sample Bottles at 10 Cents; Regular Size $1.

ALBANY.

This is "Fourth of July" week when the district expects a quiet market. It has not been disappointed, for no large buyers have shown themselves since our last report. The receipts of lumber are free, the week which ended with 30th June bringing forward the largest quantity of any week this season; still we are much short of what we had received to date a year ago. Prices are without change and steadily held.

Hardwoods are in steady demand and unchanged in price.

Coarse lumber comes forward slowly; the mills are not running to their capacity for want of a sufficient supply of water; the demand is good and prices steadily held.

The receipts of lumber by lake at Buffalo for the week ending July 4th were 8,450,000 feet and by rail—— cars. The receipts by lake at Oswego for the week were 4,537,000.

The receipts by canal at Albany from the opening of navigation to July 1st were:

	Boards and Scantling, ft.	*Shingles, M.*	*Timber, cub. ft.*	*Staves, lb.*
1881	100,874,000	48	.....	459,000
1880	115,060,600	200	5,400	.....

Freights from Oswego to Albany, $1.60@1.65. From Ottawa to Albany, by boats, $3.00@3.50 ₱ M. feet.—*Argus.*

River freights are:—

To New York, ₱ M ft	@1 00

SAGINAW VALLEY.

The *Lumberman's Gazette* says: Another week of great activity in the lumber market has passed, in which a large quantity of stock has changed hands at good figures. Prices for choice lumber are very firm, sales having been made at $8, $16 and $38, and $8, $16 and $40, and in one instance a manufacturer named $10, $20 and $40, as his figures for an extra choice lot. Among other sales we note 1,300,000 feet strips at $6.50, $13 and $30, 300,000 feet strips at $6.50 and $13, 200,000 feet strips at $9, 100,000 feet common strips at $6.50, $13 and $30, 1,500,000 at $7, $14 and $35, and 5,500,000 feet on market rates. There have been more lumber buyers in the market the past week than usual, the reduction in the cost of transportation seeming to have a favorable effect on the market.

Shingles are in good request at $1.90@2.10 for clear butts and $2.90@3.10 for XXX.

The total shipment of lumber, lath and shingles from the river for the season to date, were as follows:

Lumber, ft	228,033,503
Shingles	43,748,600
Lath	5,376,000
Hoops	7,519,000

The aggregate of lumber shipped last year to July 1, was 273,408,000 feet, and 1879, 195,714,811 feet. The shipments are fifty millions short of what they were last year at this date. The shingle shipments are about the same as last year, but only about one-half what they were in 1879.

MINNEAPOLIS.

The Mississippi Valley *Lumberman* of the 8th inst., says: The condition of the lumber business is all that any one anticipated could be at the opening of the season. There has been a steady advancement in values since the first day of January and the tendency is to still better figures. It is not an over estimate to say that emigration into the Missouri Valley and the country beyond (including Dakota) during the next two years will absorb five hundred million feet of lumber, which amount is to be added to that required in the west herefore, to say nothing of the emigration into the Mississippi Valley. The Lake Michigan region will necessarily have to furnish a portion of the amount required, because there is is not lumber enough cut on the waters of the Mississippi river to supply the country west of it. The advance in lumber during the past ten days at the several points along the river from St. Louis to Minneapolis has amounted to about one dollar per thousand on the leading qualities.

BOSTON.

There is still a very good distribution, although in some instances the intervention of a holiday has affected trade slightly, but the falling off is counter-balanced by the light receipts of the week. Prices remain very firm. Dimension stuff and long timber are very scarce, and in some cases are held rather above the general market, and from present indications will probably so continue. As a general rule the better kinds of lumber are stiff, and sales have been made at an advance over list prices. Ash is in pretty good supply and prices are not so firm, although dealers anticipate a speedy reaction as soon as this surplus stock is worked off. The following are car load quotations:

CANADA PINE.

Selects, Dressed	$48 00@50 00
Shelving, Dressed, 1sts	40 00@42 00
do do 2nds	33 00@35 00
Dressed Shippers	27 00@29 00
Dressed Box	18 00@20 00
Sheathing, 1st quality	42 00@45 00
" 2nd "	34 00@35 00

TONAWANDA.

The *Northwestern Lumberman*, under date of July 5th, says: The market here has had a tendency to dullness the past week, owing to public excitement in regard to the President's assassination, public holiday, etc., all of which have somewhat broken in on the general activity and routine. Prices have suffered no change. Lake freights are quoted to-day at $2.25 from Bay City, and dealers and shippers are confidently looking forward to that figure as the settled price for the season.

CARGO LOTS—MICHIGAN INSPECTION.

Three uppers	$38 00@43 00
Common	17 50@20 00
Culls	11 50@12 50

The Grease Tree.

IT is said that large forests of the grease tree of China are to be found there, and they form the source of a considerable local traffic. This tree not very long ago was imported into India, and it is said that the experiment of cultivating it there has proved quite successful. In the Punjaub and northwestern provinces generally it grows as rapidly and as vigorously as in the native soil, and there are already thousands of trees on the government plantations yielding tons of seeds, admirably adapted to a variety of commercial purposes. Dr. Jameson, a chemist in the Punjaub, has prepared a quantity of grease from this tree, and has forwarded on trial a portion of it to the Punjaub railway to have its qualities tested in a practical manner as lubricating matter for those parts of the machinery constantly exposed to friction. The grease thus obtained forms an excellent tallow, burning with a clear, brilliant and, what is infinitely more to the purpose, a white light, and at the same time emitting not a trace of any unpleasant odor or of the ordinary disagreeable accompaniments of combustion.

CIRCULAR SAW STEAM FEED!

I would also call special attention to my

Heavy Circular Saw Mills

and for STEAM MILLS, would recommend the Steam Feed, having put in several which are giving the best of satisfaction, as will be seen by the following testimonials:—

GRAVENHURST, August 20th, 1880.

WM. HAMILTON, ESQ., Peterborough.

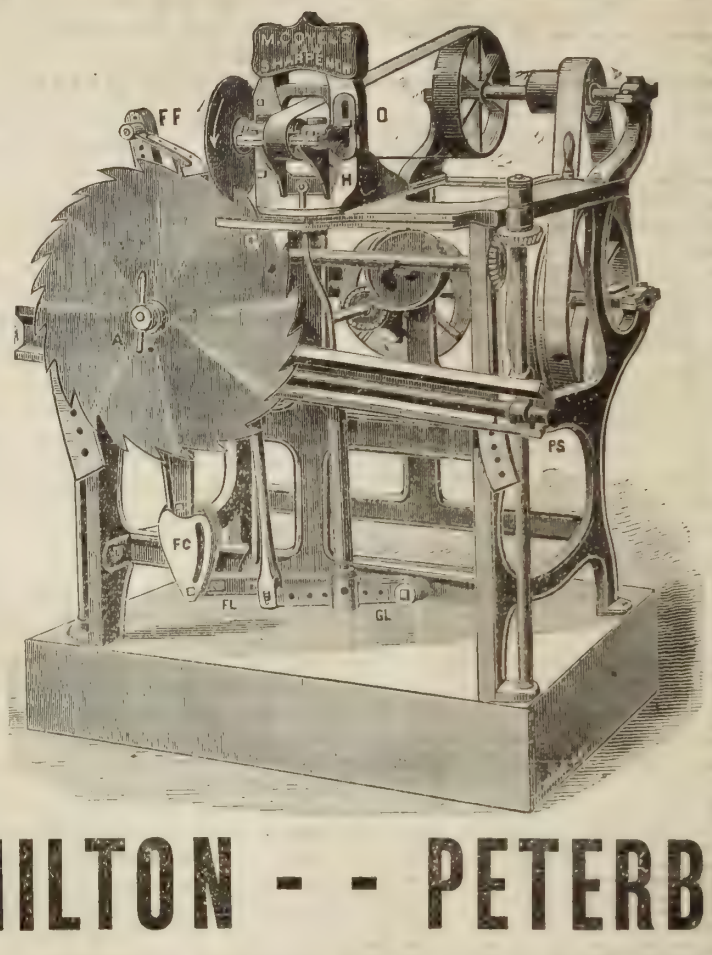
DEAR SIR—I have used your Steam Feed for near four months, and it has given me perfect satisfaction in every way; it is admitted by every person who has seen it work to be the best feed ever invented. Since I put it into my mill, I have not lost ten minutes time fixing anything belonging to it. I can cut 18 boards 13 ft. long in one minute. It can do much smoother and better work than the pinion feed. It is easily governed and reverses the carriages instantly. I am thoroughly satisfied with it and can recommend it to any person who has a Circular Saw Mill for cutting long or short logs. I consider I have cut more lumber than will pay for the Steam Feed since I got it than I would have cut had I not put it in.

Yours respectfully,
WILLIAM TAIT,
Lumberman, Gravenhurst.

TORONTO, August 11th, 1880.

WM. HAMILTON, Peterborough, Ont.

DEAR SIR—The Steam Feed you put in is working splendidly. Yours, &c.,
THOMPSON, SMITH & SON.

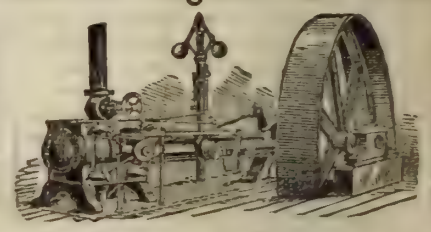


MILL MACHINERY!

I am also manufacturing Saw Mill Machinery, for all sizes of Gang or Circular Mills, Span or Double Circular for Slabbing Small Logs. My Patent Jack Chain for drawing logs into Saw Mills, acknowledged by all to be the Cheapest and best ever got up; also, my Patent Lumber Markers, different sizes of Edgers, Gang Lath Mills, Trimmers, Power Gunmers, and all Machinery used in a first-class Gang or Circular Saw Mill; also, small Hand Gunmers for use in the woods, for Cross-cut Saws. Rotary Pumps of different sizes, for Fire Protection in Mills, &c.

Horizontal Engines and Boilers

CORLISS ENGINES



Where economy of fuel is the great consideration, along with uniformity of speed, such as is required in Grist and Flouring Mills, Woollen and Cotton Factories, or large Factories of any kind, I supply the Corliss Engine. I feel justified in saying that our Style, Workmanship and Finish on this Engine will be no discredit to its renown, and certainly is not equalled in this country for economy of fuel. I have them working at 2½ pounds of coal per horse-power per hour. L10

EMERY WHEELS FOR SAW GUMMING!

Solid Emery Wheels are now almost in universal use for the purpose of gulletting and gumming saws. Statistics show from 25,000 to 30,000 saw-mills in the United States. Many of these run only a single saw each. A one-saw mill would use one or two wheels a year, costing $3 to $4 each, and when such small mills order single Emery Wheels from the factory, the express charges often equal the cost of the wheel. There was a time when the quality of Emery Wheels was so uncertain, and the demand so fickle, that storekeepers could not afford to carry them in stock. Now, however, Saw Gumming Wheels have become as staple an article as Files, and every dealer in saws, Hardware and Mill Supplies can afford to carry a few dozen standard sizes in stock. Large dealers order stocks of $500 to $750 worth at a time. Saw Gumming Wheels are used with the edge (or face) square, round, or beveled. Probably seven-eighths of all in use are beveled.

The principal sizes are:

8x¼, 8x⅜, 8x½ } ¾ in. hole. 10x¼, 10x⅜, 10x½, 10x⅝ } ¾ in. hole. 12x¼, 12x⅜, 12x½, 12x⅝, 12x¾, 12x1 } ¾, 7/8 and 1 inch. Holes,

Probably more wheels 12x⅜, 12x½ and 12x¾ are used than all the other sizes together. Saw Gumming Wheels are used, however, of all sizes up to 24x1½. The most frequent complaint is that Emery Wheels harden the saw so that a file won't touch it. The answer is that you don't want a file to touch it. An expert workman will shape and sharpen the teeth with an Emery Wheel, leaving the teeth *case hardened*, in which condition the saw will cut about 33⅓ per cent. more lumber than a soft saw will. Those who want to use the file, however, have only to touch the saw *lightly* a second time (after going all over it once), and this second touch will cut through the case-hardened scale.

A QUESTION OF QUALITY.

Thirteen years of experience as makers of, dealers in, and actual users of Emery Wheels, have led us to a decided opinion as to what quality is the best. We prefer for almost every use an "Extra Soft" wheel like the "Pocono." We believe that money lost through the rapid wear of the wheel is more than made up by the money saved on wages. As we cannot get every one to adopt our views, we make several qualities, so as to meet their views. We say to those who think they can only be satisfied with some other make of wheels (not Tanite), that we can furnish qualities *to match* any and every other make. If you have got used to some special quality of wheel, let us know what it is, and we can send you *a Tanite Wheel of similar quality*. Our *regular* classification of Saw Gumming Wheels is as follows:

CLASS 2. MEDIUM—HARD.—This Wheel is THE STANDARD Saw Gumming Wheel all over the world. Probably seven-eighths of all the Saw Gumming Wheels used are "Class 2." It cuts fast and keeps its shape well. Some think it too hard, some too soft. We prefer the "Pocono."

CLASS 3. MEDIUM—SOFT.—The same as to coarseness and fineness as "Class 2," but a *softer*, and therefor freer cutting wheel.

CLASS "POCONO." EXTRA SOFT.—This Wheel we prefer to all others. It is both *finer* in grain and softer than either of the above. As a Saw Gumming Wheel, Class "Pocono" is specially suited to those practical and experienced Sawyers who know how to grind with a light touch, and who want a free cutting wheel that will not create much heat.

Illustrated Circulars and Catalogue, showing Cuts of Saw Gumming Machines, and Shapes, Sizes and Prices of Wheels, sent free on application.

LUMBERMEN'S ASSOCIATIONS.

Failure in business does not always prove a man lacking in business ability, neither does the untimely termination of an organization conclusively establish the want of organizing power and energy in those who have been concerned in the association. Many a business man of fine abilities fails from excess of enterprise. He pushes his business beyond the limit of its endurance before he knows it; he fails because he attempts to do too much. This, we believe, was the cause of the failure of several of the lumbermen's associations to which the *Northwestern Lumberman* alludes. They were too comprehensive. To use an expressive vulgarism, "They bit off more than they could chew." Take the National Association of Lumbermen. There may have been some relations of the members to each other which it did not attempt to regulate, but we do not remember any. It was devoted mainly to the interests of the retail dealers, and had a patent, back-action, double open-and-shut devise for preventing a member doing business anywhere except in his own bailiwick. This was chiefly directed at wholesale dealers, who were subject to be mulcted in a sum equal to the profits on the trade, which was to go to the dealers against whose prerogative they had sinned—the fine being collectable by a process which closely resembles boycotting, since that practice has been invented in Ireland. It amounted to a practical restraint of trade. If a wholesaler sold a bill of lumber to anyone not a dealer within the territory occupied or supposed to be occupied by a dealer, he was directly notified to walk up the captain's office and settle, or he was posted among the association as a man not entitled to their confidence. Theoretically, at least, all the members of the association agreed not to purchase lumber of him until he had shown for the prerogative of the retailer. It is not surprising that an association which proposed thus to interfere with the freedom of trade should fail. It gathered in the ducats of a large number of the retailers by its bewitching promises of promoting their interests and enabling them to corner the home market and unload at their own prices. But the promises it made to the ear were broken to the hope. It had bitten off more than it could chew. The wholesalers, after standing the boycotting a while, concluded the National Association was a menace to their rights and interests, and they formed a counter association. The National Association movement culminated and went to pieces because its foundation was rotten; it was organized for an illegitimate purpose, on unsound principles. The maintenance of such an organization is an impossibility, because it proposed an unnatural and unwarranted interference with the rights of trade.

As we do not think much of associations organized to determine where a man may sell his goods or to whom he may dispose of them, so we have not a high opinion of combinations to determine what price he shall charge for them. They operate as a restraint of trade and subordinate energy and enterprise to indolent conservatism. Combinations to maintain the prices of commodities are not more justifiable than combinations to maintain or advance the price of labor. It is unquestionably of advantage to the trade that there be uniform grades of lumber, that the names of grades shall signify as nearly the same kind and quality of stock as the variable judgment of inspectors will allow, and to secure such a uniformity is legitimate work for an association. It may also be advantageous and justifiable that a uniform basis of prices be established, but the enforcement of any price list established by a combination is beyond the recognition of morality in trade. If the railroads or vessel men, or the workmen enter into combinations to enforce higher prices for transportation or labor, the irregularity of the procedure is recognized at once.

There is no association or combination of lumbermen on the Saginaw river; prices are maintained at a uniform rate without any such extraordinary contrivance. And there is no place where trade may not be safely left to the operation of the legitimate laws governing all trade.

Nevertheless, there is work for associations, and they will organize success when they will attend to those matters which lie within their proper sphere. An association may establish grades; compose price lists without attempting to enforce them; reform as many of the abuses its members suffer at the hands of railroads and other interests, as possible, without invading the rights of others; compile statistics, and disseminate among its members information regarding the condition and prospects of trade, and the best methods of manufacturing and handling the products. Such associations may safely attempt the same line as agricultural societies, but when they undertake to accomplish what trades unions and railroad pools are formed for, they may expect to be classed in the same category and break in pieces as often.—*Lumberman's Gazette.*

MESSRS. RATHBUN & SON manufacture yearly 62,750,000 ft. of lumber and ties, besides shingles, lath, doors, mouldings, sash, blinds, and other goods. They employ in all 1,500 men. They have this season brought 300,000 saw logs and 125,000 pieces of cedar, timber and floats down the Moira, Trent and Napanee rivers.

FOR a city the size of Winnipeg, property seems to be excessively dear. A lot having a frontage of 160 feet on Main street, with a depth of 264 and some buildings valued at about $10,000, has been sold for $110,000.

NOTES BY THE WAY.

SUNDERLAND.

The flourishing village, on the Toronto and Nipissing Railway, 53 miles from Toronto, is supplied with two planing mills. Mr. Moore's planing factory is a very complete establishment, not large, but *multum in parvo*. The machinery is so arranged, that all the woodwork required to finish a house from cellar to garret—with doors, sash, blinds, bannisters, chairs, tables, and bureaus, complete—is manufactured by Mr. Moore and his staff of assistants. Wooden rakes are also made by Mr. Moore in large quantities. There is also a circular saw for cutting small logs, of second growth wood, which is found to be best for rake, hoe, and fork handles. The motive power is supplied by one of Doty's, Toronto, oscillating steam engines.

There are three saw mills in the neighborhood of Sunderland. Mr. A. McMillan's is near the railway station. It is driven by two engines, a portable 12 H.P. and a stationary 25 H.P. The portable engine is taken out after the summer sawing is over, and utilized for threshing grain. Mr. McMillan will cut this season about a million feet of lumber, including lath and shingles.

Mr. Joseph Ruddy's steam saw mill is about two miles south of Sunderland, near the railway. His stock will amount to over 250,000 feet of pine, besides some basswood.

The third saw mill is owned by Mr. James St. John, jr. It is situated about two miles west of the village. The season's cut will be about half a million feet of pine, and five hundred thousand shingles. Mr. St. John, fortunately, has come across a rare and valuable stick of curly-black ash. It is 36 feet long, 3 feet at the butt, sound as a bell, and curly to the core. It will be a choice catch for some wholesale cabinet-maker or railway car builder.

WOODBRIDGE

Being the headquarters of the manufacture of Mr. Abell's celebrated safety engines and threshing machines, the village of Woodbrigde, sixteen miles from Toronto, via the Toronto, Grey & Bruce Railway, has attained considerable importance. Mr. Abell employes one hundred and forty men, and uses a large quantity of lumber in the manufacture of his threshing machines, as well as in covering the outside of the portable boilers to prevent radiation of heat. The factory is complete in all its branches, and possesses an hydraulic engine for boiler making, being the second in Canada of the kind. It performs the work of six men. It is Mr. Abell's intention to remove his Woodbridge establishment to Toronto. He has purchased seven acres of land adjacent to the Lunatic Asylum grounds, south of Queen street. Men are at work preparing 800,000 bricks for the building. The foundation will be of white limestone, from Owen Sound quarries. They are expected to be ready for occupation in two years. Mr. Abell calculates to save $7,000 per annum in freight by the removal to Toronto.

THE ADVANCE IN THE PRICE OF BUILDING MATERIAL.

The railroads have had the advantage of cheap iron for the past three years, and all our industries have had no reason to complain of the cost of material. With a rampant stock market, there has been no speculation up to this time or until very recently, in any of the leading products of the country. Cotton, corn and wheat have ruled low, and when labor was first being employed, it did not demand high figures. But it was evident to all business men that the plethora of money would find its way at length into general merchandise, and there is every evidence now of a steady enhancement in values, especially in manufactured articles, due to the increased cost of labor.

On June 11th the *Real Estate Record* gave the following advice to builders: "It would, we judge, be wise to take large contracts ahead for building material at their present rates. There is every prospect of an enhancement in values during the coming fall, for while consumption is enormous, supplies are light, and as the price of labor is rising in every department of trade, there is a fear of a large enhancement of values."

Those who heeded that warning have reason to congratulate themselves. Take the article of brick. In our market reports we have shown over and over again the dangerous condition of the brick market for buyers. The heavy rains and other causes have prevented the usual work in brick yards, and this occurring in connection with an extraordinary demand for building, has put the buyers of brick entirely at the mercy o those who sell them. This hint ought to be sufficient for all who are under obligations to complete buildings. The increase in the price of labor alone is sure to enhance the value of all the materials which go into the construction of a building. So serious is the brick question, that more than one large concern has put a stop to its work for the time being. Then, the scarcity of labor has led to most extraordinary demands for skilled working people.

As a matter of fact, there is too much building going on. We are overdoing a legitimate and necessary business. There is danger of loss to those who entered into contracts based upon the prices of labor and material which obtained six months ago. Land is rising in value, and the price of labor usually goes up when realty is in better demand. This reacts on all prices, and hence the prudent builder will make contracts for some time ahead.—*New York Real Estate Record.*

The bulk of the World's writing is done with steel pens. Esterbrook's can be procured from any stationer, and at wholesale from Brown Bros., Toronto.

AMONG THE GEORGIAN BAY MILLS.

A party consisting of H. H. Cook, and Robt. Jaffray of Toronto, Mr. McFarlane of the Edinburg *Scotsman*, and representatives of the *Mail* and *Globe*, have been doing our timber country, and from the correspondence in the latter journal we cull the following as likely to prove interesting to our readers :—

THE MIDLAND SAW-MILL.

Our visit to the elevator, the wharfs and the saw-mill were made on Monday evening, when all was lighted up by sixteen electric lights. The saw-mill, which is one of the most extensive in the Province, is owned by the Canadian Lumber Company. This Company was formed about two years since, under the presidency of Mr. H. H. Cook, who handed over to it the extensive lumbering business he had then been carrying on for several years. The capital, a part of which is held in the Old Country, is $1,000,000, one-half being preference stock, on which an annual dividend of ten per cent. must be paid before the other half million of stock can claim any share of the profits.

THE INTERIOR OF THE MILL.

As this mill is a fair specimen of the largest lumber mills in the country, a brief notice of it may serve to give an idea of how these great mills are carried on. There are two storeys, the second one on a level with the extensive platforms which, supported by trestle-work, extend in every direction over the yard. In the lower flat are the engines and various separate machines, or machinery connected with the sawing frames up-stairs. The engines are two in number—one of 120 horse-power and the other of 60.

SAWING UP THE LOGS.

Up-stairs, however, the whole process of sawing is carried on. From the boom along the water front the logs are shoved one by one into an alley of water penetrating the mill. Then by a steam crank and chains they are hoisted up to the second storey and flung rolling upon a sort of platform. At the further end of this is a long car upon which the log rolls, and is placed in a firm position by a wooden arm which comes up through the floor, gives the log a poke and a squeeze in what looks like a clumsily intelligent manner. The log car then moves against a pair of saws, which strip off from two opposite sides of the log the bark and rough wood. When the log has passed the saw it rolls upon a frame work bearing a series of small iron wheels or rollers, which facilitate the movement of the log towards the great sawing machine. A hook now seizes the timber, gives it a shove into its proper position, rolls it upon a long car which is moved slowly up endwise against a wide sawing machine containing a large number of parallel saws adjusted to any required thickness of board. Your correspondent saw a log about four feet thick go through the saw singly, but generally the small size of the logs admits of two or four going through the machine at once. On the other side of the machine the rough boards, such as come off the unsquared parts of the log, are taken to one side and sawn into lengths. On the other side the good boards are thrown upon a small movable platform suspended from a curved iron-way above. They are then swung upon a broad car which moves them up to another sawing machine, over which they pass and are cut into the required lengths, and their rough ends trimmed off. The now finished boards are either shoved down a flume into the lower storey, or out upon cars on the elevated railways, and carried away to the piles which fill up most of the yard.

WHAT IS DONE WITH THE RUBBISH.

Long, shallow boxes reach round the building, and a system of endless chains, attached to which are transverse pieces of wood, scrape all the sawdust, bark and refuse wood out of the building, and either into the boiler room or away over an elevated way into a gigantic furnace nearly a hundred feet high and twenty-eight feet in diameter. The furnace is a round stone tower, narrowing in its upper part into a broad smokestack. A great damper on the ground outside admits the air to beneath the half open flooring of the furnace. At an elevation of forty or fifty feet is an opening through which the endless chain carries the refuse of the mill, and throws it upon an inclined sheet of iron, down which the stuff slides till it falls into the middle of the flames below. The constant falling of heavy boards upon this sheet of iron causes an incessant rumbling noise like the sheet iron thunder of a theatre.

THE HEAT OF THE FURNACE.

Through the openings in the side of this great furnace there stream at night great beams of red light, which produce a weird effect as they fall upon the human figures moving around in the darkness. Inside a circular pit of from twenty-eight feet in diameter and ten or twelve deep is a glowing mass of coal, above which the flames roar and curl, and reach upward fiery tongues as if to lick down the pine fragments falling from the iron slide above.

The enormous destruction of refuse by this furnace at first sight may appear reckless, but in the lumber districts this refuse is worse than a drug, and is burned simply to get rid of it. Throwing it into the water would prove an intolerable nuisance and eyesore along these beautiful shores, and besides would poison the fish.

BRIGHT AS DAY.

We visited the mills at night, and found them lighted by eight Brush electric lights. The whole place seemed as bright as noonday. Even in the shadow the brightness was diffused as is a solar light in the shadows of daytime. Outside, away above the elevated platform, the lights now poured their radiance down upon the mills and trestle works and acres of lumber piles and out on the tens of thousands of logs floating in the booms in the harbour. It was proposed to concentrate the outside lights in one or two high towers, so as to more effectively light up the village and harbour.

SOME FACTS ABOUT THE MILL.

The mill has a capacity of twenty-five million feet per season, and it is expected that eighteen million feet will be produced this year. There are also thirty thousand laths turned out per diem from small pieces of scantling which cannot be sold for lumber. Three hundred men are employed at the mill during the time of navigation. In winter most of these men betake themselves to the woods of the Muskoka and other rivers flowing into Georgian Bay. In these primeval forests the Canadian Lumber Company employs one thousand men all winter. The company has also built a mill at the mouth of the Wye, two miles south-east of Midland. This mill is smaller than the Midland one, having a capacity of only six million feet per annum. Midland has two mills besides that of the Lumber Company. They are owned by Messrs. Cheer Brothers and John Dollar. The two mills together are capable of producing eight million feet per annum.

WHERE THE LOGS COME FROM.

The logs for the mills come from far away in the interior. They are hauled in winter to the streams, and piled along the ice. Every log has upon it the mark of the lumbering firm to which it belongs. These marks are patented, and heavy liabilities are placed upon any one who interferes with them. In the spring the most of the logs are carried down the rivers to the bay, while a special company brings down all the others later, carefully distinguishing as to ownership. The grand collecting booms of the Canadian Company are at Muskwash, eighteen miles from Midland. Here booms of various sizes are made up and towed by a tug belonging to the company to the mills at Midland and at the Wye. Then the booms are floated in behind the long boom that stretches behind the shore with a width of from fifty to three hundred feet.

It may be necessary for the information of the uninitiated to explain that, although square timber is put up in rafts, round logs are not, but are floated in booms. These booms consist of logs connected by chains running through holes in their ends. A boom may thus be constructed for floating logs along the lake, or for confining them in a short strip against the shore.

AN HISTORICAL LOCALITY.

Near this locality are the ruins of an old French fort said to have been built over 250 years ago, but which was abandoned after the garrison had been massacred by the Indians. The masonry is overgrown with trees, and right upon the walls are standing stumps two or three feet in thickness. Three miles further inland an Indian pit containing the skeletons of three thousand of the old aboriginies was discovered a couple of years ago. At the Wye in times long past the Hudson Bay Company maintained a post, of which scarcely a vestage is now remaining. At Victoria Harbor, a few miles further south-east, we found the extensive mills of Mr. Richard Powers. These mills produce 15,000,000 feet of lumber annually. At Sturgeon Bay, a little eastward, are two mills of a capacity of about four millions each.

A MODEL SAWMILL.

At Waubushene we stopped for over half an hour to see the immense mill of the Georgian Bay Lumber Company. The village is a model of taste and neatness. The streets are tidy, and the houses, which are of board, are painted white, and surrounded by white picket fences. Gardens and croquet lawns abound and every evidence of comfort. The village is owned by the Company, which charges no rent to the occupants of the houses, all of whon are employees at the mill. These rent—free tenants are, however, expected to keep their places in good order, under penalty of ejectment in case of negligence. No liquor is allowed to be sold or brought into the village, a regulation which the Company has enforced with excellent results. The appearance of the mill premises is in keeping with that of the village. The mill buildings have painted sides and roofs, and even the trestlework which supports the miles of elevated railway is painted white. The elevated tracks extend along the piles of timber to a distance in all of several miles. The manager, Mr. Peakham, a former resident of Toronto, and who proves himself a most efficient director of the mills, informs us that the railway siding measured between seven and eight miles. The mill's interior sufficiently resembles the Midland mill to make a description superfluous. The motive power is derived from an engine of 350 horse-power. The logs are hauled up from the water into the mill on inclined planes, and keep two endless processions all day long. An endless chain with teeth is used on one of the machines, while the other works with toothed wheels. Adjoining the mills are the warehouse, where supplies are stored, and a smaller building in which the tug boat lies when not in use. The mill has a capacity of about fifteen millions, and employs about one hundred men. The Company has another mill at the Severn, a few miles distant.

WANTED, A SOFT PLACE.

Inquiries come to us almost every week, "wanted a position," "would like to superintend a mill or get into a position where there is a good salary to be had, not very much work to do; am a graduate of——— College, can refer to the Hon. so-and-so, the Rev. so-and-so, etc." There are about two hundred thousand men in the United States, if not a good many more, who are all looking for soft places, and have been looking for soft places ever since they were big enough to keep out of the reach of their mother's slipper, and the very fact of this continued hunt for soft places has cost the American people millions upon millions of dollars. Soft places are not to be had for the asking, and the general construction of this slang phrase is a place with a fat salary and not much work or responsibility. Just the sort of men are always looking for these places that are neither fitted by nature, by culture, qualification or disposition to properly fill them.

The majority of men are satisfied with a salary of from one to three thousand dollars. Sometimes men, with special qualifications, reach five, six or ten thousand in private life or in private business. There are a great many men to-day drawing salaries of from five to twenty-five or thirty thousand dollars who are no more fitted for the position they occupy than an uneducated boot-black is for professor of languages. They are put into these positions by the influence of their friends, so that their clique can control the railroad, manufacturing corporation, or whatever the position may be; and the fact of it is, in a position like this, there is no sort of competition, no chance of merited promotion, and, as a rule, the men who hold these positions would be very expensive at $10 per year, so far as their personal qualifications and worth go. * * *

What we want to-day are men who are fitted by their experience and contact with business to do business, and to manage business. A man who never saw a cotton mill, no matter how smart he is, is unfit to have the management of one. The man who has not had actual experience with a railroad, can not run it, successfully at least, and it does not make any difference whose son-in-law he is, or how much he has learned at some college. We prefer to risk our life on a road managed by a man who has been brought up in the business, and knows what he is doing; and the tendency among railroad managers, to-day, is to seek out this class of men and give them the control of roads, because the man who can run the train himself can teach others how to do it, and he knows also whether they are doing as they are instructed or not.

The man who can erect the machinery in a cotton mill, who can figure his own drafts, twists, changes, etc., is the very man to know whether the people who are working under his direction are doing their work as they should do it or not.

We take the ground that it is no disgrace to a man to have a collegiate education. The majority of men form habits during their attendance upon the average college which are not any particular benefit to them all through life, and the simple fact that a man has been through college, and has graduated, is no sort of a warrant to a cotton spinner, a machine maker, a railroad or steamship manager, that that man is any more fit to take practical charge of either one of these matters than as though he had never seen college, except insomuch as he may be able to write or figure better. The certainties are that he will not know as much or as well about doing the routine work required as some man who has been for several years employed in a line of business which gives him familiarity with what he is in daily contact with. And other things being taken as equal, we would prefer, if we were to choose editorial assistants, to take from the ranks men who were familiar with the manipulations of machinery, men who knew the difference between a wheel-barrow and a front roll, a monkey-wrench and a water-wheel, than to take the best educated collegian who knew only his Greek and Latin—and perhaps very indifferently at that—for the man who had been several years working with his hands and his brains, has formed habits that will stick to him through life; he is better able to cope with difficulties, he is less liable to err in judgment, and his judgment is apt to be keener and clearer than the man who has, up to the time of his leaving college, depended entirely upon somebody else for every thing.

Capitalists and business men are getting to take this view of matters, and within the last two years men who have been expecting soft places or desirable positions, have had to stand back and see men who have been in the work promoted. As a matter of fact, the last seven or eight years have taught capitalists and stockholders that we have been on the wrong track. They have switched off; they are running more upon common-sense principles than ever before, and the man who requires a soft place hereafter will have to work for it, and not only make himself fit to be promoted, but fit to hold the place after he has been put into it.

Men who have never been obliged to depend upon themselves, are not men to be trusted with the working out of important problems. Men who have been compelled to earn their own living and to get their education by such means as good books and papers, out of working hours, not only learn faster, but what they learn they are sure of. Seemingly soft places are not always so soft as they appear to be; and if a man is capable of holding a position, the surest way for him to get it is to attend strictly whatever he has in hand, and he may be assured that his time will come from some source or other, and it will most likely come when he least expects it.—*Boston Journal of Commerce.*

At the annual meeting of the stockholders of the Longford Lumber Co. the other day, Mr. Wm. Thompson was appointed President, in the place of his father lately deceased, and Mr. Maxwell Hall, formerly of Peterboro, Secretary.

Mr. George Stethem, of Peterborough, asks any mill-owner using leather belting to try Jewell's (Hartford, Conn.,) oak tanned; from 4 to 12 inch in stock. No matter how small the order. Satisfaction guaranteed.

THE SCOTTISH PINE.

Erect he stands, 'mid scenes so wild,
On Nature's bulwarks grey;
His plume waves in the northern breeze,
The shadows round him play.

The blacken fern and blackberry
Spring up about his feet,
While heath-crowned rocks, or hoary crags,
O'er head oft nearly meet.

The storms that blow so fierce and strong,
Round many a summit bare,
Sweep down upon him. Yet he stands
Unvanquished monarch there.

O'er many a glen his sceptre sways;
Lone Rannock, wild Braemar,
The banks of Spey, and crooked Glass,
Lochiel, Glenroy, Cromar.

Although he loves his Highland hills,
'Mong purple heath to stand,
Yet we oft meet his stalwart form
Far from his native land.

Give him the welcome he deserves,
He's always brave and true;
Where others fall, victorious he,
Shall save his bonnet blue.

A DURABLE WHITEWASH.

To the Editor of the Scientific American.

In regard to the query of C.B.C., in your last number, in relation to whitewashing, I believe I have tried every known wash. The so-called White House stucco wash is no better than any ordinary whitewash. No brick wall that ever is intended to be painted should be whitewashed. All washes absorb water, and in damp weather lose their color.

The best wash that I have ever heard of is made as follows: For one barrel of color wash—half a bushel white lime, 3 pecks hydraulic cement, 10 pounds of umber, 10 pounds ocher, 1 pound Venetian red, quarter pound lampblack.

Slake the lime; cut the lampblack with vinegar; mix well together; add the cement, and fill the barrel with water. Let it stand twelve hours before using, and stir frequently while putting it on.

This is not white, but of a light stone color, without the unpleasant glare of white. The color may be changed by adding more or less of the colors named, or other colors. This wash covers well, needing only one coat, and is superior to anything known, excepting oil paint.

I have known a rough board barn washed with this to look well for five years, and even longer, without renewing.

The cement hardens, but on a rough surface will not scale.

Cincinnati, Ohio, July, 1881. T. G.

Population and Temperature.

A census bulletin shows the distribution of population in the United States in accordance with temperature. Arranging it in groups by 5 degrees of mean annual temperature, it is found that no less than 98 per cent. of the total population live between lines marked by 40 and 70 degrees Fah. The cotton region is above 55 degrees, sugar and rice above 70 degrees, and tobacco between 50 degrees and 60 degrees. The prairie region of the Mississippi valley almost entirely below 55 degrees, while the great wheat region of Minnesota and Dakota is mainly below 50 degrees of mean annual temperature. The highest maximum temperature is in southwestern Arizona and southeastern California. Of the entire population, 89 per cent. are found in the classes which have maximum temperature between 95 degrees and 105 degrees. In considering minimum temperature, it is seen that 95 per cent. of the inhabitants of the United States live between the lines of 35 degrees below zero and 10 degrees above, for extreme cold.

From this it is evident how population tends to increase in regions rather north of medium temperature; or, more correctly speaking, between isotherms of low degree.

THE MOST PLEASANT, rapid, reliable and effectual remedy yet discovered for diarrhœa, dysentry, cholera morbus, cholera infantum, and all summer complaints, is Dr. Fowler's Extract of Wild Strawberry. It is unsurpassed as a reliable specific in the above diseases, it is well known as a great remedial agent, and is more highly valued the longer it is known. Travellers and tourists should carry a supply in their haversack. For sale by all dealers in Medicines

A BARGAIN—GRIST AND SAW MILL FOR SALE, paying 12 per cent. clear; price $9,000; and above percentage guaranteed. Apply to

JOSEPH DAVIES & Co.,
Lumber, Coal, & Commission Merchants,

DESERONTO.

A GREAT WOOD CENTRE—RATHBURN & SON'S EXTENSIVE OPERATIONS—WHAT ENTERPRIZE AND ENERGY HAVE DONE.

About the year 1848 H. B. Rathbun, Esq., arrived in these parts, seeking a site to establish himself in the lumbering business. Picton, Napanee, Belleville and other points were all approached in turn, but none would offer a suitable site or hold out sufficient inducements to secure the location of his business, and he consequently settled at Culvertson's. Facts have since proven that in giving Mr. R. the cold shoulder, is just when the other corporations missed their golden opportunity.

ITS GROWTH.

The original saw mill, which was of a primitive character, was soon found to be entirely inadequate for the requirements of their business, and was therefore replaced by one of a more approved pattern, and supplied with better machinery. In the year 1872 this mill with the other shops which had been added, together with the lumber surrounding them, was entirely consumed by fire, but the buildings and machinery were immediately replaced by a more substantial structure, fitted up with all the economical and labor-saving machinery known to the business.

THE BIG MILL,

as it at present stands, is built of stone, covered with an iron roof, and with the excellent facilities for avoiding and overcoming fire, is as safe from the destructive element as it is possible to make it. The size of the main building is 173x137 feet. The sawing floor is 145 feet long by 90 feet wide. The sawing machinery consists of 165 gang saws, and 38 small circulars, for edging, making lath, etc. The machinery for handling the logs is the most effective and economical in time and labor known to the business, while the arrangements for sorting and carrying off the manufactured lumber and the refuse is complete. An elevated railway was constructed a little over a year ago for conveying the edgings, etc., to the adjacent wharves for convenient shipment to the steamers which use them as fuel, and for shipment to other places where large quantities are consumed as firewood. The product of the mill for the year 1881 will be at least 28,000,000 feet of pine lumber, besides lath, barrel heads and short lumber, running by day only. Not a single inch of lumber which is adapted to any use is allowed to go to waste, and even the sawdust is henceforth to be utilized and turned into a valuable commodity which will give it a market value.

DRY KILNS.

South of the mill are five large dry kilns for the quick seasoning of lumber. The bay, in the immediate vicinity of the mill, furnishes ample storage room for the large quantity of logs required to keep the mills in operation during the season.

BLACKSMITH SHOP AND BOILER ROOM.

Adjoining the "big mill" and to the east of it, is the blacksmith shop and boiler rooms. These are filled with the best machinery, such as steam hammers, &c., for the building of the largest boilers and other machinery, and making necessary repairs. A large staff of skilled mechanics are employed.

MACHINE SHOP.

If there is one department in which Messrs. Rathbun endeavor to excel, it is in their machinery department. No trouble or expense is counted loss in securing the services of the most skilled artizans, to perfect not only the machinery of their own establishment, but of the steam vessels which are entrusted to their workmanship. Some of the very best marine engines employed on the bay and lake service are from this establishment, and the satisfaction which they are giving is the best proof of their excellence. They are at present engaged upon a large double engine to be placed in a freight and passenger propeller now on the ways, and to be employed by the Deseronto Navigation Company, between Oswego and the bay ports. Repairs are promptly executed in this department, and already the firm has established a wide reputation among marine men.

PLANING MILL AND SASH AND DOOR FACTORY.

To the north of the machine shop is the planing mill and sash and door factory. This is an industry which has been in operation only a short time, but it promises soon to rival even the big mill in the range of its products, and its importance to the future of this place. A trade in this line has been opened up with Great Britain, Australia, New Zealand, and other countries, and as the foreign demand is practically unlimited and is constantly increasing, the possibilities of this trade cannot be estimated. Shipments are made weekly to all parts of the globe, and the facilities for production have to be constantly increased to meet the demand. The following is the product of this mill during 1880 :—

Doors	25,000
Turned Maple Rods	60,000 pieces.
Chair Stretchers	100,000 "
Mouldings	600,000 feet.
Broom Handles	75,000
Window Sash	7,000
" Blinds	4,500
Matched Flooring	3,000,000 feet.

This year they will turn out lath, 10,000,000 ; doors, 40,000 ; besides sash, mouldings, &c. A large part of the above was exported to European countries and the antipodes.

To the east of the collection of mills is located the

SHIP YARD

where on an average about forty men are constantly employed, and a large number of steam and sailing vessels have been constructed during the past few years. Perhaps half of the bay fleet now employed in the bay and lake trade is from this yard, and the industry is increasing year by year. A large freight and passenger propeller is now on the way, and it is expected she will be completed for business some time in August, to be ready for the fall trade. An immense repairing business is done at this yard.

THE CEDAR MILL

is located just east of the ship yard. Unlike the "big mill" this is kept in operation throughout the year, and the amount of manufactured material turned out is enormous. For the season of 1881, they expect to turn out 12,000,000 feet of ties and lumber.

Besides the above the Messrs. Rathbun & Son have contracts for the delivery of cedar ties and lumber from outside mills amounting to 10,000,000 feet.

During the year 1881 they will manufacture 20,000,000 shingles.

OTHER MILLS.

Besides the above mills Messrs. Rathbun & Son own the Eagle Mills at Ferry Point, and the Walbridge at Shannonville is operated for them. At the former they will saw 12,000,000 feet of lumber this year, and at the latter 75,000 feet. The magnitude of all the figures—the product of Messrs. Rathbun's Mills, can be scarcely comprehended even by those who are accustomed to lumbering operations on a large scale, for instance we have the

Big Mill	28,000,000
Cedar Mill, ties and lumber	12,000,000
Bagle Mill	12,000,000
Wallbridge's Mill	750,000
Contract for ties and lumber	10,000,000

Making a grand total of 62,750,000 feet of lumber and ties, besides the lath, shingles, doors, sash, blinds, moulding and other goods which are in constant course of manufacture. In their mills at Deseronto they now employ about 500 men, and in all their operations about 1,500 hands on the average are kept constantly employed. The operations of the firm are amazing to the novice, and an inspection of the mills and factories is always interesting. We have several times had the pleasure of visiting the mills, and have always found both proprietors and employees willing, courteous and obliging to visitors, and those who can make it convenient to visit the village and make a tour of inspection will be well repaid for their trouble.

We almost forgot to mention that the logs that will be brought down the Napanee, Moira and Trent waters this year by the firm will aggregate 300,000 pieces, besides 125,000 pieces of cedar, timber and floats.

THE STABLES.

An important adjunct to the other interests of the place is the stables of the firm. These are located just east of the road and are the most extensive and complete in their equipment of any to be found in the province. The stable is 40x140 feet—two stories high, with horse fork and other apparatus for hoisting feed, and is provided with granary, root cellar, harness room, straw cutter, etc. About eighty horses and mules are kept stabled here, and from an inspection of the stock we know that the firm has some of the finest draft horses in the district. They also keep some good road stock. The animals are kept in excellent condition.

THE GRIST MILL.

This is Messrs. Rathbun and Son's latest enterprise, and it is one of greatest importance. The mill is situated in the eastern portion of the village Deseronto, and is a substantial stone structure, 45x70 feet, four stories in height the stories ranging from twelve to sixteen feet high. At the north end of the building is the engine-room, also of stone, 40x40 feet. To the south or rear of the mill, on the water front is the elevator, entirely sheeted with iron, 50x60 feet, forty-five feet high, and surrounded by a cupola twenty-two feet high. This elevator has a storage capacity of 45,000 bushels, and the mill is supplied with wheat from it by means of an iron screw conveyor, which passes into the mill in the third storey. About sixty-five feet west of the mill is a bran and flour warehouse, 40x60 feet, forty-five feet high. The upper portion is used for the storage of bran, and has a capacity of 400 tons, while the lower portion is intended for a flour warehouse, having the capacity for from 1800 to 2,000 barrels. This mill operates on a system which is entirely new in the Dominion at least, and very few such mills are in operation on this continent. Instead of employing stones in grinding, the kernel is crushed, by means of a series of iron rollers revolving at great speed, and which gradually reduce the grain to flour of the finest and purest grade. This mill has twelve setts of these rolls, and is regarded by milling experts as one of the most complete on the continent. The sample of flour turned out in every day work equals the finest brands manufactured, and is, in every way, of superior quality. The mill is now turning out daily an average of 125 barrels. In an article upon this mill the *Milling World* says :—

"The mill, in the fullest sense of the word, is a model, and reflects credit upon its proprietors for the liberal spirit evinced in its fitting up, and upon its designer for the perfet manner in which every portion of the machinery performs its allotted functions. The Deseronto mills are unquestionably far in advance of home competition. The Messrs. Rathbun are to be congratulated upon the ownership of the finest mills in Canada."

The location of these mills in our midst is an advantage which should be appreciated by both producers and consumers. The quality of flour produced is unquestionably the finest and best in the market. Another advantage is that farmers taking their grists to the mill will immediately have the proper amount of flour weighed out to them, and may return to their homes without delay.

THE GRAIN ELEVATOR

adjoining the grist mill is also a public accommodation which the people of this district are not slow to appreciate, as it increases competition for their staples, and enables them to get full value for their productions.

THE COAL TRADE.

Messrs. Rathbun & Son engage largely in the coal trade and have coal sheds at Deseronto, Belleville, Napanee, Kingston, Gananoque and other points. Last year they handled about 20,000 tons of coal, and the prospects are they will handle a much larger amount this year.

THE DOCKS.

Nowhere are the improvements which Messrs. Rathbun & Son have effected in Deseronto more noticeable than in the magnificent docks and wharves which they have constructed. These now reach over a mile and a half in length, and are of the most substantial character, having been built for permanency and not for temporary accommodation. These are constantly filled with huge piles of lumber, and it is a rare thing indeed for a visitor to call at the village and fail to find vessels loading lumber therefrom for foreign parts. The steamboat landing and storehouse is the principal point of attraction, but our space will not admit of a detailed description of this. Suffice it to say that it is one of the most convenient and commodious on the Bay. They have also extensive docks at Belleville, Napanee, Kingston, Gananoque and other places. Directly opposite the steamboat wharf is an immense coal shed, of very substantial construction,

THE BIG STORE.

Messrs. Rathbun & Son are also the proprietors of a large store in the village, through which they supply their employees and the public with everything from a needle to an anchor.

BANKING.

The firm has also within the past few months added banking to their other business, which is found to be a great accommodation to the people of the village.

THE OFFICE.

Their offices are at present located in a one storey building between the big mill and the steamboat wharf, but we are informed that the firm contemplate erecting, at no distant date, a large and commodious suite of offices possessed of more conveniences than the present business quarters.

Every department in their mills is connected with Mr. Rathbun's private office by means of a Bell telephone, so that orders and directions may be given promptly by word of mouth.

DESERONTO NAVIGATION COMPANY.

The business of the firm of Messrs. Rathbun & Son is of itself sufficient to keep a whole fleet of steam and sailing vessels employed. Until very recently, nearly the whole of their immense transportation business was done by steamers owned by the firm. Last year, however, a new company styled the "Deseronto Navigation Company," was organized, composed principally of Messrs. Rathbun & Sons and their employees, and the principal steamers are now under control of the company. The principal of these are the steamers *Armenia*, between Deseronto and Ogdensburg, tri-weekly ; the *Deseronto*, between Picton and Trenton, daily ; the *Pilgrim*, between Deseronto and Napanee, and the steam barge *Norman*. The Company has another large propeller on the way which, it is expected, will be completed in August. She is intended for passengers and freight, and will be run between Oswego and Bay ports. The engines have been constructed in Messrs. Rathbun & Son's machine shops, and are nearly ready to be set up. R. C. Carter, Esq., is manager of the Company, and the steamers being swift and commodious, and so placed that they make sure and convenient connections, they are fast becoming popular with the travelling public. The route of the *Armenia*, passing through the Thousand Islands by daylight, both going and returning, is particularly pleasant. F. S. Rathburn, Esq., is Secretary-Treasurer of the Company.

THE FARM.

Messrs. Rathbun & Son have, within the past two or three years, added a magnificent farm to the other industries. The farm is located immediately north of the village, and contains two hundred and thirty acres of the very best arable land to be found in this favored agricultural district. An experienced manager has been engaged, and already the transformation that has taken place is amazing to those who have been content to spend their lives plodding along on the old system. Messrs. Rathbun & Son have undertaken to test the value of scientific farming in Canada. They have some excellent thoroughbred stock, and in every respect the farming operations are carried on in the most approved principle. It will not take many years for Messrs. Rathbun & Son to make their farm the model of the Bay district, if not the Province. Like every other department of their business, the aim is to make the farm self-sustaining, and we are assured this object will not be lost sight of in its management, as is too often the case in farming on scientific principles.

RAILWAY CONNECTION.

Until now Deseronto has depended entirely upon water communication for their intercourse with the outside world, but it has been a fact patent to all that this state of affairs would not be long tolerated. Last year the village granted a handsome bonus to secure connection with the Grand Trunk Railway, and with the promptness which marks all their enterprises, the contract for grading has already been given out, the ties are upon the route, and in a few weeks—two or

three months at farthest—the citizens will hear the snort of the iron horse entering their village. The railway is to be furnished with steel rails, and will be in every respect a first-class road.—*Napanee Beaver.*

THE TREATMENT OF SEA SICKNESS.

The *Tribune* has been making inquiries among prominent physicians touching the cause and cure of sea sickness:

"What advice in regard to sea sickness would you give a patient going to sea?" was asked of Dr. Alonzo Clark.

"I should tell him to take a wash basin into his stateroom," responded Dr. Clark, cheerfully.

"Then there is no remedy?"

"One remedy, yes—to stay ashore." Dr. Clark continued: "I think people will be sea sick until the millennium comes. The disorder is in a way a puzzle to doctors. It is caused by a disordered action in the brain and nervous system, and the stomach feels it as a part supplied with nerves. There is no perceptible change in the nerve tissue, but a nerve disturbance, and probably all the brain is affected. It is unaccountable that the practice of going to sea cures the disorder, although this may be owing to a circulatory accommodation. I have never made use of the various remedies suggested. Sea-sickness is modified by a low diet, and if health is much depressed the patient should keep his bed. Food should be taken as constantly as possible, and the best form is soup with toasted crackers. Any alcoholic drink will soothe some stomachs. The supposed benefit to be derived from sea-sickness amounts to very little, except, perhaps, in the case of large feeders. Of course, land sickness, caused by riding backward and in railway cars, is practically the same as sea-sickness. An instance has been related of a woman cured by wearing a sheet of paper over her chest, which illustrates the power of faith."

Dr. Geo. M. Beard said: "A year ago there was no disease of which so little was known and which was so incurable as sea-sickness; now there is no disease of which so much is known and which is so perfectly curable. It is a functional disease of the central nervous system, mainly of the brain, but sometimes also of the spinal cord, and comes from purely mechanical and physical causes, being a result of a series of mild concussions. No more benefit can be derived from it than from an attack of typhoid fever. Infancy and old age are least affected by it, and it is most frequent and severe with the nervous and sensitive. In some cases there is simply congestion of the brain. The chief symptoms are headache, backache, nausea, vomiting, pain in the eyes, mental depression, neuralgic pains, sleeplessness, and nervous exhaustion. Dr. F. D. Lente, of Florida, first suggested the use of bromide of potassium as a preventive of sea-sickness in voyages between the North and South, and it was used with good results. This had also been recommended by Dr. Parker, who carefully studied the subject. My experience had led to my developing this treatment for long voyages and suggesting bromide of sodium in large doses instead of bromide of potassium. The former is less irritating to the stomach and contains more bromine than the latter, but when not procurable bromide of potassium may be used. The patient should take thirty, sixty, or ninety grain doses of bromide of sodium three times a day a few days before embarking and keep it up at sea until the danger seems to be past. The result aimed at is a mild bromization of the central nervous system, rendering it less susceptible to the disturbances caused by the movements of the ship. There is a great difference in people about the effect, and the great point is to know when to stop taking it, avoiding an excess, and not to take too little. A few people have an idiosyncrasy against bromide, bus there is little or no danger from its use if patients will carefully watch for the sleepiness and indisposition for exercise which are the symptoms of mild bromization. I have known of but one failure from the proper use of bromides, and I have here several letters from persons who have crossed safely by their use, although always sick before. Of course the drug should be taken intelligently and under competent directions, as there is a great difference in different people, and every case ought to be studied separately so far as possible."

"What is sea-sickness?" was asked of Dr. Wm. A. Hammond.

"Well, I should call it a disorder of the nervous system."

"Is there any remedy!"

"I can't lay down rules for other people, but I can tell what I have found beneficial in my own case, and that is ten or fifteen drops of chloroform on lump sugar, and the use of bromide of potassium."

Overworking the Undeveloped Brain.

"Overwork," properly so-called, can only occur when the organ upon which the stress of the labor falls is as yet immature, and, therefore, in process of development. When an organ has reached the maturity of its growth in can only work up to the level of its capacity or faculty for work. Fatigue may produce exhaustion, but that exhaustion will come soon enough to save the organ. Repeated "efforts" may, under abnormal conditions, follow each other too rapidly to allow of recuperation in the intervals of actual exertion, and as the starting point will, in each successive instance, be lower than the previous state, there may be a gradual abasement; but even this process should not seriously injure a healthy and well developed organ. In short, a great deal of nonsense has been said and written about the "overwork" of *mature* brains, and there are grounds for believing that an excuse has been sought for idleness, or indulgence in a valetudinarian habit, in the popular outcry on this subject, which awhile ago attracted much attention. Nevertheless there can be no room to question the extreme peril of "overwork" to growing children and youths with *undeveloped* brains.

The excessive use of an immature organ arrests its development by diverting the energy which should be appropriated to its growth, and consuming it in work. What happens to horses which are allowed to run races too early, happens to boys and girls who are overworked at school. The competitive system as applied to youths has produced a most ruinous effect on the mental constitution which this generation has to hand down to the next, and particularly the next but one ensuing. School work should be purely and exclusively directed to development. "Cramming" the young for examination purposes [colledge students at this time of year take heed.—ED.] is like compelling an infant in arms to sit up before the muscles of its back are strong enough to support it in the upright position, or to sustain the weight of its body on its legs by standing while as yet the limbs are unable to bear the burden imposed upon them. A crooked spine or weak or contorted legs is the inevitable penalty of such folly. Another blunder is committed when one of the organs of the body—to wit, the brain—is worked at the expense of the other parts of the organism, in face of the fact that the measure of general health is proportioned to the integrity of development, and the functional activity of the body as a whole in the harmony of its component systems. No one organ can be developed at the expense of the rest without a corresponding weakening of the whole.—*Lancet.*

A Wood-Splitting Machine.

A novelty in mechanics is a wood-splitting machine, which E. W. Peck has used near Cambridgeburgh, Vt. It acts exactly upon the guillotine principle. An enormous axe, weighing with its fixtures 200 pounds, runs up and down between two uprights, and is controlled by a pair of levers. As the section of a log drops from the buzz saw, it rolls down an incline to the splitter. Here a workman places it under the axe, which, descending, splits it with incredible ease and despatch. The toughest and knottiest "old settlers," which it would take a man half a week to split with an ordinary axe, are disposed of in a second. The rapidity with which it works may be imagined from the fact that it can split wood as fast as it can be sawed in a mill. It does as much work in a given time as twenty men can accomplish.

According to the Louisville *Courier-Journal*, a good deal of the black walnut in Kentucky is utilized in fence rails.

Department of the Interior,

OTTAWA, 25th May, 1881.

WHEREAS circumstances has rendered it expedient to effect certain changes in the policy of the Government respecting the administration of Dominion lands, public notice is hereby given:—

1. The Regulations of the 14th October, 1879, were rescinded by order of His Excellency the Governor General in Council, on the 20th day of May instant, and the following Regulations for the disposal of agricultural lands substituted therefor:

2. The even-numbered sections within the Canadian Pacific Railway Belt—that is to say, lying within 24 miles on each side of the line of the said Railway, excepting those which may be required for wood-lots in connection with settlers on prairie lands within the said belt, or which may be otherwise specially dealt with by the Governor in Council, shall be held exclusively for homesteads and pre-emptions. The odd-numbered sections within the said belt are Canadian Pacific Railway Lands, and can only be acquired from the Company.

3. The pre-emptions entered within the said belt of 24 miles on each side of the Canadian Pacific Railway, up to and including the 31st day of December next, shall be disposed of at the rate of $2.50 per acre; four-tenths of the purchase money, with interest on the latter at the rate of six per cent. per annum, to be paid at the end of three years from the date of entry, the remainder to be paid in six equal instalments annually from and after the said date, with interest at the rate above mentioned on such portions of the purchase money as may from time to time remain unpaid, to be paid with each instalment.

4. From and after the 31st day of December next, the price shall remain the same—that is $2.50 per acre—for pre-emptions within the said belt, or within the corresponding belt of any branch line of the said Railway, but shall be paid in one sum at the end of three years, or at such earlier period as the claimant may have acquired a title to his homestead quarter-section.

5. Dominion Lands, the property of the Government, within 24 miles of any projected line of railway recognized by the Minister of Railways, and of which he has given notice in the *Official Gazette* as being a projected line of Railway, shall be dealt with as to price and terms, as follows:—The pre-emptions shall be sold at the same price and on the same terms as fixed in the next preceding paragraph, and the odd-numbered sections shall be sold at $2.50 per acre, payable in cash.

6. In all townships open for sale and settlement within Manitoba or the North-West Territories, outside of the said Canadian Pacific Railway Belt, the even-numbered sections, except in the cases provided for in clause two of these Regulations, shall be held exclusively for homestead and pre-emption, and the odd-numbered sections for sale as public lands.

7. The lands described as public lands shall be sold at the uniform price of $2 per acre, cash, excepting in special cases where the Minister of the Interior, under the provisions of section 4 of the amendment to the Dominion Lands Act passed at the last session of Parliament, may deem it expedient to withdraw certain farming lands from ordinary sale and settlement, and put them up for sale at public auction to the highest bidder, in which event such lands shall be put up at upset price of $2 per acre.

8. Pre-emptions outside of the Canadian Pacific Railway Belt shall be sold at the uniform price of $2 per acre, to be paid in one sum at the end of three years from the date of entry, or at such earlier period as the claimant may acquire a title to his homestead quarter-section.

9. Exceptions shall be made to the provisions of clause 7, in so far as relates to lands in the Province of Manitoba or the North-West Territories, lying to the north of the belt containing the Pacific Railway lands, wherein a person being an actual settler on an odd-numbered section shall have the privilege of purchasing to the extent of 320 acres of such section, but no more, at the price of $1.25 per acre, cash; but no Patent shall be issued for such land until after three years of actual residence upon the same.

10. The price and terms of payment of odd-numbered sections and pre-emptions, above set forth, shall not apply to persons who have settled in any one of the several belts described in the said Regulations of the 14th October, 1879, hereby rescinded, but who have obtained entries for their lands, and who may establish a right to purchase such odd-numbered sections or pre-emptions, as the case may be, at the price and on the terms respectively fixed for the same by the said Regulations.

Timber for Settlers.

11. The system of wood lots in prairie townships shall be continued—that is to say, homestead settlers having no timber on their own lands, shall be permitted to purchase wood lots in area not exceeding 20 acres each, at a uniform rate of $5 per acre, to be paid in cash.

12. The provision in the next preceding paragraph shall apply also to settlers on prairie sections bought from the Canadian Pacific Railway Company, in cases where the only wood lands available have been laid out on even-numbered sections, provided the Railway Company agree to reciprocate where the only timber in the locality may be found on their lands.

13. With a view to encouraging settlement by cheapening the cost of building material, the Government reserves the right to grant licenses from time to time, under and in accordance with the provisions of the "Dominion Lands Act" to cut merchantable timber on any lands owned by it within surveyed townships; and settlement upon, or sale of any lands covered by such license, shall, for the time being, be subject to the operation of the same.

Sales of lands to Individuals or Corporations for Colonization.

14. In any case where a company or individual applys for lands to colonize, and is willing to expend capital to contribute towards the construction of facilities for communication between such lands and existing settlements, and the Government is satisfied of the good faith and ability of such company or individual to carry out such undertaking, the odd-numbered sections in the case of lands outside of the Canadian Pacific Railway Belt, or of the Belt of any branch line or lines of the same, may be sold to such company or individual at half price, or $1 per acre, in cash. In case the lands applied for be situated within the Canadian Pacific Railway Belt, the same principle shall apply so far as one half of each even-numbered section is concerned—that is to say, the one-half of each even-numbered section may be sold to the company or individual at the price of $1.25 per acre to be paid in cash. The company or individual will further be protected up to the extent of $640, with six per cent. interest thereon till paid, in the case of advances made to place families on homesteads, under the provisions of section 10 of the amendments to the Dominion Lands Acts hereinbefore mentioned.

15. In every such transaction, it shall be absolutely conditional:—

(*a.*) That the company or individual, as the case may be, shall, in case of lands outside of the said Canadian Pacific Railway Belt, within three years of the date of the agreement with the Government, place two settlers on each of the odd-numbered sections, and also two on homesteads on each of the even-numbered sections embraced in the scheme of colonization.

(*b.*) That should the land applied for be situated within the Canadian Pacific Railway Belt, the company or individual shall, within three years of the date of the agreement with the Government, place two settlers on the half of each even numbered section purchased under the provision contained in paragraph 14, above, and also one settler upon each of the two quarter sections remaining available for homesteads in such section.

(*c.*) That on the promoters failing within the period fixed, to place the prescribed number of settlers, the Governor in Council may cancel the sale and the privilege of colonization, and resume possession of the lands not settled, or charge the full price of $2 per acre, or $2.50 per acre, as the case may be, for such lands, as may be deemed expedient.

(*d.*) That it be distinctly understood that this policy shall not only apply to schemes for colonization of the public lands by Emigrants from Great Britain or the European Continent.

Pasturage Lands.

16. The policy set forth as follows shall govern applications for lands for grazing purposes, and previous to entertaining any application, the Minister of the Interior shall satisfy himself of the good faith and ability of the applicant to carry out the undertaking involved in such application.

17. From time to time, as may be deemed expedient, leases of such Townships, or portions of Townships, as may be available for grazing purposes, shall be put up at auction at an upset price to be fixed by the Minister of the Interior, and sold to the highest bidder—the premium for such leases to be paid in cash at the time of the sale.

18. Such leases shall be for a period of twenty-one years, and in accordance otherwise with the provisions of section eight of the Amendment to the Dominion Lands Act passed at the last Session of Parliament, hereinbefore mentioned.

19. In all cases the area included in a lease shall be in proportion to the quantity of the live stock kept thereon, at the rate of ten acres of land to one head of stock; and the failure in any case of the lessee to place the requisite stock upon the land within three years from the granting of the lease, or in subsequently maintaining the proper ratio of stock to the area of the leasehold, shall justify the Governor in Council in cancelling such lease, or in diminishing proportionately the area contained therein.

20. On placing the required proportion of stock within the limits of the leasehold, the lessee shall have the privilege of purchasing, and receiving a patent for, a quantity of land covered by such lesse, on which to construct the buildings necessary in connection therewith, not to exceed five per cent. of the area of the leasehold, which latter shall in no single case exceed 100,000 acres.

21. The rental for a leasehold shall in all cases be at the rate of $10 per annum for each thousand acres included therein, and the price of the land which may be purchased for the cattle station referred to in the next preceding paragraph, shall be $1.25 per acre, payable in cash.

Payments for Lands.

22. Payments for public lands and also for pre-emptions made in cash, or in scrip, or in police or military bounty warrants, at the option of the purchaser.

23. The above provisions shall not apply to lands valuable for town plots, or to coal or other mineral lands, or to stone or marble quarries, or to lands having water power thereon; and further shall not, of course, affect Sections 11 and 29 in each Township, which are public school lands, or sections 8 and 26, which are Hudson's Bay Company's lands.

J. S. DENNIS,
Deputy Minister of the Interior.

LINDSAY RUSSELL,
Surveyor-General.

3L17

We have added to our plant all the latest improved machinery for Electro and Stereotyping, and the manufacture of Printers Furniture, facilities for executing work which no other establishment in the Dominion possesses, and not excelled by any on the continent. A large assortment of various cuts constantly on hand.

FLEMING & SON,
26 Colborne St., Toronto.

TRUSSES.

CLUTHE'S PATENT SPIRAL TRUSS all attachments improved. No more buckles, all on solid brass casting. Book on rupture and human frame free. Send address in full post card. Best true information about rupture and deformities. CHAS. CLUTHE, Surgical Machinist, 118½ King Street west, Toronto. 12L13

Travelling Agent.

MR. A. L. W. BEGG has been appointed agent for the CANADA LUMBERMAN, and is authorized to collect subscriptions and grant receipts therefor and to make contracts for advertisements appearing in its columns.

The Canada Lumberman

DEVOTED TO THE LUMBER AND TIMBER INTERESTS OF THE DOMINION.

PUBLISHED SEMI-MONTHLY BY

TOKER & Co. PETERBOROUGH.

Terms of Subscription:

One copy, one year, in advance	$2 00
One copy, six months, in advance	1 00

Advertising Rates:

Per line, for one year	$0 90
Per line, for six months	50
Per line, for three months	30
Per line, for first insertion	10
Per line, for each subsequent insertion to 3 mo's.	05
Cards not occupying more than 12 lines (1 inch) per annum	8 00
Cards not occupying more than 12 lines (1 inch) for six months	5 00
Cards not occupying more than 6 lines per annum	5 00
Cards not occupying more than 6 lines, for 6 mo's	3 00

Special rates will be made for page, half page and column advertisements.

Advertisements intended for insertion in any particular issue should reach the office of publication at least three clear days before the day of publication, to insure insertion.

All communications, orders and remittances should be addressed and made payable to TOKER & Co., Peterborough, Ont.

Communications intended for insertion in the CANADA LUMBERMAN, must be accompanied by the name of the writer, not necessarily for publication, but as a guarantee of good faith. Communications to insure insertion (if accepted) in the following number, should be in the hands of the publishers a week before the date of the next issue.

PETERBOROUGH, Ont. AUGUST 1, 1881.

NOT ALL PROFIT.

THOSE not engaged directly in getting out and manufacturing lumber are inclined to think the lumbermen of Canada are having a big time just now. But on the present occasion, as on so many others, "all is not gold that glistens." Were the enhanced prices now being obtained, as compared with a few years ago, all profit, they would indeed be having a good time. But such is very far from being the case. If the selling price of lumber has advanced, the cost of getting it out and manufacturing it has also sensibly advanced, and, as a consequence, the "margin" between the two is much less than many would suppose. Of course the lucky men who carried over considerable stocks from last year are doing well, but, upon the logs taken out last winter, and now being got to the mills and manufactured, every item of expenditure has increased in quite as great, if not greater ratio than the price of lumber. This being the case, it will be obvious that any set back in prices within the next twelve months might prove disastrous to those who seem to be on the high road to fortune. While we do not think there is any immediate danger of such a set back, a word of caution certainly can do no harm—either to employer or employed. With regard to those employed in the trade it may not be out of place for us to remind those of them, who see the *Lumberman*, that while they are entitled to share in the existing "boom," their employers have to encounter many slips twixt the cup and the lip between the time the tree is felled and got to market, and unless he keeps a decent margain ahead of him, he is very apt to come out at the small end of the horn by the time the seasons operations are wound up. During a period of high prices, like the present, such a margain is particularly necessary. Granting that the expenses in getting out the stock now on hand is moderate as compared with ruling prices, these prices cannot be realized for months to come, and in a great many cases until next year, so that the employer has to consider, not so much the present value of lumber, as what it may be twelve months hence, and the higher the price now, the greater the room for a fall before he can get his present stock off his hands. Caution and moderation should therefore be the motto of the employer and employed.

FORESTRY.

THE Council of the Agricultural and Arts Association offer special prizes this year for essays on "Forestry, including best methods of preserving our present forests, and the varieties of trees best suited for forest planting." These essays are not to exceed twenty pages of foolscap in length, and are to be sent into the Secretary of the Council, (Henry Wade, Toronto,) not later than the 15th August, so as to be examined by a committee, the prizes awarded and the prize essays read at a public meeting to be held during the Provincial Exhibition, on Wednesday evening the 21st of September. The prize for the best essay is $30, for the second best, $20.

TORONTO.

From Our Own Correspondent.

TORONTO, July 25.—From the contents of my last letter you will doubtless expect to hear that lumber shipments at this port are now fairly booming; but, alas! for human hopes, this world of ours is full of disappointment, and in this instance the fond expectations of the lumbermen has not been realized; in fact, matters are worse to-day than at any period of the season's work. True, the gauge of the road has been changed, and it seems difficult to find out what is the exact trouble at present. Some assert that the company have not engine power sufficient to do the work required, but this the company deny positively; others affirm that it is the want of rolling stock, a large quantity of flats being still unchanged from the broad gauge to the narrow. My impression is that the latter is the main cause of the present delay, and much difficulty is said to have been experienced through the heating of the boxes on cars that have been lately changed to the present gauge. So much trouble has this caused the company that trains have frequently had to be divided, and a portion left at some station a considerable distance north of this city, and shippers are now declaring that patience with them has ceased to be a virtue. Inspectors working at different points of the road have in many cases had to return home, one of whom I heard soberly declare that he had travelled the entire length of the road in search of empty flats, and failed to find one on any part of the line. One thing is certain, unless the present state of things is soon changed, this season's business will be a losing game. The retailers are grumbling furiously because shippers get a preference in their application for cars, and there is no doubt but that the railroad companies favor shippers at the expense of those doing a local trade. So much so has this been the case that many of the yards are entirely out of desirable portions of their usual stock, and this just at the time when building is unusually brisk is certainly vexatious. Let us hope, however, that another week or two will so improve prospects, as to at least partially remove the state of ill-feeling existing in the minds of those having business relations with the company. There is no doubt, as remarked in my last letter, that the railroad company made a serious blunder in changing the gauge of the road just at the commencement of the busy season, but they are now striving to remedy their mistake as far as possible by using strong efforts to get all the rolling stock changed as quickly as circumstances will allow, so as to meet the demands made upon them for cars as far as lies in their power. Local dealers now shipping over the Midland and G. T. R. to this place find no difficulty in disposing of all the lumber they bring in, and this will continue to be the case while the dearth for empty flats continues on the other road. There are several firms doing a good carload trade on the local market, noticeable among whom is the firm of J. & F. N. Tennant, formerly of Barrie. They have the reputation of being liberal buyers and close sellers, and their success in consequence is doubtless assured, and being men who look sharply after their business, they will deserve all the success they may obtain. I will in future letters mention the names of other enterprising firms doing wholesale local and shipping trade. In my last letter I promised to give you the total quantity of walnut sold and worked up in this city, and after considerable trouble in collecting figures, I find that there is sold and consumed in this market, in round numbers, something over 2,000,000 feet of walnut, which may be put down at an average price of $80 per M., thus making a total investment in this class of wood alone of $160,000.00, and the trade in this and other fancy woods is rapidly increasing. How long the forests of this continent will stand the yearly drain now being made in the above and other woods is hard to predict, but unless an extensive system of replanting is soon entered upon, the end may be much nearer than many people imagine.

Freights to Oswego remain about the same, with some tendency on the part of vessel owners to accept slightly lower rates on lumber, as there are always a large number of vessels seeking lumber freights that are unfit for the grain carrying trade. Shingles have at last taken a leap upwards, and are now selling from the yards at $2.75 per M. for XXX, and if the present scarcity continues a still higher price will have to be demanded. Dealers have at last been convinced of the folly of selling by retail at wholesale purchasing prices, and it would have been money in their pockets had they consented to have raised their prices earlier in the season. The same quantity, or nearly so, would have been disposed of, and some remuneration for their labor; and I would again remind retailers that just so long as they consent to remain in an isolated position, without any recognized organization amongst themselves, just so long will this haphazard mode of doing business continue, and I venture to say, without fear of contradiction, that there is no other class of dealers on the face of the earth to-day who would so long allow this state of affairs to continue.

LATEST QUEBEC NEWS.

SHIPMENTS OF LUMBER—RECENT TRANSACTIONS. PRICES CURRENT.—MINING NOTES.

From Our Own Correspondent.

QUEBEC, July 25.—So far as the shipment of lumber goes, this is about the dullest period of the summer. The early arrivals, generally spoken of as the spring fleet, are mostly on their return voyage, and the vessels now in port are not, generally speaking, taking in very large quantities of timber or deals. It is too early yet to speak of the prospects for the fall fleet, but no matter how large may be the sailing of timber vessels for Quebec this fall, cargoes will be found for all, providing present expectations are realized, and that the heavy transactions of the past few weeks are repeated a few times from now to the close of navigation.

The very large yield of deals from the mills of Messrs. Baptist & Co., of Three Rivers, have been lately purchased by Messrs. R. R. Dobell & Co. of this city. The prices paid have not yet transpired.

The most accurate idea that can be given of the prices current of deals may be formed from the figures paid in the latest transactions, the principal of which are given elsewhere.

OAK.

Only two sales of oak worth reporting have been recently made in this market. One dram of Ohio oak, 76 feet average, has changed hands at 49 cents, and it is understood to-day that another sale has been made of 100,000 feet, though the prices are not made public.

In the absence of sales to report, the following market prices may be of interest:—American pipe staves, fair specification, $320 per standard mill; West India white oak, $72 per standard mill; West India red oak, $64.

MINING NOTES.

Scarcely a week passes but the discovery of new signs of mineral wealth in this Province attracts the attention of scientific men and mining experts. Only a few days since there was found quite close to the line of the Lake St. John R.R., about 15 miles from this city, beautiful specimens of white plaster (sulphate of lime.)

Mining operations in the gold district of Beauce have been materially interrupted of late by want of water, occasioned by the late drought. The streams are now well replenished, however, by late rains.

MESSRS. R. & G. STRICKLAND are now shipping over the Midland and Grand Junction Railways, from Lakefield to Belleville, a raft of 150,000 feet of timber, which is said to be the finest ever sent from these parts.

A NEW LUMBER COMPANY.

THE MIDLAND AND NORTH SHORE LUMBERING AND GENERAL MANUFACTURING CO., (LIMITED).

The Lindsay *Post* says:—A meeting of a number of gentlemen interested in the new lumbering and manufacturing company, to be formed with headquarters at Lindsay, was held at the Benson House on Monday, and satisfactory progress made in the project. Among those present were Hon. T. N. Gibbs, Oshawa; R. C. Smith, Port Hope; A. P. Poussette, D. Ulyott, Peterboro; J. D. Smith, Fenelon Falls, and J. A. Barron and Needler & Sadler, Lindsay. The capital stock is to be $750,000, in shares of $100 each, and nearly one-half of this amount has been taken and paid already. From the notice in the *Ontario Gazette* we gather that the company is to be called "The Midland and North Shore Lumbering and General Manufacturing Co., Limited;" and that the objects for which incorporation is sought are the acquisition of pine timber limits and lands in the Province of Ontario by purchase or otherwise; the conducting of the business of lumberers and timber merchants, including the purchase, preparation, manufacture, trasport and sale of timber, lumber, shingles, lath and pickets, broom handles, matches, pulp, doors, sashes and blinds, pails tubs and wooden ware, furniture, agricultura, implements, mouldings, boxes, railroad and other cars, ties, cordwood, fence rails and posts, telegraph poles, staves and barrels, axe handles, wagons, carts and lumber dryers; the building of vessels, ships and boats, docks and piers; the planing and dressing of lumber, and the erection and purchase of mill privileges, water powers, mills, saw mills, buildings, machinery, coves, booms, booming grounds, utensils, horses, cattle, boats, vessels, and many other things. The operations of the company are to be carried on within the Province of Ontario, and the town of Lindsay is to be the chief place of business. The applicants and directors are Messrs. Dalton Ulyott, G. A. Cox, A. P. Poussette, Hon. T.N. Gibbs, Jas. H. Beatty of Thorold, R. C. Smith, Malcom McDougall of Parry Harbor, and J. A. Barron of Lindsay.

It will be seen that car-building is one of the lines of industry to which the company proposes to have power to give its attention, and that being the case, it may be well that the superior advantages of Lindsay for such industry should be brought before them. The committee on manufactures might take some action in the premises.

LONGFORD MILLS.

From Our Own Correspondent.

Business at this point is at present booming. The logs of the Longford Lumber Company have all arrived safely in Lake St. John at the mills. The Dominion Bank logs reported stuck will be very near all got out of Black River. The two mills are running to their full capacity cutting up to the average of other years. Some difficulty was experienced for some time past in getting lumber forward to Toronto, owing to the scarcity of rolling stock on the Northern Railway during the time of the change of gauge. At present a full train a day leaves the yards loaded with lumber for Albany and other points. One hundred and twenty men are employed at the mills and yards, and up to the present no difficulty has been experienced in getting what men were necessary to keep this large staff replenished, owing largely to the cordial good feeling existing always there between employers and employees.

The burners erected here by Mr. Wm. Hamilton, of Peterboro, are an immense success, devouring the entire refuse of both mills like chaff and with perfect safety from fire. Sales of lumber are going on satisfactorily. Prices have advanced steadily. The large quantity of cull lumber held here was disposed of recently to an American firm at fair prices.

At the annual meeting of the Longford Lumber Company held recently a resolution of condolence with the families of the late Mr. John Thomson and Mr. T.W. Buck were unanimously passed, owing to the death of these two prominent gentlemen of the Board of Directors.

The circulation of the CANADA LUMBERMAN is over 2,000 copies. Advertisers should note this

OTTAWA.

From Our Own Correspondent.

OTTAWA, July 25.—The lumber market is firm, sales being steady. Business this year has been somewhat better than last. During the quarter ending June 30th the value of lumber and shingles exported to the States from this section was $587,514.75, as against $509,863,05 for the same three months of 1880. The shipments for the March quarter amounted to $31,430.47, making a total value of $618,945.22 for the half-year. Shipments of this season's cut of lumber have begun to be made.

QUOTATIONS.

There is virtually no change in prices during the past two weeks. Ten-inch stocks are quoted at from $12 to $14 per thousand; 12-inch stocks at from $16 to $19; sidings at from $20 to $30 per M.; shipping culls at $10 and $11 a thousand. Last sell at from 85 to 90 cents a thousand by the barge load, and 90 cents to $1 in smaller quantities.

SQUARE TIMBER.

So far this season 50 rafts, averaging 90 cribs each, have passed through the Chaudiere slides at this point. There are about twenty or twenty-five rafts yet to come down. It is expected that not more than half of these will be got through, owing to the lowness of the water in the Ottawa, which is now slightly more than three feet lower than it was at this time last year. A jam of saw-logs at Roche Captaine kept back several rafts a few days. McLachlin Bros., Octave Lalour, David Moore, and Allan Grant are among those having rafts in difficult places. The timber got out by the Scotch-Canadian Co. is being brought down by rail—twelve hundred carloads, through from Mackey's station to Quebec, over the the Canada Central and Occidental Railways, 475 miles, at a cost, it is said, of five cents per foot. The quantity of square timber taken out last winter was about ten million feet.

THE DRIVES.

The drive on the Upper Ottawa is progressing favorably, but it will be late in the season before the logs will all be got down.

The final sweep on the Gatineau River is being made, under the superintendence of ex-Ald. Bingham, who has the contract. The following quantities of logs have already been brought down this season :—

Gilmour & Co., Ottawa Mills	108,000
" " Chelsea Mills	112,000
G. B. Hall & Co	165,000
W. C. Edwards	41,000
Hamilton Bros	33,500
James MacLaren & Co	14,000
John Roach	8,300

In addition to the above 5,000 pieces of square and flatted timber were brought down for MacLaren & Co., and 48,000 railroad ties for Hebron Harris. The quantity of logs yet to come down the Gatineau is about 150,000, so that the total number of logs taken out on the river named this season will reach nearly 632,000.

EDGINGS.

Messrs. Perley & Pattee have arranged for the lighting of their mill by electricity.

Capt. Young has been unfortunate this year, having to shut down on an average a couple of days a week for want of logs, which have been delayed in coming down.

Considerable quantities of lumber is being shipped by rail—St. L. & O. Railway—to Ogdensburg.

A number of Canadian barges are laid up for the present, for lack of freight, shipping being a little dull just now.

McLachlin Bros.' new steam mill at Arnprior will be 156×60, with a 32×40 wing, and a 44×60 boiler house. The engine will be of 500 horse-power.

Rates of lumber freights are as follows :—To Montreal, $1.10@$1.25; to Quebec, Burlington and Whitehall, $2 per M.; to Albany, $3, and to New York, $3.25. The rate to Whitehall was $2.25 a week ago, but it dropped a quarter.

ZOPESA.—A healthy man never thinks of his stomach. The dyspeptic thinks of nothing else. Indigestion is a constant reminder. The wise man who finds himself suffering will spend a few cents for a bottle of *Zopesa*, from Brazil, the new and remarkable compound for clensing and toning the system, for assisting the Digestive apparatus and the Liver to properly perform their duties in assimilating food. Get a 10 cent sample of *Zopesa*, the new remedy, of your druggist. A few doses will surprise you.

ST. JOHN, N. B.

From Our Own Correspondent.

DEALS AND SHIPS.—Our port continues to be well supplied with tonnage, and the shipments have been large, in consequence of which our stock of deals, not in the hands of shippers, is very small indeed. Country sawn deals, though coming in rather freely, are absorbed as fast as they arrive; they are selling at about $8.50 per thousand, Sup. feet. The small stock of deals of city manufacture are held for considerable higher prices, which are likely to be realized before the end of the season.

FREIGHTS.—As a natural consequence of what is stated above, the freight market continues greatly depressed. The *Hildyard*, 1,200 tons, was chartered for Liverpool last week at 51/3, which, considering the lateness of the season, may be reasonably considered as about the lowest point. It is not very probable that rates will be lower this season.

VESSELS IN PORT.—The following is a list of the square-rigged vessels in port, with their tonnage and destination :—

William, 198, Marseilles.
Nylghan, 1254, Liverpool.
L. H. D'Veber, 615, Londonderry.
John Murphy, 1479, Liverpool.
Loining, 847, St. Nazaire.
Moss Glenn, 893, Dublin.
Varbierg, 401, United Kingdom.
Astracana, 1193, Liverpool.
Arklow, 748, ——
Wacissa, 809, Liverpool.
Fidelia, 450, W. C. England.
Nellie Moody, 746, ——
Navigator, 530, Marseilles.
Chas. B. Kenny, 1128, Adelaide, orders.
Jennie Parker, 998, Gibralter, orders.
Paramatta, 925, Dublin.
Solid, 493, Plymouth.
Gem, 281, Cork Quay.
Emily Raymond, 290, Wexford.
Regina, 1212, ——
China, 420, United Kingdom.
St. Olaves, 571, ——
Eos, 390, Bordeax.
Still Water, 1090, Newport.
Priscilla, 766, Melbourne.
Matilda, 675, Marseilles.
Colorado, 682, Dublin.
Finn, 425, France.
John Rutherford, 983, Dublin.
Stilla, 445, ——
Emily Lowther, 762, ——
Henry, 1095, Liverpool.
Hildyard, 1200, Liverpool.
Edna M. Gregory, 386, ——
Golden Sea, 1418, London.
Susan L. Campbell, 727, ——
Hattie M., 597, Dublin.
Alfred, 349, ——
Rolf, 922, ——
Torryburn, 448, discharging.
B. F. Nash, 412, ——

SHIPMENTS.—The shipments of deals and other sawn lumber are as follows :—

For Europe	25,587,000	Sup. feet.
" United States	4,598,090	" "
" West Indies	155,000	" "
" Canary Islands	209,000	" "

St. John, N.B., July 19, 1881.

Those who write for fame, for honor or emolument, cannot do better than use pens made by the Esterbrook Steel Pen Company. Samples furnished on application by addressing their office, 26 John Street, New York.

THOUSANDS OF CHILDREN are lost annually from cholera infantum, diarrhœa, and the summer complaints, whose lives might be preserved by using Extract of Wild Strawberry. Physicians recommend and use it constantly. It is a remedy well known, and more highly valued the longer known. It is for sale at all drug stores, and is within the reach of every one. See advertisement in another column.

All above sold by druggists.
Hop Bitters Mfg. Co., Rochester, N. Y., & Toronto, Ont.

SALE BY TENDER
OF EXTENSIVE STEAM
Saw-Milling Property
AT
Parry Harbour, Georgian Bay, and Valuable Timber Limits in the Parry Sound District.
The SAW-MILL is complete in its appointment, and has a cutting capacity of 90,000 to 100,000 feet per day of twelve hours.
The LIMITS cover an area of 229 square miles in the Townships of Monteith, Humphrey, Christie, Ferguson, Hagerman, McKellar, Spence, and Shawanaga, besides the purchased rights to cut the timber from numerous lots in the same Townships, and contain a large quantity of standing pine.
The whole establishment is in complete condition and active operation, and is excellently situated for the manufacture, sale and shipment of timber
Tenders for the whole property, including plant, will be received until the 20th August next, addressed to the General Manager, Ontario Bank, Toronto, by whom terms of payment and any further information will be furnished on application. No tender will be accepted unless satisfactory to the vendors. 4L17

THE GROWTH AND DECLINE OF LUMBER

ECONOMICALLY AND COMMERCIALLY CONSIDERED —THE TRADE AS IT IS TO-DAY,

We find the following in the Brooklyn *Eagle*:

Four years ago the then Secretary of the Interior reported that from all the information he could obtain there was not enough timber in the whole of the States to last thirty years. In 1878 a timber journal estimated the supply to last twenty years. Yet, notwithstanding these assertions, doubtless based upon accurate figures, merchantable lumber to-day is cheaper than it was ten years ago. Proof of this fact will be given further on. How to reconcile this apparent discrepancy is one of the purposes of this article. Statistics, as a rule, are not interesting to the general reader, and they will be avoided as much as possible, except were absolutely required for necessary illustration. The primary causes of the depletion of our forests (apart from the necessary clearing for homesteads and corn fields) are waste and carelessness. On taking up a farm the first thought and act of the farmer was to cut down every tree growing on it; and he never seemed quite happy until the last one had fallen. His governing idea was doubtless to make every square inch of his land productive. The result of late years has shown him how great was his mistake. With the clearing away of the timber he has pretty well cleared away the climate also, and he has succeeded in reducing the number of rainy days to the detriment of his crops. Possibly some one will reply "but our grain products of late years have largely increased. How do you account for that?" True. This, however, is due to increased emigration and increased acreage in virgin soil, but it does not apply to the older settled States, as New York, Massachusetts, Indiana, and many others. The trouble has been that the boundless forests of the North-west promised to endure forever, and their seemed no incentive to any care of the original growth of timber. The fine old forests of the South have been more shamefully ill-used than those of the North. The negro has so little regard for trees that he never fails to cut down the young saplings, because they yield firewood with less trouble than other trees.

To appreciate more fully the rapid exhaustion that is now going on, it should be stated that it was quite usual, thirteen years ago, for a square timber to average in length from seventy to seventy-five cubic feet per log, whereas, at the present day, the average of the season's log crop does not average beyond fifty-five cubic feet—an average decrease of say seventeen feet in thirty years. Against this place the fact it requires something near 150 years for a pine tree to attain maturity, and a fair idea will be formed of the seriousness of the situation.

The initial causes of this rapid decline, it has been stated, are waste and carelessness. With regard to the waste, how does it arise? Take pine and hemlock as illustrations. In cutting out a square stick of pine lumber, twenty-five per cent. is loss. A long train of dry chips marks the route from the spot where the tree is felled to the place of transportation on the wagon on the rough road. These trains, for they are almost as inflammable as gunpowder, easily catch fire, and when once started thousands of acres are in danger of destruction. Again, only one pine tree in every five cut down is sound, for mercantile purposes. Consequently, four are left to rot in the woods, and thus increase the danger. Instead of utilizing the healthy parts of the stick, by sawing it up, thousands of dollars literally rot in the ground, annually, through this want of foresight. But would it pay to transport these unsound trees to a saw mill? Undoubtedly it would, for while the neglected stick may be quite useless as square timber, it would be useful for mouldings, laths and various other purposes for which pine is used. In the future, when pine becomes much scarcer than it is now, the collection of felled trees that have hitherto been supposed to be useless, will become a very valuable business. The same remarks also apply to hemlock. Thousands of these trees are stripped of their bark, year by year, and are left to share the same fate as the pine.

As to carelessness: Forest fires mainly proceed from the want of precautions on the part of lumbermen and hunters, who fail to see that their camp fires are properly extinguished. A sudden breeze, a spark falls on a dead leaf, and, behold, a conflagration. In several instances fires have been known to originate from a passing locomotive, the smokestack of which has not been provided with a safeguard. But very few cases have been reported of extensive forest fires where engines have been furnished with this necessary article. Thus we see the results of waste and carelessness. It is a singular fact that very few fires are caused by lightning, which is almost invariably accompanied by heavy rain storms. Mr. Stewart Thayne, an English journalist, who has given the subject much attention, said in his evidence before the Select Standing Committee of the Canadian House of Commons, in April, 1878 (see report, p. 123):—"I have never been able to trace fires to lightning. I have been able to trace them, however, to almost every other cause." At a meeting of the Liverpool Board of Trade last fall the same gentleman remarked that it was within the bounds of moderation to say that within the past ten years the supp'y of timber that had been recklessly and unnecessarily cut down would, at the average rate of legitimate consumption, have lasted one hundred years.

THE REMEDY.

The remedy is simple enough and suggestive. In Europe every forest of any extent has its regular staff of officers and rangers, whose special duty it is to watch over its safety. Open spaces and broad belts of cleared land are kept up on purpose to keep fire from spreading. The ground is not incumbered with such a quantity of *debris* as is usual in the United States and Canada. There the people employed in the forests are interested in their preservation, and stringent official regulations control all others.

THE CLIMATE.

The subject of forest depletion is not alone important in its relation to the waste and consumption of timber. In its climate aspect it has great significance. The reports issued by the United States Government prove that a most notable change has taken place in the climate of the New England States, in New York State, New Jersey, and also in the Southern States.

In this State, where the error of a total clearing away was first observed, the replanting of forest trees has been attended with very good results. In these sections the rainfall has largely increased, and the rainfall is more evenly distributed throughout the season than in districts almost completely denuded of timber. On the prairies of Kansas and Nebraska, where a good natural growth of wood is lacking, the results obtained from the planting of forest trees are even more strikingly illustrated. The planted forest serves as a good wind break, and the influence of the wood's growth is seen in lessened periods of drouth and an increase in crops. What is needed, however, is accurate information about the branches of trees adapted to particular soils, and to provide this the Government has set apart an appropriation, and placed in charge of the work Mr. Charles Sargent, professor of aboriculture in Harvard College. In San Francisco the cultivation of the almond tree has been attended with great success, as also that of the eucalyptus, or blue gum tree, indigenous to Australia, and admirably adapted for firewood. In the vicinity of San Josef there were planted last year 350 acres in almond trees, and the growers claim that it is the best paying industry in that part of the country—the profits being larger than are obtained from any other enterprise. In Massachusetts the Legislature has given large tracts for forest culture, in addition to liberal bonuses for the best variety of trees grown within a certain period. This part of the subject is especially interesting, but sufficient has been said to show that the public attention is being aroused to the absolute importance of remedying a condition of affairs which is becoming more serious every year. To ameliorate a climate presenting violent contrasts of temperature, there is only one method—that of planting wherever the nature of the soil will permit, and forming settlements under the shelter of these plantations.

THE LUMBER TRADE TO-DAY.

It was stated at the outset of this paper that merchantable timber is cheaper now than it was ten years ago. In an interview with a well known lumber merchant of New York, who is thoroughly posted on the subject, he said:

"Yes, lumber is much cheaper now than ten years since. The white pine was worth $75 per 1,000; to-day it is quoted at $55. Pitch pine, ten years ago, was $45; now it is worth $32.50. Hard woods, with the exception of black walnut, are also cheaper. Ash is now worth $50 per 1,000; ten years ago it was $75. It is the same with oak. Spruce then realized from $25 to $30. To-day I can buy it for from $17 to $20."

"How about black walnut?"

"Black walnut is the same price to-day as it was ten years ago $120 per 1,000, jobbing price). But four years since the price of black walnut that now sells at $120 was $90. The reason is that we can see the end of it. It is now brought from the Missouri River to Indiana to be sawn up. Ten years ago it was growing at Indiana's own door."

"But how do you account for the cheapness in other woods, especially pine?"

"Over production. And yet the building trade was never more brisk and exports were seldom so large as now. But you must remember that the over production of lumber is the natural outcome of good times, and growers will soon see the mistake they are making by not saving their timber till they can get more for it."

"What will take the place of back walnut?"

"Mahogany from Mexico, which sells at from sixteen to twenty cents a foot."

"Does the export of square timber continue as large as formerly?"

"Well, I am scarcely prepared to say, but I should think not, because we are now manufacturing a class of goods that formerly were made from the log."

"What class may I ask?"

"We are sending, for instance, house trimmings to Scotland, as mouldings, sashes, etc. There is quite a trade springing up in portable houses in Chicago that are shipped to the West Indies and Australia. Formerly these were made in Norway and Bavaria, right near the forests. But America is getting ahead of those places."

"Does the introduction of iron in buildings affect the timber interest?"

"Not much, as yet. I do not know but that it may eventually. In some large buildings that are going up iron beams, and even iron laths, are being extensively used, though whether they will stand the test of oxidation remains to be seen. These are used mostly in fire-proof buildings. The beams cost fifty cents more than wood beams."

"What is your impression about the scarcity of the lumber supply, taken as a whole?"

"The difference in the prices I have quoted does not carry out the supposition that the capacity of our forests is seriously declining, but there is no doubt much waste in the cutting of trees. But that waste is being rectified by new industries springing up by which much that was formerly thrown away is now utilized into mouldings, small panels, etc. If I were a proprietor of a pine forest I should decidedly keep my timber standing until it paid me to cut it. But I am not, being interested in buying all I can as cheaply as possible. You see it makes all the difference in the world how a man is situated. My impression is that at the present rate of consumption the people will only realize the full value of their timber when it is nearly all gone. But that is their business. My business is to sell."

Upon inquiry at the offices of a large sash manufacturer on Barclay street, who does an extensive export business, one of the partners said:

"We are shipping sashes and mouldings to London, and the trade is growing every year. In time it may turn out quite a large industry, as it is only of late years that the British have taken to buying such goods of American manufacture."

The over production theory certainly appears to be borne out in the following figures taken from the *Lumberman's Gazette*, for the week ending June 25, when the total shipments of lumber, lath and shingles from the Saginaw, with comparisons, were as follows:

	1880.	*1881.*
Lumber	211,650,362	164,839,269
Shingles	35,320,000	31,558,600
Lath	12,969,650	2,746,000

Again, in the comparative statement of stock on hand in the Chicago market on June 1, the figures are as follows:

	Lumber and Timber.		*Lumber and Timber*
1875	188,212,169	1879	225,738,000
1876	205,552,022	1880	262,467,000
1877	216,150,895	1881	270,317,946
1878	248,885,400		

In the one case it will be noted that while the sales from the Saginaw were much less on the date specified this year than in 1880, the accumulations of stock on the Chicago market on June 1 have been increasing until the present season. The reason of the sudden decline in 1881 is owing not to the fact that the over production has been sensibly reduced, but that prices have fallen so low that dealers can no longer afford to hold their stuff. Were it otherwise, it would be found that the shipments from the Saginaw would have increased in 1881, instead of being reduced. The same remark applies to other lumber centers. F. J. H.

Tree Cisterns.

It has long been known, through the reports of travellers, that in certain arid districts of Africa water is often found, even in the driest seasons, in hollow trunks of the great baobab tree (Adonsonia), and it was supposed that the provision of water was, so to say, natural; but it appears from the investigations of offices attached to surveying parties sent out by the Egyptian Government, that these reservoirs are neither formed nor filled by the accidents of nature. They are in reality prepared and filled by the inhabitants of the country, who carefully remove the decaped and spongy fibers from the interior of the trunk and laboriously transfer water to the cisterns thus made, bucketful by bucketful, from neighboring pools in which it collects in the rainy season. The importance of these reservoirs is illustrated by the fact that trunks containing 15,000 gallons of water are not uncommon in Kordofan, and that individual trunks have been measured which might store 33,000 gallons. The officers of the survey urge that it would be well for the Egyptian Government to organize a service for the protection and maintenance of these trees on the post roads and telegraph lines, so that couriers, linesmen, inspectors, etc., might always find a store of water. They cite one particular post-route, where in times past the people of the country had carefully filled the Adansonia tree during the season of rains, and thus ensured water during the dry seasons for much travel. But when troops were moved in that direction, the inhabitants took alarm, abandoned the vicinity, and neglected to fill the trees, so that the road became as good as impassable.

The Sand Blast.

Among the wonderful and useful inventions of the times is the common sand blast. Suppose you desire a piece of marble for a grave stone; you cover the stone with a sheet of wax no thicker than a wafer, then you cut in the wax the name, date, etc., leaving the marble exposed. Now pass it under the blast and the sand will cut it away. Remove the wax and you have the raised letters. Taking a piece of French plate-glass, say two by six feet, cover it with fine lace and pass it under the blast, and not a thread of the lace will be injured, but the sand will cut deep into the glass wherever it is not covered by the lace. Now remove the lace and you have a delicate and beautiful figure raised upon the glass. In this way beautiful figures of all kinds are cut in glass and at a small expense. The workmen can hold their hands under the blast without harm, even when it is rapidly cutting away the hardest glass, iron or stone, but they must look out for finger nails, for they will be whittled off right hastily. If they put on steel thimbles to protect the nails, it will do little good, for the sand will soon whittle them away, but if they wrap a piece of soft cotton around them they are safe. You will at once see the philosophy of it. The sand whittles away and destroys any hard substance—even glasses—but does not effect substances that are soft and yielding, like wax, cotton, or fine lace, or even the human hand.

TRAVELLERS AND TOURISTS should always be provided with Dr. Fowler's Extract of Wild Strawberry, the best remedy in the world for curing suffering brought on from eating unripe or sour fruits, bad milk, impure water, change of water and climate. The great remedy for all summer complaints.

OUR QUEBEC LETTER.

RENEWED ACTIVITY IN WHITE PINE—IMPORTANT TRANSACTIONS—RULING PRICES—CONTINUED STAGNATION IN HARDWOODS—MINING.

A period of almost unprecedented inactivity in the Quebec market, lasting over several months, has been broken, so far as white pine is concerned, by several important transactions within the past two weeks, which are worthy of special notice for two distinct reasons: the size of the sales and the prices obtained. Last week a large lot of lumber in the Bridgewater cove changed hands at an advance of a half cent per foot over the price agreed upon last year for another lot of the same quality lying right alongside of it.

Amongst the most noteworthy of recent sales are the following: 370,000 feet of Mr. McLaren's white pine, 60 feet average, 16 inches, has been sold at 25 cents, measured off.

Another lot of square, white pine, 53½ feet average, and containing 150,000 feet, has changed hands at 23½ to 24 cents.

Messrs. Sharples & Co. have recently purchased, through a broker from Jonathan Francis, 300,000 feet of square, white pine, 50 feet average, for 23 cents.

One of the cheapest lots sold this season was 50,000 feet waney white pine, small average, purchased by Messrs. R. R. Dobell & Co., at the following figures: 18 inches, 22½ cents; 18½ inches, 23½ cents; 19 inches, 24½ cents. This sale cannot be considered an indication of ruling prices. At present writing, holders are firm at the figures given for the previously mentioned transactions, and even higher prices may, in the opinion of some old dealers, be looked for. The prospects of a temporary settlement of Irish affairs appears to have given rise to increased confidence in the home market, which, thanks to the Atlantic cables, has found its almost instantaneous echo here.

HARD WOOD.

The stagnation in hard wood continues. Buyers seem to have formed a strong combination for the purpose of bringing down prices. Manufacturers and their Quebec agents, especially in oak, are holding purchasers to last year's bargains. There are no prospects of an immediate decline either in oak or staves. Holders can afford to wait. The Banks are not pressing for their money, having no particular demands for it, while their collateral is as good as gold, and cannot be again produced for its present cost.

MINING MATTERS.

There is undoubtedly a boom just now in gold mining matters in the now famous mines of Beauce. With the opening of this summer's season comes the news of the development of more mines, and the erection of many more extensive works for the mining, crushing and washing of the earth and quartz containing the precious metal. Mr. Ainsworth, agent of the Clarence Mining Company, has just erected immense works for the washing of the gold. The water is furnished from the Labranche River by an artificial canal 780 feet long. The quartz mill has been in operation since April last, and during the last three months has given every satisfaction. This company's works are upon what is known as lot 13, Gilbert River. Lot 14 is worked by Mr. Smart for the Beauce Mining and Milling Co., which has lately acquired a new engine for the quartz mills, and is engaged in opening up new pits. Mr. McRea is opening new pits this season on lot 15, which in 1867 yielded gold to the value of $17,000. Capt. Richards has commenced operations on lot 16, and on the "Branche," a new company at work, composed of Messrs. DeLery, Rodrigue, Chapman, and others.

The most important operators, however, in this district, both as regards the number of its employees and the extent of its works, are the Canada Gold Mining Co. (limited), represented here by its chairman, Mr. Gordon, of London, and by Mr. Walter Moodie, manager. The scene of its operation is upon lots No. 12 and 13. The works of this company are immense. More than one hundred men are now employed by it in the shafts, puddling machines and quartz mills. Upwards of eighty tons of earth and gravel are pulverized daily.

The Titanic Iron Works at Baie St. Paul will probably ere long be re-opened. A deposit of native silver, said to have been worked in a primitive manner under the French regime, has been discovered near the same place, partly by the aid of old records in the Crown Lands Department here. The fortunate holder has invited members of the Geological Survey to visit the site, and the readers of the LUMBERMAN shall be kept posted as to the result of their investigation.

STADACONA.

LUBRICANTS.

The *Scientific American* says, in answer to a number of correspondents, we publish the following:—

The desirable features of a good lubricant or unguent may be briefly stated thus: It should, first of all, reduce friction to a mixumin, should be perfectly neutral, and of uniform composition. It should not become gummy or otherwise altered by exposure to the air, should stand a high temperature without loss or decomposition, and a low temperature without soldifying or depositing solid matters. The question of cost and adaptability to the requirements of light or heavy bearings are also important considerations.

The finest lubricating oils in the market—those used for watch, clock, and similar delicate mechanism—are chiefly prepared from sperm oil by digesting it in trays, which clean lead shavings for a week or more. Solid stearate of lead is formed, and remains adhering to the metal, while the oil becomes more fluid and less liable to change or thicken on chilling.

Sperm oil is used for lubricating sewing machines and other light machinery. Some of the oils sold for that purpose contain cotton seed oil and kerosene, and others are composed largely of mineral, sperm, or signal oil—a heavy, purified distillate of petroleum.

Good heavy lubricating oil is made from heavy paraffine oil (a distillate of petroleum). Owing to "cracking" (decomposition of the vapors of the heavy distillate into lighter products), which takes place in the still, the crude oil contains a large per cent. of light offensive oils, too thin for lubricating purposes. In Merrill's process these are seperated by blowing superheated steam through the oils, heated just short of its boiling point in the still, the lighter oils being driven off, a neutral, nearly odorless, heavy oil, gravity 29° B. to 26° B., and boiling at about 575° Fahr., remaining. When mixed with good lard oil it makes an excellent and cheap lubricant.

Common heavy shop and engine oils are commonly variable mixtures of heavy petroleum or paraffine oils, lard oil, whale or fish, palm, cotton seed and resin oils. There are nearly as many of these composite oils in the market as there are dealers in such supplies. The following is one of them.

Petroleum	30	per cent.
Paraffine oil (crude)	20	"
Lard oil	20	"
Palm oil	9	"
Cotton seed oil	20	"
	99	

Solid or semi-solid unguents, such as mill and axle grease, etc., are prepared from a variety of substances.

PORT HOPE.

The following is a statement of lumber, etc., shipped from Port Hope for the periods named, as obtained from the books of the Harbour Master, viz.:—

LUMBER.

April	3,697,276	feet.

Market Reports.

MONTREAL.

From Our Own Correspondent.

MONTREAL, July 11, 1881.—The exports of lumber as reported at the Custom House from the 1st July to date were as follows: To Fleetwood, 12,926 deals and 1,477 deal ends; to Gloster, 10,940 deals; to London, 28,803 deals; to Cork, 16,290 deals; to Liverpool, 16,886 deals; to Dover, 7,000 pieces; to Montivideo, 51,076 pieces; and to Penarth Road, 11,140 pieces. All the wholesale trade in shipping lumber at this port is done in Ottawa and elsewhere, so that it is impossible to give the wholesale prices for shipping lots, there being now bought in the Montreal market for that purpose, business here being almost entirely confined to the supply of the building trade, which is pretty brisk at present and the demand is very good, which, from all appearances, will continue so for some time to come, and the market is in consequence firm.

Lath, pine, ₱ M	1 30	@ 1 30

Stocks of building lumber are pretty full, but not beyond the expected requirements of trade. In cordwood there is not much doing just now, but the market is firm with upward tendency. A large contract has been taken here for maple at $6.20 delivered, French measure, cord, which is six inches longer and three inches higher than that in use in Upper Canada.

July 25.—The shipments of lumber from the opening of navigation till the 18th inst. were as follows:—To Montevideo, 51,076 pieces and 685,753 ft.; Buenos Ayres, 739,076 pieces and 685,753 ft.; Buenos Ayres, 739,076 ft.; Penarth, 11,140 deals; Dover, 7,000 pieces; Liverpool, 16,886 deals; Cook, f. o., 16,290 deals; London, 28,805 deals and 210,000 ft.; Gloucester, 10,940 deals; Fleetwood, 12,926 deals; Cardiff, 11,815 deals; Grenock, 6,148 deals; Glasgow, 830,580 ft.; Monmouth, 40,000 ft.; Mist Hartlepool, 45,000 ft.; Queenstown, 10,000 ft.; Newcastle, 20,000 ft.; St. John's, Nfld., 406,883 drum staves and 55,000 ft.; Halifax, 313,753 ft.; Rotterdam, 58,000 ft.; Lisbon, 8,147 deals and 734 deal ends; Antwerp, 55,000 ft.

The rates of freight have been steady, to River Plate $15; to direct ports in Great Britain, 60s. to 62s. 6d.

The shipping trade has not been active during the past two weeks, only two cargoes having been shipped to the River Plate. The local demand has been good, and prices are well maintained, but without any change to note. Quotations unchanged.

TORONTO.

JULY 25.—The following are the quotations:

LONDON, ONT.

From Our Own Correspondent.

This market continues to be active, with no indications of a slackening off in work. Very loud and long are the complaints of a deficiency in our accommodation, which the railroad companies would do well to remedy. The G. W. R. and G. T. R. are, of course, the chief lines coming into this city, but they alone are not to blame; the auxillery lines are equally in fault.

This city has in the neighborhood of a dozen large lumber yards, besides planing and sash mills, and the demands on both are unprecedented; for the surrounding country, in this county and the neighboring counties of Oxford, Lambton, Elgin and Huron are outlets for the supply and production to an extent more or less.

The cedar block pavement which has just been completed in compliance with the terms of contract, gives entire satisfaction so far, and it is only a question of a very short time when it will be extended along Dundas street (one of our main thoroughfares) east of the city as far as Wellington street.

The Masonic Temple approaches completion, and it is without question one of the handsomest buildings west of Toronto. The *Free Press* of this city gave a representation of this magnificent structure in their issue a few weeks ago.

The calamity which befel this city on the 24th May last has resulted in the total colapse of the Navigation Company, and the two steamboats, *Forest City* and *Princess Louise* were offered at auction the other day, but there were no bidders; and I do not see what anybody could do with them, unless they were made into miniature training ships for a juvenile navy. They are now nearly high and dry, and will soon have to be proped up on their keels, or where the keels should be; and as there is no outlet they must either sail the Thames or become sad momentos of a woeful day.

Hard wood lumber does not meet with much sale in this city, and what there is in the market has no set price.

Shingles continue to be very scarce, and an advance on my last figures will be found in accompaning list.

Oak plank and scantling sells here at from $16 to $22.

My report of this city's lumber market at this date is firm and brisk, and below I give quotations:

Mill cull boards and scantling	$ 8 00
Shipping cull boards, promiscuous widths	10 00
" " 10 and 12 in. stocks	10 50
Common boards, promiscuous widths	13 00
Scantling and joist, up to 16 ft	14 00
" " " 18 ft	14 50
" " " 20 ft	15 50
" " " 22 ft	16 50
" " " 24 ft	18 00
Common stocks	14 00
Common 2 in. plank	13 00
Cutting up plank and boards	18 00
Sound dressing stocks	17 00
Clear and picks	28 00
Three uppers, Am. inspection	35 00
1½ inch dressed and matched flooring	21 50
1¼ " " " "	21 25
1 " " " "	21 00
XXX sawn shingles, ₱ M	3 00
Lath per 1000 feet	4 25

BOSTON.

The *Journal of Commerce* of the 23rd of July says:—There are no indications of a lull in the consumptive movement. The demand for dry stock is still without precedent at this season of the year. Cargoes stay hardly long enough to be noticed, they are so quickly caught up. Hardwoods are scarce and firm, with the exception of ash, which latter is a little "off" in price. Reports show the receipts of hardwoods to be light, and the anticipations of small future arrivals occasion a very firm feeling among holders. Advices from abroad show lunber to be very scarce, with high prices asked. The following are car load quotations:—

CANADA PINE.

Selects, Dressed	$48 00@50 00

" 2nd "	34 00@35 00

THE REMEDY that has had the most remarkable success in the cure of diarrhœa, dyssentery, cholera morbus, and, indeed, every kind of summer complaint, brought on by eating improper food, such as raw vegetables, unripe or sour fruits, bad milk, impure water, etc.,—the remedy that is the most pleasant, rapid, reliable, and effectual, is Dr. Fowler's Extract of Wild Strawberry. It is the finest remedy for all summer complaints known. For sale by all dealers.

NEW YORK.

The *Real Estate Record* of July 23, says:—Very little in the way of positive complaint is to be heard on our wholesale market. Demand fluctuates a trifle, but sustains a good volume for the season, and there appears no apprehension of any serious falling off. Indeed, the schedules already presented indicate that buyers are making early preparation for their fall and winter supplies, and as the call from other points appears to be quite as full as upon our own market, it is not likely that the mill men will accumulate a stock upon which business must be forced. On the other hand, there is not at present any disposition to express views of a specially buoyant character, ruling prices standing pretty full, and affording a fair margin to the producer and intermediate operator, while the consumer, having made calculations in accordance with the cost, can afford to submit gracefully. The export movement still promises well.

Eastern spruce retains a good healthy market, with no positive tendencies favorable to either buyer or seller. Now and then a cargo can be reached a trifle "off," while against this is an occasional sale at extreme valuation, but the bulk of the business will average about former cost. Advices from the mills represent much animation at present, and "hooks full of orders," as an insurance against any coming lull, but now and then a manufacturer can be found who will work in a schedule if the bid prove full. Prices range about as before, or say $14@16 per M for randoms, and $16@18 for specials, the latter for extra difficult.

White pine has gone out so freely this season on export orders as to leave scarcely any accumulation of shipping grades, and with the home consumption also free stocks generally are moderate. Moore goods are coming forward, but at a cost which must lead to firm holding, even if they do not find early sale, and the latter appears to be the strongest possibility. Accounts from the primary points are supporting. We quote $17.00@19.00 per M for West India shipping boards; $24.50@26.00 for South American do.; $16.00@16.50 for box board; $17.00@17.50 wide and sound do.

Yellow pine is well sustained in price, finds a good general demand, and the market throughout, according to the majority of reports, seems to be in a healthy, cheerful condition. Manufacturers are in some cases able to give rather better time on schedules, but all keep away, and do not find it necessary to shade cost to secure customers. For direct shipment from primary points the demand has been better of late, but also quite particular over quality. We quote random cargoes at about $24.00@26.00 per M; ordered cargoes, $26.00@28.00 do. green flooring boards, $24.50@26.50 do.; and dry do. do., $27@29. Cargoes at the South, $15@19 per M for rough, and $20@24 for dressed.

Hardwoods of attractive quality continue in small supply, and secure a good demand as soon as offered with full prices bid on all kinds. The offerings at interior points are small, and owners' ideas extreme for anything in mercantile order. We quote at wholesale rates by carload about as follows: Walnut, $77@85 per M; ash, $35@38 do.; oak, $40@45 do.; maple, $30@35; chestnut, 1st and 2nd, $30@35; do. do. culls, $18@20 do.; cherry, $50@55 do.; white wood, ½ and § inch, $25@27.50, and do. inch, $33@35 do.; hickory, $35@45 do., for Western, and $65@75 good nearby stock.

Shingles not unusually active, but selling well, and prices sustained without much difficulty. The supply is not very large or well assorted. We quote Cypress at about $6 for saps and $8.50@9 for hearts; pine shipping stocks, $4 for 18-inch, and Eastern saw grades at $2.50@4.50 for 16-inch, as to quality and quantity. Machine dressed cedar shingles quoted as follows: For 30-inch, $16@22.25 for A and $28.75@33.25 for No. 1; for 24-inch, $6.50@16 for A and $16.75 @23 for No. 1; for 20-inch, $5@10.50 for A and $11.25@11.75 for No. 1.

LATH.

The market has shown less irregularity than last week, and presented few items of positive interest. Supplies were a little more plenty and occasionally quotations somewhat slow, but receivers appear to have placed all cargoes without shading cost, and the current quotation remains at $1.75 per M. A few arrivals may be expected every week, it is said, but nothing liberal or oppressive, and advices at hand indicate that quality will run good.

SAGINAW VALLEY.

JULY 27.—The abundant activity in this market last week continues in increasing measure. It is a genuine surprise, the eagerness for lumber. The transactions, from their size and frequency, are really bewildering, when some of the dragging periods of the past year are recalled. It is considered a poor day when sales are not reported aggregating five or six million feet. Friday last the reports showed that over six and a half million feet changed hands. As for prices, they have covered a pretty wide range on some grades. There was never more firmness felt, and it may really be said that prices have advanced, although some of the figures made in the transactions are the same as have appeared from time to time. The true state of the case will be revealed in the notice of sales below. The east, west and south have competed with each other in this market the past week, Chicago buyers being on the ground in numbers, picking up lots to suit their trade, their requirements being largely bill stuff, although they have bought quite a quantity of boards and strips. Ohio, New York and Pennsylvania dealers have also placed orders here.

The advance of lumber at Chicago of course strengthens this market, and under the extraordinary demand prices on the river may be expected to advance. The following sales have been reported the past week:—1,100,000 feet common stock at $6.50, $13 and $32; 300,000 feet at $7, $14 and $32; 1,200,000 feet at $8, $16 and $36; 500,000 feet at $7, $14 and $35; 300,000 feet at $7, $14 and $32; 1,200,000 feet at $8, $16 and $35; 1,000,000 feet at $7.50, $15 and $35: 700,000 feet at $7, $14, and $33; 1,000,000 feet at $7.50, $15 and $35; 125,000 feet at $7.50, $15 and $35; 200,000 feet at $8, $16 and $36; 600,000 feet at $7, $14 and $35; 1,000,000 feet at $7.25, $14.50 and $35; 9,000,000 feet at $7, $14, $32, $7.50, $15 and $35; 350,000 feet, prices not learned; 175,000 feet Norway bill stuff at $9; 1,600,000 feet Norway bill stuff at $8 and $10; 350,000 feet prices not learned; 3,000,000 feet at $7, $14 and $32; 2,800,000 feet, price not reported; 2,600,000 feet, price not reported; 450,000 feet, price not reported; 1,250,000 feet, price not reported; 500,000 feet at $7, $14 and $32; 1,000,000 feet at $7.50, $15 and $35; a choice lot, amount not learned, at $8, $16 and $40; 975,000 feet Norway bill stuff at $8@10; 2,000,000 feet pine lumber at $6.75, $13.50 and 32; 1,500,000 feet at $7, $14, $7.50, $14.50, $32 and $35; 200,000 feet at $7, $14 and $35; 300,000 feet at $7, $14 and $33; 300,000 feet at $9, $17 and $36; 510,000 feet at $7, $14 and $33; 1,000,000 feet at current rates; 425,000 feet at $7.50, $15 and $35.

Freights remain the same as quoted last week, namely: Bay City to Buffalo and Tonawanda, $2.25 per M; Saginaw to same ports, $2.50; Bay City to Ohio ports, $1.75; Saginaw to Ohio ports, $2; Bay City to Chicago, $2.50; Saginaw to Chicago, $2.75.

The amount shipped the past week has increased over the previous week, but the season's shipments have not yet overtaken in quantity those of last year at the same date, and if they are going to this season it is time some sign of it appeared. The amount of clearances of lumber to July 23, last year were over 375,000,000 feet; to the same date this year the aggregate is 304,000,000.

The shipments of forest products from the river for the week ending July 23 was as follows:

Lumber, feet	32,182,000
Lath	1,458,000
Shingles	5,250,000
Hoops	480,000
Shooks	208,000
Staves	44,000
Cedar posts	2,500

Of these amounts there was cleared from East Saginaw 10,360,000 feet of lumber and 3,350,000 shingles, the balance clearing from Bay City.

The total shipments of lumber, shingles and lath from the river for the season to date were as follows:

Lumber, feet	304,925,124
Shingles	54,253,600
Lath	7,609,000

Shingles are in good demand and prices firm.

Quotations are: River brands, $2.10@2.20 for clear butts and $3.10@3.20 for XXX; country brands, $2.00@2.10 for clear butts and $3@3.10 for XXX.

RAILROAD FREIGHTS.

The following are the present railroad freight tariffs from the Saginaw Valley to principal points, for 10 tons, as reported by Mr. O. Waters, Commercial Agent M.C.R.R.:

Albany, N.Y.	$52 00
Burlington, Vt.	84 00
Buffalo, N.Y.	33 00
Boston, Mass.	68 00
New York City	58 00
New Haven, Ct.	68 00
Portland, Me.	68 00
Rochester, N.Y.	43 00
Rome, N.Y.	55 00
Syracuse, N.Y.	53 00
Springfield, Mass.	68 00
Schenectady, N.Y.	52 00
Utica, N.X.	56 00
Worcester, Mass.	68 00

CHICAGO.

JULY 20.—The principal change in prices since last report has been in piece stuff, which was advanced again on Saturday to $11.50 and $12 for ordinary lengths, by which is meant eighteen feet and under. Longer stuff is higher in proportion. These figures are said to be obtained without difficulty, though some of the dealers continue to talk of a possible reaction in the prices of this kind of lumber later on. It is expected now that more piece stuff will come to the market than heretofore in proportion to the quantity of inch received, for the reason that it has advanced so much that the manufacturers can afford to make it instead of putting so many of their cheap logs into inch lumber. It will require but a short time to change the character of the receipts in this respect considerably, and we may therefore look for a more liberal supply of dimension on the market within a few weeks.

CARGO QUOTATIONS.

MINNEAPOLIS.

The Mississippi Valley *Lumberman* of the 22nd ult. says:—All things work together for good to such as raised their price lists promptly and regularly, which remark we explain as meaning that those firms and markets who first took our advice and raised prices have netted the largest amount of satisfaction and money while those who have hung back would like to hire some one to kick them. T'was ever thus etc. News from all quarters are of the most cheerful character pour in upon us. A correspondent writing from St. Louis says "we can do no more lumber business in this city until we have more Railroads to carry it away, and in prices we lead the markets of America." Another friend in Hannibal writes us "trade has continued with unprecedented activity during the whole summer and prices have been maintained throughout without an inclination to weakness. The advances that have been made from time to time have been fully sustained and have served to stimulate the demand rather than retard trade."

Dubuque, Davenport and other river cities have all the trade they can handle at the late advance. Minneapolis is getting rid of over 5,000,000 feet per week and only sawing about 6,500,000 feet. Heavy log sales are reported from the St. Croix where they are closing out the remnants of their winters cut at good round prices. Logs elsewhere are becoming valuable. A sale is reported of 5,000,000 feet at Oshkosh to the Diamond Match Co., at $17 per M for Wolf river logs. Eastern Michigan is having her full share of prosperity as will be noticed in our Bay City report.

ALBANY.

LOGS.

The *Stillwater Lumberman* says:—Gillispie & Harper report the following log sales: Page, Dixon & Co., Dubuque, 140,000 feet; Renwick, Shaw & Co., Dubuque, 400,000 feet; Quincy Lumber Co., Quincy, Ill., 600,000 feet; Gales & Wightman, Port Byron, 500,000 feet; Dubuque Lumber Co., 70,000 feet; Hemingway, Barkley & Co., Lansing, Ia., 600,000 feet; St. Croix Lumber Co., 100,000 feet; C. N. Clark, Dubuque, 200,000 feet. By the steamer *Nina*, 14 string raft to Gardner, Batchelder & Co., Lyons; and 8 strings to C. L. Coleman, by the *Rugby;* 14 strings, by *Mark Bradley*, to Taber & Co.

SINCE the first of March Hugh Sutherland & Bro. have received by rail 748 cars of lumber, amounting to about 7,480,000 feet, besides over two million feet by water, a large portion of which was shipped by the North-West Navigation Company to Brandon. They have found it necessary to keep their saw-mill, Winnipeg, running night and day, and even now they cannot keep up with the demand.

DULUTH.

The *Lake Superior News* says:—The long faces of our lumbermen about these days are supposed to be owing to the rise of $1 per M on lumber. The Chicago and Minneapolis markets advanced some little time ago, and our lumbermen have concluded not to get left. The extraordinary demand for lumber, and the hanging up of so many logs this spring are the causes of the rise. It is said that one firm in Duluth will make from $10,000 to $15,000 by this rise.

LIVERPOOL.

The *Timber Trades Journal* of the 25th June, says:—

The past week has shown a little more liveliness than some of its predecessors, but this in a great measure is due to the auction sales, which have added to the ordinary amount of work done by private treaty. The arrivals have been few, and have consisted chiefly of spruce deals; and, as the demand for these goods is falling off, we have a drooping market, as will be seen from the particulars of last Friday's sales detailed below, when Messrs. A. F. & D. Mackay offered two cargoes from St. John, N.B., one from St. Margaret's Bay, and some stored lots, together with birch timber, Quebec pine deals, and other woods. There was a fair attendance of buyers, and although there was an indication of desire to meet the wishes of the buyers, a part of one cargo of St. John, N.B., and about two-thirds of the cargo from Margaret's Bay were withdrawn. The stored spruce deals also were withdrawn, for want of competition, and the prices bid for the American black walnut, 45 logs, did not seem sufficiently high to warrant a sale, as only 4s. per foot was offered for the largest wood, viz., 20 to 24 in. deep. The spruce deals sold as follows:—

	£ s. d.		£ s. d.
St. John, N. B.—			
16 to 25 ft. 3×11	7 2 6	to	7 7 6
12 " 15 " 3×11	6 15 0	"	6 17 6
9 " 11 " 3×11	6 12 6		
16 " 26 " 3×9	6 12 6		
12 " 15 " 3×9	6 5 0	"	6 12 6
9 " 11 " 3×9	6 2 6		
16 " 26 " 3×7	6 5 0		
12 " 15 " 3×7	6 2 6	"	6 5 0
9 " 11 " 3×7	6 2 6		
9 " 25 " 2½×7	6 2 6		
9 " 24 " 3×8, 10 and 12	6 7 6	to	6 15 0
9 " 24 " 2½×9 and 11	6 12 6		
Margaret's Bay, N.S.—			
9 to 27 ft. 3×9 and 11	6 17 6		
9 " 28 " 2½×7	6 15 0	"	6 17 6
9 " 28 " 3×6	6 7 6		
Rough boards	5 10 0		

Pailings, chiefly 4½×3, 70s. per 1,200 pieces.
St. John, N.B., pine deals unassorted, 9 to 23 ft. 3×7 to 13 and 2½×7, £6 12s. 6d.
Sawn spruce timber, small sized, 4 to 9 in. square, 8d. to 9½d. per ft.
St. Margaret's Bay birch timber—

16 in. and upwards deep	18d.	per ft.
14 and under 16 in. "	14½d to 15d.	"
8 to 13 in. "	12d. " 12½d.	"

On the same day Messrs. Farnworth & Jardine offered a cargo of Pensacola hewn pith pine timber just landing, which met with good competition, and about two-thirds of the cargo was sold at the following prices:

20 to 24 in. deep,	22d.	to 27d.	per ft.
19 "	20½d.	" 21½d.	"
18 "	18d.	" 18¾d.	"
16 " 17 "	17d.		"
15 " 16 "	16½d.	" 17½d.	"

The remainder of the cargo was withdrawn.

The *Timber Trades Journal* of July 9th says:—With the arrival of several timber laden vessels from Quebec the quays are now beginning to wear a busy aspect, but so far there has not been much done in the way of delivery out of the fresh import.

From the usual monthly return given below it is evident that in nearly every article the stock is in excess of what it ought to be at this time of year, yet we must not overlook the fact that the consumption has not shown any marked decrease, for it compares very fairly with that of the corresponding month of last year.

A Fool Once More.

"For ten years my wife was confined to her bed with such a complication of ailments that no doctor could tell what was the matter or cure her, and I used up a small fortune in humbug stuff. Six months ago I saw a U. S. flag with Hop Bitters on it, and I thought I would be a fool once more. I tried it, but my folly proved to be wisdom. Two bottles cured her, she is now as well and strong as any man's wife, and it cost me only two dollars. Such folly pays."—H. W., Detroit, Mich.—*Free Press.*

DYSPEPSIA.—Strenthen your digestion—tone the stomach for utilizing and assimilating every atom of food you take; the body needs it for strength and vigor. *Zopesa* cleanses the entire system, stimulates the Liver, keeps you regular, and able to eat ten-penny nails. Letters and postal cards come in daily, telling of cures and help frem *Zopesa*, from Brazil. *Positive proof* of the health and vigor it gives in a ten cent sample. Ask your druggist.

GLASGOW.

The *Timber Trades Journal* of the 25th June says:—

There has been rather an improved feeling in the wood market here during last week.

On Thursday, the 16th inst., Messrs. Edmiston & Mitchells brought forward to public sale, at Yorkhill Wharf, an attractive assortment of Canadian and Norwegian goods, also parcels of black walnut, &c. There was an unusually large attendance of town and country buyers, the Auction Hall being quite filled. Of the Quebec deals, the extra breadths (12 in. and broader) were most in demand, and sold fairly well, and will be seen from the prices undernoted.

For the walnut timber, which was only of ordinary quality, there was spirited competition, a considerable proportion going to the east coast.

On Wednesday, the 22nd, Messrs. Singleton, Dunn & Co. held an auction sale of deals, viz., a large cargo of St. John, N.B., spruce just discharged ex-steamer. There was a good demand, the entire cargo being sold at prices as undernoted.

The stock of spruce deals now in first hands here is extremely light.

AUCTION SALES.

On 22nd inst., at Glasgow, Messrs. Singleton, Dunn & Co., brokers:—

St. John, N.B., spruce deals—

10 to 27 ft.	15×3	11d. per cub. ft.
10 " 29 "	14×3	11½d. "
10 " 27 "	13×3	11½d. "
10 " 27 "	12×3	11d. to 11½d. "
10 " 20 "	11×3	11d. " 11½d. "
21 " 27 "	11×3	12¾d. "
10 " 26 "	10×3	11d. to 11¾d. "
21 " 30 "	9×3	11¾d. "
11 " 20 "	9×3	11d. to 11½d. "
10 "	9×3	10½d. "
13 " 26 "	8×3	10½d. "
10 " 12 "	8×3	10d. "
18 " 25 "	7×3	9½d. "
15 "	7×3	9½d. "
16 to 17 and 10 to 14 ft.	7×3	9d. "

St. John, N.B., spruce scantlings—

9 to 24 ft.	6×3 and 2½d.	9½d. "
9 " 25 "	5×3 "	8½d. "
9 " 25 "	2 to 4×3	10d. "

St. John, N.B., spruce deal ends—
7 to 16×3 9d.

THE Hart Emery Wheel Co., of Hamilton, commenced operations in the early part of 1880, and from their experience since that time the following statement is deduced:—At the commencement they procured from Detroit persons well versed in the business, who soon imparted to the others engaged a practical knowledge of the business, after which they were returned to their former places of employment in Detroit. Since the start on a small scale the business has day by day increased, until now seven times as many hands are engaged as formerly. Wages are also higher, in most cases rising fifty per cent. The sales are growing larger day by day, and the facilities for manufacturing this class of goods are being increased to fill the growing wants of the consumer, while the charge for their product is greatly lessened. As to the effect of the tariff on their trade the company are fully satisfied with its workings. They have a protection of 7½ per cent., which to a great extent debars American competition; and at the same time their goods are of better quality than those furnished on the other side of the line.

D. GILMOUR, Esq., of the firm of Gilmour & Co., was in Campbellford on Monday last, with a view to shipping lumber there. If he is successful in purchasing a suitable site, the Company will also establish a regular supply depot, like unto the one recently built by Messrs. Rathbun & Son.

Honored and Blest.

When a board of eminent physicians and chemists announced the discovery that by combining some well known remedies, the most wonderful medicine was produced, which would cure such a wide range of diseases that most all other remedies could be dispensed with, many were skeptical; but proof of its merits by actual trial has dispelled all doubts, and to-day the discoverers of that *great medicine*, Hop Bitters, are honoured and blest by all as benefactors.—*Democrat.*

BY THE TIMELY USE of the Extract of Wild Strawberry, you may avert all disagreeable summer complaints, diarrhœa, dysentery, cholora morbus, etc., nothing is so pleasant in its cure, so rapid, reliable and effetual, as Dr. Fowler's extract of Wild Strawberry. And the value of this medicine is an antidote in sour stomach, colic, cramps, seasickness, vomiting, and other irritations of the stomach and bowels is inculculable. It is safe and sure, and should be carried in the haversack of every traveller and tourist.

Wrought Iron Shanty Cook Stoves

The Best Article ever offered to the Trade.

I have much pleasure in drawing attention to my **WROUGHT IRON COOKING STOVE, for Shanty, Hotel and Boarding House use.** These Stoves are made of **Heavy Sheet Iron,** the top and lining of the fire-box being of **Heauy Cast Metal** and all the connecting parts of substantial **Wrought Iron Work.** The dimensions of these Stoves are as follows:—

SINGLE OVEN STOVE

Top surface contains six 10-inch holes, with ample room between, and one oven 16 x 24 x 26.

DOUBLE OVEN STOVE

The Double Oven has a top surface containing twelve 10-inch pot holes, with two ovens, each 16 x 24 x 26. One fire-box of suitable size for area to be heated. Below will be found Testimonials from some of the leading Lumbermen, who have used my Wrought Iron Cook Stoves since I ommenced manufacturing them. They are the names of gentlemen who are well known and eliable, and will carry more weight than any recommendation of my own could do.

The Best Stove I have ever Used.

PETERBOROUGH, May 31, 1880.

ADAM HALL, Esq., Peterborough. Dear Sir,—I have used your Wrought Iron Cooking Stove in our lumbering operations since its introduction here, and have no hesitation in saying that I prefer it to any other. For durability, economy and efficiency, where a large number of men are employed, it is the best stove I have ever used. You can, with confidence, offer it to hotels, boarding houses and lumbermen.

Yours truly, THOS. GEO. HAZLITT.

The Stove for Lumbermen.

PETERBOROUGH, June 1st, 1880.

ADAM HALL, Esq., Peterborough. My Dear Sir,—We have used your Wrought Iron Cooking Stove and find it is very satisfactory for lumber operations, especially so on drives. We can recommend it highly.

Yours truly, IRWIN & BOYD,

Gives the Greatest Satisfaction.

PETERBOROUGH, June 3rd, 1880.

A. HALL, Peterborough. Dear Sir,—I have had the Wrought Iron Cook Stove, purchased from you, in constant use ever since last fall, and it gives the greatest satisfaction in every respect. I can recommend them highly to any one who is in the lumber business. Very truly yours, GEO. HILLIARD, M.P.

EVERY STOVE GUARANTEED

All the necessary TINWARE and CUTLERY for Shanties suppied at the Lowest Prices.

EMERY WHEELS FOR SAW GUMMING!

Solid Emery Wheels are now almost in universal use for the purpose of gulletting and gumming saws. Statistics show from 25,000 to 30,000 saw-mills in the United States. Many of these run only a single saw each. A one-saw mill would use one or two wheels a year, costing $3 to $4 each, and when such small mills order single Emery Wheels from the factory, the express charges often equal the cost of the wheel. There was a time when the quality of Emery Wheels was so uncertain, and the demand so fickle, that storekeepers could not afford to carry them in stock. Now, however, Saw Gumming Wheels have become as staple an article as Files, and every dealer in saws, Hardware and Mill Supplies can afford to carry a few dozen standard sizes in stock. Large dealers order stocks of $500 to $750 worth at a time. Saw Gumming Wheels are used with the edge (or face) square, round, or beveled. Probably seven-eigths of all in use are beveled.

The principal sizes are:

8x¼, 8x⅜, 8x½ } ⅜ in. hole. 10x¼, 10x⅜, 10x½, 10x⅝ } ⅜ in. hole. 12x¼, 12x⅜, 12x½, 12x⅝, 12x¾, 12x⅞ } Holes, ⅜, ⅞ and 1 inch.

Probably more wheels 12x⅜, 12x½ and 12x¾ are used than all the other sizes together. Saw Gumming Wheels are used, however, of all sizes up to 24x1½. The most frequent complaint is that Emery Wheels harden the saw so that a file won't touch it. The answer is that you don't want a file to touch it. An expert workman will shape and sharpen the teeth with an Emery Wheel, leaving the teeth *case hardened*, in which condition the saw will cut about 33⅓ per cent. more lumber than a soft saw will. Those who want to use the file, however, have only to touch the saw *lightly* a second time (after going all over it once), and this second touch will cut through the case-hardened scale.

A QUESTION OF QUALITY.

Thirteen years of experience as makers of, dealers in, and actual users of Emery Wheels, have led us to a decided opinion as to what quality is the best. We prefer for almost every use an "Extra Soft" wheel like the "Pocono." We believe that money lost through the rapid wear of the wheel is more than made up by the money saved on wages. As we cannot get every one to adopt our views, we make several qualities, so as to meet their views. We say to those who think they can only be satisfied with some other make of wheels (not Tanite), that we can furnish qualities *to match* any and every other make. If you have got used to some special quality of wheel, let us know what it is, and we can send you *a Tanite Wheel of similar quality*. Our *regular* classification of Saw Gumming Wheels is as follows:

CLASS 2. MEDIUM—HARD.—This Wheel is THE STANDARD Saw Gumming Wheel all over the world. Probably seven-eighths of all the Saw Gumming Wheels used are "Class 2." It cuts fast and keeps its shape well. Some think it too hard, some too soft. We prefer the "Pocono."

CLASS 3. MEDIUM—SOFT.—The same as to coarseness and fineness as "Class 2," but a *softer*, and therefor freer cutting wheel.

CLASS "POCONO." EXTRA SOFT.—This Wheel we prefer to all others. It is both *finer* in grain and softer than either of the above. As a Saw Gumming Wheel, Class "Pocono" is specially suited to those practical and experienced Sawyers who know how to grind with a light touch, and who want a free cutting wheel that will not create much heat.

Illustrated Circulars and Catalogue, showing Cuts of Saw Gumming Machines, and Shapes, Sizes and Prices of Wheels, sent free on application.

M. Covel's Latest Improved Automatic Saw Sharpener!

Is the Most Perfect Machine that has ever been Introduced into Mills for that purpose.

CIRCULAR SAW STEAM FEED!

I would also call special attention to my

Heavy Circular Saw Mills

and for STEAM MILLS, would recommend the Steam Feed, having put in several which are giving the best of satisfaction, as will be seen by the following testimonials:—

GRAVENHURST, August 20th, 1880.

WM. HAMILTON, ESQ., Peterborough.

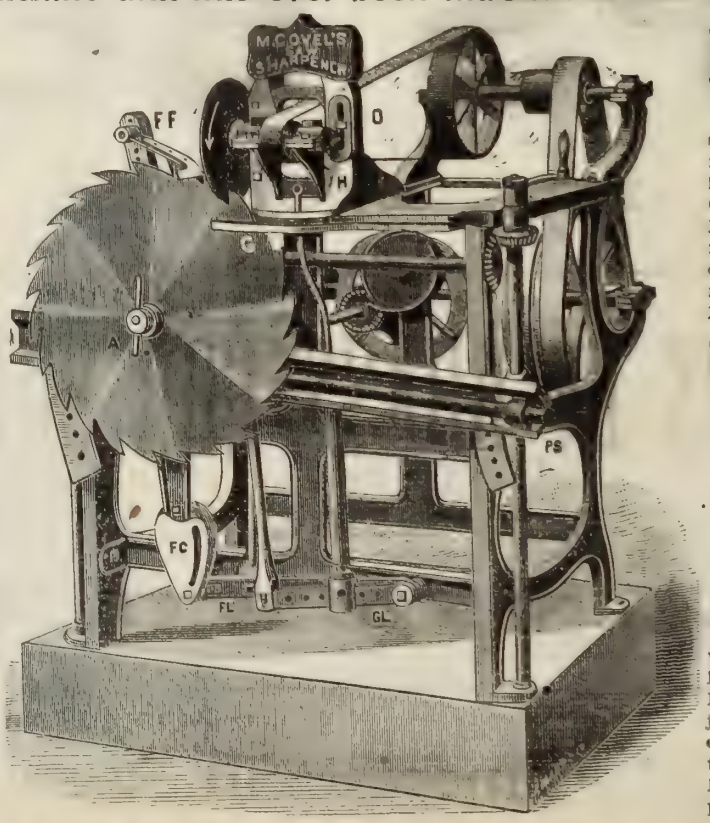
DEAR SIR—I have used your Steam Feed for near four months, and it has given me perfect satisfaction in every way; it is admitted by every person who has seen it work to be the best feed ever invented. Since I put it into my mill, I have not lost ten minutes time fixing anything belonging to it. I can cut 18 boards 13 ft. long in one minute. It can do much smoother and better work than the pinion feed. It is easily governed and reverses the carriages instantly. I am thoroughly satisfied with it and can recommend it to any person who has a Circular Saw Mill for cutting long or short logs. I consider I have cut more lumber than will pay for the Steam Feed since I got it than I would have cut had I not put it in.

Yours respectfully,
WILLIAM TAIT,
Lumberman, Gravenhurst.

TORONTO, August 11th, 1880.

WM. HAMILTON, Peterborough, Ont.

DEAR SIR—The Steam Feed you put in is working splendidly. Yours, &c.,
THOMPSON, SMITH & SON.



MILL MACHINERY!

I am also manufacturing Saw Mill Machinery, for all sizes of Gang or Circular Mills, Span or Double Circulars for Slabbing Small Logs. My Patent Jack Chain for drawing logs into Saw Mills, acknowledged by all to be the Cheapest and best ever got up; also, my Patent Lumber Markers, different sizes of Edgers, Gang Lath Mills, Trimmers, Power Gummers, and all Machinery used in a first class Gang or Circular Saw Mill; also, small Hand Gummers for use in the woods, for Cross-cut Saws. Rotary Pumps of different sizes, for Fire Protection in Mills, &c.

Horizontal Engines and Boilers

CORLISS  ENGINES

Where economy of fuel is the great consideration, along with uniformity of speed, such as is required in Grist and Flouring Mills, Woollen and Cotton Factories, or large Factories of any kind, I supply the Corliss Engine. I feel justified in saying that our Style, Workmanship and Finish on this Engine will be no discredit to its renown, and certainly is not equalled in this country for economy of fuel. I have them working at 2½ pounds of coal per horse-power per hour.

WILLIAM HAMILTON - - PETERBOROUGH, ONT.

PUBLISHED SEMI-MONTHLY.

The only Newspaper devoted to the Lumber and Timber Industries published in Canada.

SUBSCRIPTION $2.00 PER ANNUM.

VOL. 1. PETERBOROUGH, ONT., AUGUST 15, 1881. NO. 20.

FOR the first six months of the year there were 42,257,531 feet of lumber exported from New York. Of this amount the West Indies took 23,335,326 feet; South America, 13,700,047; East Indies and Africa, 3,346,396; Europe, United Kingdom, 2,219,529, and Europe, continent, 656,233. During the same months of the four preceding years, 34,935,899 feet were exported in 1880, 33,842,867 feet in 1879, 26,178,286 in 1878, and 27,839,860 in 1877. The figures do not include the exports of hardwoods.

ON Wednesday morning about forty of C. N. Nelson & Co.'s mill crew struck for a reduction of time from 11 to 10 per day. They paraded the streets, and succeeded in getting about forty of Hersey, Bean & Brown's mill crew to join them. These were joined by Jordan & Mathews' and J. Mulvey's rafting crew. The crowd marched to Schulenberg Boeckeler's mill and attempted to stop the mill, but Earnest Hospe's revolver induced them to give up the job. They also failed to induce Isaac Staples' crew to join them. Nelson & Co. and Hersey, Bean & Brown's mill are still running with half crews. The mill owners declare they will not reduce the working time, and the end is not yet.

THE Mississippi Valley *Lumberman and Manufacturer* remarks that from present appearances the great timber country of northern Wisconsin and Minnesota will be gridironed with railroads the next five years. Arrangements are being made to commence work on half a dozen, and as these projects are all gotten up as feeders and extensions of the great railroad lines of the northwest there is little doubt but that they will all be constructed. In the lumber way the most important of these lines is the timber belt railway, which is designed to run east and west through northern Wisconsin. The Wisconsin central railroad has had cut along its lines during the last winter 215,000,000 feet of logs, or nearly the cut of the whole upper Mississippi and Rum river country, and considerably more than was cut on the St. Croix river.

AN Oregon prophet, awake to the coming importance of the lumber interest in that country, glowingly asserts that the Pacific slope now offers the most considerable supply of lumber remaining on the continent. The development of the projected railway system of Oregon will open up the lumber trade of that State, which will soon become more extensive and lucrative than its fisheries and wheat production. It is also predicted that Oregon lumber will supply the markets of Montana, Dakota, and even Chicago. This authority further says that within a few years the mountains, where the choicest timber is to be found, will be penetrated in all directions and at all points, and the lumber will be run out on tramways, or driven down the streams; and that in ten years from now the mountain lumber manufacture will be an immense business. Here, he says, is not only the easy and natural source of supply, but the only possible one. Though the supply cannot be considered inexhaustible, it is thought to be good for a hundred years.

THE following table shows the cost of thick clear lumber in Boston, Mass., shipped from Chicago, Detroit, Mich., and Tonawanda, N.Y., the current prices and rates of freight being used in the calculation :—

	CHICAGO.	DETROIT.	TONAWANDA.
Two inch clear.....	$46 00	$47 00	$45 00
Dressing.....	1 50	1 50	1 50
Freight.....	7 00	5 50	3 50
Cost in Boston...	$45 50	54 00	50 00

These figures show a difference of fifty cents and $4.50, respectively, between the prices received by the Detroit and Tonawanda deals, and that obtained for the same quality of stock by any Chicago man who may be fortunate enough to sell it. The comparison, therefore, assuming that Chicago prices fix the value, proves that the Detroit and Tonawanda dealers are selling their lumber for less than it is worth; at the first point the price should be $47.50, and at the second $49.50.

THE WORLD'S PROGRESS.

From a book entitled "The Balance Sheet of the World," published in London not long since, are gleaned the following interesting facts and conclusions. One striking feature of the work is an exhibit of civilized progress during the decade from 1870 to 1880. It is shown by the table below :—

	Per Cent of Increase.
Population.....	9.76
Agriculture.....	8.58
Manufactures.....	18.60
Commerce.....	38.20
Mining.....	47.06
Carrying trade.....	53.22
Earnings of nations.....	19.84
Public wealth.....	10.57
Taxes.....	22.34
Public debt.....	43.39

It will be noticed that manufactures increased more than double the percentage of agriculture, and commerce more than four times that of agriculture. Mining and the carrying trade mounted still higher in comparison. A careful student of human progress, by a survey of these figures, is led to inquire whether agriculture is really losing ground in the race with our industries. If all material progress is based on agriculture, one might be led to conclude that the business structure of the world is in danger of becoming top-heavy. But as civilization means the development of artificial life, and the most perfect use and economy of the raw material, such a conclusion would be hasty and immature.

BURDOCK BLOOD BITTERS cures scrofula, erysipelas, salt rheum, piles, and all humors of the blood. Cures dyspepsia, liver complaint, biliousness, constipation, dropsy, kidney complaints, headache, nervousness, female weakness, and general debility.

PIONEER SAW-MILLS IN EUROPE.

A writer in the *Timber Trades Journal* says that the exact date of the first practical employment of the saw-mill is not known. The earlier mills were driven by water-wheels and windmills, steam as a motive power being then unknown. The Greek and Roman writers, although in their works referring to machines for sawing stone and marble, make no mention of any machine for sawing wood, from which it may be inferred that such machines did not exist in their time. The first record we have of the saw-mill in Europe is in reference to a mill erected in Germany, on the river Boer, in the fourth century. Beecher, in his "History of Inventions," says that saw-mills were first introduced in Europe in the seventeenth century, but it is authoritatively given that such mills were to be found working in Bavaria in 1337.

When the Infante Henry, of Portugal, sent settlers to the Island of Maderia in 1420, he ordered saw-mills to be erected there, for the conversion into deals of the various kinds of excellent timber, with which that island abounded. In 1427 the city of Breslau, in Prussia, possessed a saw-mill which produced a yearly rent of three marks. In 1490 the magistrates of Erfurt, a town in Prussia Saxony, caused a saw-mill to be erected in a forest in the neighborhood of their town. Norway, which is covered with forests, had the first saw-mill about the year 1530. The sawing of timber by machines was then looked upon as a new art, and because the exportation of sawed timber was thereby increased, a deal tithe was imposed by Christian III., in 1545. In 1552 there was a saw-mill at Joachimsthal, in Prussia, which, as we are told, belonged to Jacob Gensen, mathematician. In 1555 the Bishop of Ely, ambassador from Mary, Queen of England, to the court of Rome, having seen a saw-mill in the neighborhood of Lyons, thought it worthy of his attention, and gave instructions to the writer of his travels to make special and particular mention of it in his report to his royal mistress. In the sixteenth century there were in use mills with several saws, whereby logs of timber could be sawed into deals and planks.

The original saw-mill consisted of a square wooden frame in which the saws were stretched, which frame, by the motion of a crank, was caused to rise and fall on wooden uprights secured to a suitable foundation. The log to be cut was placed on a horizontal bed or carriage sliding on the mill floor. The carriage was provided with a rack, worked by suitable gearing in connection with a ratchet wheel and pawl, or click, and so arranged that at the up stroke of the swing frame the click slipped over a certain number of the teeth of the ratchet wheel. During the down stroke of the swing frame the click turned the ratchet wheel, and with it the rack gearing, thereby traversing the rack carriage with the log on it.

A large number of the saw-mills of the present day are made on the same principle, one of the greatest improvements being the silent feed wheel to work the feed motion, in place of the oldfashioned ratchet wheel and click. With the silent feed wheel the rate of feed can be regulated to the greatest nicety, whereas the ratchet feed could not be regulated to a less grade than one tooth of the rachet wheel.

PENNSYLVANIA LOG LAW.

During the late heavy freshet thousands of logs escaped from Lock Haven and Williamsport boom, many of which were caught by individuals living along the river, or stranded on the islands and rocks on their way downward. The law of 1812 provided that a compensation of six cents be allowed for each log so captured or found lying on one's property. A supplement to this law was published in 1855, which provided that when a sufficient number of logs were not caught to adequately compensate for the time and trouble a reasonable amount should be paid, equal to what would have been earned by ordinary labor. But it was discovered that during the period of high water the owners of logs sent them adrift above to be caught again in the State of Maryland, where they were manufactured into the various kinds of lumber, thus depriving the Pennsylvanians of the benefit of the manufacturing lumber trade. To prevent this a law was passed in 1866, prohibiting loose logs to be transported on the Susquehanna and its tributaries, and that all loose logs should be bound together, and that all persons catching logs floating loosely in the water were to be paid fifty cents for each by the owner thereof. But there was a proviso attached to the act: "That this act shall not apply to sawlogs now lying in the said stream, nor to any case in which by reason of high water, or from any other casualty, said sawlogs may be swept out of the west branch and Susquehanna booms." It follows, then, that as to all logs sent adrift by interested parties, for the purpose of sending them to a market outside the State, which are caught on their downward way, the persons securing the same are entitled to fifty cents for each one; that all logs which by accident, such as the breaking of a boom or otherwise go adrift, are to be paid for according to the law of 1812, which is six cents a piece, where a number are held, or when a sufficient quantity has not been obtained to pay for the time occupied in catching them a reasonable compensation is to be allowed those who bring them ashore.

ATTENTION is being called to the superior quality of the pine timber grown in the northern districts of America to that which comes from the more southerly States. It is stated to be of slower growth, and consequently better matured, mellower, and of a finer texture, and the goods manufactured from it are said to give greater satisfaction.

OUR QUEBEC LETTER.

THE DEMAND FOR TIMBER AND DEALS.—THE WEEK'S SALES.—PRESENT PRICES.—OAK IN DEMAND.—AUCTION PRICES.—THE SUPERIORSHIP OF CULLERS.

QUEBEC, August 8.—It is satisfactory to note that since the date of my last letter to the LUMBERMAN prices have been steadily maintained, and the demand has increased for almost every kind of wood in and out of the market.

WHITE PINE.

White pine in particular is in good request, owing to the large quantity stuck up the Ottawa, which cannot possibly reach Quebec this season. Prices for this wood are very satisfactory, and higher than even the most sanguine could have expected some short time since.

Within the last few days a raft of white pine containing about 100,000 feet, 49 feet average, has been sold for 27 cents, with a parcel of red about 36 feet average, which fetched 18½ cents. Another raft of Kippewa timber, 45 feet average, containing some 85,000 to 90,000 feet of white pine and 20,000 red has been sold, the former at 28 cents, and the latter at 18½. A third raft of mixed white and red has been sold at 20 cents for the white, 38 feet average, and 13 cents for the red, 27 feet average, Another lot of Kippewa white pine has been sold for 32 cents, 49 to 50 feet average. A few smaller lots have changed hands at 27 to 31 cents for 48 to 53 feet average. A remarkably fine raft, which arrived last week from the Kippewa, is held at 38 cents. There are several more rafts under offer at this moment, and further sales will doubtless be soon reported.

Messrs. R. R. Dobell & Co., of this city, have recently purchased from David Moore, his whole stock of red and white pine now stuck at Roche a Captaine.

By the way, lumbermen will regret to learn that Mr. Dobell is just now confined indoors from the effect of a recent slight sunstroke.

AUCTION PRICES.

The saved portion of the *Bristolian's* cargo, wrecked on Anticosti, was sold here to-day by auction. The figures obtained are significant, it being of course always remembered that amounts paid at auction rarely reach the highest market value. The square pine, 3,000 feet, was sold to J. B. Charleson for 12½ cents, and re-sold to George King for 15 cents. James Connolly bought 16,000 feet board pine at 29 cents. About 1,600 deals, thirds and fourths, were sold to Jos. Archer, sen., at the rate of $34. The pipe staves were sold to a local cooper for $151 per mill, and about 1,400 w.o.w.i. were purchased by J. B. Charleson, broker, for $34 per mill.

OAK.

The apparent combination to bear themarket on oak has fallen through. One or two shippers having run out of stock were forced to buy, and the figures of late transactions compare favorably on the whole with last year's prices. Holders and manufacturers' agents, being in a position to hold out for their own, purchasers have gained nothing by holding back.

One very good dram of Canada oak, 55 feet, culls out, has fetched 44 cents. Another common lot, measured off, one-third Michigan and two-thirds Ohio, has been sold for 42 cents, a price which the same quality would hardly have brought last year.

For elm there is very little enquiry. Walnut is in demand, but there is little or none offering.

Mr. E. J. Charlton, of the Upper Ottawa contracting firm of Purpore & Charlton, shipped to-day a large lot of English dredging machinery for deepening the Upper Ottawa. The hull of the vessel is building at Pembroke. When the work is completed, there will be opened a new stretch of navigation on the Upper Ottawa, of ninety miles in length, passing through the Culbutte locks, of great importance to the lumber trade.

THE SUPERVISORSHIP OF CULLERS.

The recent death of the late Mr. W. Quinn, who for twenty-seven years held the office of Supervisor of Cullers at Quebec, has called forth an army of applicants for the office, principal amongst whom are H. J. Chaloner, a confidential clerk in the office of Hon. Thos. McGreevy, M.P., Government contractor, Mr. Jas. Patton of this city, a life long lumberman, and Mr. John Poupore, M.P., of the Ottawa district, also a well known operator in lumber. It was rumored some time ago that Mr. Quinn was to have been superannuated and Mr. Chaloner appointed in his stead. Deputations of leading lumbermen both in Ottawa and Quebec immediately waited upon the Government, and upon Mr. McGreevy, M.P., who exercises a great deal of the patronage of the Dominion Government in this district, and protested energetically against the selection for the position of any but a properly qualified officer. The Council of the Quebec Board of Trade passed resolutions to a similar effect, and the Government halted in its intended action. To-day another deputation has been selected amongst those interested in the trade in this city, to wait up Hon. Messrs. Langevin and Caron, the representatives of this district in the Cabinet, and urge upon them similar views. What the result will be cannot yet be foreseen, though it would not seem probable that the Government should desire to incur the opposition of so important and influential a section of the community as the lumbermen, by making to this important office the appointment of any unqualified party merely as a requital for party services.

AUCTION SALE OF GOVERNMENT LANDS.

I have it from the highest sources that it is the intention of the Hon. Commissioner of Crown Lands for the Province of Quebec to hold at no distant date another sale by auction in this city of Government lands. Instead of lumbering limits, however, most of the lots to be offered will probably be mineral lands.

WALNUT TREES.

To the Editor of the Toronto Evening News.

SIR,—I have just read your comment on the culture of the walnut tree, suggested by remarks on the subject by the *Times* of Hamilton. With your permission I give an instance of the great benefit that might result from the extensive culture of the walnut.

In the spring of 1839 myself and a brother transplanted two small walnut trees, which were not two inches in diameter or ten feet in height. They took root rapidly, and grew rapidly, and some eight years ago I saw and measured them. One of them had a girth of 72 and the other 65 inches, one foot from the ground. Each had a fine trunk some 20 feet to the lower limbs, and a fine spread of top of over 30 feet, and was loaded with nuts every year. They are now two as beautiful trees as can be met with, and more valuable than beautiful, and can be seen by any one passing over the Hamilton and Caledonian plank road, about nine miles south from Hamilton, on the late Bingham, now Coon Farm. You justly say it is as well to plant valuable trees as any, and if these few lines will be of any use in directing further attention to walnut tree culture I will be amply rewarded for this hasty note on the subject.

Yours very truly,

A. BINGHAM.

Flies and Horses.

Dr. J. J. Ridge, of Enfield, writes to the *Daily News*:—"The incessant torment which flies inflict upon horses during such hot weather as we recently endured may not have occurred to the minds of many. Though a minor misery, yet it is so real that I venture to ask you to allow me to describe a plan which I have found thoroughly successful in preventing it altogether, while perfectly harmless. It is simply the application, before harnessing, of a mixture of one part of crude carbolic acid with six or more parts of olive oil. This should be rubbed lightly all over the animal with a rag, and applied more thickly to the interior of the ears and other parts most likely to be attacked. This application may need to be repeated in the course of the day, but while any odour of the acid remains the flies decline to settle, and the horse is completely free from all their annoyance. The nervous, irritable state into which some horses get from the attacks of these insects is also not an infrequent cause of accidents, and these, therefore, may also be obviated. Whether the dreaded tsetse of Eastern Africa would also fight shy of similarly anointed animals I cannot say, but it deserves a trial, and if successful would be an incalculable boon. It might also prove obnoxious to mosquitoes.

EUCALYPTUS GLOBULUS.

United States Consul John Wilson, of Brussels, furnishes to the State department at Washington a translation of an article originally published in France, descriptive of this Australian tree, which has attracted some attention in this country, and if it possesses but half the good qualities claimed for it, it must be admirably adapted to the treeless regions of southern Kansas, Texas, and indeed all our prairie territory. The article appears in the consular reports for June, and is as follows:—

Nothing is more curious than this Australian tree, yesterday nearly unknown in France, and to-day on the point of producing a revolution in the sylviculture in the south, and perhaps in certain industries also. It developes with a prodigious rapidity, its wood is very hard and resinous, and is neither affected by water nor attacked by insects.

The eucalyptus flourishes in the south of France, especially in the Maritime Alps, were, thanks to the efforts of Dr. Gimbert, its culture is constantly on the increase. At Cannes its mean yearly growth is about four meters. Seedlings a year old, planted in the month of May in favorable ground, reach the height of 6 meters by the following December. Throughout all of Southern France, if planted in good ground, the eucalyptus in seven or eight years attains a height of from 20 to 25 meters. It is an elegantly proportioned evergreen, and sheds a very agreeable balsamic fragrance.

It is therefore of the highest importance to draw the attention of sylviculturists and economists to this remarkable tree, for the replantation of the forests in Southern France and Algeria. This is a source of wealth worthy of the most serious consideration.

The ordinary timber trees in France are cut from the forest, on an average, every hundred years; the eucalyptus can be cut five times in that period, or once in every twenty years.

It will be seen by this that the value of timber forests would be quintupled by the culture of this tree.

It has been calculated that a cross-tie for railroads, which now costs 8 francs in France, would only cost from 1 to 2 francs if made of eucalyptus wood.

An ordinary pine tree fit to furnish a telegraph post of 6.50 meters high requires a growth of thirty years, and costs 6.50 francs, whilst the eucalyptus will grow the same post in five years, and from this it may be seen what an economy must result from the growing of this tree for these purposes.

It is well known that, in consequence of the rapid extension of our naval construction, we are obliged to import much timber from Russia, Sweden, Norway, and the United States. The culture of the eucalyptus would in time completely relieve us from having recourse to these foreign sources of naval timber. All the masts, hulls, and indeed the entire frame work of ships can be made from this tree. All the wooden vessels that now ply between Australia and England are chiefly made of it. The whaling vessels of Hobrat Town are made of this wood, and throughout Australia it is extensively employed by carpenters, wagonmakers, wheelwrights, &c. A hectare of land, planted with the eucalyptus in 6 meters between the trees, well planted, they will have a diameter of 20 centimeters in three years, and a tree of this dimension is very useful to mechanics and wheelwrights, and can be sold for over 5 francs each. Thus the first cutting would produce 2,500 francs per hectare. At eight years, the trees of such a plantation would have acquired the dimensions suitable for railroad purposes, and each tree would be worth 20 francs. A hectare of this plantation would then be worth, according to Mr. Frothier, 6,200 francs.

Large plantations of this tree could be made rapidly to invade and cover swampy grounds, more or less previously drained, and so change its character as to entirely prevent the emanation therefrom of noxious miasma. Such plantations would prevent the direct action of the sun's rays upon the ground; would extract any excess of humidity from it, and would thus absorb all the elements of a parasitic and unhealthy vegetation. Thus, on a ground formerly uncultivated and pestilential, at the end of ten or twelve years from the planting a strong, generous and health-giving forest might be produced.

Intermittent fevers do not exist where the eucalyptus grows, and travellers think that Australia owes much of the salubrity of her climate to the fact that so much of her territory is covered with this tree.

Mr. Gimbert strongly recommends the plantation of the eucalyptus in certain regions of Spain, the treeless plains around Rome, the vicinity of Poestum, the deltas of the Var, the coast of Corsica, &c., which are during the hot season humid, and hence the seat of intermittent fevers.

The eucalyptus contains an essence which is easily extracted, and of which Dr. Gimbert has shown the happy medical properties. This essence has, among others, the property of a febrifuge, anti-spasmodic. Mr. Gimbert, who, at Cannes, was the physician of Prosper Merimee, tells us that the illustrious writer for three years used cigarettes of eucalyptus, and that they always calmed his asthmatic oppressions.

These facts speak for themselves, without it being necessary for us to add anything farther. The eucalyptus is a precious conquest, of which we must now try to profit.

IMPROVED BAND LOG SAW MILL.

The last issue of the *Scientific American* contains the following description of a new band saw-mill which is now being built by a firm of American wood-machinery builders for the purpose of securing greater economy in the manufacture of sawlogs, especially those of the more valuable woods. It says:—The machine proper, except the carriage, is mounted on a heavy cast-iron sole plate, which sustains and supports all the operative parts. The operator, without changing his position, has entire control of the mill, and can start or stop it, change the feed, or vary the direction of the carriage at will. It is massive and substantial, wheels 72 inches in diameter, and arranged so the saw can be made to run on any portion of the wheel almost instantly. The guides—upper and lower—are those peculiar to all of the Fay & Co. machines, having a wheel to receive the back thrust of the saw, and lateral supporting slide guides or packing plates to suit the thickness of the saws; the upper guide is also so arranged that it can be raised or lowered instantly to any desired size of log, and yet will always remain in a true vertical line with the lower one—a very important feature. The carriage head blocks and set works are the most improved known. The log is set with the greatest ease and convenience, and with unerring accuracy. The set works are arranged to be operated in the most expeditious manner. The carriage runs on friction rolls. The side supports are arranged so as always to secure an even thickness of the last board. Rests at the same distances apart as the side supports afford a decided advantage over ordinary mills in edging up boards and splitting plank into scantling.

The nearness together of blocks saves any change of moving of head blocks in sawing logs of different lengths. No calculation is required to leave the last board of the desired thickness.

The operator and assistant stand at the sides of the carriage, where logs can be easiest handled, and where the proper set, when slabbing, can be determined. The position of the sawyer has the further advantage of enabling him to cut different grades of lumber in the same log into the most suitable dimensions.

A single improved dog quickly operated holds securely any size of logs until nearly finished. Sliding dogs can be quickly applied to hold the last board without tearing or otherwise injuring the lumber.

The carriage can be run close to the rear of the mill building. Every part is most thoroughly constructed, and the working parts are all readily accessible. The blade is usually four inches wide and No. 18 gauge, and removes a kerf of one-sixteenth of an inch.

The enormous saving in lumber over other saw-mills by this machine we leave to our readers to compute, feeling it will be worth their most careful investigation.

PAPER pulp made from sawdust is to be sent to England from Welland, Ont. It will be tried at an English factory, and the paper sold as an experiment. If successful, several capitalists will start a factory at that place.

MILK AS FOOD FOR INVALIDS.

The value of milk as food for invalids is now so generally recognized that we believe our readers, both professional and non-professional, will thank us for condensing the following practical suggestions concerning its use from an article in the *New York Medical Record*, by Dr. James D. Trask :—

The most common objection offered to the use of milk is that it produces "biliousness." In many instances this is due to a disregard of the fact that milk ought to be looked upon as an article of food, and not as a mere drink ; consequently, to secure its perfect digestion, it should be always taken at one of the regular meals, or at a point as near as practicable midway between two meals, when something is required to bridge over this interval. Bread and milk eaten together, by both children and adults, being agreeable to the palate, is often hurriedly swallowed and in excessive quantities, and indigestion is the consequence.

Again, since modern chemistry has taught us the important part taken by the saliva in the preparation of all starch foods for digestion, we have a ready explanation of the failure of the stomach to digest bread that has been swallowed with milk without previous mastication. * * When milk is given to either children or adults with feeble digestion, the bread should be first thoroughly mixed with the fluids of the mouth and swallowed by the child or invalid before the milk is taken ; the young child must be watched as it eats, mouthful by mouthful, until the proper habit is formed.

The digestibility of milk depends, in many instances, upon the temperature at which it is taken into the stomach. This is particularly true in cases of nervous prostration. The digestive organs of these persons are almost invariably weak, and the temperature at which milk is ingested will determine whether it shall be gratefully received and readily digested, or, on the other hand, prove a source of discomfort.

On reflection it will at once appear that food, on being taken into the stomach, must first of all be warmed up to the temperature of the stomach, and this at the expense of vital heat. To raise a half pint of milk thirty or forty degrees involves the waste of considerable animal heat. This in a healthy person with vigorous digestion may not only be disregarded, but may be agreeable in its effects ; but it is far otherwise with him whose digestive organs, under any of the depressing influences productive of nervous exhaustion, are taxed to their utmost to furnish fresh supplies of enriched blood to the enfeebled nervous centres. In these cases, milk at ordinary temperatures will be felt as a cold, foreign body long after it is swallowed, and its ingestion will probably be followed by acidity and headache. It is manifestly far more economical of vital force, in these cases, to heat the food upon the kitchen range, rather than in the patient's stomach.

These remarks are especially applicable to the use of food by such persons in cold weather. In summer, when the temperature of the atmosphere and surrounding objects approximates that of the human body, drinks may be generally taken without being first artificially heated. On the return of cold weather the stomach again becomes conscious of the additional duty imposed upon it, and artificial heating again becomes necessary. * * *

Much has been said of the value of external heat as a vital stimulant. Few, however, seem rightly to appreciate the value of heat introduced into the system as a vital restorative. No more acceptable mode of accomplishing this can be devised than the drinking of hot milk. Milk heated to much above 100° F. loses for the time a degree of its sweetness and its density. No one who, fatigued by over-exertion of body or mind, has ever experienced the reviving influence of a tumbler of this beverage, heated as hot as it can be sipped, will willingly forego a resort to it because of its having been rendered somewhat less acceptable to the palate. The promptness with which its cordial influence is felt is indeed surprising. Some portion of it seems to be digested and appropriated almost immediately ; and many who now fancy they need alcoholic stimulants when exhausted by fatigue, find in this simple draught an equivalent that shall be abundantly satisfying, and far more enduring in its effects. * * * * * * * *

The following statement is a gratifying confirmation of the value of these suggestions :— A lady, whose nervous system had been severely overtaxed by the supervision of a large school for girls, and whose digestion had become seriously impaired, went to Europe for her health. She eventually consulted Sir Thomas K. Chambers, and in answer to his inquiries stated that she had made repeated attempts to take milk of ordinary temperature as an article of food, but it had never been tolerated. At the suggestion of Dr. Chambers she began to drink it after being heated, in the same quantities as before. This proved the turning point in her case. The heated milk was well borne, and her convalescence dated from that time.

Orillia House,
ORILLIA.
New and Commodious Brick Building ; best north o Toronto ; splendid sample rooms ; centrally located ; free 'bus. b20 JOHN KELLY, Proprietor.

The Queen's Hotel,
TORONTO, CANADA.
McGAW & WINNETT, Proprietors. Patronized by Royalty and the best families. Prices graduated according to room. b20

St. Lawrence Hall,
PORT HOPE.
Is noted for its superior home-like comforts—a well kept table, equalling the best hotels in Toronto, and large, well-furnished rooms. Good sample rooms on ground flour. Walton Street, Port Hope.
b26 WM. MACKIE Propr,ietor.

Caledonian Hotel,
GRAVENHURST.
JOHN SHARPE, Proprietor. This Hotel has been newly opened out, pleasantly situated on Main Street, within five minutes walk of Northern Railway station. Bar kept with best assorted Wines, Liquors and Cigars. Every attention paid to guests. Good Stabling. 1yL15

Queen's Hotel,
BRACEBRIDGE.
JOHN HIGGINS, Proprietor. The proprietor (late of Georgetown,) having lately purchased the above hotel,) will endeavor to make it one of the best houses in the District of Muskoka. Tourists and hunting parties will receive every possible attention. Free 'bus to and from steamboat wharf. Terms, $1 per day. b20

The American Hotel,
BARRIE, ONT.
Collier Street, Adjoining the Market.
RATES REASONABLE, CENTRAL LOCATION, FREE BUS TO AND FROM ALL TRAINS.
☞ Every accommodation for Commercial and LUMBERMEN.
L14 W. D. McDONALD, Proprietor.

Fraser's Hotel,
GRAVENHURST, ONT.
HENRY FRASER, proprietor, (successor to Dougland Brown.) Mr. Fraser having purchased and thoroughly renovated and refitted that old established hotel, so long and popularly kept and owned by Dougland Brown, in the Village of Gravenhurst, is now in a position to attend to the wants of the travelling and general public. Parties *en route* to the Muskoka District, will find "Fraser's" a comfortable stopping place. The Bar and Larder are well furnished. Convenient Sample Rooms for Commercial Men. Good stabling and attentive hostler. Free 'bus to and from trains and steamboats. b26

D. S. BRIGGS,
9 TORONTO STREET, TORONTO.
WHOLESALE DEALER IN
Clear, Pickings, Common and Hardwood Lumber, Lath, Shingles, &c.
BILL STUFF CUT TO ORDER.

USE OF NATURAL WOOD v. PAINTING.

As Sir Roger de Coverley would say when he wished to dodge a question, "much might be said on both sides," but Mr. Gardener states the whole subject so felicitously, says the *American Furniture Gazette*, that we will let him present his views somewhat at length :—

To answer according to the spirit of your inquiry, I should say by all means (if you do not mind the cost) use wood instead of putty. With all respect for white paint and striped paint and all other kinds of paint, there is nothing more enduringly satisfying than the natural tint and grain of the different kinds of wood suitable for building, of which we have such great variety in style and color, from the over-estimated black walnut to the rarely-used white pine, rarely used without having its natural beauty extinguished by three coats of paint. What I wish to say is, that finishing your woodwork without paint does not necessarily require the said wood to be of the kinds commonly called hard. Any wood that is not specially disposed to warp, and that can be smoothly wrought, may be used. There are several important points to be religiously observed if you leave the wood, whatever the variety, in its unadorned beauty. It must be the best of its kind ; it must be seasoned to its inmost fibre ; it must be wrought skilfully, tenderly cared for, and, finally, filled and rubbed till it wears a surface that is not liable to soil, is easily cleaned, resists the action of moisture, and will grow richer with age.

Hence, I say, by all means finish with unpainted wood, if you are not afraid of the expense ; and yet paint and varnish are good, and putty, like charity, covereth a multitude of sins. Nothing protects wood better than oil and lead, and by means of them you have unlimited choice of colors, in the selection and arrangement of which there is room and need for genuine artistic taste. Yes, good honest paint is worthy the utmost respect. When it tries to improve upon Nature's divine methods and calls itself "graining," it becomes unmitigated nonsense,—yes, and worse. It is one of the sure evidences of man's innate perversity that he persists in trying to copy certain beautiful lines and shading in wood, not as an art study, but for actual use, when he may just as well have the perfect original as his own faulty imitation. What conceit, what blindness, what impudence this reveals ! What downright falsehood ! Not in the painter—oh no ! skill is commendable even when unworthily employed,—but in him who orders it. You may buy a pine door, which is very well ; pine doors are good ; you tell every man that comes into your house it's black walnut, or oak, or mahogany. If this is not greeting him with lying lips and a deceitful heart, the moral law is not as clear as it ought to be. You may think it is of no consequence—certainly not worth making a fuss about—but I tell you this spirit of sham that pervades our whole social structure, that more and more obtrudes itself in every department of life, comes from the bottomless pit, and will carry us all thither, unless we resist it, even in these milder manifestations, as we would resist the Father of Lies himself. Truth and falsehood are getting so hopelessly confused that we can scarcely distinguish one from the other.

One other suggestion in this connection. Without either painting or graining you may get a most satisfactory effect, both in looks and utility, by staining the less costly kinds of woods, using a transparent stain that will not conceal, but strengthen the natural shading, and at the same time change its tint according to your fancy. This is an honest and economical expedient. It only requires that your lumber shall be sound, tolerably clear—a good hard knot isn't alarming—seasoned, and put up with care. The cost is less than common painting, and the effect as much better than graining as nature's work is more perfect than ours.

From the consideration of painting, *per se*, we naturally glide to the question of graining or deceptive painting, which Ruskin has just declared inadmissible. And here we may say that however much they may be at variance on other points, there is substantial accord among art writers in condemning graining. Mr. Gardener has had his tilt at it in the extract already given, and Ruskin pounces upon it with all his pugnacious virulence :

"There is no meaner occupation for the human mind than the imitation of the stains and striæ of wood and marble. The grainer must think of what he is doing, and veritable attention and care, and occasionally considerable skill, are consumed in the doing of a more absolute nothing than I can name in any other department of painful idleness. I know not anything so humiliating as to see a human being with arms and limbs complete, and apparently a head, and assuredly a soul, yet into the hands of which when you have put a brush and a palette, it cannot do anything with them but imitate a piece of wood. It cannot color ; it has no idea of color. It cannot draw ; it has no idea of form. It cannot caricature ; it has no idea of humor."

Eastlake says his say about it as follows :—"It is an objectionable and pretentious deceit, which cannot be excused even on the grounds of economy. In the last century, when English oak and Spanish mahogany could be procured at a reasonable price, the grainer's work was, of course, unneeded. In modern days the usual substitute for those now expensive woods is deal ; but deal is so soft and absorbent in its fibre that it quickly becomes soiled, and in most situations, especially when exposed to the air, it soon requires painting. But why should we paint it in imitation of oak? Everybody can see at a glance that it is *not* oak, and, as far as appearance is concerned, there are many modes of treatment which would be far more effective."

The White Water of the Arabian Sea.

With reference to the phenomenon of what is known as the "white water" of the Arabian Sea, a correspondent writes as follows :—"If the call of duty or pleasure should at any time induce any of your readers to undertake the overland journey to India, they must not fail to give instructions to be called from bed should the nocturnal phenomenon of the 'white water' occur. It is more frequently seen in the months of July and August, and is principally confined to a narrow belt to the eastward of the Island of Socotra, known in the charts of that sea as the Line of the Strongest Monsoon, and wherein the rain clouds on quitting Central Africa on their passage eastward are apparently confined. Should the moon be above the horizon, an uneasy night's rest may be anticipated, as the writer has never known the phenomenon to occur in the presence of that orb.

"To give the reader some idea of this remarkable and striking appearance, we will suppose ourselves in a steamer, about two hundred and fifty miles to the eastward of Socotra, in the position named, and in the latter end of July ; time, 1 a.m. The monsoon is blowing strongly and steadily—the night, starlight and clear—a light fleecy scud occasionally passing rapidly to the eastward, and the good vessel bowing along at the rate of fourteen or fifteen knots an hour. Suddenly we discover a light hue in the water, which in a short while assumes a snow white aspect, and in the course of a quarter of an hour extends to the horizon in all directions. The transformation of the water is perfect, the usually green color of the sea having been replaced by an appearance of whiteness like that of milk. And yet if you draw a bucket of water for inspection or analysis, you will find that it is beautifully clear, and not a vestige of anything white being visible ; nor can the microscope discover anything over and above the ordinary quantity of minute life always present in sea water within the tropics.

"The deception seems to me to admit of easy explanation, it being the result simply of reflection of color. The vessel in passing through a light, misty atmosphere, inappreciable to the eye while within its influence ; and the white watery vesicles held in suspension are in some favorable condition of air and water, reflected on the surface of the latter."—*Chambers' Journal.*

DYSPEPSIA.—Strenthen your digestion—tone the stomach for utilizing and assimilating every atom of food you take ; the body needs it for strength and vigor. *Zopesa* cleanses the entire system, stimulates the Liver, keeps you regular, and able to eat ten-penny nails. Letters and postal cards come in daily, telling of cures and help from *Zopesa*, from Brazil. *Positive proof* of the health and vigor it gives in a ten cent sample. Ask your druggist.

THEY ALL DO IT.—Everybody uses "TEABERRY" for the teeth and breath, the newest, brightest, c osiest little toilet gem extant. Try a 5 cent sample.

KEEWATIN MILLS.

These mills are situated on the line of the Canadian Pacific Railway, at the outlet of the Lake of the Woods into the Winnipeg river. Their water power is equal to anything on this continent. There is always a fall of eighteen feet, and sometimes more, if the water is high. A channel was formed for the passage of the water from the main lake into a depression which forms a small lake, at the outlet of which the mills were erected, and after driving the turbines the water falls into Darlington Bay of the Winnipeg river. A gate at the outlet into the small lake or reservoir keeps the amount of water perfectly under control, and may be closed entirely if necessary for repairs, leaving the mill quite dry, and keeping them in the winter free from ice.

The buildings were erected in the fall of 1879, and everything completed for the season's cutting at 1880. The main building is 120 feet long by 36 in width, and is three stories high. The lower storey contains five turbine water wheels and shafting required to drive the machinery above. The second storey contains three shingle machines, a bolter and lath machine, slab cutter and planing machiue. The upper storey or saw floor contains one large circular for dimension stuff, two slash saws, one double stock gang, one double edger, one trimmer and two log ways, all fitted with the latest improvements and conveniences. There is also within the walls an iron lathe and other machinery and tools required for making repairs, so that when breakages occur no time will be lost in waiting for the necessary repairs. On a level with the upper floor is a very large platform for temporary storing, hauling away, etc. The other buildings are an office, two storehouses, blacksmith shop, boarding house, to hold fifty, residence, five tenement houses, stables, etc.

The present capacity of the mills is 800,000 feet of lumber, 90,000 shingles, and 35,000 lath per day, which will be increased as required. The piling ground is situated between the mills and the track of the Canadian Pacific Railway, and is very convenient, there being room for about 6,000,000 feet of lumber with railway switch running through it. The platform of the mills extends out to the switch connection with the main track of the railway, placing them in excellent position for shipping. From 8 to 10 carloads of lumber per week have been sent to Winnipeg since the commencement of this season's cut. About 6,000.000 feet of lumber will be manufactured this season, for which there is a ready market at good prices. About seventy-five to one hundred men are steadily employed in the mills during the summer and getting out logs during the winter. Wages range from $40 to $60 per month, without board. These mills are owned by the Keewatin Lumber Company, and are conducted under the efficient management of Mr. John Mather, the largest stockholder. The timber limits of the company are all the islands of the Lake of the Woods, as well as a number on the shores of the lake, and are easily accessible by their powerful tug, which is used for towing the logs to the mills. This is one of the many institutions which will eventually occupy the narrow neck of land which forms at this point one of the finest water powers on the continent, and which will build up a large manufacturing centre, supplying the prairies of the west with various kinds of manufactured articles.—*The Progress, Rat Portage, Keewatin.*

Monster Locomotives.

The Rhode Island locomotive works are now at work on ten monster freight locomotives for the Atlantic and Pacific Railroad Company, and have furnished two which will be shipped to Albuquerque, New Mexico. The locomotives, when in running order, will weigh sixty tons each, and the tanks have a capacity of 3,500 gallons of water. The tenders weigh 35 tons each. The length of the locomotive over all is 60 feet. The cylinders are 20 inches in diameter, with 26 inch stroke. There are four pairs of couple drivers 50 inches in diameter, and one four wheel truck. The fire box is ten feet long and 43½ inches wide. The boiler is 58 inches in diameter, wagon top, and contains 200 2½-inch tubes. There are a set of steam gauge cocks for the fireman located at the back head of the boiler, and another set for the engineer, inside the cab. The tops of the cabs of these locomotives are higher than the smokestacks of the engines used on the railroads hereabouts. The height of the smokestacks from the top railing is sixteen feet six inches. Either hard or soft coal can be burned. These locomotives, compared with the largest eight wheeled engines built at the Locomotive Works, look like giants. The smokestacks and whistles had to be removed, in order to allow the engine to pass under the bridges, and there is some doubt as to whether they will pass under all the bridges with the cabs in position. The company are also building fifty of their largest eight-wheeled engines for the Milwaukee and St. Paul Railroad.

Fire in a Saw-Mill.

MOUNT FOREST, July 30.—Between four and five o'clock this morning a fire broke out in the large saw-mill owned by Messrs. Martin & Sons, of this town, and in a few minutes the entire building, including the stave, heading and lath mills, were in flames. The mill was situated about a mile from the town, rendering assistance impossible until the building, with all the machinery, was entirely consumed. Efforts were directed to saving the large quantity of lumber and shingles in the yard, but the flames spread with such rapidity that this was difficult. Quite a lot of lumber was burned, with five hundred bundles of shingles. The building and machinery was insured for about $4,500 in the Waterloo Mutual, Saugeen Mutual, and Union Insurance Companies. Estimated loss over $12,000.

SOME four or five millions of logs taken out in the Red Lake county in the United States, tributary to the Red River, are being floated down the latter stream to Winnipeg, where they have been sold to Canadian manufacturers of lumber.

BURDOCK BLOOD BITTERS cures all diseases of the blood, liver and kidneys, female complaints, nervous and general debility, and builds up the entire system when broken down by disease.

WESTERN SUPPLIES.

The *Northwestern Lumberman*, of the 23rd July, gives what it believes to be a tolerable correct estimate of the relative supply of lumber in stock at the points named on the 1st of July, as follows s—

LUMBER ON HAND JULY 1.

District.	1881.	1880.
Mississippi Valley	708,117.963	596,728,202
Lake Michigan	587,741,329	584,346,419
E. Mich. and Lake Erie	554,800,000	497,930,000
Miscellaneous points	59,000,000	62,000,000
Total	1,909,659,292	1,741,004,162

The *Lumberman* then goes on to say :—It may surprise a good many to find that the Mississippi river district, which includes nearly all the interior Wisconsin points, with the exception of Oshkosh and Fond du Lac, shows an increase of 111,389,761 feet over the amount in pile at the same date last year. There is no real reason, however, why it should. It will be remembered, we presume, that the inventory taken on the first of January revealed the fact that there was then an excess in the stock as compared with that of the preceding year of 168,560,272 feet. It is true that the trade of this year has been larger than it was in 1880, but is it not also true that the production has been greater? We think it is, unquestionably. The mills were somewhat later in starting, but they escaped the reduction in their cut that was occasioned last year by the freshet, and no one will dispute that the time lost at the beginning of the season is not so valuable, and does not represent the same reduction in the product, as the same amount taken from it after the mills are fairly under way. Moreover, the mills this year have all been operated up to their capacity, and with the capacity materially greater than it was ever before, and with a log supply fully equal to it, we are justified in assuming that the net result up to the first instant in the way of lumber manufactured was considerably larger than it was a year ago, or, indeed, than it ever was before. On this ground we think the increase, large as it is, is susceptible of a simple and reasonable explanation. The fact that it is no greater becomes, when we consider it in the light of these circumstances, the best kind of evidence of a trade that has been active beyond any precedent lumbermen can bring forward. With an increased supply to begin the season with of 168,560,272 feet, and an increased production of an indefinite, but presumably very large amount, a difference in the stock July 1 of only 111,389,761 feet is remarkable, and proves beyond question that the demand for lumber for the first six months of the year was the greatest ever known.

The difference in the quantity of lumber manufactured this year and last was probably greater in the Mississippi valley than on Lake Michigan—though there has been some increase in the latter also—which accounts for the showing which a comparison of the totals in the last named district makes. In this, the total stock on hand is approximately the same as it was a year ago. We have here still stronger evidence of what the trade has been this season ; for there was 94,173,492 feet more lumber on hand to begin with than was available in 1880, and the production, taking the Chicago receipts as a criterion, was up to the middle of the year about sixteen per cent. greater than last season. If the business in this city may be regarded as fairly representing the trade of the whole district, which is not an unfair assumption, since the bulk of all the lumber produced therein reaches the consumer through the Chicago yards, we may say that the difference in the sales of the two years amounts to fully the percentage just named.

The increase in the total stock on hand is 168,654,671 feet. This is apparently large, though really very small, being in fact a gain of only a little more than ten per cent.

It is worth noticing that the percentage of increase in the stock, as compared with last year, was twenty-two and a fraction, January 1, or more than double what it was on the first of July. This is sufficient proof that the excess in the supply is not what it should be.

And in its issue of the 30th ult. the *Lumberman* has the following with regard to the

LOG SUPPLY :

District.	Secured.	Doubtful.	Hung up.
Mississippi Valley	1,899,000,500	189,000,000	116,000,000
Lake Superior	150,000,000	19,000,000	.....
Lake Michigan	1,865,500,000	111,000,000	40,000,000
Eastern Michigan	1,705,750,000	136,500,000	32,000,000
Wolf River	115,000,000	10,000,000	10,000,000
Total	5,735,450,000	466,000,000	198,000,000

The most noticeable feature of the foregoing statement is the smallness of the amount of logs hung up. According to the footings in the last table, there are only 198,000,000 feet of logs in all the streams enumerated, and only 466,000,000 feet that are regarded as doubtful. It is in respect to these two items that the *Lumberman* is inclined to question the accuracy of the reports, though it may be that the situation is exactly as they represent it to be. At all events, we shall not be very much surprised if at the end of the season it is reported that more logs are still back in the streams than the above tables show.

Absence of Trees on Prairies.

A curious and interesting explanation of the absence of trees on the great western prairies was given at the meeting of the Academy of National Sciences by Mr. Thomas Meehan. Numberless theories have been advanced by the students in natural history why the great feeding grounds of the buffalo should be without vegetation, the principle on which is supported by distinguished authors as being that of climatic influences. Mr. Meehan's theory is that the absence of trees is due to artificial causes altogether. Taught by their necessities, the early Indians made it a practice annually to fire the high grass of the prairies, which had the effect of making the growth more luxuriant and consequently more inviting to the vast herds of buffalo, on which the aborigines depended chiefly for sustenance. It has been conclusively settled that no vegetation, save the hardy prairie grass, will appear on ground over which fire has swept until another season, so that the yearly prairie fires extended the area of the plateau until they became almost measureless. Mr. Meehan cited several instances where trees have grown when the firing has been discontinued.

ZOPESA.—A healthy man never thinks of his stomach. The dyspeptic thinks of nothing else. Indigestion is a constant reminder. The wise man who finds himself suffering will spend a few cents for a bottle of *Zopesa*, from Brazil, the new and remarkable compound for clensing and toning the system, for assisting the Digestive apparatus and the Liver to properly perform their duties in assimilating food. Get a 10 cent sample of *Zopesa*, the new remedy, of your druggist. A few doses will surprise you.

A POSITIVE FACT.—It is now established beyond controversy that DR. FOWLER'S EXTRACT OF WILD STRAWBERRY is the most perfect cure for all forms of bowel complaints, including cholera morbus, dysentry, colic, cholera infantum, nausea, canker of the stomach and bowels, piles, etc. Beware of opiates and poisoning drugs, that only check for a time and produce inflammation. WILD STRAWBERRY is safe and certain in its effects.

Wrought Iron Shanty Cook Stoves

The Best Article ever offered to the Trade.

I have much pleasure in drawing attention to my **WROUGHT IRON COOKING STOVE, for Shanty, Hotel and Boarding House use.** These Stoves are made of **Heavy Sheet Iron**, the top and lining of the fire-box being of **Heauy Cast Metal** and all the connecting parts of substantial **Wrought Iron Work.** The dimensions of these Stoves are as follows :—

SINGLE OVEN STOVE

Top surface contains six 10-inch holes, with ample room between, and one oven 16 x 24 x 26.

DOUBLE OVEN STOVE

The Double Oven has a top surface containing twelve 10-inch pot holes, with two ovens, each 16 x 24 x 26. One fire-box of suitable size for area to be heated. Below will be found Testimonials from some of the leading Lumbermen, who have used my Wrought Iron Cook Stoves since I ommenced manufacturing them. They are the names of gentlemen who are well known and eliable, and will carry more weight than any recommendation of my own could do.

The Best Stove I have ever Used.

PETERBOROUGH, May 31, 1880.

ADAM HALL, Esq., Peterborough. Dear Sir,—I have used your Wrought Iron Cooking Stove in our lumbering operations since its introduction here, and have no hesitation in saying that I prefer it to any other. For durability, economy and efficiency, where a large number of men are employed, it is the best stove I have ever used. You can, with confidence, offer it to hotels, boarding houses and lumbermen.

Yours truly, THOS. GEO. HAZLITT.

The Stove for Lumbermen.

PETERBOROUGH, June 1st, 1880.

ADAM HALL, Esq., Peterborough. My Dear Sir,—We have used your Wrought Iron Cooking Stove and find it is very satisfactory for lumber operations, especially so on drives. We can recommend it highly.

Yours truly, IRWIN & BOYD,

Gives the Greatest Satisfaction.

PETERBOROUGH, June 3rd, 1880.

A. HALL, Peterborough. Dear Sir,—I have had the Wrought Iron Cook Stove, purchased from you, in constant use ever since last fall, and it gives the greatest satisfaction in every respect. I can recommend them highly to any one who is in the lumber business. Very truly yours, GEO. HILLIARD, M.P.

EVERY STOVE GUARANTEED

All the necessary TINWARE and CUTLERY for Shanties suppied at the Lowest Prices.

ADAM HALL, Peterborough.

OAK HALL

Nos. 115, 117, 119, 121, King St. East, Toronto.

We are the most Extensive CLOTHIERS in Canada.

We carry a STOCK of FIFTY THOUSAND DOLLARS to choose from.

We watch the interest of our Customers. Our stock is FULL of the very best goods in Scotch, English and Canadian Tweeds.

We BUY and SELL for Cash, therefore it enables us to do business on very SMALL PROFITS.

NOTE THE PRICES.

We give a Good Tweed Suit for.....$6 00
We give a Good Tweed Pants for..... 1 50
We give a Good Overalls for 0 35

LUMBERMEN!

When you visit Toronto, come direct to OAK HALL, and fit yourselves out with a Good Suit. Remember the address :—OAK HALL, the Great One Price Clothing House, Toronto, opposite St. Jame's Cathedral. 1yl13

STEAM SAW MILL OWNERS

Have your Boilers thoroughly Inspected and Insured against Explosion by

Cards not occupying more than 12 lines (1 inch) for six months	5 00
Cards not occupying more than 6 lines per annum	5 00
Cards not occupying more than 6 lines, for 6 mo's	3 00

Special rates will be made for page, half page and column advertisements.

Advertisements intended for insertion in any particular issue should reach the office of publication at least three clear days before the day of publication, to insure insertion.

All communications, orders and remittances should be addressed and made payable to TOKER & Co., Peterborough, Ont.

Communications intended for insertion in the CANADA LUMBERMAN, must be accompanied by the name of the writer, not necessarily for publication, but as a guarantee of good faith. Communications to insure insertion (if accepted) in the following number, should be in the hands of the publishers a week before the date of the next issue.

PETERBOROUGH, Ont. AUGUST 15, 1881.

THE *Ontario Gazette* contains a notice of an application for the incorporation of the "Severn Driving and Boom Co.," which will operate on certain streams in Muskoka and the County of Simcoe. The applicants are Hon. W. E. Dodge, Arthur M. Dodge, C. E. Dodge, of New York; J. S. Peckham, of Waubaushene; Henry S. Lovering, of Coldwater; and James Scott, of Waubaushene.

THE Society of Swedish Saw-mill Owners and Timber Exporters held a meeting at Hernosand on the 16th of the present month. The chief subjects discussed were the necessity for the continuation of the Guarantee Society, and assorting and classification of deals, &c., and other matters appertaining to the welfare and expedition of the Swedish saw-mill business. No hints appear to have been thrown out at this meeting as to what the production of Scandinavia for the English market is likely to be this season; but probably we shall have fuller details later on, in which some allusion to the subject will be made. —*Timber Trades Journal, July 23.*

A GRIEVANCE.

A cause of dissatisfaction has existed in the British provinces relative to the advantages which lumbermen of the United States have over British-American.

Lumbermen of the Republic enjoy the privilege, under Lord Ashburton's treaty, of exemption from all taxation of their lumber passing through British territory; this immunity is, as might be expected, abused.

The lumber is floated from American streams into Canadian, manufactured, and then shipped to the United States, and has not the duty of $2 per M. imposed on exports by Canadians. The worst of it is the lots are sometimes augmented by logs after being entered.

There exist more than one firm of Canadians, nominally headed by Americans, doing business in this way, to the demoralization of our trade. This feeling pertains chiefly to that portion of the Dominion mainly affected, namely, western New Brunswick and south-eastern Quebec; and it is felt that this old law should be modified so that American logs manufactured into lumber, &c., in Canada should be entered to the other side on the same terms as Canadian.

OTTAWA.

From Our Own Correspondent.

THE NEW CARGO REGULATIONS.

Owners of American boats are not well pleased with the enforcement of the custom laws in regard to the admission of lumber in bond into the States. They had been in the habit of carrying large loads and breaking bulk in order to get through the Champlain Canal readily, but now they are not allowed to lighten at the point named. The lumber yards at Whitehall are principally bonded ones, and the American law is that when a vessel clears from a foreign port, with freight for a port in the United States, it must arrive at its destination with the same quantity as specified in the clearance paper. The transferring of a portion of bonded lumber loads in the past has been a violation of the law, but was permitted by the American customs officials. A change has, however, come, and the law is to be enforced to the letter. The cause is not stated, but it is presumed that it is being done in order to prevent errors in keeping the record. After the bonds are given at Kanse's Point the bulk of any vessels cargo is not be broken in any way. Vessels have been in the habit of carrying from 150,000 to 175,000 feet of lumber each trip, but now in order to be able to get through the Champlain Canal, their cargoes will have to be reduced by about 25,000 feet per barge. The owners, therefore, cannot realize as much in each trip as formerly, but the probability is that freight rates may advance, although they have not done so as yet. The regulation applies to Canadian bottoms as well as American boats.

THE LUMBER BUSINESS.

Lumbermen decline to make any heavy sales at present, for two reasons. The price of lumber having advanced in the Western States has made the market in the east firmer, but no increase in price here is to be noted as yet. The principal reason, however, for the present cautiousness of the producer in making only limited sales is in the fact that there is a probability of a short lumber supply this season, owing to the slowness of logs coming down, caused by the lowness of water in the Ottawa. There are a good many logs stuck at various points, and the most of them may not be got down until the fall freshet sets in. There are about 100,000 logs for the Chaudiere Mills at the Chats Slides, head of Deschesnes Lake, thirty-five miles from this place, that can hardly be kept moving. The anticipation of mill owners was to cut about the same quantity of lumber this season as last, in which case the production would be about as follows :—

Firm.	*Feet.*
E. B. Eddy, Hull	50,000,000
E. B. Eddy, Deschesnes	30,000,000
Brouson & Weston	45,000,000
Perley & Pattee	40,000,000
J. R. Booth	35,000,000
Gilmour & Co., Hull	35,000,000
Gilmour & Co., Chelsea	35,000,000
Sherman, Lord & Hurdman, Hull	25,000,000
John Rochester	20,000,000
McLaren & Co., New Edinburgh	20,000,000
McClymont & Co., New Edinburgh	15,000,000
Capt. Young	17,000,000
Total	367,000,000

The two mills of Bronson & Weston have been running along day and night since the season opened, and has sawn up more lumber so far this season than any other firm. Mr. Booth had a large surplus of logs on hand for the start and is keeping within a good margin, so as not to have to shut down even for a day. Perley & Pattee are said to be running short of logs, and may have to shut down for a few days shortly.

In regard to quotations there is no material change, although the market is firmer. The following are current prices :—$12@14.50 ₱ M. for 10-inch stocks; $16@19.50 for 12-inch stocks; $20@30 for sidings; and $10@11.50 for shipping Lath rate as formerly—85 cents to $1 ₱ M.

RIVER TROUBLES.

The troubles between Boyd, Caldwell & Son, and Peter McLaren, both of Carleton Place, will be aired before the Supreme Court of Canada, a further appeal having been made. The Caldwells have been compelled to close down their mill for want of logs, the drive being stuck at and above High Falls. It is understood that they will enter an action for damages against Mr. McLaren for loss sustained in the logs being kept back. The law proceedings will cost a heavy sum before they are ended, but it will settle the question as to the right of streams. Both of the parties named control the timber limits on the Mississippi river, which flows into the Ottawa at Arnprior.

On the Kippewa river there is also trouble. T. & C. Smith and George Taggert threaten to destroy the dam erected by the owners of the Gordon creek limits, in which case there will be trouble between them and the interested parties.

LOGS AND TIMBER.

By the end of the present week it is expected that two millions of logs will have passed through the Quio boom, which is thirty miles above Ottawa. The exact quantity of logs coming down is not yet known, but there is quite a quantity stuck. On the York branch of the Madawaska the firm of Bronson & Weston, Ottawa, have a lot of 85,000 logs stuck, and these will be left until next spring.

It is expected that the last of the square timber passing down will get through the Chaudiere slides this week. About twelve or fifteen rafts will be laid up on the Upper Ottawa until the spring, owing to the lowness of the water. Sales at Quebec are reported at from 19 cents to as high as 35 cents per square foot for white pine; red pine, 17 to 25 cents.

EDGINGS.

McClymont & Co. are shipping lumber to Ogdensburg, by rail over the St. L. &. O. Railway, at the rate of five carloads a day.

So far this season Canadian barges have principally been engaged in carrying lumber to Quebec and Burlington at $2 ₱ M.

American bargemen have demanded an increase in freight rates to Albany and New York of 25 cents ₱ M. They claim that it does not pay them at $3 and $3.25 ₱ M. respectively, as they cannot carry so much as formerly, not only through the enforcement of the Customs' laws, but also through the lumber being green, and therefore heavier than last year's cut. They will likely get the advance asked for.

The freight business at this period last year was somewhat dull, as it usually is in the middle of the summer season, but this year is an exception to the rule. During the past couple of weeks the shipments have been as brisk as in the spring or fall.

SHIPMENTS OF LUMBER.

Lumber is being shipped over the Canadian Pacific railway from points along the line to Brockville at the rate of seventy carloads a week. Each car averages 10,000 feet. The following are the principal shippers: Caldwell & Son and Peter McLaren, Carleton Place; Dickson, Almonte; Foley, Pakenham; McLachlin Bros., Arnprior; Gillies Bros., Braeside and Sandpoint; W. R. Thistle & Co., Pembroke. The lumber is tranferred to boats at Brockville and sent to Oswego.

Several lumbermen have made application to the C. P. Occidental Railway Co. for shipment of square timber by rail to Quebec, but lack of flat cars prevented them from entering into such an engagement at present.

TRENTON.

From Our Own Correspondent.

GILMOUR'S NEW MILL.

TRENTON, August 5th.—Mr. Gilmour, of Gilmour's mills here, just returned from Michigan yesterday. I caught him at the mill a few hours after he came off the train, and had quite a long talk with him about lumbering matters. His loss on the mill burnt down lately here was very heavy. The mill and plant alone were worth $150,000. He was insured for $75,000 in ten several companies, but could only get $40,000. He says he is too anxious to build and proceed with his business to stop and invest more of his money in law suits; so he will go on. He will build again on the old site, and intends, he says, to beat the world on saw-milling this time. He saw much in Michigan that he will introduce, and also has new ideas of his own. He hopes to have all running in first-rate order by next spring. He is not doing much at present; just keeping a small temporary mill going.

DIFFICULTY WITH FOREST RANGER.

Mr. Gilmour was slightly wrathy at the action of the Forest Ranger, Mr. McWilliams, who had stopped several drives of logs up the Trent, alleging that the measurement was not correct, and that thereby a portion of the just dues would be avoided. Mr. Gilmour says that he must have a very vague notion of the cost of stopping a drive of logs, and that the action is unprecedented and high handed. On account of his mill not being in operation, it does not actually make a vast deal of difference to him, but if it were running, it would pay him to disregard the official interference till the logs were within his own booms. He alleges that he made Mr. McWilliams the following apparently very fair offer: That the doubtful logs should be marked with the Forest Ranger's private mark, and run into a boom by themselves. Then as they came up to be cut, in the mill, the Ranger could have a man measuring both each log and the amount of lumber it produced, and Mr. Gilmour could also have a man. Then correct measurements could be obtained. This offer was refused.

Mr. Gilmour says that anyhow the logs should have been measured in the woods, and that if there is any error it is the Ranger's own fault. It is not likely, he considers, that anything is wrong with the measurement, as his men make affidavit that it is correct.

LUMBERING AT ARNPRIOR.

During my conversation with Mr. Gilmour he told me some very interesting facts about the new mill Mr. McLaughlin is building at Arnprior. It will be, till his own is built, he says, ahead of anything of the kind in Canada. His engine is a very large 30×42-inch cylinder, with seven boilers. All the machinery is worked by live rollers and endless chain. They have several improvements in the machinery which no other mill in Canada can show. The machinery was almost all procured from Starr's, of Erie, Penn. The mill will run two large circulars and a gang. Mr. McLaughlin calculates the cost at from $60,000 to $65,000, but in Mr. Gilmour's estimation this is much below the mark.

FOREST FIRES

EAST SAGINAW, Aug. 7.—The greatest alarm now prevails as to the safety of this city should the course of the forest fires not be checked. On the Detroit and Bay City Railroad the fences on the neighboring farms are burned down, and the flames are spreading over the fields to the woods. The air is surcharged with smoke and burning cinders, and charred leaves are flying through the streets of the city. The rural population is out *en masse* fighting the approaching conflagration, and both sides of the track are ablaze. On Wednesday a train could not get into Ludington because of the heat. At Evart a railway bridge is in danger. At Freeland gangs of men are cutting down all that can afford fuel to the flames. The smoke in the town is blinding, and all are in a state of exceeding anxiety. All along the narrow gauge line between Mount Pleasant and Coleman is on fire, as is also the case on the Otter Lake Branch of the Flint and Pere Marquette road.

One large lumber yard, George Whitman's, with the house and barns and three head of cattle, has been utterly consumed in Freeland, Saginaw county, and there is every reason for fearing that Bagsley's and John Jaddin's families have been cut off, as they had no means of escape. The east half of Ogeman county is a sheet of flame, and the fire is bearing down on Tawas.

The drought at Bay City has been so intense that the crops have suffered beyond hope. The soil is baked and tillage is impossible. The corn is stunted and yellow, and the oats will hardly yield half a crop. The woods are a vast tinder-box, and forest fires are the rule on every side. Trains are delayed, sometimes entirely stopped. The woods in Midland will soon be non existent, and the falling white ash in Bay City resembles a snow storm, with the thermometer at 90°, and the sky a brilliant coppery yellow. The air is so sultry that breathing has become a difficult task, and the visitation exceeds that of 1871. Whole lumber camps have been burned out, and the men, who were out fighting the flames in a different direction, return to find their places of abode swept away, and all their belongings licked up by the unsparing fire fiend. The conflagration will cause a rise in the price of pine lands and in insurance rates. Only a constant deluge of rain for some days can check the progress of destruction.

ST. JOHN, N. B.

From Our Own Correspondent.

DEALS AND SHIPS.—Our fleet of ships in port has diminished considerably during the fortnight, and will doubtless assume still smaller proportions during the next few weeks, before the fall shipments commence; meantime our stock af deals will be increased to some extent. The deal market here is firm, owing in some measure to the recent favorable reports from the Liverpool market, though prices here are not quotably higher, the current value of country sawn deals being about $8.50 per M.

FREIGHTS.—It was intimated in our last that freights had reached their lowest point, which opinion has been fully confirmed, as rates have since advanced 3s. 9d. per Standard, several large ships having recently been placed at 55s. for Liverpool.

VESSELS IN PORT.—The following is a list of the square-rigged vessels in port, with their tonnage and destination :—

John Murphy, 1479, Liverpool.
Arklow, 748, Cork Quay.
Fidelia, 450, E. C. Ireland.
Emily Raymond, 290, Westport.
Regina, 1212, Liverpool.
St. Olaves, 571, B. Channel, or E. C. I.
Eos, 390, Bordeaux.
Colorado, 682, Dublin.
John Rutherford, 983, Dnblin.
Stella, 445, ——
Emily Lowther, 762, Sharpness.
Henry, 1095, Liverpool.
Golden Sea, 1418, London.
Susan L. Campbell, 727, London.
Rolf, 922, United Kingdom.
Torryburn, 448, ——
Julies Marie, 271, U. K. or Continent.
Missouri, 818, ——
Hants County, 641, ——
Asiana, 1193, Liverpool.

SHIPMENTS.—The shipments of deals and other sawn lumber are as as follows :—

For Europe	17,222,000	Sup. ft.
" United States	2,303,000	"
" Australia	788,000	"

St. John, N.B., Aug. 6.

From Another Correspondent.

THE WEATHER

here for the past week or ten days has been very disagreeable, foggy overcast and wet. A change of wind and slight clearing up yesterday enabled quite a number of vessels that were ready and waiting to get to sea, so that at the present writing our harbor is rather bare of shipping.

THE ENGLISH MARKET.

has shown a slight upward tendency, with indications that the rise is not merely temporary, but that shippers may look for fairly remunerative prices for their deals.

FREIGHTS

are, in consequence of the better news from the other side, slightly stiffening, and we hear of an offer of 52/6 being refused ; 53/9 was accepted by the same parties, and 55/ has since been paid. Coastwise freights remain firm, and with little r no change to advise.

THE AMERICAN MARKET

is in very fair condition, although we are aware of heavy shipments of lath to Boston from Bangor, which have dropped the price from $1.62½ to $1.55. The sound ports do not offer any better prices to speak of than Boston, and many shippers prefer the latter port in consequence of the difference in freights. New York advices show that cargoes of wide stuff of good lengths command ready sales, and laths are quoted at $1.65 to $1.75, according to quality. The fact that western lumber dealers have advanced their prices on certain lines will, we hope, have a beneficial effect upon our dealings with our friends in the neighboring Republic, for they are too good customers to be allowed to slip through our fingers for the want of proper management, and we flatter ourselves that we can supply them with our staple article in as great quantities, good quality, and at as reasonable a rate as it can be procured elsewhere.

St. John, N.B., Aug. 9.

McRAE'S sash and door factory at Trenton is filling a large order for Kingston.

AUCTION SALE

OF VALUABLE

Timber Limits,

Situated Near Lake Nipissing.

Notice is hereby given that (if not previously disposed of by private bargain) the following Valuable Timber Limits will be offered for sale at Public Auction in the

CITY OF OTTAWA,

ON

Thursday, the 22nd Day of September Next,

VIZ.:

	Sq. Miles.
Berth No. 23, on the River Bueve, near Lake Nipissing, comprising	36
Berth No. 43, on the River Wannapitac, near Lake Nipissing, comprising	36
Berth No. 51, on the River Wannapitac, near Lake Nipissing, comprising	36
In all	108

These limits contain, in the aggregate, a large quantity of magnificent pine timber.

Berth No. 23 is estimated—as the result of a recent exploration—to contain a quantity of trees sufficient to produce at least half a million cubic feet of square timber, besides two hundred and fifty thousand standard saw logs. The river is available for driving to Lake Nipissing.

There is a good mill site on the Bueve river, about three miles from Lake Nipissing.

Lumber could be transferred thence by water to the Callender station of the Canada Central Railway, the line of which is projected to pass directly through this limit.

Lumbermen and others desirous of acquiring limits are invited to examine these berths in the interval preceding the day of sale.

The owners reserve the right to dispose of either or all of them by private bargain in the meantime, and will be ready to consider any offers that may be made.

Terms of purchase will be liberal, and will be made known before the sale, the place and hour of which will be duly advertised.

Persons desiring further particulars are invited to communicate with the undersigned.

PETERBOROUGH.

SPERRY'S NEW SHINGLE MILL.

A few days ago a correspondent paid a visit to the new shingle mill of Mr. A. Sperry, which stands on the right bank of the Otonabee just above the locks. This establishment, which is one of the most perfect of its kind in the Province, was built last spring, and has been running but a few months. It has, however, turned out over three quarters of a million shingles in that time.

The mill itself is a two storey frame structure, 40 by 60 feet, with an engine-room wing on the south side, 25 by 35. A little bay running into the land is utilized for the purpose of holding logs for immediate consumption, and which would probably hold a drive of 2,000 logs. Further up the lake Mr. Sperry has other booms and enclosures sufficient to hold a whole summer's supply.

The machinery and appliances of this mill are all of the newest and most perfect kind. Beginning on the lower flat, the first feature is the huge engine—steam power is used alone, it being found necessary to burn up the waste sawdust and strippings. The engine is an Automatic Cut Off of seventy-five horse-power, with a driving wheel 8 feet in diameter, which, with a 16-inch double thick belt, drives the machinery. On the river side of the building is the slide, up which the logs are hauled by means of a strong chain winding round a shaft for the ordinary saw-mill principle. At the top of this slide, and but a few inches from it, is the crosscut "drag-saw," where the rough timber is cut into convenient lengths and shipped per the revolving "elevator" to the second storey. The only other object worthy of note on the lower flat are the "conveyers." These are used for carrying the sawdust and strippings to the engine. The coarser waste stuff is pressed into bundles and sold for kindling.

On the second storey are five circular saws in all, and the lengths of log brought up the "conveyor" are subjected to four processes before they are turned over to the packer. They are first stripped of bark with axes, then trimmed, that is, reduced to the proper length—18 inches. From the trimmer they are taken, unless very small, to the "splitter," a second circular saw, when they are turned over, divided into quarters, and taken to the shingle machine. The shingle machine in Mr. Sperry's establishment is a very ingenious American patent called the "Hall" machine. It is greatly used in Michigan though not much in vogue yet in this country. The slant of the shingle is caused by a "fet-work" attachment by means of which the block is planted outwards and inwards as each strip is cut off. From the shingle machine the strips pass to the hands of the "edgers." Here two circular saws, hard at work, keep up with the pan of the shingle machine. The edgers put the last finishing touches on the shingles before they go to the packers—cutting off any frayed or bad part. The packing process is performed by boys with what are called "binders," which exert, by means of a lever, a tremendous pressure on the centre of the bunch, so that the binding cross pieces can be firmly nailed with hoop iron.

The total capacity of the mill is 25,000 to 35,000 per day.

In reply to a question as to whether Peterborough was not rather far from the market, Mr. Sperry said no, he did not find it so. It was also very convenient to the point of supply. There is, he says, any amount of good timber for his purposes to be procured up the Otonabee.

The market for these shingles at present is Oswego. They are shipped at the mill on waggons to the Midland station, whence they are conveyed by rail to Port Hope and from that point per schooners to Oswego.

Mr. Sperry is going to add to his plant in the fall, and professes himself, so far, well satisfied with the success of his venture.

A FINE HARDWARE ESTABLISHMENT.

Peterborough has long been noted for having the finest stores, and its merchants for carrying the largest and best stocks to be found anywhere in the Province outside of Toronto, and it would seem that they now propose not only to outdo themselves, but eclipse the Queen city of the west. Quite recently Mr. George Stethem has fitted up and moved into premises which we venture to think constitute the largest and best retail hardware establishment to be found in the Province—certainly there is none in Toronto to equal it. The store proper is 22 feet wide by 135 feet deep, with, like nearly all the stores in Peterborough, plate glass windows. The interior arrangements are as nearly perfect as one can imagine possible for the extensive business which Mr. Stethem's untiring energy and close attention to the wants of his various customers, have succeeded in building up. Some idea of the extensive character of the stock which Mr. Stethem carries may be formed when we state that not only is the main shop more than fully occupied, but that a good sized outbuilding has also to be used, while the large cellar underneath contained at the time of our visit about 70 barrels of different kinds of oils, coils of rope, &c. The second story was also fully occupied with the lighter goods kept in stock. In addition to keeping an unusually large and varied stock of ordinary hardware, Mr. Stethem is the sole agent in Canada for the celebrated Wetmore axes and scythes, Jewell's oak-tanned leather belting and Rangoon machinery oils. Having been brought up to the business, and giving the wants of his lumbering, agricultural and manufacturing customers his undivided attention for years, it is clear that what Mr. Stethem does not know about his line of business is not worth knowing. His thorough acquaintance with the wholesale markets and his connection with the manufacturers, enables him to buy closer and sell as cheap as any and much cheaper than most of his competitors. Everyone visiting Peterborough should take a run through Mr. Stethem's establishment even though they do not require anything at the time, and they will then realize how ample his stock is for filling orders on the shortest possible notice.

BLACK WALNUT.

A GLOOMY OUTLOOK FOR FURNITURE MEN.

A few years ago black walnut was a drug on the market, and was not at all popular with furniture manufacturers and dealers, but recently it has been so universally sought for and used so extensively for almost every kind of furniture, that latterly it has become very scarce, and now it is found next to impossible to obtain a sufficient supply to meet the increased demand, at almost any cost. An idea of its scarcity and value may be gained, when $100 per thousand feet has been paid this year for the same quality and quantity of black walnut as could be purchased last year for $70. The rapidity at which the supply has decreased is owing to the impetus the trade has received through the organization of a large number of extensive furniture companies in the United States. The immense number of sewing machines (the wood-work of which has been manufactured from black walnut) that have been annually turned out both in the States and in Canada, is one of the principal causes of the rapid consumption. A prominent dealer in the city stated to a *Globe* reporter that there are now ten anxious buyers distributed throughout the States to every one there was two years ago, and that there is more difficulty in procuring a few thousand feet of the precious lumber now than there was in securing half a million feet three years ago. When walnut first came to be used, it was obtained in large quantities from Port Stanley, the Counties of Kent, Essex and south Middlesex, and it also grew in abundance on the banks of the Thames River, Ont.; but now the Canadian supply is exhausted, and lately it has been obtained from the State of Indiana. There was such a great similarity between the wood of the two countries that manufacturers had no choice, and paid the same price for either. Since the Canadian supply has failed the immense drain on the forests of the State of Indiana has caused the supply to give out there, and now the walnut (which is of a lighter shade and consequently not so good) is obtained from the States of Arkansas, Kentucky, Kansas and South Tennessee.

Mr. Hay, of Toronto, states that when he first came to Canada walnut was used for

RAIL FENCES.

The principal value of walnut is that it is an excellent wood for furnitnre and is handsome in appearance. It has a close grain, is not liable to be affected by changes of temperature, and at the same time is not hard to work, which renders it a very valuable timber economically. Another reason why it is so expensive is that it has to be hauled a great distance by teams before a railroad can be reached.

A SUBSTITUTE.

Butternut has been considered an excellent substitute for walnut, but as it can seldom be obtained without flaws, it will never fill the place of the time-honored walnut. Besides this it is also very scarce, and is gradually increasing in price.

Cherrywood, which is as enduring as walnut, and which has been rapidly growing in favor with furniture dealers, has doubled in price within the last two years on account of its scarcity.

THE REMEDY.

If walnut is not replanted at once, the outlook for good furniture in the future will be very dreary. If it were planted along the shores of Lake Erie or in the counties before mentioned, or in any part of the Province west of Ontario, in twenty years time it would pay 5,000 per cent., so says an old arboriculturist. In the meantime the prospect is gloomy in the extreme, and dealers look forward to a speedy and complete exhaustion of the supply.—*Globe.*

BUSH FIRES IN THE MICHIGAN PENINSULA.

There are fires in the woods along the entire route of the Jackson, Lansing and Saginaw railroad north of Kawkawlin, mostly light and smouldering, having burned out in many quarters without doing material damage to the timber, but at some points, where there had been lumbering operations last winter, or where there was considerable down timber, that which is standing has been so much affected that it will have to be lumbered during the coming winter. A strong wind coming from a different quarter than that which has prevailed for the past week would, unless we are favored with a heavy and general fall of rain throughout the burning district, result in immense damage to the timber in many quarters. As an experienced lumberman remarked, it seems as if there was a little fire on every section.

Standing upon Bald Hill, on the Manistee, a well known elevation in town 27, north of range 4 west, extensive fires can be seen both to the east and west. From Portage Lake, in town 26 north, range 4 west, heavy fires may be seen to the east, and immediately about the lake fires have swept through a considerable portion of the forest, doing much damage. Fires may be also seen both east and west from Grayling, on the Jackson, Lonsing and Saginaw railroad, and one started up on Saturday in the immediate vicinity of that village, which threatened serious results, but was checked before it had made any considerable progress.

A fire was started on the Methodist camp grounds on Higgins' Lake last week by the men engaged in clearing up the premises, and it spread all through their twenty acre tract down into the lumber camps on the line of the Roscommon road, near the lake, and only by the hardest kind of work were the buildings saved. It spread also through considerable of the timber in the vicinity, is still burning, and a change of wind might make it decidedly warm for the sojourners, both at Saginaw and Burrows encampments, they having been already materially discommoded by the dense smoke, which for a week past has hung over that entire section.

Fires, seemingly in the heavy timber, could be seen on Saturday a long way to the east of Cheeney, and at points all along the line from there to Terry Station; in some cases remote, in others in the immediate vicinity of the track, as at St. Helens, where the down timber in the marsh just beside the line is all burning up. There are fires at all points, and there is smoke everywhere. A good drenching rain would at this time be worth millions to the timber interest, as well as to all other interests in the lower peninsula of Michigan.—*Bay City Call.*

DR. FOWLER'S EXTRACT OF WILD STRAWBERRY cures all forms of bowel complaints in infants or adults. The most safe, pleasant and perfect remedy known. Purely vegetable and free from opiates or poisonous drugs.

BRITISH TRADE NOTES.

THE agents for one of the largest productions in the Baltic, we hear, have now received notice not to make any further sales just yet, as some doubts are entertained whether any further quantity can be delivered this year in addition to what is already contracted for. We understand the prices made by the stock in question—which was one of the first in the market to sell—compare most favorably with those now ruling.

WE are pleased to learn that arrangements have lately been made between a house in Glasgow and a Canadian mill for a regular supply of pine doors and mouldings, this being a branch of the Dominion trade which we hope to see greatly developed.

WE are informed that a largish parcel of Swedish lower Gulf whitewood battens was sold last week to a Hull firm, at £5 per standard, that had previously been offered unsuccessfully in the same neighborhood earlier in the year at £4 15s. This sale, we understand, cleared out the agent's stock for present shipment.

IT is stated that the Continental demand has absorbed a good portion of the north of Europe stocks for f.o.w., and that the Colonial demand (including Australia and the Cape) has been unusually brisk this season. It is reported also that a much larger number of Swedish and Norwegian sailing vessels are taking wood to the north of France and other of the nearer ports of Europe this season than they have done heretofore. Most of these little ships, it seems, instead of calling at the coal ports to coal, proceed immediately after discharging the wood back to the Baltic in ballast. This relieves the freight market here of a good deal of tonnage.

STOCKS of spars here are low, though prices continue somewhat weak; in comparison, however, they still show an improvement on those of last year. The sluggishness in the revival of these goods is partly attributable to the fact of their being much more come-at-able now than they used formerly to be, owing to the number of steamers engaged in the trade, which kept the port open during the winter, and render the chance of the market being run out very remote. Christiania are offering freely on the other side, and Petersburg are coming forward now, which will assist in keeping prices of this description from rising. The talk of a shortage on the supplies earlier in the season is hardly borne out in the result, and they seem to be forthcoming from somewhere as soon as ever there is an inquiry for them.

THE LAW IN NEW YORK.

The following law regarding the disposal of mill refuse, &c., has recently come into force in the State of New York, and will be of interest to all mill owners:—

CHAPTER 430.

AN ACT to amend chapter five hundred and thirty-four of the Laws of eighteen hundred and seventy-nine, entitled "An Act for the prevention of moose, wild deer, birds, fish and other game." Passed May 28, 1881; three-fifts being present.

The people of the State of New York, represented in Senate and Assembly, do enact as follows:—

SECTION 1. Section twenty-five of chapter five hundred and thirty-four of the Laws of eighteen hundred and seventy-nine, entitled "An Act for the preservation of moose, wild deer, birds, fish and other game," is hereby amended so to read as follows:

SECTION 25. No person, association, company or corporation shall throw or deposit, or permit to be thrown or deposited, any dye stuff, coal tar, refuse from gas houses, sawdust, lime or other deleterious substance, or cause the same to run or flow into or upon any of the rivers, lakes, ponds, streams, or any of the bays or inlets adjoining the Atlantic Ocean within the limits of this State. Any person who shall violate this section, or any member of any such company, association or corporation who shall authorize and direct any such violation, shall be guilty of a misdemeanor, and in addition thereto shall be liable to a penalty of fifty dollars for each offense. But this section shall not apply to streams of flowing or tide water, nor to the town of French Creek in Chautauqua County, which constitutes the motive power of the machinery or manufacturing establishments, *when it is absolutely necessary for the manufacturing purposes carried on in such establishments to run the refuse matter and material thereof into such stream.*

IF YOU ARE SUFFERING with a cold do not fail to try HAGYARD'S PECTORAL BALSAM; it is daily relieving its hundreds throughout our Dominion. It is pleasant and palatable.

Chips.

A CHICAGO tug captain has invented a machine to unload lumber from vessels by steam, which the Captain says, will do the work at a cost of 12½ cents per thousand feet.

THE firm of E. Walsh & Co., lumberers and storekeepers at Bear River, N. S., has failed. The assets are almost all covered by a bill of sale, and unsecured creditors fare badly.

A TRAMWAY fifteen miles in length connects the port of Rockingham, in Western Australia, where vessels of 1,000 tons can approach close to the shore, with the great timber location of the Jarrahdale Timber Company.

THERE is not a single wooden sailing ship now laid up for sale in the Wearmouth Dock which has seldom been without several since the Crimean war. The old sailing ships have been nearly all bought by foreigners, mainly Norwegians.

IT is no great length of time since it was the custom of merchants at Liverpool, when measuring spruce deals, to make allowances for defective wood. It may, however, be now noted as being one of the "new order of things," that the practice has died out of existence.

"A THOROUGHLY posted lumberman" predicts that the available pine timber of Michigan suitable for lumbering will be used up in five years at the present rate of cutting in the Saginaw valley. One who does not profess to be thoroughly posted, predicts that the "thoroughly posted lumberman" will be cutting a good deal of lumber on the Saginaw river ten years from now.

THE Union Forwarding Company, which tows logs for the lumberers on the upper branches of the Ottawa river, tried to raise its rates about 50 per cent., and is accused of attempting to "arbitrarily monopolize" the towing. The result is that, as the Pembroke *Observer* says, Captain John Murphy, late of the Union Forwarding Company has signed a contract with the Chaudiere lumbermen to tow all their logs on the Upper Ottawa for the next eight years. We understand he will at once commence the construction of several propellers, to be placed on the various lakes to do the work.

THE London *Iron Trade Exchange*, of recent date, publishes a complete list of blast furnaces in and out of blast in the United Kingdom. From the returns it appears that out of the total 943 furnaces built, 563 are in blast and 380 are standing. There are probably 40 furnaces in various districts which are not included in the returns, but none of these have been in blast for many years, and they will never be re-lighted; others are dismantled, and some have never been completed. The returns from Derbyshire were imperfect, and the figures relating to that district may not be quite accurate, but as regards other districts the figures, says the *Exchange*, may be relied on.

IT is reported that cork trees have been successfully cultivated near Milledgeville, Ga., and that on some of them the bark is already thick enough for use. The trees have grown from the acorns of the Spanish oak, which were planted several years ago. The soil and climate of Georgia seem to be well adapted to the cultivation of this tree, and it is said that little doubt remains but that it can be profitably grown. Probably in other portions of the South the conditions are equally favorable, in which case the cultivation of cork need not be limited to one district, or even one State.

JAMES WALKER & Co.'s mill at Orono, Me., is spoken of as the largest in New England. The saw-mill proper is 65×450 feet, well supplied with improved machinery; then there is a building 64×68, used for the manufacture of short lumber, boxes and shingles. The capacity of the mill is 150,000 feet daily, and 250 men are employed. The precautions against fire are more than ordinary, there being a large force pump at each end of the mill and one in the middle. No dust and cobwebs, which are frequent causes of fire, are allowed to gather on the beams and underside of the roof.

DR. FOWLER'S EXTRACT OF WILD STRAWBERRY cures summer complaints, diarhœa, dysentry, cholera morbus, cholera infantum, sour stomach, colic, nausea, vomiting, canker, piles, leucorrhœa, and all manner of flaxes

LIVERPOOL.

The *Timber Trades Journal* of July 23 says:—The arrivals of timber-laden vessels continue to be upon a very moderate scale, especially from Quebec, New Brunswick and Nova Scotia, and this is a matter for gratification, since our market, though firm at present, is in a sensitive condition, and will readily yield under any pressure to sell.

Fair progress seems to be made with the car goes of Quebec goods recently arrived, the very stiff position of the timber market in Canada having no doubt considerable influence over purchasers. Whether the high prices demanded by the lumbermen can be maintained remains to be seen, but by latest advices they appear to be under no apprehension of the future, and are very firm at the quotations. These are, however, so wide from the prices that can be obtained in this country that there is very little doing in the way of shipments to England, notwithstanding the low rates of freight now current.

LIVERPOOL TIMBER SALES.

On the 20th instant Messrs. Alfred Dobell & Co. offered one cargo of sawn pitch pine timber, deals, &c., and the balance of an old cargo, both of which were cleared up at fair prices, although the purchasers present were limited to local dealers. The prices realized were for—

16 in. and upwards deep	18d.	per ft.
16×12 to 15 in.	17½d.	"
15×13 " 14 "	17½d.	"
14×14 "	17½d.	"
12to14 "	16d. to 16¾d.	"
9"12 "	14¾d." 15½d.	"
6 to 8 in.×7 to 12 "	13d. " 13½d.	"

After which Messrs. A. F. & D. Mackay offered 312 logs of New Brunswick birch, withdrawn from their sale of Friday last. There was no disposition to buy, and lot after lot was withdrawn without a bid; eventually one lot of 13-inch wood was sold at 12d. per ft.

What an Albany Man Said.

One of the lumber dealers in Michigan has for the past three years been supplying a dealer at Albany. For the first year everything went well, but at length the Albany man began to complain. He found shortage and culls in every car load sent him and demanded discounts therefor, and this spring it was impossible to please him. No matter how carefully lumber and shingles were culled and billed here he was sure to write back that they were not up to the standard. Two weeks ago a car-load of "star" shingles was sent him. The "star shingle beats anything made in the country, and they know it at Albany as well as in Michigan, but as soon as the car arrived the dealer replied that he really must protest. The shingles were hardly "clear butts," and he could not unload the car until assured of a discount of twenty-five cents per thousand.

The Michigander had suffered long, but the end was nigh. He had inspected every bunch of shingles on that car, and he made up his mind to go to Albany and inspect them over again. The dealer there had never seen him, and the Wolverine walked into his office as a would-be purchaser of some extra fine shingles.

"I've got exactly what you want," promptly replied the Albanian. "I've got a carload of Michigan 'stars' out here which lay over any shingles you ever saw."

"Are they all perfect?"

"Every one of them."

"No culls in the centre of the bunches?"

"I'll eat every cull you find. I got them from a Michigander who is as straight as the Ten Commandments, and he has never yet sent me a stick of second-class stuff. Come and see 'em."

The Wolverine quietly pulled out his business card and laid it on the desk.

The dealer took it up, read the name, and sat down on a stool with a queer feeling in his knees.

There was an awful silence as they glared at each other, and it was a full minute before the victim slowly extended his hand and hoarsely whispered:—

"Did you ever see a man make such an infernal ass of himself? Shake!"—*Detroit Free Press.*

"Temper is everything," and in the pens of the Esterbrook Steel Pen Company the temper will be found all that is to be desired.

Parry Harbour, Georgian Bay, and Valuable Timber Limits in the Parry Sound District.
The SAW-MILL is complete in its appointment, and has a cutting capacity of 80,000 to 100,000 feet per day of twelve hours.
The LIMITS cover an area of 229 square miles in the Townships of Monteith, Humphrey, Christie, Ferguson, Hagerman, McKellar, Spence, and Shawanaga, besides the purchased rights to cut the timber from numerous lots in the same Townships, and contain a large quantity of standing pine.
The whole establishment is in complete condition and active operation, and is excellently situated for the manufacture, sale and shipment of timber.
Tenders for the whole property, including plant, will be received until the 20th August next, addressed to the General Manager, Ontario Bank, Toronto, by whom terms of payment and any further information will be furnished on application. No tender will be accepted unless satisfactory to the vendors. 4L17

Market Reports.

MONTREAL.

From Our Own Correspondent.

AUGUST 10.—The exports of lumber since the date of our last report (18th July) were as follows:—To London, 4577 pieces and 108,800 feet oak and 39,858 deals; Buenos Ayres, 1,234,715 feet; Montevido, 361,800 feet; Rosario, 289,258 feet; Liverpool, 42,777 deals; Glasgow, 15,000 feet. The exports to the River Plate are much in excess this year over last. The total shipments there since the opening of navigation till the 9th instant were 3,022,024 feet, against 2,007,103 feet for the corresponding period of 1880, being an increase of 1,014,921 feet. The rates of freight to the River Plate range from $13@16, according to the size of the vessel. Rates to Britain are about 60s. with an easy market, owing to the difficulty ships have experienced in procuring grain cargoes, and shipping is expected to continue brisk during the season.

The demand for building lumber has fallen off somewhat, builders being for the most part supplied, but lumber for repairs is in very good demand. We give the following as the yard prices in the city:—

Pine, 1st quality, ₱ M.	$32 00@40 00
Pine, 2nd " ₱ M.	18 00@24 00
Pine, shipping culls, ₱ M.	12 00@15 00
Pine, cull deals, ₱ M.	8 00@10 00
Pine, mill culls, ₱ M.	5 00@ 6 50
Spruce, ₱ M.	8 00@10 00
Hemlock, ₱ M.	8 00@00 00
Ash, run of long culls out, ₱ M.	16 00@18 00
Bass, " ₱ M.	14 00@16 00
Oak, ₱ M.	35 00@45 00
Birch, ₱ M.	17 00@20 00
Hard Maple, ₱ M.	18 00@25 00
Lath, ₱ M.	1 25@ 1 30
Shingles, 1st, ₱ M.	3 00@ 0 00
Shingles, 2nd, ₱ M.	2 00@ 0 00

BOSTON.

AUGUST 1.—The *Journal of Commerce* says:—There are no specially new features to report, and the demand remains fully up to expectations. The call for pine has been remarkably good, and in fact for all kinds of dimension stock dealers report a large consumption. Arrivals have been liberal, but the continuous demand has tended to prevent any accumulations. The supply of Western and Canada pine is small, and this fact (coupled with the recent advance made by dealers at productive points) indicates a prospective advance in this market. Southern pine is moving actively, with the supply sufficient to meet present wants at least. Spruce is rather weak, owing to large accumulations. Of the hard woods, oak is apparently the easiest, and a prime article can be bought for $40, with a possibility of an offer of $38 not being refused. Ash is quiet. Cherry has been arriving freely and is in good supply. Black walnut is in good demand and firm, with prospects of a further advance in prices. The following are carload quotations:—

CANADA PINE.

Selects, Dressed	$48 00@50 00
Shelving, Dressed, 1sts	40 00@42 00
" " 2nds	33 00@35 00

XX, " "	2 25@ 2 40
Lath	1 40@ 1 40

Since the advance at Albany trade here has improved and a feeling among the dealers that present prices will now be maintained to the end of the season, an increase in the receipts may be expected, as the new cut is about in condition to be moved. Canal and lake freights are steady, the supply being in excess of the demand.

IF YOU ARE SUFFERING with a cold do not fail to try HAGYARD'S PECTORAL BALSAM; it is daily relieving its hundreds throughout our Dominion. It is pleasant and palatable.

NEW YORK.

AUGUST 6.—The *Real Estate Record* says:—The situation does not vary greatly from last week. On most grades of stock the demand is only fair, and buyers moving with some caution, while prices tend to ease off somewhat from extremes, but there is no general downward tendency, and sellers in all cases refrain from urging the sale of desirable goods. Current consumption is full, but supplied by parcels coming in on contract, and while dealers want all the stock offering, they have a slight advantage which is naturally made the most of. The export trade has been a little unsettled for a week or two, and, in some instances, it would be necessary to offer a concession in order to secure the attention of shippers. Sellers, however, are not much troubled over the situation, and calculate upon winding the year up with quite as large a volume of exports as shown at the opening.

Eastern spruce is in fair stock, and there is not much inclination to make further important additions at the moment. Demand in consequence is somewhat slow, and offerings of random cargoes have to be handled with some care, though not much actual weakness has thus far been shown on really attractive stock. Specials meet with demand for fall delivery and manufacturers adhere to full rates on any outside or ordinary cutting. For an operating basis about $13@15 ₱ M. may now be quoted, and $17 the average top for specials.

White pine retains a firm position, and notwithstanding the accumulating stocks holders are very confident. Home wants continue full and not likely to shrink much, while the prospect for export demand is considered excellent in every respect. It is claimed that a great many shipping orders formerly filled at the eastward must have come here as the only point at which desirable stock can be reached. At primary points the "talk" is very firm, and some of our operators are purchasing at the full rates asked. We quote $17@19 ₱ M. for West India shipping boards; $24.50@26 for South American do.; $16@16.50 for box boards; $17@17.50 for do. wide and sound do.

Yellow pine has had a few ups and downs of demand, but as a rule dealers express themselves satisfied with the amount of business doing, and the market shows quite as good, if not better, position than usual for the season. Quite a number of specifications have been accepted on accounts ranging frsm 100,000 up to 500,000 feet, and at about former rates. There is some tendency to advance the cost of freight from one or two points. Randoms are not much wanted, and would be difficult to sell except at a shading. We quote random cargoes at about $24@26 ₱ M.; ordered cargoes, $26@28 do.; green flooring boards, $24.50@26.50 do.; and dry do do., $27,-@29. Cargoes at the South, $15@19 ₱ M. for rough, and $20@24 for dressed.

Hardwoods in good demand for choice seasoned stock and at full rates, the market ruling quite firm throughout, though it is intimated that "indications" from primary points are a shade easier in some instances. We quote at wholesale rates by carload about as follows:—Walnut, $77@85 ₱ M.; ash, $35@38 do.; oak, $40@45 do.; maple, $30@35; chestnut, 1st and 2nd, $30@35 do.; do. culls, $18@20 do.: cherry, $50@55 do.; white wood, ½ and ⅝-inch, $25@27.-50, and do. inch, $33@35 do.; hickory, $35@45 do. for Western, and $65@75 for good nearby stock.

Shingles sell well enough to prevent any great accumulation of supply, and prices are supported all around. The stock is only fair. We quote Cypress at about $6 for saps and $8.50@9 for hearts; pine shipping stocks, $4 for 18-inch, and Eastern saw grades at $2.50@4.50 for 16-inch, as to quality and to quantity. Machine dressed cedar shingles quoted as follows:—For 30-inch, $16@22.25 for A and $28.75@33.35 for No. 1; for 24-inch, $6.50@16 for A and $16.75 @23 for No. 1; for 20-inch, $5@10.50 for A and $11.24@11.75 for No. 1.

Be Wise and Happy.

If you will stop all your extravagant and wrong notions in doctoring yourself and families with expensive doctors or humbug cure-alls, that do harm always, and use only nature's simple remedies for all your ailments—you will be wise, well and happy, and save great expense. The greatest remedy for this, the great, wise and good will tell you, is Hop Bitters—rely on it.—*Press.*

CHICAGO.

AUGUST 3.—So far as the records show, there has been no material difference in the movement of lumber for the past week, as compared with the one preceeding. The general tenor of our reports indicates than an active demand prevails, and that the sales of lumber are large and numerous. We do not think there is evidence of any particular increase in the volume of business doing over the average for July, which, as is now well known, was the largest for that month on record, though some of our correspondents assert that the trade in the markets from which they write is so active that it severely taxes the capacity of the dealers to keep up with it. The notable absence of complaints in regard to the present business may be accepted as pretty good evidence that it maintains its activity, as lumber dealers everywhere have become accustomed, this season, to a rushing demand, and they would be very apt to notice an unfavorable change in it. On the whole, the *Lumberman* is inclined to regard the situation of the lumber trade as in most respects eminently satisfactory.

Some doubt has been expressed hitherto in regard to the effect of the rapid advance in prices this season upon the buyers of lumber in the country, and some have even gone so far as to definitely predict a marked falling off in the quantity of lumber consumed in consequence of its increased cost. It will be noticed that in a number of our reports this week reference is made to this point. It is evident that in some markets the operators think they observe that the demand has been checked slightly by the repeated changes in the list, though in the majority of cases it seems to be the fact that the advance in prices has made no difference with orders. There is not enough in these statements to warrant the assumption that a dangerous falling off will result from the higher price of lumber. It may deter some who have had building enterprises in mind from immediately undertaking them, but not, we feel sure, to an extent sufficient to make a difference in the volume of trade. Those who have already begun building, or who have determined to do so, will hardly be kept from carrying out their plans by the slight difference the higher price of lumber would make in the cost of their improvements. In a general way the rise in the price of building material may have the effect to make some people defer their operations until what appears to them a more convenient season, but we do not regard this probability as of sufficient importance to make it a source of apprehension to lumbermen. It is a matter of fact that more building is done when prices are high than when they are pretty well down towards the bottom, from which it may safely be inferred that there is not much danger of trade being cut off in consequence of any increase in the cost of lumber, or any other material that is essential to the construction of buildings.

We have to note again a considerable advance in prices, the action of the dealers at this point last week having brought forth the usual crop of changes. For the most part, competing markets follow promptly Chicago's lead, but in some instances the necessary advance is made with some reluctance, the operators evidently fearing that it will have the effect to check trade. With a rising market it is of course to be expected that lumber will be firm, and generally speaking, no doubt it is so; but, possibly, where the dealers fancy that they may be losing some orders in consequence of the high prices, figures may occasionally be made that are not put down in the list. It is not to be supposed, however, that much of this sort of thing is doing, or that it will produce any noticeable effect upon the established rates. The average dealer in lumber, particularly if he has a stock of that article in his possession, is too firmly convinced that it is worth a good deal more than it cost him, whatever that may be, to part with it at much of a discount from the quoted rates.

The outlook for trade remains as favorable as ever. The demand promises to keep up, and there is therefore every reason to anticipate the continued firmness of prices. Whether the latter will be advanced still more is a problem. There is likely to be a temporary lull in the upward movement at present, but we have no means of knowing how long it will last.

Piece stuff has declined from twenty-five to fifty cents from the figures ruling last week, for all lengths under twenty feet, inferior being now quotable at $11.50, and good at $11.75. Longer stuff maintains its value rather better, and the prices obtained for it are covered by the range given a week ago. Cargoes running largely to this kind of stock are generally sold on their merits, the demand for long-length dimension being such as to warrant the sellers in asking more in proportion for it than they get for ordinary stock. Inch lumber is considerably lower than it has been, some grades having declined as much as $2 from the former prices. No. 2 Muskegon stock has been sold, it is said, as low as $11.25, and ranges now from that price to $13. Other grades are also lower than they have been lately, and everything is more or less weak. The probability is that in many transactions the actual prices obtained are lower than sellers care to make public, so that it is difficult to print quotations that represent the market accurately. The demand for shingles has not been sharp enough to keep up the price to last week's range, and we are compelled to note a decline of five cents per thousand, the present rates being $2.75@2.80 and $2.90@2.95 for Standard and Extra A respectively. It is claimed that the market for shingles is a trifle stronger than it was a few days ago, and the commission men hope to get along without making further concessions. Lath are steady at the old figures.

There is some difference of opinion as to what the immediate future of the cargo market will be, sellers, even, being by no means of one mind in regard to it. Some assert there belief that it will speedily recover its tone, while others give expression to the fear that the present weakness will last pretty well through this month. It must be admitted that there is considerable uncertainty about the course it will take, and under the circumstances one opinion is as likely to prove correct as another.

Lake freights are unchanged, but weak at the rates quoted below:—

CARGO QUOTATIONS.

Joist and scantling, green, ordinary lengths	$11 50@11 75
Joist and scantling, green, 20 feet and over	14 00@16 00
Mill run, choice green	16 50@21 00
Mill run, medium, green	13 50@16 50
Mill run, common, "	11 25@13 00
Shingles, standard	2 75@ 2 80
Shingles, extra A	2 85@ 2 95
Lath	1 80@ 1 85

LAKE FREIGHTS.

Manistee	$2 12½
Muskegon	1 62½
Ludington	1 87½
Grand Haven	1 62½
Menominee	2 12½
Sturgeon Bay	2 12½
White Lake	1 75
Ford River	2 00

Receipts and shipments of lumber and shingles for the week ending August 2:

	RECEIPTS.		SHIPMENTS.	
	Lumber.	Shingles.	Lumber.	Shingles.
1881	59,348,000	23,825,000	55,862,000	6,299,000
1880	51,872,000	18,638,000	30,442,000	2,822,000

Receipts and shipments of lumber and shingles from January 1 to and including Aug. 2:

TONAWANDA.

AUGUST 1.—Trade is very brisk. Dealers report heavy sales at good prices. Prices have advanced in consequence of an increased demand and largely by reason of the rise at Chicago and Saginaw. Appended find corrected price list, indicating an advance in several grades.

CARGO LOTS—SAGINAW INSPECTION.

Three uppers	$38 00@43 00
Common	17 50@20 00
Culls	11 50@12 50

BUFFALO.

AUGUST 1.—Trade is good and prices fair. We have not noticed any falling off in trade, owing to the advance in prices. The retail dealers are in buoyant spirits. The following are the latest quotaions for cargo lots:—

Uppers	$40 00@50 00
Common	17 00@20 00
Culls	13 00@14 00
Dressing stocks	18 00@20 00
Dressing sidings,	17 00@19 00

America was discovered by Lief Ericcson the Icelander, in the year 1004, and 856 years after, the Esterbrook Steel Pen Co., turned out their first pen.

ALBANY.

AUGUST 2.—The *Argus* has the following:—The most important movement in the district since our last report was fully set forth in yesterday's *Argus*, in giving the action of the trade on Monday, in which every house we believe participated, advancing the quotations of pine lumber, viz., $1.00 ℔ M. feet on common; $2.00 ℔ M. feet on intermediate grades, and $3.00 ℔ M. feet on uppers and inspected pickings, and pretty generally through the list. This is no sensational movement, but is taken by the trade in self-defense. Until yesterday pine lumber on dock at the Saginaw mills was, when the trade there would consent to name a price, bringing as much money as at Albany. At present writing the Saginaw holders of lumber refuse to name a price for their stocks, not for the want of any logs, nor from any lack of demand, but the largely and steadily increasing trade renders present and future values there, as here, uncertain. In Canada the lack of water has hung up so many logs on the streams that lumber is in light supply at shipping points. Whether this state of things is to continue much longer, until it will be too late to change the present aspect of things is, of course, uncertain; but throughout the Dominion, as on the Saginaw, all kinds of lumber are bringing and are held at much higher figures than were current in the winter. The sales here last week included the following round lots of common box at the then ruling prices: 1,500,000 feet, 1,700,000 feet, 1,000,000 and 500,000 feet; 600,000 feet various grades on p. t. To-day the market has a very healthy aspect; a sale was made early of 1,400,000 feet common box, we presume, at the advanced prices. We do not think there is any material addition to stock.

Hardwoods are steady and firm.

The stock of coarse lumber is getting very light; the demand is good at unchanged prices, but the trade here is cautious as to accepting orders in the present uncertainty of getting stock from the Northern mills, whence the report is dry! dry!

Shingles are in demand at quotations.

The receipts of lumber by lake at Buffalo for the week ending August 1st were 9,887,000 feet, and by rail 103 cars. The receipts by lake at Oswego for the week were 7,044,800 feet.

The receipts by canal at Albany from the opening of navigation to August 1st were:

	Bds. & Sctl.,ft.	Shingles,m.	Timber,ft.	Staves,lbs.
1881	171,173,060	860	.....	2,287,000
1830	175,020,800	974	5,400	257,000

MINNEAPOLIS.

The *Mississippi Valley Lumberman* of the 5th instant says:—The weather of the past three weeks has been particularly favorable for drying lumber, and a very large part of the early sawing is now ready for shipment and is being sent away as fast as cars can be had upon which to load it. There is no cessation to the demand, and all manufacturers are burdened with orders. The recent advance has had no perceptable influence on trade anywhere. The fact that the wheat harvests are now almost beyond the reach of blight or damage of any kind inspires confidence and gives a firmness to prices. The want of cars is becoming an exciting topic with all classes of business men in the north-west, as the volume of traffic has passed entirely beyond all the railroad capacity for handling. There has been a regular blockade in the shipping yards of Minneapolis during the last few weeks, owing to want of room and cars, to which trouble the railway employees added a strike, which practically suspended business last week and led to a general public movement for relief. We estimate that Minneapolis is 15,000,000 feet behind in shipments.

News from all western markets indicate a perfect willingness to follow Chicago up on prices as often as she chooses to move, and all agree that the demand is beyond precedent and present facilities for doing business. The notable event in the north-west is the apparent success of the movement to organize the lumbermen's association, as we consider this an assurance of harmony which will secure steady uniform prices for lumber throughout the north-west.

DULUTH.

AUGUST 1.—Prices remain unchanged, but with an upward tendency. The advance in manufacturers' prices has apparently not affected the retailers, who have put up their own as much, and in some cases more, than has been done in this market. Along the Northern Pacific railway building continues brisk, and the demand for lumber good.

Treatment for Ringbone.

Ringbone consists of inflammation of the joint of the foot and deposit of bony matter just above the coronet and above or below (or both) the pastern joint. In the end the bony matter covers the joint and renders it immovable. The treatment of a newly-formed ringbone consists in giving the animal rest; use a high or low-heeled shoe, as the case may need, and as the horse walks on the toe or heel. To reduce the heat and inflammation, apply cold water with wet bandages, and when this has been effected, apply a blister made of 20 grains of corrosive sublimate and camphor, 10 drops of muriatic acid, and one ounce of oil of turpentine. When the blister is formed the part is washed and greased with lard. If this is of no avail, firing may be used with benefit, especially with a young horse. One ounce of hypo-sulphite of soda may be given daily for two weeks to remove any rheumatic tendency.

As the result of observation, and from the testimony of trustworthy men, the following is about the average growth in twelve years of the leading desirable varieties of timber when planted in belts or groves and cultivated:—White maple, one foot in diameter and thirty feet high; ashleaf maple or box-elder, one foot in diameter, and twenty feet high; white willow, one and one-half feet in diameter and fifty feet high; yellow willow, one and one-half feet in diameter and thirty-five feet high; Lombardy poplar, ten inches in diameter and forty feet high; blue and white ash, ten inches in diameter and twenty-five feet high; black walnut and butternut, ten inches in diameter and twenty feet high.

AT Taylor's mill, Gravenhurst, on Tuesday Mr. Wm. Clute, who was engaged at the trimming saw, by some means had his hand thrown against one of the saws, lacerating the back of the hand to some extent.

No Good Preaching.

No man can do a good job of work, preach a good sermon, try a law suit well, doctor a patient, or write a good article when he feels miserable and dull, with sluggish brain and unsteady nerves, and none should make the attempt in such a condition when it can be so easily and cheaply removed by a little Hop Bitters.—*Albany Times.*

Mr. TAIT'S new mill, Gravenhurst, is now in thorough working order, and is turning out about 30,000 feet of lumber per day. We noticed this week a new shingle machine on its way to the mill. Mr. Tait intends to manufacture shingles and lath as well as lumber.

M. Covel's Latest Improved Automatic Saw Sharpener!

Is the Most Perfect Machine that has ever been Introduced into Mills for that purpose.

CIRCULAR SAW STEAM FEED!

I would also call special attention to my

Heavy Circular Saw Mills

and for STEAM MILLS, would recommend the Steam Feed, having put in several which are giving the best of satisfaction, as will be seen by the following testimonials:—

GRAVENHURST, August 20th, 1880.

WM. HAMILTON, ESQ., Peterborough.

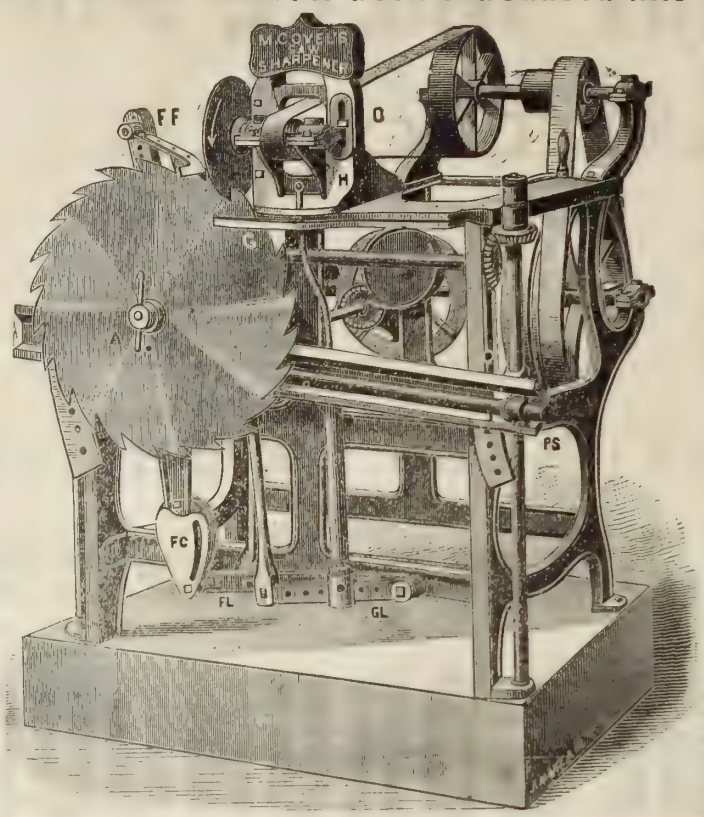
DEAR SIR—I have used your Steam Feed for near four months, and it has given me perfect satisfaction in every way; it is admitted by every person who has seen it work to be the best feed ever invented. Since I put it into my mill, I have not lost ten minutes time fixing anything belonging to it. I can cut 18 boards 13 ft. long in one minute. It can do much smoother and better work than the pinion feed. It is easily governed and reverses the carriages instantly. I am thoroughly satisfied with it and can recommend it to any person who has a Circular Saw Mill for cutting long or short logs. I consider I have cut more lumber than will pay for the Steam Feed since I got it than I would have cut had I not put it in.

Yours respectfully,
WILLIAM TAIT,
Lumberman, Gravenhurst.

TORONTO, August 11th, 1880.

WM. HAMILTON, Peterborough, Ont.

DEAR SIR—The Steam Feed you put in is working splendidly. Yours, &c.,
THOMPSON, SMITH & SON.

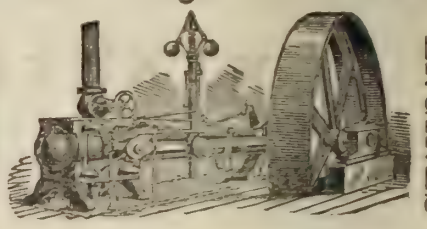


MILL MACHINERY!

I am also manufacturing Saw Mill Machinery, for all sizes of Gang or Circular Mills, Span or Double Circulars for Slabbing Small Logs. My Patent Jack Chain for drawing logs into Saw Mills, acknowledged by all to be the Cheapest and best ever got up; also, my Patent Lumber Markers, different sizes of Edgers, Gang Lath Mills, Trimmers, Power Gummers, and all Machinery used in a first class Gang or Circular Saw Mill; also, small Hand Gummers for use in the woods, for Cross-cut Saws. Rotary Pumps of different sizes, for Fire Protection in Mills, &c.

Horizontal Engines and Boilers

CORLISS ENGINES



Where economy of fuel is the great consideration, along with uniformity of speed, such as is required in Grist and Flouring Mills, Woollen and Cotton Factories, or large Factories of any kind, I supply the Corliss Engine. I feel justified in saying that our Style, Workmanship and Finish on this Engine will be no discredit to its renown, and certainly is not equalled in this country for economy of fuel. I have them working at 2¼ pounds of coal per horse-power per hour. L10

WILLIAM HAMILTON,

PETERBOROUGH, ONT.

EMERY WHEELS FOR SAW GUMMING!

Solid Emery Wheels are now almost in universal use for the purpose of gulleting and gumming saws. Statistics show from 25,000 to 30,000 saw-mills in the United States. Many of these run only a single saw each. A one-saw mill would use one or two wheels a year, costing $3 to $1 each, and when such small mills order single Emery Wheels from the factory, the express charges often equal the cost of the wheel. There was a time when the quality of Emery Wheels was so uncertain, and the demand so fickle, that storekeepers could not afford to carry them in stock. Now, however, Saw Gumming Wheels have become as staple an article as Files, and every dealer in saws, Hardware and Mill Supplies can afford to carry a few dozen standard sizes in stock. Large dealers order stocks of $500 to $750 worth at a time. Saw Gumming Wheels are used with the edge (or face) square, round, or beveled. Probably seven-eigths of all in use are beveled.

The principal sizes are:

8x¼, 8x⅜, 8x½ } ⅜ in. hole. 10x¼, 10x⅜, 10x½, 10x⅝ } ⅜ in. hole. 12x¼, 12x⅜, 12x½, 12x⅝, 12x¾, 12x⅞ } Holes, ⅜, ⅞ and 1 inch.

Probably more wheels 12x⅜, 12x½ and 12x¼ are used than all the other sizes together. Saw Gumming Wheels are used, however, of all sizes up to 24x1½. The most frequent complaint is that Emery Wheels harden the saw so that a file won't touch it. The answer is that you don't want a file to touch it. An expert workman will shape and sharpen the teeth with an Emery Wheel, leaving the teeth *case hardened*, in which condition the saw will cut about 33⅓ per cent. more lumber than a soft saw will. Those who want to use the file, however, have only to touch the saw *lightly* a second time (after going all over it once), and this second touch will cut through the case-hardened scale.

A QUESTION OF QUALITY.

Thirteen years of experience as makers of, dealers in, and actual users of Emery Wheels, have led us to a decided opinion as to what quality is the best. We prefer for almost every use an "Extra Soft" wheel like the "Pocono." We believe that money lost through the rapid wear of the wheel is more than made up by the money saved on wages. As we cannot get every one to adopt our views, we make several qualities, so as to meet their views. We say to those who think they can only be satisfied with some other make of wheels (not Tanite), that we can furnish qualities *to match* any and every other make. If you have got used to some special quality of wheel, let us know what it is, and we can send you *a Tanite Wheel of similar quality*. Our *regular* classification of Saw Gumming Wheels is as follows:

CLASS 2. MEDIUM—HARD.—This Wheel is THE STANDARD Saw Gumming Wheel all over the world. Probably seven-eighths of all the Saw Gumming Wheels used are "Class 2." It cuts fast and keeps its shape well. Some think it too hard, some too soft. We prefer the "Pocono."

CLASS 3. MEDIUM—SOFT.—The same as to coarseness and fineness as "Class 2," but a *softer*, and therefor freer cutting wheel.

CLASS "POCONO." EXTRA SOFT.—This Wheel we prefer to all others. It is both *finer* in grain and softer than either of the above. As a Saw Gumming Wheel, Class "Pocono" is specially suited to those practical and experienced Sawyers who know how to grind with a light touch, and who want a free cutting wheel that will not create much heat.

Illustrated Circulars and Catalogue, showing Cuts of Saw Gumming Machines, and Shapes, Sizes and Prices of Wheels, sent free on application.

L13

The Tanite Co. Stroudsburg, Monroe Co. Pennsylvania

CANADIAN TRADE SPECIALLY SOLICITED.

PUBLISHED SEMI-MONTHLY.

The only Newspaper devoted to the Lumber and Timber Industries published in Canada.

SUBSCRIPTION $2.00 PER ANNUM.

VOL. 1. PETERBOROUGH, ONT., SEPTEMBER 1, 1881. NO. 21.

A DESPATCH from Buffalo, dated August 11th, says :—"At a joint meeting of the Buffalo and Tonawanda Lumber Exchanges held here today, it was resolved to advance the prices of pine lumber $1 per thousand feet on all grades below shelving, and $2 on shelving and higher grades. The established terms hereafter will be 60 days, or 1½ per cent. off for cash."

THE fire in Bronson's lumber piles on the morning of August 16th is believed to have most satisfactorily settled the problem whether a fire in that locality could be extinguished. Great satisfaction is expressed among mill owners. Bronsons & Weston gave a checque for $100 to the benevolent fund of the fire brigade in ackowledgment of their services. The loss will not exceed $1,000.

A BOSTON furniture factory is making some chairs and tables from oak logs taken from a bridge in Germany. They have been in the water since the year 780, and are consequently about 1,100 years old. The logs are in a remarkable fine state of preservation, and they show no sign of decay after penetrating two inches below the surface. The color is a sort of brownish-gray, the fibres are fine and close, giving to the wood evidence of being capable of high polish. The logs were imported by a gentleman, for whom the furniture will be made.

THE *Jeffersonian* of Stroudsberg, Pa., has just been shown the certificate of award—which, by the way, is a magnificent specimen of the engraver's art—and a beautiful bronze medal, issued to "The Tanite Co., of Stroudsburg, Pa.," by "The Sydney International Exhibition" of New South Wales, Australia, forwarded to T. Dunkin Paret, Esq., President of the Tanite Co., by the commissioners for the United States, appointed by the Government of New South Wales. A similar award, similarly obtained, was not long since forwarded to the Company from the recent International Exposition of Geneva, Switzerland. The emery wheels of this company have obtained world-wide renown.

A LEADING match-splint manufacturer of Canada is authority for the statement that there are about twenty-two match factories in the United States and Canada, and that the daily production—and consequent daily consumption—is about 25,000 gross per day. In each gross of matches manufactured there are 144 boxes, so that the 25,000 gross produces 3,600,000 boxes. Each box made in the United States, where a duty of one cent upon every box of matches is levied, contains 100 matches, so that the number of matches produced and used daily amounts to 360,000,000. Counting that it takes a second to light each match, to light the 360,000,000 would take just that number of seconds. This gives 6,000,000 minutes, or 100,000 hours. In days of twenty-four hours each, it figures up to 4,166⅔, and gives eleven years and five months, with a couple of days extra as the time occupied during every twenty-four hours, by the people of North America—not figuring on the Mexicans—in striking matches. Figuring a little further it gives 4,159 years time in each year.

THE increase in the value of the Michigan forests within the last dozen years is probably unprecedented in the annals of the lumber trade. Twelve years ago, a man with a few thousand dollars to invest, bought a tract of land in Menominee county, Michigan, from the United States for $1.25 per acre. Wednesday he sold 2,875 acres of pine timber from the same section to a Chicago lumber firm for $25 per acre, reserving the land for himself. The investment has therefore paid a profit of over $68,000 on the 2,875 acres in only twelve years, the original investment being less than $3,600, and, as the land is worth something, "the returns are not all in yet."

THE Stanton (Mich.) *Clipper* has recently instituted an investigation into the pine resources of Montcalm county, the result of which is stated in the following paragraph :—"It says that its success in obtaining exact figures was only partial, but believes that the estimates given may be relied upon as very close to the actual facts : Day township has 7,000 acres ; Cato, 1,000 acres ; Perris, 1,560 acres ; Belvidere, 1,000 acres ; Home, 7,920 acres ; Douglas, 1,920 acres ; Pine, 640 acres ; Evergreen, 1,920 acres ; Crystal, 4,000 acres ; Richland, 5,000 acres ; Sidney, 1,040—making a total of 33,000 acres of pine in the country that has never been cut over. The quality on an average is very good, and it will cut according to the best estimates we have been able to obtain, about 792,000,000 feet of lumber. This, of course, is exclusive of a vast amount of pine that has been cut over once or twice, leaving a quantity of good lumber and shingle timber. There are probably also small tracts of good pine that have not been reported to us, but the above approximates very nearly the quantity of standing pine yet remaining to be cut in Montcalm county. At the present rate of manufacturing it, our timber will be entirely used up within the next five years, except perhaps a few tracts that men of means and foresight may hold for the higher prices that are sure to come. In the same five years, at the rate at which clearing has been going on and improvements are being made, good, well-improved farms will have sprung up to take the place of the pine, and the transition from a lumbering district to a fine farming country will hardly have been noticed ; yet the two conditions of the country will be so close together that they will stand out in bold relief.'

THE PREDICTED TIMBER FAMINE.

In a recent issue, the *Leffel Mechanical News* makes some very sensible remarks on this subject.

Regarding the supply of pine timber in this country, says the *News*, its rapid disappearance, and the prospect of its speedy exhaustion, we gave a few weeks since some figures which are not a little alarming, but are believed to be entirely authentic. It does not add to the cheerfulness of the situation to know that in the matter of our resources of oak and walnut lumber we are no better off. Both these woods, but especially the former, are of such vast utility in our manufacturing industries that they have been justly considered indispensible, and no theory has ever been formed, so far as we are aware, of the means by which their loss could be made good. But it is daily becoming more apparent that the problem will, at no remote period, imperatively demand solution, and that one of two alternatives must be chosen ; either the production of these varieties of timber must be stimulated, or substitutes be found which will answer in their place.

So far as oak is concerned, the case is not yet so desperate but that economy in its use, and above all an immediate check to its needless destruction, may be a sufficient remedy, at least for the needs of the present generation. The insane propensity for clearing land, whether it is useful for agriculture or not, and whether the timber is to be turned to any account or not, ought to be restrained by a penal statute. It is carried in some instances to such an extent that nothing short of a deliberate purpose to impoverish the country, to bring droughts and hurricanes, to "sow the wind and reap the whirlwind," can explain the conduct of the landowners. Individual freedom is so much prized by our people that a restraining law on this subject would probably be difficult of enforcement ; but agricultural societies, granges, farmers' clubs, and public journals of whatever class, can do very much in this behalf by disseminating the facts and bestowing wholesome advice on this vitally important subject.

The market for walnut lumber has already been seriously affected by the approaching scarcity. A "corner" has even been attempted by a few particularly shrewd dealers ; and manufacturers of furniture are considering what course they shall adopt when the time comes in which they can no longer, even at a heavy advance, obtain this much desired material. Nothing else is so well adapted to the purposes for which it is used ; and even of the unsatisfactory substitutes proposed, the supply is not to be depended on. Mahogany will take its place to some extent, but the tendency here also is to increasing scarcity, as the trade is destructive to the vessels engaged in it, owing to the stormy latitudes which they are compelled to visit. The gum tree is also recommended, and as a material for veneers is found to be nearly equal to rosewood, free from shrinkage, and taking an admirable finish. Beech, birch and red oak have been resorted to in many cases, and will necessarily be used more and more frequently as the coveted walnut becomes higher in price.

The true remedy, after all, is to make good the deficiency, not by seeking poor and unsatisfactory substitutes, but by producing as fast as we consume. Groves of walnut trees should be planted by thousands of acres in every part of the country where they have a natural home. The experiment has been tried with perfect success in the south, in the west, and in the northwest. The great difficulty is that a term of years—say from fifteen to twenty—must elapse between the investment and the return ; and however sure the latter may be, it requires to be waited for, which is the one thing of which the average American citizen is not capable. We have not much faith, as a rule, in any good to be accomplished by interference on the part of the government ; but if the legislature of every state were to give a bounty of $1 for every tree planted, we are confident that surprising and beneficial results would in due time be realized. A dollar in the hand—such is the charm of certainty and the bliss of actual possession—would go farther than the prospect of fifty in the tree.

ONTARIO TIMBER LIMITS.

The Ottawa *Free Press* says that Ottawa lumbermen will be interested in the statement made by the Parry Sound *North Star* that the Ontario Government contemplate offering the townships in that district not already under license for sale as timber limits at an early date. It is generally believed that the Government own no more unsold limits of any extent or value. This is a great mistake. There are yet some two thousand square miles of unsold Government limits in the district alone, lying on the upper waters of the Muskoka, the Magnetawan and the French rivers. Every township in the district is now more or less settled, and in order to save the timber from destruction by fire, though clearances are being made in every direction, it is absolutely necessary that the townships should be placed under license. Many of those limits are very fine, and will no doubt realize a handsome bonus. No better time for such a sale could be found, and the wisdom of the Government in taking advantage of the present boom in timber lands to dispose of such limits as it is necessary for the public interests to sell cannot be doubted.

THE spool factory lately erected at Jacquet River, county Restigouche, and only in operation a few months, was totally destroyed by fire on the morning of August 12th. There is said to be some insurance, but the loss is very heavy,

THE MOUNTAIN FORESTS AND WATER SUPPLY OF THE CONTINENT.

BY DR. JOHN A. WARDER.

The mountains were intended to be perpetually clothed with forest growths, at least to the *timber line*, at a varying elevation depending upon latitude, where arboreal vegetation is restricted by the low temperature that approaches the conditions of congelation. The traveller, to be of any use to himself or to others, should keep his eyes open and observe every phenomenon as he passes through the country.

Limited observations, when among the Rocky Mountains a few years since in Colorado, and more recently in a journey on the Medicine-Bow Mountains of Wyoming Territory, have given the writer still firmer convinctions of the truth of the first proposition, which had already been accepted, as truly set forth by forest writers of of Europe, and read in the open book of nature, as it was unfolded before his eyes in the Alpine regions of that continent. But these journeys among the Cordilleras of our country, exposed as they are and have been to the ruthless and wanton destructiveness of ignorant and thoughtless man, have filled him with serious apprehensins respecting the future water supply of our western rivers.

The destruction of these mountain forests by fire is indeed a most fearful and melancholy subject to contemplate. An inspection of portions of the public domain by one who has studied the subject, and who has either read of or witnessed the disastrous effects of the spoliation of the forests in elevated mountain heights, cannot fail to fill the mind with the most serious apprehensions.

The efforts of the Secretary of the Interior on behalf of the forests are highly appreciated by those who have made a study of the influence of the woods upon the country's water supply. The mountains (up to a certain elevation, close to the limit of perpetual congelation) were designed for the forests, nor should they ever be stripped of their arboreal covering, for, as the Secretary has well said in his annual report of 1877, if the forests in such regions be once destroyed, they will never be restored. The rationale of the action of the forests as receivers, reservoirs and fountains of waters, is perfectly simple and familiar to all students of forest science, and may be understood by any one of common powers of observation, who may have had his attention directed to the conditions of earth's surface in a wood that is in a state of nature. The fallen trees and branches, the undergrowth, the mosses and other herbage, among the decaying leaves, the accumulations of years—all these, and the leafy canopy above —break the force of the falling rains, which come quietly to the earth and are there arrested, and instead of rushing tumultuously down to lower levels, they are absorbed as by a sponge, until, although gradually percolating into the soil, they reach internal cavities or porous strata, from which they are gradually distilled through perennial springs that keep up a constant and regular supply for the streams and rivers.

But to return to Wyoming, to scenes so recently visited—while traversing a broad plateau of the range, and passing through a glorious forest primeval, the traveller closely scrutinized the trees. These were chiefly pines, and almost exclusively of our species *(pinus contorta)*, but among them, in the lower and damper spots, the most lovely firs and spruces reared their tall shafts, clothed with a mystic drapery of depending boughs, bearing the silvery green foliage of the *Menzies*, *Douglas* and *Englemann's* spruces, and of the *Grandis* firs.

While contemplating these noble trees, we suddenly came upon a scene of *appalling desolation.* Upon a tract of many square miles in extent, as far as the eye could reach in every direction, over many thousands of acres, there was not a living tree to be seen. All, all, were standing bare, stark and stiff in death; their tall dead trunks blackened by fire, except where time had kindly come to their relief and stripped off the bark, leaving the bare poles that stood by the way like shivering ghosts, waiting in purgatory until storms of years should prostrate them to the earth that bore them, when they would at length gradually crumble into mould to renovate the soil, which had been deprived of all vegetable humus by the fierce flames of the conflagration.

The forest is destroyed, the noble trees are dead and gone, too often never in our time to return, to be a kindly covering and a befitting garniture to the sad wastes, and to clothe these mountain sides with verdure, *Continued* and *continuous* desolation is their sad doom.

Practically speaking, this is and must be so. Whence can come the seed germs for the future aforesting of such extensive tracts? Man, the improvident destructive, will not do it. The kindly winds can transport the winged seeds but a short distance from the parent trees. The cunning and provident rodents have a still more limited range within which to carry the seeds they may gather, and with wise instinct store up for their hyemal repasts, from which a few might escape, to germinate and form nuclei, producing at length seeds for further distribution in the future.

Ages must be required to restore these forests in the slow course of nature, and meanwhile the degrading agencies of every storm will be carrying away the soil, and scarring the mountain sides with frightful gullies and chasms, occupied at times with violent torrents, for there is no longer any herbage, no moss or bush, nor any debris to cover the surface, and, spongelike, to absorb and retain the precipitated moisture.

Yes, our worthy Secretary was perfectly right in his assertion that in these bared mountains the forests would never be restored, when thus ruthlessly destroyed. In certain situations and over such vast areas, practically speaking, in reference to any period of time that it is worth our while to calculate upon, any time that we or our progeny for many generations need take any account of, this is sadly true.

But, it may be asked, cannot these terribly destructive fires be prevented? Cannot these calamitous results that must inevitably follow be avoided? Yes! yes! they may, and they *must* be prevented, and that at once, lest our fair continent become a desert, unfitted for the many millions it is capable of happily sustaining upon the broad territory of its beautiful bosom.

This is indeed a great question, and only requiring the exercise of a high order of statesmanship. It is truly a difficult question, but the interests at stake are enormous, and are of infinitely greater importance to this NATION than deciding who of all the great army of office-seekers shall be gratified by an appointment to this or that petty office under Government; and yet there are those who were sent to guard the great concerns of the State who cannot spare time from the scramble after office to listen, to study, nor to advocate matters of such great import as this. Oh, that we could be blessed with a race of *statesmen* something better than politicians, and capable of grasping and of solving such questions as this!

Yes! the interests at stake are truly enormous; they involve the welfare of the country, since they concern the permanence and the very existence of our rivers. If their consideration be neglected, will not some future explorer of the vast *Sahara*, that may extend eastward from the base of these mountains, find, amid the shifting sands of that wide desert, only depressions of the surface to mark the ancient beds of our great rivers and their tributaries in that American Sahara, as Champollion has observed them in the wastes of Northern Africa, ot which he said: "And so the astonishing truth dawns upon us that this desert may once have been a region of groves and fountains, and the abode of happy millions. Is there any crime against Nature which draws down a more terrible curse than that of stripping mother earth of her sylvan covering? The hand of *man* has produced this desert, and, I verily believe, every other desert on the face of the earth. Earth was Eden once, and our misery is the punishment of our sins against the world of plants. The burning sun of the desert is the angel with the flaming sword, who stands between us and Paradise."

But how shall this great work, the preservation of the mountain forests, be accomplished? How shall we preserve these treasure-houses of the snow and rain that they shall steadily distil the streams which are to fill our rivers?

It may be effected by wise legislation after we have enlightened the public upon the subject of an advanced forest science, and educated them up to a proper and just appreciation of the importance and of the especial functions of the forests on these mountain heights, as *condensers of moisture*, as *receivers* and as *reservoirs* of the water supplies of a large portion of the continent.

When so educated, and fully informed upon these important truths, with an enlightened public sentiment, the people will become more careful in the use of this dangerous agent; they will be more watchful of their camp fires, they will compel others to be more careful, and they will stamp out the first beginning of a conflagration.

In addition to this enlightened sentiment, and complimentary to it, legislation will be needed to operate on those who may wickedly or ignorantly transgress. Some of the excellent suggestions of Mr. Schurz were incorporated in the bill of Senator Plumb, of Kansas, last winter (S. 609). They might prove valuable as preventive measures, especially the appointment of forest guards, as proposed in the 3rd section. Section 13 is intended to prevent fires on the public domain, whether in prairie or timber. Such a provision has never existed in the case of Government lands, though provided for by some of the states.

The losses by fires are enormous, and should be prevented.

Some of us know by sad and painful experience how difficult it is for the philantropist, who presents a simple proposition for the public good, however great its importance, to arrest the attention of the public. We have also learned how almost impossible it is to reach the ear of the law-making powers, and to excite in their minds an active interest in such questions as are here presented; in a word, how herculean an undertaking is presented, when we attempt to educate the people, and those who represent them in the Halls of Congress, up to a proper and full appreciation of such a subject as this of *Forestry*, which so deeply concerns the public weal.

More especially unpromising does such an effort appear, when an attempt is made to impress upon their minds the absolute necessity of keeping these extensive ranges of mountain heights in a condition best adapted to attract and condense the atmospheric moisture, to receive the precipitation, to retain it for a time, and then gradually and quietly to give it off through perennial springs, as limpid fluid, to supply the fertilizing streams that shall fill the rivers which are so happily and extensively distributed over our great continent.

You who are engaged in forest studies, you who are engaged in planting trees, will unite in presenting our thanks to Secretary Schurz for the noble stand he has taken in defence of the forests on the public domain, and for the part he has taken to call public attention to the vast and wide-spreading influence exerted by them on the present and future welfare of the country. Long may he be permitted to prosecute these noble efforts in behalf of the protection, preservation, and extension of our woodland heritage!

Mr. President, the above paper is but a repetition of an open letter addressed to the secretary of the Interior, which may never have fallen under the notice of any of your members. No apology will be offered, however, for presenting it to men like yourselves, even thus at second-hand, because you are known to be interested, as western-tree planters ever are and should be, in everything that relates to this great question of trees. Situated as you are, on the great open plains, this is to you especially a vital question, and this aspect of the infinite value to you of the mountain forests cannot be devoid of interest, even in the imperfect manner of its presentation by such a tyro in forests science as your friend W.

Wicked for Clergymen.

REV.——, Washington, D. C., writes: I believe it to be all wrong and even wicked for clergymen or other public men to be led into giving testimonials to quack doctors or vile stuffs called medicines, but when a really meritorious article made of valuable remedies known to all, that all physicians use and trust in daily, we should freely commend it. I therefore cheerfully and heartily commend Hop Bitters for the good they have done me and my friends, firmly believing that they have no equal for family use. I will not be without them."—*New York Baptist Weekly.*

A NEW LUMBER DISTRICT.

A correspondent of the Toronto, Ont., *Globe*, who is writing for that paper from British Columbia, includes in a recent letter some interesting information in regard to the lumber and logging business of the Province. The point from which he writes is New Westminster, located at the mouth of the Fraser river, and very near the boundry line between that Province and Washington Territory. It is the largest manufacturing point for lumber in British Columbia, and will, no doubt, become the center of one of the most important producing districts on the Pacific before many years. The country adjacent to it is rapidly settling up, and we are informed that the business of turning the timber wealth of the country into cash already occupies a large proportion of the people. The forests are the continuation of those immense timber tracts that have made Oregon and Washington Territory famous, and the trees contained in them are similar in size and other respects to those found there. Speaking of the remarkable size that the timber attains, the *Globe* correspondent says:—As the trees in the woods through which we passed, on the Hastings road, were such monsters, I was curious to know how they could be cut down and hauled about. Miles upon miles of timber exists on the inlet of the Douglas fir species, as well as cedar. Unless one saw these trees he would scarcely credit the fact that such did exist anywhere. In numerous instances they rise a perfectly limbless trunk for 200 feet, and then over another 100 feet above that, with small limbs.

About three miles from Granville I saw trees felled that were 320 feet in length, and eight feet in diameter. There were hundreds like these all round, The woodman cuts a hole in the tree, about four feet from the ground, into which he inserts a board having sharp iron prongs. This resembles a spring-board. On this he stands while swinging his axe. The axe is the same as is used in the east, but much longer in the handle, generally four feet; occasionally a shorter one is used for the outside cuts. As he enters the tree the resin runs like water, and every blow spatters it in every direction. So soon as the tree is down the woodman attacks another. His business is to lay it on the ground. Following him comes the sawyers, who cut it into the required lengths; then the "barkers." Every inch of bark is peeled off before leaving the spot where it feel, to enable it to be moved round conveniently by the teams. In this camp an ox team of twelve oxen is employed to bring the logs to the road on which the traction engine runs. Strong pulleys, with endless chains, are used to get the log so the team can get a haul on it. Come away it must. Scarcely a word is uttered to these dumb brutes. The driver is merciful on the score of shouting, and uses a goad. He stands in the middle of the team, has a long pole, in the end of which is inserted short spikes. A few dabs of this into the hide of the bullock has the desired effect, and off they go, pulling all together for dear life as it were. They take to the "station ground," on an average, logs that will manufacture into 8,000 feet of lumber. The road on which the traction engine runs is constructed of split cedar, and hewed down perfectly level. In the center of this road-bed, at distances of seven feet apart, are placed concave blocks of maple, on which the logs can ride. As they move along, the "greaser" applies dog-fish oil to each one. The log being free of its bark, the oil takes effect, and along it glides, apparently with perfect ease. The engine makes four trips a day to and from the water, into which the logs are rolled, and thence are towed to the mill by a tug. Following the logs to the mill we saw them hauled up the gangway and placed upon the carriage; two circular saws in very short order take off the slab, one saw being suspended and revolving over the other. The lumber cut is taken on board a vessel lying at the wharf. loading for Hong Kong.

Having heard that the mill across the inlet was a very complete one, we decided on visiting the Moodyville mill, in which Senator Nelson is largely interested. Here we found matters very similar to those at Granville, except that a gang of thirty-six saws is used for cutting the log after it is slabbed. The machinery here is of the very best description, and all of the latest design. The power is obtained from a turbine

water-wheel of fifty horse-power, which drives the planing and such like machinery, while a low pressure engine 750 horse-power drives the saws. A very ingenious edger is in use here, with which, being adjustable, a wide board can be cut into any width desired while passing through, as there are no less than twelve small circulars in the mandrel, or shaft. Logs were brought in on the gangway at one end of the mill in our presence, and sent out at the other, and into the hold of the vessels, of which there were two loading, one for China and the other for South America, each having a carrying capacity of 1,500,000 feet. The lumber was cut to fill a bill, none of it being less than twenty-four feet in length, principally thirty-six and sixty, and some square timber as high as 120 feet, which will give your readers some idea of the length of the carriage ways. The company owns all the houses and ground at Moodyville, and no liquor is allowed to be sold on its property.

There is an abundance of timber on Burrard's Inlet, to last for many years' cutting. The land is of an inferior character for agricultural purposes, where such heavy timber grows, and very expensive to render fit for cropping, as the stumps are such monsters that thousands of dollars would be required to remove them from even an acre of ground. The delta lands of the Fraser are generally overflown by water in the summer, and during the high tides in December. They afford very good pasturage for stock, and as considerable rain falls on the mainland west of the Cascade range, pasture is good from early spring until late in the fall. Plenty of lumber is procurable for fencing purposes, while plenty of timber for building can be procured at any of the mills at Westminster, Emory, or Popham, and landed anywhere on the river's bank. The streams pouring down the mountains afford ample mill sites, and as these streams are never failing, no fear need be entertained of failure in the supply of water.—*Northwestern Lumberman.*

THE AUSTRALIAN TIMBER TRADE.

Messrs. Gemmell, Tuckett & Co., in their monthly timber report, dated Melbourne, June 6th, state that the improved demand for all descriptions of building materials has been maintained during the past month, and the list of sales by auction shows that a large amount of business has been carried rhrough.

American Lumber.—Sales ex *Titan*, *Edmund Phinny*, *Great Surgeon*, from the United States, and *Trevellyan* and *Cedric the Saxon*, from London. Michigan clear pine brought £18 2s. 6d. to £18 7s. 6d. for fair quality, and £15 2s. 6d. for inferior; Canadian clear, £17 10s. to £17 5s., 11×3; Canadian clear, from London, good condition and fair quality, £15 15s. to £15 5s.; 7×3 to 17×3, coarse and in bad condition, £5 12s. 6d. £7 2s. 6d.; w. p. shelving, 12 inches wide, £12; do., wider, £11 15s. to £11 12s. 6d.; clear do.; wide, £14 5s.; w. p. t. and g. ceiling, £9 2s. 6d. to £8 17s. 6d. per thousand feet. super; market closing firm at these rates, with good demand.

Ship-Building.

Halifax, N. S., August 22.—There seems to be quite a "hum" in ship-building in Nova Scotia. The following vesseis will be launched next month:—1,000-ton barque, by Osmond & Brien, Noel; 800-ton barque, by Dr. Brown, Maitland; 1,300-ton ship, by Capt. Cox, Maitland; 1,000-ton barque, by McLellan & Black, of Great Village. Alfred Putnam, of Maitland, is about laying the keel of a 1,100-ton ship, and Capt. Ellis, of the 2,500-ton ship, W. D. Lawrence, is about to commence a sister ship at Maitland. R. P. Crickter, of Kinsport, has taken the contract for a 2,100-ton ship for C. R. Burgess & Co., Cornwallis; the vessel to class 14 years and to be launched in July, 1882. At the same place Vaughan & Power have laid the keel of a 1,800-ton ship for R. M. Rand and others. Messrs. Churchill & Sons, of Hantsport, heve just launched the *Shetland*, of 1,530 tons, the largest barque ever built in Nova Scotia. They are also beginning to build another large barque.

The Fountain of Life is the blood. Keep the fountain pure and all the tributaries of health are in good condition. Burdock Blood Bitters will cleanse the blood from all the impurities, expelling Scrofula and all humors, tones up the debilitated system, regulating the liver, bowels and kidneys, and brings health to the afflicted.

A Novel Mountain Railway.

A curious project is on foot in connection with the well-known baths of La Raillere, in France. The hot sulphur springs which constitute the attraction of the neighborhood are high up on the mountain, and at a considerable distance from Cauterets, in the valley below, where invalids are wont to take up their residence. An engineer has been putting his wits to work to construct a railway for this journey on an entirely novel plan. His idea is ingenious, whether or not it be practicable. He has planned a railway line like a flight of steps, with an hydraulic lift at each of them. A carriage to convey passengers from the village in the valley to the hot baths up the mountains is run on the lower step, and started down a slight incline towards the mountain. It is pulled up by a powerful break as it reaches the platform of the first hydraulic lift, which hoists it up to the second step, when it again runs forward on an incline until it reaches the second lift. This, in like manner, raises the carriage another step, and allows it to run forward, the hydraulic machinery each time raising it rather above its intended destination, so as to get sufficient velocity from gravitation to carry the vehicle forward. Gravitation is the power relied on for a forward motion, and a powerful waterfall higher up the mountain is brought under the yoke for the vertical lifting. Each lift is placed in a kind of tower, and as there are several of these, and the machinery must be a rather costly item, it must, we should imagine, be a somewhat doubtful experiment financially. The scheme, however, is none the less curious and interesting as an engineering device. Of course, it would be applicable only to such special circumstances as are to be found at La Raillere. A good head of water would be indispensable; and this feature in the neighborhood may possibly permit of the idea being carried out.

Dr. Fowler's Extract of Wild Strawaerry cures summer complaints, diarohœa, dysentry, cholera morbus, cholera infantum, sour stomach, colic, nausea, vomiting, canker, piles, leucorrhœa, and all manner of fluxes.

A BARGAIN—GRIST AND SAW MILL FOR SALE, paying 12 per cent. clear; price $9,000; and above percentage guaranteed. Apply to

L14 26 Colborne St., Toronto.

THE TIMBER QUESTION.

BY DR. JOHN A. WARDER, OF OHIO, PRESIDENT OF THE AMERICAN FORESTRY ASSOCIATION.

This is a matter which has no politics in it, but which has already become an important question. In the new north-west part of the State, the people are yet laboring to get rid of the forest, but in the old and early settled portions it is evident to everyone that the war of the axe and the trees has been carried too far.

It is certainly one of the functions and one of the duties of the Legislature to consider this matter. It is an agricultural question also; and why that Board and the College has not given attention to it, is something of a mystery to us.

The first we heard of it, as a practical effort, came from the State Horticultural Society, in the form of a petition for a law encouraging the culture and preservation of forest trees. This was referred to the Committee on Agriculture in the House. Next came a memorial from Colonel Whittlesey, a member of the Committee of the American Association for the Advancement of Science, presented by Mr. Chapman, which had the same reference as that of the Horticultural Society. The Committee of the American Association have presented the whole subject to Congress and the Executive, so far as it has connection with the public lands. President Grant has sent in a message to Congress, and that body is effectually at work offering land bounties for tree planting on the prairies.

The future consequences of the destruction of timber will be appalling if they shall be the same here as in other countries—with our rapid modes of doing everything, this future may not be very distant. It is the object of the Scientific Committee to collect the facts respecting timber destruction as they have developed in Europe.

The papers before our Legislature refer less to the general subject than to what pertains to Ohio, for it is not in the power of Congress to do much for us. This we must do ourselves.

Mr. Chapman reported a bill which has not yet been discussed, which embraces only the encouragement of trees in the public highways. Something more than this must be done eventually; but this is a good beginning. The subject will work its way into notice from the necessity of the case, though its progress may be slow. Some two years since we cuddled the forest trees somewhat, as may be seen by our files, but with very little effect.

People are slow to perceive the advantage of what seems to concern posterity. To show that the growth of trees does not inure to future generations entirely, we quote largely from the memorial of Col. Whittlesey, which was printed by the House. He says:

The benefits of tree planting may be felt in fifteen or twenty years, and timber cut in thirty to thirty-five years.

In Salisbury, Connecticut, on the rocky slopes of the Taconic mountain, too rough for cultivation or even pasture, the spontaneous growth is cut once in twenty-five years for making charcoal, and pays the interest on $100 per acre. It is divided into twenty-five belts or strips, running from the base to the summit of the mountain, one of which is cut away each year. I have seen in southern Illinois, in 1832, a small growth of oak and hickory, on the borders of the prairie, which in 1848, after a lapse of sixteen years, was large enough for many uses on the farm, making two posts or two rails.

In Aurora, Portage county, there is a farm where the shell-bark hickory has been allowed to grow in an old slashing. After twenty years these trees produced a profitable crop of first-class nuts; and the larger ones were cut for axe helves and pick handles. Old settlers of Stark county, Ohio, have told me that where, in the year 1800, there were openings covered with bushes not as high as a man's head, in 1850 the trees were few of them less than fifty feet in height. In Massachusettes a white pine, which had been transplanted, attained a diameter of two feet (at two feet above the ground) and a height of eighty feet in thirty-five years.

The City of Cleveland has acquired the title of the "Forest City," on account of shade trees planted in the streets and public grounds, most of them within twenty-five years. This was brought about by public opinion, cultivated by the example of the late Leonard Case and a few other large owners of city lots. An elm set out by him 1824 still thrives near the south-west corner of the post office. Its girth two feet above the pavement, is seven feet, and consequently its diameter is two feet five inches. In 1836, the Hon. John W. Allen, John M. Sterling, and the late Charles M. Giddings planted native trees in front of lots in which they were interested. By their exertions, the village corporation authorized the same to be done in the north-east quarter of the public square, and in 1839-'40, in other parts of it, under the direction of John Willis. Those trees are principally elms, and now, after a life of thirty-five years, are from one and a half to two feet in diameter. By observations upon nineteen cultivated trees, whose age was known, I find that the average increase in diameter is about two-thirds of an inch each year; the annual layer or ring of growth being not far from one-third of an inch.

For light lumber and wooden ware, the white wood or poplar, the white pine, chestnut, and the linden or basswood may be used in thirty years from the seed. Three to five years may be gained by transplanting young trees. In a field of seedlings the less thrifty can be profitably thinned out and used as fuel, at twelve or fifteen years; and the ground will then produce pasturage. If at the expiration of thirty or thirty-five years it shall be entirely cleared, the soil will be found restored and ready for cultivation.

Every farm of one hundred acres should have at least fifteen acres in growing woodland, in which, by proper care, the crop may always be kept good.

As the primitive forest is thinned out for timber, or by natural decay, by a proper and well advised attention to the second growth it will renew itself perpetually.

In this State, besides the ordinary uses for timber on farms, there is an extraordinary demand for fuel and ties, by railroad companies. Their fuel may be obtained from coal mines, but no substitute is known for wooden ties. The roads of the State now require for repairs, without regarding the laying of new lines, about a million and a half of ties annually.

What is necessary here is the preservation of a proper proportion of wooded land, which is not only valuable property, but is indispensable to the full enjoyment of the remainder. When the growth of native timber is wholly destroyed in the ancient States of Europe and Asia, the region becomes, in process of time, a desert, or so near it to be of little value. The reasons why growing trees have such an important influence upon the increase of inundations, and consequently of low water and of drought, the diminution of atmospheric moisture, which affects vegetation of all kinds, the increase of heat in summer, and of cold in winter, rural beauty, shade, health, and numerous consequences that come on slowly, but in time produce prodigious results, I do not at this time propose to give.

J. A. W.

TIMBER IN BRAZIL.

Within an area of half a square mile, Agassiz counted 117 different kinds of wood, many of them admirably fitted by their hardness, tints and beautiful grains, for the finest cabinet work. The muira-pinima, tortoiseshell wood, undoubtedly the most precious wood in the world, is found in large quantity on the tributaries of the upper Amazon, where the water can be easily used as a motive power. The pao de sangre, the rosewood, the pao de ferro (iron wood), or apulela ferrea, the various species of jacaranda known to natural history students under the name of dalbergia nigra, meehærium violaceum and platypodium elegans, the white and black maraquatiara, the macacauba, the pao santo or holy wood, and the sabuarana, both of which are rivals of the most beautiful walnut—are wasted yearly on the Amazon in amounts ample enough to veneer all the palaces of Europe. Maurice Mauris, the explorer, believes that with the facilities which the Brazillian Government is ready to impart to enterprising industry, the export of these commodities would develop immense profits in the shortest time, while the capital invested need not be enormous. It is only necessary that these woods be introduced into the market to obtain a decided preference over those now most sought after in the two hemispheres. Still richer is the country in timber for the purpose of construction. The acapu *(Voucapoua Americana)* is most plentifully found there, and often in the most imposing proportions. Mr. Mauris has seen dining tables six feet in width made wholly out of one piece. The wood, like all its kindred macaranduba and itauba, or stone wood, furnishes ship timber as durable as teak. The longer these remain in water the stronger and harder they become.

A SUBSTITUTE FOR WALNUT.

BLACK BIRCH TO BE THE WOOD OF THE FUTURE —AS DURABLE AND HANDSOME AS WALNUT.

A short time ago a local sketch appeared in the *Globe* deploring the exhaustion of the supply of walnut. Since that time the subject has been discussed in most of the Canadian papers, and many suggestions have been offered as to the kind of wood that might be used as a substitute.

A *Globe* reporter interviewed several extensive furniture dealers and lumber merchants on the subject, and all were unanimous in saying that the only good substitute is black birch, which is rapidly coming into favor. Black birch is a close-grained, handsome wood, and can easily be stained to resemble walnut exactly. It is just as easy to work, and is suitable for nearly, if not all, the purposes to which walnut is at present applied. Birch is much the same color as cherry, but as the latter wood is now so scarce, and consequently so dear, the dealers do not take much stock in it. It is with difficulty that cherry wood can be obtained at $50 a thousand feet, while birch wood can be purchased at any saw-mill for $16 per thousand feet. When properly stained, it is almost impossible to distinguish the difference between it and walnut, as it is susceptible of a beautiful polish, equal to any wood now used in the manufacture of furniture. When it became known throughout the States and Canada that the supply of walnut was almost exhausted, the dealers set their brains to work to find a substitute, and now since birch has been thought of the price is slowly advancing.

AMPLE SUPPLY.

In the forests throughout Ontario birch grows in abundance, especially if the land be not too boggy. There is a great difference in the wood of different sections. Where the land is high and dry the wood is firm and clear, but if the land where the wood is grown be low and wet, the wood has a tendency to be soft, and of a bluish color. In all the northern regions it can be found in great abundance, and as the tree grows to such a size, little trouble is experienced in procuring a large quantity. The forests of the Manitoulin Islands abound with it, as well as those of the Peterborough and Haliburton districts. The Muskoka district also contains a plentiful supply.

AN ARTICLE OF EXPORT.

During the past few years large quantities of this wood have been exported from the Province of Quebec at a low figure, but this will be stopped when it is known that it is to take the place of walnut in the near future. It is very easily detected among other trees on account of its height, large trunk, and the peculiar color of its coarse bark. Most of the perforated chair bottoms now in use are manufactured from it. There is a species of bird's-eye birch, but it is very scarce, and is not more valuable commercially than the plain woods. In consequence of the prospect of its speedy substitution for black walnut, it should be husbanded with the greatest of care.

HARD TO FLOAT.

An evidence of the weight and solidity of the wood is the fact that it will sink after being a few days on the water. This fact is a slight drawback to the work of having it conveyed to saw-mills. One of the principal means resorted to is binding it together with pine logs, and thus it is brought to the mill, but pine cannot always be found where birch grows, and it is then necessary to haul it, sometimes a great distance, with the aid of horses.

The golden age—the present—when Esterbrook's popular Steel Pens are within the reach of all. The stationers can supply them. Wholesale by the leading Toronto stationers.

SAW MILL BURNED.

A large lumber mill belonging to White, Clarkson & Co., New Haven, Conn., stood close to the frontier line, between Abercorn and Richford, but was totally destroyed by fire in the forenoon of Saturday, August 6th. The fire began a little after 7 a. m. in a building adjoining the engine room, packed with shavings for use in heating the boiler. Its cause is not certainly known. It is supposed to have originated from heating of the damp shavings, or to have been set on fire by a spark from a locomotive, the railroad track being close by. Explosion of the boiler was feared, but did not occur. The flames were carried by a south wind directly over the main building, and all was consumed, together with 700,000 feet of lumber ready for shipping, which was piled up behind it. By noon there remained only the brick walls of the boiler-house, its blackened engine and tall iron chimney. It is said that this engine has now passed through the fire for the fourth time. Long rows of black beams marked where the great flame building stood. Nearly all the machinery was destroyed, or too much damaged for use. The planing machine is sound, the fan or blower injured. Happily no lives were lost, nor not any serious accident occured among the 150 or 200 volunteers who gathered from Abercorn and Richford. The burning sun of that morning, however, intensified by fire, prostrated Lyman Smith, of Richford, and two or three others. Dr. Smith was present aiding the sufferers, who were taken to Richford. Several adjacent buildings caught fire, but all were saved except the frame of an old barn. Nearer to the fire than this stood a small house occupied by the fireman, Dane. It was saved, but all hands being occupied, his wife (who can speak but little English) was alone with her baby, and fainted from terror and excitement. The only water available was a small pond near by. Mr. Priest, the manager, did all that could be done with great coolness and energy, and constant exertion. He expects it to be rebuilt immediately. —*Cowansville Observer.*

AMERICAN BARGES.

A recent determination of the United States authorities to enforce the strict letter of the law concerning lumber barges, in the carrying trade between the Canadian rivers and New York, is likely to benefit barge owners. Hitherto it has been customary for large American barges loading lumber at Ottawa for New York to take a full load, which averages about 175,000 feet. A barge with such a load as this cannot pass through the Champlain canal, owing to the insufficient depth of water. The custom, however, has been for years past to transfer a portion of the barge's cargo to scows drawing little water, and bring the lumber into this country in different portions. According to the strict letter of the United States law, when a vessel clears from a foreign port, with a certain quantity of any kind of freight, it must arrive with the same quantity specified in the clearance papers. With regard to the lumber laden barges passing through the Champlain canal, this has, for years past, been winked at for the convenience of shippers, but the United States authorities have now decided to rigidly enforce it. This will have a detrimental effect on shippers, but will benefit barge owners, as under the new regime they will be unable to take more than 125,000 feet of lumber to the barge load, thus necessitating a greater number of trips. It is believed that toward the close of navigation, when there will be a large lot of lumber to come forward from Canada, the barge owners will take advantage of the new state of affairs to raise their rates.—*Northwestern Lumberman.*

Buttermilk as a Summer Drink.

An Americcan physician asserts that for a hot-weather drink nothing equals buttermilk. It is, he says, "both drink and food, and for the laborer is best known. It supports the system, and even in fever will cool the stomach admirably. It is also a most valuable domestic remedy. It will cure dysentery as well and more quickly than any other remedy known."

BURDOCK BLOOD BITTERS cures all diseases of the blood, liver and kidneys, female complaints, nervous and general debility, and builds up the entire system when broken down by disease.

Chips.

AN English firm is said to have offered Mr. David Moore $300,000 for his timber limits situated on the C.P.R.

THE men are at work grading the road for the new siding by which the Grand Junction and Midland cars will have access to Hazlett's mill.

THE supreme court of Maine has decided that sawdust and shavings are included in the act prohibiting refuse from being thrown from the mills into the Penobscot river.

A BUFFALO despatch dated August 15th, says that lumber freights are more active, several boats having been loaded for New York at the rate ruling for some time past, namely, $2.50 per ton.

THE flywheel to the engine in Henderson Brothers' mills, Montreal, Quebec, is the largest ever put up in Canada, it being fourteen feet four inches in diameter, and thirty-two inches face. The double belt made for it is full hide width—twenty-inches wide and eighty feet long.

A LETTER from a Chicago lumberman speaks of the great lack of dock room on which to handle the great amount of lumber which has been pouring into Chicago during the last few weeks. It says that in consequence of this there was a falling off of 50 cents during a day or two of last week to save demurrage, but adds that prices rallied quickly.

A BOSTON paper says that a short trip among the lumbermen fully substantiates the statement made a few days since that the Eastern furniture manufacturers aro seriously troubled at the scarcity of black walnut timber, and that the whole supply in the United States has now become entirely inadequate to the demand.

AN Ottawa correspondent writing on August 18th, says that a raft belonging to Mr. J. R. Booth is now running the Chaudiere slides. Rafts belonging to Campbell Bros. and McLachlin Bros. are above the Chaudiere. The raft of the latter is said to be the finest taken out this year, and is said to have been sold at 40c. a foot, to be delivered at Quebec.

A FIRE BROKE out in McArthur and Rayside's saw mill at about four o'clock, on Aug. 19, at South Lancaster and lasted about one hour and a half, burning the saw mill down to the ground. The machinery is damaged considerably. The mill was insured in the Queen's of Toronto for two thousand dollars. The estimated loss is eight thousand dollars. The cause of the fire is unknown.

A CORRESPONDENT writes from London, Eng., to a furniture journal that American whitewood is very much used for ebonized work. It is found to take the stain remarkably well, and is generally preferred to any other kind of wood. Well squared, straight, round logs, of American walnut are quickly bought up at good prices. It is the poor quality, faulty, and ill-made log that are difficult to place.

A REPORT from Beef Slough, Wis., last week, says the total number of logs consigned to the different mills down the river, to date, is 256,821,810. The total amount rafted is about 267,000,000. The amount rafted last week was about 17,000,000 feet; but hereafter, owing to the rapid decline of the water, the rafting will not exceed much more than 2,000,000 per day, and it may stop altogether, until the fall rise in about two weeks.

FINAL arrangements have been completed by Messrs. Allan, Grant & Co., of Ottawa, to send to this city a large number of cars of square timber, consigned to Messrs. Cook Bros. & Co. The first train of this wood is expected here tomorrow. A switch will be run on to the custom house wharf to accommodate this cargo, which, when arrived here, will be thrown into the pond, enclosed by a boom, then rafted and towed to Messrs. Cook's cove.

A New Invention.

An improved machine for passing logs over dams has been patented by Mr. David B. Weaver, of Hopewel Township, Huntingdon County, Pa. This invention consists principally in providing the top of the dam with a strong beam or shaft having any suitable number of radial arms, the beam or shaft being adapted to be turned in its bearings by any suitable means for throwing logs over the dam.

AUTOMATIC FIRE SPRINKLERS.

A recent issue of the *American Machinist* contains a very interesting account of a series of experiments with different styles of sprinklers for extinguishing fires in sawmills or other establishments that are in danger of quick destruction by fire. The report will prove interesting to many of the *Lumbermen's* readers, though we are not inclined to think that it determines conclusively the relative merit of the different devices tested. We extract from the article as follows :—

For many years the most hazardous portions of mills have been defended against fire by parallel lines of perforated pipes, extending across the room near the ceiling, and connected with a water supply, furnished by pumps, reservoirs or tanks, so that the room may be showered by opening a valve on the outside of the building. This arrangement is particularly valuable in rooms difficult of access from the outside, where the contents are very combustible, or where the smoke is too pungent for human beings, as that of loose cotton.

Notwithstanding the absolute necessity of such apparatus, the use of this system has been open to serious objections. Property is frequently damaged by water let on the sprinklers, by accident or malice; the orifices in the sprinkler pipes are liable to be obstructed by paint or rust; and in case of emergency the water cannot be concentrated on the fire, but will be spread over the whole or half of the room covered by that system of sprinklers. The efficiency of the best planned system of pipe sprinklers is limited by the vigilance of the one discovering the fire, and the presence of mind which opens the right valve.

Within a few years there has been another type of sprinklers, termed, from the method of their operation, "automatics." They each consist of a rose head, or its equivalent, for throwing water in an upward direction over as large an area as is practicable. The distributing pipes and their branches are arranged so that these heads are about one foot from the ceiling, and ten feet from each other. These heads are kept closed by thin metal caps over the top, or valves within, either being secured by bismuth solder, which melts at 165° Fahrenheit. (Composed of one part each of tin, lead and cadmium, and four parts of bismuth.) For dry rooms and similar places, an alloy which fuses at 250° is used. The water pressure remains constantly upon these sprinklers, and when the heat in any portion of the building exceeds the melting point of the solder, the head is opened, and the water flows from the nearest sprinkler. The first supply is usually from a tank placed in the mill tower, and this is supplemented by a reserve supply, furnished by pumps, or a reservoir. The lowering of the water in the tank sounds an alarm, by means of an appratus which rings a bell or blows a whistle. This system of automatic sprinklers is no new and untried experiment as the representatives of the various sprinklers have constructed buildings in which hundreds of fires have been set and extinguished. There have been twenty-one fires in mills put out by automatic sprinklers, and in no case where properly supplied with water have they proved inadequate to serve their purpose.—*North Western Lumberman.*

Spiders Obstruct the Telegraph.

One of the chief hindrances to telegraphing in Japan is the grounding of the current by spider lines. The trees bordering the highways swarm with spiders, which spin their webs everywhere between the earth, wires, posts, insulators and trees. When the spider webs are covered with heavy dews they become good conductors and run the messages to earth. The only way to remove the difficulty is by employing men to sweep the wires with brushes of bamboo; but as the spiders are more numerous and persistent than the brush users, the difficulty remains always a serious one.—*Scientific American.*

ZOPESA.—A healthy man never thinks of his stomach. The dyspeptic thinks of nothing else. Indigestion is a constant reminder. The wise man who finds himself suffering will spend a few cents for a bottle of *Zopesa*, from Brazil, the new and remarkable compound for clensing and toning the system, for assisting the Digestive apparatus and the Liver to properly perform their duties in assimilating food. Get a 10 cent sample of *Zopesa*, the new remedy, of your druggist. A few doses will surprise you.

Communications to insure insertion (if accepted) in the following number, should be in the hands of the publishers a week before the date of the next issue.

PETERBOROUGH, Ont. SEPT. 1, 1881.

WASTE OF TIMBER.

Some of the writers in the lower provinces are calling the attention of the people to the serious waste of wood arising from the careless way in which forest trees are cut. Mr. E. Jack, of New Brunswick, shows a loss to that country of upwards of $500,000, on the lumber which has been cut on the Crown lands alone in that Province during the six past years. If to this be added the loss on that cut on the New Brunswick Land & Lumber Co.'s property, containing 1,600,000 acres in round numbers and on other land owned by private individuals, this will be vastly increased.

We wonder very much that the Government of New Brunswick, as well as the Land and Lumber Co. referred to, do not take joint action in the matter of cutting spruce logs, and compel the party cutting to run the log into the branches until it reaches a point where the diameter shall be at least not less than nine inches at that end.

The matter of forest fires arising from settlement merits the most serious attention of all of the provinces. We are informed by leading lumbermen on the St. John that settlers are allowed to locate themselves on spruce lands on the rivers in the Province of Quebec, where they can only eke out a miserable existence from farming, and that the fires which have extended from these settlers' clearings have cost the Province of Quebec hundreds of thousands of dollars in loss of stumpage on the St. John river and its branches alone.

We are informed that under the existing law regulating the survey of saw-lows in New Brunswick, these are required to be not less than (11) eleven inches in diameter at the top end. We are also informed that this law has received no attention in so far as its revision (which is much needed) is concerned, for many years.

Would it not be well for the Province of New Brunswick, which is so much interested in this matter, to examine into the working of the law as it now stands, and to cause such amendments therein to be made as the circumstances and the times require, these being far different from what they were when the law was framed?

A DESPATCH from Ottawa says it is understood that Mr. David Moore of that city has closed with an English company for his timber limits on the line of the Pacific railway.

OTTAWA.

From Our Own Correspondent.

LUMBER TRADE.

The lumber business is somewhat duller than it was two weeks ago. Recent sales, however, have been at prices slightly in advance of those secured in the spring, the recent advance in lumber at Albany and Tonawanda having made the market here firmer. It is quite evident that the cut of the Ottawa valley mills, and principally those of the Chaudiere, will not be so large as that of last season, owing to the quantity of logs that will not reach their destination. There is no marked changes in lumber quotations. Stock lumber runs from $18@23 per M. according to width and quality, and siding from $20@30 per M., according to thinkness, width and quality.

FREIGHT BUSINESS.

Shipments of lumber have been duller during the past week than at any other former time the present season, but so soon as the water in the Ottawa begins to rise, it will improve. The river has not been so low for a great many years as it is this. Steamers or barges with any sort of heavy draft find it difficult to get through the locks at Carillon and Ste. Annes; in fact, ordinary barges have to take light loads, and this does not pay very well. There is no change in freight rates, but in the fall they will doubtless have their usual rise. The opening and close of the season is always the best for boat-owners.

IMPROVING THE OTTAWA.

The Government are having quite extensive improvements made on the Ottawa river, in order to improve navigation. The works at Greece's Point are being pushed forward steadily, by Messrs. Stewart, Strachan & Nicholson, while the further enlargement of the locks at Ste. Annes will be again prosecuted the coming winter by the contractors, Messrs. O'Connor & Cassidy, who have got a great deal of necessary material on hand. With the enlargement of the locks at the Point, Carillon and Ste. Annes, the river navigation will be greatly improved. At this place the large reef of rock lying a short distance below the Union Suspension bridge, in the center of the river between Eddy's and Booth's docks, is to be removed, Government workmen having started operations. It has obstructed the channel, and not only been dangerous to steamers and barges, but to the bridge when the spring freshet occurs, preventing the water from readily flowing down. On the upper Ottawa improvements to the Culbute channel are being made by the contractors, Messrs. Poupore & Charlton. In a couple of years the river will be much improved. In this connection I might also mention that Mr. Askwith, contractor, is engaged in dredging the slabs and sawdust away from the mouth of the Rideau canal locks. Although the Government passed a law, several years ago, prohibiting slabs or sawdust from being thrown into rivers, the Ottawa in this section generally shows a pretty good quantity, but where it comes from the Chaudiere lumbermen don't seem to know.

THE UPPER OTTAWA LOG DRIVE.

Mr. G. B. Greene, manager of the Upper Ottawa Improvement Co., which controls the log drives for the various lumbermen in the Ottawa valley, states that the drive in progressing very fairly considering the low water. There were not such a great quantity of logs stuck in the smaller streams, but difficulty has been experienced on the main rivers owing to the rapid falling and present lowness of the water. At the Flat Rapids, on the Madawaska, a good many logs belonging to Mr. J. R. Booth are stuck, while upon some more rapids further up Messrs. Bronsons & Weston have a large number fast. Both lots will likely be left until the rise of waters in the fall. At the Chats rapids, thirty miles above Ottawa, a great many logs are constantly being stuck, about twelve thousand being fast at the present time. A gang of men are at work there. The rapids are long and shallow, and at very low water it is hard to get logs through. The last logs that will come down to the mills this season will be in the Ottawa river the first week in September, and reach here about the middle of October. The Improvement Company have about two hundred and fifty men in their employ right along during the summer season.

T. W. Currier & Co., formerly of Ottawa, are running a saw-mill at Aylmer in connection with their sash, door, blind and furniture factory, manufacturing a considerable quantity of lumber.

Lath is being sold at from 80 to 85 cents per thousand wholesale. Considerable quantities have been shipped to Montreal and the States this season.

Perley & Pattee, J. R. Booth and E. B. Eddy are the only manufacturers of deal at the Chaudiere, and the bulk of what is produced is sent to Quebec. $40 per thousand for two-thirds quality is what present stock is held at.

No logs have passed the Gatineau works for two weeks past. Ex-Ald. Bingham has his men at work on the final sweep about forty miles up, and it will be four or five weeks before they will be down.

Perley & Pattee's mill is closed down for a day or so for want of logs. J. R. Booth is running his day gang only, and Capt. Young his night gang; and Bronsons & Weston one mill by day and the other at night.

Ottawa, Aug. 25, 1881.

FIRE AT LONGFORD MILLS.

ORILLIA, Ont., Aug. 17.—To-day, at 2.20 p.m., word was brought to Orillia that the Longford Mills were ablaze. Capt. Hatley and the local fire brigade were soon out, and having taken the engines and hose reels to the Northern railway station, were delayed awaiting the arrival of a special from Barrie, which arrived about 3.30. The run to Longford was made in fifteen minutes, and the brigade were soon at work. The fire was first discovered in the rear of one of the dwellings, and soon communicated with the surrounding buildings, viz., a boarding-house, offices, store and store-houses, and a few private houses, the whole block being totally destroyed. The furniture and contents were nearly all saved, but damaged by handling. The buildings were owned by the company, and were insured for $6,500. Much thankfulness is expressed that the mills were saved, and although the employees will have to put up with rough beds for a few nights, they will have the consolation of constant work, which was vouchsafed to their brethren in labor at the Waubaushene mills. Many thanks are due to Captain Hatley and his men for turning out as they did, many losing their half-day. The brigade worked manfully.

THE *Timber Trades Journal* is pleased to learn that arrangements have lately been made between a house in Glasgow and a Canadian mill for a regular supply of pine doors and mouldings, "this being a branch of the Dominion trade which we hope to see greatly developed."

THE Ottawa *Citizen* says that the following are the quantities of timber passed through the works mentioned during the week ending 13th August:—

CHAT'S SLIDE.

Rafts.	Owners.	Cribs.
1	J. R. Booth	216
1	Young & Bronson	89
3	McLachlin Bros.	271
1	R. Campbell & Son	151
7		727

A raft belonging to J. R. Booth composed of 88 cribs, containing 296 pieces white pine and 2,041 pieces red pine, left Ottawa on the 10th instant, and on the 16th Messrs. Young & Bronson's raft of 89 cribs, containing 122 pieces white pine and 2,276 pieces red pine, left Ottawa for Quebec.

FOURTEEN years ago a Mr. Sterling, of Monroe, Michigan, placed two gate posts of white oak in front of his residence. When they were set he bored into the top of each with an inch and a half auger a hole three inches deep, filled it with common salt, tightly plugged it, and coppered the posts. Having occasion recently to change the location of the posts, he found them as sound from top to bottom as the day they were planted.

MR. GEO. STETHEM, of Peterborough, importer and dealer in harware, has handed us a change of advertisement too late for this issue, so we can only give the principal points in this notice. He calls attention to his stock of Canadian as well as American axes, lance-tooth saws, special broad and blocking axes, and trimmings for heavy harness,

A WORD ABOUT THE HARDWOODS OF THE MARITIME PROVINCES.

BY EDWARD JACK.

The shores of that part of New Brunswick which borders on the Bay of Fundy, from the north of the St. Croix to a point not far from Quaco, have been denuded of their hard as well as soft woods. From this to Upper Salmon river, in the county of Albert, there is a great abundance of yellow birch and other hardwoods. The growth is short, and not of sufficient size to make a large class of timber, but it is sound and admirably adapted to the purposes of shipbuilding, as well as to the manufacture of articles of furniture and other uses.

The great difficulty attending the export of hardwood from this locality is the absence of harbors in which vessels can ride at anchor, or remain afloat at high water, all the harbors along that coast being what are usually called "high water harbors," from the fact that the recession of the water leaves them dry at low tide.

A large part of this coast is sparsely settled, and its shores are usually steep and rugged. Fires have here done little damage; indeed, there is something in the nature of the soil, even where the forest is of spruce, in this part of the Province, which prevents the spread of the devouring element.

Schooners can enter many of these harbors at high water, and can then be loaded aground, leaving with their loads when the tide is sufficiently high.

For manufactories of articles of hardwood, where a good deal of labor has to be bestowed on the raw material, and where the articles manufactured could be boxed up to be put together at the place to which they might be exported, no better opportunity could be desired, as great quantities of most excellent wood can be hauled in the log directly to the manufactory.

In a short article, such as the present, I can afford to touch upon only one part of Nova Scotia in relation to this subject. Having occasion last season to follow the Avon river, which empties into the Bay of Fundy at Windsor, to its source near the head of Gold river, which empties into the Atlantic not very far from Chester, my attention was strongly directed to the great quantities of excellent rock maple trees which bordered the road and extended some distance from it. The road which was followed by me was that which is called the New Ross road. Leading from the Avon about sixteen miles from Windsor to Gold river, it was very rough, almost unfit to travel upon with a wagon in summer. The country rock was of granite, with boulders of which the whole surface of the country was covered; among them, especially within a few miles of New Ross, there was a splendid growth of rock maple extending for a number of miles.

Upon making enquiries at New Ross (where there is a good hotel, two churches and three or four houses) I found that the people of the country would deliver this maple there, round, in short lengths, for about $1.50 per cord. I had noticed among it a good deal which was bird's-eye.

From New Ross to Chester, which possesses an excellent harbor and where there are plenty of wharves, the distance is about fourteen miles. As the people living in the vicinity of New Ross have abundance of leisure, and as teams are plentiful, this wood can be hauled during winter very cheaply to Chester, and there placed upon the wharves for shipment to Europe.

There are numerous other places as well in Nova Scotia as in the interior of New Brunswick, especially along the line of the New Brunswick railway, where vast quantities of most excellent beech, birch and maple can be had very cheaply in the log, and the vicinity of this wood to railway transport and to the sea board renders river driving unnecessary.

It may be safely asserted that the British Provinces on the Atlantic offer the best opportunities to be found on the American coast for those desirous of obtaining an annual supply of hardwood, the source of which will last for years.

A POSITIVE FACT.—It is now established beyond controversy that DR. FOWLER'S EXTRACT OF WILD STRAWBERRY is the most perfect cure for all forms of bowel complaints, including cholera morbus, dysentry, colic, cholera infantum, nausea, canker of the stomach and bowels, piles, etc. Beware of opiates and poisoning drugs, that only check for a time and produce inflammation. WILD STRAWBERRY is safe and certain in its effects.

FOREST TREE CULTURE.

Our thanks are due to the Hon. J. G. Joly for a copy of a brief essay on the above subject, written by him last winter for the Montreal Horticultural Society. The paper contains some very suggestive remarks on the good results which might be achieved in a few years were farmers all over the country to turn their attention to sowing the nuts or planting the seedlings of suitable forest trees. They can be placed in unoccupied plots and corners, and with suitable care in selection, will grow well in spots useless for the production of any other plants. Mr. Joly then proceeded to give some of the results of his experiments in tree planting in Quebec. He paid particular attention to the black walnut, in view of its great economic value, it being worth at present about a dollar a cubic foot. Of this he says :—"True, it did not grow spontaneously anywhere in the Province of Quebec, but this appeared to me no conclusive reason why it should not grow and flourish here. The lilac comes all the way from Persia, and it spreads out its leaves earlier and keeps them unchanged later than our typical tree, the maple. I did not fear our great colds, for in the west, the natural home of the black walnut, the thermometer often ranges as low as here, though for a shorter period at a time."

He procured a bag of black walnuts in 1874, late in November, and sowed them at once, though he had to remove the snow and break through the frozen ground in order to do so. They came up about the 10th of the following June, not five per cent. failing. Without any artificial shelter those not transplanted attained in six summers' growth to an average height for four of the largest of fourteen feet. Other lots which were transplanted are doing well, but are considerably smaller. In the pamphlet Mr. Joly says :—"Judging by the growth of the living trees and the rings of the timber when cut, I do not hesitate to say that a black walnut, under ordinary circumstances, at the age of seventy-five years will have attained twenty-one inches in diameter, and will contain at least fifty cubic feet of timber, the actual value of which is about one dollar per cubic foot. He does not undertake to say how many such trees will find room on one acre of surface, but feels sure that trees of twenty-one inches in diameter standing in a single row will have space enough at eighteen feet distance from each other. With reference to the above calculation as to the length of time required for the walnut to reach a marketable size, Mr. Joly, in a note accompanying the pamphlet, after referring to the interest which has been excited all over the Dominion by the *Globe's* articles on the black walnut, says :—

"Generally those who warmly advocate some new undertaking are apt to exaggerate its advantages. In my wish to avoid that mistake I have fallen into a worse one, and some of my remarks, especially those connected with the number of years required for maturing the black walnut, may tend to discourage those willing to undertake its culture.

"By carefully looking into this matter since last winter, I think the number of years required for giving a commercial value to the black walnut tree is not as considerable as I have stated in the essay, and ought to be shortened by at least one-fourth."

Mr. Joly's essay gives also some interesting facts and suggestions based upon his experience in the cultivation of the butternut, white oak, white elm, maple, ash, tamarack, Russian pine and poplar, all of which grow in Quebec. It is greatly to be desired that farmers all over the Dominion would set about planting such trees in clumps and rows in suitable spots. Not only will they or their sons surely find them some day most valuable additions to their farms in a pecuniary sense, but nothing would add so much to the beauty and picturesqueness of the scenery in the different localities. No doubt much prejudice will have to be conquered before this will be done to any great extent, for, as Mr. Joly observes, many of the people have for generations "been brought up to look upon the forest tree as their natural enemy, to be got rid of at any cost, hacked down, burnt out of the way (for want of a better mode of disposing of it) and still troubling the settler for years with its ...ing stump." The writer of this article well remembers when, some twenty years ago, he had brought some elm saplings from a distance of thirty or forty miles in his buggy (so clean a sweep had been made in the locality), and was engaged in planting them, with what indignation one of the old settlers passing by regarded the operation. "Young man," said he, "if you had undergone as much toil and trouble as I have in cutting down those trees and getting the pesky roots out of the soil, you would find some better employment than planting them again. It always makes me angry to see it done."—*Globe.*

CHAUDIERE STEAM MILLS.

The following letter appears in the *Witness* :—

SIR,—Constant attention to business in these prosperous times has precluded the possibility of giving much heed to newspaper literature, but occasionally statements are made of so peculiar a character by anonymous writers that people on the spot are astonished, and wonder how editors can allow themselves to be imposed upon, and put into circulation what with very little trouble they would find out was purely fictitious and imaginative. This holds good in reference to what appears in your issue of the 8th instant, purporting to be a "special" from your Ottawa correspondent. It is there stated that "Mr. Rochester's steam saw-mill has shut down for the want of hands, the men having nearly all engaged to go to Eau Claire, Wisconsin. A party of about 200 mill men leave to-night. Their passage is paid. Ordinary hands are to receive $1.50 per day." In so far as I and my men are concered there is not one word of truth in the statement of your correspondent. On Saturday last, the 6th inst., my mill did not run for the simple reason that the "governor" of the engine had to be taken off and sent to the machine shop for repairs. These were promptly done, and the mill started again on Monday morning, and then, instead of stopping "for want of hands," not a solitary man in my employment had been hired to go to the States. In consequence of the excessive heat which prevailed here as elsewhere during the week ending on the 6th, the men were glad of two days' rest instead of one, and were ready for work on Monday morning. As to "want of hands," it happens that had I required fifteen or twenty more hands I could have hired them without difficulty, notwithstanding the alleged exodus. In regard to the statement of your correspondent about "200 mill men leaving to-night," &c., I am only interested, as others ought to be, in these outrageous reports of multitudes leaving Canada for the United States. Most have no more truth in them than the above, and all are adapted, if not designed, to belittle Canada and elevate "the States." Since I saw your "special," I made diligent enquiry on the subject, and from the best information am prepared to say that not one single man in regular service here has left his employment to go the States. I am told there has been a person in the city pretending to hire men, who succeeded in getting some few individuals to hang about the streets for some days. He informed the men that he had telegraphed to his employers and could get no answer. I understand the would-be boss is still here, and so are the men, and likely to be so for all that yet appears to their advantage.

JOHN ROCHESTER, M.P.

Ottawa, Aug. 11, 1881.

Conflagration in St. John.

ST. JOHN, N.B., August 25.—Hilyard Bros.' saw-mill, on the Strait Shore, was totally destroyed by fire this afternoon, caused by the woodwork supporting the boiler giving way. The mill was worth $30,000 ; insured for $10,000, divided as follows :—Commercial Union, $5,000 ; Queen, $3,000 ; Liverpool and London and Globe, $2,000. A quantity of lumber belonging to Guy, Bevan & Co. was also destroyed. One hundred persons are thrown out of employment.

DYSPEPSIA.—Strengthen your digestion—tone the stomach for utilizing and assimilating every atom of food you take ; the body needs it for strength and vigor. *Zopesa* cleanses the entire system, stimulates the Liver, keeps you regular, and able to eat ten-penny nails. Letters and postal cards come in daily, telling of cures and help from *Zopesa*, from Brazil. *Positive proof* of the health and vigor it gives in a ten cent sample. Ask your druggist.

THEY ALL DO IT.—Everybody uses "TEABERRY" for the teeth and breath, the newest, brightest, coziest little toilet gem extant. Try a 5 cent sample.

FOR SALE.

The Dexter & Whitwam Manufacturing Company, offer for Sale the Entire

Real Estate Plant and Machinery

OF THEIR EXTENSIVE

BENDING & TURNING FACTORY

Situated in the City of St. Thomas, in the County of Elgin, Ontario. For full particulars apply to H. BROWN, Manager, or E. MOORE, President. L20tf

AUCTION SALE

OF

VALUABLE LIMITS,

Situate on the Gatineau River and Lake Keepawa, 387½ Square Miles.

The following valuable limits owned by Messrs. Ross & Co., of Quebec, will be sold at Public Auction at the Grand Union Hotel, in the city of Ottawa, on

Tuesday, the 20th Day of September

NEXT, at half past two o'clock, p. m., viz :—

	Sq. Miles.
Lake Keepawa, Berth No. 48	50
" " " " 49	30
" " " " 54	30
" " " " 55	50
Total	160

	Sq. Miles.
Gatineau River, License No. 189	50
" " " " 190	50
" " " " 191	50
" " " " 192	50
" " " " 193	27½
Total	227½

The Keepawa limits are in a good pine country, and adjoin limits owned by David Moore, J. R. Booth, John Ross, of Quebec, and the British American Lumbering and Timber Company.

The Gatineau Licenses front on the river, and adjoin valuable limits owned by Gilmour & Co., and Hamilton Bros.

These limits are admirably situated for lumbering purposes, and well worthy the attention of the trade or speculators.

Terms and conditions of sale, which will be liberal, will be announced at the time of sale, or can be had from the Vendors, Messrs. Ross & Co., Quebec, or from

O'CONNOR & HOGG,
of Ottawa, Solicitors for Ross & Co

TAKING CARE OF THE TIMBER.

One of the most hopeful attendants upon the development of the lumber industry of the future is found in the fact that through a persistent and intelligent presentation of the actual resources of the forests, and of the yearly and increasing demand which is made upon them, such as has been the mission of journals devoted to this interest during the last decade, the wastefulness which so pre-eminently marked the earlier operations in the forests, is well nigh overcome, and an intelligent appreciation of the value of standing timber has taken its place.

* * * * * * * * * * * * * *

Even after the value of timber began to be realized, and its owners began to look for some benefit from it, the wastefulness which took place was, from the standpoint of the present day, simply appalling. Fifteen, nay ten, years ago it was a well nigh universal custom for the operator in the woods to select only such trees as gave promise of yielding a proportion, at least, of the better grades of lumber, leaving all of twelve or fourteen inches diameter, and all which were not pretty nearly first-class in appearance, to stand the chance of destruction from fire, or at least, looking upon them as of so little value that when the best timber was taken, the land was allowed to go back to the State in default of the payment of taxes. In 1868 two partners in settling their business and dividing resources, differed as to the value of one lot of 400 acres, which had been stripped of its valuable pine, after the manner then customary. They agreed to mark upon a paper what each considered it worth, and what each would either give or take. One marked $300, the other $500. In order to arrive at a settlement, the proposition to divide the difference was accepted, and the purchaser, after holding the land for a few years, sold nearly $20,000 worth of pine from it. Both were keen, shrewd lumbermen, who thought they knew the value of each stick of pine which they owned—and they did, at its then existing value—but neither had as yet comprehended the fact that a tree of less than fourteen inches diameter had any value. It was this view of the case which led to estimates only ten years ago which, if correct, would have exhausted the pine of Michigan before this season, instead of giving it a lease of several years still longer continuance. This state of things is now happily at an end. The value of standing timber is fully realized, not only by the lumberman, but by the farmer, and we venture the prediction that but few localities, and bnt few pioneers in settlement, can now be found in the land who do not have an eye both to their own financial benefit and the demands of the future in the conservation of the timber growth. Not all of them will have patience to await the coming of the saw-mill to their neighborhood, or of the speculator who is seeking for timber, but in a large degree the wasteful destruction of trees is a thing of the past, both in hardwoods and pine growths, and the smaller sizes of timber are being utilized, until in the so-called pine districts even the smallest trees are in some manner prepared for market and public use. Could but some means now be devised to prevent the wastefulness and destruction caused by forest fires, the balance of the timber now remaining in the country might well be said to be in a fair way to contribute in its entirety to the nation's growth and advantage.—*Northwestern Lumberman.*

It is a fact well-known by dealers in hardwoods that there is a large amount of fine walnut in Indian Territory, and many dealers unmindful of the law governing its exportation, are doing a thriving business in securing it. A few days ago several mills located on Cherokee territory were seized by authority of the chief of the Cherokee nation. Among the mills was one belonging to Junk & Huff, who have been operating for several years, and who have shipped their lumber largely here and to Indianapolis. They have been working under a permit of a half-breed named Wheeler, son of Judge Wheeler, of Fort Smith, Ark., but the Cherokee council denies that Wheeler has any right to give such a permit, and when the firm refused to pay the required royalty, the seizure was made. A large lot of lumber was also taken possession of.

THE LUMBER TRADE OF NORWAY.

The following figures are taken from a report recently published by the directors of the Lumber Association of Christiania, and forwarded to the Government by Mr. Gerhard Gade, United States consul.

During 1880 the lumber firms marked 2,224,740 logs, which, with only a loss of three per cent., were floated down the Glommer river to their destination, and delivered to their owners or at their mills. The result proved much better than was anticipated in the spring and summer, which are usually dry seasons. Timber floating was considered successful in almost all the Norwegian rivers, as of the 8,160,000 logs destined for floating throughout the country, only eight per cent. remained in the rivers. Sweden was not so fortunate. In the rivers emptying into the Gulf of Bothnia, only 6,000,000 logs out of 10,680,000 old and new ones reached their destination.

By calculating the average price in 1880 of the logs delivered for floating in the Glommer river, from reports of more than 12,000,000 we find that the gross value of a log was about $2.45. The forest owners of the district received $5,450,613 for their products. If we deduct the producer's expenses for cutting, gathering, transporting and floating the logs in the tributaries to the Glommer river, estimated at $1,614,000 the net profit in 1880 for the forest owners was $4,005,600, or about $1.80 a log.

Norway exported in 1880 an aggregate quantity of 894,816 register tons of lumber. England took sixty-seven per cent of it, and France eleven per cent. By comparing the foregoing figures with those of the export lists in previous years, we observe that Norway has only in the favorable years 1871 up to 1876, excepting 1875, exported larger quantities than in 1880. The export of planed wood is always on the increase, and amounted in 1880 to more than a fifth part of the whole export. That article increased from 96,445 tons in 1870 to 193,654 tons in 1880. Sawed timber declined from 428,553 tons in 1870 to 245,548 in 1880. Square timber and other hewn timber declined from 169,743 to 100,351 tons. Spars, mining timber and pit-props rose from 100,552 to 295,616 tons, and staves from 19,631 to 40,061 tons.

Among foreign markets, England ranks first, with an increased importation since 1879 of 156,498 tons; of this, 32,745 tons were planed lumber, 37,504 tons hewed timber, and 85,580 tons spars, mining timber, props, etc. Next to England comes France, with an increase from 1879 of 26,567 tons, 4,355 tons of which were planed timber, 17,968 sawed, 2,639 square timber, and 1,739 staves. This country imported in 1870 only 7,869 tons planed timber from Norway, but in 1880 the importation reached 19,963 tons.

Germany declined considerably on account of the protective tariff, which was carried into force on October 1, 1879. The export in 1880 was only 36,203 tons to 59,962 in 1879, a difference of 23,559 tons, which fell chiefly on planed lumber; the reduction in that export being 23,303 tons. The new market which the Norwegian planing works have found in Holland promises well. The duty on planed boards, which formerly made shipments to that country impossible, was taken off in 1879. The planed timber imported into Holland before 1880 passed for the greater part to Germany, but that, of course, came to an end on October 1, 1879. We may therefore calculate that the 19,852 tons exported in 1880 to Holland remained in that country. In regard to Australia we can give no accurate figures, as much lumber from Norway reaches there via England. The direct export in 1880 was a good deal larger than the average export since 1870, which was 7,799 tons. The export to Africa is rapidly increasing; in 1870, 823 tons; in 1879, 3,803 tons, and in 1880, 7,647 tons. As long as the duties in Spain continue unchanged, that country will be of no importance for the lumber trade of Norway.

We have reduced the numbers and money to the American standard, so that they may be understood by our readers.—*Northwestern Lumberman.*

In consequence of the demand for long timber in the Chicago market, lumbermen about Menominee, Mich., intend putting in a large number of long logs the coming season.

LUMBER INDUSTRY OF PUGET SOUND.

None but those who have been on the ground can have an adequate conception of the extent of the lumbering business of the Puget Sound district, Washington Territory. The sound, a magnificent arm of the sea, reaches down from near the northwestern limit of the territory, nearly to its western middle, affording extended facilities of navigation, its numerous bays, like insinuating fingers, feeling into the territory all along shore, as if inviting, and even clutching after the commerce of the country. Around this stretch and spread of navigable waters grow the finest forests in the world, of pine, fir, spruce and redwood, the enormous growths of which are a natural wonder. Since the settlement of the Pacific coast the lumber business of Puget Sound has been gradually developed, under the stimulus of California and Chinese trade, until it has become an industry of leading proportions. Numerous mills, of first-class appointment and capacity, cluster about the indentions of the sound, many of the lumbering points constituting towns of themselves. In these towns are stores, carrying stocks of merchandise of from $40,000 to $100,000. The lumber companies own lines of ships, and frequently from four to ten vessels can be seen simultaneously loading at the dock of a single mill. Many of these mills have attached to them from twenty to fifty dwellings, and the population of a single village sometimes numbers 500 or 600 persons. A single company owns three of these immense milling establishments, with four mills capable of cutting 500,000 feet of lumber a day, together with four powerful tug boats, a score of ships, and timber lands estimated at 200,000 acres.

The leading mills at the sound are those at Ports Gamble, Ludlow, Blakely, Madison and Discovery, Seabeck, Utsalady and Tacoma besides which there are smaller mills at new Tacoma and Seattle. The daily capacity of the larger mills, when driven, is about as follows:—

	FEET.
Port Gamble	200,000
Seabeck	80,000
Discovery	70,000
Madison	100,000
Blakely	100,000
Tacoma	90,000
Utsalady	75,000
Ludlow, when completed	225,000
Total	940,000

The smaller mills about Seattle, the principal lumbering point of the district, will aggregate a daily cut of 150,000 feet, making the total diurnal product of the mills about Puget Sound nearly 1,100,000 feet. The cut of the mills during the year ending June, 1881, was 200,000,000 feet. Of the lumber product of this region 25,000,000 feet a year is shipped to foreign countries, 25,000,000 used at home, and 150,000,000 sent to California.

This great industry had its beginning thirty years ago, in a little water-power mill erected in Thurston county by James McAllister. The capacity of this mill was 1,000 feet per day. The first steam saw-mill was erected by H. L. Yesler, in Seattle. in 1853, and had a daily capacity of 80,000 or 10,000 feet.

Great as has been the increase of the past, its volume is small compared to what may be expected in the future. The expansive and towering forests about Puget Sound are but just touched by industry, and the lumber interests of that region are yet to feel the energy of the Northern Pacific traffic. The future of the lumber business of Washington Territory can be seen as in a glass, but not darkly.—*Northwestern Lumberman.*

YOUNG'S POINT.

The Drives.—Another large sawlog drive belonging to Irwin and Boyd will pass through here this week *en route* to their mills at Nassau. The last gang of men belonging to Mr. Hazlitt's drive were well behaved in every respect.

Dr. Fowler's Extract of Wild Strawberry cures all forms of bowel complaints in infants or adults. The most safe, pleasant and perfect remedy known. Purely vegetable and free from opiates or poisonous drugs.

If You are Suffering with a cold do not fail to try Hagyard's Pectoral Balsam; it is daily relieving its hundreds throughout our Dominion. It is pleasant and palatable.

THE ENGLISH MARKET.

Robert Coltart & Co's *Wood Circular and Prices Current*, dated Liverpool, 2nd August, says:—

A better tone has been noticeable in the wood market during the past month, and in some articles an advance has taken place, more especially in spruce deals, in which the decline in value has been arrested and much better rates obtained. In consequence of the excitement in Canada, chiefly as regards white pine, importers are now holding Quebec goods firmly, The import has been moderate, and if the present steady consumption continues, a more healthy feeling will doubtless soon be established, but there is still no room for increased supplies.

Colonial Woods.—For yellow pine there has been a fair demand, and the new arrivals have gone well into consumption. Of waney board a parcel of 2nd quality, 17½-inch average, has been sold at 2s. 1½d. per foot, and 2nd quality, 17-inch average, at 2s. per foot. Of square pine, a parcel of A quality, 15½-inch average, has been sold at 2s. 3½d. per foot, and a parcel of prime deck plank wood at 2s. 2½d. per foot. Of red pine the sales have been by retail only. Ash of prime quality and good size is inquired for. There are no sales of elm to report. For oak the demand still continues dull, and there is no improvement in the consumption; the sales have been by private only. Wagon scantlings continue to arrive too freely, and sales are difficult to make; a parcel of prime quality realized 2s. 4d. per foot. The consumption of birch continues on a limited scale, and the stock is more than sufficient; 979 logs ex-*Arabia*, from St. John, N.B., realized prices ranging from 14d. to 2s. 2d. per foot, averaging 16½d. per foot. Of black walnut several parcels have been sold during the month at prices ranging from 4s. to 5s. per foot. The consumption of N. B. and N. S. spruce deals continues good, and the stock now consists of 17,380 standards against 24,051 standards at the same time last year. Early in the month sales of St. John were made at £6 5s. per standard, but have since advanced to £6 10s., and the latest sales are reported at £6 15s. per standard. By auction several cargoes of St. John have been sold at an average of £6 10s. 5d. to £6 11s. 5d. per standard; Parsboro' at £6 11s. 9d. per standard, and Buctouche at £6 8s. 9d. per standard, ex quay. Dalhousie pine deals realized £11 per standard for 1st quality, £8 2s. 6 per standard for 2nd quality, and £6 15s. per standard for 3rd quality. Of Quebec pine deals the stock consists of 8,657 standards against 5,218 standards at the same time last year, and the consumption 2,561 standards against 1,798 standards. At auction 1st quality realized from £19 to £22 per standard for 3×11 and wider, and by private, 3rd quality are reported sold at £8 10s. per standard. Quebec merchantable pipe staves are selling at from £75 to £80 per mille, and puncheon at about £21 per mille.

TORONTO.

From Our Own Correspondent.

AUGUST 10.—During the past two weeks lumber shipments from the north to this port have been much brisker than for the two weeks preceeding, although not yet nearly up to the wishes or expectations of shippers, and it is now quite certain that it will not assume the proportions required during the remainder of the navigable season, as it is now evident the company has not sufficient rolling stock on hand to meet the demands made upon them, consequently the wants of shippers cannot be fully met until the company procure more lumber flats.

The removal by death of the late F. W. Cumberland, Esq., for many years the successful manager of the N.R.R., is much to be lamented. He had proved himself to be a most efficient railroad man, always keeping in view before all, and above all other interests, that of the road entrusted to his management, sacrificing himself, as few men will be found willing to do, in order to promote the welfare of the company, and the success which has attended his efforts is well known. Let us hope that his mantle will fall on the shoulders of whoever may be appointed as his successor.

The traffic from the northern end of the line to Hamilton and points west of that place is constantly on the increase and as cars are more readily obtained for the western trade, as the G. T. R. Co. place cars freely at the shippers' disposal as soon as called for, the wants of retailers are freely met on the portions of the road supplied by that company. No so here, however. Our local trade languishes for want of the same facilities of transportain afforded to western dealers.

The scarcity in shingles still continues, and consequent on that scarcity prices are again advanced, retailers now demanding $3 per M. for XXX, and the prospect is for a still further advance. Lumber brought here by rail finds quick and ready sale for local use, and the prospects for a brisk fall trade is good, if lumber can only find its way here in sufficient quantities to meet the demand. Cherry lumber is still exceedingly scarce, $3 per M. being freely offered by carload if quality is good.

In my last letter I promised to give you the names of other firms doing a wholesale and retail business in lumber here. Prominent in the wholesale trade is the firm of Thompson Smith & Son, who manufacture largely north of this city and at Duncan City, in the State of Michigan. Nearly the whole proceeds of their mills finds its way to the Albany and Chicago markets. The firm is an old established one, and highly respected. Next comes the Toronto Lumber Company, who do a large business with the American as well as in the local market. Next we have the firm of Donogh, McCool & Oliver, the members of which are all young men, and whose character for probity and straightforward dealing stands high with all who have had any business transactions with them. They are enterprising young men, and are doing a good wholesale trade. There is also the firm of S. C. Kennedy & Co., the senior member of which was formerly connected in business with two of the members who now comprise part of the Toronto Lumber Company. This firm bears a good reputation, and is doing a thriving business—wholesale only. Then we have the following companies represented here: The British and Canadian Lumbering and Timber Co.; the Muskoka Lumbering Co,, and the Parry Sound Lumber Co., the largest part of whose business is transacted with the English and American markets, disposing of full vessel cargoes and whole mill stock; in fact, their transactions are of considerable magnitude.

There are no doubt some others whom I do not at present call to mind, and to whom I may refer in future letters.

In the retail trade we have quite a large number of firms doing more or less of a carload business, as well as retailing from the yards. I will name them in order as near as I can to that which their prominence entitles them to.

The largest trade, so far as dollars and cents are concerned, is doubtless done by the firm of John Oliver and Co., who deal nearly exclusively in hardwoods, embracing all the fancy varieties, including veneers of all kinds, and the stock carried by them is a costly one. Messrs. Hillock & Kent do a thriving retail trade in both pine and hardwood, as also considerable of a carload trade, and they bear a good reputation as men of strict integrity.

Next comes the firm of Bryce Bros., who do a large local trade, and generally carry a full stock.

We come next to the firm of S. & J. Willcock, who are pushing young men and do a large trade on a small piece of land, turning over their stock so quickly as to nearly obviate the necessity for piling.

Wm. Latch, whose mill is situated on the North Simcoe Junction line of road, does a compact business by carload and from the yard.

Joseph Davidson has his yard at the western limit of the city on the confines of the thriving village of Parkdale, and adjoining his yard is the yard of McKinley & Son. Both of these firms do a thriving trade, and are highly thought of as business men.

I find I will have to reserve the names of other dealers for a future letter, but I think I have now given your readers sufficient to enable them to take pick and choice in case they wish either to purchase or dispose of any quantity or kind of lumber.

The following are the quotations:—

LONDON.

From Our Own Correspondent.

AUG. 12th, 1881.—When matters are in a normal condition and business is transacted with a machine like exactness, without the spurts incident to corners and the speculators of controling capitalists, a trade report as a rule reads dull and stale, and there is a very strong desire on the part of correspondents to look through an imaginary telescope with double magnifying power, it seems born in them, though they have great reverence for everything truthful, they would scorn to keep back a fabrication if it would be productive of good to a waning community. It should be borne in mind too, that correspondents are not paid by the year the same as Congressmen, but by the "job," so it often happens that they haven't time to sift out the wheat from the "chaff," but are often rushed from scenes of blazing pleasure to pictures of horror and misery, and they are apt to get their ideas mixed up considerably. I am not writing this now in extenuation of my case, in this letter at any rate, but we don't know what is before us.

The lumber business of this city has toned down considerably since my last letter, and comparative quietness prevails, though merchants are not complaining, as they say they have plenty to do, and a little *siesta* will invigorate them for a lively time, which is expected will set in early next month and last till the first frost.

The inconvenience felt for the want of Railway car accommodation has now passed over, and all cars called for are immediately on hand. Shingles are now plentiful, but you will observe another advance.

The handsome block of wholesale warehouses just nearing completion, on Richmond street, made a big hole in $5,000 for the lumber contract and the amount used for the exhibition grounds, including new fences, &c., will reach fully 500,000 feet.

The cedar block pavement, (second contract), is let, but not to the same firm who executed the first one, and work will commence immediately.

Hardwood No. 1 sells here for about $4.80 per cord, and the price will no doubt be well sustained, if not much higher, in consequence of the probability of coal keeping up.

My report for this market is firm and steady with prospects ahead for a short spell of rushing business.

Penetanguishene Foundry
AND
MACHINE SHOP
CRAIG & CAMERON, Proprietors.

The undersigned beg to announce to the public that they are prepared to make all kinds of **Mill and Steamboat Brass and Iron Castings.**
All kinds of PLOW CASTINGS kept on hand. Plow Points and Landsides a specialty.
We have first-class machinery and are prepared to do all kinds of TURNING or PLANING on short notice.
We hope by strict attention to business and moderate charges, to merit a share of the public patronage.
☞All work guaranteed.

A RARE CHANCE.
AUCTION SALE OF
Valuable Timber Limits
—AT—
OTTAWA,
On the 20th of September.

On Lake Nipissing.

License No. 455, Sixty Square Miles Area, situated on the head waters of the Mattawa and South Rivers. This limit is wooded with Pine of the very best growth and quality. Timber cut thereon can be taken out either via the Mattawan to the Ottawa River, or by Lake Nipissing and French River to Georgian Bay with the greatest convenience.
In connection with this limit is a well improved farm of about 200 acres, deeded property, 100 acres cleared, with buildings, stock and crop, all of which will be sold at valuation.
There are also Six Timber Births numbered 12, 20, 36, 37, 39 and 31, situated on the River Beuve and Western Arm Bay, each 36 miles square. These limits have never been worked, and abound with the very finest quality of white Pine. Access from Georgian Bay via French River is quite easy. The Canada Pacific Railway passes in the neighborhood of these limits.

On the Georgian Bay.

License 169, on the Missisaga River, consisting of 36 square miles area, and License No. 200, situated on the Thesselan River, consisting also of 36 square miles area. These limits have never been worked and are covered with an abundance of the best Pine Timber.
The above limits will be sold on the 20th September at the Grand Union Hotel, Ottawa. Conditions made known on day of sale. For particulars apply to R. NAGLE, Ottawa; JOHN SCULLY, commission merchant, Toronto; or to J. T. LAMBERT, 62 Wellington Street, Ottawa. 2L21

AUCTION SALE
OF VALUABLE
Timber Limits,
Situated Near Lake Nipissing.

Notice is hereby given that (if not previously disposed of by private bargain) the following Valuable Timber Limits will be offered for sale at Public Auction in the
CITY OF OTTAWA,
ON
Thursday, the 22nd Day of September Next,
VIZ.:

	Sq. Miles.
Berth No. 23, on the River Bueve, near Lake Nipissing, comprising	36
Berth No. 43, on the River Wannapitac, near Lake Nipissing, comprising	36
Berth No. 51, on the River Wannapitac, near Lake Nipissing, comprising	36
In all	108

These limits contain, in the aggregate, a large quantity of magnificent pine timber.
Berth No. 23 is estimated—as the result of a recent exploration—to contain a quantity of trees sufficient to produce at least half a million cubic feet of square timber, besides two hundred and fifty thousand standard saw logs. The river is available for driving to Lake Nipissing.
There is a good mill site on the Bueve river, about three miles from Lake Nipissing.
Lumber could be transferred thence by water to the Callender station of the Canada Central Railway, the line of which is projected to pass directly through this limit.
Lumbermen and others desirous of acquiring limits are invited to examine these berths in the interval preceding the day of sale.
The owners reserve the right to dispose of either or all of them by private bargain in the meantime, and will be ready to consider any offers that may be made.
Terms of purchase will be liberal, and will be made known before the sale, the place and hour of which will be duly advertised.
Persons desiring further particulars are invited to communicate with the undersigned.
STEWART, CHRYSLER & GORMULLY,
Solicitors, Ottawa.

Market Reports.

MONTREAL.

From Our Own Correspondent.

AUGUST 22.—Since the date of our last report (August 10th) shippers have been pretty busy, having shipped four cargoes to the River Plate, and three vessels have taken a good deal to London. At the present time four vessels have been laid on for South America, and four are loading for ports in the United Kingdom. Freights to South America are firm. Large vessels are getting $13.50 per M., and small vessels $15. Shipments since 10th instant to date were :—To Montevideo, 1,375,304 feet ; Buenos Ayres, 39,632 pieces and 586,862 feet ; London, 13,646 pieces and 603,000 feet. Total shipments since opening of navigation to date to the River Plate were 4,984,190 feet, against 2,683,675 feet for the same period of 1880, being an increase of 2,3000,515 feet.

At the present time there is not much doing in the lumber yards, as is usually the case between the seasons. The only reported business is in small lots for building purposes within our range of quotations, but some activity is expected next month. We quote :—

Pine, 1st quality, ℔ M	$32 00@40 00
Pine, 2nd " ℔ M	18 00@24 00
Pine, shipping culls, ℔ M	12 00@15 00

CORDWOOD.—The demand is improving and the market is firm as under for large lots :—

Upper Canada Maple	$ 6 00@00 00
Birch	5 50@00 00
Beech	5 00@00 00
Tamarac	4 00@ 4 50

TORONTO.

From Our Own Correspondent.

AUGUST 26.—During the last week or ten days lumber shipments from the north have largely improved in regard to quantity received here, but just at present it has again fell off owing to scarcity of vessels. Docks are full, and a large number of loaded cars standing awaiting shipment. No blame is therefore to be attached to the company in this instance, as most certainly if shippers do not unload their lumber promptly, they cannot expect to be supplied with cars. The local wants, however, are not near fully met as yet, shippers in all cases getting the preference, as the cars are generally unloaded more promptly ; so that it is evidently to the interest of the company to grant shippers all the cars they can spare, and let the local trade go. It is quite natural for a little selfishness to crop out in corporations as well as in individuals.

Lumber comes in freely over the Midland and Grand Trunk to this city ; and in this connection it gives me great pleasure to say a good word in behalf of that much abused company, the G.T.R. So far as lumbermen are concerned, at least, there is little fault to find with the treatment received at their hands. The officials, without a single exception, so far as I have had an opportunity of judging, are gentlemen in the truest sense of the word ; always obliging and courteous, and prompt in the transaction of all business coming before them. Not half as much red-tapeism in their method of doing business as with some one-horse roads to be found here ; in fact, it is generally with the latter that you find the most snobbery and incivility.

The price of the various grades of lumher is likely to advance in the local market, especially on bill stuff cut to order. An increase in the rates of freight from all points north is said to be in contemplatfon by the H. & N. W. R. Co. This was to be expected at no distant date after the N. R. Co. obtained possession of the H. & N. W. R., thereby stopping competion from all points north of this place and Hamilton. Most people who do business over those roads are under the impression that rates are high enough at present, but when the powers that be determine otherwise, they will have to submit gracefully if they like, but submit anyway ; this is the inevitable result of all monopolies.

There is now a large quantity of cedar posts coming to this market to meet the demand consequent on the building and laying down block pavement on many of our streets. None but perfectly sound cedar is allowed to be used in the pavement, and the price of cedar is likely to advance, especially as the shipper hitherto has not received sufficient remuneration for his timber and trouble in cutting and hauling, the prices paid in the past only leaving him something like $16 per car at the point of shipment. I have doubts, however, as to this kind of roadway fully meeting the wants of our citizens. In my opinion the nature of that kind of wood is so porous ; that it will absorb much filth and moisture, and ultimately become a nuisance.

Freights to Oswego continue the same, but will doubtless shortly advance. Rates for unloading at Oswego having advanced ten cents per M., and sailors' wages being likely to advance, it is hard to see how vessel owners can long continue to carry at the present rates, as it certainly leaves them a very small trifle after paying all expenses incurred.

Shingles still continue scarce, and dealers hesitate to pay the advanced figures demanded by manufacturers, although my own impression is that prices are no higher than they should be in order to enable the maker to pocket a fair profit.

LONDON, ONT.

From Our Own Correspondent.

AUGUST 25.—My last letter, which from some unexplained cause did not appear in your issue of the 15th August, gave, I think, a good synopsis of the lumber trade of this city as it stands today. I mentioned in that letter that business had slackened off somewhat, and that merchants were waiting for the expected "spurt," which would last in all probability till the setting-in of the first frost. Well, the "spurt" has not yet arrived ; meantime there is plenty to do, and more time to do it in than dealers have had for the past few months. The demand for mill culls and scantling is very brisk, and I may say the same of scantling and joist of the medium lengths, but in other grades everything is quiet, shingles excepted.

The Exhibition building is now nearing its completion in lumber material, and my statement of half a million feet will perhaps be a somewhat short estimate of the quantity used.

The cedar block pavement from Dundas to the G. W. R. depot on Richmond will probably require about forty to fifty carloads of posts, and the locality from which they will chiefly come is at present indefinite. Will know more of this matter when the laying begins. I only hope the merchants on Richmond street will not fling their poisoned arrows of despotism at the workers as the Yonge street shopkeepers did during their temporary state of transition. Inconvenience and laying block pavements are synonymous, and those who have been through the mill should know this.

There is no change to report in prices since my last, and a copy of this I append.

I wish I could give you some items of shipping, but will have to wait until communication is opened up with the St. Clair river and the Georgian Bay via the "Thames," which it has been proposed to "scoop out" and make navigable.

ST. JOHN, N. B.

From Our Own Correspondent.

SHIPPING.—Shipping is still scarce in the harbor, and will be so for some little time, until the fall fleet begins to put in an appearance.

VESSELS IN PORT.—The following is a list of the vessels in port, with their tonnage and destination :—

STEAMERS.

Scindia, 1423, dis.

SHIPS.

Asiana, 1193, Liverpool.
John Murphy, 1472, Liverpool.
Missouri, 818, repairing.
Naval Reserve, 1831, Liverpool.
Wm. A. Campbell, 1538, Liverpool.

BARQUES.

B. Hilton, 986, dis, W. C. England or E.C. Ireland.
Hants County, 641, Bristol Channel.
Huron, 774, United Kingdom.
Industri, dis.
Sichem, 519, dis.
Providence, 478, ——
Vestfold, 500, dis.
Cite d'Aleth, 273, France.
Algeria, 620, Hare Island.
Kate Crosby, 697, Dublin.

BRIGS.

Leah, 554, ——
Myrtle, 169, dis.
G. S. Berry, 236, ——
Curlew (new) 350, Bristol Channel.

FREIGHTS.—Freights continue to stiffen a little, as a consequence of the rising market in England, and at this writing we can quote from 56/3@57/6 to direct ports in United Kingdom, and we know of one charter made at 60s., with a choice of five ports. American and coastwise freights are about the same. Logs are scarce and in demand, and very easily command $8. Deals are also hard to find. A great many small country mills have shut down for the present, being out of stock, and supplies from this source are about exhausted. The stock on hand for sale is small, and lots are readily disposed of at $9 per M.

The American market just now is dull, in consequence of recent numerous arrivals of lumber-laden vessels.

The tonnage from the port of St. John, arriving in Liverpool up to the 1st of August of this and the two preceeding years is as follows :

1879	50,496
1880	53,103
1881	31,055

Showing a considerable decrease for this year.

The stock of lumber on hand in Liverpool on the first of August, with the importation and consumption, is as follows :

	IMPORTATION.	STOCK.	CONSUMPTION.
N. B. and N. S. Spruce Deals	Standards. 11,524	Standards. 16,428	Standards. 8,681

The English market still shows signs of improvement, and we sincerely hope that the advance may not be a temporary inflation, but a healthy and permanent improvement.

Your editorial remarks anent the practise of running American logs through Canadian waters and shipping the manufactured article free of duty to the States, are very pertinent. There is no doubt that the privilege is much abused, and the Canadian manufacturer is simply two dollars per thousand worse off than his American next door neighbor who produces a consul's certificate that his lumber was cut in American waters, and is the growth and produce of the United States. The evil, for it is one, should most assuredly be remedied, and that right speedily.

St. John, N.B., Aug. 20, 1881.

From Another Correspondent.

THE LOG SUPPLY.—The heavy rains during the last few weeks caused a great rise of water in our rivers, in consequence of which large quantities of logs which had been hung up on the main river and larger tributaries have been run out, including a large portion of those belonging to the State of Maine in the Aroostook river. Those logs will now become available for the fall sawing. As the latest advices from Great Britain report the continued improvement of the markets on that side of the water, and as the shipments from this direction for the present, as well as for the immediate future, will be on a limited scale, we may reasonably look forward to a large and profitable business this fall.

FREIGHTS.—There has been very little done in chartering since the date of last report. Available tonnage is in light supply, and shippers are backward in responding to the advanced rates demanded. The market is very firm, however, and rates are not likely to recede. The last transactions we hear of were the *B. Hilton* and *Sichem*, both for the west coast of England, at 57/6.

SHIPMENTS.—The shipments of deals and other sawn lumber are as follows :—

For Europe	12,896,000	Sup. feet.
" United States	2,289,000	"
" Australia	501,000	"

St. John, N.B., Aug. 22, 1881.

OSWEGO, N.Y.

AUG. 25.—The following are the quotations :

Three uppers	$42 00@45 00
Pickings	32 00@35 00
Fine, common and dressing	20 00@25 00
Common	14 00@18 00
Culls	11 00@13 00
Mill run lots	17 00@22 00
Sidings, selected, 1, 1¼ inch	30 00@37 00
Mill run, 1x10, 12 in	16 00@21 00
Selected "	20 00@25 00
Strips, 1 and 1¼ inch mill run	14 00@18 00
" " culls	10 00@13 00
1x6 selected for clapboards	25 00@40 00
Shingles, XXX, 18 inch, pine	3 75@ 3 90
XX, " "	2 75@ 2 90
XXX, 18 inch, cedar	3 00@ 3 25
XX, " "	2 25@ 2 40
Lath	1 40@ 1 40

No change in prices. Dealers are now getting forward new cut stocks. About all last year's cut has been got forward, and disposed of. The demand keeps up, and prices are quite firm. Country dealers are now satisfied that very little change can be made in prices during the season, and are buying quite freely and paying very promptly—a sure sign that they are selling at an advance.

NEW YORK.

AUGUST 15.—The present season has been one of unusual activity in this department of business. At the opening of the year, prices of the majority of goods were resting upon an extremely low basis, and with a hardening of real estate values all around, the prospects favored an extensive trade so soon as the weather was sufficiently settled to admit of preparations. The predictions that were uttered at that time, and the anticipations, have been realized to the fullest extent, as not only has the consumption of this country exceeded that for many years, but foreign countries have drawn upon us liberally, and the demand does not as yet appear satisfied. Well may people cry out that our forests are disappearing, and that but a few years only will elapse before there is an actual scarcity, for such statements are true, and the several State governments should see to it that where felling is extensively carried on planting should be encouraged to the same degree.

Never in the history of this city and its surroundings have building operations been so extensive. The island is rapidly filling up with costly and attractive edifices, and the end of the operations appears no nearer now than it did several months ago. The enormous demand for land has been the means of forcing values for such to an extreme upward point, but buyers do not hesitate, for though surface space is dear, space above is unlimited and cheap. This can be seen in the many structures that are attaining a height of ten and even twelve stories, the trouble of mounting the enormous pile being removed by the general use of elevators : in fact, the preference is given to offices high up in the world, as a cool and bracing atmosphere is assured, and the noise and bustle of the street is thus avoided.

The position of the market to-day is exceedingly favorable. Spruce, yellow and white pine, walnut—in fact all descriptions—are actively inquired for, and prices are maintained at a point that yield a very remunerative return to the manufacturer, and few, if any, express fears as to the future situation.

WHITE PINE.

Since the extraordinary foreign business in June the export demand has steadily fallen off,

but the less demand for shipment has seemingly been made good by the increase in home consumption. Yard dealers report a business not experienced before in years, and are constantly in the market to replenish the rapidly depleting stocks, and seldom make an effort to secure any concession from the prices asked by first hands. The continued strong advices from all western points, also those from Canada, have resulted in establishing an exceedingly firm market here, but no effort has been made to secure a corresponding rise to compare with the higher views elsewhere expressed, as it is said, and truly too, that this market is the last to answer to an improvement, but first to respond to a decline. The receipts from the north and west continue quite heavy on contracts made during the winter months, and the stock here is therefore kept full, offering a good assortment from which buyers can select. Freight rates from Albany remain at $1 per thousand, and are steadily maintained. The quotations in this market today are :—

THICK UPPERS—2½ TO 6 INCHES.

TONAWANDA.

AUGUST 15.—Market brisk, sales active and prices firm. At a recent meeting of the Tonawanda and Buffalo Lumbermen's associations, in joint session, it was decided to advance the prices of pine lumber to correspond with the increase at the western mills and other leading markets. The figures have therefore been raised $1 per M. on all grades below shelving ; $2 per M. on shelving and higher grades. The terms have also been changed from 2 per cent. to 1½ per cent. discount for cash, or 60 days. Dealers here are feeling buoyant over the prospects, and trade continues brisk.

Cured of Drinking.

"A young friend of mine was cured of an insatiable thirst for liquor, which had so prostrated him that he was unable to do any business. He was entirely cured by the use of Hop Bitters. It allayed all that burning thirst ; took away the appetite for liquor, made his nerves steady, and he has remained a sober and steady man for more than two years, and has no desire to return to his cups, I know of a number of others that have been cured of drinking by it."—From a leading R. R. Official, Chicago, Ill.—*Times.*

GLASGOW.

Singleton, Dunn & Co.'s monthly timber circular, dated Glasgow, 11th August, says :—

Imports are larger than at the corresponding date last year. This is owing to the earlier arrivals this season, the spring fleet being oomplete ; while last year it was well on in August when cargoes came forward. Business continues very languid, and notwithstanding the enhanced values at Quebec, operations here are on a very restricted scale. At several auctions of timber at which fresh timber was offered, it was difficult to effect sales, even when sellers were willing to meet buyers. In these circumstances it is clearly the interest of shippers to curtail supplies, as an undue augmentation of stocks must necessarily check speculative business and depress prices. North of Europe goods are much weaker than in the spring, and for battens and deals very low rates are accepted.

BOARDWOOD—Waney.—Some good 20-inch average was placed at 2s. 4d., and a small quantity of 17-inch prime at 2s. per cubic foot. The stock on hand is unduly heavy, and will no doubt make it difficult to realize even fair rates. The consumption is an average.

WHITE PINE.—Owing to the holidays little enquiry has arisen, and we have heard of no transactions. A considerable quantity of deck plankwood was sold to arrive, Some 50 feet average lengthy joisting wood was sold at 17½d., and a parcel of nice 35-40 cubic feet fair average at 15d. per cubic foot. A line of g.f.a. 70 cubic feet, last season's import, was closed at 18d. per cubic foot.

RED PINE.—The demand is unusually dull, and sales that were made were at low rates—14d. to 15d. for 30 to 35 feet, and 15d. for some extra fine 22 cubic feet average. The stock on hand is extraordinarily large, and should not be increased.

PITCH PINE.—The import has been very heavy, and as the consumption was only about an average, we are now left with a full stock. Sawn is not excessive, but hewn is far beyond the demands of the trade. Prices have been fair for sawn—say for selected sizes 17d. per cubic foot, and for quantities 30 to 35 feet average 15½d. to 16½d. per cubic foot. A parcel of 35 feet average contract wood was placed at equal to 16½d., and a parcel of 40 feet average at 17d. per cubic foot. Some other sales were made at as low as 16d. to 16¼d. for 40 cubic feet average. Hewn.—A quantity of large average, comprising mast and spar pieces, was placed at 17d. to 18d. The ordinary sizes, 70 to 80 feet, are very dull of sale. Planks.—Almost no demand.

ELM.—The consumption was very restricted, and consequently a large stock is now on hand. A small quantity of old 30 feet average was placed at 18d., and a small lot of 50 feet average prime at 2s. per cubic foot.

OAK.—Too much of last season's woods remains on hand, and as the railway companies have parcels forward on contract, the prospects for wood on the market are not encouraging.

BIRCH.—Stock is ample, and contrary to expectations, the demand is dull. A full supply of lower port and Quebec wood is now here.

ASH.—Some inches 14 and up sold at 2s. 1d. to 2s. 2d. Demand dull meantime.

WALNUT.—For prime and large an average of 5s. to 5s. 4d. per cubic foot was made.

DEALS.—1st Pine—Dull, except for extra specifications. Very low prices—21d. to 22d. per cubic foot have been taken for 7 to 9 inches. The stock, consisting mainly of oddments, is by far too large. 3rd Pine—Quebec—The consumption of these is light and prices low—at Greenock 1s. per cubic foot, and at Glasgow 13d. per cubic foot for standard sizes. 4th Quebec Pine of long specification was sold at 11½d. per cubic foot. Lower Port Pine—The stock is light, but as most of the dealers have cargoes on contract, it is improbable that high prices will be got for market cargoes. Quebec reds are very unsaleable, except at very low rates. Spruce—The demand was good, and prices were well sustained. The last auction was of a cargo per steamer from St. John, which sold readily at from 10½d. to 11½d. for 9 inches and up, with 9d. for 7 inches, and 9¾d. to 10d. for 8 inches. The lateness of imports from Riga has assisted the sales of Canadian spruce.

BRACEBRIDGE.

To the Editor of The Canada Lumberman:

AUG. 22.—Lumbering has been at a standstill here for some time past, but is beginning to move again, several parties having sent a few men each into the woods, and judging from the way standing timber has been selling, there will soon be a rush. There was a gang left here this morning for the north shore of Lake Huron to make board timber. Men are very scarce and wages high. No doubt they will be more plentiful when the harvest is over. The last of the drive is over Muskoka Lake ; it has been very slow this summer, and will be late when the last reaches Georgian Bay, but the mills are all well supplied now, and will without difficulty be kept so.

Edward Marlow, "hewer," had his arm broken on Saturday last by a kick from a horse at Port Sydney.

I hope before next issue that I will be able to report more lively times here.

A CANADIAN VIEW OF BIRCH.

A Toronto, Ontario, newspaper man interviewed several lumber dealers and furniture manufacturers on the scarcity of walnut, and all were unanimous in saying that the only good substitute is black birch, which is rapidly coming into favor. Black birch is a close-grained handsome wood, and can easily be stained to resemble walnut exactly. It is just as easy to work, and is suitable for nearly all purposes to which walnut is at present applied. Birch is much the same color as cherry, but as the latter wood is now so scarce, and consequently so dear, the dealers do not take much stock in it. It is with difficulty that cherry wood can be obtained at $50 per thousand feet, while birch wood can be purchased at any saw-mill for $16. When properly stained it is almost impossible to distinguish the difference between it and walnut, as it is susceptible of a beautiful polish, equal to any wood now used in the manufacture of furniture. When it became known throughout the United States and Canada that the supply of walnut was almost exhausted, the dealers set their brains to work to find a substitute, and now since birch has been thought of the price is slowly advancing.

In the forests through Ontario, birch grows in abundance, especially if the land be not too boggy. There is a great difference in the wood of different sections. Where the land is high and dry the wood is firm and clear, but if the land where the wood is grown be low and wet, the wood has a tendency to be soft, and of a bluish color. In all the northern regions it can be found in great abundance, and as the trees grow to such a size, little trouble is experienced in procuring a large quantity. The forests in the Manitoulin Islands abound with it as well as those of the Peterborough and Haliburton districts. The Muskoka district also contains a plentiful supply.

During the past few years large quantities of this wood have been exported from tne Province of Quebec at a low figure, but this will be stopped when it is known that it is to take the place of walnut in the near future. It is easily detected among other trees on account of its height, large trunk, and the peculiar color of its coarse bark. Most of the perforated chair bottoms now in use are manufactured from it. There is a species of bird's-eye birch, but it is very scarce and is not more valuable commercially than the plain woods. In consequence of the prospect of its speedy substitution for black walnut, it should be husbanded with the greatest of care. An evidence of the weight and solidity of the wood is the fact that it will sink after being a few days in the water. This fact is a slight drawback to the work of having it conveyed to the saw-mill. One of the principal means resorted to is binding it together with pine logs, and thus it is brought to the mill, but pine cannot always be found where birch grows, and it is then necessary to haul it, sometimes a great distance, with the aid of horses.—*Northwestern Lumberman.*

The Timber Line of Mountains.

Some very interesting facts were brought out at a meeting of the Academy of natural science of Philadelphia, concerning the timber line of mountains. The highest Alpine vegetation consists for the most part of short stemmed perennials. Lower down are dwarfed trees of species which still lower down the mountain sides form forests of considerable height, and which, as trees suited to merchantable purposes, make what is known to mountain travellers as timber lines.

In the mountains of Colorado the forests commence at about 7,000 feet above sea level, and continue up to about 11,000 feet, when they suddenly cease. At this point the coniferous trees are from 30 to 40 feet high, and above the same species exist as stunted shrubs seldom exceeding three or four feet in height and often but a foot, through trailing widely over the ground. In the dwarfed condition they they are often found some 1,500 feet higher up, or half way from the recognized timber line on the top of the mountain.

On Mount Washington, in New Hampshire, which is a little over 6,000 feet high, the timber runs up about 4,000 feet, while Mount Webster, a mountain forming the southern peak of the same chain, and about 4,000 feet high, has little timber above 3,000 feet. Roan Mountain, in North Carolina, is about 5,300 feet above the level of the sea and on some parts of the timber extends to its summit. At a height of 5,000 feet black oak was measured that was five feet in circumference and three feet from the ground, and 40 feet high.

Wrought Iron Shanty Cook Stoves

The Best Article ever offered to the Trade.

I have much pleasure in drawing attention to my **WROUGHT IRON COOKING STOVE, for Shanty, Hotel and Boarding House use.** These Stoves are made of **Heavy Sheet Iron,** the top and lining of the fire-box being of **Heauy Cast Metal** and all the connecting parts of substantial **Wrought Iron Work.** The dimensions of these Stoves are as follows :—

SINGLE OVEN STOVE

Top surface contains six 10-inch holes, with ample room between, and one oven 16 x 24 x 26.

DOUBLE OVEN STOVE

The Double Oven has a top surface containing twelve 10-inch pot holes, with two ovens, each 16 x 24 x 26. One fire-box of suitable size for area to be heated. Below will be found Testimonials from some of the leading Lumbermen, who have used my Wrought Iron Cook Stoves since I ommenced manufacturing them. They are the names of gentlemen who are well known and eliable, and will carry more weight than any recommendation of my own could do.

The Best Stove I have ever Used.

PETERBOROUGH, May 31, 1880.

ADAM HALL, Esq., Peterborough. Dear Sir,—I have used your Wrought Iron Cooking Stove in our lumbering operations since its introduction here, and have no hesitation in saying that I prefer it to any other. For durability, economy and efficiency, where a large number of men are employed, it is the best stove I have ever used. You can, with confidence, offer it to hotels, boarding houses and lumbermen.

Yours truly, THOS. GEO. HAZLITT.

The Stove for Lumbermen.

PETERBOROUGH, June 1st, 1880.

ADAM HALL, Esq., Peterborough. My Dear Sir,—We have used your Wrought Iron Cooking Stove and find it is very satisfactory for lumber operations, especially so on drives. We can recommend it highly.

Yours truly, IRWIN & BOYD,

Gives the Greatest Satisfaction.

PETERBOROUGH, June 3rd, 1880.

A. HALL, Peterborough. Dear Sir,—I have had the Wrought Iron Cook Stove, purchased from you, in constant use ever since last fall, and it gives the greatest satisfaction in every respect. I can recommend them highly to any one who is in the lumber business. Very truly yours, GEO. HILLIARD, M.P.

EMERY WHEELS FOR SAW GUMMING!

Solid Emery Wheels are now almost in universal use for the purpose of gulletting and gumming saws. Statistics show from 25,000 to 30,000 saw-mills in the United States. Many of these run only a single saw each. A one-saw mill would use one or two wheels a year, costing $3 to $4 each, and when such small mills order single Emery Wheels from the factory, the express charge often equal the cost of the wheel. There was a time when the quality of Emery Wheels was so uncertain, and the demand s fickle, that storekeepers could not afford to carry them in stock. Now, however, Saw Gumming Wheels have become as stapl an article as Files, and every dealer in saws, Hardware and Mill Supplies can afford to carry a few dozen standard sizes in stock Large dealers order stocks of $500 to $750 worth at a time. Saw Gumming Wheels are used with the edge (or face) square, round or beveled. Probably seven-eigths of all in use are beveled.

The principal sizes are:

8x1/4, 8x3/8, 8x1/2 — 3/4 in. hole. 10x1/4, 10x3/8, 10x1/2, 10x5/8 — 3/4 in. hole. 12x1/4, 12x3/8, 12x1/2, 12x5/8, 12x3/4, 12x7/8 — 3/4, 7/8 and 1 inch. Holes,

Probably more wheels 12x3/8, 12x1/2 and 12x1/4 are used than all the other sizes together. Saw Gumming Wheels are used, however, of all sizes up to 24x1½. The most frequent complaint is that Emery Wheels harden the saw so that a file won't touch it. The answer is that you don't want a file to touch it. An expert workman will shape and sharpen the teeth with an Emery Wheel, leaving the teeth *case hardened*, in which condition the saw will cut about 33⅓ per cent. more lumber than a soft saw will. Those who want to use the file, however, have only to touch the saw *lightly* a second time (after going all over it once), and this second touch will cut through the case-hardened scale.

A QUESTION OF QUALITY.

Thirteen years of experience as makers of, dealers in, and actual users of Emery Wheels, have led us to a decided opinion as to what quality is the best. We prefer for almost every use an "Extra Soft" wheel like the "Pocono." We believe that money lost through the rapid wear of the wheel is more than made up by the money saved on wages. As we cannot get every one to adopt our views, we make several qualities, so as to meet their views. We say to those who think they can only be satisfied with some other make of wheels (not Tanite), that we can furnish qualities *to match* any and every other make. If you have got used to some special quality of wheel, let us know what it is, and we can send you *a Tanite Wheel of similar quality*. Our *regular* classification of Saw Gumming Wheels is as follows:

CLASS 2. MEDIUM—HARD.—This Wheel is THE STANDARD Saw Gumming Wheel all over the world. Probably seven-eighths of all the Saw Gumming Wheels used are "Class 2." It cuts fast and keeps its shape well. Some think it too hard, some too soft. We prefer the "Pocono."

CLASS 3. MEDIUM—SOFT.—The same as to coarseness and fineness as "Class 2," but a *softer*, and therefor freer cutting wheel.

CLASS "POCONO." EXTRA SOFT.—This Wheel we prefer to all others. It is both *finer* in grain and softer than either of the above. As a Saw Gumming Wheel, Class "Pocono" is specially suited to those practical and experienced Sawyers who know how to grind with a light touch, and who want a free cutting wheel that will not create much heat.

Illustrated Circulars and Catalogue, showing Cuts of Saw Gumming Machines, and Shapes, Sizes and Prices of Wheels, sent free on application.

CIRCULAR SAW STEAM FEED!

I would also call special attention to my

Heavy Circular Saw Mills

and for STEAM MILLS, would recommend the Steam Feed, having put in several which are giving the best of satisfaction, as will be seen by the following testimonials:—

GRAVENHURST, August 20th, 1880.

WM. HAMILTON, ESQ., Peterborough.

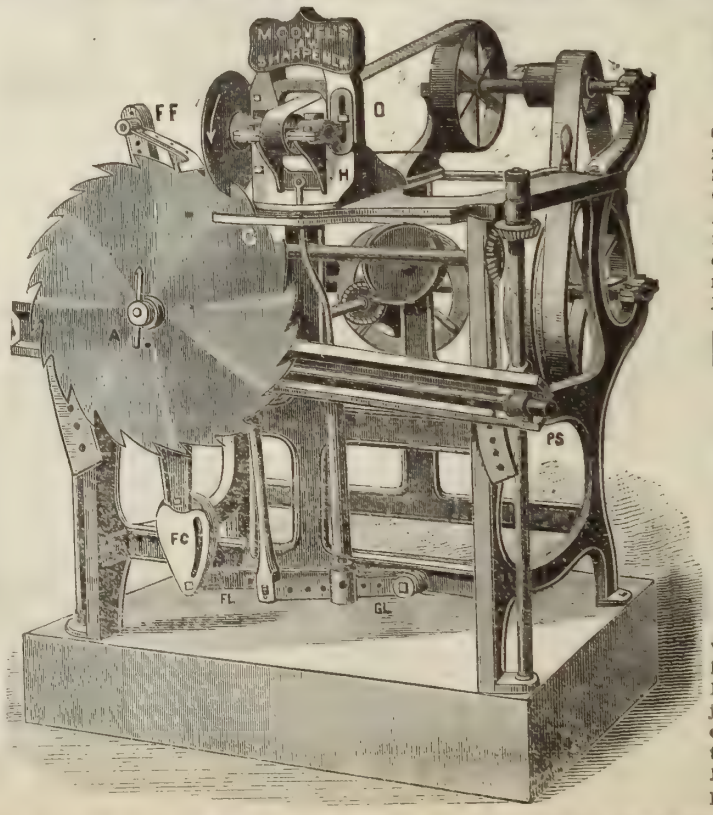
DEAR SIR—I have used your Steam Feed for near four months, and it has given me perfect satisfaction in every way; it is admitted by every person who has seen it work to be the best feed ever invented. Since I put it into my mill, I have not lost ten minutes time fixing anything belonging to it. I can cut 18 boards 13 ft. long in one minute. It can do much smoother and better work than the pinion feed. It is easily governed and reverses the carriages instantly. I am thoroughly satisfied with it and can recommend it to any person who has a Circular Saw Mill for cutting long or short logs. I consider I have cut more lumber than will pay for the Steam Feed since I got it than I would have cut had I not put it in.

Yours respectfully,
WILLIAM TAIT,
Lumberman, Gravenhurst.

TORONTO, August 11th, 1880.

WM. HAMILTON, Peterborough, Ont.

DEAR SIR—The Steam Feed you put in is working splendidly. Yours, &c.,
THOMPSON, SMITH & SON.

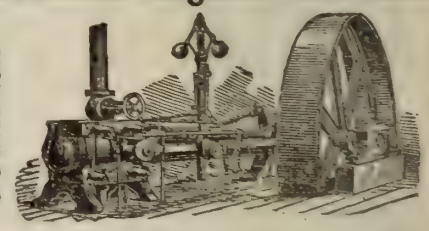


MILL MACHINERY!

I am also manufacturing Saw Mill Machinery, for all sizes of Gang or Circular Mills, Span or Double Circulars for Slabbing Small Logs. My Patent Jack Chain for drawing logs into Saw Mills, acknowledged by all to be the Cheapest and best ever got up; also, my Patent Lumber Markers, different sizes of Edgers, Gang Lath Mills, Trimmers, Power Gummers, and all Machinery used in a first class Gang or Circular Saw Mill; also, small Hand Gummers for use in the woods, for Cross-cut Saws. Rotary Pumps of different sizes, for Fire Protection in Mills, &c.

Horizontal Engines and Boilers

CORLISS ENGINES



Where economy of fuel is the great consideration, along with uniformity of speed, such as is required in Grist and Flouring Mills, Woollen and Cotton Factories, or large Factories of any kind, I supply the Corliss Engine. I feel justified in saying that our Style, Workmanship and Finish on this Engine will be no discredit to its renown, and certainly is not equalled in this country for economy of fuel. I have them working at 2½ pounds of coal per horse-power per hour.

L10

WILLIAM HAMILTON,

PETERBOROUGH, ONT.

THE CANADA LUMBERMAN

AND MILLERS' MANUFACTURERS' AND MINERS GAZETTE

PUBLISHED SEMI-MONTHLY.

The only Newspaper devoted to the Lumber and Timber Industries published in Canada.

SUBSCRIPTION $2.00 PER ANNUM.

VOL. 1. PETERBOROUGH, ONT., SEPTEMBER 15, 1881. NO. 22.

THE Ottawa *Free Press*, of August 29th, says that quite a quantity of lumber is being shipped to the United States by McClymont & Co. per St. Lawrence & Ottawa railway. Twelve cars laden with sawn lumber left from the siding near the engine house across the Rideau to-day. More will follow during the week.

The *Mississippi Lumberman* says that a sale of 1,000 acres of pine land on the St. Louis river for $12,500 occurred last week. The purchase was made by Mr. Fowler, of Saginaw, Mich. The price is the highest ever paid for timber in that region, but if any body understands the value of pine trees it is Mr. Fowler, who for years has been an extensive operator on the Hudson shore.

THE boom in timber lands extends to Pennsylvania. A journal of that State says:—Hon. Samuel Calvin, of Hollidaysburg, recently sold the timber right on a tract of land in White township, Cambria county, for the snug sum of $45,000. The same tract, timber and all, was bought, it is stated, a number of years ago by that gentleman, from a gentleman of Ebensburg, now deceased, for the sum of $1,000.

A QUEBEC despatch of last week described arrangements as completed by Messrs. Allan, Grant & Co., of Ottawa, to ship to that city a large number of cars of square timber. A switch will run on the Custom House wharf to accommodate the first cargo, which when arrived will be thrown into the pond alongside the wharf, enclosed by a boom, and then rafted and towed to the cove of Messrs. Cook Bros. & Co.

SURVEYS of public lands now being made in the San Fernando and Catalina mountains have disclosed the fact that there are large tracts of table lands in those mountains, embracing several hundred thousand acres of the very best white and yellow pine, from twenty inches to three feet in diameter. There are groves with an average height of seventy to one hundred feet. The Texas Pacific and Atchison, Topeka & Santa Fe railroads will traverse this region, and make it valuable as a source of supply for southern Arizona, Sonora and Chihuahua.

THE report of the Government cinchona plantations in Southern India indicates the astonishing progress made since slips of this valuable tree were first planted in that district twenty years ago. The number of trees now planted out is more than four and a half millions. At present the greater part of the bark produced appears to be consumed in supplying the medical depots at Calcutta, Bombay and Madras; but upward of 3,000 pounds was last year sold to the public, and the annual yield is rapidly increasing with the growth of the trees. The actual profit last year on the capital of the plantation is stated to have been eight per cent.

THE Nova Scotia Glass Co., New Glasgow, have just placed an order for 10,000 boxes to pack the goods of their manufacture. This means the cutting up of some 250,000 feet of lumber. The company are pushing their works forward, and they confidently anticipate being able to make glass Monday week. The crucibles have just been set.

MR. S. P. BENJAMIN, of White Rock Mills, Kings Co., N. S., has started at that place a barrel and box factory for making boxes and barrels for the putting up of apples and plums, etc. He has put in improved machinery, and is able to turn out 240 barrels a day, besides boxes. Next year Mr. Benjamin intends putting in machinery that will turn out at least 60,000 barrels, saying nothing of boxes, which he can furnish to an unlimited extent.

A HARRISBURG, Penn., paper says:—The maple and hemlock forests of Pennsylvania have never had the benefit of the right kind of enterprise to render them as important and productive as their real value ought to produce for them. The maple wealth of Pennsylvania is as valuable as that of her black walnut, if properly handled, because the wood is hard and can be utilized to as beautiful effects in building and furniture as that of walnut or ash. This wood grows to enormous abundance in this State, and will sooner or later become one of the most profitable sources of industry for those who know how to put it on the market.

THE *Timber Trades Journal*, of August 13th, says:—There was a goodly array of shipping reported the last week, both in London and Liverpool, laden or partly laden with timber goods, and those who have been apprehensive of short supplies, will be much cheered by the increasing importation. It is remarkable too that just half of the arrivals at Liverpool were by steamships, and for the first time in London, in a busy import month, *more than half* were steamers—of 60 timber vessels reported 31 were steamships, one more than half. In Liverpool, of 33 arrivals 16, or barely half, were steamers. Heretofore we have seldom known more than a third of the arrivals steamships.

Celebrities.

It is worthy of note that amongst some of the men who have risen from the ranks of industry are the late Rev. Dr. Morley Punshon, a timber merchant's clerk, Ben Johnson, a bricklayer, Carlyle, the son of a stonemason, Socrates, a statury, and Robert Burns, a farm carpenter and laboring rustic.

THE GREATEST POPULARITY OF DR. FOWLER'S EXTRACT OF WILD STRAWBERRY is where it has been longest known. Time cannot detract from its merits. It is the oldest reliable remedy for all bowel complaints incident to the summer season.

WHAT BURNS THE MILLS.

With the opening of the season the saw-mill proprietor enters not only upon a period of active labor in the production of lumber, but upon a season fraught with the gravest apprehensions. If he could be about the mill through the night as well as through the day, and were he endowed with powers that did not need to seek recuperation in sleep, he could rest somewhat easy in his mind as he contemplated the risk attaching to his property, in the contemplation of the fact that his own eternal vigilance would prove the price of his safety from the danger of fire.

Careless engineers and faithless watchmen are about the most dangerous things to be found about a mill. The former allows the sawdust to accumulate about the furnace doors or hearth, and if the truth were to be known about many a saw-mill fire, it would be found to have its inception in this scattered sawdust, which ignited while the engineer had "just stepped out of the fire-room for a minute." His call outside proves a most dangerous minute for the proprietor, though the resultant destruction could have been averted if the hearth had been swept before he stepped out. Probably two-thirds of the fires which destroy saw-mills in the day-time arise from this cause. It is no uncommon thing to see the engineer of a saw-mill bank up his hearth doors with sawdust when he shuts down at noon and goes to his dinner. Such an engineer is a most excellent subject for discharge from a man's employ, for if the mill does not take fire the first time he does it, the old adage about taking the pitcher to the well once too often is pretty sure to be verified before the season is over.

Night fires are more usually the result of a too implicit confidence in the watchman than many suppose. We would not assert that all watchmen are unfaithful, but experience has proved the value of a proprietor s call at the mill at unseasonable hours of the night. If you find a wide plank or two laying across the top of your boilers, or suspiciously near the arch, you may be pretty sure that a quiet visit to that locality in the small hours of the night, will find them occupied by a lodger whom you have paid to walk around and see that no merauders are threatening your property, and no incipient blaze is endangering its safety. It is a good thing to have an energetic man in your employ, but when you find your watchman always ready to fill an extra place during the day, and apparently able to do without sleep for an indefinite length of time, you can be almost positively sure that what sleep he dispenses with in the day time is taken at your risk during the night. It is well known to be suspicious of the faithfulness of the man who can watch all night and every night, and grow fat on it, while working half or three-quarters of the time during the day. It is at least a good plan to visit him when he least expects you, for by such visits you can often reduce the amount of your apprehension, if not the actual premium of your insurance.

The spark-catcher on your smoke stack may be all safe enough, for practical purposes; but when you find a little patch of fire here and there through the mill yard, on a hot day, it will pay handsomely to call in the boiler-maker, or set your engineer at work to make the meshes smaller, or to put up a new wire screen in place of the damaged one, which will warm you some day with a hotter blaze than is healthy or profitable. Your fire-pump may be a first-class one; but when you go into a mill and see a row of empty water buckets in the rack on the saw floor, you can rest assured that if a fire ever starts on those premises, the fire pump will be of very little service. Empty buckets are a pretty sure sign of lazy engineers and mill foremen, and disabled pump. Unfortunately, when a fire starts on saw-mill premises, it is usually in too much of a hurry to get through the contract it has taken in hand to allow a machinest to be sent for to put the pumps in order, or to repair the hose which has been hanging on a peg in the wall until it is ready to drop to pieces from decay. The truism that a "stitch in time saves nine," has often been correctly rendered, "a full bucket of water saves the mill." With the record of saw-mill fires daily increasing, it well becomes all who are interested in this class of property to give the subject of its safety from fire a little of the care that is taken to obtain a full stock of logs, or an extraordinary cut by the saws.—*Monetary Times.*

Hints Concerning Saws.

A saw just large enough to cut through a board will require less power than a saw larger, the number of teeth, speed and thickness being equal in each. The more teeth the more power, provided the thickness, speed and feed are equal. There is, however, a limit, or a point where a few teeth will not answer the place of a large number. The thinner the saw the more teeth will be required to carry on equal amount of feed to each revolution of the saw, but always at the expense of power. When the bench saws are used, and the sawing is done by a guage, the lumber is often inclined to clatter and raise up the back of the saw when pushed hard. The reason is that the back half of the saw, having an upward motion, has a tendency to lift and raise the piece being sawn, especially when it springs and pinches on the saw, or crowds between the saw and the gauge; while the cut at the front of the saw has the opposite tendency of holding that part of the piece down. The hook or pitch of the saw-tooth should be on a line from one-quarter to one-fifth for a softer timber. For very fine-toothed saws designed for heavy work, such as shingles, &c., even from soft wood, one-quarter pitch is best.—*Lumber World.*

TERRIBLE BUSH FIRES.

THOUSANDS OF SQUARE MILES BURNED AND LAID WASTE.

DETROIT, Sept. 9.—The accounts which are hourly coming in as to the ravages of the forest fires show that there has been very little, if any exaggeration in the matter. The high winds that prevailed cut off nearly every means of escape. Large burning masses were lifted up and borne to great distances, starting fires in fresh places, and adding to the destruction. At Freeing the unfortunate people, most of whom are Poles, were caught in a fire-trap, and literally roasted alive, together with their cattle and horses. As a rule they were all new settlers. Numbers of them, blinded by the smoke and crazed by the fury of the flames and the agony of their sufferings, either died of their injuries or committed suicide. At least 300 are supposed to have perished.

The following villages have been completely burned down :—Bad Axe, Verne, Forest Bay, Richmondville, Charleston, Anderson, Deckerville, Harrisville, and Sandusky. The following have been partly burned :—Port Hope, Minden, and Ubbey. The loss in the villages is as nothing to that in the country, which is simply incalculable. The exact loss of life cannot yet be adequately ascertained, and the amount of damage done to property can only be roughly estimated.

At Paris, near Port Sanilac, up to last night, forty-five corpses, nearly all those of Poles, were found within a mile, many persons being still missing. In the whole settlement there is not one building left. Houses, crops, fences, all have disappeared.

South of Forestville from the lake back seven miles not one house is left to the square mile.

One man at Cato loses $40,000 in grist mills, store and hotel. Here the settlers are nearly all Germans, and newcomers, and all have been burned out. The fire swept their property off like a hurricane, and drove many of them like sheep into the lake, where they perished miserably.

In Deleware township the people and cattle crowded to the lake shore. Men, women, and children have lost even the clothes they stood up in, and the unfortunate cattle have had their very hides burned through.

In Huron county the same has happened. One man driving through Huron county directly after the spread of the fire, reported that he had met five women entirely naked, each carrying a child. He gave them two flour bags to cover themselves with. A farmer saved his family, consisting of his wife and eight children by taking refuge in a field of buckwheat. A poor woman in his neighbourhood endeavoured to save herself and children by digging a hole and covering them as best she could with her hands. They were all subsequently found dead. The little ones had their heads burned off to the shoulders. The loss of cattle and animals is immense. Twenty head of cattle were found in a half-acre lot dead. Animals are strewed in all directions.

In addition to the dead, which are estimated at from 700 to 1,000, fully 5,000 persons have been rendered homeless, of whom many are absolutely without shelter.

Near Sanilac township, northwards, the people did not know any fire was near them until it was on them, and all had to run for the lake, and it being but a short distance all reached it in safety. John Kerr and family were asleep when their building caught, and a neighbour seeing it ran and woke them, and they succeeded in saving their house, but lost all else.

Mrs. W. Burgess got seperated from her husband and lay all night in a ditch. Another person laid down in a mud-puddle and rowled over all night. Large parties of men have been detailed to bury the dead animals less their corpses should breed a pestilence. The task of burying the human beings has in many cases been left to strangers, of whom one man reports that he saw 116 persons burned. In one place he saw four wagons bearing eight coffins, and one man walking behind alone. It was his entire family. Another man was following three coffins.

The whole of the Sanilac burnt region has been traversed by Rev. Z. Grenfell, Jr., pastor of the First Baptist Church here. He reports that the herald of the approach of the fire was darkness and a copper-coloured appearance of the sky. Later it changed to a deep red, and by two o'clock on the afternoon of Monday it became so dark that lanterns were a necessity in order that people might find their way out of doors. Mr. Grenfell relates the story of a Mr. J. Jenks, who said that the darkness was so intense that in passing his hand before his face it could not be seen. In the woods were many dead of every age, and presenting the revolting appearance of bodies which are scorched and charred by fire. The skill and courage of men seemed impotent to cambat such flames, and the fleeing people were caught in fire traps and roasted as were their live stock. Mr. Grenell tells of one farmer who was ploughing with his oxen a few miles from Sand Beach, who, perceiving the approaching darkness, started for his house. Reaching their he fouud that his wife had gone to a neighbour's. He took two children and gave three others in charge of his eldest daughter. Before travellng many rods they found themselves cut off by the flames. He turned in another direction and escaped with two children; the three children and the daughter were found the next day all of a heap and charred beyond recognition.

William Humphrey, a mail carrier between Argyle and Elmer, started on his route on Monday. Midway he was stopped by the flames, and unhitched his horse from the waggon. Mounting his horse with the mail bags he turned hastily back. The horse found its way back to Argyle without mail-bag or rider. A tag was tied to his main and he was urged back over his usual route. He reached Elmer, but Humphrie's body was found buried in the woods in one place and the half consumed mail-bag in another. The wagon was found reduced to cinders.

At Port Huron the following appeal has been published by the authorities :—

"Our country has been devastated by fire. The suffering is beyond description—people in a starving condition. Will the people of Canada lend aid ? We need seed wheat, provisions and clothing. Orders have been received from the Secretary of the Treasurer that all goods for this purpose will pass free of duty."

THE PARRY SOUND FIRES.

The district of Parry Sound has passed through an experience during the past three weeks which will never be forgotten by the inhabitants, who have been kept in constant dread of the flames which day and night have covered the sky with volumes of smoke so dense that the sun has never appeared but as a great red ball, shorn of its brightness though not of its heat. No rain has fallen of any account since June, and under the intense heat even the streams of this well-watered district have failed. From Mr. J. C. Miller, M.P.P. for Muskoka, who is the head and chief proprietor of the Parry Sound Lumbering Company, a *Globe* reporter has obtained as reliable information as is at present available on the extent of the fires and the destruction caused by them.

What the destruction is, he says, will not be known until the smoke clears away, for the fires are still burning in every direction, and a strong wind, which may at any time spring up, may increase tenfold the devastation wrought thus far. The fires burn in every direction, and there is scarcely a square mile out of more than two thousand in this area but is sending up its contribution to the great pall of smoke which lays over the land. Beyond the multitude of minor fires which at any time may develop into great conflagrations, there have been five or six great fires which have come prominently under his notice. The first of these was started by a settler in the township of Fuller, in the month of June, on the north-western road, a few miles from Parry Sound. During the drought of July this fire burned in an easterly direction over a belt from half a mile to a mile in width across the northern part of the township of Macdougall, and after devastatating the lands of the Parry Sound Lumbering Company, passed into the township of Ferguson, sweeping away a large area of forest in the limits of the Ontario Bank. An east wind then drove it back into the township of Cutting, where it is now raging. In all this fire has burned over 15,000 acres of very fine timber country.

Another fire on the Shawanaha River has swept over the larger portion of the township of that name.

A fire broke out lately on the Nashcoutcong River near Bying Inlet, and burning along both sides of the stream, ran south through the townships of Wallbridge and Harrison, enveloping both these townships in flames.

TWO HUNDRED MILES OF FIRE.

Along the Georgian Bay the Maganetawan Lumber Company have lost heavily by a fire which commenced three weeks ago and burned along a length of thirty miles of coast by a distant island not yet known but probably from six to ten miles, or over two hundred square miles of territory. It is still burning.

THE TOWNSHIP OF MILLS.

A very destructive fire originated apparently in a criminally careless manner has swept the township of Mills. It was started for the purpose of facilitating the repair of a Government colonization road. It is stated that Mr. Kelsey, who superintends the repairs on the north road, refused to start the fire, as he did not know, the weather being so dry, what destruction it might cause. Mr. D. M. Card, Road Inspector, it is reported came along and, notwithstanding Mr. Kelsey's remonstrances, gave prematory orders that the fire should be started, saying that they "must build the road and let the fire take its chances." It took its chances, and besides burning out the crops and buildings of a Mr. McVitte destroyed twenty-five square miles of splendid timber yet unsold by the Government. Mr. McVitte, it is said, has issued proceedings against the Provincial authorties for the destruction of his property.

In the vicinity of Parry Sound a fire was set on an island either by a camping party or by the Indians. The fire leaped across the islets to the mainland near the Boyne River, and worked its way up to within two hundred yards of the Ontario Bank Mills, which were saved with much difficulty on Monday; the wind carried it south east across the Parry Sound Road in an old barn. The east wind on Wednesday and Thursday drove it back towards the Village of Parry Sound endangering the village, and the large establishment of Wm. Beathy and the Parry Sound Lumbering Company. A telegram yesterday morning said the danger was over. The loss by these fires is already about $20,000, and the Ontario Bank Mill loss nearly as much.

It is reported that over 3,000,000 feet of saw logs owned by Cook Bros., and others have been burned in the dried up bed of East River, in the township of Chaffey, but the exact truth regarding this is not yet known.

By these great fires between three and four hundred square miles have certainly been burned, but there are fires yet unreported which may add greatly to the area. They still burn and at any hour may sweep much of the territory that remains. The gum forests on good land are rarely destroyed, the fires confining themselves mainly to rocky districts, green timber, and old areas burned in previous years. The loss of life thus far has been nothing so far as learned, and while elsewhere hundreds of farmers are burned out, the writer has heard of only one, McVeth, in the township of Mills, who has lost everything, including a saw mill. Fences have everywhere suffered on the farms, and it has been only by long continued fighting night and day with all the available forces that could be gathered together that the flames have been prevented from sweeping the country. In timber the loss has been enormous, and thus far can scarcely fall short of one million dollars.

The pine which is burned over, unless stripped of its bark before spring, will be attacked by the pine bores—Pissodes Strobi—a grub about two inches long and a quarter of a inch thick. This borer is furnished with a auger-like probosces, with which it bores right through a tree. The noise of the boring is quite audible. The borer only attacks burned, fallen, or decaying trees, the beetle never depositing its eggs under the bark of a dry tree. Scarcely one out of all the trees now damaged by fire will escape destruction or serious injury from this borer.

In regard to fires Mr. Miller thinks that legislative action is necessary. The present law is a failure, and steps should be taken to secure a better one compelling any farmer who wishes to clear a fallow to obtain first the permission of the stipendiary Magistrate of the district, who would if he considered it safe to grant the settler's request notify by letter all the timber limit holders of the neighbourhood of the fact. A precaution could likewise be taken by notification in some way of neighbouring settlers. If nothing is done, the loss from fires in future will be enormous.

Mr. Miller could give no information of a definite character regarding the great fires in Muskoka, not being at all familiar with them.

THE MUSKOKA FIRES.

Mr. C. Duke, of Yorkville, has within the last few days received two letters from his son Charles, who is farming in the Muskoka district, in which are given accounts of the ravages committed out there by the bush fires. The young man writes from Utterson. In his first letter dated September 1st, he informes his father that their experiences of the previous day were "awful." The had at last to fly for their lives. The writer proceeds :—"The two houses are saved and all the live stock, but the barns and fences are all completely gone. We came to Titterson last night, and I am just going up to the farm. I dread to go. I know it will look awful. West's buildings are all gone; Turner's buildings, excepting the house, are all down; Fearon is completely cleared out—not an article left; Captain Openshaw is similarly visited; also Thoura. The English minister's house at Port Sidney, and W. Clark's houses are gone, but Mr. Crown's is saved. I don't know how it will end. Poor old Turner died on the roadside after he was carried out. We have have saved the fanning-mill, plough and cultivator."

The next letter is dated Tuesday night (last). Young Duke says :—"I cannot give you very good news yet. Rain threatened, but did not come; and yesterday and to-day the flames have been finishing Turner's fences, and the sawlogs are all blazing as I write. The wind is blowing hard. I saw Fearson yesterday; he looks bad; all his sheep were burned to death: everything was swept in the clearance that he lived in, but he saved his other barn and a hay-stack. Harvey had no fire near him." In a P. S. the writer adds by way of a crumb of comfort, "You need not be anxious, as I think we are all right now."

CANADIAN SHIPPING.

OTTAWA, Sept. 10.—The Department of Marine and Fisheries has just issued a list of vessels on the registry books of the Dominion of Canada on December 31st, 1881. From it it appears that the number of vessels remaining on the registry books of the Dominion on that date including old and new vessels, sailing vessels, steamers and barges, was 7,377, measuring 1,311,218 tons register, as compared with 1870. The number of steamers on the registry book on the same date was 918, with a gross tonnage of 190,159 tons, and a net tonnage of 120,141 tons. Assuming the average value to be $30 a ton, the value of the registered tonnage of Canada on the 31st December last would be $39,336,540, or £7,867,308.

The Sorrows of Genius.

Homer was a beggar.

Cervantes died in hunger.

Terrence, the dramatist, was a slave.

Dryden lived in poverty and distress.

Sir Walter Raleigh died on the scaffold.

Butler lived a life of penury and died poor.

Bacon lived a life of meanness and distress.

Plutus, the Roman comic poet, turned a mill.

Paul Borghese had fourteen trades and yet starved with all.

Tasso, the Italian poet, was often distressed for five shillings.

Steele, the humorist, lived a life of perfect warfare with bailiffs.

Otway, the English dramatist, died prematurely and through hunger.

Bentivoglio was refused admittance into a hospital he had himself erected.

The death of Collins was through neglect, first causing mental derangement.

Savage died in prison at Bristol, where he was confined for a debt of forty dollars.

Goldsmith's Vicar of Wakefield was sold for a trifle to save him from the grip of the law.

Chatterson, the child of genius and misfortune, destroyed himself at eighteen.

A VETERAN'S TALK ABOUT LUMBER.

A representative of this paper visited a veteran n the lumber trade Thursday for the purpose of applying the reportorial plaster and drawing from its burrow some information which might interest, amuse or instruct its readers, according as it might harmonize with their views or appear to them absurd. "Put yourself in his place" is what no one can do, and hence the views we get of things differ.

"So, young man," said the veteran, "you are in search of information about the lumber trade, in order to enlighten the public. Well, wisdom won't die with me, and you need not set me down on the start as the best informed man in the business. If you are looking for the Solomon of the trade, you might as well strike almost any other person. I can send you to such a man, or I can give you my opinion and what I know of lumbering. What points are you dazed on?"

"What effect will the high prices of supplies have on lumbering operations the coming winter?"

"Very little, in the way of limiting operations. The expense will be increased quite a good deal, of course. Pork will cost about $20 where it cost $16 last season; corn about 70 cents in place of 46, but hay and oats are not much higher. Stock will, perhaps, cost more and labor be higher. But the additional expense wont have much more effect on the amount of stock put in than the weather in winter has. If I wanted to help bull the market, I'd say, oh, yes; it'll be too costly bnsiness lumbering this winter, and a good many firms will go light. But I don't talk that way, beeause there is no sense in it. Men who haven't the capital may have to curtail their operations on account of the extra expense, but those who have the stock to cut, the capital to candle it, and confidence in the market, will go in just the same as though pork was but $10 a barrel."

"Then you think there'll be a large stock cut the coming winter?"

"Well, I don't think there will be an excessive crop. Some men will go in as though they thought there was never going to be another chance for them to make a harvest of pine, but there are not many such in the trade now. The firms lumbering in this Saginaw country are pretty much all composed of level-headed, well-balanced men, who can see a good way beyond the ends of their noses. They are in a position where they don't have to market their lumber, unless they choose. Of course, they'll cut enough to satisfy the demand, for the risk from fires is greater than ever, and much timber has to be cut to save it. But there is a powerful reason for conservatism in the cutting of timber in the Saginaw district."

"Do you mean that the stock is becoming small?"

"Yes, you have hit it. Some of the largest mills on the river haven't standing pine enough within reach to last them six years, at the rate they are cutting, and it is my opinion there are not a dozen firms on the river that can count on ten years' cutting, within profitable reach."

"Is there not timber they can get? Some land yet unexplored?"

"Not in the lower peninsula. There is hardly a pine tree standing south of the straits that has not been estimated. A good deal of land has been cut over the second time, and the virgin forest has been penetrated in every direction The railroad has done the business,"

"Then pine land is eagerly sought?"

"You can say so. No hungry grayling ever took a fly more eagerly than men snap at pine lands. A few years ago you couldn't give them away; now men are crasy to buy. And no wonder, when you consider the facts I've given you above. The prices which men are paying for standing pine, in my estimation, settles the fate of the market for some time to come. Prices cannot fall materially without ruining every man in the trade who has bought pine lately. There have been many sales where the stumpage cost three and a half to five dollars a thousand, and when you come to put cost of cutting, driving, booming, rafting and sawing on top of the stumpage, the margin at present prices for lumber isn't much, any one can see."

"What is about the average result on a lot of average Saginaw logs?"

"About fourteen dollars a thousand. You see, the virginity of the forests has been violated, and the best timber has been culled."

"But I see sales at $17 and $19 straight."

"Yes, but those are from selected logs and not the common run. In days gone by, when we took the first pick, logs would average 25 per cent. uppers, and often run as high as 40 per cent., but they won't average per cent. now, nor up to best common. Fourteen dollars is about the average result from an average lot of logs on this river now, sir."

"If as you say the pine is getting short in supply, wouldn't it be good policy to go slower in cutting?"

"Well, it might, and then again it might not. It would be, if it wasn't for the pesky fires that rage in the woods every season. Why, whether you believe it or not, it is true, that as much if not more timber has been distroyed in eastern Michigan by fire in the last ten years than has fallen by the axe. It's enough to make a lumberman who loves good timber shed tears to see the long stretches of dead pine which can be seen in a belt from five to nine miles wide extending from Sant Point to Thunder Bay river, while the marks of the devastating fires may be seen in every other locality where there are bodies of pine. Some of the owners of pine would gladly husband their resources, cut less lumber now and let price go up where they ought to be, but the chances are even that fire would destroy more than enough to make the difference in their returns, so that they would really make nothing by the operation. Some of the owners of pine lands are taking the risk and holding off, and as the end of the pine comes nearer there will be more conservatism in cutting and prices have got to go up. The prairies of the west are settling up so rapidly that Wisconsin and Minnesota are not going to have much lumber to spare for eastern consumption, and when the Michigan supply is exhausted, or nearly so, there will be a dearth of pine for the eastern market, unless some new region shall be discovered, and that dosen't seem possible. The lumber problem in this country is going to be a difficulty one to solve and you can't expect me to settle it."—*Lumberman's Gazette.*

Waste of Gas.

The cost of gas is a great expense in many a house. A bright light is a luxury, and is appreciated by every one, but it cannot be enjoyed without being paid for. Waste of gas makes the gas bills mount up, and the careful housekeeper may effect a considerable saving by preventing this. The gas meter should be turned off during the day, so that if there are any places where the pipes are defective, escape of gas may be prevented. The condition of the burners has almost as much to do with the amount of a gas bill as the cost of gas per thousand feet. Old wornout burners are the best friends which the gas companies have. A smell of gas should never be disregarded. It is a sign that there is an escape somewhere, and steps should be immediately taken to discover where it is, and put a stop to it. Last, but not least, gas when not in use should be turned out or left very low. A careless person who leaves the gas "full on," in an unused room, is throwing money away as much as if he cast it into the street.

Chinese Ingenuity.

A recent number of a paper published in China records a fresh illustration of the acuteness of the natives in the matter of exports from Hong Kong. Large quantities of matches are bought in this city for re-exporting to other ports, but on coming into the trader's hands they undergo strange transformation. Empty boxes are counterfeited and filled in the following manner:—After emptying the matches as originally packed (each box containing on an average sixty) they commence the refilling by laying two matches across each other, at the bottom of the box, in the form of an X, and fill up the box. The boxes, as now filled, do not contain more than two-thirds the original number of matches, and every gross thus sold realizes 50 per cent. profit.

IT NEVER FAILS.—Dr. Fowler's Extract of Wild Strawberry is an unfailing remedy for all kinds of bowel complaint.

WANTED.

CLERKSHIP IN SHANTY for Winter. Practical knowledge of timber object more than salary. 4 years experience in offices, 2 in timber. Age nineteen. First class references. Address "CLERK," care of *Canada Lumberman*, Peterborough, Ontario. L22

A BARGAIN—GRIST AND SAW MILL FOR SALE, paying 12 per cent. clear; price 89,000; and above percentage guaranteed. Apply to

JOSEPH DAVIES & Co.,
Lumber, Coal, & Commission Merchants,
46 CHURCH ST. TORONTO. 1yL16

St. Lawrence Hall,
PORT HOPE.

Is noted for its superior home-like comforts—a well kept table, equalling the best hotels in Toronto, and large, well-furnished rooms. Good sample rooms on ground flour. Walton Street, Port Hope.
b26 WM. MACKIE Propr,ietor.

Caledonian Hotel,
GRAVENHURST.

JOHN SHARPE, Proprietor. This Hotel has been newly opened out, pleasantly situated on Main Street, within five minutes walk of Northern Railway station. Bar kept with best assorted Wines, Liquors and Cigars. Every attention paid to guests. Good Stabling. 1yL15

The American Hotel,
BARRIE, ONT.
Collier Street, Adjoining the Market.

RATES REASONABLE, CENTRAL LOCATION, FREE BUS TO AND FROM ALL TRAINS.

☞ Every accommodation for Commercial and LUMBERMEN.
L14 W. D. McDONALD, Proprietor.

Fraser's Hotel,
GRAVENHURST, ONT.

HENRY FRASER, proprietor, (successor to Dougland Brown.) Mr. Fraser having purchased and thoroughly renovated and refitted that old established hotel, so long and popularly kept and owned by Dougland Brown, in the Village of Gravenhurst, is now in a position to attend to the wants of the travelling and general public. Parties *en route* to the Muskoka District, will find "Fraser's" a comfortable stopping place. The Bar and Larder are well furnished. Convenient Sample Rooms for Commercial Men. Good stabling and attentive hostler. Free 'bus to and from trains and steamboats. b26

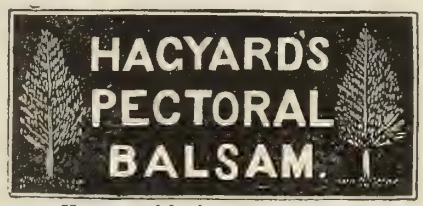
TRUSSES.

CLUTHE'S PATENT SPIRAL TRUSS all attachments improved. No more buckles, all on solid brass casting Book on rupture and human frame free, Send address in full post card. Best true information about rupture and deformities. CHAS. CLUTHE, Surgical Machinist, 118½ King Street west, Toronto. 12L13

CANADA TRUSS FACTORY
(ESTABLISHED 1856.)
F. GROSS,

Manufacturer of SURGICAL and ORTHOPŒDICAL INSTRUMENTS, ARTIFICIAL LIMBS made to order. INDIA RUBBER GOODS of every description. L19-1y

688 and 690 Craig Street, Montreal.



Has no equal for the permanent cure of
Coughs, Colds, Sore Throat, Asthma, Croup, Whooping Cough, Bronchitis, and all Lung Diseases.
☞ Every bottle guaranteed to give satisfaction.
T. MILBURN & CO., Proprietors Toronto.

GRATEFUL—COMFORTING.

EPPS'S COCOA
BREAKFAST.

"By a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of well-selected Cocoa, Mr. Epps has provided our breakfast tables with a delicately flavored beverage which may save us many heavy doctors' bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—*Civil Service Gazette.*

Made simply with boiling water or milk. Sold in packets and tins only (½-lb. and lb.) labelled

JAMES EPPS & CO., Homœopathic Chemists, London, England. L19-1y

Flexible Board Rules,

With Steel Head, either Cleveland or London make, at $1.75 Each.

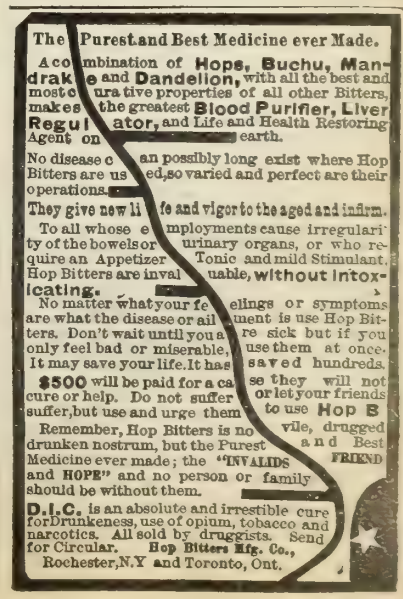
WANTED.

Cherry, White Ash, Black Ash, and Dry White Pine Lumber.

Quote Price delivered, and Carefully Describe:—Quality, Widths, Length, Thickness, and how long Sawed.

ROBERT C. LOWRY,
Wholesale Lumber,
12L19 55 Pine Street, New York.



ITEMS OF INTEREST.

SOME arithmeticians have calculated that steam is now doing on the globe, every day, the work of 800,000 men; that is, all the machines and engines worked by steam have 80,000,000 horse-power. Of this the locomotive force represents 30,000,000 horse-power, as it is thought that there are 105,000 locomotives on both hemispheres, which run 220,000 miles.

THE lead used in sounding from a vessel usually weighs about 14 pounds, but in deep sea sounding a weight of not less than 150 pounds is frequently employed. Wire has been largely used for a line, as it makes less friction in sinking through the water. With hemp rope a sinker of 300 weight is sometimes twenty minutes in reaching the bottom in 1,500 fathoms of water, so great is the friction of the line.

A FRENCHMAN has devised a method of converting iron into steel, and at the same time producing illuminating gas. The iron is placed in a retort with charcoal or coke in layers, and is heated to 1650 degrees Farenheit. Fatty matters are then injected, and as soon as decomposition has taken place, a jet of dry steam is passed over the incandescent mass. The iron is thus changed into steel, while carburetted hydrogen is given off from the retort.

MR. MAXIM, inventor of one of the electric lights, ridicules the idea that there is danger to either life or property from the use of that light, and says that he is ready at any time to take the shock from any number of the largest machines. While lightning will jump through two miles of air and forty feet of solid rock, he asserts that no dynamo machine used for the electric light in this country will make a current of sufficient strength to jump through the one-hundredth part of an inch of either air or stone.

ONE of the great trials which the builder has to endure is the "saltpetering" of the brick-work, or the white streaks which too often disfigure the fronts of brick buildings. It is worth noting that this can usually be prevented by adding oil to the mortar at the rate of a gallon to the cask of lime. Linseed oil is generally used, but any kind will do which does not contain salt. If cement is used in the mortar, an extra gallon of oil must be used for each cask of lime. When the incrustations have once formed on a building, they cannot be permanently removed, though they can be for a time by washing with hot water or the muriatic acid generally used for washing down brickwork.

A WRITER in *Les Mondes* ascribes the exceptional healthiness of butchers to their inhaling the nutritive principles of meat, and a French physician of eminence deduces from this the desirability of vapor baths charged with vitalizing principles. Cooks, at this rate, ought to be amazingly full of vitality. The good health of butchers is probably due to the living entirely in the open air, the same cause which gives so many more years of life, on the average, to the grocer's clerk than to his dry goods brother. Thirty years ago butchers in London never wore hats at work, but drove all over the town bare-headed, as many young butchers do now. The inhaling idea is, like all others, old. A century ago consumptive patients were sent to live over cow houses.

ONE of the most gigantic schemes of its kind is that which proposes to direct the current of the St. Lawrence river, opposite Montreal, into the channel between St. Helen's Island and the southern shore—this to be accomplished by running a dam of large proportions from Point St. Charles, in the western part of the city, to St. Helen's Island. This dam would be 2,700 feet long and 900 feet road, and would give a head of twenty feet for mill elevators and factories. As contemplated, this project would cost some $7,000,000, and would realize the following advantages: The dam could be utilized either as a railway or carriage road, or both, thus obviating the necessity of a tunnel; and the harbor would be made a still water one, where vessels might winter.

CERTAIN insects are known which give something like an electric shock to anything touching them. The *Reduvius genatus*, or "wheel-bug" of the West Indies, is one so described by Kirby and Spence. Two other examples have been lately recorded in the "Proceedings" of the Entomological Society of London, by Mr. Yarrell. A letter from Lady de Grey, of Groby, referred to a shock caused by a beetle, one of the *Elateridæ*, or snapping beetle, and extended from the hand to the elbow. The other case is that of a large, hairy caterpillar in South America. Captain Blakeney on touching it had an electric shock so strong that he lost the use of his arm for a long time, and his life was even considered in danger. The last story is almost incredible, as a caterpillar, no matter how large, can hardly be supposed to supply as much electric energy as a gymnotus.

THE colossal crane or derrick—the most powerful in the world—which has been in process of construction for several years at the royal arsenal, Woolwich, Eng., is now an accomplished fact. The size of this apparatus may be judged from the curious details published, as for instance, that more than eighteen hundred tons of iron have been used in its manufacture, while the brass bearings alone amount to more than three tons. The design has been that this monster crane should be capable of lifting three or four 100-ton guns at once; the purpose, however, for which it has been mainly provided, is not to do work which other appliances could accomplish in detail, but, rather, to meet the probable necessity for dealing with pieces of ordnance so enormous as to defy all the means at present available for mounting them in their carriage. The motive power is steam, and, although calculated to raise twelve hundred tons in case of need, the apparatus is also fixed for raising small weights at accelerated speed, and thus adapted, in many instances, to facilitate the ordinary operations.

THE process of making screws is very interesting. The rough, large wire in big coils is, by drawing through a hole smaller than itself, made the size needed. Then it is put into sawdust and "rattled," and thus brightened. Then the head is shaped down smoothly to the proper size, and the nick put in at the same time. After "rattling" again in sawdust, the thread is cut by another machine, and after another "rattling" and thorough drying, the screws are assorted by hand (the fingers of those who do this move almost literally like lightning), grossed by weight and packed for shipping. That which renders it possible for machines to do all this is a little thing that looks like and opens and shuts like a goose's bill, which picks up a single screw at a time, carries it where needed, holds it till grasped by something else, and returns for another. This is about the most wonderful piece of automatic skill and usefulness to be seen, and it has done distinctive work at the rate of thirty-one screws a minute, although this rate is only experimental as yet; ninety-three gross per day, however, has been the regular work of the machine.

DR. JAMES EDMUNDS, of London, points out in the *English Mechanic* some of the advantages of double glazing in promoting the health of homes in winter. Skylights, he says, ought never to be put up unless double or double-glazed. Double-glazing answers perfectly if the sashes are grooved out for glass on each side, and are then glazed with an air space of one-half inch or more between the panes of glass. The glass must be put in with its inner faces perfectly bright and clean, and the glazing should be done on a cold, dry day, so as not to include watery vapor, which in cold weather will condense inside the air-space and cause mistiness. The double-glazing with an air-space makes a window almost as warm as a brick wall, and not only keeps up the temperature of a room in winter, and saves firing, but it keeps the room cool in hot weather, and it makes the temperature more uniform throughout the apartment. With ordinary thin glazing in winter the inmates are always being chilled on that side which looks toward the window, and baked on the side which is toward the fire, and no sooner do ladies leave the dining-room than the gentlemen instinctively make up to the fire-place and proceed to bake the cold side of their persons. Double-glazing our window sashes would save all this trouble.

DYSPEPSIA.—Strenthen your digestion—tone the stomach for utilizing and assimilating every atom of food you take; the body needs it for strength and vigor. *Zopesa* cleanses the entire system, stimulates the Liver, keeps you regular, and able to eat ten-penny nails. Letters and postal cards come in daily, telling of cures and help from *Zopesa*, from Brazil. *Positive proof* of the health and vigor it gives in a ten cent sample. Ask your druggist.

HOW TO FIGURE SPEED.—THE REASON WHY.

In selling machinery, the maker usually recommends that it be run at a certain rate of speed, which has been demonstrated by experience to be most favorable to its successful operation. To fix upon the relative size of pulleys to be used in communicating this motion from the "line shaft" is a calculation which seems to be very imperfectly understood by the average mechanic. Conversation on the subject with a large number of engineers, millwrights, and others, has led me to think there was a demand for more light, and accordingly I offer the following system, the convenience and accuracy of which I have proven by years of practical use. This simple example will illustrate:—

Given, a 20-inch pulley revolving 100 revolutions per minute, a belt from which will drive a 10-inch pulley how fast?

The "rule" laid down on the "books" says, "Multiply the diameter of the driving pulley by its revolutions per minute, and divide by the diameter of the driven pulley." I find no fault with this rule, but would suggest that the teacher and text book of the future will be successful in proportion as they abound in "reasons why," and give the student *principles* from which to form his own rules. As every *rule* must be based upon a *principle*, when one is familiar with the latter the former becomes self-evident and not easily forgotten.

The speed of a driven pulley will bear exactly the same relation to the speed of its driver as its diameter does to the diameter of the driver.

In the above instance, the driven pulley being smaller, let its size represent the denominator of a fraction, of which the diameter of the driving pulley shall stand as a numerator, thus:

$$\frac{20}{10} \text{ of } 100 = 200$$

Or, suppose the diameter of driver was 25 inches its speed 180, and a speed of 600 was required, what must be the diameter of driven pulley?

Reasoning: Since the speed must be greater, its diameter must, of course, be less than that of the driver. How much? As much less as its speed is greater, thus its size will be

$$\frac{180}{600} \text{ of } 25 = \frac{75}{10} \text{ or } 7\tfrac{1}{2} \text{ inches.}$$

This not only leaves less room for a misstatement of the problem, but in most cases the multiplications and divisions may be made mentally, thus saving time and avoiding liability to error.

These advantages are of still greater importance where intermediate pulleys or "counter" shafts are used to multiply motion. For instance, it is required to "set up" a planing machine, the cylinder of which must run 3,500; it has a pulley 4 inches; the counter shaft has pulleys 6 and 24 inches, respectively; the line shaft runs 160; what size driving pulley will be equired?

Reasoning: The 4-inch pulley being driven from one 24 inches, the larger pulley will revolve as much slower as 24 is greater than 4, and the drive pulley on line shaft must be as much larger than the driven or counter shaft, as its speed is slower than that of the counter shaft which it drives. The entire operation may be analyzed as follows:

For the sake of clearness, I will suppose that the motion was communicated *direct* from the line shaft to the 4-inch pulley, in which case the rive pulley must be

$$\frac{3500}{160} \text{ of } 4, \text{ or } 87\tfrac{1}{2} \text{ inches.}$$

The use of a counter shaft will decrease the size of driver exactly in proportion to the relative size of its pulleys. In the above instances the pulleys on counter shaft are 6 inches and 24 inches, consequently the driving pulley will only require to be 6-24 as large as when no counter shaft was used, and this being understood the whole problem may be disposed of as follows:

$$\frac{3500}{160} \times \frac{6}{24} \times 4 = \frac{175}{8} \text{ or } 21\tfrac{7}{8} \text{ inches.}$$

This method is even more useful where pulleys are not exact as to measurement and also in computing trains of gearing, etc., of which I shall have something to say at another time.

STERLING ELLIOTT.

THE DESTRUCTION OF WOOD IN CANADA.

A correspondent of the *Scotsman*, taking notes in Ontario and the outlying districts, writes:—"The Canadians have been so accustomed to a plethora of wood that they contemplate the waste of it with remarkable indifference. To the west of Lachute," he says, "additional fields were in course of being conquered, not from the primeval forest, but from a good second growth of larch and maple." The simple process appears to be to cut down the trees, burn the trunks and branches, and leave the stumps in the ground. At one time the export trade was very extensive here, but within the last twenty years there has sprung up in these lumber districts a class of men who assume independence of any extraneous help. In referring to a district traversed by rail, the writer says:—"As far as the eye could reach, the timber clothing of the country consisted of a second or third growth of aspen, birch and various kinds of fir. High over the rich expanse of foliage there rose gaunt skeletons of older trees, melancholy records of those bush fires which have robbed and are to-day robbing Canada of so much of her natural wealth." Originating in the thoughtlessness or carelessness of settlers, these conflagrations have been known to devastate thirty or forty square miles at a swoop. "In one day's journey," he says, "I saw six fires burning, which only seemed to a want fanning breeze to produce the same serious results."

Further on, in speaking of the snake fences, he writes:—"Their stability is secured without fastenings by the use of three or four times as much material as might have served the purpose, and on every patch of waste ground may be seen a litter of logs and branches in all stages of decay." Even at more than one of the sawmills he noticed the refuse timber shot into the adjoining rivers to be carried away at pleasure, and probably form with the admixture of mud, after sinking, a serious obstacle to navigation. In a concluding paragraph the writer states "that from the whole of the north-east region of Ontario there has for the past four years been a steady flow of emigration towards the north-west—as an instance, during last spring the Grand Trunk Railway moved some 4,000 persons."

A $25,000 Raft.

H. Pigeon & Sons, of Boston, mast and spar builders, started from below Starbuck's Island to-day for Boston via New York the largest raft ever shipped from this city to the Hub. The timber was cut in Ontario, Canada, north-east from Toronto. On the lake it was made into a raft and towed to Oswego, where it was separated into two rafts of six "cribs" or sections each, and one of seven cribs. John Wells, of Oswego, towed the rafts from that city to Troy. The propeller *Lafayette* left with them for New York. The united rafts were 900 feet long and 34 feet wide. At New York they will be increased by 113 pieces from Clearfield county, Pennsylvania. The raft thus formed will be 1,300 feet long and 64 feet wide. On the ocean the pieces will be united by six tons of cable chains, each piece being bound separately by the chains. The large tug boat *Charles Pearson* of Boston will tow the raft along the coast to Boston. The cost of towage from Canada to the destination will approximate $3,500. It has already amounted to $2,000. The raft will be worth $25,000 when it reaches the Hub. Large timber such as make up this gigantic raft were formerly shipped from this city to Boston by rail. The experiment of sending by the river and coast was tried last year by H. Pigeon & Sons, rafts containing 80 and 180 pieces being selected for the trial. The results were perfectly satisfactory, the great economy being in the matter of expense. The pieces in the raft which left to-day were from 75 to 95 feet long, and from 18 to 30 inches in diameter. They will be made into masts and spars of all sizes and descriptions, and will speed the voyages of all kinds of vessels from fishing schooners to the largest men-of-war.—*Troy Times.*

THE FOUNTAIN OF LIFE is the blood. Keep the fountain pure and all the tributaries of health are in good condition. Burdock Blood Bitters will cleanse the blood from all the impurities, expelling Scrofula and all humors, tones up the debilitated system, regulating the liver, bowels and kidneys, and brings health to the afflicted.

IMPROVEMENTS IN MACHINERY.

BY S. B. RICHARDS, IN THE "LUMBER WORLD."

When I was about sixteen years of age, my father got an idea into his head that I had the making of a first-rate millwright in me, and so took me in hand to develop my capabilities. How well he succeeded I shall not attempt to say, nor do I believe the reader would be interested in knowing. I have, so long as I can remember, had a liking, natural or acquired, I can't say which, for machinery and mechanical combinations, and, looking back to my boyhood, can recall many crude attempts to devise means to lighten, what I then believed were the arduous labors imposed upon me. My inventive faculties were not, however, equal to the task of decreasing the amount of physical exertion necessary to the accomplishment of my allotted tasks, although I experienced little difficulty in performing them in a manner essentially different from that usually accepted as the most sensible.

As I grew to manhood, I gave no little time and thought to devising new methods of performing mechanical operations, and shall never forget the time when my first application for a patent was allowed; nor my feelings, when I received, at our little country post office, the huge envelope, with the portentous words printed thereupon, "United States Patent Office; Official Business." That envelope stamped me as a man of note; the government had, after patient labor, and diligent research, conceded the fact that I had discovered and utilized something new; that this something new was worthy of governmental recognition, and that so valuable was it, I should have sole property right to, and in it, for the term of fourteen years, with a privilege of extension of this property right for seven years longer if I desired. Our little town had never been the home of an inventor, and I at once became an object of interest to every dweller therein. No one seemed to give the subject of *how* I should realize a fortune out of my invention, a thought, nor did I at first. I was an inventor; I had a patent, and what more could a man want? I was congratulated on every hand, and more than one expressed the hope that I would not think of removing from the village. I endeavored to wear my honors meekly, but it is not in human nature to resist being condescending to those who have looked upon you as being something inferior to them, when, by reason of the exertion of your own powers, you are enabled to overstep them in popularity, and I am afraid I more than once entertained the suspicion that I was superior to the majority of my companions.

After some months it occurred to me that it would be a good idea to sell my patent. I confess it appeared singular that capitalists and manufacturers in the large cities had not been around to see me in reference to buying me out, but attributing this to ignorance, upon their part, of the fact that such a patent had been granted, I started out to enlighten them. How well I remember the old mother, as with one hand in mine, and the other holding one corner of her apron, she bade me good-bye, with many injunctions as to care of my money and person, and cautious to "beware of them patent fellows." Dear old lady, she had full faith in her boy's smartness, if the "old man" was at times somewhat skeptical. I had never been very far or very long away from home before this, and the importance of the trip rendered it necessary that all the village should be aware of the date of my intended departure, so that I lacked not for hand-shakings and good wishes when I started out. That period of my life is particularly pleasant for me to remember. I had a patent; I was going to sell it; I should come home rich. Railroads in those days were not so numerous as now, and I had to go by stage some sixty miles to reach my destination, where I arrived late and tired in the evening. The next morning, after a long talk with the hotel-keeper, in which I told him I was an inventor and had a patent to sell, information which did not seem to impress him as I thought it should, I set out to find a firm that was engaged in the manufacture of such machinery as I had invented, and a brief sketch of my interview may possibly prove interesting.

Entering the office I was met by an old gentleman, with a red flannel shirt on, sleeves rolled above his elbows, hands covered with iron filings and oil, who inquired what I wanted. I said:

"You manufacture and sell wood-working machinery?"

"Oh, yes," he replied, "can we do anything for you? Our stock is quite complete, and our terms quite as liberal as other makers."

"I am not desiring to purchase, not being engaged in the wood-working line, at least to an extent that would justify me in the employment of machinery," I said, "but I have given a good deal of study to mechanical devices, and have a patent——"

"I am quite busy," interrupted he, "and am not very much interested in such matters anyhow, so you will excuse me if I say that we have all the inventive ability in our establishment that we at present can employ."

"But," I replied, "I am not looking for employment. I have a very good trade that keeps me busy——"

"Better stick to it," he broke in.

"Well," said I, "as you do not appear to care about looking into the matter, I will not take up your time. There is another establishment here engaged in the same line, and if you will tell me where they are located, I will not trouble you further."

"Well," said he, "you have a patent. What is it for?"

"A saw table," I replied.

"Have you a model with you?"

"Yes, and my patent."

"Well, I'll look at it, although such things don't interest me, and I have but little time to spare. Come in and sit down."

We went into an inner room, and I took out my model, which, by the way, had cost me many days of patient labor, and was very elaborately gotten up, and he examined it. "Let's see your patent," said he.

I handed it to him, and after a few minutes examination, he returned it with the remark, "I don't see as it would be to our advantage to take hold of it."

"Is there any objection to the use of the device?" I asked.

"None at all," said he, "if you can get any one to use it."

"Well, if there is no objection to the use of it, why wouldn't it be to your advantage to secure the right to build it?"

"How much do you consider the patent worth?" he asked.

"It ought to be worth about ten thousand dollars," I replied.

"The question," said he "is not what it *ought* to be worth, but what *is* it worth?"

"If I could dispose of it at once, I would be willing to take five thousand dollars for it," I answered.

"Good," said he, "now we are arriving at a basis for negotiations. Let me ask you how long a time it took you to conceive and develop this invention?"

I could not see what he was driving at, so replied that from childhood I had been noted for "tinkering" and trying to invent something, and that I believed I had a gift that way.

"Let me put the question to you another way," said he. "How long did you study upon this saw table before you conceived the idea of the combination you have made?"

"Oh, no time to speak of," said I, "it came to me all at once, as it were; that is, I conceived the idea that a saw table susceptible of the changes of position and relations to the saw, such as I have made, would be very convenient to the user, and of money value to me, so after a few days of thought upon the matter, I made a model and applied for a patent."

"Did it take you a month to do all this?" he asked.

"I think not so long as that," said I.

"What did your patent cost you?"

"Nearly fifty dollars."

"Just step out into the shop with me a few moments," said he.

We went out, and, going straight to the "buzz-saw," he picked up a piece of board, and, in a few moments' time, by the aid of some thin strps or thicker blocks, had cut that board up into pieces, the sawed edges of which presented various angles to the original flat surface. Calling a boy, he directed him to take the pieces into the engine-room and we returned to the office.

When we were seated he said, "I have taken you out into my shop only to show you that upon my old saw table I can perform the same operations that you can with your improved and patented arrangement. I can do everything you can, with as great accuracy, but possibly not quite so quickly. You come to me with your invention, that has taken but little of your time to devise, and necessitated but a slight outlay of money, and ask me to pay you the snug sum of five thousand dollars for your patent. If I could not, upon my old saw table, do what you can upon your improved one, and if it was essential that these operations be performed, the price you put upon your patent might be reasonable. If I buy your patent, I must have some prospect of getting my money, with a reasonable profit, back again. I fail, at present, to see how this can be done, and, of course, am not inclined to purchase at your price."

"What, in your opinion, is it worth?" I inquired.

"I should not care to put a value on it," he replied "but I will say this; if your invention were my own, I should not use it for the reason that it would only add to the expense of making an article, in which there is now very little profit, without in any manner adding to its real utility. You are a young man, endeavoring to make money without working for it, unconsciously perhaps, but nevertheless endeavoring to do so. Take my advice, go home, and to work. You say you have a good trade. Stick to your trade, and save your money. Invent all you please, so long as you don't neglect your business, but don't attempt to sell a patent until you *know* you have something that will facilitate operations, thereby cheapening the cost of performing them, or that will simplify the method of performing them, or that will permit of new operations being performed."

I went home, but it took me a long time to comprehend what the old man meant.

Advertisements intended for insertion in any particular issue should reach the office of publication at east three clear days before the day of publication, to insure insertion.

All communications, orders and remittances should be addressed and made payable to TOKER & Co., Peterborough, Ont.

Communications intended for insertion in the CANADA LUMBERMAN, must be accompanied by the name of the writer, not necessarily for publication, but as a guarantee of good faith. Communications to insure insertion (if accepted) in the following number, should be in the hands of the publishers a week before the date of the next issue.

PETERBOROUGH, Ont. SEPT. 15, 1881.

OUR TIMBER POLICY.

We are not aware that anything could prove more conclusively the short-sighted and destructive system with which the timber lands of the Province have been and are dealt with than the circumstances which are now about to compel the Ontario Government to place in the market a considerable area of pine lands in the Nipissing district. It is no longer a state secret that the Crown Lands Department of Ontario have recently organized parties to make reports on the timber in those townships in the district referred to that are now prejudiced and liable to be destroyed by the squatters and settlers and pine fire bugs, to which on several occasions we have found it necessary to refer. With wonderful acumen they seek to transfer the risk of this valuable trust to the lumber trade at par. Do they expect that the trade are equally ignorant of their business, and will bid such bonuses as they would have been justified in doing had the fire risks been protected by the department? It is within our knowledge, and our attention has been recently called to the immense depreciation that lumber operators put on the value of standing timber where the ground has been forestalled by the squatter or settler. Perhaps the statement of a practical operator, and one who is prepared at any time to bid for public timber lands, may call attention to this subject; the information is given freely to us to publish, backed up by evidence which may be available should we require to use it.

The circumstances are these, and seem to us what are liable to occur on this new area about to be exposed to sale. The operator states that he bought a limit not a hundred miles from the townships which are to be sold. He discovered that the settlers were damaging the timber, and although most unwillingly, he was compelled to operate. No sooner were his operations started than these settlers and squatters actually cut down and put three to four cross-cuts in from four to six hundred pine trees of the choicest kind. The only reason he could ascertain for this was that they would make sure of shingle timber when, or if ever, they should require them. The operator states that each tree would have averaged 140 feet of the best board timber. He further states that he appealed to the Crown Lands Department for protection with no results, and then asked the department to allow him an equal number of trees from the next township, which was not under licence, and was also refused; so that the operator lost this valuable timber, and the Province the Crown dues which would accrue therefrom.

We do not wish to be understood to claim that the department should not now expose these timber lands for sale; probably it is the only thing left to be done; but we do say that so long as the revenue of the Province did not require it, and the manufacturing requirements of the Province did not demand it, fresh timber areas were better unsold. There are quite enough timber lands under license west of the Ottawa section and south of Lake Nipissing exposed to dangerous fire risks, and which should be forced to furnish revenue by keeping other fresh territory out of the market, if it were possible.

A WORD TO THE TRADE.

We are now, notwithstanding the fair wind and flow of trade, approaching the period when the careful navigator will take in sail. We are going to ask a question, the answer to which ought to lead all thinking operators to operate carefully. Mr. Operator, had you the pine growing to-day that you have cut down within the last ten years still standing on hand, would you not be able to sell out for more money than you are worth to-day? We anticipate the affirmative reply.

The disposition to pay bonuses for timber lands based on the profits of stocks got out with cheap labor and supplies; the fact of a dear labor and supply market to face for the coming season of manufacture; the fact that for every percentage of advance in our labor there is an equal percentage less work done; the fact that the ebb tide of trade will face us with our stocks on hand, got out on these expensive, and perhaps to some extent unavoidable circumstances, this array of facts should arrest the natural and fatal anxiety of many in the trade to operate too largely and to endeavor to get rich too fast. To those that hold timber lands, we say, go slow. Keep your plant account in service; don't increase it. Keep your mill going—not too high pressure; your foundry bill will be less, and you will cut better lumber. Make up your mind to operate to the extent that you can handle under your personal supervision, and don't compete with your wealthier, but perhaps reckless neighbor for labor, and we safely predict that you will find your properties three years hence more valuable and under better control than those who, carried away by a little temporary prosperity, project increased operations, which can only be carried out under the most advantageous circumstances.

A DESPATCH dated Parry Sound, Sept. 2, says: Serious difficulties have arisen here between the river drivers in the employ of the Ontario Bank and the foreman of the Parry Sound Lumber Company about water rights on the Seguine river. Years ago the company purchased the right to overflood land, and constructed a large dam at the outlet of Mill Lake to hold a supply of water for their mill during dry seasons. The water is now very low, being barely enough to float logs through the sluice at Mill Lake. In order to keep a supply for the drive the Bank men have taken forcible possession of one sluice and have jammed logs on the rapids, holding back the water so as to shut down Mr. Wm. Beatty's flour-mill and the large saw-mill of the Parry Sound Lumber Company. The logs of the Bank, after leaving Mill Lake, must pass over the sluice at the company's mill before reaching the Bank's mill on the Georgian Bay. It is understood that orders have been given by the company's manager to resist this passage by force if necessary, and very serious complications, and even bloodshed, are feared.

THE very great scarcity of fodder next season consequent on the poor crops of hay is a matter of serious comment by the coming winter's operators in the woods. A double misfortune has befallen those of New Brunswick in the destruction of the great reserve fund, that of the Tantamar and new and west marshes being flooded by salt water. The dykes broke at the late high tide, completely submerging them to a depth of upwards of four feet.

PREVENTION OF FOREST FIRES.

The Kingston *Whig* has the following editorial:—

"The curse curseless shall not come;" and though like Mackbeth's wife we may hail the oft-seen terror as a "thing of custom," it will not the less work its mission as the penalty for the breach of foral or economic law. A race gifted with other aptitudes than that which has found its home in this country might work out the utilization of the forests which clothed it by converting them into materials which would add to their own wealth and so of mankind; but the discussion hereof would probably open up questions of ethiaology as various as those presented by the contemplation of many parts of the world endowed with everything but an intelligent population. There have been forest fires in Ontario since the settlement of the U.E Loyalists, increasing in destructive energy year by year, and it would seem vain to hope that they will not recur with greater ravage. The Ottawa valley has been desolated throughout entire townships until there are millions of acres which no man will buy. The consolation afforded by the agricultural commission report that such is not the case is brobably the best an ignorant and inculpable people can desire to have. While we can sell a few millions of feet every year, and while the party in power are satisfied with the returns, it is idle to discuss the propriety of enquiring whether this source of revenue is ever likely to fail us, or whether it is worth while to diminish the revenue by measures calculated to ensure its duration. With abundant fuel in the coal mines of a foreign neighbor we may cheer ourselves, while the miles of woodland yearly recede from view, that we have never made any effort to carbonize our wood into charcoal, but have instead dissipated its heat to the empty air. While our streams dry up, and the hum of many a mill is hushed forever imported coal will supply our frontier manufactories with power we have flung back to the heaven that gave it.

It could not be otherwise where national opinion is impervious to any conception of the curse which is wrought on us by the destruction of fertile soil, of fuel, and of building timber every year, it could hardly be expected that criminal negligence in dealing with fire would be punished. The record of the general iniquity in this respect might be shown in darker light. The hideous crime of arson is common in Ontario, and, as might also be expected, no steps are being taken in the the interests of justice to bring the criminals to account. No insurance company will keep a policy on foot upon unoccupied farm buildings, and the record of their business shew the wisdom of this provision. It is well known also that bad harvests immnsely increase the losses of insurance companies. Much may be allowed for the difficulty of detecting incendiarism, but the difficulty is too often made an excuse for supineness. From the combustible material of farm buildings a law exacting people would derive a reason for greater activity in ferreting out incendiaries. The very ground for such a reason makes them dread injury to themselves from the hands of the wrong doer should their endeavour to track him prove abortive. And so it is with field fires put out among stumps and in log-heaps during the season between May and November. If the farmer is negligent his neighbors suffer and they put up with it. If one per cent of the actionable cases had been dealt with ten years ago it is more than likely the damage would be enormously less. Those who, from a sense of public duty, will bring the offender of this year before the courts, will merit the thanks of the public. Not a single case of negligence should go unpunished. It is one means only, but an important means, of educating criminally careless people to a sense of their duty, and of the rights of others. And such a conviction will spread into the domain of those cases attributed to accident. When the farmer shall be made keenly sensible of their rights and duties in this matter, there will be a ray of hope available to the public that the Government of the Province will do something to protect the Crown Timber Lands from destruction by fire.

TRY BURDOCK BLOOD BITTERS, the great system renovator, blood and liver syrup, acts on the bowels, liver and kidneys, and is a superb tonic.

TORONTO.

From Our Own Correspondent.

Since my letter to you of two weeks ago lumber has been arriving for export by the N. & N. W. R. quite freely, and the docks belonging to that company are crowded with lumber, recalling to mind the good lumber times which existed at the close of the American civil war. The local dealers, however, are still complaining bitterly at the treatment accorded them by the railway company in the matter of supplying them with cars for the local wants of consumers; dimension stuff in consequence is extremely scarce, and the company persistently refuse to grant them more that a limited number of cars for the wants of the city trade. This discrimination in favor of the foreign markets, as against the wants of our home market, is certainly unjust, when we consider the large amount of pecuniary aid given by our citizens to assist railroad enterprise. This, however, is not the only instance of unfair treatment received by Torontonians at the hands of railway corporations, and so it will continue to the end of the chapter. Railway companies are proverbially slippery customers to deal with, and you never know when you have them; there always seems to be some loop-hole through which to escape from the performance of their engagements.

Another serious cause for complaint, as mentioned in my last letter, is the large increase in their freight tariff, 20 per cent. being the rate of advance from all points of the N. & N. W. R. and its various branches. True, the company try to convince their customers that they are actually granting them concessions, instead of laying on more onerous burdens, inasmuch as they grant them the privilege of loading on a car 20,400 lbs. instead of 20,000 lbs., the latter being the weight previously allowed to shippers. At a first glance this appears plausible, but the company know full well that previously, in at least eight cases out of ten, the latter weight was brought over the road, but want of time and other causes prevented the weighing of all cars to detecting offenders. Their specious pleading in this case virtually amounts to this: We will grant you the liberty to do that which you have hitherto done, and charge you 20 per cent. additional for the privilege of so doing. This increase in rates will tell most severely on dimension stuff cut to order, as shippers cannot venture safely in putting on more than 7,500 feet and keep within the weight at present allowed. This estimate, of course, is based on the lumber being green from the saw, therefore the only course open to them will be an increase in prices on all bill stuff cut to order; and lath, unless dry, had better be left at the mills until they are seasoned, as cost of manufacture cannot be realized if brought here in a green state.

Another discrimination in favor of the foreign trade, as against the local dealers, is to be found in the difference of about 25 per cent. in freight rates in favor of all lumber passing over the company's docks; so that all things considered, it is little wonder that yard men and local consumers deal out hard names when discussing this matter, and the fact is undeniable that retailers are so heavily handicapped through the above and other causes, that it is little wonder that so many go to the wall when times of financial depression occur. At present, however, in spite of all difficulties, building goes on as briskly as ever, and it would seem that Toronto had obtained possession of Alladin's wonderful lamp, for turn whichever way you will, new buildings are springing up in all directions, and vacant lots in eligible positions will soon become a thing of the past.

Prices at the various yards remain firm, and former quotations are fully maintained, and should the present dry weather continue much longer, bill stuff will be hard to obtain at any price, as a large number of mills have been compelled to shut down, not daring to continue running until rain has fallen, as the sparks from their smokestacks easily ignite the combustible material laying all around them. Rates to Oswego rule about the same as mentioned formerly, and vessels hard to obtain.

Toronto, Sept. 9, 1881.

Improvements are constantly being made in the manufacture of steel pens. Esterbrook's are of superior excellence. For sale by all stationers.

EXTENSIVE FIRE.

AMHERSTBURG, Sept. 8.—For the past few days fires have been burning along the line of the Canada Southern Railway in this county, but not till this week was any serious damage done. Watchmen have been employed day and night at places where buildings and other property were in danger. In the neighbourhood of McGregor D. Sicklesteen has had men watching the fires for several days. On Wednesday night, notwithstanding these precautions, Mr. Sicklesteen's mill was totally destroyed, and Thos. Oullette's large stock of hardwood lumber at McGregor was burned and badly damaged. About eleven o'clock on that night fire was discovered in the south side of the mill, and in thirty minutes the entire building was ablaze. Messrs. Oullette's and Sicklesteen's horses were immediately got out and set to work drawing water to the fire, and lumber and logs from it. The men had one force pump and hose, which they worked to great advantage while the water in the well lasted. Everyone who could get a pail was at work, and men never worked more faithfully. Robert Pool and Theophilus Lemay overworked themselves and had to be carried away. Peter Laporte had his feet badly burned, but no one else was injured except by overwork. Telegrams were sent to Messrs. Oullette and Sicklesteen, at Amherstburg, as soon as possible, and they at once drove out. When the fire brok out the watchmen were busily engaged on the north side of the mill, where the fire has been raging in Hiram Walker & Sons' woods, which caught fire from a Canada Southern engine about a week ago. At one time it was thought that the whole village would be burned. Mr. Sicklesteen's loss on the mill is $6,000; insurance, $2,500. Mr. Oullette's loss on the lumber, &c., is $8,000; insurance, $5,000, of which $2,000 is in the Royal, and $3,000 in the Mercantile. Mr. Sicklesteen's mill was only completed last year, and was the best and most complete in the county of Essex. Its destruction will be a great loss, not only to Mr. Sicklesteen, but to the village of McGregor and neighbourhood, as a large number of men depended on employment therein and about for their livelihood. Between McGregor and Essex Centre the bush is full of fire, and in many places the fences along the track are burned. In the neighbourhood of Cottam considerable damage has been done to fences, &c. Word was received here yesterday afternoon that a saw mill at Gesto had been burned, but it is hoped the report is incorrect.

The Montreal *Gazette* says that the great display of Colonial timbers, which was so important a feature of the London International Exhibition of 1862, and in which Canada was not badly represented, was, at the close of the exhibition, transferred to the museum at Kew. The museum was begun in 1847, the first contributions being a few objects from Sir William Hooker's private collection. The botanical collections at Kew were commenced about the middle of last century by the Princess Dowager of Wales, mother of George the Third. The King, her son, greatly increased them, with the scientific aid of Sir Joseph Banks. The impulse given to navigation and exploration towards the close of the century had the effect of adding a great deal to its botanical treasures, the New Holland house having been specially built for Australian plants. During the two preceeding reigns Kew was comparatively neglected, but on the Queen's accession an enquiry was made into its condition, and the result was that the royal gardens were devoted to the public service. Relations are maintained between Kew and all the great botanic gardens of the British Empire.

THE WORST GENERAL in the battle field of life is general debility, which the vital forces often fail to conquor. Burdock Blood Bitters are ever victorious against all attacks of chronic disease, they regulate the bowels, act upon the kidneys, liver, and all the secretions, tone up the debilitated system, strengthen the nerves, purify the blood and restore lost vitality One dollar per bottle. All dealers in medicine can supply you.—T. MILBURN & Co., Toronto, General Agents.

Worthless Stuff.

Not so fast my friend; if you could see the strong, healthy, blooming men, women and children that have been raised from beds of sickness, suffering and almost death by the use of Hop Bitters, you would say "Glorious and invaluable remedy."—*Philadelphia T...*

THE MART
BY F. W. COATE & CO.

SALE OF VALUABLE

Timber Limits

Near Lake Nipissing.

The subscribers have received instructions to sell by Public Auction, WITHOUT RESERVE, at the Mart, 57 King St. East, in the City of Toronto, on

Wednesday, 5th Oct. Next

The Valuable Timber Limits situated near Lake Nipissing, and designated as Berths Nos. 29, 30 and 38 containing 36 square miles each.

The outlet from these limits is by the Bueve River, which runs centrally through a large section of them, affording first-rate facilities for running timber or logs into Lake Nipissing.

By recent survey of two lines and ranging a portion of them, they are known to contain a large quantity of excellent White and Red Pine, represented to be quite equal, if not superior, in quantity and quality to any in the entire district; a considerable portion of it being in close proximity to the river, growing on good even surface and can be easily worked.

The Limits have not been worked, and will be sold to purchasers in separate lots as they are designated and on liberal terms, which will be stated at time of sale. Sale to commence at 12 o'clock.

Wrought Iron Shanty Cook Stoves

The Best Article ever offered to the Trade.

I have much pleasure in drawing attention to my **WROUGHT IRON COOKING STOVE, for Shanty, Hotel and Boarding House use.** These Stoves are made of **Heavy Sheet Iron,** the top and lining of the fire-box being of **Heauy Cast Metal** and all the connecting parts of substantial **Wrought Iron Work.** The dimensions of these Stoves are as follows:—

SINGLE OVEN STOVE

Top surface contains six 10-inch holes, with ample room between, and one oven 16 x 24 x 26.

DOUBLE OVEN STOVE

The Double Oven has a top surface containing twelve 10-inch pot holes, with two ovens, each 16 x 24 x 26. One fire-box of suitable size for area to be heated. Below will be found Testimonials from some of the leading Lumbermen, who have used my Wrought Iron Cook Stoves since I ommenced manufacturing them. They are the names of gentlemen who are well known and eliable, and will carry more weight than any recommendation of my own could do.

The Best Stove I have ever Used.

PETERBOROUGH, May 31, 1880.

ADAM HALL, Esq., Peterborough. Dear Sir,—I have used your Wrought Iron Cooking Stove in our lumbering operations since its introduction here, and have no hesitation in saying that I prefer it to any other. For durability, economy and efficiency, where a large number of men are employed, it is the best stove I have ever used. You can, with confidence, offer it to hotels, boarding houses and lumbermen.

Yours truly, THOS. GEO. HAZLITT.

The Stove for Lumbermen.

PETERBOROUGH, June 1st, 1880.

ADAM HALL, Esq., Peterborough. My Dear Sir,—We have used your Wrought Iron Cooking Stove and find it is very satisfactory for lumber operations, especially so on drives. We can recommend it highly.

Yours truly, IRWIN & BOYD,

Gives the Greatest Satisfaction.

PETERBOROUGH, June 3rd, 1880.

A. HALL, Peterborough. Dear Sir,—I have had the Wrought Iron Cook Stove, purchased from you, in constant use ever since last fall, and it gives the greatest satisfaction in every respect. I can recommend them highly to any one who is in the lumber business. Very truly yours, GEO. HILLIARD, M.P.

EVERY STOVE GUARANTEED

All the necessary TINWARE and CUTLERY for Shanties suppied at the Lowest Prices.

ADAM HALL, Peterborough.

THOSE FOREST FIRES.

GREAT DESTRUCTION OF VALUABLE TIMBER, ETC., IN THIS DISTRICT.

MINDEN.—Forest fires have been raging in this neighborhood for the last week, but have not done much damage until within the last two or three days. Hazlett's, Hilliard's and Ullyot, Saddler & Co.'s timber limits are said to have been damaged to a large extent in the township of Stanhope. The crops and fences in some instances have been totally destroyed.

MILLBROOK.—Bush fires have been raging in this vicinity for the past week, destroying barns, grain and fences. A heavy thunderstorm, lasting about six hours, visited here last night, which has greatly stopped the bush fires, though the village is still filled with smoke.

COBOCONK.—The excessive heat of the last few days, together with the long spell of dry weather, has made this entire country one vast tinder-box. Some years ago the whole country to the north and west of this point was swept by fire, killing nearly all the vegetation, since which time the progress of decay in the falling timber has been going on. Now a few small green shrubs with tall, dead trees, and dead decaying down timber cover the face of the ground for some miles. At many places the fire has got a start, and with the gale of wind we had yesterday, its progress was rapid. The smoke was so dense here as to render it almost unbearable. An object could not be discerned one hundred yards away, and falling leaves flew around in every direction, giving the air the appearance of flocks of birds passing steadily in one direction. The inhabitants walked around with handkerchiefs to their eyes, one and all having the appearance of an old toper after a week's holiday. The wind kept up at a high rate until late on Wednesday. Yesterday morning, however, it was almost a dead calm. Had it continued as fiercely as the day before there would have been great danger from a fire approaching from the north-west, and distant not more than three miles, with abundance of fodder to supply it. South from this point two farmers have lost all their fences and buildings, and several more their fences, while to the north numerous fences are burning in every direction. At the north siding where there is a large quantity of cord-wood piled the fire has raged for several days, as also at numerous other points along the line, but has been checked by the employees. The night before last the village of Kirkfield had a narrow escape from being totally consumed. As it was a house and a large quantity of slabs belonging to the Mackenzie Bros. was consumed, and only for the extraordinary exertions put forward by the inhabitants, their large mills would have taken fire. Had such been the case, nothing could have saved the village.

The great want is rain, and unless it comes before long, or the wind keeps a dead calm, the whole country will be in flames.

Another despatch says:—McBain's saw-mill about six miles from here, is burnt. The smoke to-night is very dense. No rain has fallen here for five weeks.

PARRY SOUND.—For the past two weeks, in every direction, we have seen the glare of fire made by the conflagrations. The settlers have been working night and day to save their little all, and still the progress of the devouring element is not stayed. The efforts of those who have been fighting the flames have met with considerable success, and a large number of houses and barns have been saved, but thousands of dollars worth of valuable pine has been burnt. Nearly every farmer has lost more or less by the burning of fences, the fire running over his meadows, or burning some portion of his crop. In the immediate vicinity of the village the fire has been raging with great violence. On Wednesday Parry Harbor was threatened with destruction, and it required a determined fight to prevent the fire creeping up over the hill and catching in the Ontario Bank mill yard. The wind favored the efforts of the workmen in fighting the flames. On Tuesday and Wednesday the residences of Messrs. L. McGowan, S. J. Peake and W. A. Scott were in great danger, but were eventually saved. Yesterday the whole country was enshrouded in a dense smoke, and it is feared that if rain does not soon come the destruction of property will be very much greater. On Wednesday a fire broke out in the woods near Mr. William Beatty's residence, caused by a fire started by some small boys who had a shanty built there. A large number of men were engaged all night in putting it out, and it is now nearly under control.

OVERHEAD HEATING.

The system of overhead heating in manufactories and mills by means of steam pipes is being very generally adopted in New England, and is recommended by the insurance companies. The first objection usually made is that heat rises, but in point of fact the connection of heat from pipes is by radiation, and does not follow special direction either upward or downward under the usual conditions of a factory. It is simply a question of diffusion, and the best place for the pipe is where the radiation or diffusion is effected in the best manner. One of the greatest dangers to which factory buildings are exposed, and one of the heaviest causes of loss, is the collection of combustible matter on steam pipes, where they are ordinarily placed at the sides of the rooms under the windows. Mr. Edward Atkinson, president of the Boston Manufacturers' Mutual Fire Insurance Company, recently addressed a circular to the managers of fifty-two mills where this system is employed asking a number of questions, to draw from them the results of their experience with the overhead pipes, and received forty-two answers. Out of the forty-two replies two were unfavorable; two were unfavorable, but were qualified by statements that showed their apparatus to be poor; one was favorable with exceptions, and thirty-seven were absolutely favorable. In respect to economy in heating the answers varied from nothing to twenty-five per cent. saved, and the greatest saving was shown where the pipes were away from the wood and brickwork, and therefore lost nothing by having the heat conducted away. Among the mills which sent favorable answers are many of the largest in the country, and that they do not speak until they have thoroughly tested the system. The coils of pipe are generally placed about two feet from the ceiling on hanging brackets from the beams, and one and one-fourth inch pipe is the best adapted for the purpose. In addition to the safety from fire, there is the economy of space, and every inch of floor space is available. The system is one that should commend itself to those who are engaged in the manufacture of inflammable articles.

New Forests.

A writer in a West Virginia paper says that the Shenandoah valley, when first settled, 160 years ago, was an open, prairie-like region, covered with tall grass, on which herds of deer, buffalo and elk fed, and devoid of timber except on occasional ridges; but that after it became settled trees sprang up almost as thickly and regularly as if seed had been planted. These forests, having been preserved by the farmers, cover now a large part of the surface of the valley with hardwood trees of superior excellence. The explanation of this change is that previous to the settlement of the valley annual fires, negligently started by the Indians, burned up the young trees and prevented the formation of forests, but with the arrival of settlers these fires were prevented; and the opinion is asserted that the treeless character of the western prairie is owing to the Indian practice of annually burning the grass. Were it not for that, dense forests would have covered these vast plains for centuries.

How to Give Pine an Oak Color.

Wash the wood carefully in a solution of copperas dissolved in strong lye in proportion of a pound of copperas to a gallon of lye. When the wood is dry, after having been thoroughly saturated with this wash, oil it, when it can be stained and again oiled. Often, when not subjected to hard usage, the color will remain undimmed for several years, only requiring to be oiled occasionally. The color may be put on with a short brush, or the hands being protected with thick buckskin gloves, the wash may be applied with a cloth, which will saturate the wood more evenly. It will blister the hands if they are not well protected.

KOUMISS.

The Tartars and some other equestrian tribes, from time immemorial it is said, have practiced the art of brewing a sort of beer from mare's milk; and in later times they have learned how to distill this beer and procure from it a very potent brandy. Koumiss is the native name of the mare's milk beer, and rack or racky of the koumiss brandy. This koumiss has at times become celebrated among enlightened people as a health reviver—a fact, by the way, not at all extraordinary, and not necessarily dependent upon any good quality of the koumiss. The regular doctors and the standard medicines fail us so often that we must not be too severe on the afflicted, who, in their despair, resort to quacks and the outlandish devices of the barbarians.

The following account of the preparation of koumiss by the Tartars is on the authority of a memoir by Dr. Grieve, in 1788, to the Royal Society of Edinburgh. Take any quantity of mare's milk, dilute it with a sixth of water, pour it into a wooden vessel, and add as a ferment about one-eighth of very sour milk, or better, of old koumiss; cover the vessel with a thick cloth and keep it at a moderate temperature. After standing twenty-four hours, a thick coagulum rises to the top, which must be well mixed in by beating and churning. After reposing for another day, it is again stirred till it becomes quite homogeneous, and in this state it forms the new koumiss, which has an agreeable sweetish acescent taste. Koumiss keeps well, and, like other beers and wines, with proper care, improves with age in taste and becomes more alcoholic.

It is often preserved and transported in bottles made from horse skin; a complete bottle is made from the skin of the hind quarter, the leg part forming the neck of the bottle. We understand that it is the practice of some of the tribes to prepare koumiss in the skin bottles by simply filling up the bottle with fresh milk as fast as the koumiss is consumed. If the rate of using and filling up be properly regulated, a pretty uniform product would be secured, but of course it would be a sort of "'alf and 'alf."

It is to be understood that mare's milk is the basis of the genuine koumiss, and no doubt genuine koumiss has a taste and odor peculiar to and characteristic of mare's milk. But as to chemical constitution, there is very little difference between mare's milk and that of other large mammals, and any kind of milk will produce koumiss closely resembling the genuine; perhaps cow's milk will produce a koumiss which will surpass the genuine. The Tartars use mare's milk because of the abundance of horses in comparison with other milk-giving animals. Horses and Tartars have been constant companions for ages, and thus it has come about that Tartars became experts in the difficult art of milking mares and then invented koumiss. The ancient Scotch made a fermented drink out of milk, but not mare's milk, which is proper to allude to here. The basis of the Scotch drink was whey, which was prepared by keeping it in the ground, undisturbed, for at least a year.

A drink under the name of koumiss has been on sale in some of the saloons of this city, which is prepared from a receipt substantially as follows: To one quart of milk add one tablespoonful of sugar and the same of brewer's yeast; when sufficiently fermented, preserve in strong bottles.

Wine whey, and innumerable punches, and Tom-and-Jerries, which contain milk as an essential ingredient, also are related to koumiss. And there are those, constantly increasing in number, who do not allow that milk can be improved for any useful purpose by the addition of alcohol.

A few days since the news was flashed over the country that koumiss had been recommended in President Garfield's case, and that a supply of it had been forwarded for his use. Koumiss has accordingly become a subject of extensive inquiry, and thus has originated the present article.—*Scientific American.*

THEY ALL DO IT.—Everybody uses "TRABERRY" for the teeth and breath, the newest, brightest, cosiest little toilet gem extant. Try a 5 cent sample.

DR. FOWLER'S EXTRACT OF WILD STRAWBERRY cures canker of the stomach and bowels, dysentry, cholera-morbus, and all summer complaints.

THE ELECTRIC LIGHT IN SAW MILLS.

The lighting of saw mills with the electric light is now being tried in various parts of the country, under different conditions, and its utility and economy will be fully tested. That the light in itself is adapted to the purpose there can be no doubt, and when it shall be fairly demonstrated that the machinery for its production can be run by the mill machinery and produce a steady light at less cost than is involved in the use of other means of lighting, or that the reduction in the fire risk or the amount of additional work accomplished shalll be sufficient to offset any increase in the expense, the electric light will eventually come into general use. The light is used in the McGaw mill, in this city, and in some of the larger mills in the west and Canada, with fairly satisfactory results.

The experiment of running the generator by the mill machinery is being tried at Alpena, in the bay shore mill of Fletcher, Pack & Co., which was lighted for the first time on the 13th instant. The light is furnished by a Maxim generator, run by the mill machinery. The mill is one of the best saw mills in the State, and contains the latest improvements—steam feed for the circular saws, cant turners, live rollers, patent edgers and every modern appliance. The upper storey of the mill has three electric lights, which, it is said by the local papers, illuminate the large room almost equal to the light of day. Each lamp has an illuminating power equal to that of two hundred candles. The *Argus* says: "There is a slight flicker to the lights, which is caused by the mill machinery running a little faster at some times than at others. When the saws are cutting logs there is a slight check on the motion of the engine, and the machinery works somewhat slower than when the saws are not cutting. As the same power that drives the mill machinery also drives the electrical machine—the result is that the electric machine is run at different velocities, and thus occasions a slight flicker of the light." The running of the electric generator by water power is also to be tried at Alpena. The *Argus* says: "Negotiations are being made for lighting up the mills, opera house, business places, streets and dwelling houses by the electric light. The motive power will be at the dam, and wires will lead from there to various parts of the city. The cost of putting in such works will not be very expensive, and the light can be furnished cheaper than gas. It is a better, clearer and stronger light than gas, and there is no danger from fire. The lamps with which it is proposed to supply private houses are of thirty candle power, and are said to be almost indestructible—the danger of breaking by fair usage being but little. The dam promises to be of much benefit to the city. It runs a saw mill, furnishes large booming facilities for logs, supplies the power that furnishes the city with water, and now it is proposed to make it furnish light for the mill, streets, stores and houses." At the McGraw mill in this city some difficulty is experienced in keeping the lamps in order. When the lamps are in order the light is satisfactory.—*Lumberman's Gazette.*

The Strength of Small Spruce Beams.

F. E. Kidder performed a series of experiments at the Massachusetts Institute of Technology, their object being the determination of the moduli of elasticity and of rupture in small beams of white spruce *(Abies alba)*, and such other information as might be derived from the data obtained, The results of these researches are embodied in a paper read before the American Academy of Arts and Sciences, and printed in the current number of the *Journal of the Franklin Institute.* The conclusions drawn from the results of the experiments are as follows:—The modulus of elasticity depends not only upon the elasticity of the material, but also upon the length of time that the load is applied. When subjected to loads not exceeding one-sixth of the breaking weight, spruce beams do not take a permanent set; but even under very small loads, if applied for any length of time, there will be a temporary set. Knots and gnarls in beams loaded at the center, when not within one-eighth of the span of the centre of the beam, do not materially affect the elasticity under small loads.

NEW GLASGOW.

MESSRS. I. MATHESON & CO'S FOUNDRY AND BOILER WORKS.—In the fall of 1867 Mr. Matheson started a foundry and boiler works in this place, and, owing to his extensive advertising in the daily papers, has become one of the best known manufacturers in the Province. His enterprise, after many years of struggle, was well established, and he was just beginning to realize the return of prosperity when, with a number of heavy orders on his hands, and a workshop full of partially built boilers and engines, a disastrous fire destroyed his principal workshops and machinery. The loss was a heavy one to Mr. Matheson, who, unfortunately, had no insurance. But nothing discouraged, Mr. Matheson set to work to rebuild, and although less than three months has elapsed since the fire, a new building three times as large as the one destroyed by fire has been erected, and operations have recommenced with renewed vigor and energy. The new building, 175×140, is roofed with galvanized iron, and contains the machine, boiler and smith shops. Adjoining is the brick moulding shop, 135×36, and several other buildings. A siding from the Eastern Extension and Intercolonial railways runs through the main building. Forty mechanics are steadily employed, to whom as good wages are paid as are to be obtained in any part of Canada. These and other orders will keep the works running on full time for the next four months. Messrs. Matheson's specialty is the manufacture of boilers, bridges, steam-hammers, windlasses, and all kinds of iron ship works, shears, and hydraulic presses' for knee-bending. They also import saws, belting and pipe. Five of their boilers are now in use at the Drummond and Vale Collieries ; two at Hon. Senator Muirhead's saw-mills at Chatham ; also boilers and engines at the Oxford Manufacturing Co., Oxford ; Reed's furniture factory, Bridgetown ; Carmichael & Co.'s saw-mill, New Glasgow ; the saw-mills at Scots Bay, King's County ; and the steamers *Wellington*, Antigonish ; *Lion*, Georgetown, P. E. I. ; *Bertha*, Halifax ; and *Alpha*, Georgetown, P.E.I. Most of the steam hammers now in use in this Province were built by this firm. They have also rollers made by themselves capable of rolling plate one inch thick and eight feet wide.

We direct the attention of our readers to the advertisement of Messrs. Matheson & Co. in this issue of the CANADA LUMBERMAN.

OUR QUEBEC LETTER.

END OF THE EXCITEMENT IN WHITE PINE.—INCREASED DEMAND FOR OAK.—PRICES CURRENT, &C.

QUEBEC, Aug. 26.—There has been some little excitement in white pine since the date of my last letter, but a calm has followed, and there is not presently any particular reason to apprehend that it will be seriously disturbed for some little time to come. A few choice rafts of Kippewa and Michigan timber changed hands some ten days ago at prices which have rarely been reached here before. A raft of Michigan waney pine of 21 inches sold as high as 40 cents. Two other rafts of the same timber of 19 inches sold one for 36 cents, the other for 38 cents. An Ottawa raft of 48 feet changed hands at 24 cents, and one of 42 feet at 19 cents, with red pine 29 feet at about 13 cents. About the same time bright pine deals, which were not in very great demand, were sold at $102, $65 and $34, and spruce deals at $38, $26 and $22. During the past week the feeling has been quieter, the only sales made being as follows :—Three good rafts of white pine, 58½ feet average, at 30 cents, 53 feet average at 29 cents, and 47 feet average at 27 cents per foot.

Advices from England are to the effect that the demand is not very great ; still it must be remembered that the stocks held here in first hands are very light.

It is perhaps fortunate for lumbermen that the prices obtained a fortnight ago are not likely to be maintained. As stocks are so light, very few of those in the trade would have gained by their continuance, while a score or two of inexperienced firms or individuals would probably have rushed into the manufacture of timber this fall, and brought ruin upon themselves and disaster to the trade. The opinion of those competent to form such here is that every precaution must be used this year in the production of stocks, or with the vast quantity of logs remaining in the water from last year, another glut will be certain to occur.

Waney board pine, first class wood, 19-inch average, in shipping order, is now offered at 39 cents per foot.

Red pine is in excess of the demand, and only choice wood of large average is asked for. A prime raft of 42 feet average has been sold at 20 cents, and two rafts of fair average quality, 37 feet average, at 17 cents, and 32 feet average at 15¾ cents per foot.

Oak is, as predicted some weeks ago, maintainining its price and in much greater demand. The movement to bear it has fallen through, and shippers having run low in stock, have now to buy. A lot of about 55,000 feet, 60 feet average, and only medium quality, has changed hands at 45¼ cents.

Elm is not much sought after.

Pine deals remain as quoted above. Spruce deals are being bought in small quantities by shippers who have run short. Prices remain at $38, $27 and $22.

Freights are just now remarkably low, ships having been chartered this week at 19s. to the Clyde for timber, and 59s. 6d. to London for deals. The figures will not long remain so low, however.

A new era in the trade is marked by the shipment of the first cargo last week of a consignment of Kippewa timber from above Ottawa to Quebec by the Q. M. O. & O. railway. The price per car has not transpired. The timber belongs to Allan Grant, and is shipped here to order of Cook Bros. & Co., whose agent rafts it alongside the Commissioners' wharf, where it is thrown into the pond from the cars direct, and tows it to his cove. The facilities here for these shipments are very good.

Nothing has yet been settled here with reference to the Supervisorship. The trade is united on one point, namely, that none but a duly qualified party must be appointed.

The following is the latest comparative statement of timber, masts, bowsprits, spars, staves, &c., measured and culled to date :—

Waney White Pine.	1,060,844	1,380,102	1,374,887
White Pine	2,105,593	2,956,470	4,220,802
Red Pine	530,555	696,097	1,137,392
Oak	610,789	1,104,979	1,902,774

Brl. Staves	.....	.....	.....

The New Mill.

A few days after Mr. Gilmour's return from the American side, whither he had gone on a tour of inspection among the saw mills of that country, dame rumor busied herself with the propagation of many idle stories. One man had it that Mr. Gilmour had sold out to Rathbun & Son ; another that the business was about to be removed to Belleville. Soon this bit of information was supplemented by the sayings of some one deeply in the secrets of the Gilmour, affirming with an ominous look that there was a "split in the firm ;" that the old country member of the firm was opposed to rebuilding. Thus it might be expected that for a short time the nervous would be disposed to believe that Trenton was about to meet with a great loss. However, the fears implanted in the breasts of the timid ones were soon dispelled, as within an incredible short space of time Mr. Gilmour showed that not only was it the intention of the firm to rebuild, but indeed, to rebuild as fine a mill as could be found in the Province. If for a few days the mill was run with fewer hands what did it matter? The people could not have known the intention of Mr. Gilmour. To-day the mill is running day and night, and the hands paid $1.25 per day. The trouble in this world is that people take rumors as facts—entirely forgetting that secrecy is one of the pillars upholding the business fabric. We do not pretend to be in Mr. Gilmour's confidence, but we predict that 1882 will be a most prosperous year for Trenton, and that such prosperity will be largely induced by the new mill and its six or seven hundred men.—*Trenton Advocate.*

FOR SALE.

The Dexter & Whitwam Manufacturing Company, offer for Sale the Entire

Real Estate Plant and Machinery

OF THEIR EXTENSIVE

BENDING & TURNING FACTORY

Situated in the City of St. Thomas, in the County of Elgin, Ontario. For full particulars apply to H. BROWN, Manager, or E. MOORE, President. L20tf

AUCTION SALE

OF

VALUABLE LIMITS,

Situate on the Gatineau River and Lake Keepawa, 387½ Square Miles.

The following valuable limits owned by Messrs. Ross & Co., of Quebec, will be sold at Public Auction at the Grand Union Hotel, in the city of Ottawa, on

Tuesday, the 20th Day of September

NEXT, at half past two o'clock, p. m., viz :—

	Sq. Miles.
Lake Keepawa, Berth No. 48	50
" " " " 49	30
" " " " 54	30
" " " " 55	50
Total	160
	Sq. Miles.
Gatineau River, License No. 189	50
" " " " 190	50
" " " " 191	50
" " " " 192	50
" " " " 193	27½
Total	227½

The Keepawa limits are in a good pine country, and adjoin limits owned by David Moore, J. R. Booth, John Ross, of Quebec, and the British American Lumbering and Timber Company.

The Gatineau Licenses front on the river, and adjoin valuable limits owned by Gilmour & Co., and Hamilton Bros.

These limits are admirably situated for lumbering purposes, and well worthy the attention of the trade or speculators.

Terms and conditions of sale, which will be liberal, will be announced at the time of sale, or can be had from the Vendors, Messrs. Ross & Co., Quebec, or from

O'CONNOR & HOGG,
of Ottawa, Solicitors for Ross & Co

AUCTION SALE

OF VALUABLE

Timber Limits,

Situated Near Lake Nipissing.

Notice is hereby given that (if not previously disposed of by private bargain) the following Valuable Timber Limits will be offered for sale at Public Auction at the Grand Union Hotel, in the

CITY OF OTTAWA,

ON

Tuesday, the 20th Day of September Next,

AT 2.30 P.M., VIZ. :

	Sq. Miles.
Berth No. 23, on the River Bueve, near Lake Nipissing, comprising	36
Berth No. 43, on the River Wannapitac, near Lake Nipissing, comprising	36
Berth No. 51, on the River Wannapitac, near Lake Nipissing, comprising	36
In all	108

These limits contain, in the aggregate, a large quantity of magnificent pine timber.

Berth No. 23 is estimated—as the result of a recent exploration—to contain a quantity of trees sufficient to produce at least half a million cubic feet of square timber, besides two hundred and fifty thousand standard saw logs. The river is available for driving to Lake Nipissing.

There is a good mill site on the Bueve river, about three miles from Lake Nipissing.

Lumber could be transferred thence by water to the Callender station of the Canada Central Railway, the line of which is projected to pass directly through this limit.

Lumbermen and others desirous of acquiring limits are invited to examine these berths in the interval preceding the day of sale.

The owners reserve the right to dispose of either or all of them by private bargain in the meantime, and will be ready to consider any offers that may be made.

Terms of purchase will be liberal, and will be made known before the sale, the place and hour of which will be duly advertised.

Persons desiring further particulars are invited to communicate with the undersigned.

STEWART, CHRYSLER & GORMULLY,
Solicitors, Ottawa.

J. B. TACKABERRY, Auctioneer.

Ottawa, 28th July, 1881. 3L20

A RARE CHANCE.

AUCTION SALE OF

Valuable Timber Limits

—AT—

OTTAWA,

On the 20th of September.

On Lake Nipissing.

License No. 455, Sixty Square Miles Area, situated on the head waters of the Mattawa and South Rivers. This limit is wooded with Pine of the very best growth and quality. Timber cut thereon can be taken out either via the Mattawan to the Ottawa River, or by Lake Nipissing and French River to Georgian Bay with the greatest convenience.

In connection with this limit is a well improved farm of about 200 acres, deeded property, 100 acres cleared, with buildings, stock and crop, all of which will be sold at valuation.

There are also Six Timber Births numbered 12, 20, 36, 37, 39 and 31, situated on the River Beuve and Western Arm Bay, each 36 miles square. These limits have never been worked, and abound with the very finest quality of white Pine. Access from Georgian Bay via French River is quite easy. The Canada Pacific Railway passes in the neighborhood of these limits.

On the Georgian Bay.

License 169, on the Missisaga River, consisting of 36 square miles area, and License No. 200, situated on the Thesselan River, consisting also of 36 square miles area. These limits have never been worked and are covered with an abundance of the best Pine Timber.

The above limits will be sold on the 20th September at the Grand Union Hotel, Ottawa. Conditions made known on day of sale. For particulars apply to R. NAGLE, Ottawa ; JOHN SCULLY, commission merchant, Toronto ; or to J. T. LAMBERT, 62 Wellington Street, Ottawa. 2L21

J. T. LAMBERT,

MONTREAL.

From Our Own Correspondent.

SEPTEMBER 9.—The shipping business has been pretty active since the date of our last report, and August orders are now nearly all filled, and there is only one vessel loading now for South America. The shipping for this season is about closed. Rates of freight are $13@16. Shipments since the 22nd ult. were: To Adelaide, Australia, 294,313 feet and 30,000 lath; Antwerp, 150,000 feet; Cook, f.o., 150,000 feet; London, 53,800 feet; Liverpool, 462,320 feet and 24,367 deal ends; Buenos Ayres, 1,385,126 feet; Monte Video, 947,490 feet. The total shipments to the River Platte since the opening of navigation to date were 7,316,806 feet, against 3,332,808 feet for the same period of 1880, being an increase in shipments of 3,893,998 feet.

The total lumber trade for building purposes has been quite active, and some large transactions are taking place, and, although we do not make any change in quotations, prices continue firm as under :—

Pine, 1st quality, ℔ M	$32 00@40 00
Pine, 2nd " ℔ M	18 00@24 00

Hard Maple	5 50@ 6 50
White Birch and Soft Maple	5 00@ 0 00
Red Birch	5 50@ 6 00

LONDON, ONT.

From Our Own Correspondent,

SEPTEMBER 9.—Among the many vicissitudes of a commercial life the crowning one is a collapse; and it is my painful duty to record in this letter the cessation of the firm of G. E. Hargreaves, lumber merchant, of this city. This firm has been in business between three and four years, and held a high rank in the trade. To-day a meeting of creditors takes place, and there will probably be about twenty creditors or their representatives present from Toronto and the north. The estate, as far as I can learn, will show up very poorly, but I would prefer not to give any approximation in this letter; in my next I will give a result of to-day's meeting.

The bush fires on the W. G. & B. and L. H. & B. railways in the vicinity of Wingham, Blyth, Bluevale, &c., are creating great devastation, and less lumber is coming into this market in consequence, some parts of the road at times being blocked by barriers of flame.

The principal lumber men in this city may be classified as follows: Wm. Willis, James H. Belton, Ferguson Bros., H. C. Green, G. E. Hargreaves, and W. H. Winnett. Of course there are quite a few others doing a smaller business. One of the above mentioned firms purchased yesterday three million feet of pine lumber on the line of the L. H. & B. railway.

The market, as predicted, has greatly improved since my last letter, and I may safely assert that there will be no let up until we have the first precursor of King Frost. All grades of common lumber are presenting indications of a rise, and shingles continue to be scarce. Cars on the G. W. R. are plentiful, but are scarce on the G. T. R.

In conversation with a Goderich lumber merchant this morning he informs me that his firm and another one conjointly have brought into that town twenty-five million feet of lumber during the past year, and nearly all from the Georgian Bay district.

OTTAWA.

From Our Own Correspondent.

SEPTEMBER 10.—The lowness of water and consequent limited supply of logs is affecting materially the cut of lumber at the mills of this locality. There is very little lumber left to be sold, the producers declining to sell before stock is in hand. The mills of the Chaudiere, New Edinburgh and the Gatineau are not running more than half-time, so that it is quite evident the cut for the season will be largely reduced. Present quotations are as follows :—

10-inch stocks, with shipping culls and better per M	$14 00@15 00
12-inch stocks, with culls	18 00
12-inch stocks, without culls	22 00
Sidings, best qualities	28 00@30 00
Sidings, 1-inch kind	25 00

There is a great demand for lath, and the price has increased to $1 per thousand. Montreal and American buyers have bought largely this season. The supply of lath is not equal to the demand.

The last raft of square timber by water is on its way to Quebec, having left this point some days ago. The price for timber this season is much higher than for a great many years past. Waney board quality has brought as high as 40 cents per foot.

Shipping of lumber is somewhat slack at present. The rates remain unchanged, but if the water remains low and the cut of lumber continues small, they will shortly rise. The following are the present rates :—To Montreal, $1.25 per M.; Quebec, $2 per M.; Burlington, $2 per M.; Whitehall, $2 per M.; Albany, $3 per M.; New York, $3.25.

The final sweep of the Gatineau log drive is within eight miles of the city, but it will take about ten days to have it completed.

The drive on the Upper Ottawa is progressing slowly, owing to the large number of logs which have become stuck in the rapids.

Word has been received that the timber limit of Mr. J. R. Booth, on the Temiscamingue, has been badly swept by fire. It is not known that the limits of any other Ottawa lumberman have been damaged to any extent by fire.

ST. JOHN, N. B.

From Our Own Correspondent.

GENERAL REMARKS.—We have arrived at that stage of the season's business when for a longer or shorter period there is usually very little calling for special remark with reference to the lumber trade; the rush of the spring and summer shipments being over, with a sort of intermission before fully entering upon the fall operations, a state of quietness prevades all branches of the trade. The only remarkable occurrence of the period was the destruction by fire of Messrs. Hilyard Bros.' saw-mill. The destruction of this mill, although a serious loss to the owners, will not cause any disturbance to the trade generally, as the available supply of saws in operation in and about the city is quite sufficient to cut all the logs that come to this market; indeed, the mill in question was at the time being supplied with logs cut on the bay shore, and brought in from the sea, so to speak —quite a novel feature of our lumber trade. It is reported that the Messrs. Hilyard intend rebuilding, but I do not know whether the report is correct or not. Prices of deals remain steady at $8.50 to $9.00 per M.

FREIGHTS.—The freight market continues firm, rates running about the same as last reported, viz., 57. 6d. for principal English ports, at which rate several vessels have been fixed.

VESSELS IN PORT.—The following is a list of the vessels in port, with their tonnage and destination :—

John Murphy, 1479, Liverpool.
Missouri, 818, ——
Vestfold, 500, E. C. I. or W. C. E.
Huron, 774, Liverpool.
Wm. A. Campbell, 1538, Liverpool.
Industrial, 350, United Kingdom.
Carlew, 345, Bristol Channel.
Talavera, 384, Bristol Channel.
Eurydice, 1247, Liverpool.
W. N. H. Clements, 428, Swansea.
Belle O'Brien, 1902, Liverpool.
Thor, 343, France.
Freeman Dennis, 808, Liverpool.
Crown Jewell, 716, Limerick.
Artizan, 1140, Liverpool or Barrow.
Seaward, 668, Penenth Roads.
Antwerp, 573, ——
Ella, 332, Glasgow.
Nettie Murphy, 1373, Liverpool.
Minnie Burrill, 1465, Liverpool.
Herbert Beech, 1061, Liverpool.
Annie Burrill, 897, ——
St. Julien, 1049, Liverpool, Barrow or Bristol Channel.
Anna P. Odell, 379, ——
Rothemay, 1200, Liverpool.
Maggie M., 429, ——
Arklow, 638, ——
Mary A. Kerston, 344, Dundalk.
W. E. Heard, 587, ——

SHIPMENTS.—The shipments of deals and other sawn lumber are as follows :

For Europe.....7,604,000 Sup. feet.
" United States..3,500,000 "

St. John, N.B., Sept. 6, 1881.

From Another Correspondent.

SHIPMENTS OF LUMBER.—The following is a statement of the clearances of lumber at St. John, N. B., for transatlantic ports for August, 1881 :—

45 vessels containing—	
Deals, battens and ends	26,875,368 sp. ft.
Boards and scantling	676,792 "
Palings	97,620 pcs.
Birch timber	788 tons.

Below are the clearances at St. John, N. B., for transatlantic ports from 1st January, 1881, to 1st September, 1881 :—

Deals, battens and ends	133,994,143 sp. ft.
Boards and scantling	4,201,613 "
Palings	284,965 pcs.
Pine timber	768 tons.
Birch	3,609 "

The English market continues to remain fairly firm and satisfactory to shippers. We learn of one cargo sold to arrive at Garston dock at £6 16s. c.i.f., which would be about equal to a sale at £7. 2s. 6d. in Liverpool in the usual way.

THE AMERICAN MARKET.—In New York laths have shown an upward tendency, and recent lots have sold as high as $2.26, but this price will hardly hold long, for shippers will forward laths as fast as possible. Cargoes of wide stuff command ready sale, and we can quote from $15 to $17 for 10, 11 and 12-inch lumber. In Boston, owing to heavy arrivals, the market has weakened somewhat, and laths are quoted there at $1.70; spruce boards, &c., at $13.

Freights have lately dropped a little, and while the most of the chartered vessels in port have obtained 57s. 6d., we know of two recent charters at 55s., one for Liverpool and one for Bristol Channel.

Coastwise freights are firm at $3.25 for New York, $3 for Sound ports, and $2.50 for Boston. Logs are held at $7 to $8, and deals are worth about $8.50 per M., with few outside arrivals to report.

Fire has been busy lately among the mill owners. On the 6th instant a mill belonging to E. D. Jewitt & Co. was burned, on which there was no insurance. The loss is estimated at from $15,000 to $20,000. We believe it is not the intention of the owners to rebuild, as they will occupy another mill in the neighborhood which is unused at present.

Hilyard Bros., the loss of whose mill by fire you reported in your last issue, have decided to rebuild, and are busy clearing away the ruins.

St. John, N.B., Sept. 9, 1881.

CHICAGO.

SEPTEMBER 7.—Prices remain unchanged, practically, although during the week sales were made at quite a reduction from the regular market prices. The following are the quotations :—

LONDON.

The *Timber Trades Journal*, of August 27th, says :—All things taken together seem to point to a considerable firmness in the position of the wood trade in both the London and provincial markets, and though the improvement is slow, unless interrupted in the manner described, it is likely to be steady, and that says a great deal. We take it as rather a good sign that the trade are feeling their way so cautiously, and not jumping to any hasty conclusions. As far as the metropolis is concerned, it is as clear as daylight that there must be a strong undercurrent of business to keep the dock deliveries every week so much in advance of those of last year, and, in spite of the talk about general depression, facts bear us out in stating that things in that respect are not half so black as they are painted. If we had only been blessed with a fine harvest, we should probably have seen prices much higher this fall than they were last: as it is they rule much the same, but the situation is so different now that everything is hopeful, while nothing but gloomy anticipations surrounded us twelve months ago.

THE GREAT TRIUMPH of the 19th century is the great medical climax Burdock Blood Bitters, cures all diseases of the blood, liver and kidneys, nervous and general debility, and is the purest and best tonic in the world.

LIVERPOOL.

The *Timber Trades Journal*, of August 27th, says:—The importation during the past week has shown a slight increase over the average of the preceding ones, but not to any extent.

Everything points towards the continuance of a moderate import for the year, and this, together with the firm attitude held by sellers in the various shipping ports, has had the effect of steadily raising prices. So far as North American spruce deals are concerned, prices are yet below an average value, and with the increased price abroad a still further advance is looked for, and will doubtless be obtained during the the coming week.

Latest advices from Quebec show that no reduction from the high rates already paid there for pine timber is at all likely to take place—in fact, the appearances are all the other way; and as the stock on hand there is short, the highest prices ever known have been paid for some rafts of good quality. This will make the cost of importation heavy, and consumers who are in want of this description will not mend their position by waiting for later arrivals.

GLASGOW.

The *Timber Trades Jounarl*, of August 27th, says:—Imports of foreign timber to the Clyde during the past week have been to the extent of about 5,000 loads, consisting of two cargoes teak, one of Quebec timber and deals, and several parcels of wainscot billets, American and Italian walnut, &c. The tonnage employed for the conveyance of teak imported to Clyde since the beginning of the year aggregates 7,819 tons, being rather more than for the corresponding period of 1880; last arrivals this year were in March. There has been a falling off in the imports of birch this year, the arrivals from Quebec and lower ports amounting to 5,000 logs, as against 8,000 last year at corresponding date.

A public sale was held here on the 23rd inst., Messrs. Singleton, Dunn & Co., brokers, the goods offered consisting chiefly of New Brunswick spruce deals and Pictou, N.S., birch timber. The attendance was good, and a fair portion of the catalogue was disposed of at the following rates:—Pictou birch timber, about 500 logs sold, one parcel of 20 logs, average 17¼ inch square (some logs figured) at 1s. 7¼d. per cubic foot, string measure, the remainder, say from 15-inch to 16-inch average square, at from 1s. 2½d. to 1s. 4d. per cubic foot. A parcel of 39 logs American black walnut (round), from 10 to 19-inch girth, sold at from 2s. 7d. to 4s. 11½d. per cubic foot, string measure, average 3s. 5½d.

For lower port deals suitable for stage planks, box-making, &c., a fair demand still continues.

Lumber Growth on the Pacific.

The *Oregonian* has this to say of the Puget Sound lumber forests:—"The forests of the great Pacific north-west are as yet virtually untouched, and they now offer the most considerable source of supply remaining on the continent. Development of our railway system will, in a few years, give us an immense lumber trade. This interest will be more important than our fisheries, and it may for a time take precedent over our wheat. The railroads will make our vast forests accessible to the great treeless region of the interior, and as lumber is now carried from Michigan to Maine, so it can be carried from Oregon and Washington to Montana and Dakota, and even to Chicago. The rapid settlement of the country to follow railroad construction will create a mighty demand for lumber over half a million square miles of territory. Within a few years our mountains, where the chief supply is, will be penetrated in all directions and at all points, and the lumber will be run out on tramways or driven down the streams. Ten years from now it will be an immense business. Nothing can be more sure, for the demand in the open country, from the Cascade range to the Missouri river, will certainly be met by the supply from these western forests."

Zopesa.—A healthy man never thinks of his stomach. The dyspeptic thinks of nothing else. Indigestion is a constant reminder. The wise man who finds himself suffering will spend a few cents for a bottle of *Zopesa*, from Brazil, the new and remarkable compound for clensing and toning the system, for assisting the Digestive apparatus and the Liver to properly perform their duties in assimilating food. Get a 10 cent sample of *Zopesa*, the new remedy, of your druggist. A few doses will surprise you.

SALE OF TIMBER LIMITS.

The Ottawa *Citizen* says that on Thursday afternoon, September 3, at the Grand Union Hotel, there were offered for sale by Mr. James Brewer, auctioneer, the following valuable timber limits situated on the Black river, in the Province of Quebec, which were part of the estate of the late Mr. Michael O'Meara, of Pembroke:—License No. 92, of 1878-9, comprising 50 square miles; license No. 91, of the same year, also comprising about 50 square miles; and license No. 90, of the same year, comprising about 8 square miles. The sale was made in order to wind up the affairs of the estate by order of the executors, Messrs. W. O'Meara, W. Howe and J. Doran. Besides the limits above specified, there was also a farm of about 100 acres of good land on license No. 91, and a considerable quantity of stores, including about 50 tons of good hay. It had at first been intended to put the property up in lots to suit purchasers, but at the time of the sale it was determined to put it up *en bloc*, the purchaser to take the stores on the farm at valuation. The terms of the payment were 10 per cent. cash, the balance in fifteen days, or 50 per cent. of the balance in fifteen days, and the remainder in six months, with interest at 6 per cent. added. The attendance was large, and for a time the competition keen. The auctioneer announced that no bids under $500 would be taken. Mr. McCormick, of Pembroke, started them at $10,000, which bid was doubled by Mr. Alexander Fraser. Five hundred dollars was added to this; then came a bid of $22,000, and from that the figures rapidly run up $1,000 at a time until $36,000 was reached. Here there was a short pause, and they were then slowly $500 at a time until knocked down to Mr. T. W. Murray, of Pembroke, at $38,000.

Spontaneous Combustion.

A French scientist has lately experimented with greasy rags to ascertain the degree of their inflammability under certain conditions. He took for this purpose a quantity of cotton rags, saturated them with boiled linseed oil, wrung them out, and placed them, together with dry cotton, in a box about eighteen inches long, eight inches wide, and two feet high, in which he put a thermometer in order to watch the increase of temperature. The room in which the experiment was made was kept under a temperature of 170° Fahrenheit. The mercury soon began to rise, and showed within an hour and a quarter 340°; smoke commenced to come through the fissures, and as soon as air was let in, the flames burst out. In another experiment, made under the same temperature, cotton, saturated with linseed oil, ignited within five or six hours. Rapeseed oil caused ignition after ten hours. In another room, where the temperature was left at 120° Fahrenheit, cotton, mixed with a little olive oil, and put in a paper, burnt after six hours; castor oil required more than twenty-four hours; whale oil only four hours, and fish oil two hours. Spermaceti oil, free of glycerine, did not ignite at all, neither did heavy tar, coal tar, or slate oils. These experiments show very clearly the necessity for scrupulous watching of oily rags, which are often too carelessly left around after cleaning machinery.

Walnut Burls.

A Chicago harwood buyer recently struck a bonanza in the way of a walnut burl on the Spoon river, in this state. It is fifteen feet long, seven feet, eight inches in diameter at the butt, and six feet, nine inches at the top, not including the sap. The modest sum of $7 was paid for the tree, and in addition it cost $2.50 to hire the burl cut out. It was rolled into the river, but it sunk like a piece of lead. When it was discovered that it wouldn't float, it was pulled upon the bank again by three yoke of oxen and a span of mules, and will be shipped to a veneer mill by rail. The owner considers the log worth $150, but he probably would not sell it for twice that amount. This recalls to mind a burl that was bought in Indiana some fifteen years ago for $10. It was sent to Sandusky by rail, thence by water to New York, where it was cut into veneers. The veneers were brought back to Buffalo and sold, the lucky operator clearing over $3,000 on his $10 investment.—*Northwestern Lumberman.*

ESTEY, ALLWOOD & CO., SAINT JOHN, NEW BRUNSWICK.

A PLANING MILL BURNED.

London, Sept. 11.—This afternoon a most disastrous fire occurred in this city. About four o'clock flames were noticed issuing from a shed at Green's planing mill, and although the fire brigade were quickly on the spot the flames had obtained such a hold that the whole of the sheds, brick planing mill, and brick cottage adjoining were razed to the ground. The whole of the valuable machinery, the mill being the most complete and best equipped west of Toronto, is a total loss, and a number of workmen are also sufferers to the extent of their kits of tools, some of which were worth $150. A quantity of finished stuff ready for use at the Masonic Temple, and other new buildings were destroyed. Mr. Green's loss is placed at $25,000 on which their is an insurance of $5,000. Many narrow escapes are reported. Several of the workmen, while attempting to save their tools, were forced by a sudden rush of flames to jump for their lives, and sustained painful injuries by falling upon odd tools which had been thrown out. The falling walls also made things lively for the firemen. The lumber in the adjoining lumber yard of Mr. H. C. Green ignited several times, and some piles were badly damaged. The office and buildings in the coal yard of Messrs. Bowman & Co., on the other side of the mill, were also scorched.

NEW BRUNSWICK NOTES.

Upper Province Canadians, in supplying New York and other large eastern markets, ship wide 10-inch and upwards. This the lower provinces cannot compete in with their narrow board lumber, the logs of the Provinces of New Brunswick and Nova Scotia being now comparatively small.

A city ordinance of New York requires that all spruce deals used be not less than 16 feet long by 10 to 15 inches wide. This size is regularly sorted out by New Brunswickers, and reserved for that market, and the balance, as mixed lots, sent to other points.

There had existed in southern New Brunswick a large industry to the consumption at times of 1,300,000, and now about extinct. Last year the amount was 300,000 only. There was a growth of rough, crooked trees on the right bank of the St. John river. This was utilized for the manufacture of boxes, each one consuming 28 or 29 feet of lumber. These were shipped to the West Indies, and known as "shooks," where they were filled with sugars. They were worth here about 50 to 75 cents, and sold in Cuba for from 8 to 10 reals—equal to $1.10 or so—the increased cost being the addition of a duty of 29½ cents imposed by the Cuban Government, and the freight. The firm of Fleulling & Co., of Hampton, N. B., are at present manufacturing something similar, in the shape of small boxes, to be sent to the Bermudas for the onion trade. There will be used for this purpose 600,000 feet of spruce this season.

Cement for Leather.

Equal parts of common glue and isinglass; soak ten hours in just enough water to barely cover, bring gradually to a boiling heat, and add pure tannin until the whole becomes ropy, or appears like the white of eggs. Buff off the surfaces to be joined, apply the cement, and clamp firmly.

Beautifiers.

Ladies, you cannot make fair skin, rosy cheeks and sparkling eyes with all the cosmetics of France, or beautifiers of the world, while in poor health, and nothing will give you such good health, strength, buoyant spirits and beauty as Hop Bitters. A trial is certain proof.—*Telegraph.*

THE TENURE OF LIFE.

An industrious German, Baron G. F. Kolb, has lately compiled a book of universal statistics which furnishes much food for thought. His figures show that every advance made by a people in morality, in profitable and healthy employment, and useful knowledge brings it nearer to the ideal—the greatest natural tenure of life. Domestic virtue also tells favourably on the health and wealth of a population. Thus in Bavaria, out of 1,000 children born alive there died, of legitimate children, 248 boys and 212 girls; of illegitimate, 361 boys and 342 girls. Out of 100 children succled by their mothers, only 18.2 died during the first year; of those nursed by wet nurses, 29.33 died; of those artificially fed, 60 died; of those brought up in institutions, 80 died in the 100. The influence of prosperity or povery on mortality is also shown by Baron Kolb. Taking 1,000 well-to-do persons and another 1,000 of poor persons—after five years there remained alive of the prosperous, 943; of the poor, only 655. After fifty years there remained of the prosperous, 557; of the poor, 283; at seventy years of age there remained 235 of the prosperous, and of the poor, 65. The average length of life among the well-to-do was 50 years, and among the poor 32 years.

One of the most potent shorteners of life is the anxiety of providing for bare subsistance. The lack of sanitary conditions also shortens men's years. Idleness, as compared to intense industry, outweighs—prejudically outweighs—all the advantages of ease and abundance.

Fall Planting.

The *Rural Canadian* says:—The question is often asked whether spring or fall is the better time to plant fruit and other trees. No answer of universal application can be given. It is undoubtedly an advantage to plant the smaller fruits in the fall. By these are meant raspberries, currants and gooseberries. Being of low-growing habit, they are not affected by the strong winds, and are more easily sheltered from the cold of winter. They will make a more vigorous growth next season, than if planted the following spring. Taller growths that catch the wind are swayed about more or less, and do not get firm hold of the ground. These are better planted in the spring. Evergreens rarely, if ever, do well when planted in the fall. Whether fall planting is practised or not, *fall ordering* is very desirable. It is better to get the young stock, and *heel* in it, than delay until spring. Heeling-in is temporarily planting a bundle of trees, aslant, that may awake a favourable time for spring planting. This has several advantages. Nurserymen are not so driven in the fall as in the spring; can make better selections of trees, in filling your order; pack them more carefully, and be more exact about names. With the trees on hand you can seize the opportune time for setting them out. You are not hurried, for the trees are in good state of preservation, and can be planted with care and deliberation.

By all means order in the fall, whether you plant in fall or spring. Let evergreens be the exception to this rule. They should not be lifted until spring.

Were man to comform *more* to the laws of health and of nature, and be less addicted to the gratification of his passions, it would not be necessary to advertise Fellows' Compound Syrup of Hypophosphites as a restorative for the power of the brain and nervous system, while the world's progress enlightenment would indeed be marvellous.

STEAM SAW MILL OWNERS

Have your Boilers thoroughly Inspected and Insured against Explosion by

The Canadian Steam Users' Insurance Association

HEAD OFFICE, 9 VICTORIA STREET, TORONTO.

SIR ALEX. CAMPBELL, President. GEORGE C. ROBB, Chief Engineer.
HON. JNO. McMURRICH, Vice-Pres. A. F. JONES. Secretary-Treasurer. 1yL17

OAK HALL

Nos. 115, 117, 119, 121, King St. East, Toronto.

We are the most Extensive CLOTHIERS in Canada.

We carry a STOCK of FIFTY THOUSAND DOLLARS to choose from.

We watch the interest of our Customers. Our stock is FULL of the very best goods in Scotch, English and Canadian Tweeds.

We BUY and SELL for Cash, therefore it enables us to do business on very SMALL PROFITS.

NOTE THE PRICES.

We give a Good Tweed Suit for.....$6 00
We give a Good Tweed Pants for..... 1 50
We give a Good Overalls for 0 35

LUMBERMEN!

When you visit Toronto, come direct to OAK HALL, and fit yourselves out with a Good Suit. Remember the address:—OAK HALL, the Great One Price Clothing House, Toronto, opposite St. Jame's Cathedral. 1yL13

ROBERT W. LOWE,

AUCTIONEER AND COMMISSION MERCHANT,

81 SANDS BUILDING, PRINCE WILLIAM STREET.

Cash advanced on Goods put in for sale. No Storage charged. All kinds of Merchandise Bought and Sold. New and Second-hand Furniture always on hand. Agent for Hazelhurst & Co's WINTHROP COOKING RANGES, WATERLOO WOOD STOVES, FRANKLIN, &c., &c., &c.

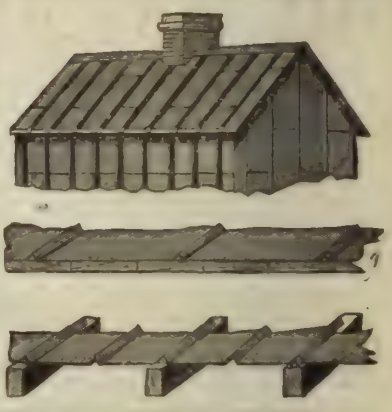
L22-1y SAINT JOHN, NEW BRUNSWICK.

The Largest Manufacturers of

SHEET IRON ROOFING

IN THE UNITED STATES.

Can give the Best of References in every State and Territory.



POTTER IRON ROOFING COMP'Y,

101, 103 and 105 West Front Street,
CINCINNATI.

All Kinds of CORRUGATED IRON Furnished.

Send for Illustrated Circulars, naming THE CANADA LUMBERMAN. 12L11

LUMBERMEN'S STATIONERY.

We will supply anything in the line of BLANKS or STATIONERY for Lumber Shanties and Offices at City prices.

All Printing done in the Highest Style of the Art, and at Lowest Living Prices.

Book-Binding of every Description got up in a very Neat and Superior manner.

Account Books Ruled and Bound to any desired Pattern.

For Schedule of Prices address, describing the kind and quality of work desired,

M. Covel's Latest Improved Automatic Saw Sharpener!

Is the Most Perfect Machine that has ever been Introduced into Mills for that purpose.

CIRCULAR SAW STEAM FEED!

I would also call special attention to my

Heavy Circular Saw Mills

and for STEAM MILLS, would recommend the Steam Feed, having put in several which are giving the best of satisfaction, as will be seen by the following testimonials:—

GRAVENHURST, August 20th, 1880.

WM. HAMILTON, ESQ., Peterborough.

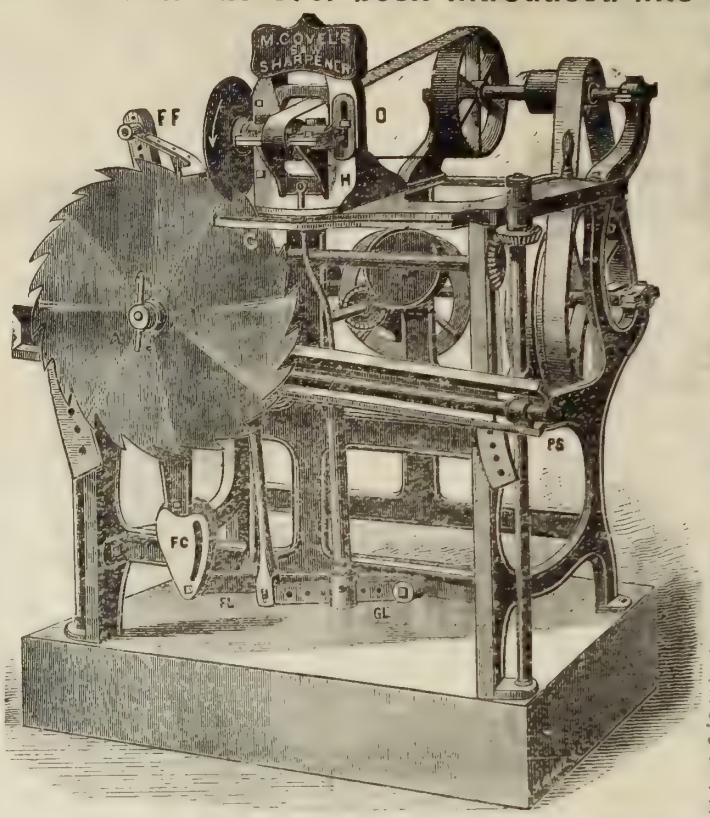
DEAR SIR—I have used your Steam Feed for near four months, and it has given me perfect satisfaction in every way; it is admitted by every person who has seen it work to be the best feed ever invented. Since I put it into my mill, I have not lost ten minutes time fixing anything belonging to it. I can cut 18 boards 13 ft. long in one minute. It can do much smoother and better work than the pinion feed. It is easily governed and reverses the carriages instantly. I am thoroughly satisfied with it and can recommend it to any person who has a Circular Saw Mill for cutting long or short logs. I consider I have cut more lumber than will pay for the Steam Feed since I got it than I would have cut had I not put it in.

Yours respectfully,
WILLIAM TAIT,
Lumberman, Gravenhurst.

TORONTO, August 11th, 1880.

WM. HAMILTON, Peterborough, Ont.

DEAR SIR—The Steam Feed you put in is working splendidly. Yours, &c.,
THOMPSON, SMITH & SON.

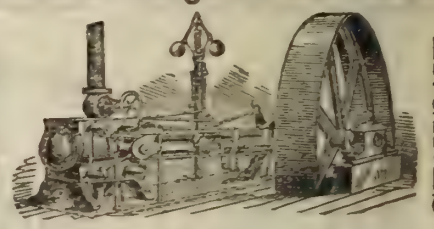


MILL MACHINERY!

I am also manufacturing Saw Mill Machinery, for all sizes of Gang or Circular Mills, Span or Double Circulars for Slabbing Small Logs. My Patent Jack Chain for drawing logs into Saw Mills, acknowledged by all to be the Cheapest and best ever got up; also, my Patent Lumber Markers, different sizes of Edgers, Gang Lath Mills, Trimmers, Power Gummers, and all Machinery used in a first class Gang or Circular Saw Mill; also, small Hand Gummers for use in the woods, for Cross-cut Saws. Rotary Pumps of different sizes, for Fire Protection in Mills, &c.

Horizontal Engines and Boilers

CORLISS ENGINES



Where economy of fuel is the great consideration, along with uniformity of speed, such as is required in Grist and Flouring Mills, Woollen and Cotton Factories, or large Factories of any kind, I supply the Corliss Engine. I feel justified in saying that our Style, Workmanship and Finish on this Engine will be no discredit to its renown, and certainly is not equalled in this country for economy of fuel. I have them working at 2½ pounds of coal per horse-power per hour. L10

WILLIAM HAMILTON,

PETERBOROUGH, ONT.

EMERY WHEELS FOR SAW GUMMING!

Solid Emery Wheels are now almost in universal use for the purpose of gulletting and gumming saws. Statistics show from 25,000 to 30,000 saw-mills in the United States. Many of these run only a single saw each. A one-saw mill would use one or two wheels a year, costing $3 to $4 each, and when such small mills order single Emery Wheels from the factory, the express charges often equal the cost of the wheel. There was a time when the quality of Emery Wheels was so uncertain, and the demand so fickle, that storekeepers could not afford to carry them in stock. Now, however, Saw Gumming Wheels have become as staple an article as Files, and every dealer in saws, Hardware and Mill Supplies can afford to carry a few dozen standard sizes in stock. Large dealers order stocks of $500 to $750 worth at a time. Saw Gumming Wheels are used with the edge (or face) square, round or beveled. Probably seven-eigths of all in use are beveled.

The principal sizes are:

8x¼, 8x⅜, 8x½ } ⅝ in. hole. 10x¼, 10x⅜, 10x½, 10x⅝ } ⅝ in. hole. 12x¼, 12x⅜, 12x½, 12x⅝, 12x¾, 12x⅞ } ⅝, ¾ and 1 inch. Holes.

Probably more wheels 12x⅜, 12x½ and 12x¾ are used than all the other sizes together. Saw Gumming Wheels are used, however, of all sizes up to 24x1½. The most frequent complaint is that Emery Wheels harden the saw so that a file won't touch it. The answer is that you don't want a file to touch it. An expert workman will shape and sharpen the teeth with an Emery Wheel, leaving the teeth *case hardened*, in which condition the saw will cut about 33⅓ per cent. more lumber than a soft saw will. Those who want to use the file, however, have only to touch the saw *lightly* a second time (after going all over it once), and this second touch will cut through the case-hardened scale.

A QUESTION OF QUALITY.

Thirteen years of experience as makers of, dealers in, and actual users of Emery Wheels, have led us to a decided opinion as to what quality is the best. We prefer for almost every use an "Extra Soft" wheel like the "Pocono." We believe that money lost through the rapid wear of the wheel is more than made up by the money saved on wages. As we cannot get every one to adopt our views, we make several qualities, so as to meet their views. We say to those who think they can only be satisfied with some other make of wheels (not Tanite), that we can furnish qualities *to match* any and every other make. If you have got used to some special quality of wheel, let us know what it is, and we can send you *a Tanite Wheel of similar quality*. Our *regular* classification of Saw Gumming Wheels is as follows:

CLASS 2. MEDIUM—HARD.—This Wheel is THE STANDARD Saw Gumming Wheel all over the world. Probably seven-eighths of all the Saw Gumming Wheels used are "Class 2." It cuts fast and keeps its shape well. Some think it too hard, some too soft. We prefer the "Pocono."

CLASS 3. MEDIUM—SOFT.—The same as to coarseness and fineness as "Class 2," but a *softer*, and therefor freer cutting wheel.

CLASS "POCONO." EXTRA SOFT.—This Wheel we prefer to all others. It is both *finer* in grain and softer than either of the above. As a Saw Gumming Wheel, Class "Pocono" is specially suited to those practical and experienced Sawyers who know how to grind with a light touch, and who want a free cutting wheel that will not create much heat.

Illustrated Circulars and Catalogue, showing Cuts of Saw Gumming Machines, and Shapes, Sizes and Prices of Wheels, sent free on application. L13

The Tanite Co. Stroudsburg, Monroe Co. Pennsylvania

CANADIAN TRADE SPECIALLY SOLICITED.

PUBLISHED SEMI-MONTHLY.

The only Newspaper devoted to the Lumber and Timber Industries published in Canada.

SUBSCRIPTION $2.00 PER ANNUM.

VOL. 1. PETERBOROUGH, ONT., OCTOBER 1, 1881. NO. 23.

A MR. BEACH is arranging to build paper and pulp mills at Eau Claire, Wis., the cost of which will be from $50,000 to $60,000.

IT is reported that a regular army of pine hunters are ransaking the north shore of Lake Superior and extending their limit as far west as the prairies in search of any odd groves of timber which Uncle Sam may have left.

EVERY Virginian over ten years of age is asked by the State Commissioner of Agriculture to celebrate the Yorktown centennial by planting a walnut or other tree, either in the yard, field, forest, or roadside. A sensible idea.—*Boston Post.*

JOHN MCGREGOR, of Midland, has closed a contract with C. H. Plummer, of Saginaw, for 320 acres of pine timber land on the Au Gres river, the consideration being $12,500. It is calculated that the tract will produce 5,000,000 feet of pine.

IN Sonoma county, Cal., a railway track crosses a deep ravine upon the upright trunks of the trees, which have been sawed off upon a horizontal line. In the centre of the ravine a firm support is furnished by two huge redwood trees, which have been cut off seventy-five feet above the ground.

AT Parishville, St. Lawrence county, N.Y., are the largest butter-tub factories in the Empire State. About 4,000,000 feet of lumber are worked up into tubs each year, the industry furnishing constant employment to one hundred and fifty men. The tubs are made mostly of spruce, brought down the St. Regis river from the Adirondack region during the spring freshets.

THE Quebec correspondent of the Montreal *Moniteur du Commerce* says that the transportation of square timber from the Upper Ottawa by the Q. M. O. & O. railway has succeeded perfectly. From the 20th to the 31st of August there arrived at Quebec by this route 116 cars containing about 1400 pieces. We congratulate the management of the company upon this result.

THE Menominee *Herald* says:—The Kirby-Carpenter company will have cut 65,000,000 feet of lumber by the close of navigation. The Ludington, Wells & Van Schaick company will show a scale of 50,000,000 feet of lumber, while the other mills on this side of the beautiful river will have increased their last year's cut. It is safe to place the cut of the Menominee mills at 155,000,000 feet.

THE works of Lyford & Tebbetts, at Locke's Mills, Me., turns out from 300 to 400 gross of spools a day. The material used is white birch, which is brought to the factory in large quantities by the farmers of the vicinity, and stacked and dried in the yard. Considerable birch is also brought from along the line of the Grand Trunk railway. The machine takes the sticks in the rough, and the spools roll out at the other end. The amount of birch manufactured into spools in this State is very large, the product finding sale largely in Connecticut at from seven to forty cents a gross, according to size.

THE *Timber Trades Journal*, of August 27th, says:—We were congratulating the trade last week on the return of the chartering market to its usual routine, in the employment of a preponderance of sailing tonnage, but this week again turns the scale heavily the other way. Of seventy-one ships arrived (timber laden) forty-five are steamers, and some of these bring 400 to 600 standards. If it is important that the deficiency of the spring supply should be made up all at once, this may be matter for satisfaction to the trade, but the market is less liable to be disturbed when the importation is more evenly distributed in sailing vessels.

A HARRISBURG paper calls attention to the maple and hemlock forests of Pennsylvania, and remarks that there has never been the right kind of enterprise to render those woods as important and useful as they merit. It is claimed that the maple wealth of the Keystone State is as great as that of black walnut once was, if properly handled, because the wood is hard and can be utilized to produce a beautiful effect in building and furniture. There is an enormous supply of maple in Pennsylvania, and it is predicted that sooner or later it will become one of the most profitable sources of industry in the State.

THE tolls of the Sturgeon Bay, Wis., ship canal this season will amount to $30,000, and it is stated that the company never expected more than $15,000 for any season. This favorable showing is made despite the fact that many masters go through the canal light, and return with their loads of lumber and other cargoes round by the bay and lake, fearing to pass through the canal on account of the low stage of water, which now has an average depth of only twelve feet. The work of deepening is going on, and it is anticipated that by October 15 the depth will be fourteen feet. The docking of the sides will soon be completed. When the work is fully accomplished and the greatest intended depth of water secured, the use of the canal will greatly augment, and the receipts for tolls must far exceed the most sanguine expectations of the projection.

The *Northwestern Lumberman* says:—The following report of the area of vacant lands in the upper peninsula, made to the State commissioner of Michigan, will be of interest to log and lumber operators. The number of acres is set down as follows:—Chippewa county, 292,600; Mackinac, 78,000; Schoolcraft, 137,500; Delta, 135,340; Marquette, 233,600; Menominee, 45,800; Baraga, 62,000; Houghton, 69,000; Keweenaw, 4,000; Ontonagon, 363,000; Isle Royale, 14,640—a total of 1,415,480 acres. The land in Chippewa, Mackinac, Schoolcraft, Baraga, Houghton, Keweenaw, Ontonagon and Isle Royale counties is all subject to private entry at $1.25 per acre, as are also 100,940 acres in Delta, 195,000 in Marquette, and 27,300 in Menominee counties. The balance of land in these counties—34,400 acres in Delta, 28,600 acres in Marquette, and 18,500 acres in Menominee counties—are subject to pre-emption and homestead entries only. The past year has witnessed an unprecedented demand for upper peninsula government lands, and should the sales continue at the same rate during the coming twelve months, the amount of Uncle Samuel's possessions in that part of the State will be lessened almost one-half.

Indian Foresters.

The *Lumberman's Gazette* says:—It is stated by the early settlers of southern Michigan that when they came the forests were so free of underbrush and sapplings that a wagon could be driven through the woods in any direction, which had the appearance of well kept groves. The reason given by the settlers for this condition of the forests was, that the annual fires which were promoted by the Indians, kept down the undergrowth and prevented the accumulation of debris. Whatever was the cause, it is certain that a change has taken place in the southern Michigan forests since the advent of the white settlers. The trees are denser and the saplings so thick that it would be unpleasant riding a horse through them, to say nothing of driving a team with a wagon attached. The moral of this matter would seem to be that if the Indians could keep the forests in such a condition that a fire running through them would do good and not evil, the smarter white man ought to be able to do as much. But a white man is not an Indian, and his time is taken up with something besides taking care of the woods. The forests supplied the wants of the Indians, and they had nothing else to do but give them such care as was necessary to promote their own safety and existence.

Southern Forests.

The New Orleans *Democrat*, in the course of an article on southern timber and its superior quality for manufacturing purposes, says:—They have been cutting timber in the counties and parishes along Mississippi sound for a century or so, yet the latest forestry report shows that in these counties from 75 to 98 per cent. of the area is wooded land. The greater portion of the State is forest, the timber being of the greatest variety—pine, ash, oak and cypress; while Mississippi, Florida and Arkansas are equally good fields for saw mills and lumber yards. New Orleans, indeed, is the centre of the largest section of the wooded lands in the Union, and will in time wrest from Chicago its claim to be the lumber capital of the country, and from Cincinnati the manufacture of furniture boxes, etc. In the many estimates of the wealth of the south this is something that has never been included. There will be a department especially devoted to southern woods at the Atlanta exhibition. Here, certainly, Louisiana ought to carry off the honor of making the best display.

Pine Land Sales.

The *Northwestern Lumberman* says that Cook & Dowling, of Montague, Mich., have recently sold about 20,000,000 feet of stumpage, on the line of the Chicago & West Michigan railroad, near East Golden, to W. H. Bigelow & Co., of Muskegon. The logs will all be taken to Muskegon to be sawed, and Messrs. Bigelow & Co. will begin cutting the timber at once. Mr. G. A. Wagar, a well known Michigan lumberman, has just bought 400 acres of what is known as "canal" land, in town 18–15, in connection with which transaction there appears to be something of a joke on a Chicago operator. The Canal Company's lands have been in the market for some years, but Mr. C. Mears, of this city, was supposed to own the only feasible outlet for the timber, in consequence of which it is asserted that he expected to absorb the land at his own figures, or thereabouts. Certain other gentlemen, with a propensity for gathering up timber land, have concluded that lumber is in sufficient demand to warrant bringing out the logs from this region by rail, and have quietly brought the most of it up.

Wanton Destruction.

The wanton destruction of timber goes on practically unchecked in the California Sierras. To say nothing of the inroads made upon Government lands by usurpation, for lumber traffic, vast quantities of valuable timber are annually destroyed by cattle men and careless and wanton campers. The former make a practice of setting fire to great pine trees for the purpose of thinning out the forests, thereby creating better cattle ranges, and the latter are quite as destructive without any special motive. The California *Commercial Herald* says: For months past great fires have been burning in the forests beyond Truckee, and scores of fires are now nightly seen throughout that region. The destruction caused by these fires is very great, and will be seriously felt in future years as the supply of lumber in the more accessible places becomes materially reduced.

MOTHERS do not drug your children with poisonous opiates, in the form of Soothing Syrups, when one bottle of Dr. Fowler's Extract of Wild Strawberry will allay all irritation of the stomach and bowels incident to teething. It is pleasant, mild, and harmless, and is a positive specific for every form of summer complaint. All dealers supply it at 37½ cents per bottle.

WHERE BIG TREES GROW.

SEATTLE, Wyoming, Aug. 15.—Few persons east of the continental divide know and appreciate the forests of this region and of Oregon and Washington Territories. In Eastern Washington and Oregon there are large tracts of timber lands as yet untouched, save for the demand for domestic uses, and which are awaiting the completion of the routes of transportation now in progress. In the Blue Mountains of Eastern Oregon, and in the Cascade Mountains along the Takina, Clearwater, and other streams in Eastern Washington, there is a sufficient quantity of timber to supply all local demands and leave a large surplus for shipment to the prairies of Montana, Idaho, Dakota, and other markets. But it is to Puget Sound that the lumberman of the future must look for the material with which to supply his mills. There is a district of country extending from the Columbia river north to and into British Columbia, and from the Pacific Ocean to the Cascade range, and surrounding the waters of Pugent Sound, which is almost entirely covered with one of the finest bodies of timber in the world. There one can see a whole forest of such tall, straight, gently tapering fir trees as would gladden the heart of a ship-master, and can travel scores of miles through gigantic lumber trees, ready for the logger's axe and saw.

The Sound district comprises a tract about 200 miles in length, with an average width of 100 miles. Estimating one-half the growth to be lumber trees, and to make 25,000 feet of lumber per acre, gives the approximate original amount of standing timber at 160,000,000,000 feet. Deducting from this the amount already cut, which is estimated at 2,500,000,000 feet, leaves now standing approximately 157,500,000,000 feet. The timber consists chiefly of pine, with considerable quantities of fir, spruce, cedar and redwood, and a small supply of white oak, hemlock and maple. The trees of this region show luxuriant growth. The yellow fir frequently attains a height of 250 feet; pine, 120 to 160 feet; silver fir, 150 feet; white cedar, 100 feet; white oak, 70 feet, and black spruce, 60 feet. Cedars have been found to measure 63 feet in girth, with a height of 120 feet. The pine trees are known to the lumbermen as of two varieties—"sap" and "overgrown." The "sap" tree yields 6000 to 8,000 feet of lumber, and the "over-"overgrown" 7,000 to 15,000 feet. Of this timber is made of all grades of lumber—ship timbers, fencing, pickets, railroad ties, barrel staves and headings, household furniture, &c.—and the product is shipped in large quantities to the Pacific coast of South America, the Sandwich Islands and Mexico, while some trade is done with Australia, France and England.

The first saw-mill on Puget Sound was a small water-power mill with capacity of about 1,000 feet of lumber daily. It was built in 1851, and was followed in 1853 by a steam mill erected at Seattle, with capacity for cutting 8,000 to 10,000 feet per day. Since this time the business has increased to more than 200,000,000 feet of lumber per annum. The following tabular statement shows the production of the Puget Sound district at different periods, in 1,000 feet, value and average price per 1,000 feet:—

Years.	Thousand Feet.	Value.	Average Price.
1855-56	10,287	$ 159,448	$15 50
1865-66	49,113	500,531	10 19
1877-78	154,078	1,474,526	9 57
1878-79	177,411	1,680,082	9 47
1880-81	209,542	1,969,694	9 40

It will be noticed that the price has steadily fallen, which is due to the increased number of mills, to competition, and to increased facilities for handling logs and lumber.

The export trade has rapidly increased, and from the best data obtainable is shown as follows:—

Years.	BOARDS, DEALS, JOISTS, &c. Thousand Feet.	Value.	LATH, PALINGS, PICKETS, &c. Value.	Total Value.
1855-56	2,286	$ 35,448	.....	$ 35,448
1856-57	4,320	64,800	$ 445	69,245
1865-66	10,914	111,196	.....	111,196
1868-69	19,314	183,483	5,505	188,988
1877-78	34,532	330,800	.....	330,800
1878-79	36,236	343,491	18,307	361,798
1880-81	40,136	377,278	25,802	403,080

The mills of the Sound are some fifteen in number, and they are most desirably situated for economical production. Some of them form towns in themselves, with dwellings, stores, shops, steam tugs, and lumber vessels, all owned by the companies. The largest, situated at Port Ludlow, has a daily capacity of 225,000 feet. Following is a list of the mills, with the daily cutting capacity of each:—

	Feet.
Port Gamble	200,000
Port Ludlow	225,000
Port Madison	100,000
Port Blakely	100,000
Port Discovery	70,000
Seabeck	80,000
Utsalady	75,000
Tacoma and New Tacoma	102,000
Seattle (Six Mills)	150,000
Total	1,102,000

The custom at nearly all the mills is to await the receipt of an order and saw the lumber to fill it, and one can frequently see a fleet of half a dozen or more vessels loading at once with lumber fresh from the saws of these mammoth mills. Shipbuilding is an industry of considerable importance on the sound in connection with the lumber interest, as nearly all the vessels engaged in the trade are built here of native timber. The first vessel built on the sound was a sloop of 14.68 tons, in 1858. From that time the number has increased yearly, with 12 vessels built in 1864, aggregating 753.30 tons; 19 vessels in 1869, 1,952.10 tons; 14 vessels in 1879, 965.99 tons. The whole number built since 1858 is 162, with a total of 20,083.28 tons.

The day seems not far distant when the western half of the American continent, at least, will look to Puget Sound for its entire lumber supply, and with the completion of the routes of transportation projected and in course of construction, lumber can be furnished to points as far east as the Mississippi river at less cost than from the Atlantic sea-board.

The waters of the Sound are recognized as the finest harbor in the world, and fleets of lumber vessels, tug-boats towing logs, and steamships plying between the various ports, carrying passengers, mails, and freight are seen on all sides. There are many desirable localities for the establishment of factories for the manufacture of barrels, pails and tubs, and of house trimmings, such as doors, sash, blinds, mouldings, &c.

At Seattle, the most important town on the sound, a large barrel factory has been for some time in successful operation, the lumber used being a very fine quality of cypress. Also at Seattle are six saw mills, besides several mills for dressing lumber and for the manufacture of builders' trimmings. Nearly all the vessels engaged in the lumber trade, as well as some of those employed in the coal trade, from Seattle to San Francisco, are made here. All the wood used in their construction from false-keel to topmast is pine of the various kinds, cut, sawed, shaped and put in place in some instances within a distance of half a mile. One sees on the sound craft of all sizes, from the row-boat to a schooner of 400 tons, built entirely of native lumber, and within such easy distance of the forest that their construction must of necessity be economical. The time is coming when one of the greatest and most profitable industries of Washington Territory will be the building of ships upon the shores of her beautiful and land-locked harbor.

Everything here seems to favor the lumberman. He has no severe winter weather to contend with. The forest reaches to the shores of the sound, which are not abrupt or precipitous, but incline gradually to the water. Numerous streams flow into the Sound, the waters of which have no current except such as is caused by the action of the tide, and logs are easily towed to any point. Thus is avoided the delay, dangers and expense of a severe winter season spent in the woods, and the "driving" down rapid and swollen streams during the spring rise, and with no danger of a sudden rise breaking a "boom" and scattering the labor of months.

In this description the heart only of the lumber country has been taken. To the north it extends into the British possessions, although after passing Frazier river the growth is not so good. Taking into consideration the vast quantity of material, the excellence of harbor, and the economy with which mills, factories and hip-yards can be supplied, it is no wonder that Puget Sound is called the future great lumber treasury of the United States.—*N. Y. Times.*

Sale of Timber Limits.

OTTAWA, Sept. 20.—The announcement of extensive sales of timber limits on private account brought together a large assembly of lumbermen at the Grand Union Hotel this afternoon. The following limits were disposed of:—The R. C. Campbell limit on the Front Lake branch of the Petewawa river, 39 square miles, sold to Wm. Moore, of Tarbolton, *en bloc*, for $29,500; Fraser & McDougall limit, berths 164 and 169 on Big Lake, River Des Moines, Quebec, 100 square miles, sold to W. G. Perley, Ottawa, for $90,000; Frazer & McDougall limit, berths 165 and 168, 100 square miles, to Alex. Fraser, Westmeath, $59,000; Fraser & McDougall limit, berth 167, 50 square miles, to E. B. Eddy, $15,500; berth 4, Deep river, 14½ square miles, to E. Moore, $4,200. The following were offered, but not sold:—Sir Francis Hinck's limit, 50 square miles, between the Coulonge and the Des Moines rivers, $110 per mile bid, limit withdrawn; Brannen limit, so-called, offered on account of Mr. McMaster, Toronto, being berth No. 4, Kippewa, 50 square miles, $485 per square mile bid, withdrawn; berths 23, 53 and 51, Nipissing, 26 square miles each, were withdrawn, notwithstanding bids of $75,000 for the three and $50,000 for one berth. The Nipissing limit, berth 168, was offered and withdrawn. Several limits were offered for sale by Mr. Brewer, auctioneer, alternately with Mr. Tackaberry, but after spirited bidding they were withdrawn. The prices realized and offered were good.

The following limits were disposed of by Mr. Tackaberry in addition to those above mentioned: Fraser & McDougall limits, berths 164 and 169, to Perley & Pattee, for $90,000; berths 165 and 168, 100 square miles, and berth 166, 50 square miles, to A. Fraser, for $59,000 and $36,000 respectively; berth 167, 50 square miles, to E. B. Eddy, for $14,000. Deep river limit, berth 4, 14½ square miles, to E. Moher, for $4,200. Buck and Stewart limits, 13½ square miles, to Perley and Pattee, for $3,700. The following limits were offered for sale, but were withdrawn owing to the bidding not being sufficiently high: Brannan limit, on the Kippewa, fifty square miles, $495 per mile, offered and refused. Lake Nipissing limits, berths 23, 43 and 51. 108 square miles, $75,000 offered for the lot, and $50,000 for berth 23 and refused. Mattawa limit, license 168, sixty square miles. Kippewa limit, berth 63, 50 square miles. Mr. Brewer also offered for sale several limits, but as they did not bring the reserve price, they were withdrawn.

American Poles in England.

In the House of Commons, recently, one of the members asked the Postmaster-General whether it is a fact that the Post Office Department uses foreign timber only for telegraph posts, whereas many railway companies use home-grown timber for that purpose; and, if so, whether he will cause inquiry to be made as to the relative price and value of home-grown and foreign timber in different portions of the United Kingdom, with a view to directing the use of home-grown timber where such a course can be adopted with advantage or without prejudice to the public service. Mr. Fawcett replied that the telegraph poles were of foreign timber, and he found that foreign timber was also used by the railway companies for similar purposes. The reason why foreign timber was preferred was the greater durability arising out of what was known as the creosote process, which made it last much longer than home-grown timber.—*Northwestern Lumberman.*

THE *Evart Review* thinks every man in the country is fortunate who is the owner of hemlock land. For both timber, manufactured lumber and tanbark, the hemlock is growing rapidly into favor in all the great lumber markets abroad. Every man who is the owner of a good piece of hemlock land should not part with it at anything like present prices. It is a good investment, in fact, one of the best that any man can make in the way of buying timber land.

THEY ALL DO IT.—Everybody uses "TEABERRY" for the teeth and breath, the newest, brightest, coziest little toilet gem extant. Try a 5 cent sample.

THE ENGLISH TRADE.

The London *Timber Trades Journal* says:—The aspect of the timber trade may be said to be quite as favorable at the present time as that of most others. There is no expectation of any considerable rise in prices, nor any apprehension of a serious fall. Some importers will find themselves shorter of stock at the end of the season than they would desire, while others will wish they had not bought quite so freely. But as a rule the trade will probably be fairly well supplied, and they are likely to get a fair remunerative profit on the business they do. There is a short importation of Russian stock up to date, amounting to about a third part of the whole shortage of import compared with last year, yet there is no want of Russian deals exhibited by the prices they fetch at the public sales, which seldom exceed the cost of importation; and as the deficiency will no doubt be partly made up before the season closes, it is not likely that better prices than those now current will be obtained for deals from that region.

Our record of imports this week contains the arrival of upwards of 770 cargoes of wood. In London alone one hundred and thirty-six timber laden vessels arriving within the compass of a week's return surpasses all that we have hitherto had to record during the present or any other year in that way. But the great preponderance as to numbers is with sailing ships, as not one-third of them are steamers this time. Russia and Russian Finland are now pressing forward the arrears of the spring shipments, nor are Sweden and Norway slow to avail themselves of every occasion to get goods forward to this country while the season is inviting. A few more such weeks and the shortage as compared with last year may melt into insignificance. This sudden supply is extraordinary.

The Land Rage in Winnipeg.

The first thing that strikes the visitor before he has been six hours in Winnipeg is the tremendous rage going on for speculation in land. This rage is almost equal to the gold or diamond fevers, and though the prospects of the city are at present good, it is feared they may be injured by the speculations which are going on, and which are very cleverly manipulated by designing speculators. Large sums of money are being made, and one man, by no means one of the largest speculators, has without doubt realized $20,000 since the spring. Go where you will there is nothing but land talked, and if you cannot talk land you had better "step down and out," for people will think you a fool. Knots cluster around the hotels and in every public place, and with all the one absorbing topic is—Land! Auction sales go on every evening, and lots are sold not only in Winnipeg, but all over the country. People rush in and buy lots that they know no more about than the man in the moon, and the following bears this out:—At a sale of lots recently, a little boy between 13 and 14 edged his way through the crowd, and going up to a gentleman interested in land, who by the way is brother of the worthy Sheriff of York, pointed out to him on a map two lots, and asked if they were good ones. The gentleman said yes, and asked why he wanted to know. "Well," said the boy, "I've saved $25 round the hotel, and I'm going to invest it in land, and I thought I'd pay so much on these, and sell them as soon as there was a rise." The gentleman showed him some lots which he thought he could do better with, and the boy departed to think over the matter.—*Globe Cor.*

Worthless Stuff.

Not so fast my friend; if you could see the strong, healthy, blooming men, women and children that have been raised from beds of sickness, suffering and almost death by the use of Hop Bitters, you would say "Glorious and invaluable remedy."—*Philadelphia Times.*

NOW THAT THE TRAVELLING SEASON IS AT HAND, no traveller should be without a bottle of Dr. Fowler's Extract of Wild Strawberry, to counteract the bad effects of the change of climate, water, and diet; fruitful sources of bowel complaints. Wild Strawberry is a specific for sea sickness, nausea, vomiting, colic, cholera morbus, diarrhœa and dysentery. Contains no opiates, is pleasant to the taste, and certain in its affects. 35 cents per bottle. Ask your druggist for it.

NO TRUTH IS CLEARER than that Scriptural declaration:—"The blood is life, * * * and the leaves shall be for the healing of the Nations." Burdock Blood Bitters is purely vegetable, and makes pure blood, renovates, invigorates, and restores the system when impoverished by disease. One bottle, at the nominal cost of one dollar, will convince the most sceptical of these assertions.

BOILER EXPLOSION.

SAD RESULT FROM A DEFECTIVE GAUGE OR CARELESSNESS OF STEAM.

BELLEVILLE, Sept. 24.—A shocking thrashing machine accident occurred in Thurlow yesterday afternoon. A local paper publishes the following particulars:—

One of the most terrible and fatal accidents that ever occurred in this vicinity took place yesterday afternoon between 6 and 7 o'clock, at the farm of Mr. George Caldwell, eighth con. of Thurlow, and about one and a half miles east of Zirous Hills. Mr. Owen Reeds steam thresher had been engaged during the day by Mr. Caldwell, and through some defect of the gauge or carelessness on the part of the engineer the head of steam carried was not fully known. The consequence was that the boiler of the thresher exploded with terrific force, tearing everything into pieces and scattering death and destruction on all sides. Inson, thresher, who was engaged near the cylinder at the time the explosion occurred, was struck by pieces of the shattered engine, and his skull was badly crushed. He died almost instantly. Andrew Lloyd, who was also near by, was blown fully twenty-five yards from the engine, and his abdomen was torn open so that his bowels protruded. Death was almost instantaneous in his case. Also Wm. Malcolm, son of Mr. Wm. Malcolm of this city, and who was formerly foreman of the gas house here, was instantly killed. He was employed on the machine and was a promising young man of about twenty years. Miss Viola Caldwell, daughter of Geo. Caldwell, aged eleven, who was near the machine watching the operations, was struck by a piece of the engine and her neck broken. She, too, died in a few moments. But these casualities, horrible as they are, did not complete the injuries inflicted upon life and limb. Mr. Caldwell was seriously, but not fatally wounded. Henry Garvin was dangerously injured, and may die. C. Gerkin was also painfully injured. The engine was shattered into a hundred pieces, and part of it was driven into the barn, setting fire to the straw. By great efforts the flames were extinguished before it had done much damage. The scene at the barn after the accident baffles description. The writer got his information from an eyewitness who describes the anguish of the bereaved friends as heartrending in the extreme. While some cared for the wounded, others gathered about the mutilated forms of the killed and rent the air with their cries. Strong, active men, who, a few moments ago were exchanging greetings and anticipated nothing but happiness, lay upon the ground bleeding and dead. The little girl Viola was not mutilated, and her death was so sudden that her countenance retained a natural expression in death. All around were broken and splintered parts of the engine. The shades of night closed over one of the saddest and crushing scenes ever witnessed in this part of Canada. Mr. Geo. Caldwell, who suffers such a terrible loss by this accident, is a brother of Dr. Caldwell dentist, of this city, and is a widower of about 48 years. He owns a farm of 200 acres, and is a prosperous farmer. His mother resides with him.

LATER.—Further particulars of the threshing machine disaster show that Mr Caldwell was not injured, and that it was not his daughter, but her cousin Viola or "Lotia," who was killed. The two children were sitting with arms intertwined when the explosion took place. A portion of the boiler struck Lotie, killing her instantly, and Helen was severely scalded. The little one who was killed was a daughter of David Caldwell, a brother of George. The body of Andrew Lloyd was thrown 192 paces, and that of Malcolm nearly as far. Gavan, who was injured, is already able to be about, but it is feared that Helen Caldwell will die, as she inhaled a quanity ot steam. Inson, the thresher, was thirty-two years of age and had three children. He lived in Thurlow. Lloyd was about twenty-five years of age, unmarried, and lived in the village of Plainfield. Malcolm was about twenty years old, and lived in Belleville. Large peices of the boiler were blown into fields adjoining, and were picked up at distances from 200 to 300 yards from the scene of the accident.

BUSH FIRES.

The following extract from an essay on Forestry by Bucke Withan, of Ottawa, is of interest and value at the present time: "The enormous waste from bush fires is quite incredible to those who have not witnessed their devastation. These originate through careless settlers and hunters, who camp in the woods, and sometimes, though rarely, by the lumbermen themselves, or by surveyors who make smudges to ward off the attacks of flies and mosquitoes. These fires started during a dry season are stopped only by large streams, lakes, swamps, or by heavy continuous rains. The fires leave a barren waste, and are only replaced by a scrub growth of birch or popular. Stringent laws have been passed by the Ontario Government against orginators of fires, but unfortunately no sufficient machinery has been created to put these laws in force, though petitions have from time to time been forwarded to the Government by the millowners and the lumbermen. It is estimated that more timber has been destroyed by bush fires than has been exported althogether from the country. It is evident that if these fires could be suppressed and the young trees which are left on the pine lands after the large timber has been cut out could be protected and allowed to grow up, a valuable forest would be formed for a continuous supply if to this were added some systematic scheme by the Government for planting on its waste lands, it is not yet too late to recuperate the pine timber forests of this country. To further the proposed undertaking it would be well to import a few practical foresters, in order that their wisdom, acquired by the old, might be utilized in the new world. The increase in the revenue derived from the Crown lands dues by the Government could be profitably expended in protecting and fostering the timber interests on the public domain. The staff of twenty or thirty rangers at present employed by the Government have done inestimable service, but it is obviously impossible for such a small staff of but partly employed men to ascertain the origin of destructive conflagrations. The writer would therefore suggest that the Government appoint permanently the required number of wood rangers or inspectors, that one or more constables be employed for every limit of 100 miles square." Whose duty should it be to apprehend and report to the ranger or other officer any case of violation of Crown timber regulations, especially with regard to fires. At present the regulations are very good, but there is no one specially to enforce them, saving the few rangers referred to. Mr. Hotchkiss, who compiled the timber article for the United States census, states that at the present rate of cutting the Canadian supply of timber will give out about the same time as that of the United States, that is, in about thirty or forty years. Hence the timber trade of the continent will thence be transferred to the Pacific slope. One of the largest millowners on the Ottawa informed the speaker that he thinks there will not be any pine for exportation from Canada twenty years hence. Should this Province, therefore, wish to retain her timber interests there must be no delay in dealing with the question.

The circulation of the blood has been demonstrated by the microscope, and the proof of the circulation of Esterbrook's Pens is that they are found everywhere.

We have added to our plant all the latest improved machinery for Electro and Stereotyping, and the manufacture of Printers Furniture, facilities for executing work which no other establishment in the Dominion possesses, and not excelled by any on the continent. A large assortment of various cuts constantly on hand.

AUCTION SALE
Twenty-one Hundred Acres
OF VALUABLE
CEDAR & PINE LANDS
Will be offered for sale by Public Auction, at Noon,
On Friday, 28th of Oct. Next
AT THE COURT HOUSE, IN THE
Town of Lindsay
Being Nine Hundred Acres in the Township of Somerville; and Six Hundred Acres in the Township of Fenelon; and Six Hundred Acres in the Township of Bexley.
Dated 24th September, 1881.
DENNISTOUN BROS. & HALL,
2L23 Solicitors, Peterborough.

AUCTION SALE
OF VALUABLE
Timber Limits
Situated near Lake Nipissing.
Notice is hereby given that (if not previously disposed of by private bargain) the following Valuable Timber Limits will be offered for sale at Public Auction at The Mart, 57 King St. East, in the CITY OF TORONTO, on
Wednesday, 5th of Oct. Next
AT THE HOUR OF NOON, VIZ.:

	Sq. Miles.
Berth No. 23, on the River Bueve, near Lake Nipissing, comprising	36
Berth No. 43, on the River Wannapitac, near Lake Nipissing, comprising	36
Berth No. 51, on the River Wannapitac, near Lake Nipissing, comprising	36
In all	108

These limits contain, in the aggregate, a large quantity of magnificent pine timber.
Berth No. 23 is estimated—as the result of a recent exploration—to contain a quantity of trees sufficient to produce at least half a million cubic feet of square timber, besides two hundred and fifty thousand standard saw logs. The river is available for driving to Lake Nipissing.
There is a good mill site on the Bueve river, about three miles from Lake Nipissing.
Lumber could be transferred thence by water to the Callender station of the Canada Central Railway, the line of which is projected to pass directly through this limit.
The owners reserve the right to dispose of either or all of them by private bargain in the meantime, and will be ready to consider any offers that may be made.
Persons desiring further particulars are invited to communicate with the undersigned.
F. W. COATE & Co. Auctioneers. SMITH, SMITH & RAE, Solicitors, Toronto.

THE CANOE ISLANDS.

They are found only on the latest local map of Lake George, these isles of the blest—that is to say of the American Canoe Association. Some five miles northward from Crosbyside they rest; three of them—blue in the haze, green in the sunshine on the waters of the most enchanting of American lakes. The second week of August saw them the centre of the canoeing interest. Thitherward under sail and paddle came sun-browned, blue-shirted ones, from as far west as Wisconsin, and as far east as Maine. Most of them had been some days or weeks on the way, taking their vacations in the open air; cruising in their canoes by day, and sleeping in them or in tents beside them by night. There were clergymen, lawyers, doctors, journalists, manufacturers, foundrymen, merchants, students and all the other trades and professions; for the A. C. A. is eminently Catholic in its scope, and says "no" to a candidate for admission to its ranks only on the most obviously objectionable grounds.

Gradually the main island assumed the appearance of a considerable camp, while the second in size was appropriated by the Cincinnati club, which sent the largest single delegation, and was in itself the centre of a life and enthusiasm that were unknown upon the main island.

Among the most notable of the arrivals early in the week was that of the Canadian contingent, hailing from Peterborough and Ottawa. They arrived in the midst of a heavy blow from the northward, the sea running quite high and the lake covered with whitecaps. The Canadians use the open hunting canoe, built on the general lines of the aboriginal "birch," but beautifully finished in bass, cedar and other woods, and polished like highly finished cabinet-work. The voyageurs had come down the Dominion rivers and Lake Champlain, bringing their camp equipage with them, and in the eyes of canoeists from lower latitudes the dainty craft were weighed down perilously low in the water. It seemed like harnessing a high-spirited racer to a lumber wagon, this loading a light and graceful creature with five or six times its weight of men and material. On they came, however, rising cork-like over the seas, the long-bladed paddles flashing, and lithe, muscular forms of the Canadians bending to the work as it became necessary to veer to one side or the other in order to avoid an unusually threatening series of waves. Presently they swept round into the lee of the island, saluted gracefully with their paddles in answer to the cheers from the shore, then landed, and in an hour or so had their tents pitched, and the Union Jack of England flying at their landing.

These Canadians carry home with them the hearty admiration of their American brethren. With two centuries of canoeing behind them they came down to Lake George as modestly as if they expected to learn something from us neophytes; and when the leader, Mr. Edwards, of Peterborough, was unanimously chosen Vice Commodore of the association for the ensuing year, he actually protested against it as too great an honor.

Wednesday was announced by the local press and on the hotel bulletins as "ladies' day," and the camps and canoes were prepared for inspection. The canoes, with all sail set, were taken out of water and arranged in line along the main path of the island, everything being ship-shape and man-o'-war fashion so far as practicable. By the middle of the forenoon visitors began to arrive with their escorts from the various hotels on the mainland, and presently the wooded island was gay with bright dresses and parasols, which went from boat to boat and from tent to tent, full of interested curiosity about every detail of camp life. The ingenious contrivances in the way of portable stoves, compact cooking-kits, and all the appliances to which canoeists resort to increase comfort while taking up but little room, were fully explained.

Thursday, the opening day of the races, saw the prettiest sight of the week. The wind was favorable, and nearly half a hundred fairy craft ran down to Crosbyside under sail. Every style of rig, standing, balance and Chinese lugs, lateens like those of the Italian felucca, leg-o'muttons, plain boom, gaff and sprit sails, all were filled by the northerly breeze, and the lower reaches of the lake were thickly sprinkled with white sails and the flashing blades of paddles. One upset occurred, successfully and safely performed by a member of the New York club, who subsequently distinguished himself by winning every sailing race in which he started, and presently all hands were at Crosbyside making ready to participate in the three days' regattas which followed.

Of these I will say nothing save that, as was appropriate, a Western son of Anak carried off the two principal prizes assigned for the muscular paddle, while salt-water seamanship secured the two which were assigned for the sailing races.

The ceremonies ended on Saturday night with a supper tendered by Mr. Crosby, of the Crosbyside Hotel, and on Monday the canoeists departed for their respective homes, or for the conclusion of cruises interrupted by the programme of regatta week.

The Association may now be regarded as an accomplished fact. Its membership is about 150, and its composition is as unexceptional, its purposes as healthful and health-giving as can readily be in any such organization. Sporting characters, in the objectionable sense of the term, are unknown upon its rolls, and it seems destined to fufill its mission of developing a spirit of good fellowship and camaraderie which can hardly be attained in like degree by any other athletic association in the land. The secretary is M. C. A. Neide, Slingerlands, N.Y.

Of the recreation in its general aspects a word may perhaps be appropriately said in conclusion. The term does not properly describe the craft, and indeed the pundits of the guild are puzzled to find a terse definition of the word. The aboriginal canoe, "birch" or Kayac with its paddle is perhaps the purest type, but modern ingenuity turns out a boat which is in all essentials a little yacht. It is fitted with sails, lockers, water-tight life-saving compartments, is decked over, affords comfortable sleeping accommodations for its crew of one, and is in all respects a safe and convenient vessel in which to cruise on lakes and rivers, and along the sea coast. Long and in some cases adventurous voyages have been made with its aid, and the accidents have been remarkably few. The whole life of the canoeist indeed teaches self-reliance and readiness under all circumstances to act promptly and with judgment.

Eternal vigilance is the price of dry flannels in a canoe cruise, and readiness of resource is a characteristic of the canoeist as it is of the sailor. No out-of-door sport that is worthy the name is without its dangers, and anything that will within reasonable bounds foster a spirit of healthful adventure must tend to develop a finer quality in the manhood of the race. Base ball, cricket, rowing, tennis and the other stock of out-of-door gymnastics have their times and seasons, but the canoe takes rank in some respects—in many, as its disciples believe—above them all. It brings its devetee nearer to nature, and opens to him possibilities of pure and genuine recreation such as none of the others can afford.—*By Charles Ledyard Norton, in the Christian Union.*

The Timber Used For Matches.

Five hundred and fifty-five thousand hours of each successive day are spent in by the inhabitants of Europe in striking lucifer matches upon the box and otherwise. The computation is based upon the following curious statistics:—Europe, continental and insular, consumes two milliards of matches daily. Assuming that each several act of ignition occupies the brief period of one second—and we have reason to believe that it is rarely performed in a shorter time—it will be obvious to every ready reckoner that the above mentioned amazing number of hours must be diurnally devoted to the production of artificial light by friction, in our quarter of the globe alone. This is food for much quaint speculation in the seemingly anomalous fact that Europeans dispose of nearly sixty-four per diem in scraping tiny sticks, tipped with some inflammable composition, upon sympathetic substances of various descriptions. It is also interesting to learn that four hundred thousand cubic yards of timber and four hundred and twenty thousand pounds weight of phosphorus are in annual request for the manufacture of the seven hundred and thirty thousand millions of matches used up by Europe in the course of every year.

DRY ROT IN TIMBER.

This disease, if it may be so termed, is still a matter of doubt between naturalists who have sought to explain the production of the fungi. Some have maintained that the fungi producing dry rot are spontaneously developed; others that they are produced by seed taken up and supported in the air, until favorable conditions are presented. The fine powder which distinguishes dry rot is composed of myriads of reproductive spores of the fungus. From a mildew it assumes a delicate, white vegetation, and afterwards a leathery appearance. The fungi, over different materials, are of various colors, sometimes reddish, violet, brown, at others white or gray. It is well known that very damp situations are not favorable to the growth of the fungus. In dry situations it is found to spread more rapidly, and we have seen the sides of a party-wall covered with its fibrous, cotton-like texture, the roots or filaments appearing to have extended from the basement. In this case the painting of the wall was in a pulverizing state, and the skirting and flooring covered by it. The situation was quite dry. Absolute wet prevents its growth, but damp combined with warmth appears to be favorable to decay. One of the principal naval builders of the Chatham, Eng., dockyard has said that the destruction of timber by dry rot cannot take place unless air, moisture and heat are all present, and that the entire exclusion of any of these three stays the mischief. Mr. Britton, in his work on "Dry Rot," who quotes this opinion, observes, "The admission of air has long been considered the only means of destroying the fungus, but as this has frequently proved ineffectual, it must not be always taken as a certain remedy." He also says the air admitted ought to be dry air, so as to absorb the moisture; it will then exhaust the fungus. But care should be taken to let the air escape, and not allow it to convey the seeds of the disease to other parts of the building. Hence, the value of free ventilation behind all skirtings, dados, wainscotting and floors in the first place. At eighty degrees Fahrenheit dry rot proceeds rapidly, but at from 100° to 120° it is arrested. At low temperatures it is also arrested. To prevent rot good seasoning and ventilation are essential. Charring after seasoning and coal-tar are recommended. To cure dry rot a solution of corrosive sublimate in water, an ounce to a gallon, used hot, or a solution of sulphate of copper, half a pound to a gallon of water, used hot, are good washes.—*Northwestern Lumberman.*

To Make a Frame House Cool.

The New York *Tribune* in a recent issue recommends the following method for rendering an ordinary frame house dry, warm and cool:—"These conditions are obtained by the introduction of a mortar or concrete wall between the upright timbers or 'studding' of the ordinary balloon frame. The wall is very cheaply made, the mortar being simply filled in between boards loosely nailed on, and as soon as the first or lower filling has set, the boards are taken off and nailed on higher up, and the space again filled. In this way, the filling process and removal of the boards being repeated as often as necessary, the wall may be carried up as high as desired, whether to the roof, or only to the top of the first storey, but the full height of the studding is best. The plaster may be put directly upon the interior surface of this wall, which of course will be of the same thickness as the width of the studding timbers, usually four inches, and will be flush with them on both sides. But to prevent the dampness which a solid wall without an interior air-space would be sure to produce, strips of lath must be nailed up and down on the outside of the house, and the siding nailed to and through these strips. There will now remain, when the siding is put on, a space of about one-third of an inch between the siding and the wall. This is not sufficient for a harbor for rats and mice, while it is quite enough to insure the retention of its warmth by the wall during the winter night, at least in a sufficient degree to prevent frost. On the other hand, the heated condition of the outer surface of the siding in summer will not be readily transmitted through the non-conducting material of the wall, which will therefore maintain nearly the same temperature day and night at all seasons."

MORE BUSH FIRES.

A REPITION OF THE LATE SCENES IN MICHIGAN —SERIOUS CONELAGRATION.

CARTHAGE, N.Y., Sept. 17.—The forest fires which broke out on Thursday a few miles south have been increasing ever since. Yesterday the wind blew a gale, and the fire spread so rapidly that many farmers were unable to remove their crops and stock, which with many buildings were burned. Hundreds of people have been employed for the past twenty four hours in removing their household goods and farming implements to places of safety. The people of this village responded to calls for help to fight the fire until the streets were deserted. Three men named Kelly, Getman and Flood went into the woods yesterday morning, and have not since been heard from. It is said that twenty houses in the Irish settlement were burned since Thursday night. The grass and seed burn like tinder, and the fire spreads with incredible rapidity if the wind blows. The fire is at present approaching the cemetery through a swamp, and the people are preparing to save it if possible. There are no signs of rain.

Big Thing.

American journals have heretofore enjoyed the satisfaction of getting up the most monstrous and absurd things capable of being reduced to print, but they are fast losing ground and Europe is coming to the front. The last number of the *Journal of Forestry*, London, Eng., contains a most remarkable article translated from the *La Gaceta de la Indastria*, of Spain; it reports:—"The Americans are projecting a work exceeding in magnitude any which have hitherto been dreamed of. They propose to unite America to Europe by a railway tunnel along the bottom of the Atlantic Ocean. The tunnel will be formed of an iron tube 5,600 kilometers in length and 8 metres in diameter. To enable it to resist the pressure to which it will be subjected, the tube is to be 50 centimetres thick and in sections 50 metres in length. Detailed information is given in regard to the proposed operations of construction at the bottom of the ocean, with notices of the arrangements for securing telegraphic communication, electric light and ventilation. Mr. Edison, who is one of the commission of engineers to which the project has been submitted, has given assurance that by means of an electric locomotive of his invention the distance of 5,600 kilometres may be travelled in fifty hours, and the colossal undertaking, inclusive of rolling stock, is not to cost more than 2,000 millions of francs." The *Gaceta* gives also a summary of a projected extension of the Moscow and Novogorod railway by Orenburg and the river Ural to Orish, the European terminus end starting point of the Asiatic line toward Tashkent-Kohlau, through desert regions requiring the construction of numerous bridges, cuttings, tunnels and workshops of corresponding magnitude, the final terminus being Pekin. It is spoken of as being beyond doubt one of the greatest undertakings of which human activity can conceive.

Blaze in a Lumber Yard.

BARRIE, Sept. 15.—The lumber in Mayor Ardagh's mill-yard, situated on the bay shore half way between here and Allandale, was discovered on fire about noon to-day, and the alarm quickly sounded, but on account of the extremely high wind blowing at the time, the flames had made considerable headway before the fire engine got over. The Northern Railway Company also sent their engine and a large number of men from Allandale to the firemen's assistance. They fought the battle well, and succeeded in keeping the fire within the lumber yard, although the mill and many of the surrounding houses had a narrow escape. The loss on lumber is estimated at from $7,000 to $8,000. On account of the absence of Mr. Ardagh in Toronto, it cannot be ascertained whether the lumber was insured or not. The origin of the fire is not known, but is supposed to have been caused by a spark from the mill or a passing train.

Were man to conform *more* to the laws of health and of nature, and be less addicted to the gratification of his passions, it would not be necessary to advertise Fellows' Compound Syrup of Hypophosphites as a restorative for the power of the brain and nervous system, while the world's progress enlightenment would indeed be marvellous.

FOREST CULTURE ON THE PRAIRIES.

In a thickly-wooded country it is natural that settlers should turn their chief efforts to getting rid of the timber. Only a very small portion of it can be utilized for building and fences; the rest is valuable only for the potash it will produce. This is true of the early settlements. After a while the merchantable timber, the black walnut, where it happens to grow, the pine, the oak, the bird's-eye maple, are worth marketing. At a further stage, such as that which the State of New York has now reached, almost all kinds of hardwood are valuable, not only to produce heat, but for use in manufactures. In a country where the prairies are out of all proportion to the woodlands, large, the necessities are of an opposite kind; instead of tree destruction, which is the law of progress in forest lands, tree planting is a necessity. But there is, nevertheless, a natural reluctance to engage in it. To plant in autumn or spring a crop that will be reaped in the coming summer is what most strongly recommends itself to the farmer. To plant and reap in a few months is the sort of alternation that suits him best. To plant trees which may be years in arriving at maturity, which the planter may never live to see fit for use or the market, offers a too remote chance of compensation for the labor and patience expended, to make planting trees an alluring enterprise. And besides tree growing, which consumes a number of years, raises a question of capital. If a farmer has no capital which he can afford to invest without the hope of a return for a number of years, he cannot go into forest culture, even with a strong inclination to do so.

In such a state of things, forest culture needs special encouragement. Bounties and freedom from taxes have both been tried in the western States. In some cases a fixed sum has been paid for every tree planted; but the temptation to fraud which the premium held out sometimes proved too strong to be resisted. This plan, judged by its results, can scarcely be recommended for adoption. The freeing of timber-planted land from taxes is said to have answered better; but if frauds can be perpetrated under one form of bonus, it is difficult to see why the same evil may not happen under the other. To be sure, a tree planted in the spring might have its absence explained some months after, on the plea that it was dead. Taxes are payable every year, and they would not be likely to be remitted on land which the assessors did not find devoted to forestry. There is, therefore, a reason for preferring the remission of the tax. Whether the remission of the municipal tax, where there is no other, would prove sufficient, is a question. It is clear that though the remission of state and municipal taxes might achieve the object desired, the remission of the municipal tax only might not bring equal success.

Another question should properly precede this: Is it desirable to offer pecuniary encouragement for forest planting on the prairies, in any form? This is an economical question with a political side; and if it be determined in the affirmative, then it is plain that any mode of encouragement to be adopted should be sufficient. And if it be not answered in the affirmative, it would be a waste of time to discuss it. The experience of other countries, notably the United States, not dissimiliarly circumstanced, has decided the question in the affirmative; and we think it would be safe to allow that experience to guide us a moderate distance in the direction to which it points.

It will be much if men's minds be imbued with the necessity and the desirability of tree planting in our north-west. Nor should those who could afford to do it wait for bonuses to supply the necessary stimulus to exertion. If the distant hope of bonuses caused men to wait till they could get them, that hope might prove a discouragement instead of an encouragement. Whether it will pay prairie farmers to grow patches of forest, it will assuredly pay them to grow trees for shelter for their cattle.

The effect of forests on climate remains to be considered. The presence of trees is pretty well admitted to conduce to rainfall. Treeless lands are sometimes barren, but by no means always. The Rocky Mountains, by their varying configuration, regulate the rainfall in different localities on the eastern slope. They deflect the clouds in particular directions, and leave some belts of soil barren. If the planting of forests could correct this defect, which is scarcely probable, it would be advisable to plant gradually up to the barren belts first, and then invade them, as a means of giving them the conditions of fertility.

All that anyone can hope to do at present is to attract attention to the subject of tree planting on the prairies. And this it will not be easy to do, since the average prairie farmer in our North-west has his attention so completely engrossed by matters of more immediate interest. If nurserymen would turn their attention to that quarter, something might be done. The kind of trees suitable to be grown there would have to be ascertained. As a rule, a much greater variety than is actually grown for ornamental trees could easily be secured; and though the characteristic vegetation of each region ought to be the chief concern, the attainment of the widest possible variety is undoubtedly desirable. —*Monetary Times.*

The Value of Lumber.

The *Northwestern Lumberman* can see nothing to indicate why lumber will materially depreciate in value, no matter at what time the period may be placed. It is not reasonable to expect that the great tide of emigratiou will lessen, so long as this is a Republican Government, and the countries from which the immigrants come are governed by kings and queens. The foreign element will erect houses, barns and fences upon the plains that are now unsettled, and there is no reason to suppose that they will cease to do so until the western prairie States are settled as thickly as Ohio and New York. The demand for building material will increase. In cities other materials will be used largely in place of lumber, as they always have been; but on the whole wooden buildings will be the rule, instead of the exception, long after every person living on the earth to-day shall have gone where, so far as is known, there is no interest taken in buildings built by hands. The future promises no reduction in the cost of production; on the contrary, it is almost absolutely certain that the lumber cut from the logs that will be secured the coming winter will cost more than that now being sold. Provisions and grain will be higher the hauls will be longer, and everywhere stumpage is increasing in value. The boom in pine lands is, of itself, indicative that the days of cheap lumber are numbered, and no inconsider able proportion of these lands are owned by men who, if necessary, are not only willing, but able to hold them.

Neither the demand nor the supply is an uncertain quantity. The former goes on with a stride that is increased from year to year, and the latter can be figured out with much precision. The ratio of increase of the young timber can calculated, and the amount of standing timber adapted for commercial purposes is pretty well known. It is unlike the supply of iron and coal in this respect. The beds of the latter may run an unmeasurable distance underground, and in directions least expected; but there is no timber out of sight.

MACHINES TO DESTROY.

To the Editor of the Scientific American.

You have in your issue of September 3 an article on "Fast Lumber Cutting in the Puget Sound." Yes, it is wonderful how we have progressed in wood cutting and wood working machinery, and we thereby cut up in ten years as much lumber as formerly would have taken one hundred years. We shall soon be in the same fix with all our timber scarcity as you described in an article lately on the black walnut. In fifty years from now, it seems, we can break up all our saw mills and wood working machinery, as there will be no timber to cut unless some one can come to our help and invent a timber growing machine. Are we not a great nation to invent machinery to destroy, so as to turn everything into cash.

G. H. TIMMERMAN.

St. Louis, Mo., September, 1881.

ZOPESA.—A healthy man never thinks of his stomach. The dyspeptic thinks of nothing else. Indigestion is a constant reminder. The wise man who finds himself suffering will spend a few cents for a bottle of *Zopesa*, from Brazil, the new and remarkable compound for clensing and toning the system, for assisting the Digestive apparatus and the Liver to properly perform their duties in assimilating food. Get a 10 cent sample of *Zopesa*, the new remedy, of your druggist. A few doses will surprise you.

WANTED.

CLERKSHIP IN SHANTY for Winter. Practical knowledge of timber object more than salary. 4 year experience in offices, 2 in timber. Age nineteen. First class references. Address "CLERK," care of *Canada Lumberman*, Peterborough, Ontario. L22

A BARGAIN—GRIST AND SAW MILL FOR SALE paying 12 per cent. clear; price $9,000; and above percentage guaranteed. Apply to

JOSEPH DAVIES & Co.,
Lumber, Coal, & Commission Merchants,
46 CHURCH ST. TORONTO. 1yL16

St. Lawrence Hall,

Cards not occupying more than 6 lines per annum	5 00
Cards not occupying more than 6 lines, for 6 mo's	3 00

Special rates will be made for page, half page and column advertisements.

Advertisements intended for insertion in any particular issue should reach the office of publication at cast three clear days before the day of publication, to insure insertion.

All communications, orders and remittances should be addressed and made payable to TOKER & Co., Peterborough, Ont.

Communications intended for insertion in the CANADA LUMBERMAN, must be accompanied by the name of the writer, not necessarily for publication, but as a guarantee of good faith. Communications to insure insertion (if accepted) in the following number, should be in the hands of the publishers a week before the date of the next issue.

PETERBOROUGH, Ont. OCT. 1, 1881.

A FOREST DEPARTMENT.

Renewed interest in the subject of the management of our Woods and Forests has been awakened by recent events. The enormous devastation caused during the late dry season by forest fires, and the contemplated sale of timber limits in the Nipissing district by the Ontario Government, both deserve consideration, and have received it.

These two circumstances, though seemingly of such a widely different nature, in one aspect point in the same direction, and teach the same lesson. The bush fires have notoriously in many, if not in most, instances taken their start from the setters' fires for clearing purposes. Again, the necessity for the sale of the Nipissing timber limits, when their is already so much pine land under license, and the propriety of economizing our supply of standing timber is so well recognized, arises from the fact that settlers are already establishing themselves on the land in question. Not only, therefore, is a premature sale forced upon the Province, if it would avoid the risk of the destruction of this portion of its capital, but the very fact of the sale will inevitably lead to fresh antagonism between the settlers and the lumbermen with their divergent interests.

It is clear when such evil results arise that there is something wrong with our forest management. That a wasteful destruction of valuable property should constantly occur—that the premature consumption instead of economical use of our fast diminishing forest wealth should be encouraged, are in themselves sufficient proofs that our system is faulty and extravagant.

Does it not seem obvious that the difficulty arises from the want of proper classification of the Crown Lands of the Provinces? Surely it would not be difficult to decide what lands should be opened for settlement, and what might be more advantageously maintained permanently as forest. Where the land is well fitted for cultivation, it may be advisable to clear off the timber and then admit the settler as quickly as possible. On the other hand, where the soil is better fitted for forest growth than for agriculture, the settler should be excluded altogether, and a proper system should be adopted for perpetuating the timber growth. Thus our resources—our capital—would be utilized in the most fitting and economical manner. It is certain that mixing up settlement and lumbering has proved a failure.

We again urge the propriety of establishing a Bureau of Woods and Forests, which will take this and similar matters in hand.

AS OTHERS SEE US.

The following are extracts from a corespondent's letter to the *Scotsman* giving an interesting account of a flying visit he paid to Ottawa, detailing some of the sights he witnessed in that rapidly rising city—the capital of the Dominion of Canada:—"The leading thoroughfares," he says, "have been laid out on a handsome scale, and show a good many substantial buildings." Speaking of the cities he had visited throughout America, he says: "Not one can be said to have really tackled the most important object of municipal management. Quebec is a marvellous agglomeration of pitfalls and sloughs of despond; and in Montreal, though the foot pavements are somewhat better, the carriage ways, for that great commercial centre, are far from satisfactory. In the case of Ottawa, there is more or less paving to be seen along the principal thoroughfares, while the wooden sidewalks are kept in a fair state.

"Scarcely had I completed a general survey of Ottawa," he writes, "when I was taken in hand by a prominent citizen who had kindly undertaken to show the lions. We visited the extensive saw-mills, where timber, floated down the river from distances of fifty to a hundred miles, is cut up into boards. In their mechanical arrangements these mills are very much alike, though with more or less important variations in detail, suggested by the ingenuity of individual managers. In the river above them lie acres of logs, the shooting of which through long slides from a higher to a lower level is considered one of the local sights, and affords a certain mild sensation to tourists who care to trust themselves on the swiftly rushing rafts. Arrived at the mills, the logs are floated one by one into a still water dock, where they are clutched by machinery adapted to convert them into marketable boards with a minimum of manual labor. Hoisted up by means of a chain worked by gearing from the engine, a log is deposited on the travelling platform of a circular saw, revolving with such rapidity that in watching it you are reminded of Smith Mimer's sword, which went clean through a man without his feeling anything but a sort of coldness in his inwards. A minute more, and with a weird sound which fancy might interpret as a shriek of triumph over the giant of the forest, the saw has whisked off a slab from one side of the rounded bole, a process which is presently repeated as the other side confronts the relentless teeth. Being thus roughly squared, the log is slid upon another table, where verticle saws, spaced according to the thickness of the boards required, cut their way simultaneously through masses of solid timber. Fed continusly into this machine, the logs come out as so many sheaves of planking. The trimming of rough edges is the work of another moment; and the boards are then sent travelling over a set of endless chains to be, on reaching a certain point, cut to the desired length and delivered at the far end in a state fit for the market. In Ottawa alone the extent and importance of the trade give employment to several thousand persons, whose appearance speaks volumes for the healthy and well-paid character of their occupation. Such indeed is the present prosperity of the lumbering interest that one establishment here has been fitted with the electric light, and is kept running day and night. Being driven by water, the mills have of course, to be closed with the advent of winter; hence this eagerness to make hay while the sun shines. Pail-making, again, illustrates that speed of production attained by division of labor which, whatever may be said against it from the artistic point of view, undoubtedly gives the consumer the advantage of a cheapness otherwise unattainable. As you watch the first stage of the process, before you can count half a dozen, a deft-handed boy has slipped within an irom hoop the staves necessary to form a pail or tub. The hoop is driven tight, and the article passed on to a planing machine, by which, in a trice, inside and out are reduced to perfect smoothness. The cutting of a groove and insertion of the bottom are accomplished with equal celerity; and, ere you have time to turn, the vessel has been fitted with a handle, and ready for the market.

"The power employed in the Ottawa mills is derived from the noble river which, just on the western verge of the town, forms a cataract ranked next to Niagara among the waterfalls of this continent. The depth of the descent does not exceed 40 or 50 ft.; but so great is the volume of water tumbling over a rocky ledge, some 200 feet in length, so terrible the turmoil of the seething caldron which receives its thundering fall, amid clouds of rainbow-tinted spray, that the effect, more especially when viewed from a platform in close proximity, is impressive to the pith of the sublime. Noting how the mill-wheel water passes off as a mere driblet from the edges of the current, one feels that in this enormous magazine of natural force there is a motive power far more than enough to propel all the saw-mills of Canada."

HOW TO FIGURE SPEED.—THE REASON WHY.

To the Editor of the Canada Lumberman.

SIR,—I notice in your last issue an article under the above title, written, as I understand it, for the purpose of explaining, in a plain way, the principle upon which the rule for computing the relative rates of speed between *driving* and *driven* pulleys of given sizes, as also the relative sizes of such pulleys for given rates of speed is based, for the special benefit of such parties interested as are supposed to be *unlearned* in such matters.

The object is a commendable one, and the writer evidently has a knowledge of the subject, but in presenting the "reasons why" in such a manner as to be easily understood by those for whom they are intended, and to be of practical use to them, the paper appears, to my mind, to be a failure.

The writer describes "the 'rule' laid down in the 'books'" for the solution of this problem—giving the diameter and speed of a driving pulley to find the speed of a driven pulley of a given diameter—to be, "multiply the diameter of the driving pulley by its revolutions per minute, and divide by the diameter of the driven pulley." Of course, if it were required to find the *size of a driven pulley* to produce a *given rate of speed*, the rule would be—Multiply as before, and divide by the number of revolutions of the driven pulley.

With your permission, I will give my version of the "reasons why" for the above rules.

From the article referred to I quote the following example:—"Suppose the diameter of driver was 25 inches, its speed 180, and a speed of 600 was required, what would be the diameter of the driven pulley?"

The relative rate of speed of the two pulleys respectively is in *inverse* proportion to their respective diameters, therefore the above question should be stated thus:—

As 180 : 25 : : 600 : diameter driven pulley. Fvery schoolboy knowns that to work this out, you multiply the first and second terms, and divide by the third, say—

$$\frac{180 \times 25}{600} = 7\tfrac{1}{2}, \text{ the diameter required.}$$

In this operation you exemplify the "rule"—"Multiply the diameter of the driving pulley by its rate of speed, and divide by the speed of the driven pulley," clearly illustrating the principle upon which it is based.

To avoid complications and confusion in computing, where counter shafts are used, apply the above simple rule to *each motion separately* in regular order, either forward or backward, and you will arrive at a correct conclusion, no matter how many changes of speed or "train of gearing" there may be between the *first* motion and the *last* one.

Hoping this may be of use to some of your eaders, I am, yours truly,

COGG WHEEL.

St. John, N.B., Sept. 21.

The good accomplished with steel pens is incalculable, but the cost of a box of Esterbrook's is only nominal. The stationers have them. The trade supplied by Brown Bros., Toronto.

TIMBER LIMITS BURNT.

The Kingston *Whig*, of Sept. 20th, says:—Last evening a gentleman who has just arrived from "away back," was interviewed in relation to the destruction caused by fires, which of late have been so terrible, convincing settlers of the danger of starting them in dry times in order to clear their farms. The west part of Clarendon and the whole of Miller have been swept over by the fiery scourge, carrying destitution and loss.

Mr. Leopold Ohlman, who resides at a place near the mountain, has lost his barns, house, crops and fences.

Mr. J. Stalker has been a sufferer to a similar extent. The people are thankful that their lives have been spared.

The fire is now in the pineries, and it is asserted that the limits of William Mackay, of Ottawa, have been greatly damaged. They were all burned over, and to preserve the charred timber from further destruction by borers and dry rot Mr. Mackay will need at once to remove the partially destroyed tree trunks and have them sawn up. A large number of men will be wanted to do this work.

Mr. McLaren's limits have also been burned over. The camps of the lumbermen in both Mackay's and McLaren's limits have been burned, but the depots and supply house have not fallen a prey to the ravaging flames. It is hard to say what the extent of the damage has been.

The heaviest losser to the farmers will be those of their crops and fences. The wood is not of as much consequence to them as it is to the people of the cities who depend on the forest in the rear for their fuel supply.

The fires around Plevna are still raging, but there is now no fear of the destruction of the village. Yesterday the fires were but a few miles from Plevna.

Not much disaster so far has been wrought in Palmerston, the residents of which are very particular as to fire.

Canonto, which has not yet been much settled, but which is now open to settlements, has been all burned over and many acres are described as "a smouldering fire bed." The sight at night is said to have been grand. The country for miles has been lit up by the flames. A short time ago our informant drove out some miles to see the conflagration work up this side of what is known as the mountain. The scene was impressive, the flames creeping up the tall trees and leaping higher and higher until they reached the craggy peak. The fantastic and wierd shapes in which the seething flames twisted presented an unparelleled sight in this vicinity. For some hours afterwards the glowing fire could be seen eating its way into the pines. It is stated that even green hardwood has fallen a prey to the destructive element. This is an unusual occurrence, due to the fact that the trees are now almost devoid of sap. The fires will smoulder for a long time unless rain falls.

The most mischievious fire observable is that which runs along the line of the K. & P. R., especially between Parham and the Mississippi.

Saw Mills Burned.

PHELPSTON, Sept. 26.—About six o'clock this evening Aanderson & Tennant's large saw mills, known as the Anten Mills, at Hendrie, three miles south of here, were burnt. The fire burst out suddenly near the boiler-room, and when discovered the interior was a mass of flames. The mill was totally destroyed; cause unknown. Its value was from $15,000 to $18,000. The insurance is reported from seven to ten thousand dollars. Very little lumber was burned. The Northern and North Western Railway lose flat cars, burnt.

THE *Monetary Times* says that an enterprise of some importance is the cooperage of Messrs. Pike and Richardson, of Pikeville, near Chatham, Ont., who have contracted with parties in Europe to furnish five million elm hoops, twenty-five million elm staves and basswood headings innumerable. The firm has factories at Bismarck, Rodney, Comber, Tibury, Charing Cross and Buxton. They employ 370 men, besides those engaged in getting out logs, while the capacity of the works is 30,000,000 staves, 6,000,000 hoops, and 1,000,000 set barrel staves.

IMPORTANT MEETING.

THE SUBJECT OF FOREST FIRES CONSIDERED—ESSAY ON FORESTRY.

At the meeting of the Ontario Agricultural Association, held in the City Hall, London, on September 21st, prize essays on forestry were read.

Mr. J. H. Aylesworth presided, and on the platform were professors Bell and Mills.

Professor Bell explained the objects of the meeting, and said the necessity for precautions being taken by the Government for the preservation of the forests was becoming more and more obvious. The essay which had been awarded the first prize by Professor Buckland, Mills and himself was written by Mr. D. Nichol. of Cataraqui, Frontenac county. He then read the essay, which embraced a list of all trees indigenous to the country, with the habits and values of the same, and their adaptability to the different soils. Directions for planting were also given at length, and some valuable information in regard to the destruction of forests by fire and other causes. The essay included a description of shrubs suitable for hedge plants, and the white cedar was highly recommended for that purpose. A mass of valuable information on the subject was contained in the essay.

Prof. Bell could corroborate what was said in regard to the white cedar for hedges from personal observation. The locust was also valuable for such purposes.

Prof. Mills proposed that Prof. Bucke's essay on the same subject be read by the writer, as his observations on the subject were the result of a long experience.

Prof. Bucke's essay referred to the immense destruction of forest areas by the early settlers of the country. At that time it would have been rediculed if the proposal to save the timber had been made. He spoke of the timber interest as second only to that of agriculture in this country. The health-preserving properties of forests was pointed out, and the many other benefits derived from their presence. The annual revenue derived from the timber lands of Ontario aggregated over $400,000. The destruction by fires was dwelt on, and some surprising statements made in regard to this. More trees have been destroyed by these bush fires than have ever been exported from the country. Some of the precautions taken by the Government against this destruction were related, and examples were drawn from those countries in which the tree-felling was regulated strictly by the government. From the time occupied by hardwood in coming to maturity—80 to 150 years—it was most obvious that the government must become the producer. No private individual could undertake such a work. In the neighboring republic great encouragement was given to tree raising, by free grants of land, etc., for that purpose. One of the largest exporters in the country expressed his opinion that in twenty years there will be no pine to export from Canada. In conclusion, he stated that it was absolutely necessary that forest fires should be suppressed, and the Government ought to take steps for enforcing precautions having this effect in view. Secondly—the pine lands remaining should not be settled. Thirdly—waste lands should be immediately planted. The destruction of the forests, he said, would lead to the gradual decrease of rainfall and other evils.

Professor Bell said the object which the Society had in view in offering prizes for these essays was to draw the attention to a subject which was of vital importance to the country.—*Free Press.*

DYSPEPSIA.—Strenthen your digestion—tone the stomach for utilizing and assimilating every atom of food you take; the body needs it for strength and vigor. *Zopesa* cleanses the entire system, stimulates the Liver, keeps you regular, and able to eat ten-penny nails. Letters and postal cards come in daily, telling of cures and help frem *Zopesa*, from Brazil. *Positive proof* of the health and vigor it gives in a ten cent sample. Ask your druggist.

LADIES, would you be beautiful, have a clean complexion, free from blotches, pimples, and other skin diseases arising from impure blood; would you restore the bloom of health to the palid cheek, the brilliant sparkle to the eye, and elasticity to the step, take Burdock Blood bitters, the great blood purifier, vitalizer, and tonic. A sure cure for all forms of female complaints, weakness, and irregularities. One dollar per bottle. Sold by all druggists. T. MILBURN, & Co., Toronto.

OMEMEE.

KINCAID'S MILLS.—We are pleased to notice the increased business which has sprung up in connection with Mr. Kincaid's saw, shingle and planing mills here. The product of these mills for the past season has been as follows:—Half a million feet of pine lumber, half a million of shingles, and two hundred thousand feet of hardwood, besides supplying the local demand and attending to large orders connected with building operations. Mr. Kincaid has shut down at present for want of water to bring logs to the mills. He was to leave for the woods on the 22nd Sept. to get out more logs from his limits in the township of Harvey. The bush fires made considerable havoc in these limits, destroying a large number of logs, &c.

Cedar Strips.

A Saginaw man has devised machinery for manufacturing cedar strips with which to line trunks. The machinery consists of a set of knives six and one-half feet long, which begin on the outside of a cedar log and cut it lengthwise into strips of any thickness required from the thirty-second to half an inch in thickness, the strips being delivered in a compact roll ready for use as soon as cut. The importance of this manufacture consists in the fact that cedar wood is a complete protection against all kinds of vermin, such an ants, cockroaches, lice, moths, and worms of all kinds. This ceiling can also be used for pantries, clothes presses, store-rooms, and all other apartments in the house, where insect pests are apt to be found. It can also be used for flooring. By the new method, the difficulty occasioned by the smallness and imperfection of cedar logs is overcome. By paring the strips thin, they can be made fifty feet long, and their flexibility prevents their breaking. For ceilings, the edges are beveled and glued together. It has been suggested that these thin cedar strips be used for mattresses.

Kentucky's Biggest Tree Felled.

The Louisville *Commercial* reports the felling of Kentucky's largest tree near Carr's. The tree measured 18 feet in diameter at the base. The cut was made 6 feet above the ground, where the tree was 12 feet through. The *Commercial* adds:—"From the cut to the first limb can be made eight good length rail cuts, each 10 feet long, which would split enough rails to fence a small farm. The first limb was nearly a dozen feet in diameter, and it would have, by itself, made a very large sawlog. Nearly all the small limbs had fallen and decayed away. Its plank measurement is computed at nearly 50,000 feet, besides several limbs that would make altegether, 25 cords of wood. On the day of the felling a large concourse of people marched from Vanceburg to the place. Colonel W. S. Rand, an able speaker, was the orator of the day. He and others, qualified to be good judges of such things, supposed that this mighty forester was four or five centuries old. There were to be distinctly seen over 300 rings, and it is not known how long since it completed its growth, as it has been dead for many years.

LUMBERMEN!

When you visit Toronto, come direct to OAK HALL, and fit yourselves out with a Good Suit. Remember the address:—OAK HALL, the Great One Price Clothing House, Toronto, opposite St. Jame's Cathedral. 1yL13

SALE OF TIMBER LIMITS.

The Ottawa *Free Press*, of Sept. 20th, says :—The announcement that there would be sales of timber limits by Messrs. Brewer and Tackaberry at the Grand Union this afternoon attracted to that place a large crowd of buyers and others. By two o'clock the spacious main office of the hotel was crowded with lumbermen, lawyers and business men, who were either engaged in conversation or examining the maps of the various limits which adorned the walls of the room.

About half-past two o'clock loud voices were heard in one corner of the room, rising over the general hum of conversation which filled the air. In the midst of the crowd, talking at the top of their voices and gesticulating wildly, were seen the two auctioneers. The matter in dispute was as the order in which the sales should conducted. It seems that both the auctioneers had advertised their sales to take place at two o'clock, and as it was obvious that they could not both sell at once, the question arose as to who should sell first. Each of the rivals had his friends who warmly espoused his cause. What with the loud tones of the auctioneers, the applause of their friends, and the suggestions of disinterested bystanders, there was a perfect babel of voices. In the midst of the hubbub, auctioneer Macdonald announced that he had intended to offer a farm for sale, but owing to the death of President Garfield, he would postpone it until after the funeral. This announcement was greeted with cheers and laughter, and had the effect of restoring good humor among the excited partizans of the two auctioneers.

A few minutes later Mr. Brewer mounted a chair and addressed the crowd. He said he was willing to do anything that was fair. He was willing to leave the matter in the hands of his employers, who should make an arrangement with Mr. Tackaberry's employers. They, and not the auctioneers, were the proper people to settle the question.

No sooner had Mr. Brewer vacated the chair than it was mounted by Mr. Tackaberry, who claimed that his sales had been advertised a long time before Mr. Brewer's, and hinted that the latter had unfairly fixed the date of his sale of poor limits on the same day in order to take advantage of the crowd who would come to purchase his (Tackaberry's) good limits.

Mr. Brewer retorted that the last speaker had never had a limit to sell at the time he had first advertised them ; but that before starting for Manitoba he had stuck his name to the advertisement in order to let people know that he was coming back.

Then ensued a most amusing scene. The rival auctioneers jumped up and down off the chair alternately, and addressed the crowd in a highly excited manner. Recriminations and epithets the reverse of complimentary issued from the mouths of the speakers in the most lively manner. Auctioneer Tackaberry said this was no place for squabbling, and darkly hinted that the matter might be finished elsewhere. Just as it began to look as though the war might develop into something more than a wordy one, auctioneer Macdonald once more restored temporary good humor by shouting out that if both auctioneers would give in, he would sell the whole of the limits himself.

Hostilities ceased for a time, and about ten minutes later Mr. Tackaberry offered for sale Campbell's limit of 39 square miles, situated on the Trent Lake branch of the Petewawa river. The limit was put up *en bloc*, the first bid being $15,000. The building was not very lively, and slowly by bids of $1,000 apiece $26,000 was reached. The bidding then hung fire for quite a time, until a voice in the rear of the crowd offered $500 better. Half a dozen more bids of $500 increase at a time brought the amount up to $29,500, when the bidding ceased and the limit was knocked down to Mr. Wm. Moore for that sum.

While Mr. Tackaberry had been engaged with this sale, his rival mounted a chair in another part of the room, took documents and maps out of his pocket, and made every preparation for beginning a sale as soon as Mr. Tackaberry finished his first one. No sooner had the first limit been knocked down than Mr. Brewer announced, in loud tones, that he was instructed to offer for sale a limit of fifty square miles on the River Cologne, known as the Bryson limit. Mr. Tackaberry appealed to his audience not to leave him, as he intended to go right on selling. In proof of this, he commenced to read the description and terms of sale of another limit. Both auctioneers then attempted to conduct their sales at one and the same time. The result was a scene which was probably never witnessed at an auction before in Ottawa. What with the handsome room, the large crowd of shrewd looking business men with pencil and note book in hand, and the confused babel of voices, over which arose clear and distinct the voices of the auctioneers, it could not but remind the spectator who had visited the New York Gold Exchange in its palmy days of that famous institution. Both actioneers talked for all he was worth, but scarcely a word either said could be distinguished. After a few moments Mr. Tackaberry's voice ceased for a time and bidding on Mr. Brewer's sale commenced. The first bid was for $2,000, and it rapidly ran up from that to $8,500. Mr. Tackaberry then recommenced, and the confusion was worse than ever. A few moments later Mr. Gormully, who represented some of the parties for whom Mr. Tackaberry was selling, came over to Mr. Brewer and informed him that it had been agreed that the sales should be conducted alternately.

Harmony having thus been restored, Mr. Brewer proceeded with his sale, and the bidding advanced to $9,000, when it ceased. After consultation with his employers, Mr. Brewer then announced that the bidding having not come up to the expectation the limit would be withdrawn.

Mr. Tackaberry then put up a limit of fifty square miles situated between the Desmoine and Coulonge rivers, at present owned by Sir Francis Hincks, who was present. The first bid was for $100 per mile, and the second for $110. Here the bidding ceased and the limit was withdrawn.

Forest Fires.

The plague of smoke has settled down over Ontario. On Monday evening the darkness was so complete in the vicinity of Kingston as to be comparable only to that described as having visited Egypt in the time of Moses, while further west the colors which the sky displayed seemed to be reflections of the bottomless pit. So powerfully did these appearances work upon the imagination of the people that the possible near approach of the day of judgment became a subject of concern with many, while the most painful rumors of calamities to neighboring cities were flying in all directions. By forest fires an enormous amount of good property is being destroyed. We presume the gases of the smoke, when they reach the ground, make the best of manure, but it is manure of a very expensive kind, as we shall find in a few years when timber becomes scarce. It is very hard for the Canadian to realize the state of things which is approaching. So long has it been our lot to contend with the forest that we look upon it rather as an enemy than as a friend. But it requires little knowledge to see that the splendid lumber regions of Michigan and Canada are diminishing at a tremendous and ever accelerating pace, and that the demands of the continent are increasing with like rapidity. For railway ties alone the demand on our forests must be enormous just now. It becomes, then, a matter of life and death to protect the forests. This seems to persons used to the liberty of this country a simple impossibility. It is, however, a thing which has been achieved elsewhere and can be achieved here. It would be very queer in the eyes of a woodsman to be told, for instance, that he must on no account smoke in the bush, mosquitoes or no mosquitoes, and must only make fires under certain regulations. Yet such are the laws in Sweden, with the result of maintaining the forests of that country from year to year in undiminished productiveness. We are not prepared for such absolute laws here, but it is high time steps where taken to make forest fires less common. One thing that might be done is to have fire inspectors whose duty would be to report on the cause of every forest fire, large and small, and to suggest means to prevent the recurrence of the cause when discovered.—*Montreal Witness.*

Try Burdock Blood Bitters, the great system renovator, blood and liver syrup, acts on the bowels, liver and kidneys, and is a superb tonic.

THE AMERICAN TRADE.

The *Northwestern Lumberman*, of September 17th, says that but few changes in prices have been reported during the past week. Since the advance following the one made by the Chicago dealers, August 27, prices have been steady and very firm. With a single exception, there has been no weakness in the leading markets throughout the country. The volume of orders has been large, in many cases exceeding the ability of the dealers to supply. From Toledo we learn that the stock of dry lumber is nearly exhausted, and that some kinds are bringing more than price list quotations. Philadelphia has low stocks in some grades, and is looking toward another advance. The mills at Williamsport have shut down on account of low water, which, if it continues, will be liable to somewhat affect prices in that locality. Burlington, Vt., reports an extraordinary heavy trade, with every indication that it will continue throughout the season.

A lack of transportation facilities is common, not only in the west, but in the east as well. The shipment of orders is much delayed for want of cars, and as a consequence lumber is accumulating on the docks and mill-yards. Water freights are firmer, and in some cases have materially advanced. It is expected that the scarcity of cars will be more marked as the crops of the season begin to move more freely.

An extensive corespondence shows that stocks in the country yards are nowhere heavy, and we often hear the expression that at present they will be allowed to remain in that condition. Building operations have been suspended to some extent, more particularly among the farmers. The high prices obtained for their farm products may cause a revival, but it is sure to come late, and probably not to any extent until the coming spring.

In the Duluth region, and throughout Wisconsin, many of the mills that were filling their orders slowly, and in some cases were doubtful about their ability to fill some of them at all, have now plenty of logs, the late rains causing clean drives. Often it is necessary to ship lumber as fast as it comes from the saw, but the ones who were behind are glad to be able to do even as well as that.

Sad Waste.

One reason why the cabinet woods of the country are scarcer and dearer yearly is given in the editorial correspondence of the Chicago *Industrial World*. The gentleman has been spying out the land, and in the course of much interesting information, says :—"The unaccountable waste of timber is startling, if not appalling. While economists and all thoughtful men in the older States are gravely discussing the problem of the coming timber famine, the good natured, easy going farmers of Henry county (and all Missouri) are splitting magnificent walnut, butternut, cherry and mulberry trees into common rails for the enclosure of $8, $12 and $20 lands, cutting them into logs for cabins, hovels and pig troughs, and even into common cordwood to sell on the market in competition with cheap coals. Still worse, many a woodland farmer girdles scores of valuable trees (even the stumps of which will be gathered for the coming markets), burns them in the new clearings, side by side with the baser woods, and wonders the while that he must pay enormous prices for solid walnut furniture from factories a thousand miles away."

A Black List.

The happenings of the past week in business circles in Ontario include a grave list of losses by fire. Accounts of forests blazing and homesteads destroyed in a number of western counties are followed by those of mills and factories devoured by the flames. Two planing mills, a hotel and two wagon shops are burned is Listowel ; Coates' shingle mill at Barrie, John Boyd's planing mill and J. P. White's mills at Whitevale are also burned ; Thos. Ouillette, an extensive shipper of woods from the county of Essex has, we regret to see, sustained a heavy loss by the burning of his mill and piles of lumber at Gordon ; Thomas Green & Co.'s planing mill in London is burned, and H. C. Green sustains a loss on lumber ; W. A. Fraser, lumberer, Wallaceburg, is burned out ; so is Henry Wells, of Salford.—*Monetary Times.*

BUSH FIRES AGAIN.

GREAT DESTRUCTION.—VILLAGES, SAW MILLS, LUMBER, FARMS, ETC.

Gravenhurst Station, Sept. 16.—The Woodstock Lumber Company's mill stock, about three millions, has been entirely consumed. The stock belongs to McDonogh, McCool & Oliver, of Toronto. It is understood to be insured, but to what extent is unknown. The whole of West Gravenhurst is burning at this moment (4.15 p.m.) One church and six houses have already gone, and if the wind, which is now blowing a gale, continues, another mill will go containing about two and a half million. The fire is already running in the sawdust. We have lost one car, and there are six more in danger which we cannot get at, the track being burned.

Lindsay, Sept. 16.—The bush fires last night were very disastrous. A strong wind prevailed all day, which almost rose to a hurricane during the evening. Losses by fire are reported this morning from all quarters. A bridge on the Victoria railway, near Kinmount, was burned ; also the saw-mill and a large quantity of lumber belonging to Mr. Ashman, of Eldon. The barns of J. Burmingham and D. Jameson, in the same township, were destroyed with their contents. The wind continues high to-day, and it is feared that the fires will again start afresh. At one time last night it was expected the station buildings at Fenelon Falls would be burned, but by the efforts of the villagers they were saved.

How to Render Wood Fire-Proof.

F. Folbarry, of New York, has devised a method of making wood incombustible without, in any way, altering its outward appearance. Wood prepared in accordance with his process may possibly be charred just at the surface, but the heat to which it is exposed, though ever intense, can never penetrate right into the wood, and touch its fibres. Timber petrified in this way is particularly suitable to staircases that are to resist a conflagration. The composition devised by the inventor is as follows :—55 pounds of sulphate of zinc, 22 pounds of potash, 44 pounds of alum, 22 pounds of sesquioxide of manganese, 22 pounds of sulphuric acid at 60°, and 45 pounds of water. The whole of the solid ubstances are put in an iron vessel containing the water at a temperature of 113° F. When all this solid matter is dissolved, the sulphuric acid is poured in slowly until the whole is saturated with it. The solution is now ready, and in order to prepare timber with it the pieces must be put on an iron grate in a suitable recipient, in accordance with the size of the pieces and the object for which they are intended, care being taken to leave half an inch between any two pieces. The composition is pumped into the recipient, and after the whole of the spaces have been filled up, it is left there in a boiling state for about three hours. The wood is then taken out and placed on a grate like wooden stand in the open air, to make it dry and firm. When thus prepared the impregnated wood may be used for ship-building, and building in general, for railway carriages, scaffoldings, posts, wooden pavements, and generally for all purposes, while it is desirable that the material should be able to resist fire.

On Piling Wood.

Many people who handle wood do not know that if they wish the bark to come off they should pile it bark down ; if they wish to retain the bark, the opposite course should be taken. A correspondent writes to the Detroit *Post-Tribune* giving his experience, as follows :—I have sold wood for over forty years in Michigan, and I find that when split wood is corded bark up it remains on until I sell and measure up the wood, and all that is piled bark down the bark falls off and measures nothing ; besides, there is more heat in the bark than in the sap of the log. The most and best ashes are also in the bark. I have on my place now some maple wood that was chopped nine years ago and corded bark up, and the bark would hold on if I would draw the wood to Saginaw (18 miles) and cord up and measure ; besides, the bark is lighter to draw. Where the bark is piled down the water runs in around the wood and makes it dozy, wet and heavy. Tell your neighbors to try it. Railroad companies would save thousands of dollars by piling their wood bark up.

THE LIVERRPOOL TRADE.

Robert Coltart & Co.'s Wood Circular and Prices Current, dated Liverpool, 3rd of September, says:—

During the past month there has been a fair consumption, and prices generally have been well maintained, with a slight advance in some articles. The import as a whole has been on a moderate scale, but some stocks, especially pitch pine, still remain too large for the present demand; altogether there is a better feeling in the trade than has been observed for several months, only modified by the bad weather and gloomy prospects in the agricultural districts, where there is little hope of anything beyond a very deficient harvest.

COLONIAL WOODS.—Of square pine the import has been light, but the higher prices now asked have curtailed the consumption, which has amounted only to 85,000 feet, against 255,000 feet during the same period last year; the sales have been by retail. Waney board pine has arrived more feely, and the stock has considerably increased; a parcel of second quality, 15½-inch average, has been sold at 22d. per foot. Of red pine a parcel of poor quality has been sold at 15d. per foot. For ash the demand is dull, prime wood only being wanted. A parcel of elm, 46 feet average, is reported sold at 23d. per foot. For oak the demand continues limited, and the arrivals are being held for better prices. The demand for wagon scantlings is good, and with the present moderate import, prices should improve. The consumption of birch continues limited, and the stock is about equal to that held at the same time last year; by auction, 161 logs from Oak Bay were sold at prices ranging from 13¼d. to 18½d. per foot, and Dalhousie at 14d. to 16d. per foot. Black walnut has been sold at prices ranging from 4s. 7d. to 5s. 2½d. per foot. The import of N. B. and N. S. spruce deals has consisted of 11,828 standards against 8,279 standards during during the same period last year, but the consumption has also been on a large scale, namely, 12,603 standards; the present stock amounts to 16,605 standards; prices during the month have been fully maintained, openine at £6 15s. per per standard for St. John, and afterwards improving to £7 per standard; by auction the cago ex *New City* from St. John was sold at an average of £6 6s. 3d. per standard, Miramichi at £6 15s. 8d. per standard, and Oak Bay, N.S., at £6 14s. 10d. per standard; by private, St. John have been sold at £7 per standard, Musquash at £6 16s. 3d., and Bay Verte at £6 12s. 6d. per standard. Of Quebec pine deals the stock still remains heavy, consisting of 9,742 standards against 4,508 standards at the same time last year; there has, however, been a good consumption, and prices are without material change; 1st quality broad realized at auction £22 10s. and £23 per standard. Quebec merchantable pipe staves have been sold at £37 10s. per mille, and puncheon at £22 per mille.

NORTH OF EUROPE WOODS.—For fir timber the demand continues languid, and the stock is sufficient. Sales have been by retail only. The import of Norway flooring boards has been extremely light, and the consumption, although moderate, shows an increase over the same month last year; the present stock is not heavy. Prices have improved during the month, and sales have been made on a basis of £8 15s. per standard for 1st white, but shippers now hold aut for higher prices. Of red deals several contract cargoes have arrived from Archangel, Onega, &c., and are going well into consumption. For mining timber the demand is dull. Masts and spars are inquired for. Fir staves have been sold at £7 7s. 6d. per standard c.i.f.

UNITED STATES, ETC. WOODS.—The stock of pitch pine is heavy, consisting of 1,410,000 feet, against 578,000 feet at the same time last year, and 847,000 feet in 1879. There has been a fair consumption, and the tendency of prices is upwards, no doubt induced by the high price of Quebec pine. By auction, the cargo of hewn timber, ex *Martin Luther*, from Pensacola, averaged about 16½d. per foot for 85 feet average, and 16⅝d. per foot for 31 feet average sawn. A parcel of prepared pitch pine flooring boards was sold by auction at £18 10s. per standard for 1¼x5 to 7; £17 5s. standard for 1x5 to 7, and £16 15s. per standard for 1x4 and 5. Oak Staves—New Orleans extra heavy pine have been sold at from £60 10s. to £65 per mile; hogshead at £45 per mille, and barrel at £24 per mille.

THE MART
BY F. W. COATE & CO.
SALE OF VALUABLE
Timber Limits
Near Lake Nipissing.
The subscribers have received instructions to sell by Public Auction, WITHOUT RESERVE, at the Mart, 57 King St. East, in the City of Toronto, on
Wednesday, 5th Oct. Next
The Valuable Timber Limits situated near Lake Nipissing, and designated as Berths Nos. 29, 30 and 38 containing 36 square miles each.
The outlet from these limits is by the Bueve River, which runs centrally through a large section of them, affording first-rate facilities for running timber or logs into Lake Nipissing.
By recent survey of two lines and ranging a portion of them, they are known to contain a large quantity of excellent White and Red Pine, represented to be quite equal, if not superior, in quantity and quality to any in the entire district; a considerable portion of it being in close proximity to the river, growing on good even surface and can be easily worked.
The Limits have not been worked, and will be sold to purchasers in separate lots as they are designated and on liberal terms, which will be stated at time of sale. Sale to commence at 12 o'clock.
F. W. COATE & Co.,
2L22 Auctioneers

Flexible Board Rules,
With Steel Head, either Cleveland or London make, at $1.75 Each.

PETERBOROUGH, L16

Market Reports.

LONDON, ONT.

From Our Own Correspondent.

SEPTEMBER 23.—"It never rains but it pours" is an old saying, and as a fulfilment of the old time assertion, we have had no less than two mill fires here since my last letter.

On Sunday the 11th Sept. about 5 p. m. a fire broke out in the extensive planing mills of Thos. Green of this city, and before long it had developed into an immense conflagration. The fire commenced at the north end of the building, which is bounded by the G. W. R. track, and it is supposed was started by a spark from a passing engine. All the fire force was immediately at work, and kept the blaze from spreading as far as practicable. The building, however, soon became a total ruin, and the loss will fall heavily on Mr. T. Green. It is estimated at about $25,000, on which there was an insurance of $5,000 in the Commercial Union. Mr. H. C. Green's loss will be about $1,000, fully covered by insurance.

A few days ago an alarm was sounded indicating a fire at Wright & Durand's planing mill, but with the prompt response of the fire brigade it was soon extinguished, with very trifling loss.

The meeting of creditors of G. C. Hargreaves was adjourned, one creditor standing out against the offer made. This creditor has, I understand, garnisheed an amount coming to the insolvent estate which will give him about two-thirds of his claim. Mr. Hargreaves' first offer has been augmented by a better offer than he made at the first meeting, and it is generally being accepted, and the firm will likely go on again.

The market has not been so brisk for the past two weeks, as suggested in my last letter, though there is a steady business doing.

The Provincial Exhibition is now in full blast, and there is consequently a temporary suspension.

No fresh contracts of any account have been made. The last contract for laying the block pavement will likely be given out again, and fresh tenders will be solicited.

Below I append price list:—

QUOTATIONS.

TORONTO.

From Our Own Correspondent.

SEPTEMBER 23.—There is not much that is new here in lumber matters to record. Shipments of lumber, lath and shingles from the north to this city continue brisk, and the lumber flats on H. & N. W. R. are continually employed, and many more could be profitably used if at the command of shippers. The company are receiving new cars from the Ontario Car Co., London, every few days, but the increase in numbers has not as yet been sensibly felt. The number of car loads of lumber, shingles, lath and cedar posts arriving daily foots up some seventy-five or eighty, and under the increased freight tariff the railway company must be netting something quite handsome; and most of this advance doubtless comes out of the middlemen, as up to the time of writing there has been no advance in prices on the local market, and most certainly the prices at which dimension stuff is sold on cars here afford no margin of profit to any one. There is no sound reason why bill stuff cut to order should not produce to the manufacturers and middlemen at least one dollar per thousand above present prices, and it remains entirely with the mill men to say whether such shall be the case or not. The rates at which short dimension stuff is now selling by car load leave the manufacturer about $6.50 per M. at the mill door, and it is a sheer waste of lumber and time to try and produce bill stuff at any such prices. Of course the answer is, if all the rest are willing to demand an advance, well and good, and this is just where the rub comes in. Each man, or firm, runs on the go-as-you-please system. Want of organization is at the bottom of the whole trouble. The pine continues to be slaughtered, and some one other than the manufacturer derives the benefit. The fire fiend steps in and helps on the demolition of our pine forests, and the time is not far distant when it will become a serious question where we shall obtain our supply from. No doubt many will laugh at this idea, but it is not so hard to calculate how long our pine forests will stand the present drain, and the end is much nearer than many may suppose.

You will notice that shingles have not held the advance formerly noted, and mainly through the action of one retailer who happened to have made a favorable contract last season for a quantity to be delivered during the present year, and who is too modest to demand more than a living profit, therefore other retailers conclude that they must follow suit, even if they do business for nothing. The retail yards here held fair stocks, except in joisting, which is scarce; and when we take into account the number of mills lately destroyed by fire, and the numbers engaged in cutting stock boards where formerly bill stuff was cut, it is hard to see how the yards can hope to obtain a full supply of the latter. The quantity of lumber now being consumed in Toronto is far in advance of anything before known, and if retailers fail to reap their harvest while they have the chance, they will have only themselves to blame for it.

Shipments over the dock are brisker than at any other time during this season. Cars are unloaded here promptly, and there is no great accumulation of lumber on the docks, so that if nothing occurs to mar the present calculations, the remainder of the navigable season will be a busy one, and it seems probable that lighter stocks will remain on hand at the close of navigation than at any time during the last several years; and should the ensuing winter prove favorable for logging purposes, there will doubtless be large stocks got in, as much of the timber over which the fire has run will have to be cut or it will be useless after the next season has passed over.

From Our Own Correspondent.

SQUARE TIMBER.

SEPTEMBER 24.—The square timber trade has been booming this season, and more has passed down the Ottawa valley to the Quebec market than for quite a number of years past. The returns of the Chaudiere slides for the current year shows the following:—

	Cribs.	Pieces.
Square Timber	6,213	162,843
Round Piles	254	5,213
Flatted Timber	83	2,356
Dimension	31	.....
Spars	4	80
Totals	6,585	170,492

The returns for last year shows 3,441 cribs as having passed through with 82,814 pieces. Take the cut of square timber alone, more than double the quantity must have been taken out last winter than the previous one, for quite a number of rafts are laid up on the Upper Ottawa until next spring. In addition to this, 10,000 pieces are being brought down by rail for the British Canadian Company. A train of seventeen car loads per day have been passing this point for four weeks past, and will continue to do so for four weeks to come, in order to complete the contract entered into between the railway and the company. There are three rafts of square timber belonging to David Moore, and two owned by Latour, laid up above the Des Joachims.

CLEARANCES GRANTED.

During the present season 121 clearances for square timber, etc., have been granted at the Crown Timber office in this city—95 for timber cut on the Ontario side of the Ottawa valley, and 26 for the Quebec side. Clearances for the latter section do not extend below the Blanche river, about twelve miles below this point. The following shows the number of clearances granted to some of the leading lumbermen of the valley:—

Four clearances—J. R. Booth, B. Caldwell & Son, Richard White.

Three clearances—McLachlin Bros., William Mackey.

Two clearances—Barnet & McKay, Lambert & Conroy, David Moore, R. & W. Conroy, R. Campbell & Son, Thistle & Egan, Archie McLean, Jonathan Fraser & Co., McCoshen & Fraser, John Fraser, O. Latour, J. & B. Bryson, George A. Grier, C. & W. Mohr, A. & P. White, R. Campbell & Son, Alex. Fraser, J. B. Dickson.

Single clearances—Levi Young, R. Nagle, Gilmour & Co., W. C. Edwards & Co., Allan Grant, Wm. Powley, Gillies Bros., R. H. Klock, Alex. Mackey, Bell & Hicky, J. & B. Grier, etc.

RAILWAY TIES.

Mr. Hebron Harris, of this city, has been shipping a great quantity of railway ties this season, from the Gatineau. The official exhibit sheet shows as follows:—

May	4,115
June	11,269
July	15,137
August	16,386
September	8,320

In addition to the above there are 4,000 more to come down, about that number being stuck a few miles up the river, the water being very low. This will give a total of 59,227 ties cut on the Gatineau last winter. The ties are shipped to Cape Vincent and to Kingston for the railways.

THE LOG DRIVES.

Considerable difficulty is being experienced in getting the log drives of the Upper Ottawa down, owing to low water, but the mills are kept partially busy, a good many men being employed in running the logs through the Chats and Deschenes.

The final sweep on the Gatineau has been abandoned above Chelsea, about four miles from the mouth of the river. Forty thousand logs are stuck. Ex-Ald. Bingham, who manages the Gatineau drive, says that such a thing never occurred before for sixteen years.

LUMBER QUOTATIONS.

There are no changes to note in the matter of lumber. Sales have been steady at firm prices. The following are the quotations:—

10-inch stocks, with shipping culls and better per M	$14 00@15 00
12-inch stocks, with culls	18 00
12-inch stocks, without culls	22 00
Sidings, best qualities	25 00@30 00
Sidings, 1-inch kind	25 00
Lath	1 00

FREIGHTS.

The freightage business is dull at present, a number of barges being laid up owing to the difficulty experienced in getting through on account of low water. A good deal of shoal-dodging has to be done on the Ottawa at some points. The river is over twenty feet lower than at its high water level in the spring. There is no change in freight rates, as shipping is not extra active at present, producers declining to make any large sales.

EDGINGS.

Some fifteen or twenty men are busy blasting a channel at the Remieux rapids, just above which there are some 300,000 logs which cannot otherwise be got down until the water rises.

All the saw mills in this locality have been running more or less irregularly for some time, and a number have been shut down for days at a time. The closing of Bronson & Weston's mills alone throws three hnndred hands idle.

By the bush fires the depot of Mr. J. R. Booth, on the Madawaska, was destroyed, with considerable provisions.

Gilmour & Co., of Hull, Q., have purchased two small locomotive engines for the purpose of shunting around loaded tramway cars in their extensive yards. The engines are to take the place of horses. They were made by Gilbert & Co.

Large numbers of shantymen are daily being sent up the river. The wages range from $18 to $30 a month, according to the work to be performed. A gang of one hundred men was recently sent to Waubaushene, having been hired to work for the Georgian Bay Lumbering Co.

A barge got stuck in the Chute au Blondeau, Grace's Point, a short time ago, and it was found necessary to destroy the vessel in order to clear the channel and improve navigation.

ST. JOHN, N. B.

From Our Own Correspondent.

DEALS.

SEPTEMBER 21.—The most prominent feature of the deal trade for the moment is the striving among the ships in port to complete their loading on or before the first of October, in order to secure their deck loads, which they will not be allowed to clear with after that date. The stock of deals is extremely light, and there are but few deals coming into the market for sale, so that the prospect, in some cases, of ships securing their deck loads in time is rather uncertain.

The stock of deals here, at the commencement of last winter was less than had been the case for many years, but from present appearances, it is likely to be still less at the close of the present season. Under these circumstances, with improving markets in Great Britain, the fall operations are likely to be fairly profitable.

FREIGHTS.

Owing to the moderate deal supply and the push in loading the vessels now in port, as already referred to, there has been little demand for tonnage, and rates have slightly declined in consequence. We quote 55s. as about the market rate for Liverpool, &c.

VESSELS IN PORT.

The following is a list of the vessels in port, with their tonnage and destinations:—

John Murphy, 1479, Liverpool,
Missouri, 818, W. C. E.
Freeman Dennis, 808, Liverpool.
Antwerp, 573, Cork.
Ella, 332, Glasgow.
Nettie Murphy, 1373, Liverpool.
Minnie Burrill, 1465, Liverpool.
Herbert Beech, 1061, Liverpool.
Annie Burrill, 897, Bordeaux.
Anna P. Odell, 379, Glasgow.
St. Julien, 1049, Liverpool, Barrow or Bristol Channel.
Rothiemay, 1250, London.
Maggie M., 429, Bristol Channel.
W. E. Heard, 587, Waterford.
W. D. Wallet, 1413, repairing.
Galatea, 1400, Bristol Channel.
Romola, 298, ——
J. I. Smith, 1350, Liverpool.
Elizabeth Childs, 395, Bristol Channel.
Malville, 924, Melbourne.
Althea, 375, Yonghal.
Buda, 349, Dundalk.
Her Majesty, 1342, discharging.
Liffey, 845, ——
Dusty Miller, 595, ——
Bonito, 599, Mersey.
Stanley, 542, ——
Hawthorne, 621, ——
Windward, 607, discharging.
Eleanora, 1049, ——
Adept, 1102, waiting.

SHIPMENTS.

The shipments of deals and other sawn lumber are as follows:—

For Europe	9,782,000 Sup. feet.
" United States	2,527,060 "

From Another Correspondent.

SEPTEMBER 23.—The English market is still firm, and we are aware of one cargo, part of which was sold in Liverpool at £7, and the balance held for a higher price. The last quotations we have give £6 15s. to £7, but better prices have been realized. The market in Lon-

don for one staple is good, as we notice one sale of dimension lumber at £8 10s., and other transactions running from £6 to £7 5s.

The American market has, of course, been affected this week by the death of the President. We can quote spruce boards and plank in Boston at $12.50@14.50; laths, from $1.70@1.80, with fair demand for good dry stock. In New York laths have dropped, and recent sales have been made at $1.90.

Freights to transatlantic ports have varied the past week. We know of two charters for London, one at 58s. 9d., and one at 57s. 6.; also one at 60s. for Liverpool or Bristol Channel; and one at 59s., with the same choice of ports. Still another charter, is of a new character, say 57s. 6d., to any dock in the Mersey. Coastwise the freights have stiffened, and at this date we can quote for New York, $3.65; Sound ports, $3.25, and Boston, $2.75. Outside deals are scarce, and prices are merely nominal, $8.75 per M. being about the present rate. Logs also are hard to get, as those holding them are keeping them for their own use, and are not at all desirous of selling.

St. John, N. B., September 23rd, 1881.

ALBANY.

SEPTEMBER 22.—The *Argus* says the trade in the district since our last report has been very fair, and several large sales of box have been made. Inquiries are being received by rail from many of the poins of consumption, giving indications of a very active fall trade. The disastrous fire at Oswego, last week, by which eight to ten million feet of lumber were burned, is going to cut the supply still further short. A good deal of this lumber, we understand, was sold to be delivered in New York, and as the season is getting short, it will be hard for the dealers to replace their stocks.

The receipts of lumber by lake at Buffalo for the week ending Sept. 20th were 7,363,400 feet and by rail — cars. The receipts by lake at Oswego for the week were 3,317,900 feet.

The receipts by canal at Albany from the opening of navigation to the 15th Sept. were:—

	Bds. & Sctl.,ft.	Shingles,m.	Timber,ft.	Staves,lbs.
1881	279,770,000	2,110	1,000	6,105,000
1880	258,800,400	2,693	5,400	257,000

Freights from Bay City to Buffalo and Tonawanda, $2,75 ₱ M.; from Saginaw, $3,00. From Tonawanda to Albany, $2,25. From Oswego to Albany, $1.50@1.60. An advance in Ottawa freights is shortly expected. From Ottawa to Albany, by boats, $3 @ M. feet.

River freights are steady:

To New York, ₱ M ft	$ @1 00
To Bridgeport	@1 37½
To New Haven	@1 37½
To Providence, Fall River and Newport	2 00@2 25

CHICAGO.

SEPTEMBER 21.—The condition of the cargo market of this city has presented few if any features of interest or change since our last report. The closing half of last week was marked with only fair offerings, which, in the main, were taken, as had previously been the case for some days, with reasonable alacrity, and with well maintained firmness on the part of all better descriptions of cargoes, whether of dimension sizes, or ordinary cut of lumber Piece stuff sold readily at $11 to $11.25 for good grades having a fair proportion of lengths above sixteen feet, $12.50 and $13 were not questioned on strictly long length cargoes.

BOSTON.

The *Journal of Commerce* of Sept. 24th says that business continues to keep very steady from week to week; while orders coming in are larger than for some time. Fine grades are rather low in the yards, owing to the marked preference on the part of buyers for this class of lumber. Mediums and randoms keep in good supply, and while the demand is only fair, enough is being consumed to hold values pretty steady. Western lumber is quoted about us, before, but it is not improbable that on finer grades an advance may be made owing to the large forest fires which dersroyed some excellent timber districts. Moreover, prices at western depots have been in advance of our quotations for some time so that dealers have been expecting a rise here ere this. Hardwoods continue in good demand, with sales equal to the supply in almost every department. The following are carload quotations.

Since the fire, market has been firm and demand good, dealers are hardly able to supply the demand for want of an assortment which is very much broken. Prospects look towards a good fall trade. Customers in many instances are obliged to go to Buffalo and Saginaw to supply their wants.

GREAT FIRE AT OSWEGO.

OSWEGO, Sept. 16.—Fire broke out to-day in a block of about ten or twelve tenements, at the foot of Water street, which were soon consumed, the wind being in the south. The flames spread to the lumber yards of C. H. Getmann, Bond and Jenkins and also about 3,000,000 feet of lumber were burned. The fire then spread to the lumber yasds of Kenyon, White & Co., E. W. Rathbun & Co., and Page, Fairchild & Co. The former contained about 2,500,000 feet and the latter about 3,000,000 feet. The indications are that 8,000,000 or 10,000,000 feet of lumber will be burned. The total loss on lumber, buildings, and docks will reach $400,000; partly insured.

Beautifiers.

Ladies, you cannot make fair skin, rosy cheeks and sparkling eyes with all the cosmetics of France, or beautifiers of the world, while in poor health, and nothing will give you such good health, strength, buoyant spirits and beauty as Hop Bitters. A trial is certain proof.—*Telegraph.*

Wrought Iron Shanty Cook Stoves

The Best Article ever offered to the Trade.

I have much pleasure in drawing attention to my **WROUGHT IRON COOKING STOVE, for Shanty, Hotel and Boarding House use.** These Stoves are made of **Heavy Sheet Iron,** the top and lining of the fire-box being of **Heauy Cast Metal** and all the connecting parts of substantial **Wrought Iron Work.** The dimensions of these Stoves are as follows:—

SINGLE OVEN STOVE

Top surface contains six 10-inch holes, with ample room between, and one oven 16 x 24 x 26.

DOUBLE OVEN STOVE

The Double Oven has a top surface containing twelve 10-inch pot holes, with two ovens, each 16 x 24 x 26. One fire-box of suitable size for area to be heated. Below will be found Testimonials from some of the leading Lumbermen, who have used my Wrought Iron Cook Stoves since I ommenced manufacturing them. They are the names of gentlemen who are well known and eliable, and will carry more weight than any recommendation of my own could do.

The Best Stove I have ever Used.

PETERBOROUGH, May 31, 1880.

ADAM HALL, Esq., Peterborough. Dear Sir,—I have used your Wrought Iron Cooking Stove in our lumbering operations since its introduction here, and have no hesitation in saying that I prefer it to any other. For durability, economy and efficiency, where a large number of men are employed, it is the best stove I have ever used. You can, with confidence, offer it to hotels, boarding houses and lumbermen.

Yours truly, THOS. GEO. HAZLITT.

The Stove for Lumbermen.

PETERBOROUGH, June 1st, 1880.

ADAM HALL, Esq., Peterborough. My Dear Sir,—We have used your Wrought Iron Cooking Stove and find it is very satisfactory for lumber operations, especially so on drives. We can recommend it highly.

Yours truly, IRWIN & BOYD,

Gives the Greatest Satisfaction.

PETERBOROUGH, June 3rd, 1880.

A. HALL, Peterborough. Dear Sir,—I have had the Wrought Iron Cook Stove, purchased from you, in constant use ever since last fall, and it gives the greatest satisfaction in every respect. I can recommend them highly to any one who is in the lumber business. Very truly yours, GEO. HILLIARD, M.P.

M. Covel's Latest Improved Automatic Saw Sharpener!

Is the Most Perfect Machine that has ever been Introduced into Mills for that purpose.

CIRCULAR SAW STEAM FEED!

I would also call special attention to my

Heavy Circular Saw Mills

and for STEAM MILLS, would recommend the Steam Feed, having put in several which are giving the best of satisfaction, as will be seen by the following testimonials:—

GRAVENHURST, August 20th, 1880.

WM. HAMILTON, ESQ., Peterborough.

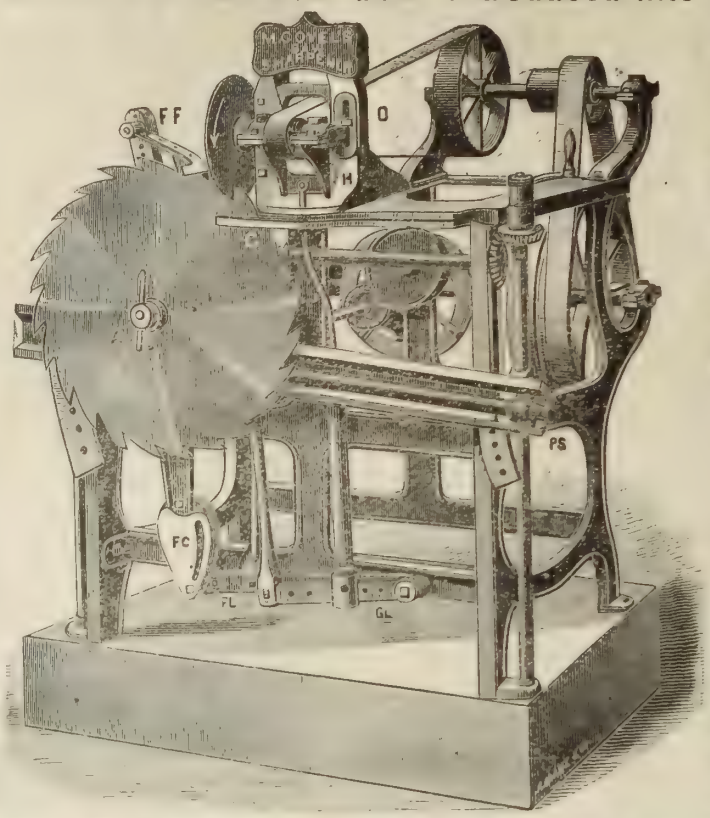
DEAR SIR—I have used your Steam Feed for near four months, and it has given me perfect satisfaction in every way; it is admitted by every person who has seen it work to be the best feed ever invented. Since I put it into my mill, I have not lost ten minutes time fixing anything belonging to it. I can cut 18 boards 13 ft. long in one minute. It can do much smoother and better work than the pinion feed. It is easily governed and reverses the carriages instantly. I am thoroughly satisfied with it and can recommend it to any person who has a Circular Saw Mill for cutting long or short logs. I consider I have cut more lumber than will pay for the Steam Feed since I got it than I would have cut had I not put it in.

Yours respectfully,
WILLIAM TAIT,
Lumberman, Gravenhurst.

TORONTO, August 11th, 1880.

WM. HAMILTON, Peterborough, Ont.

DEAR SIR—The Steam Feed you put in is working splendidly. Yours, &c.,
THOMPSON, SMITH & SON.

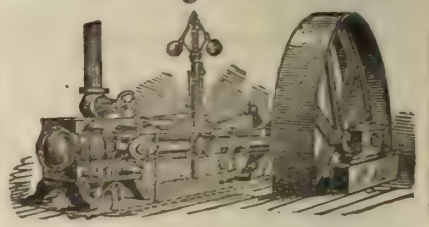


MILL MACHINERY!

I am also manufacturing Saw Mill Machinery, for all sizes of Gang or Circular Mills, Span or Double Circulars for Slabbing Small Logs. My Patent Jack Chain for drawing logs into Saw Mills, acknowledged by all to be the Cheapest and best ever got up; also, my Patent Lumber Markers, different sizes of Edgers, Gang Lath Mills, Trimmers, Power Gummers, and all Machinery used in a first class Gang or Circular Saw Mill; also, small Hand Gummers for use in the woods, for Cross-cut Saws. Rotary Pumps of different sizes, for Fire Protection in Mills, &c.

Horizontal Engines and Boilers

CORLISS ENGINES



Where economy of fuel is the great consideration, along with uniformity of speed, such as is required in Grist and Flouring Mills, Woollen and Cotton Factories, or large Factories of any kind, I supply the Corliss Engine. I feel justified in saying that our Style, Workmanship and Finish on this Engine will be no discredit to its renown, and certainly is not equalled in this country for economy of fuel. I have them working at 2½ pounds of coal per horse-power per hour. L10

WILLIAM HAMILTON,

PETERBOROUGH, ONT.

EMERY WHEELS FOR SAW GUMMING!

Solid Emery Wheels are now almost in universal use for the purpose of gulleting and gumming saws. Statistics show from 25,000 to 30,000 saw-mills in the United States. Many of these run only a single saw each. A one-saw mill would use one or two wheels a year, costing $3 to $4 each, and when such small mills order single Emery Wheels from the factory, the express charges often equal the cost of the wheel. There was a time when the quality of Emery Wheels was so uncertain, and the demand so fickle, that storekeepers could not afford to carry them in stock. Now, however, Saw Gumming Wheels have become as staple an article as Files, and every dealer in saws, Hardware and Mill Supplies can afford to carry a few dozen standard sizes in stock. Large dealers order stocks of $500 to $750 worth at a time. Saw Gumming Wheels are used with the edge (or face) square, round or beveled. Probably seven-eigths of all in use are beveled.

The principal sizes are:

8x¼, 8x⅜, 8x½ — ¼ in. hole.
10x¼, 10x⅜, 10x½, 10x⅝ — ¼ in. hole.
12x¼, 12x⅜, 12x½, 12x⅝, 12x¾, 12x⅞ — ¾, 1 and 1 inch.

Probably more wheels 12x⅜, 12x½ and 12x¾ are used than all the other sizes together. Saw Gumming Wheels are used, however, of all sizes up to 24x1½. The most frequent complaint is that Emery Wheels harden the saw so that a file won't touch it. The answer is that you don't want a file to touch it. An expert workman will shape and sharpen the teeth with an Emery Wheel, leaving the teeth *case hardened*, in which condition the saw will cut about 33⅓ per cent. more lumber than a soft saw will. Those who want to use the file, however, have only to touch the saw *lightly* a second time (after going all over it once), and this second touch will cut through the case-hardened scale.

A QUESTION OF QUALITY.

Thirteen years of experience as makers of, dealers in, and actual users of Emery Wheels, have led us to a decided opinion as to what quality is the best. We prefer for almost every use an "Extra Soft" wheel like the "Pocono." We believe that money lost through the rapid wear of the wheel is more than made up by the money saved on wages. As we cannot get every one to adopt our views, we make several qualities, so as to meet their views. We say to those who think they can only be satisfied with some other make of wheels (not Tanite), that we can furnish qualities *to match* any and every other make. If you have got used to some special quality of wheel, let us know what it is, and we can send you *a Tanite Wheel of similar quality*. Our *regular* classification of Saw Gumming Wheels is as follows:

CLASS 2. MEDIUM—HARD.—This Wheel is THE STANDARD Saw Gumming Wheel all over the world. Probably seven-eighths of all the Saw Gumming Wheels used are "Class 2." It cuts fast and keeps its shape well. Some think it too hard, some too soft. We prefer the "Pocono."

CLASS 3. MEDIUM—SOFT.—The same as to coarseness and fineness as "Class 2," but a *softer*, and therefor freer cutting wheel.

CLASS "POCONO." EXTRA SOFT.—This Wheel we prefer to all others. It is both *finer* in grain and softer than either of the above. As a Saw Gumming Wheel, Class "Pocono" is specially suited to those practical and experienced Sawyers who know how to grind with a light touch, and who want a free cutting wheel that will not create much heat.

Illustrated Circulars and Catalogue, showing Cuts of Saw Gumming Machines, and Shapes, Sizes and Prices of Wheels, sent free on application. L13

SUBSCRIPTION $2.00 PER ANNUM.

VOL. 1. PETERBOROUGH, ONT., OCTOBER 15, 1881. NO. 24.

THE Hon. J. G. Joly has a large plantation of young walnut trees at Lotbinieer, Que., and he has sent to Sarnia for more walnuts to plant. His example is a good one.

SIR A. J. SMITH'S mill, on the Petitcodiac River, was burned on Friday night, the 9th of September. The origin of the fire is unknown. The mill was shut down that afternoon at three o'clock. Mr. Early Kay, the manager, left the mill premises at 5 p.m., at which time all was straight, and there was no sign of any fire in the vicinity then. Besides the destruction of the mill, valued at over $2,000, there were over 300,000 feet of sawed lumber burned; also a portion of a bridge across the stream near the mill. The loss is estimated at $3,000. Insurance, about $1,000. Mr. Kay has taken steps towards rebuilding the mill at once.

THE *Timber Trades Journal*, of Sept. 17, says:—Liverpool was as remarkable for its bare supplies of timber during the first week of this month as London for its superabundance. Only 24 ships with wood were reported in the former, and of these 15 were steamers, mostly with only part cargoes, and some with a very small part, too, such as 3,000 staves, or 400 or 500 planks (30 or 40 loads, perhaps). On the other hand London imported 94 complete cargoes by sailers, besides 42 by steamships, some of them full cargoes from the Baltic. Yet prices at Liverpool are not improving, and the stock is heavier than it was at this time last week, while that of London is only about three-fifths of what it was then.

A. C. Danner & Co., Mobile, Ala., shipped by *Lady Dufferin* for Liverpool, a while since, a cargo, consisting of 1,250,000 feet of lumber, deals and hewed timber. The first direct shipment to Europe from this port was made several years ago by H. C. Vaughan, at present the superintendent of the mill of the firm named above, and consisted of hewed timber. This firm averages a cut of 800,000 feet monthly, and ships about 600,000 feet. The timber is brought to their mills from a radius of nearly 120 miles, and floated down the Dog and Pascagoula rivers, Mississippi, and several creeks. As it has to be brought many miles above the reach of tide water, considerable difficulty is anticipated in the future floating of rafts, which even now can only be done in a certain season of the year. As the timber men go more inland to cut, the work of bringing the logs to the rivers and creeks becomes more arduous and expensive. Tram ways are much needed which would carry the logs to tidewater, and thus afford a continuous and uninterrupted supply of material to the mills. There are at present ten mills in operation on the Dog and Pascagoula rivers. The timber is of fine quality and commands the highest price in the European markets.

SOME IRISH SAW MILLS.

Having a few hours' time to kill, while waiting for the homeward bound steamer at Londonderry, Ireland, the writer thought he could not employ them better than in a run through the saw mills, etc., which he noticed along the docks as he passed up them on the deck of the steamer, which had brought him thither from Glasgow. Although a very different thing from those of Canada, the saw mills to be seen at Londonderry are neither few nor without interest to a Canadian. Tney are, in fact, mills which take up the lumber, as turned out of our eastern mills, and fit it for actual use.

Londonderry is the chief point of supply for the North-Western district of Ireland, and imports each season about ten cargoes of deals from St. John, N.B.; three or four from other ports of N.B., and about three from Quebec, besides two or three cargoes of pitch pine. For the conversion of this and such timber as the neighbourhood produces into sizes and thicknesses suitable for the local trade, five saw mills, etc., are employed. We say "etc." because all of these mills do more or less of other wood work in addition to sawing.

While in Canada the first object is to save labour, in Londonderry the first object is to save the precious wood, and that they understand how to do this will be conceded when we state that we saw in the mills of Mr. Balantine a three inch deal cut into six boards, with the loss of only one quarter of an inch of the wood for the five saws which had passed through it,—that is just one-twentieth of an inch for each passage of the saw. In many respects the gates in which the saws are fixed for cutting deals are not unlike one of the ordinary gang gates to be found in any Canadian mill. They are, of course, all driven by steam, and work up and down in a gate, and the saws can be set to any thickness desired, in much the same way as our own. The frames in which they stand are, however, of massive iron, and are all set on the ground with a pit underneath, from whence the sawdust can be easily removed. Most of these gates are made for sawing two pieces of deals, or other small timber, at one time. In the mill of Messrs. Cook & Co. (you see they have "cooks" in the lumber business there as well as in Canada) they have a gate which cuts four deals at once, for which the "sawyer" claimed great superiority over all others in use in the city, and which, like all the rest of the machinery in these mills, had been brought across the Channel,—this particular one coming from the establishment of Thos. H. Allan, Johnstone, near Glasgow, while the others came from the works of T. Robinson & Son, Rochdale. Besides these "gates," all these mills had one or more ordinary circulars, for cutting up our square timber and the wood brought in from the surrounding country. It is a pity one half of the people of Canada cannot see for themselves the kind of Irish timber the writer saw in these mill yards, and in the course of manufacture. Nine-tenths of our people would consider it almost valuless for fuel, to say nothing of making use of it for manufacturing purposes, and yet here they were twisting and turning it about, and cutting it in this and then in that direction, until the refuse was almost reduced to nil. Seeing, they say, is believing, and one certainly requires to see for themselves the ingenuity displayed in the Old Country in making the most of a piece of the roughest wood, to appreciate in any degree the immense value which even our most inferior wood possesses under proper manipulation. As in too many other cases, it is to be feared our people will only appreciate the value of our forests when they are gone.

In addition to the sawing appliances found at the Messrs. McClelland's establishment, they were just getting into order, having been burnt out about two months before, an extensive shop for the manufacture of doors, sash, and woodwork generally. Already they had a few machines in operation, among them being what seemed to our unpractised eyes a very superior turning machine. Certainly no machine could do the work allotted to it more expeditiously or more neatly than this one did. They also had a new planing machine, which worked everything perfectly true (at right angles) from an inch up to 18 inches square. These machines, like all the others we saw (with the single exception already noted) were from the establishment of Messrs. Robinson, Rochdale, and were built, if not regardless of cost, certainly regardless of the quantity of iron put into them. In fact, as remarked to us, these machines were built to, and never did, wear out.

Mr. Balantine's is also a large establishment, with several ingenious machines for making mouldings, turning, etc., and the building trade must certainly be, as they said, fairly active in the North-west of Ireland, to give the full employment, which it seemed to be doing, to the establishments of Messrs. McClelland, Balantine and McAlwee. At Mr. Balantine's we came across an old friend from Deseronto, in the shape of some doors from the establishment of H. B. Rathbun & Son. Mr. Balintine says these doors give entire satisfaction, and that although there is a good deal of prejudice against them, yet they are destined to run the home-made article out of the market if the quality is kept up and they can continue to be sold at present prices. Upon this latter point, however, he seemed to be rather skeptical, and at the conclusion of a somewhat long conversation as to their merits, he said the only suggestion which he could make for their improvement would be that the panel should not be fitted so tight as it was, as the wood sometimes swelled after they came to hand to such an extent as to make the panel bulge. He attributed the swelling to their damper climate, and suggested that instead of being fitted tight up in the joints a vacancy of say an eighth of an inch should be left, so as to leave room for swelling. Doubtless the attention of Messrs. Rathbun only requires to be called to this point to ensure a remedy being applied, while we are sure every one will be rejoiced to learn from such a source of the success attending the enterprise of Messrs. Rathbun in sending this class of manufactures across the Atlantic.

THE FUTURE LUMBER SUPPLY.

The Ottawa *Free Press* says that regrets have often been expressed at the wholesale destruction of our pine forests by the lumbermen, but of late years the destruction of vast tracts of valuable timber by fire has led to the belief that it is better the timber should be cut than that it should be worse than wasted by annual conflagrations. In a former article we gave an estimate of the rate at which the forests are disappearing before the woodman's axe to supply the demands of the market, wherein it was shown that ten years was the limit at which the supply in the lumber regions of the North-Western States could be relied upon, while that of Canada could not be expected to last longer.

Should this forecast turn out correct, where are we to look for the future lumber supply of the world? An answer to this question is given in the accounts which reach us from the far west. From the mouth of the Columbia river extending north into British Columbia there are forests capable of supplying the prairies east of the Rocky Mountains with lumber for a great many years to come, and we fancy it is not improbable that, so soon as railway facilities are obtained from the Western Slope to the North-West territories, a great trade will arise. The lumber, coal, fish, etc., of the Pacific coast finding profitable exchange for the grain and meat of the territories.

The forests of British Columbia have a world wide fame. The timber consists chiefly of pine, with considerable quantities of fir, spruce, cedar and redwood, and a small supply of white oak, hemlock and maple. The trees of this region show luxuriant growth. The yellow fir frequently attains a height of 250 feet; pine, 125 to 160 feet; silver fir, 150 feet; white cedar, 100 feet; white oak, 70 feet; black spruce, 60 feet. Cedars have been found to measure 63 feet in girth, with a height of 120 feet. The pine trees are known to the lumbermen as of two varieties—"sap" and "overgrown." The "sap" tree yields 6,000 to 8,000 feet of lumber, and the "overgrown" 6,000 to 15,000 feet. Of this timber is made all grades of lumber—ship timbers, fencing, pickets, railroad ties, barrel staves and headings, household furniture, etc.—and the product is shipped in large quantities to the Pacific coast of South America, while trade is done with Australia, France and England.

OUR QUEBEC LETTER.

SCARCITY OF PINE IN THE MARKET—FEW TRANSACTIONS—THE ENQUIRY FOR OAK AND STAVES—THE SHIPMENT OF SQUARE TIMBER BY RAIL—LATEST QUOTATIONS—MINING NOTES.

From Our Own Correspondent.

QUEBEC, Oct. 6.—The past month has been a very uneventful one in the Quebec timber market. There have been but few transactions worthy of reporting, and not much change of prices, though in recent sales the prices of contracts, made a month or six weeks ago, have not been nearly touched.

WHITE PINE.

There is now remaining in first hands but a few small lots of white pine, and these are held by not more than two or three parties. There is still a moderate enquiry, but holders, of course, seek to improve the opportunity, and refuse to sell except at very high prices. Two or three weeks since a raft of white pine in shipping order, with some hardwood, changed hands at 26½ cents, while about the same time red pine of 44 feet, or thereabouts, was sold at 22½ cents. Last week the sales were as follows :—A raft of white pine, one of the choicest of the season, consisting of three-fourths square, 62 feet average, and one-fourth waney board, 22 inch average, at 37 cents all round ; another of 55 feet average, 28 cents. Square white pine, 45 feet average, fair quality, was sold last week for 28 cents. Within the last few days a raft of fair quality, about 52 feet average, has been sold at 26 cents, with half red pine, 38 feet average, at 17½ cents. A raft of white pine, 45 feet average, changed hands this week at 26½ cents.

RED PINE.

Red pine, as may be judged from the prices quoted above for mixed rafts, is not in much demand. Prime wood of large average would, however, command a fair sale. On the other hand a very large raft of poor quality has just been sold at 11 cents.

OAK.

Oak is still held firm with a fair enquiry. Prices have not materially changed since last quotations. Two or three sales have been made for early delivery by first rafts of next season. The figure is said to be about 49 cents.

STAVES.

Staves of all kinds are exceedingly scarce. No change in price is reported.

DEALS.

Deals are scarce and in demand, particularly spruce, which are much wanted. There is said to be little or no change since last sales, which were quoted some time since for spruce at 36, 28 and 22c. for large lots, and 40c., 26c. and 22c. for a small quantity.

FREIGHTS AND SHIPPING.

A few weeks will now end the shipping season here, and then we shall have the annual returns of stocks to winter here, which are certain, however, to be very light. The total number of vessels of all kinds in port to-day is but 35, and there are only a few more to arrive. Transactions in freights during the present week have been as follows :—London, timber 24s.; deals, 62s. 6d. Dublin, timber, 24s. Grangemouth, timber, 24s. Grimsby, deals, 65s.; timber, 35s.; deals, 80s.

COMPARATIVE STATEMENT.

The following comparative statement of timber, &c., measured and culled at Quebec, up to Oct. 7th, has been received from the Supervisor of Cullers' Office to-day :

	1879.	*1880.*	*1881.*
Waney White Pine.....	1,301,665	2,064,863	2,421,407
White Pine.....	2,503,375	3,874,801	5,455,785
Red Pine.....	741,499	954,884	1,872,004
Oak.....	793,593	1,419,196	2,534,881
Elm.....	318,074	922,530	1,009,440
Ash.....	47,161	236,672	394,039
Basswood.....	280	363	3,576
Butternut.....	70	645	2,991
Tamarac.....	6,691	22,458	24,416
Birch and Maple.....	121,224	561,815	151,742
Masts and Bowsprits...	50 pcs	4 pcs	25 pcs
Spars.....	26 pcs	23 pcs	
Std. Staves.....	76.9.0.8	17.4.0.6	368.7.2.29
W. I. Staves.....	127.3.0.11	299.6.1.2	355.4.2.20

SHIPMENT BY RAIL.

The shipment by the Q. M. O. & O. Railway, from above Ottawa, of Allan Grant's square timber, is progressing rapidly. Some 600 cars have already arrived, and 500 more are expected. The timber arrives in prime order, and is immediately dumped into a pond alongside the railway track, and there rafted and towed to the coves.

THE APPOINTMENT OF A SUPERVISOR.

The whole trade is very much excited about the vacancy in the Supervisor's Office, and the apparent determination of some few public men to pitchfork into the office some political favorite or hanger on, without the slightest knowledge of the requirements of the trade. Numerous representations, which it is to be hoped may not be overlooked, have been unanimously made by the whole trade to the Government, setting forth the importance and necessity of having a properly qualified Supervisor.

MINING NOTES.

A French engineer, sent out by Parisian capitalists, has just arrived here to investigate the mining value of the gold lands at Beauce, in the possession of the Quebec Mining Co. Should his report prove favorable, the necessary capital will at once be forthcoming. News from Buckingham is to the effect that operations upon the phosphate lands owned by the French Syndicate are to be at once pushed forward with vigor.

Effect of Removing Mountain Forests.

Attention has long been given to devising means to limit the ravages of these torrents, which ruin the land, threaten estates, destroy roads, and sometimes even compromise the existence of villages. Walls have been built along the banks to protect them, or across the streams to allay the force of these waters. The most efficacious means, however, as yet discovered, has been to maintain the woods on the slopes of the mountain. The effect of cutting away the trees in promoting the formation of torrents has not been doubted by the inhabitants of mountainous regions, and is clearly set forth by M. Surrell, who says:—"When we examine the tracts in the midst of which torrents of recent origin have been formed, we perceive that they have in all cases been despoiled of their trees and bushes. If, on the other hand, we examine hills whose sides have been recently stripped of wood, we observe that they are cut up by numerous torrents, which have evidently been formed very lately. Here is a remarkable double fact : wherever there are recent torrents there are no longer forests, and wherever the ground is cleared these torrents are formed ; and the same eyes that see the woods fall on the declivity of a mountain, may see appear there immediately a multitude of torrents."

The disastrous consequences of removing the woods from the Alps began to attract attention in the last century, and have since been discussed in many publications and official reports. In 1853 the prefect of the department of the Lower Alps said in a report to the Minister :—"If prompt and energetic measures are not taken, it will be almost impossible to designate the precise moment when the French Alps will become a desert. The period from 1851 to 1853 will produce a new diminution in the number of the popu ation. In 1862 the Minister will remark a continuous and progressive reduction in the number of hectares devoted to agriculture ; each year will aggravate the evil, and in a half century France will count more ruins and one department less." The departments of the Upper and Lower Alps actually lost thirty thousand inhabitants, or one-ninth of their population, between 1851 and 1876. A law for recovering the mountains with wood, which had been prepared by M. Forcade de Rouguet, director-general of the administration of the forests, was adopted by the legislative bodies in 1860, and was put in operation shortly afterward.—*Mr. M. J. Cleve, in the Popular Science Monthly.*

THE *Newcastle Chronicle* says a cargo of square timber chocks has been brought to the Tyne, *via* Hamburg, direct from Prince Bismarck's estate. The merchant who has received them says the wood is as hard and square as the owner of the estate himself.

Bogus Certificates.

It is no vile drugged stuff, pretending to be made of wonderful foreign roots, barks, &c., and puffed up by long bogus certificates of pretended miraculous cures, but a simple, pure, effective medicine, made of well known valuable remedies, that furnishes its own certificates by its cures. We refer to Hop Bitters, the purest and best of medicines.—*Republican.*

PEGS.

The New York *Mail* says :—It was the privilege of the writer to visit the picturesque little town of Arlington, Vt., which at the time boasted a population of 2,500, three churches, five stores, two hotels, an extensive car works, sash and blind, and chair factory ; also a "peg factory," which, by the courtesy of the foreman, Mr. L. E. White (who had been employed there twenty-nine years), he was shown through and received valuable information. The timber used is black and yellow birch, which is cut into pieces four feet in length, varying in diameter from eight to fourteen inches. These logs are placed in a building in winter and the frost extracted by steam. They are then run in on a tram railway to the circular saw department, and cut into slices or blanks of the thickness desired for the length of the pegs. These are sorted and the knots cut out, and are then passed on to a long bench which contains six machines composed of fluted rollers. The blanks are then run between these rollers, which creases both sides. They are then run through again to cross-crease, or mark out the exact sizes of the pegs. Then they go to the splitting machines, which are set with double knives, and cut the blanks into pegs. As they pass the last machine they are sorted, and all knots and discoloured ones removed as they are brushed off into large baskets. These machines are under the care of young women, who appeared much more happy and nseful than do many of those who, thumping at their piano, would consider such employment menial. The next process is bleaching, which is accomplished by the fumes of brimstone, which is unhealthy, (those who labor here shorten their lives). They are then placed in large cylinders, which hold eleven barrels, and have six hundred steam pipes running through them, and revolve one and one-half times to the minute, drying two charges per day to each cylinder. They are then passed into large wooden casks, or cylinders, which revolving rapidly, polish them by the friction, the refuse falling through wire sieves or screen openings, after which they are again passed into a sifter, which separates all the single pegs and drops them into tubs, or boxes, leaving those which have not been separated in the machine. They are then put in barrels ready for market. The factory running on full time turns out 150 bushels, or fifty barrels, per day. The sizes go from eight up to sixteen to an inch. The lengths go by eighths, two and one-half to twelve. Twenty-six hands are employed, half of them being women. The products of this factory are mostly shipped to Germany and France, and enter largely into the manufacture of toys and fancy goods, as well as into the shoe manufactory. Thus the "genii of mechanism" converts, as by magic, the trees from the Vermont mountains into articles of use, which, floating off through the channels of commerce to far away lands, anon return to sparkle the eyes of happy children in toys, in which these pegs have become important factors.

How to Come it Over Hornets.

Mr. James T. Bell's account, in the Canadian *Entomologist* of the easy capture of hornets may possibly serve as a useful hint to some agricul tural reader in an emergency. The nest was unexpectedly found in a stump during a walk in the Belleville forests : "A few days after, taking advantage of a cool morning, I sent my two boys to the woods with a small bottle of chloroform and a hard rubber syringe. Accordiug to directions, they injected about a drachm of the liquid into the hole, and threw a handkerchief over the entrance. In about five minutes they opened up the nest, when they found the inmates in a perfect state of slumber, and transferred them without trouble to their cyanide bottles. In about an hour they returned, bringing me forty-eight specimans of the insect."

ARE YOU ?—Are you a Dyspeptic? Have you Indigestion? Is your Liver sluggish? Does your food trouble you? Does sleep fail to refresh you? Is your appetite and energy gone? Zopesa (from Brazil) will cure you, tone you up, and invigorate your whole system. It is a gentle purgative, acts as a wonder upon, and gives strength and energy to the Digestive apparatus. It is strongly anti-billous, carries off all surplus bile, tones the Liver, gives sound Digestion and speedy health to the Dyspeptic and the Billious. Try a 10 cent sample at least.

Indian Forestry.

A correspondent of the New York *Tribune* in a lengthy article in which he gives a brief history of some of the forest fires that have visited this and other countries, sets forth some facts that are of peculiar interest in connection with the recent terrible conflagration that has visited our own state. He states that the Indians, as he found while living among them, made a practice of burning over the ground of their forests once a year, as regularly as the farmer plows his land. He claims that the heat from these annual burnings is not great enough to injure, much less consume the trees, but the flames clean the ground of dead leaves and rubbish, destroying bugs and worms and killing the germs of malaria. The accumulation of dry leaves, twigs, mosses and fallen timber, he thinks, is the cause of the great forest fires, such as those which have ravaged whole counties in this state and destroyed hundreds of human lives. If the woods were systematically burned every year in this Indian fashion, there could be no possibility of an accidental fire gathering headway enough to become a destructive conflagration. Some year of drouth, he fears, will see the Alleghanies and other timber strongholds swept as bare as the Tyrian rock. "Then the rainfall will cease, then the nation. History testifies that nations have perished from the earth when their forests perished." One remedy which occurs to this correspondent for the destruction of forests by fire and by the rapacity of lumbermen who cut down the trees but plant none in their stead to supply the coming generation, is the appointment of a national commissioner of forestry, "a man who knows and loves the life-giving wood, and who would travel from state to state, section to section, and forest to forest, protecting the timber lands of the country."—*Lumberman's Gazette.*

A Big Fire at Chandos.

A correspondent writes to the *Mail* as follows :—At dark on the evening of the 20th ult., the large lumber shanty in the north-east corner of Chandos caught from a forest fire, and was totally destroyed, also the stable, blacksmith shop, meat house, and granary. The office was saved by a sudden change of wind. The buildings were very extensive, the stable being 120 feet long, and the shanty (which last winter accommodated over 100 men) was 80 feet in length, and all very substantially built last fall by Mr. John Gault, an energetic foreman in the employ of Messrs. Gilmour & Co., Trenton, who expected to use the shanty for lumbering another winter or two. A near settler (with his wife and family of small children) occupied the premises as caretaker for the summer, and had his little summer's grain stored in the stable, and all burnt. He had done but little else for a month previously but watch, carry water, and fight fires in the woods around, and was beginning to hope the worst danger was past. But a strong northerly wind seemed sent on purpose to consume everything in its track, and earlier in the day reached and destroyed his own private dwelling, about forty rods from the lumber shanty. Himself and a few neighbours fought the fire so long at the big stable, and the shanty caught fire so soon afterwards, that a very few of the caretaker's household effects could be saved. To make matters more serious, his wife had given birth to a child the same day, and had to leave her bed and walk barefooted to the nearest house (nearly half a mile), supported by a neighbour and his wife.

Birch Bark Rubber.

It is said that a dense black gum may be obtained from the outer layers of the birch tree bark by distillation, which possess all the ordinary properties of gutta percha, and has the additional merit of resisting the deteriorating influence of air and the corrosive action of acids. This advantage makes it useful as an ingredient of India-rubber and gutta percha, which it renders much more durable. Whether these statements are true remains to be proved

Are You Going to Travel ?

Don't forget a supply of that Dr. Fowler's Extract of Wild Strawberry. It is a superior remedy for sea sickness, and a positive cure for all bowel complaints induced by bad water, change of diet, or of climate. Whether at home or abroad, it should be kept at hand in case of emergency.

VENNOR ON DECK.

Since Vennor's predictions of cold for this week has proved true his credit is up again in the eyes of the credulous. Therefore his predictions for the months to come are of interest. Paste them in the inner recesses of your hat :—

A warm wave is likely to occur over a large portion of North America during the month of November, 1881, and again during January and February, 1882.

A frigid wave may be expected towards the close of November and entry of December, 1881.

The winds and storms of March will probably arrive ahead of time, and render the closing days of February exceedingly disagreeable.

The latter part of April and entry of May, 1882, will remind one of winter again, and the spring is likely to be cold and backward generally.

The winter of 1882 is not likely to be characterized by heavy snow falls on this side of the Atlantic.

In Western Canada, and sections south of the lakes, navigation may remain open all the year, or close but for a very brief period.

December, 1881, will be a month of storms in the Lake Region.

The summer of 1882 will be generally unfavorable to agriculture, owing to cold and wet weather.

Western sections will probably suffer more from rains and floods than from thunder storms or cyclones during the summer of 1882.

There will be brief periods of severe cold during the winter of 1882, and longer ones of warmth.

Destructive Fire.

NEW YORK, Oct. 10.—The Fourth avenue horse car stables, owned by W. H. Vanderdeabilt, and occupying a block, were burned this evening. Most of the horses were taken out, but it is thought at least thirty perished. Some say two hundred were burned. The loss is estimated at $200,000. The flames spread to Morrell's large furniture storage building, across the street, which was destroyed. Some of the finest furniture in the city was stored there, including $50,000 worth of painting, the property of Vanderbilt, all which were burned. The loss is estimated at $2,000,000.

A VERY USEFUL KIND OF VARNISH is made known by Leon Vidal, which is excellent for producing imitation of ground glass, and will doubtless be found available for other purposes. The formula is: Sandarac, 13 parts; mastic; 4 parts; ether, 200 parts; benzol, 80 to 100 parts.

SEE TO IT?—Zopesa, (from Brazil) will cure the worst case of Dyspepsia. A single dose will relieve in a degree that shows its wonderful curative powers, and its peculiar action upon the Stomach and Digestive Organs. It is a positive and absolute cure for Costiveness and Constipation, acting in a remarkable way upon the system, carrying off impurities. As a Liver regulator its actions are most remarkable. It tones and stimulates the Liver to action, it corrects the acids and regulates the bowels. A few doses will surprise you. Sample bottle 10 cts.

Set back 42 Years.

"I was troubled for many years with Kidney Complaint, Gravel, etc.,; my blood became thin; I was dull and inactive; could hardly crawl about; was an old worn out man all over; could get nothing to help me until I got Hop Bitters, and now I am a boy again. My blood and kidneys are all right, and I am as active as a man of 30, although I am 72, and I have no doubt it will do as well for others of my age. It is worth a trial.—(Father.)—*Sunday Mercury.*

WANTED

A SITUATION IN A LUMBER FIRM, as Superintendent of Shanties and Drives; has had twenty years' experience. Good references can be given. Address R. M. S., 307, Rideau Street, Ottawa. 2L24

MILL MACHINERY FOR SALE.

A TURBINE WATER WHEEL, 50 inches, Steam Cylinder, 12 inches, with Steam Chest, Shafting and Timber Saw Mill gearing. Address P. O. Box 352, Barrie, Ont. 4L24

FRANCOIS MARCHAND,

Manufacturer of all Descriptions of

STEAM BOILERS,

SHIPS WATER TANKS, Etc.

St. Roch Street, 12L24 QUEBEC, P. Q.

ROBERT SMALLWOOD

MANUFACTURER OF

The Patent Lever Feed Shingle, Box Board & Heading Machine

(Always takes First Prize.)

Rotary Saw Mills

IN FOUR SIZES, and other

MACHINERY for SAW and GRIST MILLS.

SEND FOR CIRCULAR.

CHARLOTTETOWN,

L24-1y Prince Edward Island.

HOP BITTERS.

(A Medicine, not a Drink,)

CONTAINS

HOPS, BUCHU, MANDRAKE, DANDELION.

AND THE PUREST AND BEST MEDICAL QUALITIES OF ALL OTHER BITTERS.

THEY CURE

All Diseases of the Stomach, Bowels, Blood, Liver, Kidneys, and Urinary Organs, Nervousness, Sleeplessness and especially Female Complaints.

$1,000 IN GOLD.

Will be paid for a case they will not cure or help, or for anything impure or injurious found in them.

Ask your druggist for Hop Bitters and try them before you sleep. **Take no Other.**

D. I. C. is an absolute and irresistible cure for Drunkeness, use of opium, tobacco and narcotics.

SEND FOR CIRCULAR.

All above sold by druggists.
Hop Bitters Mfg. Co., Rochester, N. Y., & Toronto, Ont.

We have added to our plant all the latest improved machinery for Electro and Stereotyping, and the manufacture of Printers Furniture, facilities for executing work which no other establishment in the Dominion possesses, and not excelled by any on the continent. A large assortment of various cuts constantly on hand.

FLEMING & SON,
L14 26 Colborne St., Toronto.

DR FOWLER'S EXTRACT OF WILD STRAWBERRY

Cures Cholera, Cholera Morbus, Dysentery, Cramps, Colic, Sea Sickness and Summer Complaint; also Cholera Infantum, and all Complaints peculiar to children teething, and will be found equally beneficial for adults or children.

FOR SALE BY ALL DRUGGISTS.

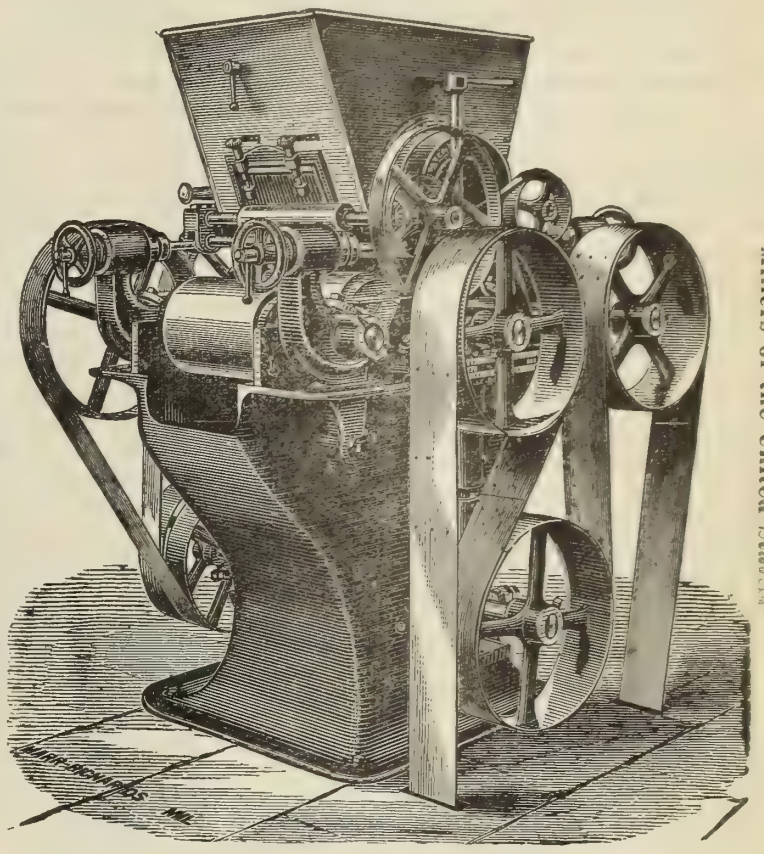
T. MILBURN & CO.,
Proprietors, Toronto.

Flour Making by the New Process

GRAY'S PATENT

NOISELESS ROLLER MILL

A Model of Perfection!
Every Mill a Success!



CORRUGATIONS of all Descriptions. Smooth Iron or Porcelain ROLLS.

These Roller Mills are used by all the Representative Millers of the United States.

The Machine is Perfect in all its adjustments, and RUNS WITHOUT NOISE.

It is doing Better Work than any other Machine in use.

Automatic Lubrication of Principal Bearings.

Driven entirely by BELTS.

Differential Speed always insured.

WEYMAN'S NEW IMPROVED PATENT

Porcelain Rolls

The BEST ROLL FOR MIDDLINGS in the world. Over 6000 in use in this country and Europe. Send for particulars.

MILLER BROS. & MITCHELL,

Nos. 110, 112, 114 and 116 KING STREET

MONTREAL.

SOLE LICENSEES FOR DOMINION.

Manufacturers of Improved Hoisting Machinery, MINING and CONTRACTORS' PLANT. Importers of BEST STEEL WIRE ROPE. Mention this Paper.

L24-1y

INFLUENCE OF FORESTS ON WATER-COURSES.

We take the following from a paper read by Mr. David D. Thompson, of Cincinnati, before the American Association for the Advancement of Science, at that city, last month :—The rapid destruction of our forests has at last begun to attract public attention, and the efforts of those who are endeavoring to awaken interest in the preservation of the standing trees, and to promote their cultivation where none exist, are bearing fruit, especially in the prairie states of the West and Northwest. The arguments used are usually such as may be embraced in the question : What shall we do for fuel, for fences, for ships, for building material, for railroad ties, and for the innumerable industries of which wood forms a part, when our forests have entirely disappeared? For all these purposes it is probable that some substitute may be found. But there are other uses for our forest trees, and for which nothing else can take their place. Important, possibly most important, among these is the influence, and the effect of their removal, upon water-courses, such as lakes, rivers, creeks and brooks, and also upon springs and wells.

Trees during a rain storm retain a vast quantity of water. Fantrat found that the soil covered with forests received six-tenths of the whole rainfall, the trees having intercepted four-tenths. The proportion, however, will vary, depending largely upon the character of the foliage and the nearness of the trees to each other.

Besides, what is retained by the branches and leaves, the roots, by keeping the soil around them loosened, induce the speedy absorption of the larger part of the rain which reaches the ground, and much of which, but for the trees and their effect upon the soil, would immediately flow away. The foliage of the trees by partially or wholly excluding the sun's rays, prevents, in a large degree, the evaporation of the water in the soil, which in a treeless region soon renders the ground as destitute of moisture as though no rain had fallen.

By the absorption of the rain as it falls, the flooding of the streams is largely prevented ; and by retaining the water in this natural reservoir, and allowing it to flow off gradually, the streams are supplied with water continuously. It can safely be said that no stream having its source near a tract of forest has ever ceased to flow.

In the early history of the eastern and middle states, a farm was regarded as lacking in an essential feature if there was no spring upon it, and the farmer's wife would as much expect to do without milk-pans as to do without a spring-house. But now a spring-house is a rare sight. When the pioneers settled these lands, they were covered with forests, and the first and most important work of the new settler was to cut away the timber, in order to get land upon which to raise food for himself and family. For many years there was, of course, no apparent effect upon the water-courses ; but as the number of settlers increased, and the amount of forest land decreased, the springs began to dry up, and with them the brooks, creeks and smaller rivers.

It is not unusual to find in many localities the beds of what were once important mill streams waterless, except when filled by sudden freshets ; and in this state certain streams emptying into the lake, which were once declared navigable, will not now float a canoe. Previous to 1832 a Captain Delorac, of Hamilton, Ohio, annually sent a fleet of flat boats down the Big Miami river, at the spring rise ; but with the destruction of the forests along that river, the rise became so uncertain that the enterprise was of necessity abandoned. Professor Newberry, in his Geology of Ohio, states that the Ohio river has been getting lower and lower, in dry seasons, for many years. About 1871-72 the Ohio sank lower than had been known before, and at Smith's Ferry, where the Pennsylvania line crosses, a ledge of rocks was laid bare that had not been seen or heard of by any people living in that vicinity.

Lapham says that "such have been the changes in the flow of the Milwaukee river, even while the area from which it receives its supply is but partially cleared, that the proprietors of most of the mills and factories have found it necessary to resort to the use of steam, at a largely increased yearly cost, to supply the deficiency of water power in dry seasons of the year. The floods of spring are increased until they are sufficient to carry away bridges and dams, before deemed secure against their ravages. What has happened to the Milwaukee river has happened to all other water-courses in the state from whose banks the forests have been removed, and many farmers who selected land upon which there was a living brook of clear, pure water, now find that the brooks dry up during a considerable portion of the year."

Even in the state of Tennesse, where comparatively but little of the original timber has been cut, the same results are manifest. Hon. J. B. Killebrew, late commissioner of agriculture of that state, relates that, upon visiting the home of his childhood, a short time ago, he was surprised to find what at the time he left his childhood's home, thirty years previously, was a considerable stream flowing through his father's farm, had entirely disappeared, and its former bed had been ploughed up. The reason for it he found in the removal of the forests along both its banks. A striking illustration o the total disappearance of a running stream is found here in Cincinnati. Deer Creek, in the boyhood of residents of this city, now of middle age, flowed with a stream of sufficient volume to turn a mill. The denuding of the hillsides, and the consequent exposure of the entire surface to the rays of the sun, have dried up the springs which formerly fed it, and no water now flows in its former bed.

The mountains are natural forest lands, and up to a certain elevation should be perpetually covered with trees. To settlers living at the base of mountains, the forest trees are of incalculable value, for by excluding the sun they prolong the melting of the snows, absorb a large percentage of that which has melted, prevent its flowing off in a flood, and carrying death and destruction to all that may lie in its track. And the fallen trees and branches, the undergrowth, the mosses and other herbage among the decaying leaves, and the millions of leaves break the force of the falling rains, which come quietly to the earth, and sink into the soil until they reach internal cavities or porus strata, from which they are gradually distilled through perennial springs, that keep up a constant and regular supply for the streams.

Wood for Fuel.

The United States Census Bureau has been gathering some facts upon the consumption of wood for fuel. After taking the figures in our last annual for the coal output, the superintendent says :—"Even with the large increase in the coal production during the last half century, wood still keeps in the van as fuel, the consumption in this country being in favor of wood against coal in the proportion of four to one. In Maine, New Hampshire, and Vermont, wood is almost the only fuel. In many counties of Massachusetts coal is ahead of wood, while in the States generally, as well as Connecticut, the percentage is about equal. Thickly populated cities, like New York, and Hudson and Essex counties, New Jersey, containing the cities of Jersey City and Newark, are put down as entirely coal. In Pennsylvania, the great coal state, there are many entirely coal counties, while in others, as Crawford, in the western part of the state, not over 3 per cent. of coal is used. The same difference holds good in different parts of New York."

A Good Deal of It.

At the late bankers' convention at Niagara Falls, N.Y., the future utility of the water power of the falls was discussed, and the statement made that the conversion of the 60,000,000 cubic feet of water hourly passing down the river into horse power under a fall of 200 feet, would yield an aggregate of 3,000,000 horse power. A full utilization of this enormous force would serve the present needs of a population four times that of the United States to-day. Doubtless the time is not far distant when it will be partly utilized, and it must be a sort of relief to the economist to know that such a wonderful natural reserve force is at hand, if the need for it should ever arise.

A WESTERN LUMBER KING.

Hon. Philetus Sawyer, one of the senators from Wisconsin and a heavy lumberman, has lately been written up on the political side by a correspondent of the Chicago *Times*, who introduces into his article the following, which will be interesting to his fellow lumbermen :—

Mr. Sawyer's home has been in Oshkosh for 34 years, and everybody, irrespective of party, not only in the city but in this entire section, is his friend. He owns two or three counties in the pinery portion of the state, half a dozen swamps, a bank, a large share of a railway, and a goodly bundle of Government bonds. He is a thorough business man in the best sense of the term, and numerous good stories illustrative of his shrewdness are told by his admiring neighbours. A great many years ago, knowing that a very large tract of pine land, located in northern Wisconsin, was to be sold at auction in New York, he started out afoot and alone, and and made careful minutes of the location and extent of the most valuable sections of the tract. When the sale began he was on hand, and began bidding on the parcels which he wished to purchase. Some wealthy New Yorkers, knowing that he had been on the ground and had spied out the best lands, watched his course, and always outbid him. He went to the auctioneer and induced him to postpone further sales till the next day. Over night he employed an agent, and giving him a memoranda of the sections he wished to buy, went back prepared for another encounter with his eastern competitors. The sale went along very smoothly. Whenever Mr. Sawyer bid on a parcel of land the New Yorkers raised him out, while Mr. Sawyer's agent bought his lots without opposition.

Shortly afterward the New Yorkers, who felt that they had done a cunning thing, came out to Oshkosh to inspect their purchases. They visited Philetus at his pleasant home, and he entertained them well. They apologized for outbidding him, but said they had such confidence in his judgment that they knew they must make money on the lands. He assured them that he had no hard feelings toward them, and hoped they would be pleased with their pine. Just as they were starting out he said, with a merry twinkle in his eye, "Gentlemen, I would advise you, if you want to go over your lands, to provide yourselves with long rubber boots or a flat-bottomed boat."

A few days later the wise men from the east took their way homeward, after discovering that they had bought a quarter interest in a vast and bottomless marsh, while Mr. Sawyer owned all the good pine land in the tract. They did not stop at Oshkosh on their return trip, and never registered their apologies for having outbid the prospective senator.

Mr. Sawyer's word is considered as good as a government bond of the registered variety by all who know him.

A fortnight ago a wealthy mill owner of Fond du Lac went over to Oshkosh, and meeting Mr. Sawyer at the depot, said, "Sawyer, I want to buy your logs."

"I'll sell them," was the reply.

"How many have you got?"

"About five million feet."

"Are they as good as last year?"

"Yes, just about the same."

"What'll you take?"

"Fourteen dollars a thousand."

"All right. I'll take them, and send you a check for $70,000 in the morning."

This conversation is a fair sample of the senator's way of doing business.

A good many people throughout the state maintain that Mr. Sawyer is a dangerous power in politics, but they fail to show wherein he has as yet done anything amisss. Few of them have as large interests at stake in the state, or can as well afford to be honest in their private or public relations. Surely it ought to considered a credit rather than a reproach to Mr. Sawyer that he possesses the energy and ability to make his way from poverty to wealth, from an humble saw mill on the banks of the Fox river to the senate of the United States, retaining throughout his whole career the confidence and esteem of the people among whom he lived, and who have known him best.

THE WORTH OF TIMBER.

The following letter appears in the London *Timber Trades Journal* :—

SIR,—I have read with much interest the account given in your last number, at page 135, of the increasing value of timber in the North American territories, which the writer traces to its wholesale destruction by the original settlers, who did not then know the value of what they were destroying by every means in their power, which, he says, "from the standpoint of the present time may be characterized as simply atrocious." Notwithstanding which, he goes on to account for it in a very natural way, and we learn from it that, so far from there being any atrocity in it, the first scettlers had no other option but to destroy the timber which cumbered their ground or starve. An emigrant who becomes owner of a tract of land in a new country has first to consider how, with the means at his disposal, he can make it support himself and family with the least possibly outlay of money, which probably is a scarce article with him. If he finds his land covered with timber of the most useful description to distant civilization, it is to him not only a superfluity, but a mortal enemy to be grappled with and overcome before he can turn the ground on which it grows to any useful purpose—that is to grow corn and edibles, or green herbs for the service of man. If he could only wait till civilization came a little nearer to him, or till a tolerable road was made for him to the nearest navigable river—which may be done ten years hence—he might make something of his timber : but he must get it out of his way at once, or as much of it as will enable him to sow a piece of land sufficient for him to raise food on when the next season comes round, by which time the resources he has been able to bring with him into the wilderness will probably have given out. His strong arms and his trusty axe, with such help as his family can give, are all he has to depend on, and the prospect is gloomy enough ; and, if he calls in fire to his aid, it is because there is nothing else to befriend him. He finds himself in precisely the same position as the poor cock on the dunghill ; he wanted a barley-corn, instead of which he scratched up a precious stone, which was no sort of use to him. Not only "fifteen, nay ten years ago," was it the custom to leave only the best trees, destroying all under 12 or 14 in., but even at this day (and for ages to come) in Canada there will be new settlers, in the remote forests, to whom the timber around them is the bane of their lives, who would welcome a gang of lumberers willing to chop down the trees, though they were all of black walnut, and clear them away for nothing, as if they were good angels from heaven.

Sir, we have now great facilities for the transportation of wood, in the application of steam and the use of railroads, which were unknown to our grandsires, but even now the prices of imported timber for building purposes do not always represent the cost of getting it to market, even if the trees, as they stood before the axe was laid to the root, were made a present free gratis to the lumbermen who undertook the work. In your number for August 27th, p. 142, there is a report of the sale of a parcel of 4th Richibucto spruce deals lying at Barrow. They were of good mercantile lengths, 3 × 9 to 20 in. wide, and the best sizes only fetched £5 per Petersburg standard. Now as £3, in round numbers, goes for freight alone across the Atlantic, only £2 would be left to pay for 165 cubic feet of sawn merchantable spruce delivered on board ship in the port of Richibucto.

Query, after paying for cutting, squaring, hauling to riverside, launching, rafting, and floating down to port, then sawing, sorting, and shipping, what would be left to pay for this valuable wood as it stood in the forest? Whatever has been inevitably or even wantonly destroyed does not appear to render American building timber much more costly at the present day than the value of the labor bestowed on it to get it to market.—I am, sir, your constant reader,

LAND'S END.

Liverpool, Sept. 7th, 1881.

DR. FOWLER'S EXTRACT OF WILD STRAWBERRY cures summer complaints, diarrhœa, dysentry, cholera morbus, cholera infantum, sour stomach, colic, nausea, vomiting, canker, piles and all manner of fluxes.

THE EVIL OF SHOEING HORSES.

For some time past an active controversy has been going on in England between those who adhere to the usual style of shoeing horses and a few innovators who contend that the old method is the cause of more than half the diseases to which horseflesh is heir.

The subject is treated very fully in a series of papers, which appeared originally in the *Farm Journal*. The writer, who goes under the *nom de plume* of "Free Lance," has recently published these productions in book form, and it is on the opinions advanced therein that the following remarks are founded—altogether "without prejudice," as the lawyers say. "Free Lance" tells us that during his working days the horse suffers perfect martyrdom owing to the interference with nature which results from shoeing. The animal is forced to adopt an artificial gait which sends aches and pains through all the nerves, tendons, and muscles of his legs; he strains himself severely by slipping on greasy roadways; he is worn out unnecessarily by being deprived of his natural grip of the ground; and frequently suffers mutilation or injury through inability to keep his feet. But not only are shoes responsible, it is said, for a great deal of unnecessary pain and inconvenience to the horse while at work; they are the fruitful source, according to the same authority, of numerous diseases of the feet and legs which render him prematurely unfit for use. Shod horses, according to "Free Lance," are constantly afflicted with corns, side-bones, sand crack, greasy heels, seedy toe, dropsole, ring-bone, thrush, quittor, ossified cartilages, spavins, curbs, splints, windgalls, navicular disease and other maladies; while those who go without shoes enjoy almost total immunity from these ailments. If this is true, it is evident that the money loss involved in the maintenance of the present system must be enormous. Several eminent veterinary surgeons maintain that a horse, and most other animals, should live five times as long as it takes to reach maturity. Horses do not usually reach the full perfection of their powers until seven years old, and consequently ought to live until they are thirty or thirty-five years old. Under existing circumstances, however, they are termed old at ten and very old at twenty years of age, while fully three-fourths either die or are destroyed before they reach the age of twelve. If horses beginning to work at three are worn out before they reach twelve years old, then it is evident that the working life of the animal is shorter by fourteen years than nature intended it should be. In other words, three horses, are used up in doing what ought to be the work of one, and this extravagance in the United Kingdom necessitates an expenditure within a given time of about £200,000,000 instead of £68,000,000. The causes of this unnecessary mortality, according to "Free Lance," are: The absence of springs and brakes from the vehicles horses are compelled to draw. The use of dangerous nostrums, together with hoof ointments, stoppings, &c., by prejudiced farriers and ignorant grooms. Last, but not least, the use of shoes and the method of applying them. Horses shoes are of comparatively modern origin. "Xenophon, who wrote the most complete work on horsemanship of his day, makes no mention of horseshoes; while, on the other hand, he is particularly explicit as to the means to be taken to harden and toughen horses' hoofs. He recommends specially for this purpose bare stone pavement, which, he says, 'will cool, harden, and improve a horse's feet merely by his standing upon it, while the same benefit will result to his hoofs as if he were made to travel on stoney roads every day.' Another writer, Vegetius, says:—'The floor of the stable should not be made of soft wood, but of solid hard oak, which will make the horse's feet as hard as rock.'" It will be observed that these writers, so far from considering that a horse's hoofs should be spared because they are unprotected, insist that constant contact with hard and rough surfaces is essential to their preservation. They probably deduced from observation the principle which has been thus formulated by Mr. Miles:—"It is an invariable law of animal economy not to continue to unemployed structures the same measure of efficient reparation that is extended to parts constantly engaged in performing their allotted tasks." If the horse's hoof is intended by nature to bear rough travelling without injury, it stands to reason that constant subjection to the conditions it is designed to meet can alone maintain it in a thoroughly efficient state. "The constant use of litter (in stables) makes the feet tender, and causes swelled legs; moreover, it renders the animals delicate. Swelled legs may be frequently reduced to their natural size by taking away the litter only. Let any proprietor go to his stable, upon returning on a Sunday from morning church service, when the horses will perhaps have been left to themselves for three hours, and he will find that his horses have been trying to get rid of it by scraping holes in it, in which to stand at ease and comfort on the bare floor, having pushed as much as they can into the gangway. It is probable, also, that instinct takes part in their dislike to it, on the score of its being unhealthy as well as uncomfortable to them.

"Even at the present time in many parts of the continent of Europe, and in a considerable portion of the rest of the globe, horses run about over rocks, through ravines, and up precipitous ridges, unshod; yet all this is done without difficulty, and to the evident advantage of their hoofs, for these animals never suffer from contracted feet, or from corns, sand cracks, &c., until they become civilized and have been shod." Again: "During the mutiny in India many of our cavalry horses went unshod, because they could not get shod, and they never went better in all their lives." The special military correspondent of the *Morning Advertiser* said recently of the irregular cavalry employed in the Zulu war:—"Few of the men have their horses shod in front; some do not shoe at all." On one excursion he made in company with this corps they had to go over "sheets of polished, wet and slippery stone in the torrent beds, making one wonder how our unshod horses could keep their feet. All through the reports on the war, not a complaint was made as to these horses falling lame. Surely there must be something in this. Sheets of wet, slippery rock, and rolling stones in river beds, would be calculated to try the hoofs to the utmost; yet in the pursuit of the Zulus, when they fled at Ulundi, these 'ponies' (from 14½ hands downward) were able, we are told, to follow miles further than the shod horses. In North, Central, and South American countries, where, outside the pastures, hard, rough, stony ground largely predominates, horses and mules do very heavy work without any protection to their feet. In some parts of these countries," says our author, "it rains every day in the year, and in other parts they get dry roads during six months and wet ones during the other six. The horses have to travel over either, and over naked sheets of rock, as they in turn present themselves, and, as Mr. Douglas says, 'without difficulty, and to the evident advantage of their hoofs, for they never suffer from contracted feet, or from corns, sand-cracks, &c.' Yet their work is of the hardest. Many of them bring down from the interior (some hundreds of miles) two bales of cotton, which weigh, with pack-saddle, &c., over 300 cwt., and in fording rivers have to carry across the driver also. This is the way in which all the commerce of the country is carried on. There is not a horseshoe or a nail to be obtained over the whole route, and on some roads at crop times, nearly 2,000 pass daily, some descending to the coast, and others returning inland. In Ireland 'donkeys are worked unshod in draught and over macadamised roads, even over loose broken stones;' and not only are their hoofs uninjured by such treatment, but they actually outgrow the wear and tear of work, becoming turned up at the toes if not periodically rasped."

July.

During this month summer complaints commence their ravages. To be forewarned is to be forearmed. Dr. Fowler's Extract of Wild Strawberry is the best preventative and cure for all forms of bowel complaints and sickness incident to the summer season.

August.

The summer season now reaches its climax, and is prolific in developing bowel complaints. Over-indulgence in fruit, immoderate drinking of iced waters and summer beverages, in a few hours produce fatal ravages among children and adults. Dr. Fowler's Extract of Wild Strawberry is the most reliable remedy for all forms of summer complaints. Safe, pleasant, and prompt in its effects. All dealers keep it.

Communications to insure insertion (if accepted) in the following number, should be in the hands of the publishers a week before the date of the next issue.

PETERBOROUGH, Ont. OCT. 15, 1881.

HUGH SUTHERLAND & BRO. have bought out Towless' lumber limits on Rainy Lake, comprising 100 square miles, his mill at Fort Francis, his lumber on hand and logs, his farm, and his buildings. It is their intention to dispose of their retail business and go into the manufacturing and wholesale business exclusively. They will enlarge the present mill at Fort Francis to a capacity of 20,000,000 feet per annum. There are 300,000,000 feet on the limits. The sale yard will be at Rat Portage and the head offices at Winnipeg.

THE *Timber Trades Journal* says the introduction of steamers into the timber trade has had one good effect which must not be ignored—we mean the increased speed with which cargoes of wood goods are discharged. Some of the recorded feats in this line would have been thought impossible a few years ago. One of the latest instances that have come under our notice is the screw steamer *Nellie*, belonging to Messrs. Pyman & Co., which arrived at West Hartlepool from Soderhamn, on the 16th inst., with 240 standards of deals and boards for Messrs. Harrison & Singleton. The vessel was berthed in the Hart Dock at 9 a.m., the cargo was all discharged by eleven o'clock the following morning and the vessel proceeded to sea the same night with a cargo of coals.

THE *Timber Trades Journal* says Sweden derides American competition in the wood trade, as the difference of expense in getting to market here under our free trade system is glaringly against our colonies. This may be seen at a glance, requiring no elaborate argument to prove it. 60s. was quoted in our last impression as the freight of deals, from Quebec to London, which is below the average, and only a lower port rate. 45s. in the same paper is stated as the freight from Sundswall to London, which is above the average. So that we may assume the the minimum difference to the advantage of Sweden is 15s. per standard. This is just the same as if, being equidistant, Canada goods were subject to a duty of 15s. per standard, equal to about 10 per cent. on the f. o. b. price of high-class deals, and 15 to 20 per cent. on inferior qualities. This is a barrier which, like a turnpike gate, there is no evading. Under a system of duties Canada was put formerly on a more level footing, but free trade leaves our colonies to shift for themselves against the natural advantages of other countries.

SPEAKING of the forests of Russia, *L'Echo Forestier* says :—On the estate of Lenine, belonging to Prince Wittigenstein, there are 56,883 hectares of woodland covered with trees of the greatest commercial value. The oak appears to be the favorite, and there are no less than half a million monarchs of the forest upon the estate, valued at over four and a half million francs. There are also 450,000 pines, valued at ten francs each, or 4,500,000 francs. The entire value of the wood on the property is estimated at over a million pounds sterling.

THE Port Blakely, Wash. T., Mill Co. are enjoying a large lumber order from Shanghai, the filling of which will require five vessels, the aggregate cargoes amounting to 3,000,000 feet or more. Three vessels are there now for loads, namely, the *Earl of Elgin*, the *Hollander*, and the *Marsha*, all barques, and two more are expected soon to arrive. The lumber goes in large pieces—squared timbers, which are again cut on arrival at the other end of the broad Pacific into dimensions to suit ; not that they can be better or more cheaply cut there, bnt that by some custom regulation a light tariff is imposed on the importation of manufactured timber. This order is, perhaps, the heaviest one that ever came to a Puget Sound mill from China.

THE Montreal *Gazette*, in an article on forest fires, writes as follows :—We want more bush than we have. We want not only protection for what is left, but a system by which tree planting may be regularly prosecuted wherever it is needed. We want, in fact, what almost every State in Europe has long found the necessity of, a complete scheme of forest management, including schools of forestry, where young men may be trained for that purpose. These should be established at once. There is no lack of experience on the subject to our hands. Why should we wait until some sudden wave of destruction sweeps all before it, and leaves us nothing but helpless regret? With a regular system of educated forest officers and police, adapted both for preservation and creation, we could in a few years do much to atone for past neglect ; otherwise, we may some day be reduced to the position of Madeira, which received its name from its magnificent and varied wealth of forest, but which has long been dependent on foreign supplies for even the materials of native construction.

A CORRESPONDENT of the Buffalo *Lumber World* says the Saco is the most wonderful river with its tributaries for growing pine lumber of any place in all New England. Although cutting pine has been going on for one hundred years, get it appears to be inexhaustible. It comes up everywhere, and it appears that it makes no difference what kind of growth is cut off, it comes up to pine, and mostly white pine. About forty millions of all kinds of pine, spruce and hemlock are floated down the Saco every year, yet the supply appears to be abundant. Only about sixty miles miles of this river is capable of log driving, as above that the stream is too rapid and rough to admit of it. It is calculated that the town of Frysburg has now eighty million of pine timber, and it grows at the rate of five millions a year, or 16 per cent. There are no square edged pine shipping boards sawed on Saco river now. The small and roughest logs are sawn into § in. box-board rough edged, and sell for from eight to ten dollars per thousand. The largest and best are put into sugar box shooks for the West Indies market. The price for the last two years has been very low, about 50 cents apiece. It takes three thousand feet to make one hundred boxes. The other logs are sawn into 1⅛ in. boards for heading, and of these there are a large amount made on this river. They sell for 18 to 25 cents per pair, according to size. It takes one thousand feet to make sixty pair on an average. A large part of heading lumber is sawn from hard pine, as it grows in abundance on the plains. Hemlock boards now sell for $12, spruce $14 to $16 per thousand. There are not so many mills now as formerly, but what they are make up in speed and despatch what the lack in number.

"MUST SAY it's the nicest thing I ever used for the teeth and breath," says everyone having tried "Teaberry," the new toilet gem. Get a 5 cent sample.

WESTERN LUMBER TRADE.

At the monthly meeting of the Chicago lumber dealers to fix the October price list, the directors recommended that no changes should be made except in shingles, in which item of the list they recommended a decline of five cents per thousand on clear, and twenty cents per thousand on extra A and standard A. This recommendation was at once adopted by the meeting, but on a motion for reconsidering this action a few further changes in the list were thought judicious, and on motion an advance of $1 was ordered on the items of first and second clear, two-inch ; A and B selects, two-inch ; one and one-fourth inch third clear, and one and one-fourth inch A and B selects. With these changes the former list was re-affirmed as the October list, and will so stand unless circumstances shall dictate the necessity of an amended list during the coming month.

The *Lumberman* says that the accumulation of stocks at Chicago is not at all in proportion to the increase in the volume of trade, and this fact was officially recognized by the following resolution, which was recommended by the board of directors, and passed at the above meeting :—

Resolved,—That in the light of the experience of the season of 1880, and thus far during the season of 1881, the past, present, and prospective increase in the consumptive demand for lumber throughout the West imperatively requires of the Chicago lumber dealers the holding of a stock in their yards on January next amounting to not less than 650,000,000 feet, in order that the requirements of their customers, both as to quantity and shipping condition, may be fairly met ; and we, as a board of directors, would point to the fact that but two months of navigation remain, during which time an increase of 75,000,000 feet must be obtained during each month in order to meet what we firmly believe to be the requirements of a healthy winter and spring business, and that, in our opinion, the present prospect and rate of increase do not warrant the belief that the necessary quantity is likely to be realized by a large difference.

The secretary presented an estimate. based upon his daily reports of the present stocks on hand, placing that of lumber at 511,964,279 feet, and of shingles at 200,600,000, on September 25, an increase, as compared with the yard reports of October 1, 1880, of 47,916,234 feet of lumber, and 66,355,000 shingles.

C. P. R. LAND DEPARTMENT.

Early in May the Company, having taken into consideration the organization of a land department to deal with the vast acreage to be awarded as the line progresses, decided to establish the head office in Winnipeg, and appointed Mr. J. H. McTavish, Chief Factor of the Hudson Bay Co. here, as Land Commissioner. Mr. C. F. Kindred, formerly chief clerk of the Northern Pacific Land Department in St. Paul, was subseqently appointed Assistant Commissioner, and the organization of the department has been rapidly completed by Mr. McTavish, who secured the premises formerly occupied by the Bank of Montreal here for offices. Land examiners have been in the field for some time past, and the office staff have been busily engaged recording and classifying the applications that have been made to purchase lands. Over 1,500 applications have already been received, the amount of land represented by them amounting to about 750,000 acres. On Monday, the 26th, the Department will commence to deal with these applications, and will on and after that date be prepared to sell land. In all cases in which persons have settled on railroad lands in good faith and made reasonable improvements, their claims will be respected, and they will be allowed to purchase the land on the Company's advertised terms.

The Company has decided to sell only to actual settlers or to persons who agree to cultivate and otherwise improve, and the pernicious evil of speculators buying large tracts and locking them up will be thus avoided. The price of lands will be $2.50 per acre, one-sixth in cash and the balance in five equal annual instalments. The form of contract which has been prepared provides that until the final payments are completed, all improvements placed on the premises shall remain ; that the purchaser will regularly pay all taxes, and that he will cut no wood or timber upon the land except for fuel and fencing and the erection of buildings thereon. It is provided that the purchaser shall, within four years after the date of the agreement, bring under cultivation, and sow and reap a crop on three-fourths of the land, but if he shall erect buildings thereon, satisfactory to the Company, and shall reside thereon continuously for three years at least of the four years, then at least one half of the land shall be by him so cultivated and cropped within four years. It is further provided that the purchaser will be allowed a credit of $1.25 per acre for each acre cultivated and cropped during the four years, or if he erect buildings and reside on the land continuously, then the period during which breaking may be made and allowed for will be extended. On the completion of the payments and the performance of the terms of the agreement, the Company will give a deed conveying the land in fee simple, reserving, however, a strip or strips 200 feet wide to be used by the Company for right of way or other railway purposes, wherever the line of the C. P. R. or any branch thereof is or shall be hereafter located over the land. If the purchaser fails to carry out the terms of his agreement, all his rights, etc., in the land will cease, and it will revert to the Company, but the Company may, in its discretion, revalue the land and make a new sale of it to the purchaser at the revaluation.—*Winnipeg Free Press.*

A Large Walnut Tree.

Malachi White, of Middletown, has sold to Watson & Buckman, lumber dealers, of Newtown, Pa., the large walnut tree which has stood in the door-yard for at least 150 years past, and from which the farm derived the name of "Walnut Green. From the best information that can now be obtained, it is supposed the tree was planted by John Woolston, the owner of the farm, about the year 1728. The tree was twenty feet in circumference, nineteen feet to the limbs, and as straight as an arrow. Some of the limbs are about three feet in diameter and thirty feet long, making good sized saw logs. The tree was a great bearer, and it is said that as many as sixty bushels of walnuts have grown on it in a single year. The cutting and hauling of such a tree is no inconsiderable task, and it had to be chopped for a considerable distance before the eight-foot cross-cut saw could be worked to advantage. After cutting the tree down the log was cut off nineteen feet long, and loaded on a log carriage and taken to Newtown, where it will remain about a year, or until the sap becomes colored, before it will be sawed.

Department of Crown Lands,

TORONTO, 6TH OCTOBER, 1881.

NOTICE IS HEREBY GIVEN THAT, UNDER AN ORDER IN COUNCIL,

TIMBER BERTHS

In the undermentioned Townships in the

MUSKOKA and PARRY SOUND DISTRICTS,

Will be offered for Sale by Public Auction at the Department of Crown Lands at twelve o'clock noon.

On TUESDAY, the 6th day of December next,

viz. :—Townships of Mowat, Blair, McConkey, Hardy, Patterson, Mills, Sinclair, Bethune, Proudfoot, Gurd, Machar, Strong, Joly, Laurier, Pringle, Lount, Nipissing and Himsworth.

The area to be disposed of in the above Townships as Timber Berths is upwards of 1,400 square miles, and to suit all classes of purchasers each Township will, as nearly as practicable, be divided into four berths.

Sheets containing conditions and terms of Sale, with information as to Area and Lots and Concessions comprised in each Berth, will be furnished on application personally or by letter, to the woods and forests branch of the Department, or to the Crown Timber Offices at Ottawa, Belleville and Quebec, and the Office of T. E. Johnston, Esq., Parry Sound.

T. B. PARDEE.

L22 1y

PARKER & EVANS

SOLE PROPRIETORS OF THE

FAMOUS INTERNATIONAL

BOILER FLUID COMPOUND.

Patented 5th March, 1877.

This Compound will save its Cost many times in one year by saving fuel.

It eradicates scale, and when the Boiler is once Clean a very small quantity keeps it Clean and Free from all Incrustation.

It is perfectly harmless to Iron, and emits a clear pure Steam.

In ordering, mention the CANADA LUMBERMAN. L241y

When you visit Toronto, come direct to OAK HALL, and fit yourselves out with a Good Suit. Remember the address:—OAK HALL, the Great One Price Clothing House, Toronto, opposite St. Jame's Cathedral. 1yL13

THE NEW DOCKS AT LIVERPOOL.

The *Timber Trades Journal* says that the reception accorded to the Prince and Princess of Wales at Liverpool on Thursday week was of the most gratifying character. The Prince performed the ceremony of opening the great dock gates, and the Princess the interesting duty of "christening" one of the docks, the Alexandra. At a banquet following the ceremony the Prince of Wales, in replying to the toast of his health, alluded to this important addition to the dock system of Liverpool in these words :—"We are not likely to forget the reception we have met to-day at Liverpool ; and although it is by no means the first time that we have visited this great and important city, still the special occasion which brought us here to-day is one which is not likely to be forgotten by us. We have not only visited your great and important city, but we have taken part in a great and interesting work, one which, I trust and feel convinced, cannot fail to improve, if possible, even still more the great commerce of this city, and at the same time evince the great modern engineering skill of the present day. Everybody knows that Liverpool, after London, is the second largest city in the United Kingdom, but there are a few statistics connected with the docks of this great city which I perhaps may mention on this occasion. At the commencement of the century dues were paid on 450,000 tons, and in the present time they amount to 7,800,000—very nearly 7,900,000—tons. In the year 1864, when my late lamented father visited your town and opened the dock which is now called after his name, the docks and basins amounted to only 27, whilst now they amount to 58. Again, in that year the length of the quays was nine and a half miles, and it now amounts to forty miles. At that time the water space occupied by the docks was 122 acres ; it is now 543 acres, and whilst the extent of the dock estate was then only 506 acres, it now amounts to 1,545. These figures show clearly the great prosperity of this city, and they also show, under the able chairmanship and able management of the chairman of the Dock Board, how flourishing everything in connection with these great docks is. I must not forget to allude to the name of one who, though he is taken from you, must ever remain in your memories, the name of the late Mr. Jesse Hartley. It was he who first founded the modern system of docks. After his death his son succeeded him, but only for a short time, and then the mantle of Mr. Hartley descended on the shoulders of Mr. Lyster, the present engineer."

We abstract the following description of the new docks from the *Daily News*.—

"The river front of the Dock Estate at Liverpool and Birkenhead is about eight and a half miles. It covers more than 1,500 acres, has a water area, including the new docks, of 543 acres, and forty miles of quays. Eighty years ago the vessels entering the docks and paying dues fell far short of half a million ; now it is nearly eight millions—figures which show the rapid growth of the latter in size. The new docks are calculated to accommodate the largest ships now in use, and were commenced eight years ago. A sea wall, crowned by a magnificent promenade, extends northward for 6,000 ft. across the front of the new docks to the Seaforth Battery, whence another sea-wall returns, almost at right angles with the first-named, towards the shore. The area thus enclosed is about 310 acres."

In reference to the Canada Dock, the writer says :—The Canada Basin and its piers, constructed some years ago, have been in a great measure rebuilt and remodelled. Large timber jetties have been added outside the pier-heads, for the purpose of sheltering the entrance and facilitating the egress of ships. To all who know the Mersey this care to prevent accident will not appear superfluous under certain conditions of wind and tide. The basin has also been enlarged, and an elaborate system of sluices constructed within it and carried along the jetties to the outer heads."

In the "Alexandra Dock the main body of the dock is an irregular rectangle, 1,600 ft. long by 500 ft. in width, enclosing some seventeen acres of water ; the total water area is 44¼ acres, with 11,814 feet of quays. The water area of the whole group of new docks is 81 acres, with more than four miles of quays and 25 acres of new sheds."

OTTAWA SQUARE TIMBER TRADE.—1881.

From Our Own Correspondent.

OTTAWA, Sept. 26.—The following is a detailed statement of the number of cribs of timber brought down from the Upper Ottawa during the present season :—

J. R. Booth	529
Caldwell & Son	329
A. & P. White	311
R. H. Klock	179
Wm. Mackey	321
Thistle & Carswell	143
J. B. Dickson	102
Octave Latour	163
R. Campbell & Son	580
A. McLean	244
Hilliard & Dickson	106
Fraser & Curry	114
John Fraser	112
J. Francis & Co	243
Bell & Hickey	119
Fraser & McCoshen	381
J. & S. Bryson	189
Thistle & Eagan	179
R. & W. Conroy	176
David Moore	185
R. & J. White	99
Alex. Fraser	144
J. & D. Grier	108
Barnet & McKay	309
McLachlin Bros	271
Robert Grant	56
J. & G. Heavy	34
W. Croft	34
Boyd Caldwell	88
McCool & Sunstrum	87
Gillies Bros	88
Sills Bros	53
Wm. Mason	93
J. Pompore	18
Levi Young	93
Chas. & Wm. Mohr	81
G. A. Grier	93
R. Nagle	94
Young & Bronson	89
James Findlay	12

This gives a total of 5,749 cribs ; but, in addition to the above, there was a small raft brought down for James Findlay by rail, while all the timber of the British Canadian Company is coming down the same way. The timber by rail would be equal to 600 cribs, so that the grand total of timber reaching market will be 6,349 cribs. To this must still be added 750 cribs in the four rafts of O. Latour ; the three of David Moore, and one of R. and J. White, which stuck in the Upper Ottawa, in order to get at the season's output of square timber.

An Architect on the Situation.

An architect, who has done a good deal of work for speculative builders this season, is inclined to think that the marked activity seen in the last six monts, will decline gradually for the next six months.

"What about prices?" asked a representative of the *Real Estate Record*, of New York.

"My opinion is that the price of labour and material will fall to their normal condition, and then people will think about building again. You know that from 1865 to 1873, the market was in a see saw condition. A year of activity was followed by a year of dullness. Of course, when the panic came, everything came to a standstill for several years. It is only within the last two years that the building trade has regained its wonted buoyancy."

Don't you think there are too many high-priced houses in the market to-day ?

"I have no doubt of it. As soon as prices become settled, builders will start new enterprises, and as a natural consequence will be able to place houses in the market next year at a figure lower than those who have built this year possibly can."

Somebody will lose money then ?

"Yes, but the few will suffer for the good of the many. Rotten concerns will be pushed to the wall, and safer business must inevitably follow."

Nature Makes no Mistakes.

Nature's own remedy for bowel complaints, cholera morbus, cholic, cramps, vomiting, sea sickness, cholera infantum, diarrhœa, dysentry, and all diseases of a like nature belonging to the summer season, is Dr. Fowler's Extract of Wild Strawberry, which can be obtained of all dealers in Medicine.

A WAVE OF IMPORTATION.

The *Timber Trades Journal*, of Sept. 17, says :—Not only in London but all along the east coast there is an unusually large supply of wood goods reported in our last number, chiefly from Scandinavia and the Baltic, by reason of about a week of northeasterly winds blowing steadily on that side of the island of Great Britain, being really the first spell of that kind which we have had from that direction for some months past. The prevailing winds this summer were from the west and south-west, with an occasional slant from the eastward, scarcely enduring twenty-four hours, or a day or two at most, when they again reverted to the west as before. The consequence was that east country ships dropped in slowly, and the timber-carrying trade seemed to be about to be done chiefly by steamships, sailing vessels making so small a show up to the end of July in comparison of the anticipations of the trade.

We had ourselves warned importers that the summer months were likely to make up a good deal of the shortcomings of the spring, and we certainly had an impression that July and August would bear out the view we took ; but when the returns for July showed a substantial deficiency, as compared with last year, our confidence in a plentiful supply somewhat abated, and it appeared likely that the trade would be in a position to make a good profit on the purchases they had made earlier in the year ; also reports began to be circulated that demand was overtaking supply, insomuch that those who had made contracts for their season's importation were regarded as on the lucky side, and those who had hung back in doubt during the previous months seemed then to be in some haste to secure a larger share of the stock still remaining for shipment abroad than they had previously intended to buy.

The returns for August again, though those of a good average month, were still moderate, and short of public expectation. This gave renewed briskness to speculation, and some considerable stocks abroad found buyers ready to deal for them offhand, as we intimated last week. The sudden change in the ratio of supply which we then had to record must, however, in some degree damp the ardour of buyers. People wondered what had become of all the sailing ships that were supposed to be in the trade, and those who had chartered and got their bills of lading long since began to fear the short days would be here before the cargoes on the way home. September has already materially abated their apprehensions, and the opinions of the trade in regard to the ultimate wind-up of the year will again vary.

The importation to the United Kingdom for the first week of this month averaged more than 110 timber ships per day, and if it contiuues at that rate to the end of the month, and assuming the average cargo to be only 150 standards, we should have imported nearly as much in excess of last year as we were at the end of August in arrears of it—viz., about 760,000 loads. But this, of course, is not altogether likely, though it is far from impossible that we shall tread very closely on the heels of last year, for if the North Sea were cleared of the bulk of the cargoes on it last week, the Atlantic, as shown by the returns from the west coast, was all the other way.

Liverpool, with heavy stocks, had very little added to them, and, though doing a fair trade, could not get any appreciable advance. The best sizes and qualities of St. John spruce, at the public sale, brought no more than £7 10s., and the average of the cargo not £7, and other spruce cargoes from the Gulf of St. Lawrence averaged about £6 10s. With these prices on a backward importation it can scarcely be expected that better terms will prevail later on. There were, however, two causes assigned for the disinclination of buyers to accede to an advance of price—one that "the lower port cargoes were somewhat discoloured," the other, that buyers were discouraged by the bad harvest prospects. For ourselves we do not attach importance to either in this case ; most likely the plentifulness of the stock on hand and the knowledge that a good many spruce cargoes are on their way to Liverpool were the real checks to more liberal dealings. Waney board timber, of which the stock on hand is nearly double what it was last year, found no buyers at the reserve on it—this, too, in the face of a rising market at Quebec. In contrast with the state of the importation for the same week in London, we may point to the fact that more firewood was imported there than the total bulk of wood into Liverpool, over thirty cargoes of firewood besides oddments arrived in the Thames during that week, bringing altogether more than 5,550 fathoms (above 23,970 loads). Possibly with the next strong puff from the westward the arrival of transatlantic timber ships in Liverpool will render the contrast less remarkable, but on the other hand, as the demand is already scarcely equal to the supply, which means that the commodity is too abundant to admit of much margin to the vendor, with large arrivals it will be still more difficult to obtain a profit. * * * We may therefore look forward to a rather full importation during the fall. Nor, after the bound forward which the trade has made in that department since the present month commenced, will anyone be surprised if the tot-up at the end of this year should find the United Kingdom quite as well supplied with foreign and colonial timber as it was at the termination of the last.

Swedish Enterprise.

The *Timber Trades Journal* says :—It is reported that, in view of the development which the trade in wood goods from the north of Sweden to Australia is taking, several of the Swedish shipbuilders, who have hitherto been occupied in building wooden ships, are preparing to lay down iron ships instead, the advantages of the latter class in carrying capacity, &c., more than making up for higher first cost. There is no doubt a considerable field of employment open to tonnage of this class, and which can be much easier worked than steam tonnage, from the north of Sweden ; but it is, however, liable to be ousted out of the return freight and other goods from Australia by steam, however remote this contingency may appear at present. Iron shipbuilding at Gothenburg, Malmo, Oscarshamn, and Stockholm is active, and an increase in the size of the vessels is observable. Steamers of 3,000 tons burden are now being built at Malmo for Copenhagen firms, to run between that lively Danish town and the United States with emigrants and goods.

Boiler Explosions.

A Canadian mechanical engineer, named Arnoldi, has invented a device designed to give a partial security against boiler explosions. The invention consists of an electric adjustable attachment to the ordinary steam guage now in use, to give an instant and continuous alarm, at any distance from the boilers or other pressure generators, of any excess of pressure over that at which the alarm has been set, and where there is more than one generator in operation, an ordinary "tell tale" can be attached to signify which generator is at fault. The invention possesses a great many valuable features, prominent among which may be noticed that it is extremely simple and inexpensive, and can be attached to existing arrangements at no expense beyond that of the alarm itself, and without in any way affecting the present adjustment of the guage.

Fire Proof Shingle Roofs.

Spon, for this purpose, recommends a wash composed of lime, salt and fine sand or wood ashes, to be applied as in putting on a coat of whitewash. This coating, he adds, will render an ordinary shingle roof fifty-fold more safe against fire from falling cinders in case of a neighboring fire, than one without it. He adds, also, that it will have a preservative effect on the shingles, protecting them against rotting from exposure to the weather, and against warping, and states that the older and more weather-beaten the shingles are the more benefit they will derive from this application. He recommends, finally, that a small quantity of lampblack be mixed with the wash, to give the coating a darker color, thus avoiding the offensive glare of a white-washed roof.

The ancient orders of architecture are the Tuscan, Doric, Ionic, Corinthian and Composite. The five leading pens of Esterbrook's make are the Falcon, Bank, Engrossing, Extra Fine and School.

Chips.

THE Chippewa, Wis., Lumber & Boom Co.'s mill, in two days last week, sawed 856,000 feet of lumber, in an actual running time of twenty-two hours.

THE Empire Lumber Company, of Winona, will erect a new mill that "will occasion the expenditure of about $100,000 in the further development of the manufacturing interests of Winona."

THE state of New York has not escaped devastation by forest fires. A tract twenty miles in diameter near Carthage was burned over, the estimated loss of timber lands being three hundred thousand dollars.

THE Orillia *Packet* says :—On account of the lowness of the water the Severn mills have been cutting rather below the average. Should we not get very heavy rains soon the probabilities are the mill will be stopped.

THE building trade is showing signs of activity in Bristol and the West of England. Masons and carpenters are more busy than they have been for the past two years, and there is a decided improvement in the demand for timber.

THE St. Croix, Wis., boom has been closed for the season. A little over 200,000,000 feet of logs have passed through since navigation opened. The Stillwater *Gazette* says the total amount got out this season exceeds that of any year in the history of the boom.

SANDS & MAXWELL, of Pentwater, Mich., have shipped to C. C. Thompson & Co., of Chicago, a clear pine plank, sixteen feet long, forty inches wide and four inches thick. The same firm has also shipped one of the same size and grade to the St. Nicholas Toy Company.

FROM a tabular statement in *L'Echo Forestier* we gather that fifty-four vessels entered the port of Dieppe, France, during the month of August, with timber cargoes, the greater number arriving from Hernosand and Sundswall (Sweden), Riga and Kotka (Russia).

AT the French seaport town of Honfleur they cannot be said to be protectionists in the timber sawing business. Instead of only raw wood being sent them as formerly, to be worked up, a great deal of timber is now brought already worked, to the detriment of many Honfleur saw mills.

C. L. STINE, Bucyrus, Ohio, who has a mill four miles west of that town, has sawed 1,500,000 feet of hardwood this season, and expects to add 1,000,000 to it by shutting down time. Walnut is worth $45 in that locality ; oak $20 ; ash $21—all right from the saw. The market is active, and the timber supply limited.

THE Chippewa, Wis., *Herald* says the Chippewa Lumber and Boom Company's mill has cut thus far this season, 41,000,000 feet of lumber ; 12,500,000 lath ; 200,000 pickets, and 9,250,000 shingles. It is estimated the mill will cut by the 10th of next month 50,000,000 feet. This is about 15,000,000 more than it has cut in any previous season.

SAMUEL JELLISON, of Belfast, and the spool factory company of Searsport, Me., have recently purchased a township, known as No. 4, in range 8, in the north part of Penobscot county. The township contains 33,000 acres. The east branch of the Penobscot river, and a tributary, run through the township, affording excellent opportunities for logging. The forests are largely white birch, which is the material used in the manufacture of spools. A large gang of workmen are now on the grounds getting out spool stock.

WHEN the Stillwater, Minn., boom was shut down on account of the recent high water, over 220,000,000 feet of logs had passed through during the season thus far. The total amount got out this season exceeds that of any year in the history of the boom, the largest run heretofore, which occurred about five years ago, having been 204,000,000 feet. At a meeting of the Lumbermen's Board of Trade held recently, it was decided to send a crew of men, under charge of James Rooney, to Taylor Falls, with instructions to bring down every log between that point and Stillwater. This, it is said, will make the cleanest sweep ever known.

FIVE ACRES OF LUMBER BURNT.

The Oswego *Palladium* gives the following graphic account of the appearance of the recent conflagration in that city :—"We are sure that none who saw this picture when the fire was at its height ever saw a grander or more impressive of the kind. About five acres of lumber all in a blaze, fanned by a gale of twenty miles an hour, makes an elemental combination seldom seen. Seizing on a lumber pile the fire would wrap it in an instant and pour from every interstice from top to bottom a devilish looking blue flame, which streamed from the cracks in a sheet resembling molten metal forced out under high pressure. There were, as said, about five acres of these mighty forges, all flaming at once. and when they lost their individual forms and settled down into less shapely heaps they glowed and fused like ores. Apart from the sense of danger and damage going on, it was a stupendous spectacle. The reflection of the fire lighted the cloudy sky with a sickening glare which had an awful look, and for miles around the country was lighted up almost as by the sun at noon. Throughout the towns of Oswego and Scriba the people were awakened by the unearthly light, and looking toward the city believed it to be all on fire. Many hitched up their teams and drove to town, and several carriages came down from Fulton, where the fire looked as if the whole city were involved."

How Forests Pay in Scotland.

A writer in an English journal says that there have been forests in the neighbourhood of Darnaway for many centuries. The oak forest of Darnaway, which, by the way, is the seat of the Earls of Moray, is acknowledged to be the finest in Scotland, and there are few which can compare with it anywhere in the British Isles. For over a century the oak produced from this forest, which is over 3,000 acres in extent, has attracted attention all over the north of Scotland, and ship-builders and wheelwrights from all parts annually attend the sales. As early as the latter years of the last century the thinnings brought $5,000 per annum, and between 1830 and 1840 the sale of timber and bark ranged from $20,000 to $25,000 yearly. Owing to the low price of both wood and bark, not so much has been cut lately as in former years, but notwithstanding the way it has been reserved, it is said that after paying every expense during the growth of the timber, the revenue of the forest per acre has been double that of the finest arable land in the country. Some idea of the extent of the forest, including the oak and pine woods, may be gathered from the fact that in order to make a tour through them a walk of twenty-six miles has to be engaged in.

THE Menominee, Mich., *Herald*, in mentioning the slabs and edgings that are being shipped from Saginaw to Chicago, says that the amount of this kind of material destroyed in the burners at Menominee daily would supply a large city with wood steadily. Thousands of cords of edgings are consumed, with other refuse, every season, which if it could be "dropped" in a city like Chicago, would keep thousands of families in fuel the year round. It seems unnecessary to waste so much wood in order to get rid of it, and that, where mills are situated on navigable water, this waste might be profitably shipped for fuel.

MESSRS. GEMMELL, TUCKETT & Co., in their monthly timber report, dated Melbourne, August 1st, state :—The amount of business carried through during the month has been fully up to the average, and prices have been sustained.

AMERICAN LUMBER.—Market quite bare of w. p. t. and g. ceiling and shelving, and stocks of clear pine are lower than for years past. The only sales were ex *Harvard*, 43,510 ft. wide w. p. shelving, £11 10s. to £11 5s. per M super ; 4,819 ft. 5¼×1¼, 6×1¼, t. and g. pitch pine (including tongue), 11s. 3d. per 100 ft. lineal.

ZOPESA.—A healthy man never thinks of his stomach. The dyspeptic thinks of nothing else. Indigestion is a constant reminder. The wise man who finds himself suffering will spend a few cents for a bottle of *Zopesa*, from Brazil, the new and remarkable compound for clensing and toning the system, for assisting the Digestive apparatus and the Liver to properly perform their duties in assimilating food. Get a 10 cent sample of *Zopesa*, the new remedy, of your druggist. A few doses will surprise you.

The Ottawa River.

An exceptional, not to say extraordinary, lowness of water in the Ottawa River at the present season affords a good opportunity for examining the bed of the stream, and becoming acquainted with hitherto hidden dangers to navigation. All along the river between the Chaudiere and Grenville, rocks and reefs, whose very existence was unknown, have appeared above the surface of the water. Opposite Ottawa three new islands are laid bare, and further down a most dangerous sharp pointed rock has appeared in McLaren's Bay. At various parts on the shores similar obstructions are now conspicuous.

These facts, we should think, ought to induce the Government to take steps for clearing the river of the worst, at least, of these rocks and reefs. A proposition, noted in these columns the other day, has been made to erect a dam at Grenville, and we hope it will receive favorable consideration by the Department of Public Works. But it is equally important to remove obstructions as it is to keep up the level of the water, and, as the season offers exceptional advantages, no time should be lost. A very small outlay, comparatively speaking, at the present time would be of the greatest advantage, and, perhaps, save both life and property hereafter. —*Free Press.*

Market Reports.

MONTREAL.

From Our Own Correspondent.

SEPTEMBER 26.—Since the date of our last report the shipping of lumber has almost ceased. The shipment to South America was only one cargo to Buenos Ayres, consisting of 535,669 ft; to Cardiff, 9,007 pieces; to Cardiff, 129,000 feet. Lumber stocks here of all kinds are very low, both of sawn lumber and round logs; as a consequence prices are very stiff, and, water being so low, higher prices are expected very soon, at all events as soon as navigation closes. We do not at present alter our quotations, but outside figures for the most part rule. We still quote as under:—

Pine, 1st quality, ₱ M.	$32 00@40 00
Pine, 2nd " ₱ M.	18 00@24 00
Pine, shipping culls, ₱ M.	12 00@15 00
Pine, cull deals, ₱ M.	8 00@10 00
Pine, mill culls, ₱ M.	5 00@ 6 50
Spruce, ₱ M.	8 00@10 00
Hemlock, ₱ M.	8 00@10 00
Ash, run of long culls out, ₱ M.	16 00@18 00
Bass, " ₱ M.	14 00@16 00
Oak, ₱ M.	35 00@45 00
Birch, ₱ M.	17 00@20 00
Hard Maple, ₱ M.	18 00@25 00
Lath, ₱ M.	1 25@ 1 35
Shingles, 1st, ₱ M.	3 00@ 0 00
Shingles, 2nd, ₱ M.	2 00@ 0 00

The total shipments since the opening of navigation to date were 7,848,475 feet, against 4,319,278 feet for the same period of last year, being an increase of 3,529,197 feet. Advices from Ottawa report that many of the mills in the Chaudiere, owing to want of logs, want of water preventing their getting the logs to the mills, have been obliged to shut down, so that everything here looks for considerably higher figures in the near future.

In cordwood there has been considerable activity, and holders are making strenuous attempts to enhance values, but in the meantime ready money makes a little difference in their views. We continue to quote as under, at which some pretty fair transactions are transpiring. We quote:—

Red Tamarac	$ 4 50@ 5 00
Hard Maple	5 50@ 6 50
White Birch and Soft Maple	5 00@ 0 00
Red Birch	5 50@ 6 00

Later.

OCTOBER, 10th.—There is a general complaint among the lumber merchants here of the difficulty of getting down lumber, owing to the lowness of the water, and as a consequence prices are very firm; but as the demand for building lumber has not been very brisk, prices can hardly be said to be quotably higher. Shipments since the date of our last report have been very small, indeed they have almost ceased. To Cardiff 85,140 ft. have been shipped; to Liverpool, 23,314 pieces of deal boards and ends, and 155 pieces of oak; to Buenos Ayres, 539,148 ft. The total shipments to the River Platte since the opening of navigation to date were 8,387,623 ft., against 5,751,434 ft. for the same period of 1880, showing an increase of 2,636,189 ft. The quotations remain the same as in my last epistle.

CORDWOOD.—There have been some large contracts entered into for long maple, at $7.50, delivered. The prices on the wharf, ex cartage, are long maple, $7.00; short do., $6.50; long birch, $6.50; short do., $6.00; long beech, $6.00; short do., $5.50; tamarac, $4.50. The demand for cordwood is better, and prices are very firm.

TORONTO.

From Our Own Correspondent.

OCTOBER 8th.—The block in lumber at this port continues much the same as when I last wrote you. When passing over the dock yesterday the writer estimated that nearly 3,000,000 feet of lumber, including that standing on the cars, was awaiting shipment, and at the time of writing this there is not one foot of available space left on any of the docks belonging to the H. & N. W. R. Co., and at the present time only one small vessel loading at the wharf. Lumbermen have had a hard time of it this season; what with scarcity of cars, fighting bush fires, burning of mills, and difficulty experienced in getting the lumber away after its arrival here, their lot has not been a happy one, and the season being now so far advanced, the anxiety of shippers to forward their lumber to its destination is quite excusable.

During the last three weeks large quantities of cedar ties have arrived here for shipment. Messrs. Rathbun & Son have purchased largely in this line north of this city, and are now shipping them to the American market. Two years ago $13.00 per hundred was the ruling price for ties loaded on the cars; $18.00 per hundred is the price now being paid, so that owners of tracts of cedar are beginning to realize that they have quite a bonanza. The contractors for the cedar block pavement in this city have now had to suspend work until spring, on account of the scarcity of cedar suitable for their purpose.

The scarcity in bill lumber still continues, and builders have frequently to visit all the yards in the city before procuring sufficient to meet their wants, and in many cases have found it impossible to get their orders filled, and yet in the face of this famine for dimension stuff, prices still hang at the old figures, and lumbermen are missing a good chance to raise their tariff of prices, simply for the want of a mutual understanding with each other on this and other matters equally important to the trade.

The 20 per cent. advance on R.R. freights has now become an established fact, and it is announced that the Railway Company repudiate special arrangements made prior to the advance in rates, but, to say the least, it is questionable if railway corporations have the power in their hands to grant special rates to certain individuals. It certainly seems unreasonable that one man or firm should have their lumber brought from any given point for three or four dollars per car less than some other men or firms, doing business at the same place. Yet such is, no doubt, the fact, but it is done in this way, in order to make it colorable, all bills for freight from all stations are made out at the same figure, and the favored ones get a rebate by applying at headquarters. This enables such persons to undersell their neighbors fifty cents per M., or else make that much higher profit. A more unjust method of doing business it would be hard to name. In such cases the smaller fry are at the mercy of the larger fish, as fifty cents per M. in times of close competition, and in sales devoid of risks, would be a fair living profit, especially if the sales were made in large quantities.

Shingles are somewhat more plentiful, and remain at the same figure retail, but considerably lower wholesale on rail or vessel, $2.40 to $2.45 being the ruling figures for 16-in. XXX shingles, F. O. B. vessel here. Sawn lath are in good demand, and less plentiful than formerly, and as the season's work comes nearer to its close, lath will likely advance in prices. Butternut is in excellent demand, and a good article will bring a good figure, especially if cut into 2, 3 and 4 in. plank, or 6×6 and 8×8, and any parties having dimension stuff, say 2×8, 2×10, 2×12, and 20 and 22 ft., will meet with ready sale, and at good prices, on this market, as nine-tenth sof all shipments arriving here are comprised of mill cull, and shipping cull boards. Sound stock boards and good lumber find their way over the docks, leaving little but coarse boards for the local trade. Black ash lumber of good quality will command ready sale here at present. Many people are now only beginning to find out the value of this wood for finishing purposes, and yet hitherto a building could be finished with this wood at less cost than when finished with good pine, and its appearance, when oiled, is much preferrable to pine when painted, and its lasting qualities, in dry situations, nearly equal.

Building continues as briskly as ever, and it may serve to convey some idea of the large amount of lumber being used in this city when I state that the firm of J. & F. N. Tennant alone are reported to have sold about 1,000,000 ft. on the local market during the past month, and this amount sold mainly to consumers, and this would certainly not be more than the one-tenth of all the lumber sold to consumers during that same period.

LONDON, ONT.

From Our Own Correspondent.

OCTOBER, 10th.—There is a general talk of dullness in the lumber market here. It was at one time thought there would be a good demand spring up in the Fall, wood merchants generally were confident of this result, but it has not yet been realized, and, since my last, business has fallen off instead of increasing, as expected; there is, however, no grumbling, as all dealers seem to have enough to do, and appear satisfied. Prices, however, remain unchanged, which is a healthy sign.

As the Fall comes upon us building in this city narrows down to small limits, and there is nothing particular to note in this direction.

The Messrs. Green, whose extensive premises were almost completely destroyed by fire some time ago, are rapidly rebuilding, and they will be in working order again in a very short time. These premises will be of a more modern construction than formerly, and built with a view to evade any sudden attack of fire.

Mr. G. C. Hargreaves has effected a compromise, and the estate is being wound up. Meanwhile Mr. Hargreaves himself is employed in this market by a large wholesale Toronto firm.

The lumber coming in here is principally by the G. W. R. There are great complaints of the G. T. R. not having sufficient car accommodation for the requirements of the trade.

I must report the lumber market dull in this city, but prices rule about the same as given in my last.

ST. JOHN, N. B.

From Our Own Correspondent.

DEALS.

Reference was made in our last report to the efforts being made to complete the loading of ships then in port, by the 1st inst., to secure their deck cargoes. Those efforts were quite successful, the result being to greatly reduce the dimensions of our fleet, as well as to exhaust our stock of deals. Probably the stock of deals here is less than it has been for more than a quarter of a century, and as the country mills are mostly idle, the prospect is that the quantity wintered here will be scarcely worth counting.

FREIGHTS.

The freight market is remarkably quiet; scarcely any tonnage offering, and but little wanted. The only recent transaction reported is the *Champion*, 799 tons, for Liverpool or Bristol Channel, at 57s. 6d., which may be considered about the market rate. Owners are talking of 60s., but considering the great scarcity of deals, it is doubtful if this can be obtained at present.

VESSELS IN PORT.

The following is a list of the vessels in port, with their tonnage and destinations:—

Anna P. Oddell, 379, Glasgow.
W. D. Wallet, 1413, Melbourne.
Malville, 924, Melbourne.
Stanley, 542, France.
C. E. Robinson, 531, Cork Quay.
Eleanora, 1049, United Kingdom.
Adept, 1102, Liverpool or London.
Windward, 607, Rio Janeiro.
E. Sutton, 545, repairing.
Kilverdale, 1190, Liverpool or London.
Salacia, 797, ——
W. Dickinson, (s), 1350, Liverpool, London, Fleetwood or Bristol Channel.
Champion, 799. Liverpool or Bristol Channel.
Lalia, 391, ——
Sovereign, 332, Wexford.
Teddington, (s), 1310, discharging.

SHIPMENTS.

The shipments of deals and other sawn lumber are as follows:—

For Europe	18,593,000 Sup. feet.
" United States	3,106,000 "

October 7th, 1881.

From Another Correspondent.

SHIPPING.

OCTOBER 8th.—The fleet has been considerably reduced since our last, as quite a number of vessels cleared on the 1st of October, in order to get away before the deck load law came into operation. Under this law no vessel clearing after the 1st of October can take more than three feet of a cargo on deck, which of course materially reduces the amount of freight.

English freights are not materially changed. We hear of one charter at 65s. 6d. to the Bristol Channel. Of the two steamers in port, one is unchartered at present, and the other has been taken for U. K. at private terms, said to be 55s.

Coastwise freights are about as before quoted, and $2.25 can be readily obtained for Boston. We are aware of one charter for Boston of a load of sleepers, at 14½ cents, which is really better than $3.00 per M., but this is an exceptional case.

OUR LUMBER EXPORTS.

The following is a statement of the clearances of lumber at the port of St. John, N.B., for transatlantic ports for September, 1881. During the month 32 vessels, having a total of 22,573 tons, were loaded with:—

Deals, battens and ends	20,491,226 sup. feet.
Boards and scantling	697,971 "
Pine timber	37 tons.

We also give the shipments of lumber at the port of St. John, N.B., for transatlantic ports, from 1st. Jan. 1881, to Oct. 1st., 1881:—

Deals, battens and deal ends	154,485,379 sup. feet.
Boards and scantling	4,899,184 "
Palings	284,965 pieces.
Pine timber	806 tons.
Birch	3,609 "

Logs are scarce and holders are not desirous of selling. About 300,000 feet of unmarked superior logs were sold in the boom at $8.00.

The English market remains fairly satisfactory, and at the present time the stock in Liverpool is not excessive, so that dealers can command good prices.

The American market is also tolerably remunerative. In Boston we can quote $13.00 to $14.00 for good wide spruce boards; laths at $1.75 to $1.87½. In New York laths have in some cases reached $2.00, but the majority of sales have been at $1.90.

Oct. 8th, 1881.

ALBANY.

OCTOBER 4.—The *Argus* says the demand for the past week has been largely in excess of the preceding, and the attendance of buyers better. A sale of a million and three-quarters to a Brooklyn firm is among some of the purchases we hear of. The scarcity of certain pine grades specially sought after for manufacturing purposes is being felt, and it is apparent the "cry of wolf" is not without reason, as we hear of a prominent Michigan manufacturer shipping box direct from the saws to vessel. The lower grades of pine lumber have been sold, no doubt, too low, considering the yearly decreasing percentage of the better grades, and we see lighter stock here to-day than for years past, which no doubt will produce an effect on prices during the short business season that remains. Vessels from Canadian ports are difficult to get, and the rates asked very high. The northern mills are working with a fair supply of water.

The receipts of lumber by lake at Buffalo for the week ending Oct. 3rd were 8,660,000 feet and by rail 80 cars. The receipts by lake at

Oswego for the week, as far as reported, were 6,266,480 feet.

The receipts by canal at Albany from the opening of navigation to the 1st Oct. were :—

	Bds. & Sctl.,ft.	Shingles,m.	Timber,ft.	Staves,lbs.
1881....	313,989,000	5,516	1,000	6,105,000
1880....	289,493,800	3,872	5,400	638,200

Freights from Bay City to Buffalo and Tonawanda, $3.00 ₱ M.; from Saginaw, $3.25. From Tonawanda to Albany, $2.65. From Oswego to Albany $1.75. From Port Hope to Oswego, $1.25. From Ottawa to Albany, by boats, $3.00 ₱ M. feet.

CHICAGO.

OCTOBER 5.—The *Northwestern Lumberman* says the Franklin street market since the date of our last report has been a very dull one, the dullest by all odds of anything which has been seen this year at that place. As will be seen by the figures below, the arrivals of lumber at this port have been very heavy during the week, and this presupposes a large supply of lumber upon the market. With the receiving docks crowded still, almost, or quite to their full capacity, with lumber purchased at the mills, which on its arrival went at once to the yard of the purchaser, it was a foregone conclusion that dealers would not exert themselves to any great extent to purchase lumber seeking a market, at least unless some inducement was offered them to do so. The inducement was accordingly offered, and from a weakness such as we chronicled last week, a decided decline must be noted at this time.

OSWEGO, N.Y.

There is no change in quotations. Prices are firm, and the demand good. All lumber arriving in good condition finds ready sale. The docks lately stripped of stocks by the fire are rapidly filling up with newly cut lumber. The prospect for a good fall and winter trade never looked more promising than it does now. The receipts to date for the years named are as follows :—1880, 143,000,000 feet ; 1881, 124,000,000 feet. Lake freights from Lahe Ontario ports is $1.25 ; canal freights to Albany is $1.75, and to New York is $2,35. The following are the quotations :—

BOSTON.

OCTOBER 8.—The *Journal of Commerce* says advices from every hand show business to be fully up to expectations. For all classes of stock there is a good call, and values are very steady. Dealers report that some outside parties are endeavoring to cry down the market for the purpose of lowering prices. Holders are strong, however, and refuse concessions on regular grades in view of the healthy condition of the market and the prospects ahead. Cherry has improved considerably, during the week, in the way of demand. Ash has shown a better position than for some time past. Whitewoods are looking up. Prices on lumber generally are the same as last week.

LIVERPOOL.

The *Timber Trades Journal*, of Sept. 24, says :—The import still continues moderate, and, as there is a fair and steady demand, prices continue firm, although it most be confessed that it is only by dint of hard work that sales are effected at the present rates. Consumers are loath to believe in reports of short supplies and high cost of production, and are inclined to withhold from making purchases, at any rate for the present, in the hopes that later on rates will be easier. Seeing that the import season is within a comparatively short distance of closing, with the consequent increased cost of freight and higher rates of insurance, it is difficult to understand by what mode of reasoning such an idea can be arrived at.

That this view is well developed was shown at Messrs. A. F. & D. Mackay's sale last Friday, where the attendance was limited in a marked degree and the competition tame and spiritless. One cargo of spruce deals offered at auction was withdrawn from the sale, owing to no bids being obtainable sufficiently high to warrant the auctioneer in proceeding, and it has since been sold in one line by private treaty at a good price. Of one cargo of St. John, N.B., deals only about one-half was sold, the remainder being withdrawn, sellers being very firm, and no doubt being strengthened in their position by the fact that the prospect of anything beyond a very moderate import being available for this year is becoming more evident every day.

Birch timber appeared in fair demand, and all that was offered was readily purchased.

The supply of this timber is likely to be small, especially for the better qualities, and should any of this description come down to the shipping ports it will probably be eagerly sought after. The sales by anction were as follow :—

GLASGOW.

The *Timber Trades Journal*, of Sept. 24, says :—There has been a very light import during the past week. The arrivals at Glasgow include a cargo of pitch pine planks, which goes into consumers' hands direct, being forwarded from ship's side per rail. There has been no import of wood at Greenock during the week. Several public sales have been held here, results of which are noted below.

On Tuesday, September 20th, a cargo of Tabasco mahogany was offered, the first direct import here since October last. A parcel of Italian walnut planks was exposed on the same day.

These sales were well attended and the bidding spirited. The Tabasco mahogany, a cargo of ordinary quality, was rapidly cleared off, the market evidently not fully supplied with mahogany.

On Sept. 21st. Messrs. Singleton, Dunn & Co. held a public sale of deals, &c., prices as undernoted. There was a good attendance, but buyers were evidently disposed to purchase sparingly for immediate wants, the demand by consumers meantime being rather languid.

Only a portion of the catalogue was sold ; prices, however, were fairly maintained. The birch and ash logs were withdrawn, offers not coming up to broker's views.

AUCTION SALES.

On Sept. 20th, at Glasgow, Messrs. Farnworth & Jardine, of Liverpool, brokers :—A cargo of Tabasco mahogany from Chiltepec and Santa Ana, consisting of 280 logs (96,000 sale feet), sold at 5½d. to 10d. per foot, averaging 6⅝d.

Messrs. W. Connal & Co. thereafter sold by auction a parcel of 155 planks of Italian walnut, at prices ranging from 4¼d. to 6¼d. per foot.

On Sept. 21st., at Glasgow, Messrs. Singleton, Dunn & C., brokers :—

Wrought Iron Shanty Cook Stoves

The Best Article ever offered to the Trade.

I have much pleasure in drawing attention to my **WROUGHT IRON COOKING STOVE, for Shanty, Hotel and Boarding House use.** These Stoves are made of **Heavy Sheet Iron,** the top and lining of the fire-box being of **Heauy Cast Metal** and all the connecting parts of substantial **Wrought Iron Work.** The dimensions of these Stoves are as follows:—

SINGLE OVEN STOVE

Top surface contains six 10-inch holes, with ample room between, and one oven 16 x 24 x 26.

DOUBLE OVEN STOVE

The Double Oven has a top surface containing twelve 10-inch pot holes, with two ovens, each 16 x 24 x 26. One fire-box of suitable size for area to be heated. Below will be found Testimonials from some of the leading Lumbermen, who have used my Wrought Iron Cook Stoves since I ommenced manufacturing them. They are the names of gentlemen who are well known and eliable, and will carry more weight than any recommendation of my own could do.

The Best Stove I have ever Used.

PETERBOROUGH, May 31, 1880.

ADAM HALL, Esq., Peterborough. Dear Sir,—I have used your Wrought Iron Cooking Stove in our lumbering operations since its introduction here, and have no hesitation in saying that I prefer it to any other. For durability, economy and efficiency, where a large number of men are employed, it is the best stove I have ever used. You can, with confidence, offer it to hotels, boarding houses and lumbermen.

Yours truly, THOS. GEO. HAZLITT.

The Stove for Lumbermen.

PETERBOROUGH, June 1st, 1880.

ADAM HALL, Esq., Peterborough. My Dear Sir,—We have used your Wrought Iron Cooking Stove and find it is very satisfactory for lumber operations, especially so on drives. We can recommend it highly.

Yours truly, IRWIN & BOYD,

Gives the Greatest Satisfaction.

PETERBOROUGH, June 3rd, 1880.

A. HALL, Peterborough. Dear Sir,—I have had the Wrought Iron Cook Stove, purchased from you, in constant use ever since last fall, and it gives the greatest satisfaction in every respect. I can recommend them highly to any one who is in the lumber business. Very truly yours, GEO. HILLIARD, M.P.

EMERY WHEELS FOR SAW GUMMING!

EX INUTILI UTILITAS — TRADE TANITE MARK

Solid Emery Wheels are now almost in universal use for the purpose of gulleting and gumming saws. Statistics show from 25,000 to 30,000 saw-mills in the United States. Many of these run only a single saw each. A one-saw mill would use one or two wheels a year, costing $3 to $4 each, and when such small mills order single Emery Wheels from the factory, the express charges often equal the cost of the wheel. There was a time when the quality of Emery Wheels was so uncertain, and the demand so fickle, that storekeepers could not afford to carry them in stock. Now, however, Saw Gumming Wheels have become as staple an article as Files, and every dealer in saws, Hardware and Mill Supplies can afford to carry a few dozen standard sizes in stock. Large dealers order stocks of $500 to $750 worth at a time. Saw Gumming Wheels are used with the edge (or face) square, round or beveled. Probably seven-eighths of all in use are beveled.

The principal sizes are:

8x¼, 8x⅜, 8x½ } ¾ in. hole. 10x¼, 10x⅜, 10x½, 10x⅝ } ¾ in. hole. 12x¼, 12x⅜, 12x½, 12x⅝, 12x¾, 12x⅞ } Holes, ¾, ⅞ and 1 inch.

Probably more wheels 12x⅜, 12x½ and 12x¾ are used than all the other sizes together. Saw Gumming Wheels are used, however, of all sizes up to 24x1½. The most frequent complaint is that Emery Wheels harden the saw so that a file won't touch it. The answer is that you don't want a file to touch it. An expert workman will shape and sharpen the teeth with an Emery Wheel, leaving the teeth *case hardened*, in which condition the saw will cut about 33⅓ per cent. more lumber than a soft saw will. Those who want to use the file, however, have only to touch the saw *lightly* a second time (after going all over it once), and this second touch will cut through the case-hardened scale.

A QUESTION OF QUALITY.

Thirteen years of experience as makers of, dealers in, and actual users of Emery Wheels, have led us to a decided opinion as to what quality is the best. We prefer for almost every use an "Extra Soft" wheel like the "Pocono." We believe that money lost through the rapid wear of the wheel is more than made up by the money saved on wages. As we cannot get every one to adopt our views, we make several qualities, so as to meet their views. We say to those who think they can only be satisfied with some other make of wheels (not Tanite), that we can furnish qualities *to match* any and every other make. If you have got used to some special quality of wheel, let us know what it is, and we can send you *a Tanite Wheel of similar quality*. Our *regular* classification of Saw Gumming Wheels is as follows:

CLASS 2. MEDIUM—HARD.—This Wheel is THE STANDARD Saw Gumming Wheel all over the world. Probably seven-eighths of all the Saw Gumming Wheels used are "Class 2. It cuts fast and keeps its shape well. Some think it too hard, some too soft. We prefer the "Pocono."

CLASS 3. MEDIUM—SOFT.—The same as to coarseness and fineness as "Class 2," but a *softer*, and therefor freer cutting wheel.

CLASS "POCONO." EXTRA SOFT.—This Wheel we prefer to all others. It is both *finer* in grain and softer than either of the above. As a Saw Gumming Wheel, Class "Pocono" is specially suited to those practical and experienced Sawyers who know how to grind with a light touch, and who want a free cutting wheel that will not create much heat.

Illustrated Circulars and Catalogue, showing Cuts of Saw Gumming Machines, and Shapes, Sizes and Prices of Wheels, sent free on application.

CIRCULAR SAW STEAM FEED!

I would also call special attention to my

Heavy Circular Saw Mills

and for STEAM MILLS, would recommend the Steam Feed, having put in several which are giving the best of satisfaction, as will be seen by the following testimonials:—

GRAVENHURST, August 20th, 1880.

WM. HAMILTON, ESQ., Peterborough.

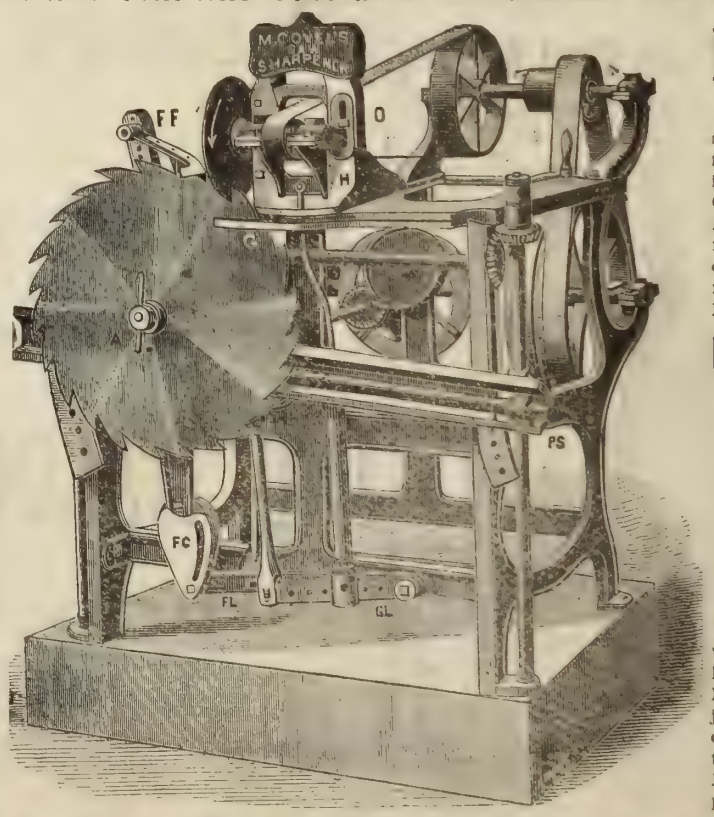
DEAR SIR—I have used your Steam Feed for near four months, and it has given me perfect satisfaction in every way; it is admitted by every person who has seen it work to be the best feed ever invented. Since I put it into my mill, I have not lost ten minutes time fixing anything belonging to it. I can cut 18 boards 13 ft. long in one minute. It can do much smoother and better work than the pinion feed. It is easily governed and reverses the carriages instantly. I am thoroughly satisfied with it and can recommend it to any person who has a Circular Saw Mill for cutting long or short logs. I consider I have cut more lumber than will pay for the Steam Feed since I got it than I would have cut had I not put it in.

Yours respectfully,
WILLIAM TAIT,
Lumberman, Gravenhurst.

TORONTO, August 11th, 1880.

WM. HAMILTON, Peterborough, Ont.

DEAR SIR—The Steam Feed you put in is working splendidly. Yours, &c.,
THOMPSON, SMITH & SON.



MILL MACHINERY!

I am also manufacturing Saw Mill Machinery, for all sizes of Gang or Circular Mills, Span or Double Circulars for Slabbing Small Logs. My Patent Jack Chain for drawing logs into Saw Mills, acknowledged by all to be the Cheapest and best ever got up; also, my Patent Lumber Markers, different sizes of Edgers, Gang Lath Mills, Trimmers, Power Gummers, and all Machinery used in a first class Gang or Circular Saw Mill; also, small Hand Gummers for use in the woods, for Cross-cut Saws. Rotary Pumps of different sizes, for Fire Protection in Mills, &c.

Horizontal Engines and Boilers

CORLISS ENGINES

Where economy of fuel is the great consideration, along with uniformity of speed, such as is required in Grist and Flouring Mills, Woollen and Cotton Factories, or large Factories of any kind, I supply the Corliss Engine. I feel justified in saying that our Style, Workmanship and Finish on this Engine will be no discredit to its renown, and certainly is not equalled in this country for economy of fuel. I have them working at 2½ pounds of coal per horse-power per hour.

SUBSCRIPTION $2.00 PER ANNUM.

VOL. 1. PETERBOROUGH, ONT., NOVEMBER 1, 1881. NO. 25.

CUTLER, GILBERT & PEARSON'S saw mill made last Saturday the largest cut on record in these parts for a single circular, 66,300 feet of inch boards in eleven hours.—*Superior News.*

THE Lake Superior *News* says J. S. Taylor & Sons got in another raft of logs, 175,000 feet, from Stewart river, on Monday morning. They hope to bring in another raft to-morrow or on Saturday, and they will still have left at Stewart river over a million and a quarter feet of logs.

FOURTEEN years ago a gentleman of Monroe, Michigan, placed two gateposts of white oak in front of his residence. When they were set he bored into the top of each with a 1½ inch auger, 6 inches deep, filled the hole with common salt, tightly plugged it, and coppered the posts. Having occasion recently to change the location of the posts, he found them as sound from top to bottom as the day they were planted.—*Northwestern Lumberman.*

THE editor of the Bay City, Mich., *Tribune* has been shown a piece of oak taken from the old gunboat *St. Lawrence*, sunk off the beach near Mortonwood, Ont., for the past sixty years. The oak is as black almost as ebony, but as sound as the day it was used in the construction of the boat. When the vessel was condemned she was sold to a gentleman named Drummond, who stripped her of her fastenings, iron, etc., and then let her go to the bottom.

THE Lake Superior *News* says Messrs. Peck & Maxim, the former from Michigan City, and the latter from Ludington, have purchased a mill site on the east side of Rice's Point, between the Blast Furnace and Cutler, Gilbert & Pearson's mill. The property comprises 575 feet of water front, and runs back 1,233 feet. The firm name is W. G. Peck & Co., and they propose to put up one of the finest mills in this section, a double circular, capacity 90,000 feet per day, a planing mill, and a shingle mill, all provided with the latest modern improvements. They will commence building as soon as possible, and will have it in operation by the opening of navigation in the spring.

A DEVASTATING tornado lately swept through a section of the Menominee, Mich., lumber district. The Peshtigo *Eagle* says it was a mile wide, and besides filling up the road from Quinesec to Felch mountain, it filled Pine creek full of trees for a mile so that the water ran over and around the banks. On the Pike river, in that town, its course was a mile wide, and wherever it passed the lumber lies flat. The extent of the damage is not yet fully known, but from present information it is thought to cover hundreds of acres of timber. Men have been sent up to ascertain the full extent of the damage. The fallen timber will all have to be put into the river the coming winter, otherwise it will be spoiled by the worms.

ENGLISH WOOD TRADE.

James Smith & Co.'s wood circular, dated Liverpool, 3rd of October, says :—Business during the month has been in many respects satisfactory, and, although there has been no great advance in prices, still they are generally firmer and in some cases are higher than at the opening of last month. The harvest has proved to be better than at one time anticipated, and trade prospects in this country are altogether more encouraging. From Quebec it is reported that mills have stopped, owing to the low state of the rivers ; the stocks are light and prices rising ; the demand from the United States is also very good. Freights are firm, with the probability of an advance. Yellow pine :—The arrivals during the month have been rather less than in the same month of the previous year, and the consumption has fallen off, no doubt owing to the great advance in the price of this article. The rivers in Canada being so low makes it impossible to add to the stocks, and it is reported that many mills have had to stop running, and that prices are advancing. A small parcel of waney board pine was offered at auction a few days ago, but was withdrawn unsold. By private a cargo of Bay of Islands square pine was sold at 19d. per foot. Red pine is in very little request, and the stock remains heavy. For ash there has been a better demand, but there is an ample stock ; this also applies to elm. Oak :—There is a large stock, and although the demand is fairly good, still the consumption is not equal to that of this time last year ; prime wood is enquired for. From January 26th to September 30th, 374 vessels had arrived.

Robert Coltart & Co.'s wood circular, dated Liverpool, October 4th, says :—The improved tendency noticed in our last circular has been maintained during the past month, and prices have remained very steady, while for some articles an advance has been obtained. The import has been very light as compared with the corresponding month of last year, but the consumption also shows some reduction during the same period ; present stocks, though ample, are not now so much in excess of the demand as they were for several months past. Of square pine the import has been light, and sales have been difficult to make at the advanced prices demanded by shippers ; the consumption has been on a fair scale, and the present stock is moderate. Waney board pine has arrived more freely, and gone well into consumption. For red pine the demand continues dull. Ash, of prime quality, is enquired for. Elm has been in fair demand during the month. The consumption of oak has been on a limited scale, and the stock is increasing.

For wagon scantling the demand is dull, and prices are unremunerative. The import of birch has been moderate, but still sufficient for the demand, which continues dull. The stock of N.B. and N.S. spruce deals is now much reduced, being 15,211 standards against 25,821 standards at the same time last year ; the consumption has been on a fair scale, and if the present moderate rate of import is continued, a more satisfactory bnsiness may be hoped for. The stock of Quebec pine deals consists of 10,248 standards, against 5,177 standards at the same time last year, and the demand continues dull ; prices are low, and do not realize the cost of import. In Quebec merchantable pipe and puncheon staves there are no sales to report.

PAPER MAKING IN NORWAY.

If pine trees might have preference among all the strange destinies of transformation to which they are born, one could easily fancy their choosing to be wrought into paper. It takes but five minutes to do this in one of the Honefos mills by that brace of confederate prestidigitateurs, steam and water. The roar, and fizz, and clink with which they do it sound weird enough in the heart of the fir forest, where the mill stands, and the change is swifter than the eye can well follow. The logs are sawed in lengths of fourteen inches, split into quarters, smoothed, piled into a huge iron wheel, revolving in water, grinds them into pulp, and tosses the pulp into troughs and pipes. Here it is sifted and strained ; then, carried up into a huge revolving hopper, it is ground still finer ; then poured out and rolled in layers on huge iron rollers covered with woollen cloth. Off these rollers it comes in solid sheets, is folded, and put into presses to drip and dry, like newspapers. Just five minutes from the time the logs go into the iron wheel at the upper end of the mill they come out at the lower end in thick sheets. These are shipped to England, to be there mixed with linen and made into thinner paper.

Seven thousand dollars a year the pine forest makes in this way for its owner ; but to do it wheels run and men work night and day all the year round, except from six o'clock to six o'clock on Sundays.

The overseer, who seemed an enthusiast, said that his one ambition in life was to have such a mill of his own. "But I shall not get one," he said, sadly, "I am paid but forty dollars a month, and it takes that to support my family. Norway is a hard country for a man to rise in. He must go to America for that."

The mill stands on the edge of, almost over, a grand waterfall, the spray of which fills the air and makes still stronger the aromatic odor of bruised pine. On every side stretch away forests of trees awaiting their turn to die into new life. The spot is full of wild and poetic significance. Allied to secrets, from first to last, is the tree that goes from the realms of the upper air, solitude of night and stars, birds, and the winds of morning, to become voiceless messenger, faithful hoarder, of the purpose, power, passion, worship of men. From papyrus to pine, a long lineage of honor. The Mohammedan is right when he reverently treasures the smallest fragment of paper, because it may have borne or bears the name of God.

Pickled Railroad Ties.

If as many railroads are built in this country in the next five years to come as have been built during the last half decade, it will be difficult to get timber for ties. Oak and cedar are the varieties of wood used, all other available kinds of timber lacking durability or firmness. The Lake Shore Company has purchased a tract of timber land near Wickliffe, paying about $120 an acre for it. It is the only timber land between Cleveland and Buffalo, and the supply will soon be exhausted. The N. Y., C. & S. L. road was obliged to use beech, maple, and other varieties of hard lumber. The majority of the ties used on the new line, however, are cedar from northern Michigan. Shortly, when the oak and cedar are exhausted, it will be necessary to use hardwood timber, put through a pickling process such as is used in preserving the wood blocks of pavements. The process is a patent belonging to a company of gentlemen, most of whom are Clevelanders. It is easy to see that they have a profitable invention. Ties made of beech and maple and other varieties of by no means durable wood, put through the pickling process, have been laid on the road at Defiance, and although they have been in place five years, they show no indications of decay. The pickling is done by placing the ties in a large boiler, costing from $15,000 to $20,000, and soaking them in a solution of creosote and other ingredients, which are known only to the inventors. In England blocks of stone are used as ties, but the concussion of such a solid foundation is hard on the rolling stock and rails of the road.

The Cedars of Lebanon.

The once famous and extensive cedar forest of Lebanon, according to a writer in the Vienna *Politische Correspondenz*, has dwindled down to the dimensions of a mere thicket, numbering about four hundred trees. To save it from complete destruction, and preserve it at least in its present extent, Rustem Pasha, the Governor-General of the Lebanon, has issued a special ordinance, containing a series of stringent regulations calculated to check, if not quite put a stop to, the vandalism and carelessness of most travellers. It is expressly forbidden to put up tents or other kinds of shelter in the district of the trees, or to light fires or cook any provisions in their vicinity. No one is allowed to break off a bough or even a twig from the trees. It is forbidden to bring any beasts of burden within the district. Should oxen, sheep, goats or other pasturage cattle be found within the prescribed limits, they will be irredeemably confiscated.—*Scientific American.*

LOSSES BY FOREST FIRES.

LOW WATER INJURES BUSINESS—THE WASTE OF MATERIAL IN MANUFACTURING SQUARE TIMBER.

Some very interesting information regarding the lumber trade has been secured. It is upwards of thirty years since the water in the Ottawa river was so low as it is at the present time. Along the banks of the river and its tributaries large quantities of saw logs are tied up, which may only be estimated by hundreds of thousands. The little village of mills at the Chaudiere is almost deserted. The mills have shut down, and disappointed mill owners are forced to cancel remunerative contracts, owing to the scarcity of logs. All the prominent lumbering establishments have been obliged to suspend work, their yards having been cleared of logs, and the idea of getting any further supply down the river this season has been abandoned. It was estimated, during the early part of the present month, that this season's cut for the Ottawa Valley district would reach 367,000,000 feet. The present state of the water will make a material change in this calulation, which will probably fall short at least thirty per cent. of the actual quantity of lumber sawn.

LOSS FROM FORESS FIRES.

The want of water is not the only obstacle which the Ottawa lumbermen have been obliged to encounter of late. The destructive forest fires which have been raging over their extensive timber limits during the past few weeks have laid waste some of the most valuable timber property in the Dominion. The question of the timber supply of the Dominion has frequently received the attention of Parliament, and notwithstanding the precautions which have been taken to enforce the laws for the prevention of forest fires it has been found impossible to lessen the quantity of valuable property which is yearly destroyed in this way. The lowest estimate of the average annual loss through forest fires places it at $5,000,000 in the Ottawa Valley alone. It was suggested by an expert, who was examined before a committee of the House of Commons, that the appointment of a staff of inspectors of forests would largely reduce the annual loss from this cause. That the country should derive the fullest benefit from the services of such a corps, he said, it would be necessary that these inspectors should be practical foresters, men of education and ample experience in the best training schools of Europe. It would be comparatively easy to secure the services of such a class, who, when once established in this country, could train their assistants. When it is considered that it takes a pine tree 150 years to attain maturity the magnitude of the yearly national loss from this cause is more apparent.

VALUE OF TIMBER LANDS.

An idea may be formed of the value of the timber limits from which the Ottawa district is supplied from the following account of sales which were effected in this city by public auction and properties offered for sale on the 21st inst.:—The Campbell limit of thirty-nine square miles, situated on the Trout Lake branch of the Petewawa river, was first effered *en bloc*. It was started at $15,000 and was knocked down at $29,500. A limit of fifty square miles on the Desmoine and Coulonge rivers, owned by Sir Francis Hincks, was next offered. This limit was withdrawn, the highest offer being $110 per square mile.

The Fraser and McDougall limits were then offered, berths 164 and 169 being knocked down at $99,000; berths 165 and 168, 100 miles square, and berth 166, 50 square miles, for $59,000 and $36,000 respectively; berth 167, 50 square miles, for $15,000. An offer of $496 per square mile was refused for the Brannen limit, 50 miles square, on the Kippewa river. Lake Nipissing limits, berths 23, 43, and 51, 108 square miles, were offered, but withdrawn, the highest bid being $75,000 for the lot, or $50,000 for berth 23.

THE FORWARDING TRADE.

While the Millowners will be serious losers as the result of this season's operations, their misfortunes will be shared by the forwarders who carry their lumber to market. Although the volume of this season's business had, up to within a few weeks since, been fully up to the average, the forwarding trade on the whole, has not proved remunerative. Encouraged by the high freights ruling last year from the Ottawa mills to the American ports, United States bargemen added nearly one hundred new boats to their fleet for this trade. A number of bargemen employed on the Erie Canal withdrew their boats from that route, expecting to find more profitable employmeet in the Ottawa lumber trade. Their expectations can hardly have been realized. Freights opened in the spring at $3.75 per thousand from Ottawa to New York and $3 to Albany. Two weeks later they dropped twenty-five cents per thousand, and about midsummer another decline of twenty-five cents took place. The low rates of coal freight to Montreal and other ports have also proved a serious loss to the boatmen, who last year found profitable employment in taking a cargo of coal on their return trip. There is still another and equally serious drawback against which they have been obliged to contend. The low state of the water in the rivers and canals will not admit of boats being loaded to anything over three feet draft. The small craft have been compelled to lay up for the season, and the larger boats, on account of the small loads they are able to carry, are only barely clearing running expenses. Local forwarders are looking for an advance in freights, yet there does not appear to be any reason at present why their anticipations should be realized. The barge stock was never so large as it has been the present season, in consequence of which the competition has been more active. Quebec freights remain about as they opened in the spring—$2 per thousand for dry and $2.10 for green lumber. Freights to Montreal range from $1.10 to $1.20 per thousand; to Whithall $2.25, and to Burlington $2 per thousand.

A NEW OUTLET.

The Commissioner of Crown Lands for the Province of Ontario some little time since called the attention of Canadian mill owners to the opening up of a new outlet for the product of their mills, by which they may escape the duty of $2 per thousand feet which meets them on shipments to the United States, and which, he says renders it almost, if not altogether impossible, for them to compete with lumber from Michigan. The outlet he refers to is the shipment of inch and inch and a quarter sawn lumber direct from the mills at Ottawa, viz., the North Shore Railway to Quebec, thence by vessel to Glasgow. The experiment was tried and proved fairly remunerative. Hitherto the produce of Canadian saw mills shipped to Europe has been in the form of deals only.

WASTE IN SQUARE PINE.

To the great loss annually sustained from the waste of valuable material in the manufacture of square and waney pine, the commissioner has given special attention. The suggestions he offers for its remedy are well worthy of its consideration. He estimates that one fourth of every tree cut into square or waney timber is lost to the wealth of the country. When the tree is cut down it is lined off for squaring, and the "round" outside the lines is beaten off on the four sides. From the portion of the tree thus thrown to waste the best class of clear lumber is obtained when taken in the round to a saw mill. There is also the upper portion of the tree, which is cast away when the tree is made into square timber, but which would be sawn into lumber (of lower grade) if the round log were taken to the mill.

The estimated loss to the Province of Ontario from waste in cutting square pine, from 1868 to 1877, both years inclusive, was placed at $3,577,500. The circulation is as follows:—Total quantity taken from public and private lands during the ten years, 119,259.420 cubic feet; waste, one-fourth of each tree, equal to one-third of the total mentioned, namely, 39,750,140 cubic feet, or say in round numbers 477,000,000 feet board measure, which may be valued one-half at $10 per thousand feet, and one-half at $5 per thousand, representing relatively the prime timber from the upper part of the tree, average value say $7.50 per thousand, which gives the total loss for ten years as mentioned above, or equal to an annual loss of $357.750.

The word character comes from a term which means to engrave upon or to cut in. In selecting pens it is advisable to see that the name of Esterbrook is stamped on them.

THE SUPERVISORSHIP OF CULLERS.

The *Montreal Gazette* says:—We print in another column a letter from Quebec on the subject of the supervisorship of cullers, the position having been rendered vacant by the death of Mr. Quinn, who for many years filled that office. It raises a question of very considerable importance, namely, whether an office like that of Supervisor of Cullers, which from the nature of the business is located in Quebec, is to be considered as an ordinary political appointment in the hands of the member representing the constituency and supporting the administration of the day. Our own opinion is that it does not come within this class. It is not like a clerkship in the Post Office or Custom House or Excise Department, which may fairly be said, under the system that prevails in this country, to be within the gift of the local representatives. It is an office which has to do with the trade of the whole Dominion. The Supervisor of Cullers at Quebec is the Supervisor of Cullers for Canada, and under these circumstances it would, we think, be most unfortunate if the position were considered to be the gift of the member for Quebec. As a matter of fact, the lumbermen of the Ottawa and the St. Maurice have infinitely more to do with the Cullers' office, and are infinitely more interested in the manner in which the Supervisor performs his duty, than are the people of Quebec themselves, excluding, of course, the timber merchants, who may be said to have an equal interest. Under these circumstances we cannot help thinking the Government would act most wisely if they considered the views of the trade rather than the views of a supporter, who happens to represent the city of Quebec, in making the appointment.

THE VANDAL IN THE FOREST.

KENTUCKY'S GREAT TREE—MEASURING FIFTY-SIX FEET AT THE BASE—SLAUGHTERED!

What vandal hands cut down that pine,
That forest monarch tree!
That battled for life five hundred years,
Away in Kentucky?

Some timber butcher sure it was,
Who in his sordid strife,
Counted only on what logs he'd make,
By taking that monarch's life.

A soulless crowd from Vanceburg too,
Assembled there to see
Him wield the axe, and not one cried,
O! woodman spare that tree.

But shouts of frantic joy they gave,
When bowed its cloud capped head,
And its giant trunk in thunder crashed
Upon an earthly bed.

Their children, if half civilized,
Will sure in after years,
Make pilgrimages to its stump,
And water it with tears.

And when, in the long lapse of time,
Its heart is in decay,
They'll make a flower bed of its core,
When those Goths have passed away.

J. L.,
A Lumberman.

Cote St. Antoine, Montreal, October, 1881.

Startling Waste.

One reason why the cabinet woods of the country are scarcer and dearer yearly is given in the editorial correspondence of the *Industrial World*. The gentleman has been spying out the land, and in the course of much interesting information says:—"The unaccountable waste of timber is startling, if not appalling. While economists, and all thoughtful men in the older states, are gravely discussing the problem of the coming timber famine, the good natured, easy going farmers of Henry county (and all Missouri) are splitting magnificent walnut, butternut, cherry and mulberry trees into common rails for the enclosure of $8, $12 and $20 lands, cutting them into logs for cabins, hovels, and pig troughs, and even into common cord-wood, to sell on the market in competition with cheap coals. Still worse, many a woodland farmer girdles scores of valuable trees (even the stumps of which will be gathered for the coming markets), burns them in the new clearings side by side with the baser woods, and wonders the while that he must pay enormous prices for solid walnut furniture from factories a thousand miles away." Where are all the timber buyers?

Wood-Preserving Process.

A new wood-preserving process has been invented in France by M. Jacques. He first impregnates the timber thoroughly with a simple solution of soap, mixed with an acid—preferably phenic acid. This causes the fermentation, in a few days, within the wood, of a fatty acid, which is insoluble in water, and impregnates the remotest fibres. The reaction of the acid on the soap does not take place until a portion of the water has evaporated. It is claimed that more perfect impregnation can be had this way than with creosote, and there is no danger of the washing out of the preservative from the exposed surfaces, as when sulphate of copper is used. The government commission on technical railroad operation in France is said to favor this process.

Wood Drying.

M. Rens, of Stettin, renders wood perfectly dry and insensible to humidity and atmospheric variations. The wood is subjected to the action of oxygen which has been heated and acted upon by an electric current. The apparatus consists of a retort for the production of oxygen by any of the known methods, and of a kier which can be heated, and in which the boards are placed to be dried. Vacuum is produced in the kier, oxygen introduced, and after heating several times an electric current is allowed to pass through.

ADAM BOYLE, of Battleford, has hit on a new way of raising potatoes. Being pressed for time in the spring, he dug holes in the sand and dropped in the cuttings, covering them lightly with earth. This was all the attention they received, and now he is taking up a heavy crop of large and fine looking potatoes. If the Indians ever learn this system of potato culture, made easy, remarks the *Herald*, it will enable them to give their hoes a rest during the hot days of summer.

LIVERPOOL STOCKS.

We take from the *Timber Trades Journal* the following Comparative Table showing Stock of Timber and Deals in Liverpool on Sept. 30th, 1880 and 1881, and also the Consumption for the month of September, 1880 and 1881:—

	Stock, Sept. 30th, 1880.	Stock, Sept. 30th 1881.	Consumption for the month of Sept. 1880.	Consumption for the month of Sept. 1881.
Quebec Square Pine	535,000 ft.	600,000 ft.	256,000 ft.	489,000 ft.

FORESTRY.

The following is the able and interesting prize essay of Mr. P. E. Bucke, of Ottawa, which was read at the recent meeting of the Ontario Provincial Agricultural Association at London, Ont. :—

In the earlier days of the Province of Ontario (Upper Canada), if anyone had argued restriction on the destruction of timber, he would have had few to listen to him. Amongst the earlier settlers the destruction of trees was looked upon as one of the cardinal virtues. The superabundance of timber led to this state of things, and it is now found difficult to check the rapid wasting away of our forests.

Fifty years ago the trees standing in and around your "Forest City" were the admiration of strangers. Mr. J. C. Loudon, writing at the date referred to, states that "The white pine near New London has a trunk varying from thirteen to eighteen feet in circumference, and some trees which had been blown down were measured and found to average one hundred and sixty feet in length. The oaks varied from ten to fifteen feet round the trunk, with fifty feet of clear stem. Mixed with these were beeches, birches and ashes. Horizontal sections of white pine and hemlock spruce exhibited between 300 and 400 annual rings; oaks, 200; elms, 300." The memory of the writer reaches nearly back to the time and place referred to when, in the language of the American poet :—

"His echoing axe the settler swung,
Amidst the sealike solitude;
And crashing, thundering, down were flung,
The Titans of the wood."

When the pioneer looks back, what changes present themselves in the past fifty years. The goose which laid the golden egg is being rapidly strangled, and it is now declared by people best able to judge that the work of wholesale destruction of the forests of the country is being carried on without any new growth of timber being produced to take the place of that removed. The Government, which has for a long time lain in a partially dormant condition with regard to this subject, is now awakening from its lethargy, and it is trusted that this immense industry, second only to agriculture in this Province, will at length receive the attention its magnitude deserves.

The subject is a practical one, and must be approached in a practical way. Besides the use of trees for timber, it is now generally conceded that they have certain influences which assist in the harmonizing of the laws of nature. For instance, trees, by the absorption of carbonic acid gas, and emission of oxygen, assist in purifying the air we breathe. By interposing their foliage between the sun and the earth, they shelter the latter and equalize the temperature of earth and air. They cover the earth with leaves which, when decayed, make a most nutritious soil, and in the meantime guard against a too rapid evaporation of water. Trees also serve to protect both the ground and human habitations from cold and destructive winds. The evaporation from their leaves by cooling the atmosphere has the effect of increasing the frequency of showers, and also assists in the precipitation of dew. In will be seen in the manner above described that forests subserve a most beneficial purpose. Apart, however, from these considerations, and their utilitarian, or revenue producing qualities, trees are the most majestic and imposing of nature's vegetable kingdom, and no view, in any country, is an object of beauty without them. It is noticed in the report of the Commissioner on Agriculture, just issued, that the County of Kent is beginning to decorate its roadways by the planting of trees. Nothing can show a higher state of civilization, or a greater love of the beautiful, than tree growing for agricultural purposes. But besides harmonizing the influences of nature, and adding their graceful forms to the grandeur of the landscape, there is a wealth in trees which few can realize who have not had some share in the export timber trade of this country. In 1872 circulars were prepared and sent to all mill owners and others in Ontario to ascertain the amount of timber cut. When the returns were received, square timber, logs, deals, &c., were reduced to board measure, and the estimate based on these returns showed a production of 750,000,000 feet, and it was calculated that of this quantity from 85 to 87½ per cent. was exported, and the balance used in the country. The produce of the forests of Ontario since then are supposed to have declined.

The revenue derived from timber by the Crown Lands Department of this Province averages nearly $400,000 per annum, and the latest returns give an area of a little over 16,000 square miles of territory under license to parties for cutting timber.

The actual amount of timber in Ontario and the territory covered by it is a subject of the utmost importance, as the wealth of this Province, like most other new countries, is represented, not so much by its manufactures as by the product of the soil, and these are derived from three sources, namely, agriculture, mines, and forests.

The enormous waste of timber by bush fires is quite incredible to those who have not witnessed the devastation of pine lands by this destructive element. These originate through careless settlers, hunters who camp in the woods, and sometimes, though rarely, by the lumbermen themselves, or by surveyors who make smudges to ward off the attacks of flies and mosquitoes. These fires, started during a dry season, are only stopped by large streams, lakes, swamps, or by heavy and continuous rains, and are much more destructive than the shantyman's axe, because where the latter culls the good timber and leaves the small trees for future years, the former destroys both timber and soil, leaving a barren waste, the pines being usually replaced by a scrub growth of birch and poplar. Stringent laws have been passed by the Ontario Legislature against the originators of these fires, but unfortunately no sufficient machinery has been organized to put these laws in force, though petitions from time to time have been forwarded to the Local Government by the mill owners and lumbermen, who are in every way interested in their suppression. It is estimated that more timber has been destroyed by bush fires than has been exported altogether from this country.

It is evident that if these fires could be suppressed, and the young trees which are left on the pine lands after the large timber has been cut out, could be protected and allowed to grow up, a valuable basis would be formed for a continuous supply. If to this were added some systematic scheme by the Government for planting on its waste lands, it is not yet too late to recuperate the pine timber forests of the country. To further the proposed undertaking, it would be well to import a few practical foresters, in order that their accrued wisdom in the Old World might be utilized in the New. A portion of the revenue derived from the Crown Land's dues by the Government would be profitably expended in fostering and protecting the timber interests on the public domain, and if the present dues are not sufficient to meet the necessary demands, they should be increased. (Power for this purpose is given in the 1st section of an Act respecting Timber and Public Lands. Chap. 26, Con. Statutes of Canada, Section 1).

Under the direction of the Commissioner of Crown Lands, there is at present a system of wood rangers, which consists of a staff of twenty or thirty experienced and reliable rangers, engaged from December to the end of April, with some of the party continued to the end of October. The employment of these individuals has been very satisfactory, swelling the revenue in some instances 50 per cent., and in one agency 400 per cent. These rangers have standing instructions to report on any special waste, and amongst other things to see that any timber, which has been killed by fire running through it, is utilized before the borer has destroyed the wood. Although their visits through the bush have been of great service to the Government, it is obviously impossible for this small staff of partially employed men, and that at a time of year when fires of a serious nature never occur, to ascertain the orgin of the destructive conflagrations which visit the pineries, or to look as sharply after the interests of the Government as is necessary. The writer would therefore respectfully suggest that the Government should appoint permanently the required number of wood rangers, or inspectors, and that one or more constables be employed for every 100 square miles, whose duty it should be to appre-hend and report to the ranger, or other officer, any causes of violation of the Crown Timber regulations, and especially with regard to fires, the officer in charge being authorized to examine under oath, and prosecute parties offending against the Land Act. At present the regulations are good, but as there is no one specially, beside the rangers, to enforce them, and as these are so few and spread over so large a territory, besides which they are not employed continuously, the Government therefore can hardly expect that careful supervision which the country has a right to demand for the revenue obtained.

With regard to the replanting of trees as a means of continuing the timber supply, the Commissioner of Crown Lands, writing in 1877, says that "It is of course known that on the continent of Europe, where forests are in the hands of the Government (as they are in Ontario), the cutting down of trees is rigidly regulated and restricted, a system of yearly planting being closely adhered to. The same practice is followed in Britain, where forests are chiefly in the hands of private individuals, but in those countries the population is at a maximum, and is maintained at that point. No entrenchments on the forest lands are deemed necessary, whereas, in Ontario, a vast yearly influx is continually pressing into the lands of the Crown, before which the forests must in the meantime yield, whatever steps may be deemed necessary to restore them in the future." The writer must dissent somewhat from the theory laid down, and would suggest that millions of acres of pine lands are practically unsuited for agriculture, and therefore worthless for settlement, and it is the manifest duty of the Government, as holding the land in trust for the people, to see that these tracts are protected in such a way that the young timber is allowed to take the place of that cut, and that they be guarded against bush fires and promiscuous pillage. With regard to the preservation and culture of pine timber, it is absolutely necessary, owing to the large area required for its growth, and the time it occupies in attaining a suitable size for the purposes for which it is used,—say from 80 to 150 years, if produced from the cone,—that the Government must be the producer, cultivator, and protector. No individual could acquire the thousands of square miles which would be needed, nor could any family or company afford, as an investment, to await the period when the greater revenue from large timber would be derived. But the greatest obstacle to a private scheme of this kind would be the danger of throwing so large a monopoly of timber and territory into private hands. The Government, by the retention of certain districts, and the appointment of competent foresters and constables, could guard, plant and protect any sized domain, and it is believed would be enabled to secure a paying revenue from the timber grown. It is therefore suggested, 1st, that pine timber lands should not be subject to entry and premption or homestead laws; 2nd, that the lands now known as "Government Pine Timber Lands" should be surveyed and appraised at their approximate value; 3rd, that experts be directed to ascertain,—if it is not already known to the Government,—the pine lands area in Ontario.

With regard to the cost of producing timber, it is stated in the report on Swedish forest culture that in the northerly part of Sweden it requires two and three hundred years for trees to attain their full size, whilst in the southern part of the country one hundred years was found sufficient. Estimating, therefore, our pine lands at one dollar per acre, allowing 160 years for the timber to grow, and interest at the rate of 5 per cent., which would double the principle every 20 years, the result would be that at the end of the time specified (160 years), the timber would cost $256 per acre. The writer believes this statement to be a very accurate one. It does not take into consideration the further cost of fencing and taxes, and the wages for the further supervision of the estate, whilst on the other hand the thinnings from time to time would pay a small percentage, probably enough to clear all charges for interest, etc. The lakes and streams enclosed might also be protected, and together with the forests, could be made to yield a revenue from the fish and game produced in them.

In Sweden the pine and spruce lands are never entirely cleared. From six to seven seed trees are left on every quarter acre until the young plants begin to grow up. In five or six years these are removed.

With respect to the encouragement of tree planting, the neighboring republic has given great attention to the subject, and has endeavored to promote it by premiums, by reduction or remission of taxes, and on prairie lands the actual right to so many acres, without money payment, provided a certain number of trees are planted and cared for, and in various ways the state has tried to stimulate arboriculture, but the result has not been such as to warrant imitation on the part of Ontario. Practical papers on forestry, published in farming journals and such others as chiefly circulate amongst the rural districts, to popularize the movement, and plantations made of our various native and selected foreign forest trees, on such Government properties as the Experimental Farm, Guelph, the Asylum enclosures, public school yards, such exhibition grounds where fairs are held (where tree protectors could also be shown), would go far to represent in a practical way how the general appearance of our country could be improved, adorned and beautified, at little cost. Trees for this purpose should be correctly and neatly labelled, giving age, the date of transplanting, as well as the common and botanical name of the specimen, and its native habitat, if of foreign origin, etc. A few acres planted here and there would soon convince our farmers and others that there is money in the business, as well as beauty, besides an advanced price added to farm lands. With such facts before them, men would be found willing and ready to invest in this enterprise, and also to adorn their farms and home surroundings.

Mr. Hotchkiss, who compiled the lumber article for the last United States census, states that the timber supply in Michigan is not over twenty-nine billions of feet, and that the ordinary quantity annually cut diminished the supply at the rate of six billions of feet per annum, which will use up these forests in eight years. The State of Wisconsin, he estimates, has forty-nine billions of feet of standing pine and Minnesota six billions, one hundred and fifty millions, but the supply is fast diminishing. He also estimates that at the present rate of cutting the Canadian supply will give out about the same time as that of the United States, say thirty or forty years hence, at the utmost limit. The lumber trade of the continent will then be transferred to the Pacific slope. One of the largest saw mill owners on the Ottawa informs the writer that he does not think there will be any pine to cut for exportation from Canada twenty years hence. Should this Province, therefore, wish to retain her timber interests, there should be no delay in dealing with the question in some practica way.

It may be stated that there is a very strong feeling amongst the lumbermen and mill-owners on the Ottawa and elsewhere that the Government should survey and inspect all the pine timber lands, and ascertain as far as possible what is worthless for cultivation, and absolutely exclude settlers and squatters from these tracts. In making such an examination the character of the soil should be carefully and thoroughly made known, as the surface of the ground is usually covered with a thin coating of good soil, owing to the decaying of the leaves from previous years, which will only raise one, two, or at the most three crops, thereby exhausting this thin skim of earth, so that nothing further will grow upon it. In the meantime the burning of the rubbish off this worthless plot has endangered, if it has done nothing more, millions worth of property.

Again, it is a difficult matter for parties holding license claims over a large territory to dispossess squatters, as these people, who have nothing to lose, and who are possessed of the means of making a fire, could avenge themselves to an alarming extent. It is believed that if the Ontario Government could make the people aware of the value of the pine timber, and the necessity there is for protecting it, they (the Government) would be largely sustained in passing and carrying out the most stringent laws for the exclusion of parties liable to injure

their interests, or that of those who are making a living from the timber.

Having thus far dealt with our pine timber trade, which is of such vast importance to this Province, and the Dominion generally, owing to the large number of hands its production employs, the machinery and shipping utilized, and the enormous revenue derived from it, a little attention must be given to the hardwood trees, and those most suitable for forest planting. Perhaps it is as well to state that the area of the natural habitat of some of our most valuable native trees is very circumscribed. Experiments show that this may be greatly enlarged.

It may be said in a general way that no tree is unsuited for cultivation, but probably the largest returns may be derived in the fewest years by setting the Black Walnut (*juglans nigra*). This graceful and beautiful tree is an exceedingly rapid grower. Ten years from the sowing of the seed, on suitable soil, will give nuts in return, and at thirty years of age its wood may be sold for furniture purposes. Chief Johnston, of Brantford, states that he has trees of this variety in his grove for which he has been offered thirty dollars apiece. It will be found, by referring to the July number of the *Canada Horticulturist*, a very practical lesson is taught by the experience of Mr. Horace Everett, who, it is stated, twenty-three years ago planted twenty-three acres of land in the Western States with black walnuts. The trees are now from sixteen to eighteen inches through, and were sold for $27,000, this gives an income of $50 per acre for the use of the land, with a minimum of labor, by planting this timber.

In all tree planting on level ground it will be found advantageous to set every second row with soft wood trees, such as poplar, willow, basswood, black ash, etc., as these assist in keeping the ground clear of grass and weeds, and can be utilized in from five to ten years in a variety of ways. Their rate of growth being from three to four times greater than the hardwood trees, they present a special advantage for cultivation. The most profitable trees to grow will probably be determined by the locality where the planting is to take place; that is to say, when plantations are made of trees outside of the ordinary commercial timber, such as pine, oak, black and grey walnut, &c. Near large paper mills it would be most profitable to plant basswood, and such of the poplars as are used in that business. If near extensive carriage and tool handle works, hickory and white ash would be most suitable. Near gunpowder factories, the willow, used for charcoal. Furniture makers use maple, birch, black and grey walnut, and sweet chestnut; fish barrels, butter tinnets and hay-rakes are chiefly made from black ash, and in this way scarcely a tree of any kind can be grown that is worthless, and as the land becomes denuded of its forests, every tree will have its special value.

It is believed that if farmers worked less land better, soil feeding their stock, and raised more trees, they would find more money in their land. Some idea of the capacity of soil for tree growing, and the management of experienced foresters in Europe, may be formed from the statement that an acre of ash, elm or sycamore, 40 years old, will contain from 2,000 to 3,000 cubic feet of timber, and when 60 years old, double that amount, after successive thinnings, which, near a commercial market, become an important source of revenue, and often realize more than the cost of management and interest on the money invested. Larch, spruce, and other conifers, require less space than broad-leaved deciduous trees. Larch will do well in good soil with only nine feet between the trees.

The quantity of timber grown on a given area in some of the European government forests, managed in accordance with the rules of forestal science, is very much greater than the same soil would grow if the wood is left entirely to itself. So much is this the case that Dr. Berenger, head of the Italian school of Vallombrosa, states in the *Journal of Forestal Economy*, 1871-72, "That while an uncultivated woodland, taken for a long period, and counting interest and taxes, would yield almost nothing for the capital invested, it is well established that the same land, managed according to modern science, would in the long run yield a revenue both conspicuous and constant."

Whatever planting is done,—and it is recommended that the nut bearing trees should be the first experimented with, such as sweet chestnut, walnuts, black and grey, hickory and white oak,—the planting of nuts and very small trees should be made, so as to cover the ground promptly, say three feet apart, these may be thinned and pruned as circumstances dictate. It is calculated that, with very little labor for culture, rough, rocky lands, or ravines, by planting and securely fencing,—where there are no stock laws against cattle running at large,—may be made to pay a revenue in four years' time. The first cuttings could be utilized for hop-poles, hurdles, grape sticks, walking sticks, or sold for replanting on other waste lands, or along road sides, or permanent fences.

Another estimate gives the price for the preparation and planting of ten acres of land with black walnut and white ash as follows:—Planting, harrowing, ploughing, etc., would cost $5 per acre, $50; seed, 50c. per acre, $5; planting, $25; cultivating during first five years, if rows are eleven feet apart, and three feet eight inches between the trees, to be thinned to eleven feet apart when required, will be paid for by crops grown between them; for cultivation from fifth to ninth year, with horses only, $30 per annum, $120; after this time no cultivation will be required, making a total of $200 for ten acres. These trees, at 25 years of age, will average sixteen inches in diameter at the butt, and about ten inches at the height of sixteen feet. This would give, deducting waste in sawing, 120 feet of lumber per tree, allowing one-sixth for damage by the elements, and loss from other causes, there would be in round numbers 360,000 feet of lumber, which, at $50 per thousand, would give $18,000, whilst the tops for fuel would be equal to the cost of preparing the logs for the mill, and the expense of sawing would be $5 per thousand, so that, after deducting all outlay, the gross earnings would be $16,000 for the use of ten acres for 25 years, and the interest on the amount expended for planting and cultivation.

The European larch is probably one of the safest trees to plant as an investmeut, and would thrive well on the sandy lands of Dorchester, or the gravelly plains of Burford. This tree grows rapidly and closely, and in fifteen years becomes fifty feet high. It is equally at home on arid sands, rocky soils, ravines, or hill sides. It is valuable as an enduring tree, and for such purposes as railway ties, fence posts, etc., it has no eqnal.

In closing this paper, a reference to the planting of the larch by the Duke of Athol may not be out of place. These plantations were begun in 1728, and continued up to 1826, when more than 14,000,000 trees were planted, covering 10,000 acres. It was found that the larch gained its fullest value in 72 years, and before it reached this age the trees were thinned to 400 to the acre. Estimating the trees at 50 cubic feet, worth a shilling per foot, the product would be £1,000 per acre, from the poorest land for agricultural purposes that could possibly be found. Larch trees planted on this estate in 1743 were in 1795 nine feet three inches round at four feet from the ground, and one hundred feet high. In 1870 these trees measured more than sixteen feet round, and were 120 feet high.

From the foregoing observations the following conclusions may be arrived at:—Firstly, it is absolutely necessary that forest fires should be suppressed, and that it is the duty of the Government, who derive so large a revenue from timber lands, to expend any sum in reason that may be necessary in the direction indicated. Secondly, it is undesirable to open for settlement much of the land at present covered by pine forests, as it is of such a rocky, barren nature as to be quite unsuited for agriculture. Thirdly, that rocky lands, ravines and lowlying grounds may be profitably planted with little expense, if stock laws are enacted and enforced to keep cattle from destroying the young trees; fencing where wood is scarce and dear being almost a prohibition against the utilizing of waste lands. Fourthly, the area in which many of our valuable timber trees now grow may, by judicious planting, be much enlarged; and finally, if the present destruction of trees is not arrested, or new plantations made, there is much danger that our climate, rainfall, and the general health and prosperity of the country may be most seriously affected.

Travelling Agent.

MR. A. L. W. BEGG has been appointed agent for the CANADA LUMBERMAN, and is authorized to collect subscriptions and grant receipts therefor and to make contracts for advertisements appearing in its columns.

DEVOTED TO THE LUMBER AND TIMBER INTERESTS OF THE DOMINION.

PUBLISHED SEMI-MONTHLY BY

TOKER & Co. PETERBOROUGH.

Terms of Subscription:

One copy, one year, in advance	$2 00
One copy, six months, in advance	1 00

Advertising Rates:

Per line, for one year	$0 90
Per line, for six months	50
Per line, for three months	30
Per line, for first insertion	10
Per line, for each subsequent insertion to 3 mo's.	05
Cards not occupying more than 12 lines (1 inch) per annum	8 00
Cards not occupying more than 12 lines (1 inch) for six months	5 00
Cards not occupying more than 6 lines per annum	5 00
Cards not occupying more than 6 lines, for 6 mo's	3 00

Special rates will be made for page, half page and column advertisements.

Advertisements intended for insertion in any particular issue should reach the office of publication at east three clear days before the day of publication, to insure insertion.

All communications, orders and remittances should be addressed and made payable to TOKER & Co., Peterborough, Ont.

Communications intended for insertion in the CANADA LUMBERMAN, must be accompanied by the name of the writer, not necessarily for publication, but as a guarantee of good faith. Communications to insure insertion (if accepted) in the following number, should be in the hands of the publishers a week before the date of the next issue.

PETERBOROUGH, Ont. NOV. 1, 1881.

TO SUBSCRIBERS IN ARREAR.

Those subscribers to the LUMBERMAN who have been in receipt of the paper since its first issue, and who have not, as yet, contributed to its financial support, either have, or will in the course of a few days, receive accounts for the amount of their past and coming year's sub scriptions.

We should imagine that it is scarcely necessary for us to remind "business men," like most of the subscribers to the LUMBERMAN, that, although taken separately, these accounts do not amount to very much, yet, when their number exceeds a thousand, the aggregate becomes a very considerable sum to the publishers; and that it is only by the prompt payment of these little accounts that the LUMBERMAN can be conducted with that vigor which we are sure its readers, as well as ourselves, desire.

In view of the early commencement of the second volume of the LUMBERMAN, it is of special importance that our subscribers should send in the amount of their subscriptions with promptitude, as upon their doing so must depend, to a very great extent, the improvements which we will feel justified in making during the ensuing year. In publishing a paper, as well a in most other things, "money" is the sinews of war, and sinews can only be supplied to the LUMBERMAN by each of its subscribers sending in promptly their subscriptions,—that is, if they desire it continued; if they do not, they should at least be equally prompt in sending us what is our due for the past, with a notice to discontinue.

THE wheat exports for India this season are said to have been larger than those of any recent year.

WE would direct the attention of our readers to the advertisement of Mr. Thomson Smith, the well known lumberman of Toronto, in another column, offering several valuable lumbering properties for sale.

STEPHEN C. HALL intends putting about 25,000,000 feet of logs into Houghton Lake this season. He will run from eight to ten camps and has now two in operation, and will open up others as soon as practicable.

ONE company on the Menominee River, Mich., owns 500,000,000 feet of pine, estimated to be worth $1,000,000. The same firm has $45,000 invested in teams and general outfit, and employs from 300 to 500 men.

THE St. John, N. B., *Sun* says the preparations for lumbering are not so extensive as last year, for, although the prospects for good prices are fair, the higher prices for provisions will affect production in some degree.

MAHOGANY for trimming parlour frames is being used to some extent by eastern manufacturers, who are putting out some fine goods in this style, and the movement meets with considerable popular favor and patronage.

A CORRESPONDENT at Packenham informs us that a large number of men have gone to the Ottawa, and that in all probability the make of square timber this season will exceed that of last year by about twenty-five per cent.

THE Scottish Arboricultural Society are this year to have their autumnal excursion to the woods of Tyninghame, Binning Wood, and Biel. Lord Haddington has invited the members to luncheon on the occasion of their visit.

THE *Timber Trades Journal* says that recent importations to the Clyde seem to have added considerably to the stocks at the ports in that river. Of Quebec deals there is now a stock of nearly 6,000 standards, being an increase of over 1,000 standards over the stock when the account was made up at June 30th. Of Quebec spruce deals there is now a stock amonnting to upwards of 1,000 standards in the hands of importers and consumers.

THE *Timber Trades Journal* says the carrying trade will now and for the rest of the season be chiefly done by steamers, as no sailing vessels will go out now with any expectation of getting back again before the winter sets in. Foreign ships not unfrequently charter out there to load and lay up, discharging crews and battening down hatches until the ice breaks up in the spring, but this kind of business is limited to cargoes of hewn timber, which do not take any harm while the frost prevails, and when the thaw sets in the vessel soon gets out of port and completes the voyage.

THE manufacture of thread from wood for crochet and sewing purposes has, it is said, recently been commenced in the middle of Sweden. It is wound in balls by machinery, either by hand or steam, which with the labelling, takes one minute and twelve seconds, and the balls are packed up in cardboard boxes, generally ten in a box. Plenty of orders from all parts of Sweden have come in, but as the works are not in proper order there has hardly been time to complete them all. The production gives fair promise of success, and it is expected to be very important for home consumption.

Kindling Wood.

In New York there are 41 different establishments devoted to the kindling wood trade alone. The largest of these concerns is C. W. Alcott & Co., who have a capital of $300,000 invested in their business, and employ in the busy season from 600 to 700 hands. They cut and prepare most of their wood in the forests of Virginia, employing in that department a force of from 500 to 600 men. Last year they handled 25,000 cords of wood. They are interested in seven vessels, and charter others in order to keep up with the demand. Two steam engines of 60 horse power each, drive the machinery that is used for sawing and splitting.

LINDSAY LUMBER SHIPMENTS.

A correspondent of the *Globe* says the shipments of sawn lumber from Lindsay to Port Hope by the Midland this season include 12,000,000 running measure from the mill of Mr. M. Boyd, Bobcaygeon; 12,000,000 feet cut by Mr. R. C. Smith, Fenelon Falls; and the shipments of Messrs. Green & Ellis. of Fenelon Falls, when completed will be between three and four million feet. The increase in the lumber shipments by the Midland are estimated at fully one-third more than those of last season, and in square timber about the same. Owing to low water, moreover, on some of the tributary waters to the back lakes, a quantity of lumber that would otherwise have sought this outlet has gone *via* the Georgian Bay. Large quantities of telegraph poles for the new opposition line are also being made. Agents have been through this section buying up all the telegraph poles obtainable, to supply the demand. In shingles the output is also far in excess of late years, and large consignments have been made by J. P. Davis and W. Bick, Bobcaygeon, and John Thurston, Lindsay. The sawn lumber sent over the Midland to Port Hope goes to Albany and Oswego. The Western Ontario market is largely supplied from the lumber forwarded from the Georgian Bay and its tributaries by way of this point. It is brought down the Midland as far as Lindsay, where it is transferred to the Whitby, Port Perry and Lindsay Railway, and thence west by the Grand Trunk. The amount of freight business by this outlet also shows a very large increase during the season, the quantity forwarded averaging ten car loads a day. The principal drawback is that the Midland Railway finds it difficult to obtain cars enough to supply the demand. The leading firms engaged in forwarding lumber and lumber stuffs by this route are the Georgian Bay Lumber Company, who ship from Waubaushene; the British Canadian Lumber and Timber Company, from Midland; R. Power, from Victoria Harbour; Peter Christie, from Victoria Bay, and A. Tait, from Orillia. A large amount in the aggregate is sent from the smaller mills at way stations. The prospects for next season are extremely encouraging, and it is likely the present year's exceptionally large output will be exceeded. Hardly a day has elapssd since the commencement of work in the bush in the latter part of August to the present time without a carload of lumbermen passing north over the Victoria railway to the shanties. Preparations are being made on all hands for an unusually heavy winter's work.

The Destroyer of the Spruce Trees.

Maine's lumbermen—and, therefore, a large part of the rest of her citizens—are much disturbed by the destructive insects which are killing the spruce trees not only in that State, but in the adjacent British Provinces. The pine has lost its pre-eminence, and the spruce was getting in a position to be the representative tree, but the *Urocerus albicornus*, if the thing has been properly identified, the Augusta *Journal* says, is killing off the spruce faster than the lumbermen could have done it, and greatly to their detriment. The white-horned *Urocerus*, for that is what his name means, is about an inch long and with wings which spread to two inches. They are as likely to destroy the pines into which they bore as the spruces, so far as the etomologists know. These insects are very prolific, and not at all uncommon. In England it has often been noticed and recorded, but there it was injurious only to ornamental trees, not to those on which so much depends in a business way, and in whose preservation so many people are interested, as the spruce forests of the Northeast. The prospect seems to be that things will go from bad to worse. Unless some smaller insect comes to the front and destroys the eggs of the *Urocerus*, it is hard to see what is going to save our spruce trees.—*Scientific American.*

THE Mississippi River Convention held sittings yesterday at St. Louis and passed a number of resolutions in favor of Congress appropriating large sums for the improvement of the great natural highway.

IMPROVING THE OTTAWA.

A proposition having been submitted to the Minister of Public Works for damming the Ottawa on the upper waters with the purpose of securing a more uniform level at all seasons of the year, we have enquired concerning the feasibility of the project and learn from a lumberman acquainted with the river some interesting facts. The proposed site of the dam is below Lake Temiscamingue. This lake is 70 miles long from its head to the head of the Long Sault Rapids at its foot. These rapids are six miles long and about a quarter of a mile wide at the head, and about 250 wide at the foot in low water. The banks here are flat and sandy on the south side and pretty much the same on the north bank. It would, therefore, be difficult to construct a dam at this place and make it substantial. The mountain rapids, seventeen miles below the Long Sault, are about 300 feet wide. The banks on both sides are good and high, and the water is not deep. This would be an advantageous place to construct a dam with back water to drown out the Long Sault. The Arables rapids, situated three miles below Mountain rapids, are from 300 to 400 yards long, the average width being 125 yards, with good banks at the head. A properly constructed dam at the Mountain Rapids would make the river navigable to the head of Lake Temiscamingue, and a good land road can be found from there to Mattawa railway station, say ten miles. The land at the head of the lake is good for farming and well adapted for settlement. It is said that the Minister of Public Works intends to send two engineers to examine these points and report on the project of the dam. Certainly the experience of the past season would indicate the necessity of an improvement of the kind proposed, and we shall await further investigations with interest.—*Ottawa Free Press.*

American Furniture Woods in London.

Probably but few even know the locality of Dod street, Limehouse, much less imagine the amount of business that is carried on within the few quiet looking buildings which compose its thoroughfare. We were recently invited to inspect the London depot of Mr. Hermann's extensive timber business, and must express our entire satisfaction at the splendid stock of goods held by this firm. Mr. Hermann has long been known as a manufacturer of furniture upon American principles, and in the recent exhibi tion at Islington he exhibited some first class suites in solid ash and black walnut. A vast array of these specimens is to be found at the works in Dod street, and the quantity of stored up timber, to which we would particularly refer is alone worth a visit to see. It is unnecessary to estimate the exact number of feet stowed away in the two buildings, the factory and timber yard; suffice it to say that on every floor and in every corner, piles of oak, walnut, ash, &c., both in the log and in plank, lie ready for use, besides a variety of manufactured goods, such as table and chair legs, which are imported in this state on account of the saving in freight which is thereby affected.

Mr. Hermann also carries on the business of a timber dealer, and is in a position to supply American woods at very low prices, the main reason for his ability to do so being the fact that he imports his own woods direct from the lumber mills. The Dod street depot, we are informed, is insignificant compared to the large factories and saw mills of the firm at New York San Francisco, Philadelphia, Indianapolis, and other places. Business generally at these works seemed brisk, and it does not appear that the talked of scarcity of black walnut is likely to have any immediate effect here, as there is a good stock on hand for present use and plenty more available on the other side of the Atlantic. —*Timber Trades Journal.*

"Don't Know Half Their Value."

They cured me of Ague, Bilousness and Kidney Complaint, as recommended. I had half a bottle left which I used for my two little girls, who the doctors and neighbors said could not be cured. I would have lost both of them one night if I had not given them Hop Bitters. They did them so much good I continued their use until they were cured. That is why I say you do not know half the value of Hop Bitters, and do not recommend them high enough.—B., Rochester, N. Y.—*American Rural Home.*

Matches.

In the United States and Canada there are 22 match factories, turning out 25,000 gross—3,600,000 boxes—of matches every day. The average is about 100 matches to the box, and the daily consumption is therefore 360,000,000 matches, a yearly average of 131,580,000,000 matches.

A Wise Deacon.

"Deacon Wildes, I want you to tell me how you kept yourself and family well the past season, when all the rest of us have been sick so much, and have had the doctors visiting us so often." Bro. Taylor, the answer is very easy, I used Hop Bitters in time; kept my family well and saved the doctor bills. Three dollars worth of it kept us well and able to work all the time. I'll warrant it has cost you and the neighbors one to two hundred dollars apiece to keep sick the same time." "Deacon, I'll use your medicine hereafter.

WANTED

A SITUATION IN A LUMBER FIRM, as Superintendent of Shanties and Drives; has had twenty years' experience. Good references can be given. Address R. M. S., 307, Rideau Street, Ottawa. 2L24

MILL MACHINERY FOR SALE.

A TURBINE WATER WHEEL, 50 inches, Steam Cylinder, 12 inches, with Steam Chest, Shafting and other Saw Mill gearing. Address P. O. Box 352, Barrie, Ont. 4L24

CANADIAN PACIFIC RAILWAY.

Emory's Bar to Port Moody.

NOTICE TO CONTRACTORS.

Tender for Work in British Columbia.

SEALED TENDERS will be received by the undersigned up to NOON on WEDNESDAY, the 1st day of FEBRUARY next, in a lump sum, for the construction of that portion of the road between Port Moody and the West-end of Contract 60, near Emory's Bar, a distance of about 85 miles.

Specifications, conditions of contract and forms of tender may be obtained on application at the Canadian Pacific Railway Office, in New Westminister, and at the Chief Engineer's Office at Ottawa, after 1st January next, at which time plans and profiles will be open for inspection at the latter office.

This timely notice is given with a view to giving Contractors an opportunity of visiting and examining the grounds during the fine season and before the winter sets in.

Mr. Marcus Smith, who is in charge at the office at New Westminister, is instructed to give Contractors all the information in his power.

No tender will be entertained unless on one of the printed forms, addressed to F. Braun, Esq., Sec. Dept. of Railways and Canals, and marked "Tender for C. P. R."

F. BRAUN,
Secretary.

Timber Limits & Sawmill FOR SALE.

The subscriber being anxious to concentrate and consolidate his business, on account of his age, will sell at very low prices—

1st. His Mills and Farm near the Bradford Station, Northern and North-Western Railway, together with Limits in Ridout and Sherbourne.

2nd. The Portage and Canal connecting Black River with Lake St. John, and Lake St. John with Lake Couchiching, in the Township of Rama.

3rd. Eight million feet of saw-logs now in Black River.

4th. About 4,000 acres of land in different townships.

If not sold at private sale, the above will be offered to the highest bidder at some future time to be named, as I intend to close all out and concentrate in Michigan, where I now have mills.

All and any information can be had from Thompson Smith & Son, Toronto, or James Durham at Bradford Mills.

4L25 THOMPSON SMITH.

P. PAYETT'S NEW IMPROVED

Adjustable Saw Guide!

Can be adjusted without danger. You can take your saw off without taking the guide off the frame.

Department of Crown Lands,

TORONTO, 6TH OCTOBER, 1881.

NOTICE IS HEREBY GIVEN THAT, UNDER AN ORDER IN COUNCIL,

TIMBER BERTHS

In the undermentioned Townships in the

MUSKOKA and PARRY SOUND DISTRICTS,

Will be offered for Sale by Public Auction at the Department of Crown Lands at twelve o'clock noon,

On TUESDAY, the 6th day of December next,

viz.:—Townships of Mowat, Blair, McConkey, Hardy, Patterson, Mills, Sinclair, Bethune, Proudfoot, Gurd, Machar, Strong, Joly, Laurier, Pringle, Lount, Nipissing and Himsworth.

The area to be disposed of in the above Townships as Timber Berths is upwards of 1,400 square miles, and to suit all classes of purchasers each Township will, as nearly as practicable, be divided into four berths.

Sheets containing conditions and terms of Sale, with information as to Area and Lots and Concessions comprised in each Berth, will be furnished on application personally or by letter, to the woods and forests branch of the Department, or to the Crown Timber Offices at Ottawa, Belleville and Quebec, and the Office of T. E. Johnston, Esq., Parry Sound.

T. B. PARDEE,
4L24 COMMISSIONER

HOP BITTERS.

(A Medicine, not a Drink,)

CONTAINS

HOPS, BUCHU, MANDRAKE, DANDELION.

AND THE PUREST AND BEST MEDICAL QUALITIES OF ALL OTHER BITTERS.

THEY CURE

All Diseases of the Stomach, Bowels, Blood, Liver, Kidneys, and Urinary Organs, Nervousness, Sleeplessness and especially Female Complaints.

$1,000 IN GOLD.

Will be paid for a case they will not cure or help, or for anything impure or injurious found in them.

Ask your druggist for Hop Bitters and try them before you sleep. **Take no Other.**

D. I. C. is an absolute and irresistible cure for Drunkeness, use of opium, tobacco and narcotics.

SEND FOR CIRCULAR.

All above sold by druggists.

REGULATIONS OF THE WATERS OF THE OTTAWA.

The following communication appears in the Ottawa *Herald* :—

Improvements must keep pace with the advance of civilization and the requirements of the times. The extensive commerce and trade of the 19th century, impelled by the most ambitious and insatiable enterprise, is not content with supplying actual wants, but ingeniously creates new branches of trade which in turn call for accommodation, and thus the ball keeps rolling, changing everything into gold, or the Almighty Dollar. There was a time, before the discovery of the use of steam, when the world's business was transacted with satisfactory despatch, though there were no steamboats or locomotives going in a few days against wind and weather across the continent. But the days when "pampered jades" and mules could do the carrying trade of the world are long since past, and the people of this exceedingly "go ahead" age would die of actual stagnation were they deprived of their railroads and canals.

Not a great many years ago the Grand River in its natural state, without the smallest improvement, accommodated all the trade of the Ottawa Valley, but then the trade of this section of the country was comparatively nothing. Bytown then covered a few acres of ground, and no person ever dreamed that the capital of a great Dominion would be built on the banks of the Grand River, or that to-day we would behold the Government Buildings towering over the brow of Parliament Hill. But civilization spread out its wings, and the lumberman's axe went further up the river each succeeding year, and great slaughter was accomplished among the "kings of the forest." The Chaudiere with the Big Kettle, in early years the terror of the lumber merchant, afforded admirable milling advantages, and accordingly as soon as its merits were recognized capitalists obtained water privileges, and erected mills which went up in quick succession. These mills increased the demand for timber and gave an additional impetus to the great staple trade of the Ottawa. But the trade could not assume such vast proportions and be carried on lucratively without improvements along the river affording greater facilities to the lumberman. Therefore, slides, booms and other necessary improvements were undertaken and completed, and up to within a few years back timber was floated from the Upper Ottawa to Quebec without much difficulty. But now that timber is being taken from near the head waters of the Ottawa, and from afar in on the tributaries, it is found very difficult to get timber to Quebec in the same year it is cut ; and much extra expense has annually to be incurred by individual firms in making temporary improvements to facilitate the getting out of timber ; and when it is a task of much difficulty at this comparatively early day to take timber to Quebec the same year it is cut, what will be the condition of things some years hence, when the forests along the banks of the Ottawa are completely exhausted, and timber is being taken out forty, fifty or more miles back on the tributaries? Without some improvements of the Ottawa River, it would be utterly impossible to get timber to market in less than two years, and hence it becomes vitally necessary to the existence of the umber trade that a plan to regulate the waters of the Ottawa should be decided upon and put into execution at as early a day as possible. We shall throw out a few ideas bearing upon the matter, and if the scheme, which we shall briefly state, be considered worthy of consideration, then the approbation of the lumbering fraternity, whose interests and welfare we are ever solicitous to promote, will be our greatest reward.

It is an acknowledged fact, we presume, that year after year the immense volume of water of the Ottawa appears to flow down into the St. Lawrence in gradually decreasing space of time, the result being that great inconvenience is caused to all kinds of trade, and incalculable pecuniary loss incurred. In the spring of the year the great volume of the water sweeps down, doing much immediate damage, while it leaves the tributaries and streams far up almost dry. Then, since the spring freshet destroys much property, and produces great inconvenience in the getting out of timber, while it is of no imaginable benefit, should not the first consideration in attempting to regulate the waters of the Ottawa be to adopt some means of keeping back as much of the spring freshet as possible? This could be accomplished by damming, and dams would be of very little use without an immense reservoir to hold the water. Rapids or falls would render this system almost impracticable so far as utility is concerned, and therefore an immense level is essentially necessary, and if we are correctly informed, Lake Temiscamingue is the grandest reservoir on the continent of America. Gentlemen who have paddled their canoes over its immense level expanse and beheld the high timber-topped hills on every side will corroborate the above assertion. The lake is about 80 miles in length, stretching from the strait or gut at the head of the Long Sault, and becoming wider and wider, until what may be called the lake proper is reached, which is over eight miles in width and 30 in length. From the Long Sault to the head of the Lake is one level expanse of water unbroken and undisturbed by rapid or fall.

We would propose building a dam about 30 feet high at the Long Sault. The banks on either side are lofty and afford admirable facilities for the construction of a dam which would not be over 2,000 feet in length, and would keep back an enormous volume of water, which at present goes to waste every spring, leaving timber high and dry in the streams, and mills deficient of water power before the season is three-quarters over. Of course the dam would be fitted with sluice gates, by which the flow of water could be regulated. During the early part of the spring the water is always high enough for navigation, water power or any other purpose, but in the summer and fall the universal cry from Grenville to the head of the river is for more water. Thus it is that we advocate the keeping of water back for a "dry day. Lumbermen have had a system in vogue for a number of years of damming the streams running through their limits, until the water became low and driving difficult, when breaking down the dams, a splendid torrent comes dashing along, floating their timber out into the river. The damming of Lake Temiscamingue is identically the same as this, on a larger scale, and with infinitely greater results. No danger or damage can eminate from it, and not an inch of country will suffer inundation, high rocky banks rising on every side.

We consider this a subject of vast importance to Ottawa and the Ottawa Valley, and one which cannot be ignored. Some such improvement as that which we have briefly referred to must be made ere long, and the sooner the better. We will say no more at present, but will probably refer to the subject again if our suggestions prove worthy of being entertained.

PENETANGUISHENE.

A correspondent of the *Mail* says :—Last week I had occasion to visit Penetanguishene, and there saw C. Beck & Co.'s new mill in operation, and this, for its size and capacity, is, in my mind, the best mill in that section of the country, and I am inclined to think in the Dominion, though that may be saying too much.

This mill consists of one gang and one circular, and the latter is deserving of special mention for the quickness of its movement, and its capability of cutting more lumber in a given time than any circular I have yet seen or heard of.

It does the slabbing for the gang, and cuts as much as ordinary circulars besides ; and it is quite capable of slabbing for two gangs, together with what it at present cuts. Its regular work is from twelve to thirteen boards per minute, and if crowded could drop fifteen to sixteen per minute, which gives one some idea of its rapid movements, both saws turning out from sixty to seventy thousand feet of timber in a working day of eleven hours.

As is well known, Mr. Beck's old mill was destroyed by fire, he having suffered a heavy loss, but with his undaunted energy and go-aheaditiveness he has succeeded in raising up a mill on the ashes of his old one that is both a credit to himself and the village. And this, with three other mills, ranks Penetanguishene as one of the lumbering centres of the Province, and is deserving of mention as such.

SHANTY SERVICES.

A Bracebridge correspondent of the *Christian Guardian* appeals to the Toronto Conference to establish missions in the Muskoka lumbering district. He says :—

"Previous to the last May meeting of the Bracebridge district, one of its members accompanied a lumber merchant, who is thoroughly familiar with the Muskoka region, in an imaginary tour over that section of the country comprehended in the the Bracebridge district,.and discovered that, allowing twenty men for each camp, there would be close on three thousand men within that section, engaged in lumbering, who, for more than half their time very rarely, if ever, hear the word of God preached, and this by no fault of theirs. In the camps little or no reading is to be found. Here is a good field for the Tract Society's operations. The little time that is left between supper and bed, which is the only time for recreation, is passed in singing songs of a doubtful, or decidedly profane character, playing cards, smoking—in any way but that which tends to profiting. When these men visit for a day or two the adjacent villages they act like sailors come ashore, and even worse, spending their money in strong drink, engaging in fights, and making an offensive babel about the ears of peaceful inhabitants. Of course there are many happy exceptions to this among the lumbermen, but the majority fall into this evil way. Mr. Wesley's merciful rule was *to go first to those who need us most.* If we are willing to act on this we will, without further unnecessary delay, put forth some direct effort to reach and bless the poor "shanty-men." As a class they are free and generous, open-hearted and open-handed. The "boss" of a shanty has in ninety-nine cases out of a hundred a hearty welcome for any man who calls to conduct a religious service for the benefit of the camp ; and invariably the rough, good-natured men themselves show marks of respect for the messenger of the truth."

A Trip Up the Lievre.

A correspondent of the Ottawa *Citizen*, describing a trip up the Lievre, says :—The object of our trip up the Lievre was to define the boundaries of about 234 square miles of timber land, and to ascertain the quantity of timber these square miles would give and the quality of the wood. I must at once assure you that this is a country unparalleled for lakes, mountains, rivers, hills and creeks, and all to be driven and surmounted, and the timber close to the lakes, rivers and creeks, and the pine and spruce trees, sound and free from punk, gum seams, knots, etc. Of course you will find a small percentage faulty. The whole front of the River du Lievre, starting from the Piskatoshing, a tributary of the Gatineau, down to the Rouge for a distance of 50 miles in the rear, is licensed to the heirs of the late J. F. Gaudet, and I can safely say that from the explorer's own personal inspection and report is worthy of attention, and only from sterling lumbermen, who only make a practice of working limits, and not from hearsay, giving a country unknown to themselves (a barren brule), but from practical experience of its real worth.

The whole of this country for 50 miles back of the Forks is well timbered, and about 600,000 pine and spruce logs can be made without much expense.

The Mississippi "Boom."

KEOKUK, Ia., Oct. 18.—The Mississippi continues to rise. At 10 a. m. the water was two inches above the great rise last spring, which caused immense damage in this vicinity. At Alexandria, five miles below, the water is backing up over the prairie. The prospects are that the town will be inundated. Railroad shops and lumber yards in the southern part of the city are completely surrounded and operations suspended. It is feared that the river will rise at least another foot and very disastrous floods result.

Are You Going to Travel?

Don't forget a supply of that Dr. Fowler's Extract of Wild Strawberry. It is a superior remedy for sea sickness, and a positive cure for all bowel complaints induced by bad water, change of diet, or of climate. Whether at home or abroad, it should be kept at hand in case of emergency.

Prof. Macoun in the North-West.

WINNIPEG, Oct. 8.—Professor Macoun and party returned last night from their exploratory tour of Lakes Manitoba and Winnepegoosis, and their tributary streams, together with the section of the North-West around the Porcupine Hills and Duck Mountains. In the latter direction there were found fine streams. The Swan and Red Deer Rivers were carefully explored. The result was satisfactory, and salt was found at many points on the land around Lake Winnepegoosis. A member of the party reports fine spruce and poplar timber on the mountains, as well as on the banks of the Swan and Red Deer Rivers. Poplar as well as spruce trees have been seen that measured about fifteen inches in circumference, and the former has been found to have an altitude in some places of seventy-five feet. Game is abundant, particularly duck, and they look upon it as a paradise for sportsmen. They spent some time at the Pelly Indian Reserve farm, where fine crops were raised this year. The land in this vicinity is pronounced the finest in the North-West. The crops of all kinds, cereals and root, are not excelled in any part of the country. The land is described as undulating prairie, with exceedingly fertile soil, easy of drainage into the Assiniboine and its tributary, the Still River.

Wood for Fuel.

The United States Bureau has been gathering some facts upon the consumption of wood for fuel. After taking the figures in the last report for the coal output, the superintendent says :—"Even with the large increase in the coal production during the last half century wood still keeps in the van as fuel, the consumption in this country being in favor of wood against coal in the proportion of four to one. In Maine, New Hampshire, and Vermont wood is almost the only fuel. In many counties of Massachusetts coal is ahead of wood, while in the state generally, as Connecticut, the percentage is about equal. Thickly populated cities, like New York and Hudson and Essex counties New Jersey, containing the cities of Jersey City and Newark, are put down entirely as coal. In Pennsylvania, the great coal state, there are many entirely coal counties, while in others, as Crawford, in the western part of the state, not over three per cent of coal is used. The same difference holds good in different parts of New York."

Spontaneous Forests.

A writer in a West Virginia paper combats the opinion, held by many arboriculturists, that an open county is never converted into a forest, through the operation of natural causes, and as establishing the fact that such change does sometimes occur, brings forward the case of the Shenandoah Valley. When first settled, about 160 years ago, it was an open prairie-like region covered with long grass, on which fed herds of deer, buffalo, elk, etc., and having no timber, except on rigy portions of it ; but in consequence of its settlement, the annual fires were prevented, and trees sprang up almost as thickly and regularly as if seed had been planted. These forests, having been preserved by the farmers, cover now a large part of the surface with hard wood trees of superior excellence. These facts would also seem to substantiate the theory that the treeless character of the prairies of the West is due to the annual burning of the grass by the Indians.

THE Ogemaw *Herald* says the firm of Cutting & Daman, who have a mill in Foster township, six miles from Beaver Lake, are cutting from 25,000 to 30,000 shingles, and from 8,000 to 10,000 feet of siding per day. They contemplate putting in an upright saw to cut lumber, and will put in 1,500,000 feet of hemlock logs, for this purpose, the coming winter. They will employ 50 men, and put in, besides the hemlock, 1,500,000 feet of pine to be worked up in shingles and siding. Their mill will be in operation the year around.

Nature Makes no Mistakes.

Nature's own remedy for bowel complaints, cholera morbus, cholic, cramps, vomiting, sea sickness, cholera infantum, diarrhœa, dysentry, and all diseases of a like nature belonging to the summer season, is Dr. Fowler's Extract of Wild Strawberry, which can be obtained of all dealers in Medicine.

Chips.

MISSISSIPPI River lumbermen, while in Eau Claire, Wis., recently, for the purpose of contracting for logs, offered from $6.50 to $7.00 a thousand for them.

AT a recent date the stock of American lumber at Melbourne was quite low, especially of ceiling, shelving, and clear pine, the latter being lower than for many years past.

THE use of sawdust in mortar is recommended as superior to hair for the prevention of cracking and subseqent peeling off a rough casting under the action of storms and frost.

THE assorting crews at the Dells dam, Eau Claire, are at work again and turning out a constant stream of logs, which go into the Beef slough works. The amount rafted at the works to date will reach 355,000,000 feet.

THE Chicago & Western Indiana railway is expending $500,000 in building lumber docks at South Chicago, and the demand, it is said, far exceeds the proposed supply, which represents 19,000 feet of dock frontage.

THE grounds of the C. N. Nelson Lumber Co.'s mill at Cloquet are so conveniently arranged with elevated platforms, &c., that the entire product of the mills, over 200,000 feet per day, is handled with two horses, on lumber buggies.

MR. FORSEMAN, of Williamsport, Pa., has lately closed a trade with a syndicate of Stillwater lumbermen, for a tract of land containing from sixty to seventy million feet stumpage, on Moose River, at five dollars per thousand, boom scale.

A GERMAN paper says that if Americans are to supply Europe with tanned leather they must be more sparing of the hemlock in their forests. The rapid consumption of American timber is attracting much attention among European economists.

THE Lake Superior *News* says the lumbermen are busy fitting out their camps for the winter campaign on the logs. One firm alone is expecting to put in 25,000,000 feet of logs, another firm 16,000,000, and so on. The cut this winter will be about double that of last season.

THE Stillwater *Lumberman* says :—The season having arrived for men to go to the woods, we call the attention of our citizens to the need of saving their newspapers for them. Over 1,700 were forwarded from the Y. M. C. A. rooms last winter, and a greater number can be sent this seasou if people will assist to the extent of leaving their papers there.

LUMBERMEN occasionally "ketch on" to a good thing. Henry Smith, a Greenville lumberman, recently secured the refusal of a tract of pine between Stanton and Lakeview for one week, the price agreed upon being $17,000. Before the week was up he was offered $5,000 for his bargain, but refused it. He has since contracted the logs on the tract, to be delivered in Six Lakes, at the head of Flat River, for $10 per thousand.

THE new pulp mill at Marinette, Wis., is described as a whole saw mill in itself, having a large five-foot bolter, endless chain and log carriage, and will be able to saw up logs three feet thick and twenty feet long. Machines for taking the bark off and splitting the wood will be near the bolter, and the wood will be carried by machinery directly to the grinders in the other end of the mill. The paper company has crews in the woods now getting out logs, and numerous logs are already in the boom.

AT a recent meeting of the Natural History Society of Goslar, a paper was read by Herr Chief Forester Reuss on the effects of the smoke from the smeltings in that neighborhood (which are very extensive, giving employment to 17,000 men) on the adjacent forests in the Upper Harz. The sulphurous fumes, which are discharged in enormous volumes, are the noxious element. Herr Reuss finds that conifers suffer more than other trees, and the silver fir most of all. The oak resists the evil influence best. The plane and ash also resist well. The beech, on the contrary, is very sensitive. The more vigorous the specimen in each species the greater their powers of endurance.

LUMBER SHIPMENTS.

The following are the shipments from St. John, N.B., from the first of the year to the 30th of September, and their destination :—

DAMAGE BY BUSH FIRES.

TORONTO, Oct. 10.—On the 29th ult., Mr. Smith, Superintendent of colonization roads for Ontario Government, was sent out in response to numerous and urgent requests from the township authorities to inspect the colonization roads and see what damage had resulted to them from the recent bush fires with a view of repairing them. Mr. Smith, who returned on Saturday, says that he went through the greater part of the Haliburton district in the county of Peterborough. On the Kinmount and Bobcaygeon roads he found that considerable damage had been done ; also on the Victoria, Miners' Bay, Monk, and Burleigh roads. Cameron, Snowdon, Monmouth, Minden, and Haliburton roads were not injured to any extent. The settlers have suffered very much from the destruction of their fences. Before leaving he had arranged for such repairs to the colonization roads as were absolutely necessary, but none others.

MUSKOKA DISTRICT.

The Superintendent also visited the Muskoka district just previous to this. Here he found that Macauley road and Macauley road south were much damaged. One settler had suffered a loss of $1,500, but no other instance, he believed, presented a case of utter destitution. The burnt districts in Muskoka were almost entirely confined to Macaulay township. In Muskoka also great damage to fences had resulted. The fires, however, were, he thought, confined for the most part to sparselysettled districts.

"MUST SAY it's the nicest thing I ever used for the teeth and breath," says everyone having tried "Teaberry," the new toilet gem. Get a 5 cent sample.

ARE YOU ?—Are you a Dyspeptic? Have you Indigestion? Is your Liver sluggish? Does your food trouble you? Does sleep fail to refresh you? Is your appetite and energy gone? Zopesa (from Brazil) will cure you, tone you up, and invigorate your whole system. It is a gentle purgative, acts as a wonder upon, and gives strength and energy to the Digestive apparatus. It is strongly anti-bilious, carries off all surplus bile, tones the Liver, gives sound Digestion and speedy health to the Dyspeptic and the Billious. Try a 10 cent sample at least.

THE fall price lists of furniture manufacturers of Chicago, Grand Rapids, Cincinnati, and generally throughout Michigan and the northwest, show an advance of from 10 to 20 per cent. The rise applies particularly to chairs, but extents to all kinds of staple goods.

SEE TO IT?—Zopesa, (from Brazil) will cure the worst case of Dyspepsia. A single dose will relieve in a degree that shows its wonderful curative powers, and its peculiar action upon the Stomach and Digestive Organs. It is a positive and absolute cure for Costiveness and Constipation, acting in a remarkable way upon the system, carrying off impurities. As a Liver regulator its actions are most remarkable. It tones and stimulates the Liver to action, it corrects the acids and regulates the bowels. A few doses will surprise you. Sample bottle 10 cts.

July.

During this month summer complaints commence their ravages. To be forewarned is to be forearmed. Dr. Fowler's Extract of Wild Strawberry is the best preventative and cure for all forms of bowel complaints and sickness incident to the summer season.

Market Reports.

MONTREAL.

From Our Own Correspondent.

OCTOBER 24th.—Since the date of our last report the lumber trade has been quiet, but as the water at Ottawa has risen very considerably there have been more importations, and stocks are now pretty full, which has helped to prevent an advance in prices. In another fortnight the season for receiving lumber by water will be over for this year, when some change in quotations is looked for. There has been very little demand for building lumber of late, as builders are beginning to close operations for the time being, and what is required for the winter for completing buildings has been contracted for some time ago. Only three cargoes of lumber have been shipped since the 10th inst., viz., to London, 590,000 ft., and to Buenos Ayres, 794,714 ft. Two vessels are now loading for South American ports. The total shipments to the River Platte since the opening of navigation up to date were 9,182,337 ft., against 7,359,174 ft., being an increase of 1,923,163 ft. For building lumber, ex yard, we continue to quote :—

Pine, 1st quality, ₱ M	$32 00@40 00
Pine, 2nd " ₱ M	18 00@24 00
Pine, shipping culls, ₱ M	12 00@15 00
Pine, cull deals, ₱ M	8 00@10 00
Pine, mill culls, ₱ M	5 00@ 6 50
Spruce, ₱ M	8 00@10 00
Hemlock, ₱ M	8 00@10 00
Ash, run of long culls out, ₱ M	16 00@18 00
Bass, " ₱ M	14 00@16 00
Oak, ₱ M	35 00@45 00
Birch, ₱ M	17 00@20 00
Hard Maple, ₱ M	18 00@25 00
Lath, ₱ M	1 25@ 1 35
Shingles, 1st, ₱ M	3 00@ 0 00
Shingles, 2nd, ₱ M	2 00@ 0 00

CORDWOOD.—As the season advances the demand for cordwood increases, while stocks are by no means heavy, and an advance on present quotations is spoken about, and will likely take place as soon as navigation closes. We quote prices on the wharf, ex cartage :—Long maple, $7.00 ; short do., $6.50 ; long birch, $6.50 ; short do., $6.00 ; long beech, $6.00 ; short do., $5.50 ; tamarac, $4.50.

TORONTO.

From Our Own Correspondent.

OCTOBER 24th.—Our docks now show conclusive signs that lumber shipments for the season of 1881 are rapidly drawing to a close, and there is but little lumber left on the dock at the present time, so that vessels have now to wait for cargoes, instead of the lumber having to wait for the vessels ; and the fact that several American buyers are now over here looking for cargoes, and anxious for all they can procure before the close of navigation, tends to prove that there is at least no overstock of lumber at the eastern lumber marts. There is an excellent demand for stock boards for shipment, and at rates in advance of that obtainable two weeks ago, and there is no doubt that the eastern market holds less sound dressing stocks on hand at this date than at any corresponding date for the last three years ; this, coupled with the fact that stocks for shipment on this side are nearly exhausted, would seem to warrant the present, if not a further, advance in prices. Lath in this market are scarcer than at any period during this season, and will doubtless advance in price, as frost, if severe, practically prevents the manufacture of lath to any great extent, and there will be a great many yet required in this market, as well as other places, in order to finish up this season's building operations. Shingles are in fair demand, but quite sufficient are being manufactured to meet that demand, and in this connection I notice that manufacturers are not so particular as formerly in properly assorting their shingles, quite a quantity of No. 2 being mixed with the XXX, this will tell against them in the future, and manufacturers will ultimately find it to their interest to see to it, that their brands are just as represented. Their laxity in this respect is no doubt attributable to the scarcity existing during a part of the past season, so that purchasers did not stop to examine so closely as formerly as to quality. The local market is now fairly supplied with most kinds of lumber, and nearly all the yards during the past two weeks have increased their stocks considerably, more especially in boards bill stuff being still scarce, and dry joisting a thing of the past. Good, dry 2 in. ash is exceedingly scarce, and good prices may be obtained for choice lots. The sales of mill cull scantling and boards in this market during the season has been large, and in consequence ot the shipments to the American markets having been brisk, culls have been plentiful, and so much speculative building having been going on, has absorbed it all quite readily, the main object of such builders being to run up houses as cheaply as possible, and get them off their hands at the earliest opportunity.

OTTAWA.

From Our Own Correspondent.

OCTOBER 12.—It is estimated that the cut of lumber this season at the mills of the Chaudiere, Hull, and New Edinburgh will not be equal to that of last year by between forty and fifty million feet, so that the surplus stock, above what was contracted for in the spring by outsiders, will be extremely limited, taking it all in all and none of the mills in this locality have been running much more than half time during the season now drawing to a close, owing to the to the lack of logs. There were plenty taken out last winter, but the rapid falling of the rivers, and unusually low water this fall, prevented them being brought down to their destination. Several large lots of logs were stuck in the tributaries of the Ottawa before being got into the main stream. Thousands of those that were got out are now stuck on the rocks in the rapids at the Chats, the Deschesnes and the Remenix. It is thought that there are between three and four hundred thousand logs stuck at the Chats Rapids alone. The channel in the Remenix has been improved by blasting, and logs are being got through slowly. The Gatineau drive is still stuck above Chelsea, but the contractor has blasted the channel and will get the logs started as soon as the water begins to come up.

THE WATER IN THE OTTAWA

has risen a few inches during the past week, but not enough to benefit the river drive. The mills will only be able to run until about the middle of November at the best, so that if the logs do not come down soon there will be a decided cleaning out of the lumber yards of this neighbourhood during the coming winter. As a general thing quite a large quantity is yearly held over from the fall until the spring, when prices generally rule better. Very few sales of lumber have been made of late, shipping contracts being merely filled. Prices are decidedly firm, with a strong tendency to further advance. The following are present

QUOTATIONS :—

Shipping Culls, per M	$00 00@11 00
Stocks	16 00@23 00
Sidings	25 00@35 00
Mill Culls	7 00@ 8 00
Lath	1 00@ 1 10

LUMBER FREIGHTS.

Shipments are steady, although barges are unable to take out little more than half a load, owing to the low water, which is somewhat unprecedented ; but to make it pay three barges start from this point and when St. Anne's is reached the load of one is transferred to the other two, which go on to their destination while the empty one is sent back again. Barges which carry 200,000 feet at a load have only been able to take 115,000 feet at the most. There was recently a slight advance in freight rates, caused by American boatmen striking. The rates paid at present are as follows :—

To New York, (with 25c. extra for strips)	$ 3 75
To Albany	3 50
To Whitehall	2 50
To Burlington	2 25
To Quebec	2 00
To Montreal	1 20@1 30

FOR THE SHANTIES.

A great many men are being sent up to the shanties this fall, and it is estimated that 6,000 men will be in the woods at work the coming winter. The quantity of logs and square timber that will be taken out will be, it is expected, considerably in excess of that of the past season. Square timber has sold well, while lumber is in excellent demand. Shantymen's wages are 25 per cent. better than they were last fall, and 50 per cent. better than two years ago. They are about the same as they were some seven years ago, when the times were good and just before the depression in the trade. The rate of pay being given in the Ottawa Valley is as follows for the class of hands specified :—

General Hands	$15 @ 18 per month.
Log-makers	18 @ 23 "
Scorers	23 @ 28 "
Liners	30 @ 32 "
Hewers	32 @ 45 "
Foremen	40 @ 60 "
Cooks	30 @ 40 "

MISCELLANEOUS.

Up to the present time of writing 700 carloads of square timber belonging to the Scotch Canadian Lumbering Co. have passed this point for Quebec by rail. There are about 150 carloads yet to be brought down.

McLachlin Bros.' new mill at Arnprior is now running. It is built in the most substantial manner, and fitted up with the finest machinery made. The engine used is a 500-horse power one, and the largest in use in any Ottawa Valley mill. The entire cost of the new mill, complete, is about $120,000. The firm have shown a great deal of enterprise in building and fitting up such a splendid mill.

Improvements are being made in the vicinity of the Chaudiere. Just below the Union Suspension bridge a portion of the low water rock island is being removed. At high water it divided the current and caused it to be so strong along either of the docks that it was impossible for steamers to bring up barges to load until near the middle of June, six weeks generally being lost. It is thought the removal of rock will prevent this in the future. At the head of the Chaudiere slides a new bulkhead is being put in.

Later.

OCTOBER 25th.—All the saw mills in this locality are now running full time, the rise in the water having allowed a plentiful supply of logs to be got down. Recent rains caused the Ottawa to rise over a foot in a few days, and navigation of the river between this point and St. Anne's has been much improved thereby. Barges which were compelled to leave the Chaudiere with a little more than a half load for five or six weeks past are now able to carry some 50,000 feet more, and with a little further rise will be able to take their full loads. The freight business has improved within the past week, and will be brisk from now until the close of navigation. The saw mills will continue to run until closed by the frost, as the mill owners are anxious to produce all the lumber possible, owing to the present excellent demand. Owing to the lack of logs, caused by low water, the cut of lumber by the mills of this section this season will be greatly reduced. It is estimated that it will not be much more than two-thirds of the quantity manufactured last season. A great deal of time was lost by most mills, some of which have not averaged more than half-time, consequently the cuts of these mills will be scarcely more than one-half of what they should be, or what was counted upon at the beginning of operations in the spring.

The lumber market is firm, very few sales being made, as an increase of price is looked for by the lumbermen. In either lumber or freight rates there are no changes to note.

A great many men are being sent to the woods this fall, and indications are that more logs and square timber will be taken out than for many winters past. The wages paid are good, being considerably in advance of those of last fall.

The log drives on the Upper Ottawa and the Gatineau are progressing favorably, and will be got through all right now in the course of a couple of weeks.

Holland Brothers, of this city, are building a saw mill upon their timber property in West Portland, Ottawa County, and will have it running in the spring.

Men in the employ of the Upper Ottawa Improvement Company are counting the logs lying on the shores of Allumette Lake, which will not be brought down until next spring.

LONDON, ONT.

From Our Own Correspondent.

OCTOBER 22.—I read a long article in the London *Free Press*, of yesterday, of the discovery of immense tracts of pine lands discovered north-east of the Georgian Bay by Col. Wm. Mercer, a railroad engineer of great experience. He penetrated 100 miles up the Spanish River inland from Georgian Bay and found pine forests of an area sufficient to supply building material to Canada and the West for the next hundred years ! If all this is true, we have a bonanza. The Spanish River to the base of this widely extended land of pine is said to be wonderfully adapted as a logging stream, being devoid of rapids or other impediments its entire length. But we must await further developments before purchasing our "little hatchet."

Since my last letter two weeks ago there has not been much lumber moving in this market, and the expected spurt has not yet come, though merchants are not complaining and prices rule as high as when I last wrote you. I had a conversation last night with the largest lumber merchant here, and he informed me that there is the greatest difficulty in getting G.W. R. cars loaded from the north, but that in respect to G.T.R. cars there is no difficulty, in fact he says we are perhaps better off here in the West than the Toronto merchants find themselves. It is understood that the G.T.R., the Northern Railroad, and H. & N. W. combined have each put on 150 cars, making 300 cars, to be devoted especially to our western demands, and that these cars are not allowed to be sent east. The consequence is that lumber by the G. T. R. arrives promptly, and there are no reproachful epithets in the lumberman's vocabulary on this score.

Notwithstanding the quietness in lumber the demand for building supplies from the mills is very brisk, and nearly all here have abundance of uncompleted contracts on hand. The Messrs. Green's new mill is fast approaching completion and they expect to be at work again in about two weeks.

Mr. Hargreaves' estate is being rapidly wound up. The sale of the mill by auction took place yesterday and realized $1,300, upon which there is said to be a mortgage of $1,000. The contents of the lumber yard will be auctioned off to-day. The stock, however, is small, consisting of pine and hemlock, and some matched flooring and siding.

Shingles are now plentiful, but the prices are unchanged. Lath is also plentiful and unchanged.

My report for this market is,—quiet but firm, with prospect bright for the spring.

DR. FOWLER'S EXTRACT OF WILD STRAWBERRY cures summer complaints, diarrhœa, dysentry, cholera morbus, cholera infantum, sour stomach, colic, nausea, vomiting, canker, piles and all manner of fluxes.

ST. JOHN, N. B.

From Our Own Correspondent.

The Muirhead, Snowball, and other large mills of the Miramichi, are now running full time, and there will be few logs left over this season.

Guy Bevan & Co., St. John, have a contract with P. Loggie to have four millions sawn this season. Mr. Loggie's mill has one of the Waterous 35-horse power rotary steam saws, and is doing thorough work, and although guaranteed to cut 20,000 feet per day, it has with the same engine, carriage, and saw frame, during the last four years, sawn inside of ten hours 34,000 superficial feet of spruce timber, and has averaged for the month 30,000 feet per day.

The weekly average for the season has been 28,000 to 31,000 superficial feet of 3 inch deals and inch boards per *diem*, and this from spruce logs, averaging 10 pieces to the thousand feet.

The quantity of shooks manufactured this year will be less than last, when 45,000 were made for shipping smelts to the United States.

The Harbor at the present writing has a bare appearance. Shipping is scarce and there is very little doing.

English freights are dull at present, there being little demand for tonnage. We hear of one charter being effected at 55s. for Cork Quay direct, and the steamer *Teddington* was taken at the same low rate.

American freights are firm, especially for Boston, for which port vessels can readily obtain $3.00 per M. The rate for New York is not quite so high, $3.50 being about the present figure.

The English market does not present any marked change to report. The price of deals should be better on the other side, as the stock in Liverpool is not so great as at this time last year. We append a comparative table of import, consumption and stock of N.B. deals in the Liverpool market from the 1st of February up to the 1st of October, 1880 and 1881 :—

	1880.	*1881.*
Import (standards)	59,963	40,003
Consumption	54,919	54,277
Stock	26,272	17,099

The American market is in as good a condition as when last reported. Lumher of good lengths and widths command ready sale, and laths are worth $1.75 in Boston, and $1.90 to $2.00 in New York.

Deals at present are scarce, and good dimension lots are worth $9.50. We have had heavy rains recently, which will be the means of bringing down a great many logs, and mills which have been before idle will very soon resume operations.

Oct. 22nd, 1881.

From Another Correspondent.

DEALS.

There is very little to remark with reference to movements in deals since the date of last report. Our stock was about exhausted at the first of the month ; shipments since have consequently been on a moderate scale, about keeping pace with the local production, so there is no material change in the position of the trade locally.

LOGGING OPERATIONS.

The preparations for operating in the woods the coming winter, have, as yet, shown very little activity ; there appears to be considerable doubt as to the extent the operations are likely to be carried on. The cost of getting out logs must be greater than for several years past; supplies and wages will all be higher, besides the increasing difficulties on account of the scarcity of trees, except at greater distances both for hauling and driving, all tend to add to the cost of the logs. It is doubtless owing to such considerations that operators manifest some hesitation in their preparations.

FREIGHTS.

There is no change to notice in the freight market. We quote 57s. 6d. as about the rate for Liverpool, London, etc., the few transactions of a recent date having been at or about that figure.

SHIPPING.

Since the heavy clearances on the first of the month, our fleet continues very small, and is not likely to be materially increased this season.

The following is a list of the vessels in port, with their tonnage and destinations :—

W. D. Wallet, 1413, Adelaide orders.
Malville, 924, Melbourne.
Adept, 1102, Liverpool or London.
E. Sutton, 545, West Coast of England.
Kilverdale, 1190, Liverpool or London.
Lalia, 391, Bougie, Africa.
Hypatia, 738, Liverpool or Bristol Channel.
Sarah B. Cann, 757, Liverpool.
Wm. Stephenson, 749, United Kingdon.
M. A. Palmer, 299, ——
Pusnaes, 503, United Kingdom.

SHIPMENTS.

The shipments of deals and other sawn lumber are as follows :—

For Europe	5,073,000	Sup. feet.
" United States	3,211,000	"
" South America	514,000	"

October 22nd, 1881.

SAGINAW VALLEY.

The *Lumberman's Gazette*, of October 25, says there is a sharp demand in this market for good stock, and the coarser grades are meeting with a fair call. A number of eastern dealers are in the market picking up all the desirable lots that can be obtained. Some extra stock has been disposed of at big prices, sales being reported of 140,000 feet at $10, $20, and $35 ; 300,000 feet at $8, $16, and $36 ; 2,000,000 feet at the same figures by commission dealers ; 500,000 feet at $7.75, $15.50, and $36 ; 700,000 feet at $9, $18, and $38 ; 1,000,000 feet at $15 straight ; 500,000 feet at $7, $14, and $35 ; one choice lot at $10, $20, and $40 ; and a small lot of extra stock rom three circle Cass river logs at $19 straight.

The demand for shingles is strong, and all the stock offering is quickly taken. Standard brands XXX commanded $3.20@3.30, and clear butts $2.10@2.20.

The shipments of forest products from the port of Bay City for the week ending October 22nd were as follows :—

Lumber, feet	24,380,500
Shingles	3,130,000
Lath	800,000
Barrel headings	400

The total shipments of lumber, shingles and lath from the river for the season to October 22, were as follows :—

Lumber, feet	689,975,686
Shingles	123,709,000
Lath	14,508,000

BOSTON.

OCTOBER 22.—The *Journal of Commerce* says the utmost satisfaction is expressed on all sides at the condition of the market and the good trade which has been enjoyed for the past three or four months. It is a long time since the yards could show such a small accumulation of stock on the approach of winter. This fact alone is evidence of what has been going on during the summer months. Choice grades of stock are just as dear, in the eyes of holders, as they were months ago, and consumers have to submit to current rates or go without a supply. Refuse and commons sell fairly, although they are not in the favor they once were. Hardwoods continue in good demand, and anything choice is held for high figures. Values generally are firm throughout.

LIVERPOOL.

Messrs. Farnworth & Jardine report that business during the month has been very inactive ; there has been a small import, and the consumption has been correspondingly small, as is invariably the case when there is little landing. Stocks generally are ample, Baltic fir and spruce deals being almost the only exceptions, and these are unusually light.

Messrs. Duncan, Ewing & Co. state that with a moderate import during the past month there has been less pressure to make sales from the quay, and this, together with a somewhat languid demand, has lessened the apparent consumption. The market continues in a quiet condition, and any pressure of importations would most probably cause prices to give way.

Messrs. Dobell & Co., in their timber market report, dated October 1st, state that during the month of September the import of square timber of all kinds has been 8,000 loads less, and of deals and boards of all kinds 13,000 standards less than the corresponding month last year. Taking into consideration this curtailment in imports, we think the consumption during the month may be considered as fairly satisfactory. There is, without doubt, a better feeling in our trade, but we would wish strongly to impress upon shippers that this cannot be matured into any tangible improvement, unless we have very moderate imports for the next few months. Spruce deals have advanced in value, and are now firmly held at £7 5s., at which price late sales of St. John have been made.

LONDON.

The *Timber Trades Journal*, of Oct. 8, says that at a sale on the 5th Quebec goods were dull, and several parcels were submitted under reserve without elicting a bid. These were all first-class shipments, but possibly buyers did not care to venture a bid, not knowing where it might land them. The upset price of 3rds, 3×11 in., 12 and 13 ft., Gilmour's C brand, ex *Arran*, imported last year, was £9 15s., and for the 4ths £8 10s. to £8 15s., while undersized were quoted at £7 5s. A portion of the goods imported last July ex *St. Pauli*, also from Quebec, were quoted even lower than those just enumerated without finding a buyer, viz., £9 for 11 ft., and £8 15s. for 9 and 10 ft. These figures seemed reasonable enough to tempt speculators, but whether they were within the holding price we cannot say. It is very likely another 5s. would have secured them. Buyers, however, like to make the prices for themselves ; nevertheless several parcels of reserved goods of other descriptions were sold without any difficulty. Compared with what low quality stuff from the Baltic ports is now obtaining, the Quebec prices would not be dear at another 10s. We have the assurance of the Quebec papers, and other information from private sources, that the production is not likely to be as much as was expected ; while the trade between the Dominion and the United States in pine logs is continually increasing, which must tell sooner or later on the supplies of pine to this country. Still either the stuff is not consumed here at its former rate, or else it meets with more favor outside the saleroom ; anyhow offered under the hammer goods of the kind appear to move slowly, while for other descriptions the demand seems unabated.

We have added to our plant all the latest improved machinery for Electro and Stereotyping, and the manufacture of Printers Furniture, facilities for executing work which no other establishment in the Dominion possesses, and not excelled by any on the continent. A large assortment of various cuts constantly on hand.

Wrought Iron Shanty Cook Stoves

The Best Article ever offered to the Trade.

I have much pleasure in drawing attention to my **WROUGHT IRON COOKING STOVE**, for **Shanty, Hotel and Boarding House use.** These Stoves are made of **Heavy Sheet Iron**, the top and lining of the fire-box being of **Heauy Cast Metal** and all the connecting parts of substantial **Wrought Iron Work.** The dimensions of these Stoves are as follows:—

SINGLE OVEN STOVE

Top surface contains six 10-inch holes, with ample room between, and one oven 16 x 24 x 26.

DOUBLE OVEN STOVE

The Double Oven has a top surface containing twelve 10-inch pot holes, with two ovens, each 16 x 24 x 26. One fire-box of suitable size for area to be heated. Below will be found Testimonials from some of the leading Lumbermen, who have used my Wrought Iron Cook Stoves since I commenced manufacturing them. They are the names of gentlemen who are well known and reliable, and will carry more weight than any recommendation of my own could do.

The Best Stove I have ever Used.

PETERBOROUGH, May 31, 1880.

ADAM HALL, Esq., Peterborough. Dear Sir,—I have used your Wrought Iron Cooking Stove in our lumbering operations since its introduction here, and have no hesitation in saying that I prefer it to any other. For durability, economy and efficiency, where a large number of men are employed, it is the best stove I have ever used. You can, with confidence, offer it to hotels, boarding houses and lumbermen.

Yours truly, THOS. GEO. HAZLITT.

The Stove for Lumbermen.

PETERBOROUGH, June 1st, 1880.

ADAM HALL, Esq., Peterborough. My Dear Sir,—We have used your Wrought Iron Cooking Stove and find it is very satisfactory for lumber operations, especially so on drives. We can recommend it highly.

Yours truly, IRWIN & BOYD,

Gives the Greatest Satisfaction.

PETERBOROUGH, June 3rd, 1880.

A. HALL, Peterborough. Dear Sir,—I have had the Wrought Iron Cook Stove, purchased from you, in constant use ever since last fall, and it gives the greatest satisfaction in every respect. I can recommend them highly to any one who is in the lumber business. Very truly yours, GEO. HILLIARD, M.P.

EMERY WHEELS FOR SAW GUMMING!

Solid Emery Wheels are now almost in universal use for the purpose of gulleting and gumming saws. Statistics show from 25,000 to 30,000 saw-mills in the United States. Many of these run only a single saw each. A one-saw mill would use one or two wheels a year, costing $3 to $4 each, and when such small mills order single Emery Wheels from the factory, the express charges often equal the cost of the wheel. There was a time when the quality of Emery Wheels was so uncertain, and the demand so fickle, that storekeepers could not afford to carry them in stock. Now, however, Saw Gumming Wheels have become as staple an article as Files, and every dealer in saws, Hardware and Mill Supplies can afford to carry a few dozen standard sizes in stock. Large dealers order stocks of $500 to $750 worth at a time. Saw Gumming Wheels are used with the edge (or face) square, round or beveled. Probably seven-eighths of all in use are beveled.

The principal sizes are:

8x1/4, 8x5/16, 8x3/8, 8x1/2 } 3/4 in. hole. 10x1/4, 10x5/16, 10x3/8, 10x1/2 } 3/4 in. hole. 12x1/4, 12x5/16, 12x3/8, 12x1/2, 12x5/8, 12x3/4, 12x7/8 } Holes, 3/4, 7/8 and 1 inch.

Probably more wheels 12x3/8, 12x1/2 and 12x3/4 are used than all the other sizes together. Saw Gumming Wheels are used, however, of all sizes up to 24x1 1/2. The most frequent complaint is that Emery Wheels harden the saw so that a file won't touch it. The answer is that you don't want a file to touch it. An expert workman will shape and sharpen the teeth with an Emery Wheel, leaving the teeth *case hardened*, in which condition the saw will cut about 33 1/3 per cent. more lumber than a soft saw will. Those who want to use the file, however, have only to touch the saw *lightly* a second time (after going all over it once), and this second touch will cut through the case-hardened scale.

A QUESTION OF QUALITY.

Thirteen years of experience as makers of, dealers in, and actual users of Emery Wheels, have led us to a decided opinion as to what quality is the best. We prefer for almost every use an "Extra Soft" wheel like the "Pocono." We believe that money lost through the rapid wear of the wheel is more than made up by the money saved on wages. As we cannot get every one to adopt our views, we make several qualities, so as to meet their views. We say to those who think they can only be satisfied with some other make of wheels (not Tanite), that we can furnish qualities *to match* any and every other make. If you have got used to some special quality of wheel, let us know what it is, and we can send you *a Tanite Wheel of similar quality*. Our *regular* classification of Saw Gumming Wheels is as follows:

CLASS 2. MEDIUM—HARD.—This Wheel is THE STANDARD Saw Gumming Wheel all over the world. Probably seven-eighths of all the Saw Gumming Wheels used are "Class 2. It cuts fast and keeps its shape well. Some think it too hard, some too soft. We prefer the "Pocono."

CLASS 3. MEDIUM—SOFT.—The same as to coarseness and fineness as "Class 2," but a *softer*, and therefor freer cutting wheel.

CLASS "POCONO." EXTRA SOFT.—This Wheel we prefer to all others. It is both *finer* in grain and softer than either of the above. As a Saw Gumming Wheel, Class "Pocono" is specially suited to those practical and experienced Sawyers who know how to grind with a light touch, and who want a free cutting wheel that will not create much heat.

Illustrated Circulars and Catalogue, showing Cuts of Saw Gumming Machines, and Shapes, Sizes and Prices of Wheels, sent free on application.

The Tanite Co. Stroudsburg, Monroe Co. Pennsylvania

CANADIAN TRADE SPECIALLY SOLICITED.

M. Covel's Latest Improved Automatic Saw Sharpener!

Is the Most Perfect Machine that has ever been Introduced into Mills for that purpose.

CIRCULAR SAW STEAM FEED!

I would also call special attention to my

Heavy Circular Saw Mills

and for STEAM MILLS, would recommend the Steam Feed, having put in several which are giving the best of satisfaction, as will be seen by the following testimonials:—

GRAVENHURST, August 20th, 1880.

WM. HAMILTON, ESQ., Peterborough.

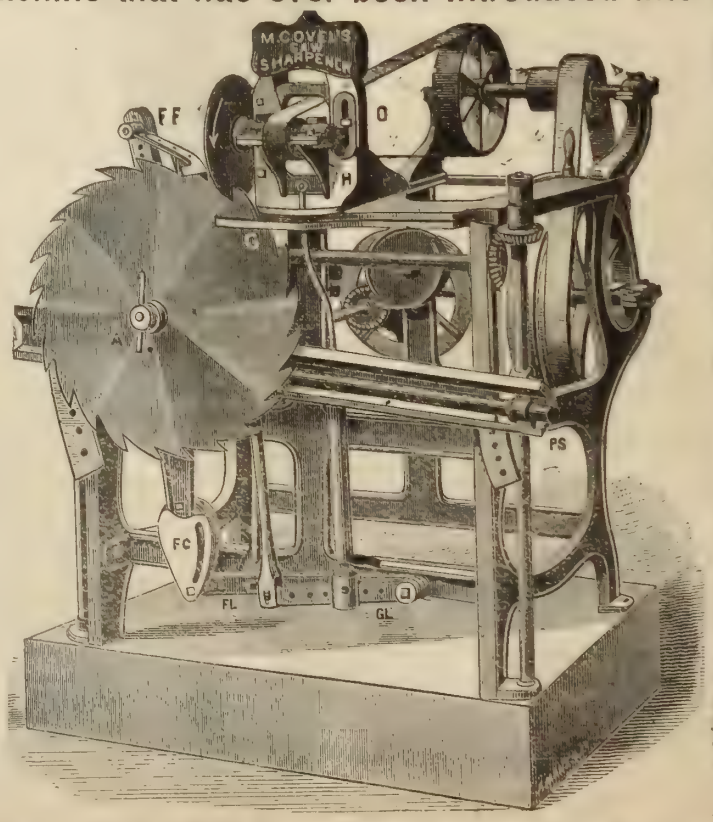
DEAR SIR—I have used your Steam Feed for near four months, and it has given me perfect satisfaction in every way; it is admitted by every person who has seen it work to be the best feed ever invented. Since I put it into my mill, I have not lost ten minutes time fixing anything belonging to it. I can cut 18 boards 13 ft. long in one minute. It can do much smoother and better work than the pinion feed. It is easily governed and reverses the carriages instantly. I am thoroughly satisfied with it and can recommend it to any person who has a Circular Saw Mill for cutting long or short logs. I consider I have cut more lumber than will pay for the Steam Feed since I got it than I would have cut had I not put it in.

Yours respectfully,
WILLIAM TAIT,
Lumberman, Gravenhurst.

TORONTO, August 11th, 1880.

WM. HAMILTON, Peterborough, Ont.

DEAR SIR—The Steam Feed you put in is working splendidly. Yours, &c.,
THOMPSON, SMITH & SON.



MILL MACHINERY!

I am also manufacturing Saw Mill Machinery, for all sizes of Gang or Circular Mills, Span or Double Circulars for Slabbing Small Logs. My Patent Jack Chain for drawing logs into Saw Mills, acknowledged by all to be the Cheapest and best ever got up; also, my Patent Lumber Markers, different sizes of Edgers, Gang Lath Mills, Trimmers, Power Gummers, and all Machinery used in a first class Gang or Circular Saw Mill; also, small Hand Gummers for use in the woods, for Cross-cut Saws. Rotary Pumps of different sizes, for Fire Protection in Mills, &c.

Horizontal Engines and Boilers

CORLISS  ENGINES

Where economy of fuel is the great consideration, along with uniformity of speed, such as is required in Grist and Flouring Mills, Woollen and Cotton Factories, or large Factories of any kind, I supply the Corliss Engine. I feel justified in saying that our Style, Workmanship and Finish on this Engine will be no discredit to its renown, and certainly is not equalled in this country for economy of fuel. I have them working at 2 1/2 pounds of coal per horse-power per hour.

VOL. 1. PETERBOROUGH, ONT., NOVEMBER 15, 1881. NO. 26.

THE new mills for the Georgian Bay Lumbering Co. are under contract and the work is being pushed on with the greatest speed. The machine shops are built and taken possession of, and the stone foundation of the mill is nearly completed.

A. J. GEIGER, Philadelphia, is reported as having the largest lumber warehouse under one roof in the United States. It is 164 feet wide and 200 feet long. It required 13,000 square feet of tin for the roof, which is so arranged that it can be opened when the weather is fair, and closed when it is stormy.

THE ONTARIO BANK.

We regret to learn, directly and indirectly, that some of the depositors and note holders of the Ontario Bank have become alarmed at recent developements, and are withdrawing their deposits and refusing to take its notes as usual, notwithstanding that there is not the slightest ground for alarm on their part.

Did we for a moment think that there is the slightest possibility of any of its creditors suffering inconvenience, much less loss, by the Ontario Bank, we should be the the last to discouraging them taking every possible means of securing themselves, but as matters stand we deem it our duty to discourage everything tending to discredit this Bank's entire solvency so far as the public is concerned.

It is unfortunately too true that through past management, a considerable portion of the Stockholders' money has been lost, but taking even the most gloomy view of the state of its affairs, and accepting Mr. Holland's report as certain to be fully realized, the bank still possesses undoubted assets, which amount to within a fraction of one hundred and thirty-five cents for every dollar which it owes to the public. But perhaps the best evidence that the Bank is thoroughly solvent so far as its credi tors are concerned, is the fact that notwithstanding Mr. Holland's proposal to reduce each $100 of its present stock down to $50, yet the speculators in both the Montreal and Toronto markets are paying about $60 for every $100 of its present stock or for every $50 of the new stock, which is equal to a premium of twenty per cent. on the stock as reduced. This is the strongest possible proof that those most likely to be best informed still place a very substantial value upon its stock, and believe that things are likely to turn out much better than Mr. Holland's estimate. Be that as it may, however, it is quite clear that this stock cannot be worth a single cent, unless there be a surplus after paying every creditor. The Stockholders are the only ones which can suffer by the bank's losses, and that being the case we have no hesitation in strongly deprecating any action on the part of any of its creditors calculated to increase the already serious loss of its proprietors.

CANADA'S RESOURCES.

IMMENSE TRACTS OF PINE LANDS DISCOVERED NORTH OF THE GEORGIAN BAY.

Col. William Mercer, a railway engineer of large experience, passed through Chicago a day or two ago to commence the survey for the Quincy, Vandalia and Eastern road. The Colonel brought the first tangible information from the mysterious exploring expedition which recently left a port on the Lake Huron shore and proceeded to the mouth of Spanish River, on the Georgian Bay, where they dismissed the steamer which had taken them thus far, and took to small boats, in which they proceeded up the river one hundred and fifty miles, penetrating a region little known to the white man, and which the Candian Government has never yet

SURVEYED OR EXPLORED.

The expedition was gotten up so quietly that only a few persons interested in the result of the exploration knew of its destination. Its abandonment of the steamer on the shores of the Georgian Bay was a matter of wonderment even to the officers of the boat, who could not, though they tried hard, guess the object of all the preparations which they found awaiting the voyagers at the mouth of Spanish River, and the extended trip of the adventurous little party at least awakened in the minds of friends at home fears that some serious disaster had overtaken them in this wild and unknown region. Launched upon Spanish River, the voyagers proceeded leisurely, noting the depths and currents of the stream, the magnitude of which surprised them more and more as they ascended. Reaching a point 100 miles inland from the Georgian Bay and the limit of Government surveys, the party landed and prepared to penetrate the great unexplored region before them. Here began the work that from its results may in the not far distant future open up a new and almost inexhaustible source of lumber supply. This, in fact, was the primary object of the expedition—to investigate the resources of this region as regarded the growth and quality of pine timber, and discover if such forests, could they be found, could be utilized when the pine supply of Michigan should be exhausted.

Establishing a base line six miles in length, the surveyors moved forward, sending outside parties, and in this way covered an area of 75 square miles. They found the pine timber of a superior quality, exceeding that of the Michigan forests, and in such quantities as to convince them that they had discovered a source which would furnish building material for Canada and the West

FOR THE NEXT HUNDRED YEARS

at least. It was estimated that the area surveyed by them would furnish 24,000,000,000 feet of lumber, and they had not begun, according to the Indian guides, to penetrate this immense forest tract. The explorers also encountered small streams connecting with the Spanish River, which, in the event of the future tapping of this great lumber supply, would serve admirably in floating the logs to the greater stream, which is free from rapids and well adapted to the logging trade. The value of this great pine forest will perhaps be better understood when it is stated that the entire stock of uncut timber in the state of Michigan is estimated by practical engineers at only 35,000,000,000 feet.

In addition to this immense lumber supply, the party found evidences of

VARIED AND EXTENSIVE MINERAL DEPOSITS,

which of themselves will in time serve to open up this great wild region to the fuller and freer knowledge of the enterprising white man.

Spanish River, according to Col. Mercer, is from its mouth to its rise, or as far as the ex pedition navigated it, a splendid stream, devoid of rapids or other impediments its entire length. It runs through a grandly picturesque country, with lofty cliffs and jutting precipices interspersed here and there with lengthy reaches of high plateaus. Its waters are of a good and uniform depth throughout. This river, to gether with the Ottawa River—the one running south west and the other south-east—serve as the

GREAT DRAINING AND IRRIGATING ARTERIES

to this widely extended land of the pine. The Ottawa River, however, is obstructed by frequently recurring rapids, and as a logging stream has many disadvantages which could not be overcome without the application of immense labor and expense. Plodding along through this almost interminable wilderness of pine, the explorers were surprised and gladdened by the voice of man coming from a source least expected—in fact, they ran upon a party of engineers engaged in the work of surveying for

THE CANADIAN PACIFIC RAILWAY.

Mutual greetings and congratulations were exchanged. The railway surveyors had long since cut loose from civilization, and yearned for some means of communication with their fellow-men. In accordance with these hopes and longings their daily accumulations of mail matter had been kept in the best state of preservation and at the foremost front, ready for any chance benighted party like themselves who would volunteer to carry them to their destination. This package of letters, which had assumed a goodly bulk, was taken in charge by our pioneers and religiously packed with their choicest instruments, in order that their charge might be properly regarded and respected.

Col. Mercer, who has been bred to eminent practical work, soon found occasion to question his newly acquired friends with regard to the prospects and ultimate intentions of the Canadian Government touching this great railway project. He had, through his own knowledge of the country, discovered that this road must pass through

NEARLY 1,000 MILES ENTIRELY UNINHABITED,

in the largest portion of which the print of the Indian moccasin has never been seen; and yet the Colonel, who is, as has been before stated, an eminently practical man, could not see how a road through such a country could be made to pay. To the casual observer it would appear that this vast tract of timber, with the accompanying mineral resources, as discovered by this exploring party, gives promise of a successful future to the railway enterprise that at its inception has such a wide and otherwise apparently unprofitable gap between its remotely separated termini.

Gilmour's New Mill.

The *Advocate* says that the work on Gilmour's new mill at Trenton is being pushed with great energy. Mr. Proper has arrived and is executing the plans made by Mr. Hall, who is the draughtsman and architect. The frame of the mill proper is made in sections, each story being a section. The frame is up and also the two extension wings. The men are putting on the roof as fast as possible, so as to have it enclosed before the cold weather sets in. It is a collossal frame in the size of its timbers and the area it covers. Mr. Proper tells us one gang similar to those to be put in cut 123 logs in one hour. Mr. Lester, sr., is pushing the new smoke stack rapidly to completion. On Saturday it was within 30 feet of its height. Messrs. Crow & Sansom are driving on the boiler house with all the forces they can well set to work. The front of the new boilers, which will be tubular, will be reversed to face the west, thereby securing a better draught. The Miller Bros. have completed the stone foundation except the centre stone work that is to bind the immensely large gangs to the rock. There is to be three feet of rock excavated, and then large bands of iron will be laid down and stone work twelve feet thick built over these irons, so that the gang under great weight, when screwed down to the irons, may be free from shake or jar. Mr. Gilmour, the engineer, has had four boilers put in position in the new boiler house in connection with the planing mill, and two of the boilers now supply steam to the mill. The new engine will shortly be in position, and then the preseut small engine will be kept for electric light or force pump purposes. The "Gehena" is about 100 feet out west of the large mill, and looks like a great circle of rough hewn stone. It will be surmounted with an iron furnace 30 feet in diameter, into which refuse stuff from the mill will be thrown, and will be kept burning day and night while the mill is in operation.

BLACKSTONE, the name of England's greatest lawyer, and the name of a well known lawyer's pen of Esterbrook's make. The stationers have them.

OUR QUEBEC LETTER.

From Our Own Correspondent.

A LARGE SALE—PRICES OF OTHER TRANSACTIONS—STOCKS WINTERING—FURTHER PREPARATIONS FOR THE WOODS—A FREIGHT DIFFICULTY—WRECKED CARGOES—MINING NOTES.

QUEBEC, Nov. 9th.—There is never very much to report at this season concerning the lumber trade, and the present fall is no exception. There will be very little more timber shipped here this season, the last cargoes being now stowed away. There are not half a dozen timber ships now in port, and these are principally taking in deals for London and Glasgow. In another ten days the last of them will have sailed out of port, and in ten days more the harbor may be covered with a sheet of ice.

Since my last letter the whole of the fine lot of square white pine, shipped to this port this fall from above Ottawa by the Q. M. O. & O. R. R., and consisting of about 7,100 car loads, has been sold to one purchaser,—Messrs. A. F. A. Knight & Co. The price at which it changed hands has not transpired, but it is reported to be pretty well up to last published quotations. This sale involves somewhere about $200,000.

Mention may also be made of a good raft of white pine, consisting of square and waney, which has been sold during the past week, the square averaging 48 feet, at 29 cents, and the waney about 17 inches, at 32 cents.

The Nagle raft has been sold here to Messrs. R. R. Dobell & Co. For it also 29 cents has been paid for white pine, but of 52 feet average, and 32 cents for waney of 18 inches.

Red pine has been sold at 25½ cents for 40 feet average, and 13 cents for 26 feet average.

No other lots have of late changed hands, nor are any sales of oak or other hard woods reported. Brokers state that prices have not changed for other kinds of timber, but there being no sales to report, it is not, of course, possible to give figures that all will consider correct. As may readily be imagined from the sales above reported, and the small stocks hitherto held here, there is not much to winter in first hands. Mr. J. Bell Forsyth is just now collecting details of the Quebec stocks for his annual report and statement. Until the various returns are in it will be impossible to give figures.

Lumbermen's agents are just now busy in getting good lumbermen for the woods. Mr. D. B. Charleson, of Sarnia, is here and has sent up several gangs to get out oak on the scene of his last season's operations. From all that can be so far learned, it appears that about the same amount of timber will be got out of the woods in Canada this winter as last.

The packing box industry, which gives employment to a large number of hands at Montmorenci and New Liverpool, threatens to suffer somewhat by a curious freight difficulty. The Grand Trunk Railway, it appears, refuse to furnish more cars to transport the boxes to the States, on the ground that American railways, when they can get Canadian cars upon their lines, run half their life out upon their own roads before returning them, just, as it was recently alleged, was done with American mail bags by the Canadian postal authorities.

The latter portion of the Quebec Fall timber fleet has been very unfortunate this season in the Lower St. Lawrence, something like six vessels loaded with timber, deals, &c., having been wrecked on their way home from this port. The value of the cargoes amount to over $80,000, but of course in some instances all, or at least a good portion, of the freight will be saved.

MINING NOTES.

A good deal of competition is anticipated here at the approaching sale by auction of Government mining lands. In Beauce matters are now proceeding very quietly, and rumour says that remunerative yields of gold have been found this season. Mr. Juncker, French engineer from Paris, sent out purposely to report upon the Beauce Mines, has completed his investigation. His report will not, however, be given to the public until after it has been submitted to the French capitalists.

There is some talk of opening up a new silver mine in Charlevoix, but nothing has been definitely done so far in the matter.

BRACEBRIDGE.

From Our Own Correspondent.

LIVELY TIMES—WAGES DROPPING—A LARGE CUT PROMISED—TIMBER SALES—EXTENSIVE IMPROVEMENTS BY THE MUSKOKA BOOM CO.—TIMBER HUNTING FEVER.

NOVEMBER 4th.—Since I last wrote you things have been lively here. There have been a great many going into the woods. The prospects are that there will be a larger stock got out the present season than last. Everyone agrees that the work is much farther advanced now than at this time last year, and although men were scarce and wages much higher, there is a much better class of men in the woods now, and wages are going down, $18 to $20 being about the ruling wages now. The cut of board pine will also be larger than last year, but it is too early yet to give any figures. The weather has been very wet for the last month or more, and the streams are all up nearly to spring level. S. S. Cook is taking advantage of this on the Little East River, and has started to drive out his timber that was stuck there last spring; although it is late, if the weather keeps mild they are likely to get it out.

The drive on the Muskosh has reached the mouth, but it is not sorted yet, and is not likely to be this fall. Its progress has been very slow, owing to the lowness of the water in the spring, and so much west wind during the latter part of the season. It is to be hoped that the Boom Company will have better luck next year. I see that they are doing some very necessary improvements, viz., on North Branch, dam at Mary's Lake, which is completed; also a slide at Wilson's and another at Bracebridge; on the South Branch, a dam at Baysville, and a slide at Hannah's Falls, both of which are completed; besides a slide at Grey's Falls, on the Muskosh, and I believe they contemplate a dam and slide at Moon River. This will about complete the improvements necessary on the rivers.

Owing to the Government having advertised a sale of limits, the upper portion of our district is swarmed with timber hunters, and from present appearances, if they are all as anxious to buy as they are to get information, they will go high, for the fever appears to be at its height just now. Nearly all the timber to be sold will come down the Magnetawan and French rivers, and a good portion of it through Lake Nipissing. Some few of the mills at Gravenhurst have shut down, but the majority of the mills that get their stock from this district are running yet, and will run until it freezes up, but the cut will not be as large as was anticipated in the spring, the low water having kept back the logs.

Several timber limits have changed hands here lately. The Muskoka Mill and Lumber Company bought from Cook & Bros. the south half of Perry, and the north-east corner of Franklin, it is said, for $23,000; and Caldwell & Son sold the south portion of Franklin for $14,000, and H. H. Cook sold six miles in Morrison for $11,000. There have also been numerous smaller purchases.

The article in your last issue, copied from the *Christian Guardian*, is a little hard on the shantymen, I think. The correspondent is one of those that likes better to write than to go and see for themselves. It is quite evident that he does not know what he is writing about.

A number of our lumbermen are now in Toronto as witnesses in the suit between Petrie and the Guelph Lumber Co., no doubt very much against their will at this season of the year.

Mill Refuse Furnaces.

During the last week there has been shipped from Mr. W. Hamilton's foundry the prepared material for two mill refuse furnaces, one for Byng Inlet, and the other for Port Severn. Another will shortly be shipped to Waubaushene, and an extra large one will be made during the winter for shipment to Trenton. These burners, or furnaces, are immense circular structures of plate iron, lined with fire brick. They are from twenty to thirty feet in diameter at the base, and from one hundred to one hundred and twenty feet high. With a well appointed system of sawdust and slab carriers, the premises about a saw mill may be kept as neat as around a woollen factory. All the leading mills are getting them.

THE ONTARIO TIMBER SALE.

As our readers will have noticed, by an advertisement which appears in another column, the Ontario Government will offer for sale by auction, at Toronto, on the 6th of December next, Timber Limits covering a very large area of territory in the Muskoka and Parry Sound districts.

Although we imagine that intending buyers at this sale will take steps to ascertain for themselves the character of the timber on these limits, and the facilities afforded by nature for getting it to market, yet it may not be out of place for us to give a brief epitome of the reports of the surveyors who laid out these townships, with regard to the timber growing upon them.

MOWAT.—This township was surveyed in 1879 by Mr. T. Byrne, who reports that all that portion of it lying south of concession line 10 and 11, and north between side line 30 and 31, and the west boundary to French River, as burnt country, and that the only pine of any consequence in the township is to be found on both sides of the Pickerel River, extending about a mile inland.

BLAIR.—This township was surveyed in 1878 by Mr. T. Byrne, who reports that about 11,000 acres in the south-west corner had been burnt over about fifteen years before, and had grown up with small poplar, white birch, balsam, spruce and scrub pine. About 21,000 acres lying south of con. line 10 and 11 to Kawigamog Lake, and west to lot 23, and all that part from the 8th con. north to Pickerel River, and west of side line 20 and 21, is heavily timbered with black birch, pine, maple, hemlock, spruce, elm, white oak, ash and tamarack, while all the rest of this township had been burnt over about three years before, leaving not a vestige of timber.

MCCONKEY.—Was surveyed in 1858 by Mr. D. Beatty, who reports that from the south boundary northward to a narrow belt along Wolf River it is timbered with maple, birch, basswood, and in some places hemlock, with scattering pine, broken with small swamps of cedar and tamarack, while immediately along Wolf River, on either side, the country is broken with ridges of rock and timbered with hardwood and pine of good quality. Along the river from about lots 20 and 21 to its outlet the pine has been cut off. Eastward from lots 20 and 21, and northward from the river, the timber is hardwood and pine,—in many places of superior quality.

LAURIER.—Was surveyed in 1878 by Mr. Henry Lillie, who describes the township as hilly, many of the hills reaching the height of from two to three hundred feet, while the timber is principally mixed with hardwood, balsam, spruce and pine, but not a sufficient quantity of the latter for lumbering purposes. There is a burnt district of about 5,000 acres in the S. E. corner.

JOLY.—Was surveyed in 1878 by Mr. T. O. Bolger. The principal streams in this township are the Magnetawan and South River. The only pine of any consequence is found along the flats of the Magnetawan, throughout the township. There is also good pine in the vicinity of the South River. Away from these streams the country is hilly and chiefly covered with hardwood.

PATTERSON.—Surveyed by Mr. J. W. Fitzgerald in 1876, who says that the swamp timber is chiefly spruce, while the uplands are covered with maple, birch, and pine, and that a rather extensive area of the north part of the township has been burnt over, and the timber rendered comparatively useless.

SINCLAIR.—Surveyed in 1876 by Mr. John McAree, who says that in different parts of the East River Valley there is a considerable amount of very good pine, of moderate size. Isolated pine trees also occur among the other timber, which consists of maple, black birch, hemlock, beech, balsam, basswood, cedar, &c.

GURD.—Was surveyed by Mr. J. W. Fitzgerald, who writes that there are only occasional pines with an enormous quantity of magnificent black birch, with trunks three and four feet thick, with a height of thirty and forty feet, and which is of fine quality and color.

MACHAR.—Surveyed in 1876 by Mr. E. Stewart, who says the whole township is well timbered,—the swamps with spruce, cedar and tamarack; the swampy land with hemlock and birch, with pine ridges, and on the higher land with maple, birch and balsam.

STRONG.—Surveyed by Mr. W. Beatty in 1876. About one-ninth of the area of this township is occupied by a lake lying near the centre. A belt of hardwood land along the west side of the lake gradually rises to about the height of one hundred feet, when it becomes mixed with scattered pine and hemlock, with occasional patches of birch and balsam. East and north of the lake the land is rolling and covered with hardwood and scattered pines, and small patches of balsam and spruce swamp.

PRINGLE.—Surveyed in 1876 by Mr. Fitzgerald, who states that the south-west portion may be described as rugged and broken, scattered over with a sprinkling of white pine of fair quality, but not in sufficient quantities to be called a pine country. The south-east part of the township is described as of better quality, covered with scattered pine of good size, large birch, and a fair growth of maple, hemlock, beech, &c.

LOUNT.—Surveyed by Mr. Hermon in 1876. The timber consists of maple, beech, birch, balsam, spruce, pine, &c. The pine about the Lake of Many Islands is said to be of value, and may be got out *via* Deep Water River and the Maganetawan.

HIMSWORTH.—Surveyed in 1876 by Mr. Chapman, who reports the northern portion of the township as having been formerly run over with fire, and much valuable timber destroyed, a small quantity of green pine in some places being all that is left. The remainder is timbered with maple, birch, oak, basswood, &c., on the high ground, with cedar, pine, balsam, and spruce along the valleys and streams running into South River.

BETHUNE.—Surveyed in 1877 by Mr. A. B. Scott, who says there is not much pine in this township, and that it is doubtful if there is sufficient to cause it to be set apart for lumbering.

PROUDFOOT.—Surveyed by Mr. C. F. Chapman in 1877. The timber is reported to consist principally of hardwood, maple, beech and birch, on the high lands, while on the lower levels these are mixed with cedar, hemlock, balsam and pine. Pine does not occur in large groves, but generally scattered through the other timber, the best localities being along Loon Lake, and the stream running from it at the head of Island Lake, and along the main (South Branch) river eastward. A grove of small pine occur at the north end of Sand Lake, but of no great extent.

MILLS.—Surveyed in 1877 by Mr. T. Byrne, who says the southern portion of this township contains some of the finest pine he had yet seen in the Huron and Ottawa territory. He considers this part of the township principally adapted for lumbering purposes. The northerly part has also some very good pine, though not sufficient for lumbering purposes.

HARDY.—Surveyed by Mr. Bray in 1877, who says on the whole the township cannot be called a good pine township, although much valuable pine exists in it. There is a great deal of cedar scattered all over the township, which, though large, is generally faulty and hollow-hearted.

NIPISSING.—Mr. H. Lillie, who surveyed this township, says that on the whole it is well timbered. In the central and westerly portions there are large tracts of fine hardwood, consisting of maple, birch, beech, and ironwood, with a mixture of basswood and hemlock. The maple is said to be of good size, and among it are many beautiful specimens of birds-eye, while the birch is frequently three and four feet in diameter.

ALMOST YOUNG AGAIN.—My mother was afflicted a long time with neuralgia and a dull, heavy inactive condition of the whole system; headache, nervous prostration, and was almost helpless. No physicians or medicines did her any good. Three months ago she began to use Hop Bitters, with such good effect that she seems and feels young again, although over 70 years old. We think there is no other medicine fit to use in the family. A lady in Providence, R. I.—*Journal.*

MILL MACHINERY FOR SALE.

A TURBINE WATER WHEEL, 50 inches, Steam Cylinder, 12 inches, with Steam Chest, Shafting and other Saw Mill gearing. Address P. O. Box 352, Barrie, Ont. 4L24

Timber Limits & Sawmill FOR SALE.

The subscriber being anxious to concentrate and consolidate his business, on account of his age, will sell at very low prices—

1st. His Mills and Farm near the Bradford Station, Northern and North-Western Railway, together with Limits in Ridout and Sherbourne.

2nd. The Portage and Canal connecting Black River with Lake St. John, and Lake St. John with Lake Couchiching, in the Township of Rama.

3rd. Eight million feet of saw-logs now in Black River.

4th. About 4,000 acres of land in different townships.

If not sold at private sale, the above will be offered to the highest bidder at some future time to be named, as I intend to close all out and concentrate in Michigan, where I now have mills.

All and any information can be had from Thompson Smith & Son, Toronto, or James Durham at Bradford Mills.

4L25 THOMPSON SMITH.

Department of Crown Lands,

TORONTO, 6TH OCTOBER, 1881.

NOTICE IS HEREBY GIVEN THAT, UNDER AN ORDER IN COUNCIL,

TIMBER BERTHS

In the undermentioned Townships in the

MUSKOKA and PARRY SOUND DISTRICTS,

Will be offered for Sale by Public Auction at the Department of Crown Lands at twelve o'clock noon,

On TUESDAY, the 6th day of December next,

viz. :—Townships of Mowat, Blair, McConkey, Hardy, Patterson, Mills, Sinclair, Bethune, Proudfoot, Gurd, Machar, Strong, Joly, Laurier, Pringle, Lount, Nipissing and Himsworth.

The area to be disposed of in the above Townships as Timber Berths is upwards of 1,400 square miles, and to suit all classes of purchasers each Township will, as nearly as practicable, be divided into four berths.

Sheets containing conditions and terms of Sale, with information as to Area and Lots and Concessions comprised in each Berth, will be furnished on application personally or by letter, to the woods and forests branch of the Department, or to the Crown Timber Offices at Ottawa, Belleville and Quebec, and the Office of T. E. Johnston, Esq., Parry Sound.

T. B. PARDEE,
4L24 COMMISSIONER

P. PAYETT'S NEW IMPROVED

Adjustable Saw Guide !

Can be adjusted without danger. You can take your saw off without taking the guide off the frame.

FOREST TREE CULTURE.

BY HON. H. G. JOLY.

The following valuable article appears in the last report of the Montreal Horticultural Society and Fruit Growers' Association of the Province of Quebec :—

The European traveller who visits only the settled parts of this Province, is invariably disappointed at the scarcity and meanness of our trees. Of course, if he leaves the beaten tracks of travellers, and goes far enough into the wilderness, up the Ottawa and the St. Maurice, he will see fine timber, but, in our settlements, we can only show him, here and there, at long intervals, one solitary elm, model of grace and beauty, and the traveller will feel, as we do, grateful to the man who spared that tree.

On a warm summer's day, the Desert of Sahara, with its lovely oasis, would be suggestive of coolness, compared with our country. No trees to shade the dusty roads, to shelter the panting cattle, to set off the neat white-washed houses; only far away, hidden nearly out of sight, the patch of small neglected timber which the farmer is compelled by our stern winters, to spare from the general slaughter, as he will die, without fuel.

If every acre of ground were covered with valuable crops, one would try and get reconciled to the absence of trees, and bow to the iron rule of our age which converts everything into cash. But what a small proportion of all that ground is used profitably! We can find plenty of spare room for growing forest trees; they are not only the most beautiful ornaments to a country, and the most useful product of nature, giving fuel, timber, shade, shelter, retaining moisture and a protection against droughts, &c., &c., but, considering the question from a *strictly money-making* point of view, the culture of forest trees is perhaps the *best and safest investment* that can be made.

It is rather difficult, I admit, to induce people to plant forest trees in this Province, where, for generations, they have been brought up to look upon the forest tree as their natural enemy, to be got rid of at any cost, hacked down, burnt out of the way (for want of a better mode of disposing of it), and still troubling the settler for years with its everlasting stump, an obstacle to thorough cultivation. The children and grandchildren of the settlers remember too well; they cannot be expected to love the forest tree, but self-interest ought to conquer instinct and prejudice. With us, land is not too valuable for forest tree culture. In Europe, where land is scarcer and more valuable than it is here, they plant, every year, thousands and thousands of acres in forest trees.

To those who say that our country is *too new*, to think of that, I will answer that New Zealand, the Australian Colonies, India (so far as the settlement of the land by Europeans is concerned), are newer countries than ours, and they are all taking active steps towards the planting of forest trees on a large scale. In the United States, the Federal as well as the States' Governments encourage the culture of forest trees by grants of land, and money, and exemption from taxation, and powerful societies are co-operating with energy and liberality. The Government of Canada has begun by offering free grants to those who undertake the planting of a certain number of trees on the Western prairies, but I will here observe that it will require more active measures to set the people in motion, and especially the establishment of nurseries, where the people can buy young trees and seed, and the beginning of some large plantations, as an example, to show to the people, by practical results, that the culture of forest trees is within the reach of every one.

We seen in the papers that the Western railways have started the culture of trees on their own account; the St. Paul, Minneapolis and Manitoba railway is reported as having appointed a superintendent of tree culture, who has just contracted for three hundred thousand trees, and most of the roads west of the Mississippi and Missouri rivers have also begun to raise trees, in order to insure a supply of ties, and for other purposes.

How many give as their reason for not planting forest trees, that they will not live long enough to get any profit out of them. You do not hear that in Europe. Are people more selfish in America than they are in Europe? Or is the feeling of self-reliance so much more developed in America that the people here expect the next generation to take care of itself as they take care of themselves? Then leave them some timber, if you wish them to have the same chance that you had. It was but a heathen who wrote, more than eight hundred years ago, "*Arbores serit diligens agricola quorum fructus numquam videbit.*" "The good husbandman plants trees whose fruits he shall never see." But I must not drift away from my subject into philosophical considerations; it will be more to the point to show that the profits of forest tree culture are not only enormous, but that their realization is far from being delayed to an indefinite future.

I do not pretend that the whole of our farms should be planted in forest trees; that would be too absurd. Our farms are generally too large for the small number of hands we employ; there are always some odd corners, idle strips, stoney or damp patches which it does not pay to cultivate; begin and plant forest trees there, suiting the tree to the nature of the soil—you will find some for every kind of soil. Once planted and fairly started, they will take care of themselves, give no trouble and increase yearly in value, in a wonderful ratio, so well expressed by the Honorable F. B. Hough, chief of the Forestry Division of the United States Agricultural Department, in the address lately delivered by him at Columbus, Ohio.

For years past, I have sought the best and cheapest mode of re-wooding our denuded lands, and have made some experiments; they have not yet been carried over a great many years, and are, so far, most encouraging notwithstanding my numerous mistakes and enforced absence at the best seasons, and they satify me as to the correctness of the statements made by the leading advocates of forest tree culture. I trust not to be charged with egotism if I now give the results of some of those personal experiments, rather than copy or condense what has been written by others, and it will be a great satisfaction if I can induce a few to try for themselves.

In selecting forest trees for planting, the first consideration ought to be the nature of the soil where they are to be planted; if the soil is not favorable to one kind of tree, do not waste your time in planting it there; you will find another tree that will suit the soil. After paying all due deference to soil and climate, you must be guided in your selection of a particular kind of tree :—1st. By the value of the timber. 2nd. The greater or lesser ease and certainty with which the tree can be grown. 3rd. The rate of growth.

I have tried principally black walnut, oak, elm, maple, ash, tamarack, Russian pine, and poplar, and will now give some of the results :—

Black Walnut.—The value of that wood is so considerable (a dollar a cubic foot at the present time), and it is getting so scarce that it struck me as the most worthy of being introduced and cultivated here. True it did not grow spontaneously anywhere in the Province of Quebec, but this appeared to me no conclusive reason why it should not grow and flourish here. The lilac comes all the way from Persia, and it spreads out its leaves earlier and keeps them unchanged later than our typical tree, the maple. I did not fear our great colds, for in the West, the natural home of the black walnut, the thermometer often ranges as low as here, though for a shorter period at a time. It was well worth trying.

I procured a bag of black walnut nuts from the West in the fall of 1874, and sowed them at once; it was late in November; we had to remove the snow and break the frozen ground, but I thought the earth the safest place for to winter them. They began to come up about the tenth of June following; not five per cent. failed, and they have never been artificially sheltered in any way. It would not be worth while introducing them here if they could not take care of themselves.

Of those left undisturbed where they were sown, I have not lost one; they have now had six summers' growth. I have just had some of them measured, so as to be certain of their size; the height of the four largest is as follows :—Fifteen feet and a half, fourteen feet and a half, fourteen feet, and twelve feet, and thick in proportion. Those have not been transplanted; now notice the difference between them and those that have been moved.

In the fall of 1875, when they were only one year old, one lot were transplanted, but the soil was not favorable and they have not done well, so far; however, they are beginning to recover. In the spring of 1876 I transplanted another lot; the best are about eight feet high; and another lot last spring, the tallest of which are about ten or eleven feet. All those trees are the same age as the fifteen and fourteen feet trees; the difference in size results from the transplanting, therefore it is much better to sow them at once where they are to remain. Plant them thick, as the wood of the young tree is very soft, like that of our native butternut.

It is contrary to all preconceived ideas, even among those who handle timber every day, but nevertheless true, that the black walnut (*juglans nigra*) and the Canadian oak (*quercus alba*) as a rule increase much more rapidly in girth than our pine and white spruce. I conclude, from counting the rings on the trees after they are cut down, and from watching the growth of the living trees, that black walnut and Canadian oak generally gain one inch in diameter in about three years and a half, while our spruce and pine take about double that time to accomplish the same result; this can easily be ascertained by counting and measuring the rings. Of course there will be exceptions, and it would not be fair to judge by those only; I speak of the aver age.

It is now time to say something of the profits, and I must be careful to avoid exaggeration. Judging by the growth of the living trees and the rings of the timber, when cut, I do not hesitate to say that a black walnut, under ordinary circumstances, at the age of seventy-five years, will have attained twenty-one inches in diameter and will contain at least fifty cubic feet of timber, the actual value of which is about one dollar per cubic foot. (See for prices the *Lumberman's Gazette*, published at Bay City, Michigan, the numbers of the 26th January, 2nd February, and 2nd March, of this year).

For how many such trees, judiciously planted, will there be comfortable room on one superficial acre? It is difficult to find a regular plantation of any trees of that diameter here, to help us to a solution of the question, and the way in which trees are scattered in the forest and their irregular size leave but a vague impression on the mind, varying according to the personal experience of each. I am not ready to answer the question at present for want of full information, and will not venture a guess, but I do not feel the same hesitation where trees standing in one single row, with plenty of room on two sides, are concerned; in that case, trees twenty-one inches in diameter would not be too close standing at eighteen feet from one another. Take a farm three acres wide, with a road across the width and a row of black walnuts of an average diameter of twenty-one inches on each side of the road, the trees eighteen feet distant from one another, you get sixty trees containing fifty cubic feet each, three thousand cubic feet, worth, at the present price, three thousand dollars.

But it will be safer to sow the black walnuts in clumps, pretty close. They will protect one another when young, and, as they grow, they can be thinned gradually. Their culture will entail little trouble, apart from the preparation of the soil, and the sowing of the nut; the work of thinning will soon repay itself with the timber removed. The better the soil, the quicker the growth. Such a valuable tree as the black walnut deserves to be well treated. If possible, find some shelter against the strongest prevailing winds for the young plantation, a belt of older trees, or a hill. They are rather soft, like our butternut; it is the only drawback I have found out so far, but not fatal. Even the youngest trees will get several branches torn off and very ugly wounds without dying; they are wonderfully hardy.

The value of these plantations will increase steadily from the day they have taken root; they represent an ever-increasing marketable value long before the expiration of that period of seventy-five years which I have indicated—not as the limit of their growth; they will grow for centuries, but—as the period necessary to attain a profitable size, when they can be cut down without waste.

The Butternut grows spontaneously here; its beautiful timber can be worked with as much ease as the softest pine; it ranks immediately after the black walnut, and is inferior to it only in the colour of the wood, which is lighter. Rubbed with linseed oil, it takes the soft, rich hue of sandal wood, and if judiciously sawn, shows wonderful marks. I recommend strongly its culture, and will be glad to send nuts to those who will plant them, next fall, as we gather a large crop of them.

White Oak.—The acorn ought to be sown as soon as possible after it drops, in the fall, as it loses its vitality rapidly, and to avoid the great check resulting from transplanting, it ought to be sown at once, if possible, where the tree is destined to remain. Its wood is tougher, and not so liable to break when young. I think it ought to grow with at least as much ease and rapidity as the black walnut; ours are rather behind, as they have been transplanted twice. The oak is so useful and valuable, and its culture so easy, that every plantation of trees ought to contain a good proportion of oak, provided the soil be not too poor for it.

White Elm.—This splendid tree recomemnds itself sufficiently by its beauty and usefulness to dispense me from dwelling at any length upon it; it grows rapidly in a deep, damp soil. I have not grown it from seed, but by taking up young trees from a low island, where they grow in abundance. It appears to bear transplanting better than the oak, walnut or maple, and can be moved safely of a much larger size than any of those trees.

Maple.—If you wish to raise a maple sugary with the smallest amount of expense and trouble, go to an old maple grove in the fall; the ground is covered with a thick carpet of seedlings. After rain you can pull them up by hand with the greatest ease, without breaking any of their small roots, if you are moderately careful. Plant them at once in a corner of your garden, about two feet apart each way; weed during the first two summers with a light hoe. We found, after four years, the trees fit for transplanting, about five feet high, and the thickness of a man's thumb. As the ground was mellow and free, we took them up with little damage. Of course, there is still the objection of transplanting, but in a less degree than when you seek your maples in the woods, where their roots are mixed up with those of other trees, stumps and stones, and must be more or less torn up with violence. There is an immense difference in the comparative cost of the two processes, which will tell upon the hundreds of trees required to make a sugary worth working. Those small trees never fail (at all events those we transplanted never did), while much larger trees, more injured in the removing from the forest, die in great numbers, and the survivors are seriously checked. I have been told that the seedlings would overtake them, but have not yet had time to verify that statement. Maples will begin to yield a reasonable quantity of sap for sugar when about twenty to twenty-five years old.

The Ash.—It is well known, and its different varieties are found very useful, especially the white ash, which recommends itself for its elasticity; its wood is beautifully marked, and is largely employed in the making of furniture, panels, &c. It will thrive where the walnut, oak and maple refuse to grow, or only linger miserably. I remember part of a maple avenue, where, year after year, the maples had been replaced over and over, and failed; at last, we had recourse to white and black ash; none failed, and they are progressing most satisfactorily.

Tamarack will grow in wet, damp ground; we have succeeded with them where even willows had failed; the value of its timber and knees is too well known to require any comment from me.

Russian Pine (*Pinus Sylvestris*).—In making new plantations, especially from seed, it is no more trouble to try foreign than Canadian seed, and, however strange it may appear, I find it easier to procure the seed of the Russian and the Himalaya than of the Canadian Pine. One

may find among foreign trees valuable additions to our plantations; such as, I think, the Russian pine, native of the north of Russia. Our climate suits it admirably, and it appears a more vigorous grower than our Canadian White Pine. I cannot give any opinion as to the quality of the timber, as they have only been sown in the spring of 1873. They started rather slowly, and their height and thickness are less than those of the black walnuts sown two summers later, in November, 1874; but they are now beginning to make more rapid strides. I measured the season's growth of one of them last year, on the 3rd day of July. It showed twenty-six inches in length, gained in about thirty days, as the buds of the coniferæ do not open much before the beginning of June; the year's growth was already over, and from that moment it only thickened and hardened into wood.

Since the growing season of our trees is so short, we ought to lose no time if we wish to help them along, by thinning, removing useless branches, mellowing the ground, or otherwise; all that ought to be done before June, so as to afford them every chance during the growing month. I think the *Abies Nobilis*, or White Fir, of Washington Territory, is the fastest grower among the Coniferæ.

POPLAR.—I must beg the indulgent reader to listen to my plea in favor of this tree, and not condemn it unheard. I speak of the kind known as Cotton Wood or Populus Canadensis (not to be confounded with the Balsam Poplar and the Aspen). Its growth is wonderfully rapid; twenty-three years ago, in November, 1858, I stuck in the ground three cuttings; it was my first trial at tree culture. They are now over sixty feet high, one is twenty-five inches in diameter, the second twenty-four inches, and the third twenty-two inches, an average of one inch a year in diameter. In every new plantation, in a country completely denuded of forest trees, and especially in re-wooding our Western prairies, I would recommend, at the start, a plentiful use of this Poplar, without neglecting, of course, more valuable trees. It strikes at once from cuttings, which can be procured and transported anywhere with the greatest ease. Thanks to its rapid growth, it will soon enliven the scenery (as it is a handsome tree), afford shade, shelter the other trees in the plantation and supply timber, not of the first quality, but better than none, until the slower growing trees are ready with their more valuable contributions, and it can easily be cut down when the room it occupies is wanted for better trees. This poplar has been introduced from Canada into France, where it is designated as the "Peuplier du Canada," and considered as a useful and profitable tree.

I must now close this long article. The results of my experiments are nothing to boast of; practical men would have done much better. If I had chosen the soil for the different kinds of trees more judiciously, had not left them much too long without thinning them, and been able to attend to them in the proper seasons, I am convinced that, as a whole, they would be much finer. At all events, it shows that any one who will take the trouble, can begin the culture of forest trees without previous training. I do not speak of orchards here. Having no School of Forestry in Canada, we must educate ourselves; we have got books written on the subject by eminent and practical men, and we have got, always opened before our eyes, the great book of Nature.

No articles ever attained such unbounded popularity in so short a time as Burdock Blood Bitters, and that too during the existence of countless numbers of widely advertised bitters and blood purifiers. It is evident that this medicine begins its work at once, and leaves no desirable effect unattained.

KEEP THE FEET DRY.—This is the season of sloppy weather so productive of colds, and lung troubles; neglected cold or damp feet is a great source of these difficulties. Cure your cough with Hagyard's Pectoral Balsam. Pleasant to take and always reliable.

DESERVING OF PRAISE.—Too much cannot be expressed in favor of that unsurpassed remedy for coughs, colds, asthma, croup, sore throat, and all lung complaints. If you suffer from neglected colds, try Hagyard's Pectoral Balsam. The cost is trifling, only 25 cents.

GRINDLEY vs. RYAN.

At the last sitting of the Court of Assize, held at Ottawa, an action for damages was brought by Mr. Grindley against Mr. Ryan, for trespassing on the limits of the plaintiff on the Montreal river. The trial extended over several days, the chief, indeed the only, question at issue being the value of the timber taken, inasmuch as it was admitted by the plaintiff that the trespass was unintentional.

After a careful review of the evidence Justice Wilson submitted the following questions for the consideration of the jury in coming to a conclusion as to what damages the plaintiff in the case was entitled to, if any:—

1. What was the quantity of timber taken estimated at as standard logs; plaintiff says 5,250, defendant 4,450?

2. How should that number of standards be classed? That is, should they be classed as logs or as square timber, or partly as logs and partly as square timber?

3. If partly as logs and partly as square timber, what proportion do you consider to have been fit for square timber? The defendant said 55 per cent., that is 11 trees out of every 20.

4. If you find any part of it fitted for square timber, what was the Quebec price of it in 1880? The witnesses have varied from 24c. a foot to 31c. a foot.

5. What do you allow for the cost of the manufacture of square timber on the Montreal River, and getting it to Quebec from there (not noticing for the present the bad shoots and rapids, and the bad place known as the notch)? Mr. Grant said it cost from 13½c. a foot to take it from the Kippewa to Quebec. Mr. Bryson said 15c. and Mr. Nagle said 17c. to take it from Lake Temiscamingue to Quebec.

6. Was there any extra expense manufacturing on the Montreal River by reason of the difficulty of getting men and provisions to the limits? Do you think the convenience of haul would make up for that?

7. Would there be any extra expense in getting square timber down the Montreal River by reason of the shoots and rapids and of the notch? If so, how much? What I mean is, by the breakage and by damage done to the corners of the sticks, and causing loss of measurement, as it is said always happens, and by any extra delay of the men? What percentage?

8. What do you value the saw logs at by the standard?

9. What would be the cost of manufacture and driving the logs?

10. What do you allow the plaintiff (if any thing) for waste of trees cut and left lying on the limits by the defendant?

11. The plaintiff's survey cost him $800. Do you allow it or any part of it to him?

His Lordship also impressed on the jury that the trespass was not a wanton one, but inadvertant, and that no extravagant damages should be given.

The jury returned the following answers to the questions which had been submitted for their consideration by the Bench:—

1. We take the defendant's statement to be correct.

2. Partly as logs and partly as square timber.

3. We consider 55 per cent. to have been fit for square timber.

4. Twenty-seven cents a foot.

5. We say it is worth seventeen cents per foot to manufacture the timber and take it to Quebec.

6. We think the short haul would make up for the difficulty of getting in men and provisions.

7. About 10 per cent.

8. One dollar and fifty cents.

9. Eight cents per standard.

10. Two hundred dollars.

11. Allow him two hundred dollars.

THE VERDICT.

The result of these answers having been considered by the Bench, the total amounts involved in them were computed, and a verdict for the plaintiff was given for $5,746.

"MUST SAY it's the nicest thing I ever used for the teeth and breath," says everyone having tried "Teaberry," the new toilet gem. Get a 5 cent sample!

Proprietors, Toronto.

Travelling Agent.

MR. A. L. W. BEGG has been appointed agent for the CANADA LUMBERMAN, and is authorized to collect subscriptions and grant receipts therefor and to make contracts for advertisements appearing in its columns.

DEVOTED TO THE LUMBER AND TIMBER INTERESTS OF THE DOMINION.

PUBLISHED SEMI-MONTHLY BY
TOKER & Co. PETERBOROUGH.

Terms of Subscription :

One copy, one year, in advance	$2 00
One copy, six months, in advance	1 00

Advertising Rates :

Per line, for one year	$0 90
Per line, for six months	50
Per line, for three months	30
Per line, for first insertion	10
Per line, for each subsequent insertion to 3 mo's.	05
Cards not occupying more than 12 lines (1 inch) per annum	8 00
Cards not occupying more than 12 lines (1 inch) for six months	5 00
Cards not occupying more than 6 lines per annum	5 00
Cards not occupying more than 6 lines, for 6 mo's	3 00

Special rates will be made for page, half page and column advertisements.

Advertisements intended for insertion in any particular issue should reach the office of publication at east three clear days before the day of publication, to insure insertion.

All communications, orders and remittances should be addressed and made payable to TOKER & Co., Peterborough, Ont.

Communications intended for insertion in the CANADA LUMBERMAN, must be accompanied by the name of the writer, not necessarily for publication, but as a guarantee of good faith. Communications to insure insertion (if accepted) in the following number, should be in the hands of the publishers a week before the date of the next issue.

PETERBOROUGH, Ont. NOV. 15, 1881.

ABOUT ten o'clock on the night of the 4th inst. the sash and door factory of Messrs. Christie & Co., St. John, were destroyed by fire. Loss, about $15,000.

THE *Lumberman's Gazette* believes that there will be a full supply of logs for next season, even if the winter should prove unfavorable for operations, inasmuch as there is a large number of logs to be carried over.

A HOLLOW tree in South California has been converted into a dwelling. Doors and windows have been put in, and floors built for four stories, the entrance being made by means of a ladder. Outside the topmost room is a small balcony, shaded by the foliage of the tree. The occupant expects to get rich by having no plumber bills to pay.

THE following is a comparative statement of the exports of lumber, &c., from Port Hope, to to the 1st of November, for this year, and also for the corresponding period of 1880 :—

	1880.	1881.
Lumber, feet	66,471,033	69,607,346
Lath and Shingles	32,540,850	33,967,900

BRITISH TRADE NOTES.

THE disposition on the part of owners just now is rather to hold than press goods on the market, in the full belief that the market will be much firmer before the end of April or May. It is the general impression now that the supply coming forward will hardly be sufficient to keep the market from touching much higher prices. Even extravagant figures are possible between now and the spring.

WE noticed at a sale some fresh-sawn oak planks from Montreal, submitted in 3, 4, and 5 in. thicknesses, at a uniform price of 3s. per foot cube. These goods are somewhat uncommon in the market. We have often wondered, with the extensive sawing facilities at the shipping places, that hardwoods have not come to this market from the various ports ready manufactured. That a trade of the kind will eventually be developed we have not the least doubt. The parcel alluded to did not sell, the demand just now for hardwood being very quiet.

AT Hull, though the importation has been brisk, there is a considerable shortage on the whole as compared with last year, and prices are reported firm with a rising tendency.

THE importation during the past week into Liverpool has been much more lively than hitherto, owing to the sudden change of wind, which has brought into port a large number of vessels that for some time past have been detained off the coast by the long continuance of easterly winds. Most of these vessels have now got to work discharging their cargoes, and the quays are now wearing a busier aspect than they have done for some time past ; at the same time there are visible many large spaces either unoccupied entirely or but sparsely filled. The recent import has not affected the market in any way, for a large proportion of the cargoes recently arrived have come upon contracts entered into some considerable time since ; hence there are not many cargoes in the market unsold, and those are being realized at about late rates. In cases where prices asked cannot readily be obtained the cargoes are being stored to await a better market.—*Timber Trades Journal, Oct. 22.*

THE AUTUMNAL TRADE.

When three-fourths of the year are fairly gone by, and about two-thirds of the import season, the trade ought to be in a position to judge pretty nearly what its status will be when the stocks expected are all come forward. or shut in by the ice, and further shipments for this year at an end.

But the season has been so exceptional that there is still great diversity of opinion as to the ruling of prices. If the last season was abnormal, so is this, but in a different sense. Then, with plenty of wood ready for shipment abroad, prices were run up by persuading importers there was going to be a scarcity. This year prices, which had been proportionately low all last year, on account of the abundant supply, rose on this side, because no shipments could be made of any importance from the Baltic ports until the spring had nearly gone by. Then came an apprehension of great pressure on our markets from the north of Europe, and prices began to droop again. Finally freights ran up 30 and 40 per cent., and while charterers were hesitating importation received a check, because buyers would not close contracts unless sellers would guarantee a ship not to exceed a certain limit of freight ; and few transactions were completed wfthout a good deal of correspondence and telegraphing, while others went off altogether because this difficulty could not be got over.

The reports of the state of the timber trade at the outports are mostly of a favorable character, and the last public sales of St. John spruce at Liverpool were the best we have noticed for some time past, and about 10s. a standard higher than they were last month, and, although business was reported quiet, prices are said to be firm, with no likelihood of abatement. Prices at Glasgow are scarcely so good for spruce and pine deals as they were twelve months ago, and 1s. 4d. per foot for first-class hewn pitch pine of 75 ft. average per piece is not an indication that the demand in the Clyde is likely to exceed the supply. There is a great quantity of timber used up in Glasgow for its iron shipbuilding fittings. It has been estimated that an iron ship of 1,000 tons register will use up about 400 loads of wood in masts, spars, bulwarks, decks, and interior fittings before she proceeds to sea ; but as the market is generally well supplied in proportion to its prices, these keep a pretty fair level.

Upon the whole the prospects of the trade may be considered more hopeful than they have been for several seasons past ; but it would be wrong to conclude the import season to be very near its end. That will depend on the weather of the next two months. No doubt the late gales have checked the importation and sent back many ships disabled, which will perhaps not come forward with cargoes this side of Christmas, and many more will take warning and lie by ; but these things nevertheless, a goodly number of ships are likely to bring forward their cargoes, as may be gathered from the information herein referred to, and those who stand out too stiffly for price while the market is good may find it difficult to do as well when the time comes for them to want the return of their money.—*Timber Trades Journal.*

THE WHITE PINE.

ORIGIN OF PINE FORESTS—REPRODUCTION—INSECTIVOROUS ENEMIES—THE BLACK KNOT—WIND SHAKES—PITCH.

William Hosea Ballou, of Evanston, read a paper before the American Association for the Advancement of Science, at Cincinnati, August 19, as follows :—

DENUDATION.

Forty-six years ago the pine industry of Michigan had its origin on the Saginaw river. From that date to the present the denudation of timber has increased in that state, and other pine areas, to such an extent that within the next decade the use of such material as a commercial pursuit must pass out of existence. Already the producer is beginning to look to science with genuine alarm for such aid as may be extended to avert a calamity which certainly is threatening an industry the capital invested in which would twice pay the expenses of the late war. It therefore devolves upon us to discuss, not only the enemies of the pine tree which nature herself has inaugurated, but also the statistics of the destruction by the more formidable consumer, man. In a paper relative to so extensive a subject, it seems necessary to draw a line of discussion, and to confine these remarks to the white pine as it was, and to-day stands in the state of Michigan.

ORIGIN OF THE WHITE PINE.

The first thought suggested is relative to the origin of the white pine forests. From whence came the species which so strictly confines itself to its own peculiar territory ? The oak, and most other trees, are naturally reproductive, and young trees are equally prolific in their growth on the same soil where the first forest was levelled to the ground. They may be transplanted on almost any territory, and without any special care, speedily growing to a state of usefulnesss to man. Not so with the white pine. It is now an almost undisputed fact that it will not reproduce on the parent soil, and that when transplanted elsewhere, its develop is marked with early decay in so many instances as to disparage the work. Furthermore, it is beset at once with the same host of natural enemies common to it on its indigenous ground.

For some years past my attention has been directed to some facts which may have bearing on the question under consideration. The pine of the level country east of the Rocky mountains seems to have its best growth in proximity to the lake region. I have noticed that frequently, where a lake recedes, leaving a sandy beach, evergreens, the juniper, pines, etc., are very apt to spring up. Within the memory of man, a wide sand beach near Waukegan has been made, and on this area a miniature white pine forest has appeared, and thrives. On some lone islands in Lake Erie, of evident recent formation, called the East Sister, the Old Hen, etc., I observed several years since that a similar phenomenon had occurred. These and other facts point to a recent origin of the pine forests under consideration, which might not have been in existence at the time of the landing of Columbus. This fact is more apparent when it is stated in this connection that the average age of the pine is 300 years in this country ; and the other fact is reiterated that it does not reproduce on the same soil. The present pine forests, then, doubtless took the place of some other species, which had exhausted the soil necessary to their existence, a phenomenon well known to naturalists. It matters not whether the seeds were blown there by the winds, or lay dormant in the soil until their turn, or, indeed, what the speculation concerning them is, so long as the facts are inaccessible ; certain it is the origin of the pine forests in Michigan is a matter of several centuries ago.

REPRODUCTION.

The next question of importance is reproduction. Answers to queries submitted to over one hundred practical lumbermen, as well as careful observation, makes positive the fact that the reproduction of the white pine on parent soil is impossible as a commercial success. There are reasons for this. The most important has relation to the exhaustion of that vitality of the soil necessary to this species. Other causes have been advanced to the neglect of this, which plainly do not bear on the case. Were reproduction successful—and here is the great practical proof—my one hundred informants say that long ago forests would have been started to replace those now a fact of the past.

THE ENEMIES

of the white pine are numerous. The average of the data I have gathered tends to show that pine forests began to decay before one-half of the trees were matured. The causes of such decay are the growth of punk or rot, "wind shakes," and loose knots. Insects do not originate, but hasten decay.

The punk is a rot which appears in a lump on the side of the tree, eating into its vitals. It is due to more than one cause. Opinions of writers vary on this subject, all of whom argue in behalf of a special cause. I have carefully examined all of these claims, but observations in the lumber regions, and talks with lumbermen, have convinced me that anything which affects the vitality of the tree will produce punk or rot. It matters not whether the tree becomes wind shaken, or the soil exhausts, or a knot penetrates to the heart, or what befalls it when alive, punk is sure to become the secondary condition, followed by destruction.

Enemy number two is the black knot. This is a loose knot, black in color, which, when the tree is sawed, drops out of the board, making it defective. It is caused by its imperfect growth If there is not sufficient nourishment at the roots to support the limb, it grows imperfectly, and its inner termination works toward the heart, as if to suck sap from the vitals. This brings on loose layers and subsequent decay.

A wind shake is one of the exasperating defects of lumber. It is noticeable in a board, the layers of which separate, usually in triangular form, when the sawing takes place. It occurs generally at the butt of the tree, and is caused by the force of the wind when the tree is standing, and by frost when the log rests in the yard. Opinions on the latter point vary.

OTHER AGENTS OF DESTRUCTION.

There are other enemies of the lumber, all of which deserve consideration just at this time, when commerce must begin to economize and obviate, so far as possible, all difficulties in the way of making the product supply the demand. The first of these is fire. All parties agree that from one-half to one-third of the lumber product is destroyed by this agent. Fires, where they occur, follow clearings, but often penetrate the dense forests, sometimes covering an area of a hundred square miles. It is impossible to secure any data on this subject, because more or less timber is saved out of the wreck. A pine tree that has been scorched is utilized the succeeding year, or the worms destroy it.

Insects are very destructive, the pine weevil, *Tomicus zylographus*, being a foremost agent. These attack a sound tree, but not a live one. If anyone will take the trouble to enter a great log yard at dusk, these creatures may be heard at work, the united sound of which is like the roar of wind or water. The grub goes through a log in a crooked line, which greatly depreciates the value of the timber. There is a "pin worm," the scientific name of which has escaped me, that bores its way straight to the heart, leaving a round black passage the size of a pin head. These are the only insects which lumbermen take into account in Michigan.

GET OUT OF DOORS.—The close confinement of all factory work, gives the operatives pallid faces, poor appetite, languid, miserable feelings, poor blood, inactive liver, kidney and urinary troubles, and all the physicians and medicine in the world cannot help them unless they get out of doors or use Hop Bitters, the purest and best remedy, especially for such cases, having abundance of health, sunshine and rosy cheeks in them. They cost but a trifle.—*Christian Recorder.*

HONESTY.—It is commonly said that you cannot make an honest man believe that white is black and *vice versa*, but those who have grey hair by using the "CINGALESE HAIR RENEWER," will find that this apparent difficulty is easily overcome. 50 cents per bottle.

SOLE PROPRIETORS OF THE

FAMOUS INTERNATIONAL

BOILER FLUID COMPOUND.

Patented 5th March, 1877.

This Compound will save its Cost many times in one year by saving fuel.

It eradicates scale, and when the Boiler is once Clean a very small quantity keeps it Clean and Free from all Incrustation.

It is perfectly harmless to Iron, and emits a clear pure Steam.

In ordering, mention the CANADA LUMBERMAN. L241y

504 St. Paul Street, MONTREAL.

A BIG FLOUR MILL.

A recent number of the Boston *Journal of Commerce* contains an account of the mammoth flouring mill now nearly completed, in the city of Minneapolis, Minn., from which we cull the following particulars. The owners are C. A. Pillsbury & Co., who also own the five principal mills of the city :—

Some two and a half years since Mr. Pillsbury visited Europe with a view of examining the various mill buildings and processes relating to the manufacture of flour in the various milling centres. After his return a site was selected on the east side of the river, about 500 feet below the falls of St. Anthony, the plans of the building agreed upon, and the drawings made. In the spring of 1880 ground was broken and the structure commenced. It is built from Trenton limestone, rock faced, and laid in courses. The building is 1,800 feet long, 115 feet wide, and 137 feet high, having seven stories and a cupola. The side walls at the foundation are 8½ feet thick and at each end the walls are 7½ feet thick. The walls of the building proper are 5½ feet thick below the grinding floor, and taper to a thickness of 2½ feet in the three highest stories. The basement is 20 feet in height, laid in Louisville cement, and the coping, window sills, and two bolting courses are of hammered granite. The outside of the building shows for itself elegance of design which is quite appropriate for the purposes to which it is applied. The masonry of this building alone required 125 men nearly six months to finish. The driving mechanism is found on the first or basement floor. There is also a wheat bin capable of holding 35,000 bushels of wheat, extending up through the grinding floor. The Hurst frames for the millstones are on this floor, but the millstones are on the floor above. The second story is the reducing floor, and when the machinery for the mill is completed, 400 sets of roller mills will be here, arranged in twelve lines. Only half of the machinery has been placed. One hundred and one Gray's mills have been furnished. All these machines are double roller, 18 × 9 inches in size. Sixty-four corrugated machines, 27 smooth roller machines, and 10 porcelain machines. There are 115 Stevens' roller mills, and there will be twenty pairs of millstones in the whole mill which will be used on middlings. The millstones are arranged in one line against the north wall of this story, and are elegantly fitted in black walnut and ash, and are all provided with Behrus' patent high pressure millstone ventilation. There is also a weighing hopper and scales upon this floor, the hopper holding 800 bushels. There is also a line shaft, 120 feet in length, from which the power to drive the flour packers on the floor above is taken. The third room is the packing room, where, on each side of the mill, will be placed, when the second half of the mill is finished, 12 Eureka flour packers, making 24 in all. One end of this floor is partitioned off for a cleaning room, and this is driven by a separate belt. A large part of the floor is taken up with storage bins, but plenty of room is left for handling the flour after it is packed. On the fourth floor the bolting chests begin and run up to the attic. In the eastern half of the mill, the half now running, there are eight double and four single chests, which on the three floors above contain 40 reels each, and on the fourth floor above 22 reels, making 142 reels in all, each 14 feet long. Twenty-three No. 2 Smith purifiers are also upon this floor. There are also bins over the flour packers on the floor below, made out of ⅜ boiler iron six feet in diameter, extending through two stories. In the end of this story, set apart for wheat cleaning like the floor below, there are four Richmond brush machines, and two large sized Kurth-Coccle separators ; also four Niagara bran dusters. The fifth floor is a continuation of the bolting chests, also four brush machines, four separators and two centrifugal flour bolters, bran dusters, smutter, brush machines, and dust catchers.

The mill has ample facilities for receiving grain and shipping flour, which facilities are absolutely necessary when the fact is stated that 25,000 bushels of wheat will be ground every day this mill runs when all the machinery is put in. The mill is supplied with an elevator for passengers and freight, and is lighted with the Brush electric light of 32,000 candle power. The steam for heating the building is supplied by two steel boilers, placed in a fire-proof building, separate from the mill ; electric call bells are on every floor, and the mill has telephonic connection with Minneapolis, St. Paul, and Stillwater. A central stairway, built of iron, which is spiral in form, is one of the noticeable features. The interior of the mill is painted white, with red trimmings, while the roll mills, stairways and scales are painted red.

The power for this mill is one of the noticeable features, as well as one of the absolute requirements. The forebay is in the basement, is 125 feet long, 15 feet wide, built of stone, and laid in hydraulic cement. The wheel-pits are dug out of a solid ledge, and are 57 feet deep, being walled in by solid masonry. Iron flumes, 12 feet in diameter, made of ⅜ inch boiler iron, are used inside the pits. The motive power is two Victor wheels, 55 inches in diameter. The two wheels yield 2,400 horse-power, according to careful measurements, and it is said to be the largest power developed by any two wheels in the world. The water is brought to the mill by means of a canal 650 feet long, 16 feet wide, and 16 feet in depth, in solid rock. After the rock was blasted out the sides were built up with solid masonry laid in hydraulic cement and arched over with stone. The bulkhead is 30 feet wide, 30 feet high, and in it are two gates, one on each side of a central pier. A stone arch beneath the basement admits the water into the mill. The discharge from the wheels is through two tunnels, each 150 feet in length, running from the river to the mill directly under the wheels. The tunnels empty into a tail-race several hundred feet long, which empties into the river. Upon the top of each water-wheel shaft is a bevel gear which transmits the power to a horizontal shaft eight inches in diameter, 145 feet long, tapering to six inches at the end, which rests on a solid archwork of masonry inside the forebay. On this line of shaft are the driving pulleys, weighing each six and one-half tons, and upon which run two 48-inch belts, each 26 feet long and double. From the line of shaft the power is taken off by thirty-inch belts, to drive the various machines of the mill. The arrangement is such that if one wheel should break the other can run the mill, and the power of both wheels can be used together on each or both sides.

One-half of this mill is now built, and is considered capable of turning out 2,500 barrels of flour per day ; but it has made, by actual record, 3,547 barrels in one day. The mill, when completed, will have a capacity of 5,000 barrels per day, making, it is claimed, the largest flour mill in the world. The amount of power yielded by the two mills in question is something which can hardly be measured, by the mind, at least ; and that a water-wheel, 55 inches in diameter, should be enabled to transmit 1,200 horse-power, is applying a large amount of power, which, in this case, seems to be thoroughly utilized. We have never before heard of a water wheel transmitting 1,200 horse-power, let alone two working in the same pit actually yielding, or ready to yield, 2,400 horse-power.

Some conception of the capacity of this mill may be had when it is stated that 125 cars are required daily to take the total production of the mill away, and sometimes 200 cars arriving and departing to do the business of this mill.

Dangers of the Electric Light.

It is reported that the disastrous fire at the Landenberger Mill, Philadelphia, on Wednesday night, had its origin, as the local journals express it, in the "unaccountable flickerings and sparks from the electric lights used in the establishment." If these statements be correct, it becomes a matter of no inconsiderable importance to ascertain from the scientists how far these eccentricities are likely to be permanent conditions of the use of these lights in other establishments. It is a serious business thus to have life and property at the mercy of their scintillations.—*Philadelphia Bulletin.*

There is more or less danger of the falling of sparks from all electric lights. Any imperfection in the carbon or irregularity in the driving engine will produce snappping and sparking. A simple safeguard is to place a glass cup around or under the carbon to catch the sparks.—*Scientific American.*

OFF FOR THE WOODS.

Probably at a thousand towns there are men now waiting for transportation to the camps, or hanging around looking for jobs. They are not burdened with Saratoga trunks, and few of them have even white shirts. Their days are merry ones, when they are sojourning in places of civilization, and after they shall have all departed the saloon keeper will detect a material decrease in his receipts. It would be strange if at some places special policemen have not been appointed to hold in check the strangers who are stopping among them. It would be somewhat out of the natural order of events if some of these strangers have not slept in the calaboose over night, and perhaps occasionally one of them has asked a citizen for a little money to enable him to pay his board bill for a day or two longer or until he can find work. These favors, however, are never asked as a gift, but are accompanied by a promise that the money will be returned immediately after the first pay day, and it might be possible to find better dressed, and more polished men who would not remember their debts as well.

We do not infer by this description that these loggers are really bad men. Many a good man has worn a woollen shirt, and been able to carry his entire wardrobe in a big handkerchief. Noble-hearted fellows, many of them are, who would share their last dollar with a companion disabled by a falling tree, or prostrated by sickness in camp, and the hat that is passed among them for a suffering comrade would often make the contribution plate, that circles around many an elegant church for the cause of charity, look mighty sick. The men in the woods will swear at one another, fight often, and are always ready to beat his fellow workman out of his last cent at poker, but when it comes to helping the unfortunate, their hearts are in the right place.

The majority of the men who go into the pineries do not leave behind them pleasant homes. In fact, many of them are homeless, and, virtually, wanderers—in the mills in summer, on the drives in the spring, and in the woods in the winter. They float from Maine to Canada, and from Canada to the Northwest, ready at any season to travel in any direction where inclination or a promise of increased pay may lead them. They can wield an axe, "yank" a saw, flourish an ox-gad, or hold a pair of reins, and feel that these qualifications will earn them a living anywhere in the lumber regions. Their stock in trade is easily carried, and they tramp, tramp, but always with an object in view.

The dangers of a camp are many. The giants of the forest will crush many a man the coming winter under their heavy bodies and spreading wings, as they go down before the axe that year after year is cutting them away. The treacherous binder will sweep scores of drivers from their loads into eternity, and often, when loading and unloading, a log will roll over the man or men in its way, breaking limbs or destroying life. The axe will go amiss, and, instead of being imbedded in the wood, will strike some poor fellow standing in its course. The men are subjected to these dangers, and others as well. The wages they obtain would be little inducement for others than habitual woodsmen to chance the risk, but they go into the woods in a mood that tells little of a thought that before the season shall end some of them, maimed, will, with blankets thrown over them, be carried to the nearest hospital, and the bodies of others drawn on ox sleds to the nearest settlement, and thence forwarded to their friends, or buried in graves that will never be wept over, or even sought. They probably think little of this phase of the life they are entering upon afresh, and it is just as well that they do not.

These men possess an enviable virtue—the virtue of good health. No weak-chested consumptive, no one deliberated by any diseaes can be included in the great army. Every member of it must be performed. If he does not, nothing is surer than the law regulating the survival of the fittest will force him to abandon his position to be filled by someone else. They must be men who can eat pork and beans and molasses, who can get along without butter and other delicacies of the table, and who can work in the snow, sleet and cold from daylight until dark for six days in the week, month after month. The business in which a logger is engaged calls for more endurance than that of a soldier, for in addition to exposure, the logger is called upon to do severe manual labour. During the civil war many of the most enduring men in the army, and as brave as ever faced a gun, came from the pineries of the three great lumber states.

It need not be supposed that because of the hard work in the woods, and a lack of so many of those privileges which are commonly supposed to make up civilized life, the loggers go dreadingly to their tasks. They gravitate to the forest as naturally as a small footed belle seeks the ball room. It is their life. They are used to work and do not expect to live without it. They feel at home under the trees, and in the camps, where of an evening they tell their stories through clouds of smoke. The fashions and ambitions that agitate the outside world, if none to them, cause them no unrest. In a certain sense they are happy, insomuch as they eat heartly and sleep soundly. They are doing a more important work than they are aware of. They are filling a great niche in the world that is necessary to be filled, and which, if it were not filled, would be disastrous to trade and progress. The blow of an axe, and the click of the saw are the forerunners of many of the blessings that we enjoy, and which the ones who do so much to produce them are forbidden to enjoy, even if they have a desire to.

INTERESTING FACTS CONCERNING WOOD-PULP.

Until recent years only a few varieties of wood were used in making wood-pulp. The poplar was early liked for this purpose on account of its clear white fibre and the ease with which it could be converted into pulp. Spruce has been considerably used of late, and hemlock makes a good quality of pulp. A large number of factories have been established for the making of wood-pulp alone and there are good reasons why its manufacture should be often carried on separate from the other processes of paper making. Less capital is needed for making pulp only. The cost of a modern wood-pulp mill, with a capacity of five tons a day, is about $30,000, while a paper mill of the same capacity would cost not less than $100,000. Moreover, since pulp, as a commercial commodity, is easily transported, pulp making, unlike the paper making process, which can often be best carried on in or near some city, can be advantageously conducted in an out-of-the-way place, where abundance of timber is at hand, and where water power, the cheapest of motive powers, and often found in connection with the clear, pure water necessary for pulp making, is abundant. Formerly the wood designed for pulp making, after having been reduced to pulp by powerful machinery, was boiled with strong chemicals in a generator, under great pressure, until the mass was digested into pulp ; but recently many mills have introduced the grinding process. The wood, after being steamed soft, is ground by powerful machinery, which almost entirely dispenses with the caustic acid before so largely used, and thereby saves much expense. Of late experiments have been made in Canada with a view to utilizing the vast accumulations of sawdust at the lumber mills for the purpose of paper making, and some of the pulp made from sawdust has been sent to England to be tested. The idea of making paper from sawdust is not new. In 1852, Wilkinson, in England, patented a process of making paper from sawdust, and a man named Johnson also secured a similar patent in England in 1855. Although it is very evident that sawdust could be much more easily made into pulp than solid logs of wood, there are several serious obstacles that prevent the production of a proper quality of this pulp. One is this :—In making paper from wood it is necessary to remove all the bark and also the knotty portions before attempting to reduce the wood to pulp ; but in the process of sawing lumber, portions of the bark and also of the knots are cut away and mixed with the sawdust. Then, too, all kinds of wood are being constantly cut in the saw mills, and the sawdust made of them all mingles and includes much pine pitch, which renders the whole mass of sawdust very objectionable for paper making purposes. To remove these obstacles and some others is the problem, and

it has not been satisfactorily solved. Wood-pulp is so largely in demand that factories for making it can be established with the certainty of doing a good business. So scarce was wood-pulp in the United States during the past season that some of the mills, unable to obtain enough, were obliged to shut down on certain grades of paper.

Two kinds of wood-pulp are used in the manufacture of printing paper, respectively designated as "mechanical pulp" and "chemical pulp." Any ordinary wood which is fibrous, free from knots and decay, and is easily disintegrated, is suitable for making chemical pulp, though the whiter the wood and the less acid it contains the better. The wood is cut into small pieces, diagonally with the grain, by revolving knives, just as logwood is cut for dyeing purposes. It is then treated with a superheated bath of caustic alkali, and afterward subjected to the same processes as are clear rags. In making mechanical pulp no chemicals are used—not even lime. An ordinary white wood is suitable for the purpose, but poplar is preferred, although the dark heart is not used. The process of manufacturing is the most stupid that could have been devised, yet it is cheap. Water power is used, and it is estimated that one cord of wood, with two stones or emery wheels and 30 horse power will produce the equivalent of from 1,200 pounds of dry pulp per day, with the labor of three men—one to attend to barking and sawing the wood, one to attend to the stones, and one to look after the pulp. The wood is used soon after it is cut, or, if seasoned, it must be steamed. The sticks are pressed endwise against the stones or wheels, and with a plentiful supply of water they are literally ground to pulp, thus destroying the fibre. Unlike the chemically prepared article, this pulp is not allowed to dry before being used. The damp sheets are folded, packed in bundles and sold, with an allowance of 40 per cent. for the moisture. To manufacture paper from it, the addition of some kind of fibre is essential—say from 20 to 80 per cent., according to the kind of paper required. Good printing paper is made from the chemical pulp without the addition of any other fibre, and the use of it is desirable in making even the best book paper. Some excellent book paper is made of 40 per cent. of this pulp, and the printing paper now being used by the government is made wholly of white spruce pulp. Machinery of the capacity for making, say 7,000 pounds of rag paper per day, will turn out from 12,000 to 15,000 pounds per day.—*Philadelphia Record.*

THE COMING WINTER'S SUPPLY.

Considerable speculation has been indulged in as to the extent of operations in the woods during the coming winter. By many it is maintained that the enhanced cost of all kinds of camp supplies, increasing the expense of putting in stock, will lead to less endeavor being made to put in a large quantity. Such reasoning is not in accord with the well known practice of lumbermen, which is to run a lumber camp for all there is in it, and cease only when the weather compels a cessation of labor. It is reasonable, then, to conclude, that no man who has ever had a camp, will refrain from establishing one this winter, provided, of course, he has any timber of his own, or can get a job of lumbering from others. Of course it is impossible to predict, or even give a shrewd guess, at the quantity of logs which will be put into the streams, or placed convenient for the operation of the mills; there are too many contingencies of weather to be taken into account, but it is perfectly safe to say that, good winter or bad winter, high prices or low prices for provisions or labor, all the logs will be cut that the streams can take care of, and if the spring freshets are ample to bring the timber from the forest to the mill booms, it will be a perfectly safe proposition that the mills will have all they can do to saw it. And contrary to the experience of former years, not so long back, there is no good reason why this should not be the case. With the present prosperity of the country, largely the result of legitimate, rather than speculative causes, the present mill capacity is none too great in the Northwest, to produce the lumber which a rapidly developing country demands for actual consumption, except under the most extraordinary conditions of the season, such as great floods or drouths, that may bring ruin to the consumer and destroy his purchasing ability, the day of overstocks in lumber has, practically, passed. There was a time when through causes induced by speculation and apparent, rather than the real wants of the country, causes the result of war rather than of peace, the mill capacity was in excess of the demand for consumption, and yearly increasing stocks of lumber at the great distributing points led to a loss in values, through the necessity of keeping the money in active motion, in order to gain even the smallest interest from its possession. Emigration was at its lowest ebb, and the era of development of the prairie, and more especially of the mining districts of the west, had scarcely given notice of its coming.

The market for lumber was then restricted to less than half the territory from which there is now an active demand. Ten years has seen an increase of one-third in the population of the United States, and the prosperity attendant upon good crops, a revival of business confidence, the development of new industries, the extension of old ones, the unprecedented increase in railway mileage, and the opening up and development of immense states, which were formerly known only as sparse settlements upon an extreme frontier—all these, aided by such an immigration as the country has never before realized, have created a use for products of the forest that almost forbids the belief that it can again be said that there is an overstock of logs in the streams, or lumber in the yards. An increased half a dollar, or dollar, in the cost producing logs never frightens a lumberman, especially when he is realizing higher prices for his manufactured stock than he ever did before; and when we see such prices quoted as $9 for culls, $18 and $20 for common, and $38 and $40 for uppers, even for such timber as tne famous Cass river pine of the Saginaw valley; or where we hear of logs selling at $19 per thousand, even allowing them to be the best timber which ever stood out of doors, and remember that these prices are several dollars higher than the same timber ever commanded before, it is folly to think that its owners will be deterred from putting it in because of an extra dollar above the cost of other years in the expense. When, again, such prices as we have quoted can be obtained for the very best of lumber or logs, it is pre-supposable that more ordinary timber will be held at a proportionate advance upon former rates.

Recurring to the original question as to the extent of operations in the forests this winter, we reply that the stocks of next spring will be as large as the ingenuity of man—and these men ingenious and determined lumbermen—can make them by the aid of snow, if the winter be favorable, of rain, if it be wet, of logging railroads, if it be dry; the logs will be put into the full capacity of the saw mills, which capacity does not now seem to be in excess of the demands of that great territory, North, South, East and West, which may be said to stand ready to consume the lumber at an equitable valuation.—*Northwestern Lumberman.*

Timber Limits.

We learn that Messrs. R. and G. Strickland have purchased the Dominion Bank timber limits in the townships of Oakley and Hindon, County of Victoria. We have not learned the price paid, but understand that the limits are among the most valuable in the back country.

ACCORDING to the *Times*, 149 new buildings have been erected in St. Thomas this season at an outlay of $178,350. Last year the number of new structures was 108 and the expenditure $133,650. There are three huge contracts on the boards for next season—the Government buildings, the Grand Central hotel, and the new Presbyterian church.

SEE TO IT?—Zopesa, (from Brazil) will cure the worst case of Dyspepsia. A single dose will relieve in a degree that shows its wonderful curative powers, and its peculiar action upon the Stomach and Digestive Organs. It is a positive and absolute cure for Costiveness and Constipation, acting in a remarkable way upon the system, carrying off impurities. As a Liver regulator its actions are most remarkable. It tones and stimulates the Liver to action, it corrects the acids and regulates the bowels. A few doses will surprise you. Sample bottle 10 cts.

Market Reports.

TORONTO.

From Our Own Correspondent.

NOVEMBER 8th.—The open weather of the past two weeks has kept shipments of lumber nearly up to the same figure as in the two weeks preceding. The average number of cars of lumber per day arriving here for local use and for shipment during the last two weeks has been about fifty, so that averaging each car at 10 M., would foot up about half a million, as our daily receipts by one road alone; so that if we include our receipts by other roads it would doubtless foot up something like 700,000 ft. per day. The quality of the lumber also has been much better on latter shipments. The writer noticed two trains, of fifteen car loads each, the aggregate value of which would be in the vicinity of $10,000 on the rail here.

The docks are entirely cleared, and nearly all the lumber now being shipped goes straight off the cars on to the vessels, and should the present fine weather continue for two or three weeks longer, considerable lumber will yet reach the American market, and I venture to affirm, without fear of contradiction, that less lumber will be wintered over here than during any winter for the last ten years. Most of the mill yards will be thoroughly cleaned out of all they have been able to manufacture, but the quantity made has doubtless come far behind the anticipations indulged in by mill men in the early part of the season. The long drought experienced during the summer months interfered seriously with the season's operations. Lath has become scarce, as indicated in my last letter, and it is difficult to procure sufficient to keep the local market supplied, and the consequence is an advance of 20 cents per M. over former prices, and the probabilities are that retailers will demand from $1.90 to $2.00 per M. before the season closes.

The stocks at the various yards throughout the city are still quite limited, more especially in bill stuff, which still continues exceedingly scarce; in fact all the yards combined could not fill a bill of any magnitude where timber and joisting predominated, indeed, the only plentiful kind of lumber on the market at the present time is cull boards, of which there is a full supply.

Good cherry, butternut and walnut continue scarce, and the latter has advanced in price steadily, $200 per thousand being the retail price now demanded for a choice article. Cedar posts are also hard to obtain of sufficiently good quality for block pavements, and large quantities will no doubt be got out this coming winter to meet the demand next spring and summer, and, in order to obtain suitable timber, higher prices will have to be paid by contractors in order to insure a proper supply.

THE CAUSES OF COLDS are getting overheated in hot rooms or crowded assemblies, sitting in a draught, or cooling too rapidly after exercise, muffling up warm and changing to light wrappings cold and damp feet. No matter what is the cause Hagyard's Pectoral Balsam is the cure for all throat and lung diseases that induce consumption.

MONTREAL.

From Our Own Correspondent.

Nov. 9th.—The demand for building lumber has been pretty brisk since the date of our last report. Stocks of all kinds of lumber here are now pretty full, but not much more is expected to arrive this fall, as sawn lumber is now difficult to get at Ottawa. Our prices continue as last quoted, and are likely to remain so for some time to come. Four large rafts passed down the river on the 4th inst. for Quebec, apparently anxious to reach their destination before the frost sets in. The shipments from this port since the 22nd ult. were to Buenos Ayres, 1,034,401 ft., and to Monte Video, 385,104 ft. These are probably the last shipments for this season, there may be one other cargo, but this is uncertain. The total shipments to the River Platte since the opening of navigation to date were 10,601,842 ft., against 8,133,944 ft. for the same period of last year, showing an increase of 2,467,898 ft. For building lumber, ex yard, we continue to quote :—

Pine, 1st quality, ℔ M	$32 00@40 00
Pine, 2nd " ℔ M	18 00@24 00
Pine, shipping culls, ℔ M	12 00@15 00
Pine, cull deals, ℔ M	8 00@10 00
Pine, mill culls, ℔ M	5 00@ 6 50
Spruce, ℔ M	8 00@10 00
Hemlock, ℔ M	8 00@10 00
Ash, run of long culls out, ℔ M	16 00@18 00
Bass, " " ℔ M	14 00@16 00
Oak, ℔ M	35 00@45 00
Birch, ℔ M	17 00@20 00
Hard Maple, ℔ M	18 00@25 00
Lath, ℔ M	1 25@ 1 35
Shingles, 1st, ℔ M	3 00@ 0 00
Shingles, 2nd, ℔ M	2 00@ 0 00

CORDWOOD.—The demand for cordwood has slackened off since the date of last report, but in a short time, when the weather turns colder, it will most likely revive; prices have receded a little. Fair quantities are arriving by boat since the river has risen somewhat, and when winter roads are good for sleighing, there will be large lots of dry wood coming in from the bush. We now quote prices on the wharf, ex cartage, as under :—

Long Maple	$6 50
Short "	6 00
Long Birch	6 00
Short "	5 50
Long Beech	5 50
Short "	5 00
Long Tamarack	5 00
Short "	4 50

OTTAWA.

From Our Own Correspondent.

Nov. 10th.—The saw mills in this section are all running in full blast, day and night, but will have to shut down in the course of about two weeks. There has been no lack of rain of late, and the rise in the river has facilitated the getting down of logs, which were stuck in the rapids at several points on the Ottawa and the Gatineau. The total cut of lumber for the season will fall considerably short of the quantity produced last year, owing to the lack of log supply during the low water season. It is questionable whether the cut of some of the firms in this locality will reach the quantity sold last spring. Some of the yards are quite bare, as compared to former years at this time, and it is quite evident that the quantity that will be held over will not be nearly so large as for many previous winters.

No large sales of lumber have been reported for some weeks past, as most of the manufacturers are doubtful whether they will be able to fill the contracts made last spring or not. There are no changes in the quotations to note since the last were given, although the market is firm with an upward tendency.

QUOTATIONS :—

Shipping Culls, per M	$00 00@11 00
Stocks	16 00@23 00
Sidings	25 00@35 00
Mill Culls	7 00@ 8 00
Lath	1 00@ 1 10

The freight business was fairly active during the past couple of weeks, but is now becoming dull, as tow steamers and barges are lying up for the winter season. The last of the American boats leave to-morrow, and Canadian boats are going into winter quarters as fast as they arrive. There was no further rise in freight rates as expected, owing to the limited supply of lumber to be shipped. It is expected that about the usual quantity of lumber will be shipped by rail during the coming winter.

The Government engineers have completed their survey for a dam at the foot of Lake Temiscamingue, to hold back a reserve supply of water, so that it could be brought into requisition at the low water season, and aid in the getting down of logs and square timber.

The log drives on the Ottawa and Gatineau rivers will be completed in about a week from the present time of writing. More difficulty has been experienced this year in getting down logs than ever before, and the lowness of water is attributed in a measure to the clearing up of the country.

The last lumber train from the Mattawan to Quebec has passed down. There were 920 car loads in all transported for the Scotch Canadian Lumbering Co. This company carries on operations on the Georgian Bay as well as on the Upper Ottawa, doing a large trade. They are sending a good many men up the river this winter, and will take out double the quantity of timber and a large lot of logs. It is contemplated by the firm to place on the market next season a million feet of square timber, and to take out 125,000 logs.

All the mill men in this section are sending large numbers of men up the river, and more square timber and logs will be taken out this winter than for a good many years back, in fact more than at any other period. The outlook is considered promising.

Mr. Edward Prince, manager of the factory at Horse Shoe Bay, on the Lower Ottawa, has shipped during the past summer fourteen large loads, or some 700 cords, of match blocks to Wilmington and Westville, U. S. Splints for the manufacture of matches were formerly manufactured at the factory, but the U. S. authorities levied duty upon them, so that the blocks were only made ready to be transformed into splints. Several gangs of men are being sent to the woods to cut logs for this factory, which is connected with the Beecher, Swift & Courtney firm.

The disease known as "Pink eye" has broken out amongst the horses in the shanties of Mr. J. R. Booth, on the Upper Ottawa.

ST. JOHN, N. B.

From Our Own Correspondent.

DEALS.

The stock of deals continues very low, and there cannot be much change in this respect for the remainder of the season. The country mills are nearly all shut down, for want of logs; the few deals that come into market from that direction are selling at about $9, while those of city manufacture are worth $10.50.

LOGGING OPERATIONS.

The want of activity in the operations for logging, noticed in our last report, continues. There is no doubt whatever but the cut of logs the coming winter will fall far short of the average, and as the streams have been pretty well cleared of the old logs during the past season, the supply for next year's sawing must be very limited indeed.

FREIGHTS.

The freight market can scarcely be said to have undergone any change. The last charter reported was the *Andrew Johnson*, 2,005 tons, for Liverpool, at 56s. 3d.; this being a very large ship, this figure may be considered rather below the market rate, which we would quote about the same as in our last, say 57s. 6d.

SHIPMENTS.

The shipments of deals and other sawn lumber are as follows :—

For Europe	6,337,000 Sup. feet.
" United States	3,109,000 "
" Africa	728,000 "
" Australia	1,828,000 "

SHIPPING.

Our shipping list shows quite an increase, and as a number of vessels have yet to arrive, the prospect is that we shall have no deals left for winter. A somewhat interesting occurrence took place here on Saturday, in the sailing of two large ships for Australia, viz., the *Mallville*, 924 tons, and the *Walter D. Wallet*, 1,413 tons, both with deal cargoes, amounting to 725,000 feet, and 1,103,000 feet respectively. The incident is noteworthy as indicating the development of a comparatively new department of our wood trade, a very few shipments having been previously made direct for that destination. Both ships are cleared for Adelaide for orders, and it will be interesting to note the time of each on their arrival at the Antipodes. We wish them *bon voyage*.

The following is a list of the vessels in port, with their tonnage and destinations :—

Wm. Stephenson, 749, United Kingdom.
Pusnaes, 503, Dublin.
Vandyck, 1,377, Liverpool or London.
Topaz, 196, United Kingdom.
St. Joseph, 385, East Coast Ireland.
Loining, 821, United Kingdom.
Sybilla, (s), 1,329, Liverpool, Glasgow or Bristol Channel.
Angel, 193, Mediterranean.
Paramatta, 925, ——
Lord Palmerston, 649, Cork.
Latona, 945, Liverpool, London, or Bristol Channel.
Bertie Biglow, 1,142, Liverpool.
Wickham, (s), 1,124, Liverpool, London, or Bristol Channel.
Andrew Johnson, 2,005, Liverpool.
Thos. N. Hart, 1,200, London.
L. H. D'Vehed, 599, ——
Oliver Emery, 623, ——
E. M. Gregory, 387, discharging.
Sea Bird, 333, waiting.
Kodiac, 420, ——

Nov. 7th, 1881.

CHICAGO.

The *Northwestern Lumberman* says :—The cargo market, during the past week, has not only been a smaller one than usual, but as well, remarkably quiet. The weather has not been favorable for dealers to "hang around" looking for bargains, and the attendance has been scarcely up to the average. The offerings have not been large, and although each day has shown some cargoes awaiting purchasers, and each day has seen the fleet nearly or quite cleaned out, the fluctuations in prices have been very slight. Ordinary piece stuff, which is the barometer of the market, has sold at $10.25 and $10.37½ to $10.75, while long lengths have ranged according to the proportion in the cargo, from $10.50 to $13. The better grades of lumber have ruled firm throughout the week.

Shingles have been in slightly better favour, sales being made at $2.37½ for brands which had not been previously held above $2.35. Quotations at this writing stand at about $2.20 to $2.30 for standards, with A bringing from $2.37½ to favorite brands at $2.65, at which latter rate a cargo was sold October 1.

Freights have been rather dull and inactive, and many vessels are going into winter quarters from inability to meet expenses. The advancing wages and the high cost of provisions, the inclemency of weather which may reasonably be expected during the month of November, is ordinarily compensated somewhat by increased rates of freight; but the outlook for a profitable month to the vessel interest is anything but promising.

The condition of trade at the yards in this city has not materially changed from that of last week. The weather, much of the time, all over the country tributary to Chicago, has been unpropitious to trade, but, notwithstanding this fact, a fairly active demand has prevailed, orders coming in quite freely. The call for lumber in the interior is, with most dealers, fully equal to their ability to supply it, on account of the difficulty in procuring cars promptly. Some trouble is experienced by individual concerns in always finding the requisite amount of stock dry enough to ship to fill orders, though it is asserted that there is enough in the district, if it was only equally distributed among the dealers. The fact is, no doubt, that dry stocks are much broken, and in many instances run down. This is an indication that the volume of trade during the season has been heavy. The lowness of dry stocks on the Mississippi, and the dubious condition of the manufacturing interests along that river, will likely make a loud demand for all the available lumber here, and this fact should tend to stiffen prices.

The late soaking rains have put stocks in bad condition for shipment, on account of the extra weight lumber has taken on by absorption of dampness.

Receipts and shipments of lumber and shingles for the week ending November 2:—

	RECEIPTS.		SHIPMENTS.	
	Lumber.	Shingles.	Lumber.	Shingles.
1881	42,413,000	20,900,000	45,120,000	18,150,000

BOSTON.

The *Journal of Commerce* says:—Reports coming in show the market to be as active as for any previous week. The call for pine stock is immense, and many large orders have been filled. Dealers who possess good stocks of No. 1 grades feel that they are in a position to reap a great harvest, if present indications do not fail. The amount of building going on and in contemplation is drawing largely on the supply of western lumber. This fact, together with the rise in freights, is likely to strengthen values very materially. Hard woods continue in good demand, especially black walnut. Basswood, which has been somewhat quiet, is quoted at $25@30. Ash has not been neglected, and some very fair sales have been made. The following are cargo prices:—

CANADA PINE.

Selects, Dressed	$48 00@50 00
Shelving, Dressed, 1sts	40 00@42 00
" " 2nds	33 00@35 00

Sheathing, 1st quality	42 00@45 00
" 2nd "	34 00@35 00

ALBANY.

Nov. 8th.—The *Argus* says we have a steady trade to report in pine lumber, with ample receipts and a well-assorted stock. The shipments, both from the river and canal sides of the districts, continue to be free to the south and east by barges and by vessel. Prices are steadily maintained.

Hardwoods are in good supply and demand, and are unchanged in prices.

Coarse lumber is arriving freely, and is in large demand at quotations; the demand does not permit any accumulation of stock.

The receipts of lumber by lake at Buffalo for the week ending November 7 were 11,600,000 feet, and by rail 61 cars. The receipts by lake at Oswego for the week were 4,609,000 feet.

The receipts by canal at Albany from the opening of navigation to the 8th inst. were:—

	Bds. & Sctl., ft.	Shingles, m.	Timber, ft.	Staves, lbs.
1881				
1880	340,627,500	6,379	10,685	638,200

Freights from Bay City to Buffalo and Tonawanda, $3.00 ₱ M.; from Saginaw, $3.25. From Tonawanda to Albany, $2.45 to $2.50. From Oswego to Albany $2.00. From Port Hope to Oswego, $1.40. From Ottawa to Albany, by boats, $3.50 ₱ M. feet.

River freights are steady:

THE MOBILE, ALA., LUMBER TRADE.

Through the kindness of Messrs. Guy Bevan & Co., of St. John, N.B., and Mobile, Ala., we are enabled to give the following particulars with regard to the lumber trade of Mobile for the year ending the 31st of August, last:—

LUMBER.

This branch of trade, which is one of the most important of the pitch pine trade, and one of the leading industries of Mobile and South Alabama, has greatly improved during the past year, and extended its trade to new markets. A good demand prevailed the entire year, and our mills were kept busy in preparing lumber for shipment; in fact, they had at times to refuse orders, as they had more than they could supply, and at the present time the demand is in excess of the capacity of the mills. Nearly four million feet of cypress lumber was shipped during the year from Stockton to New Orleans and Texas in vessels having coasting license. We have omitted this amount from our table as we have no record of last year's shipments. The number of mills in this county and on the Eastern Shore tributary to Mobile, are twenty-one; there are also two new ones building, and they will probably be in operation the coming season. The following table is made up from Custom House clearances and such other coastwise shipments as we could obtain from vessels leaving this port; we have no way of obtaining shipments by all the vessels having coasting license, or by rivers and railroads to the interior:—

FOREIGN.

	1880-1.	1879-80.
Cuba	2,059,645	1,957,440
Jamaica	1,598,067	974,655
Great Britain	1,647,651	582,962
Hayti	1,607,214	530,925
Trinidad	558,734	870,619
Rio de Janeiro	414,554	736,200
Mexico	255,170	1,383,222
France	1,545,626	1,525,715
Germany	450,833	723,901
Various	2,476,323	1,882,391
Total	12,613,817	11,168,030
Value	$188,551,62	$149,396.98

	1880-1.	1879-80.
New York	600,473	1,898,215
Texas	2,648,805	476,000
Boston	1,030,000	895,188
Philadelphia	656,573	1,105,000
Baltimore	.....	622,500
New Haven	289,712	.....
Various	322,000	407,295
Total	5,547,563	5,404,198
Total shipments, Foreign and Coastwise	18,161,380	16,572,228

HEWN AND SAWN TIMBER.

We are now at the close of one of the most successful seasons in the pitch pine trade ever enjoyed by this port. The supply of timber throughout the whole season was regular and sufficiently abundant to enable shippers to give their vessels a fair despatch and avoid the annoyance and expense of demurrage, so noticeable during the previous season, and yet it was not too abundant to prevent cutters from realizing remunerative prices almost up to the close of a protracted season. The markets in Great Britain from the close of the season of 1879-80 until early in the present year were very firm, and prices, for large average timber especially, were high. Large sales were early effected, while prices were at their highest, and as the supply of stock and vessels to remove it were sufficiently abundant at moderate rates to enable shippers to perform all their contracts, they enjoyed a very profitable season's work. But, as is always the case in the timber trade, no sooner do the markets of Europe offer inducement to importers than the trade is overdone, the markets glutted and prices dropped below the cost of importation, and the past season was no exception to the rule, aided no doubt by the sympathy of the timber trade with that of iron, which has been drooping in price since early in the spring. Although the prospects for next season's shipments look gloomy enough at present, still there seems but little doubt but that prices will revive when the shipping season fairly reopens, and we will probably see a steady demand for all classes of pitch pine goods (but especially for the larger average of hewn timber) throughout the coming season at prices that will have a fair margin for both shippers and cutters. We are lead to this belief from the fact that the crops throughout Europe are unusually good, and consequently the tone of the market in nearly all branches of trade steady and firm. The immense proportions that shipbuilding on both the East and West coasts of Great Britain is assuming must also be considered an aid to the revival of the timber trade. It is true that the vessels are almost entirely constructed of iron and steel, but it must be borne in mind that the internal fittings (in the construction of which pitch pine is an important item) are still the same, but on a much larger scale. Therefore, with these facts before us it does not seem improbable that the ensuing season will be a fairly good one. We append our annual statement of the shipments of pitch pine to Europe, &c., by which it will be seen how rapidly this branch of trade is increasing in importance at Mobile:—

HEWN TIMBER.

	Cargoes.	Cub. ft.	Value.
1880-81	41	1,364,980	$186,229.28
1879-80	19	524,932	64,095.47
1878-79	14	245,507	30,679.08
1877-78	17	467,521	54,627.36
1876-77	19	491,096	63,314.60
1875-76	12	279,530	33,543.60
1874-75	5	128,152	16,187.18

SAWN TIMBER.

1880-81	28	371,906	52,368.45
1879-80	15	223,075	26,540.43
1878-79		65,519	8,235.87
1877-78		2,248	250.86
1876-77		74,881	9,435.38

STAVES.

The high price paid for timber last year caused more time to be devoted to timber and less to staves, which caused our receipts to be very light and smaller than they have been for years. During the past year a good demand prevailed, and prices ruled from $10.00 to $15.00 per thousand higher than the previous year. Present prices will no doubt be maintained during the coming year, as prices and demand have greatly improved in Europe, and the indications are that during the early winter months staves will probably be $10.00 per mille higher. Nearly one-half of this year's shipments were to Spain. Prices of No. 1 staves have ranged from $120.00 to $130.00 per thousand. The foreign exports for the past three seasons have been as follows:—

1880-81	91,462	$11,316.27
1879-80	121,460	13,351.21
1878-79	120,052	13,594.50
Total	332,974	$38,261.98

SHINGLES.

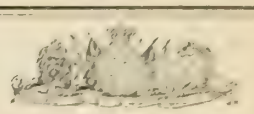
During the past season shippers were fortunate, as the market was plentifully supplied and they did not have to contend with a "scarcity" like they had the first part of the previous season, this caused prices to rule low and made Mobile the cheapest market in the world. Our shipments to foreign ports show a decrease, but those to coastwise ports show a large increase; in addition to this, the shipments by rail, &c., to the interior of Alabama, Mississippi and Georgia, is estimated at 10,000,000 shingles. This shows that the decrease to forign ports has been made up by a strong domestic demand. According to the Custom House records, the shipments have been as follows:—

	Foreign.	Coastwise.	Value.
1880-81	4,110,250	724,000	$23,538.80
1879-80	4,689.200	200,000	19,174.00
1878-79	3,702,300	191,000	17,361.20
1877-78	3,710,300	109,500	17,553.65

The Time to Cut Timber.

Experience teaches that the best time to cut timber is in the summer when in the most rapid season of its growth, and while that season is drawing to its close. The highest authority on this subject advises that the same rule be followed that skilful nurserymen observe in performing the operation of budding—that is, just as the terminal bud on each branch begins to form—as soon as it is first evident that the growth of the branch is about to terminate, but is still in active progress. Experienced tree propagators have found that much earlier than this the juices of the tree are in too thin or liquid a state to form good adhesion between the bud and peeled surface. From the moment the bark separates freely from the wood, these juices continue to thicken until growth ceases altogether, and the new wood is completely formed, and, when this new wood is in the state of a thick paste, then is the time that the bud will adhere most perfectly. This is the period when the bark may be peeled from the tree without destroying its vitality, and this is the time for cutting timber. Early in the spring the tree is full of sap, which is little else than pure water, and which has been gradually accumulating through the winter by the absorption of the roots, with no outlet for its escape, as there is in summer through myriads of leaves. While the tree is thus replete with water it is in the worst condition to cut, but when a portion of this water has passed through the leaves and the rest has been much thickened by conversion into material for wood, then is the time for cutting it.

HAGYARD'S YELLOW OIL will be found invaluable for all purposes of a family liniment. Immediate relief will follow its use in all cases of pain in the stomach, bowels or sides; rheumatism, colic, colds, sprains and bruises. For internal and external use. It has no equal in the world for what it is recommended. For sale by all dealers at 25c. per bottle.



CANADIAN PACIFIC RAILWAY.

Emory's Bar to Port Moody.

NOTICE TO CONTRACTORS.

Tender for Work in British Columbia.

SEALED TENDERS will be received by the undersigned up to NOON on WEDNESDAY, the 1st day of FEBRUARY next, in a lump sum, for the construction of that portion of the road between Port Moody and the West-end of Contract 60, near Emory's Bar, a distance of about 85 miles.

Specifications, conditions of contract and forms of tender may be obtained on application at the Canadian Pacific Railway Office, in New Westminister, and at the Chief Engineer's Office at Ottawa, after 1st January next, at which time plans and profiles will be open for inspection at the latter office.

This timely notice is given with a view to giving Contractors an opportunity of visiting and examining the grounds during the fine season and before the winter sets in.

Mr. Marcus Smith, who is in charge at the office at New Westminister, is instructed to give Contractors all the information in his power.

No tender will be entertained unless on one of the printed forms, addressed to F. Braun, Esq., Sec. Dept. of Railways and Canals, and marked "Tender for C. P. R."

F. BRAUN,
Secretary.

Dept. of Railways and Canals, Ottawa, Oct. 24th, 1881.

Wrought Iron Shanty Cook Stoves

The Best Article ever offered to the Trade.

I have much pleasure in drawing attention to my **WROUGHT IRON COOKING STOVE**, for **Shanty, Hotel and Boarding House use.** These Stoves are made of **Heavy Sheet Iron**, the top and lining of the fire-box being of **Heavy Cast Metal** and all the connecting parts of substantial **Wrought Iron Work.** The dimensions of these Stoves are as follows:—

SINGLE OVEN STOVE

Top surface contains six 10-inch holes, with ample room between, and one oven 16 x 24 x 26.

DOUBLE OVEN STOVE

The Double Oven has a top surface containing twelve 10-inch pot holes, with two ovens, each 16 x 24 x 26. One fire-box of suitable size for area to be heated. Below will be found Testimonials from some of the leading Lumbermen, who have used my Wrought Iron Cook Stoves since I commenced manufacturing them. They are the names of gentlemen who are well known and reliable, and will carry more weight than any recommendation of my own could do.

The Best Stove I have ever Used.

PETERBOROUGH, May 31, 1880.

ADAM HALL, Esq., Peterborough. Dear Sir,—I have used your Wrought Iron Cooking Stove in our lumbering operations since its introduction here, and have no hesitation in saying that I prefer it to any other. For durability, economy and efficiency, where a large number of men are employed, it is the best stove I have ever used. You can, with confidence, offer it to hotels, boarding houses and lumbermen.

Yours truly, THOS. GEO. HAZLITT.

The Stove for Lumbermen.

PETERBOROUGH, June 1st, 1880.

ADAM HALL, Esq., Peterborough. My Dear Sir,—We have used your Wrought Iron Cooking Stove and find it is very satisfactory for lumber operations, especially so on drives. We can recommend it highly.

Yours truly, IRWIN & BOYD,

Gives the Greatest Satisfaction.

PETERBOROUGH, June 3rd, 1880.

A. HALL, Peterborough. Dear Sir,—I have had the Wrought Iron Cook Stove, purchased from you, in constant use ever since last fall, and it gives the greatest satisfaction in every respect. I can recommend them highly to any one who is in the lumber business. Very truly yours, GEO. HILLIARD, M.P.

EVERY STOVE GUARANTEED

All the necessary TINWARE and CUTLERY for Shanties suppied at the Lowest Prices.

EMERY WHEELS FOR SAW GUMMING!

Solid Emery Wheels are now almost in universal use for the purpose of gulletting and gumming saws. Statistics show from 25,000 to 30,000 saw-mills in the United States. Many of these run only a single saw each. A one-saw mill would use one or two wheels a year, costing $3 to $4 each, and when such small mills order single Emery Wheels from the factory, the express charges often equal the cost of the wheel. There was a time when the quality of Emery Wheels was so uncertain, and the demand so fickle, that storekeepers could not afford to carry them in stock. Now, however, Saw Gumming Wheels have become as staple an article as Files, and every dealer in saws, Hardware and Mill Supplies can afford to carry a few dozen standard sizes in stock. Large dealers order stocks of $500 to $750 worth at a time. Saw Gumming Wheels are used with the edge (or face) square, round or beveled. Probably seven-eighths of all in use are beveled.

The principal sizes are:

$8\times\frac{1}{4}$, $8\times\frac{3}{8}$, $8\times\frac{1}{2}$ } $\frac{3}{4}$ in. hole. $10\times\frac{1}{4}$, $10\times\frac{3}{8}$, $10\times\frac{1}{2}$, $10\times\frac{5}{8}$ } $\frac{3}{4}$ in. hole. $12\times\frac{1}{4}$, $12\times\frac{3}{8}$, $12\times\frac{1}{2}$, $12\times\frac{5}{8}$, $12\times\frac{3}{4}$, $12\times\frac{7}{8}$ } Holes, $\frac{3}{4}$, $\frac{7}{8}$ and 1 inch.

Probably more wheels $12\times\frac{3}{4}$, $12\times\frac{1}{2}$ and $12\times\frac{1}{4}$ are used than all the other sizes together. Saw Gumming Wheels are used, however, of all sizes up to $24\times1\frac{1}{2}$. The most frequent complaint is that Emery Wheels harden the saw so that a file won't touch it. The answer is that you don't want a file to touch it. An expert workman will shape and sharpen the teeth with an Emery Wheel, leaving the teeth *case hardened*, in which condition the saw will cut about 33⅓ per cent. more lumber than a soft saw will. Those who want to use the file, however, have only to touch the saw *lightly* a second time (after going all over it once), and this second touch will cut through the case-hardened scale.

A QUESTION OF QUALITY.

Thirteen years of experience as makers of, dealers in, and actual users of Emery Wheels, have led us to a decided opinion as to what quality is the best. We prefer for almost every use an "Extra Soft" wheel like the "Pocono." We believe that money lost through the rapid wear of the wheel is more than made up by the money saved on wages. As we cannot get every one to adopt our views, we make several qualities, so as to meet their views. We say to those who think they can only be satisfied with some other make of wheels (not Tanite), that we can furnish qualities *to match* any and every other make. If you have got used to some special quality of wheel, let us know what it is, and we can send you *a Tanite Wheel of similar quality*. Our *regular* classification of Saw Gumming Wheels is as follows:

CLASS 2. MEDIUM—HARD.—This Wheel is THE STANDARD Saw Gumming Wheel all over the world. Probably seven-eighths of all the Saw Gumming Wheels used are "Class 2. It cuts fast and keeps its shape well. Some think it too hard, some too soft. We prefer the "Pocono."

CLASS 3. MEDIUM—SOFT.—The same as to coarseness and fineness as "Class 2," but a *softer*, and therefor freer cutting wheel.

CLASS "POCONO." EXTRA SOFT.—This Wheel we prefer to all others. It is both *finer* in grain and softer than either of the above. As a Saw Gumming Wheel, Class "Pocono" is specially suited to those practical and experienced Sawyers who know how to grind with a light touch, and who want a free cutting wheel that will not create much heat.

Illustrated Circulars and Catalogue, showing Cuts of Saw Gumming Machines, and Shapes, Sizes and Prices of Wheels, sent free on application.

CANADIAN TRADE SPECIALLY SOLICITED.

M. Covel's Latest Improved Automatic Saw Sharpener!

Is the Most Perfect Machine that has ever been Introduced into Mills for that purpose.

CIRCULAR SAW STEAM FEED!

I would also call special attention to my

Heavy Circular Saw Mills

and for STEAM MILLS, would recommend the Steam Feed, having put in several which are giving the best of satisfaction, as will be seen by the following testimonials:—

GRAVENHURST, August 20th, 1880.

WM. HAMILTON, ESQ., Peterborough.

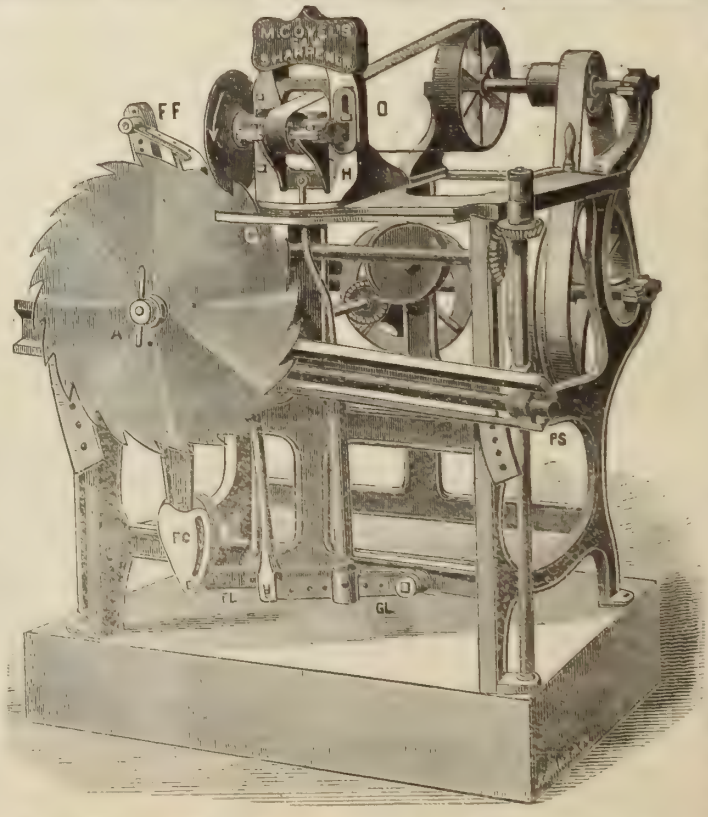
DEAR SIR—I have used your Steam Feed for near four months, and it has given me perfect satisfaction in every way; it is admitted by every person who has seen it work to be the best feed ever invented. Since I put it into my mill, I have not lost ten minutes time fixing anything belonging to it. I can cut 18 boards 13 ft. long in one minute. It can do much smoother and better work than the pinion feed. It is easily governed and reverses the carriages instantly. I am thoroughly satisfied with it and can recommend it to any person who has a Circular Saw Mill for cutting long or short logs. I consider I have cut more lumber than will pay for the Steam Feed since I got it than I would have cut had I not put it in.

Yours respectfully,
WILLIAM TAIT,
Lumberman, Gravenhurst.

TORONTO, August 11th, 1880.

WM. HAMILTON, Peterborough, Ont.

DEAR SIR—The Steam Feed you put in is working splendidly. Yours, &c.,
THOMPSON, SMITH & SON.



MILL MACHINERY!

I am also manufacturing Saw Mill Machinery, for all sizes of Gang or Circular Mills, Span or Double Circulars for Slabbing Small Logs. My Patent Jack Chain for drawing logs into Saw Mills, acknowledged by all to be the Cheapest and best ever got up; also, my Patent Lumber Markers, different sizes of Edgers, Gang Lath Mills, Trimmers, Power Gummers, and all Machinery used in a first class Gang or Circular Saw Mill; also, small Hand Gummers for use in the woods, for Cross-cut Saws. Rotary Pumps of different sizes, for Fire Protection in Mills, &c.

Horizontal Engines and Boilers

CORLISS  ENGINES

Where economy of fuel is the great consideration, along with uniformity of speed, such as is required in Grist and Flouring Mills, Woollen and Cotton Factories, or large Factories of any kind, I supply the Corliss Engine. I feel justified in saying that our Style, Workmanship and Finish on this Engine will be no discredit to its renown, and certainly is not equalled in this country for economy of fuel. I have them working at 2½ pounds of coal per horse-power per hour.

FAST SAWING.

Last winter Messrs. Irwin & Boyd determined to take out their old circular in the Nassau Mills, near Peterborough, and replace it with an A No. 1, which for good fast cutting and convenience should be ahead of anything in this lumbering district of Ontario. The contract was awarded to Mr. Wm. Hamilton, of this town, and in due time the job was placed in position, and is a decided success. But as this success was not obtained without encountering some of the difficulties incidental to high speed, and not without furnishing bits of experience worth recording, we shall note a few points that may be of interest to our patrons.

GENERAL DESCRIPTION.

The mill is of a style that is heavy and strong throughout; it is also well fitted, but is not showy. The iron husk, or frame, is $9 \times 5\frac{1}{2}$ feet; saw mandrel, $4\frac{1}{2}$ in. diameter; mandrel pulley, 33 in. diameter by 22 in. face; carriage shaft, $3\frac{1}{2}$ in. diameter; other shafts, 3 in.; feed and gig friction pulleys, 12 in. face; belt for feed cones, 6 in.; gig belt, 10 in. The main driving belt is 18 in., of heavy leather, double and made up endless at the factory in Montreal, ready to be put on, and runs with perfect smoothness, though at the unprecedented rate of 8,000 feet per minute. The feed and gig movement of the carriage was effected primarily by a $1\frac{1}{4}$ in. manilla rope, but as this had been broken several times, it was taken off and a chain used; this has also been frequently broken, but is quickly repaired. The carriage has three head blocks, one being on a detachable portion which is used only for long logs. The dogs of the other two are connected, and are operated by one convenient lever, which is weighted for the double purpose of holding the dogs in either position, and assisting in dogging. On the first head block there is a tapering attachment for setting the log either in or out. There is a friction pulley underneath the carriage which is made to operate against the back track timber while gigging, for the purpose of withdrawing the knees. The set works are on the principle of the frictional bite, and, like the British bull-dog, always bites and never slips; with new retractile stop pins for stock lumber, and new adjustable scale for siding down to stock or any given dimensions; we think this makes the most exact and convenient set works we have ever seen; one man on the carriage dogs and undogs, reverses and sets without any appreciable loss of time. The journal boxes for feed and gig shafts are balanced, and each is suspended by a heavy bolt by which they can be adjusted in a moment for the wear of friction pulleys. The mandrel boxes are cast solid on the frame with large chambers underneath and around them, which provides a good circulation of air to the parts most likely to become heated, or, if required, the lower apertures can be closed and the chamber filled with water. The alignment of the saw with the carriage is made by slightly turning the whole frame, for which a ready means is provided. The true relation of all the parts to each other is thereby retained, and the pivot is so placed that the cutting side of the saw is always the same distance from the carriage. The caps of these mandrel boxes are a sham in the ordinary sense of a close fitting cap, which would serve to keep a journal warm rather than cool. These caps are much like Paddy's beaver, which had the crown hinged to one side, and had also a few convaynient holes jist to kape his head cool. Certainly the whole arrangement serves its purpose admirably, as the journals never rise above blood heat.

STYLE OF WORKING.

The motive power of this mill is furnished by a 66 in. Leffel wheel, working under a head of from 10 to 11 feet, so that this, in common with all water mills, is under two particular disadvantages when compared with mills driven by steam. The motion of water mills varies greatly, particularly when the power is derived, as in this case, from one wheel, and no one seems to come forward with a suitable governor, whereas, steam is easily governed. Besides, steam mills can use the steam feed, which is the most marked of modern improvements in sawing lumber. The rate of feed depending entirely upon the conditions of each particular cut, the sawyers can always make the most of them; logs can be fairly shot each way, or go at a snail's pace. With the water mill you must be always content with a good average feed. This mill was calculated for a six foot saw to run at 750 revolutions per minute; it was expected not to rise higher than 800, nor to fall at any time much below 600. On trial, however, with a five foot saw, it ran as high as 950, and fell, in cuting a large log, to less than half that speed. This was an awkward condition of things; she was both fast and slow,—at times fully at the dangerous point, aud yet no good turn out of work, besides no saw could cut well under such changed conditions, and casualities were common. By a change of gearing the speed was reduced fully to the original calculation, with satisfactory results,—greater steadiness of motion and a large amount of good sawing. But as the mill was being worked from week to week, and all the bearings came to a more perfect face, with also a slight change in regard to head of water, the speed was found again to rise, the speed indicator showing 825. The six foot saw was required and put on, but not being hammered to so high a speed, it refused to do duty. The saw-maker was brought on the scene, and he advised a further reduction, which was made, bringing the speed to the neighbourhood of 700, resulting in greatly improved steadiness, less wear and tear, and good account of lumber. She would drop readily ten boards per minute. We saw this being done in the course of ordinary work. This, for a water mill, is hard to beat. It is only the few steam mills, having steam feed, that can make a better showing; they are said to make, on special trial, as much as sixteen 16 ft. boards in one minute. A small, but by no means trifling, matter was demonstrated in regard to paper friction pulleys for feeding and gigging, that is, that their circumferential speed cannot go much beyond 2,000 feet per minute without causing excessive heat, and of course excessive wear.

Upon the whole Messrs. Irwin & Boyd may be congratulated on getting what they bargained for. They certainly have the speediest, most exact and convenient mill in this region.

TERRIBLE EXPLOSION.

EIGHT BOILERS TORN TO SHREDS AT EAST SAGINAW—FOUR CANADIANS KILLED.

East Saginaw, Mich., Nov. 13.—At fifteen minutes before five o'clock this morning a battery of ten boilers in the brick boiler house attached to the saw mill and salt block of Hamilton, McClure & Co., six miles below this city, exploded with an earthqnake force, scattering the buildings like chaff, and causing immense destruction, Eight of the boilers were torn into shreds, and the pieces flew in every direction, one boiler-head dropping 900 feet away. Not a brick of the boiler-house was left standing upon the other, and the large brick chimney, 100 feet high, was ompletely levelled to the ground. The west and of the large steam mill was torn to pieces, and the entire structure wrecked and demoralized. The large steam dome was lifted high in the air and came down on the opposite side of the mill, and bricks, pieces of iron, and timbers were thrown hundreds of feet away. Bricks and timbers were found half a mile from the mill. The salt block was badly wrecked by the explosion, timbers and iron being driven through it, and a salt drill house two hundred feet distant received a piece of boiler that shattered the tower, and another smashed in one side of the roof. It is impossible to give an idea of the tremendous force of the explosion and the destruction that followed. The boilers were fired at night to supply steam for the saw mill, and the firemen at work were all killed, not one escaping to tell the story. Michael Lebeau, head fireman, who had charge of the boiler-house, was covered in the *debris*, and the body was dug out an hour after the explosion occurred. Both legs were broken below the knee and the body was badly bruised. Joseph Lebeau, brother of the first mentioned, was found thirty feet distant with his right arm and shoulder broken, his abdomen crushed in, and his clothing torn off. These men were thirty-eight and twenty-three years old respectively, and resided at Zilwaukee. They came from Montreal years ago, and have relatives in Canada. Frank Blanchard was blown into the bay 200 feet distant, and his body was not recovered until this afternoon. The body was badly mangled. He was a single man, twenty-five years old, and belonged to St. Onesime, Quebec. Charles Carpenter was found only a few feet from Joe Lebeau, his clothing torn off, and his body badly scalded and burned. He was a single man, twenty-seven years old, and came from Quebec. The damage by the explosion will reach $25,000. Low water is given as the cause of the disaster.

CLASSIFICATION OF PROVINCIAL LANDS.

The Canada Lumberman in an article on "A Forest Department," in its issue of October 1st, while remarking on the antagonism which exists between the lumberman and settler, observes as follows:—Surely it would not be difficult to decide what lands should be opened for settlement, and what might be more advantageously maintained permanently as forest. Where the soil is better fitted for forest growth than agriculture, the settler should be excluded altogether, and a proper system should be adopted for perpetuating the timber growth. Thus our resources—our capital—would be utilized in the most fitting and economical manner. It is certain that mixing up settlement and lumbering has proved a failure." These remarks apply quite as well to New Brunswick as to Ontario. We have not only allowed settlers to locate themselves upon some of our best spruce and hemlock lands, but we have paid them for doing so. We entertain the view, that for the benefit of the settler himself as well as for that of the lumberman, no settlement should be made before the locality has been examined by a fit and competent officer of the Government who shall have reported on the character of the land and the kind and quantity of the timber standing upon it, since if settlers be allowed to locate themselves on spruce or hemlock lands they will be worse off at the end of a few years than when they first settled upon them.

We are sadly at a loss to know where our really good farming lands are situated, as well as regarding our spruce and hemlock lands. Since the information which the country requires regarding this matter can only be obtained by the actual examination by competent persons, we would suggest that the Crown Lands Department take the matter in hand and furnish the public with the information at the very earliest date, and also that they withhold from settlement such tracts of land as may be deemed better adapted to the uses of the lumberman than for those of the farmer. This course would, we believe, be justified both by public opinion and experience, as long as we have in the Province such a vast quantity of good agricultural land still in the wilderness state.—*St. John, N.B., Sun.*

GILMOUR'S MILL AT TRENTON.

Since the burning of the old mill, Messrs. Gilmour & Co. have been doing their best to rebuild as soon as possible, but were greatly hindered in their operations by the unnecessarily long time occupied by the different companies in settling their insurance, which after much delay was finally fixed at $48,000. As soon as this was done a number of men were set to work to tear down what was left of the mill and boiler house, nearly every vestige of which was removed.

As soon as the plans for the new mill were prepared, the contractors for the stone and brickwork at once commenced work on the foundations, which were built of huge blocks of stone, the lowest course of which was built on the solid rock. When these were finished, the boiler and engine houses and the new smoke stack were next commenced and pushed forward rapidly, and are now very nearly completed.

The engine house, which is situated a few feet west of the mill, is built of brick and will contain two new engines, the cylinders of which will be 32 inches in diameter and the length of stroke 48 inches, These engines will be connected to a fifteen inch driving shaft and will exert together over one thousand horse power.

A few feet west from the engine house is the old smoke stack, and close against this and to the west of it is the boiler room, which is built of brick, with a heavy iron roof, and is 100 feet long by 32 feet wide, and will contain sixteen tubular boilers, each of which will be four and a half feet in diameter, and fourteen feet long. The furnaces will face the bay, and will, we understand, be fed automatically with sawdust.

The new smoke stack is built close against the western end of the boiler room, and is about the same size as the old one.

The frame of the mill, which is made of heavy timbers, framed together with great neatness and exactitude, is now up and sheeted all around. The roof is on and is covered with with heavy sheet iron painted over with a brownish paint. The main body of the mill is 172 feet long, by 85 feet wide, and will contain two twin circular saws, one single circular saw, three twin gangs, two stock gangs, edgers, slash tables, and a large amount of other machinery, of which we will give a more detailed account as soon as it is in running order. At the northwest corner of the mill there is a wing 75x36 feet, which will be devoted to the lath machinery, and directly opposite this, on the other corner, there is another wing 30x125 feet, in which will be placed the butting table and machinery for assorting the lumber.

The small mill is now running night and day and cutting (considering its size) a large quantity of lumber, besides giving employment to from 150 to 200 men. The capacity of this mill will be greatly increased, as soon as it shuts down for the winter, by the putting in of several of the boilers out of the old mill, together with a much more powerful engine than that used at present.

A number of alterations have been made in the planing mill and machine shops. A new boiler house 46x26 feet has been added to it. This contains a 75 horse-power engine and four large tubular boilers, which greatly increase the capacity of the shops. The small engine which was formerly used here will still be left in its place, and will be used for pumping water to supply the large tank in the yard and also to drive the necessary apparatus for lighting the entire mill with electricity. The apparatus will soon arrive, and we will furnish a detailed account of it as soon as possible. We believe it is the Company's intention to build a large sash factory in connection with the planing mill, which is now over driven on account of the large local demand for planed lumber.

The mill will be ready for operation before the opening of navigation, and will give employment to about 700 men, so that this enterprising firm will pay out in wages alone during the summer months fully $14,000 per month, which amount will doubtless nearly all go into the pockets of the local business man.

I am indebted for much of the above information to the ever courteous and affable engineer of the establishment, Mr. R. D. Gilmour.—*Belleville Intelligencer.*

THE GALE OF OCTOBER 14.

In the November issue of the *Journal of Forestry* there appears a very interesting and instructive record of the terrible and almost unprecedented effects of the late storm upon trees and plantations. The editor of that periodical distributed circulars, inviting short accounts, to ascertain the general effect caused by the gale, and the fact that the replies fill some seventeen pages of the magazine demonstrates how severely the memorable storm was felt throughout the whole country. As some of the worst disasters occurred to old historical trees, that have stood for centuries on spots well known to our readers, we make the following brief extracts :—

In Windsor Park and Woods the oldest trees have suffered most, particularly the beech and elm. The pollarded oaks near Forest Gate, supposed to be from 500 to 800 years old, have been much broken in the heads. The number of trees blown down was 961, and total damaged 1,074, making in all 2,008 trees wholly or partially destroyed. At Eton, two of the fine old elms in the playing fields were blown down. These trees were planted, our contemporary says, by Provost Rouse, a Speaker in the House of Commons in the time of Cromwell. In the Forest of Dean one large old oak, 220 years old, was broken off about half way up, being decayed ; and two large beech trees, about the same age, suffered similarly. In the New Forest a considerable number of decayed beeches and oaks were blown down. An ancient ash in Ashurst Wood and a notable old poplar at Bere both suffered. At Stamford an accident befell a noted old lime tree, 300 years old, and planted by "good Queen Bess." The trunk was divided into four parts about seven feet from the ground, each part as large as an ordinary tree ; three of these were blown off, taking part of the trunk with them, leaving only one large and a few small branches remaining. In all parts of London the gale played sad havoc with the Park trees, as well as doing damage to buildings, &c., as reported in the daily papers. On the Worksop Manor Estates, about 500 trees were blown down, at an estimated value of £491. Of these 100 were oak from 25 to 60 years old, and 15 elm, from 70 to 90 years old. At Birdsall, York, Lord Middleton states three of the great limes in Birdsall Avenue fell. One, though denuded of its head, measured 80 feet. In Scotland, on the Langton Estate, Dunse, the number of fallen trees reached 5,000, and a clump of magnificent beeches which had weathered the storms of 200 years at last succumbed. In Dalkeith Park, Edinburgh, a correspondent writes, it will take three months of continuous work to dissect the trees, blast or bury the roots, and repair the broken fences. On the Tynninghame Estate, Haddington, 30,000 or 40,000 trees were blown down, approximately valued at £15,000. One remarkable old beech, named the Trysting Tree, was over 300 years old. The total damage done to this estate reaches £50,000. At Floors Castle, Kelso, 800 of the finest trees were uprooted, and 200 otherwise damaged. Within a radius of four miles round Kelso some 3,000 large trees were uprooted, valued at £6,000. In Ireland, some fine old ashes and elm fell in the grounds of Antrim Castle ; and in Wales many old and valuable trees were uprooted or damaged at Penrhyn Castle, Bangor, and other well known seats. "It is difficult," remarks the editor, "to point to any district where trees have not suffered severely from the effects of the gale."

LOSS BY FOREST FIRES.

The Dominion Government employs what are denominated "bush rangers," who take care of the government's timber limits. Since the great fires of last summer, bush rangers and agents have been ordered to, as nearly as possible, ascertain the amount of damage caused to timber by these conflagrations. Estimates have already been made of the loss in the Ottawa Valley, and it is placed at $5,000,000. In the territory bordering on the Muskoka and Parry Sound districts, and thence eastward to the township along the Ottawa, little or nothing is yet known of the amount of loss. In the Muskoka and Parry Sound regions, great belts, twenty miles or more in length, and from one to five or six miles wide, were burned over, and it is asserted that the smoke of forest fires ascended from every square mile of territory from Lake Nipissing to the Severn. The loss must therefore have been great, and probably quite equal to that in the Ottawa district. Some are inclined to place the amount of loss over this wide stretch of country at only $1,000,000, but that estimate is doubtless much too small, and may be even four or five times below the actual damage. The total loss over the entire Province is roughly estimated at from $10,000,000 to $15,000,000.

The great endeavor will now be to cut the scorched timber and get it into the water before the borer begins its work. Much may be saved in this way, or much may be lost by delay.

This has not been an entirely exceptional year as regards forest fires in the Dominion. Nearly, and perhaps every, year there is a heavy loss. The surveys of the new townships of Bonfield and Boulter reveal a condition of their forest lands which is common almost every where from the Georgian Bay to the Ottawa. Two-thirds of Bonfield was burned over at one time, and a portion within recent years, while one-third of the forests of Boulter have been swept away. The same story is told of all other parts of the pine country by the surveyors who have traversed them.

Taking into consideration the destructive effect of forest fires, and the settlement of the new lands for farming purposes, it is feared that in twenty years the lumber business of Canada will be a thing of the past. Already only the limited tract along the west side of the Ottawa, it is asserted, from Mattawan to Lake Temiscamingue, the wilderness, rapidly diminishing in area, that lies between the County of Peterborough and Lake Nipissing, and a portion of the north shore district, are unbroken by settlement. Half of this area contains no pine of commercial value. Under the present system of waste, one of the leading industries of the country will be crippled by its competition with districts more favored by abundance and easy access. For this reason, those interested in preserving the forests of the Dominion are calling for legal protection of the standing timber. —*Northwestern Lumberman.*

FENELON FALLS.

Mr. John D. Smith, the well known lumberman having removed with his family to Port Hope, after a residence of fourteen years in this village, a number of their friends resolved to present Mrs. Smith with a piece of plate. The presentation was made at the Mansion House, in the presence of a large number of ladies and gentleman, by Mr. H. W. Greene, Reeve of the village, who expressed the regret of the donors at the departure of herself and her husband, and their sense of the loss that would be thereby sustained by their little community. Mrs. Smith responded in suitable terms. There was subsequently a supper given to Mr. Smith at the McArthur House, in which seventy-five persons participated, including the leading men of the village and neighbourhood, the Reeve being in the chair. There were present a number of Mr. Smith's employees, thus testifying to their mutually satisfactory relations. Mr. Smith will be greatly missed from among us.

Interesting and Valuable.

The *Montreal Shareholder* says the Canada Lumberman explains by its name the special interest it devotes itself to serve. This periodical, published semi-monthly, is very ably conducted, and full of interesting and valuable matter connected with the lumber trade and the wood bearing portion of our national domains. Everyone interested in lumber should take it.

J. DAVIES & Co.
46 Church Street, Toronto.
Sells all sort of Lumber on Commission. Advances on Consignments. Prices given on application. Whole Stocks disposed on very low Commission. 1yl16

Timber Limits & Sawmill
FOR SLE.
The subscriber being anxious to concentrate and consolidate his business, on account of his age, will sell at very low prices—
1st. His Mills and Farm near the Bradford Station, Northern and North-Western Railway, together with Limits in Ridout and Sherbourne.
2nd. The Portage and Canal connecting Black River with Lake St. John, and Lake St. John with Lake Couchiching, in the Township of Rama.
3rd. Eight million feet of saw-logs now in Black River.
4th. About 4,000 acres of land in different townships.
If not sold at private sale, the above will be offered to the highest bidder at some future time to be named, as I intend to close all out and concentrate in Michigan, where I now have mills.
All and any information can be had from Thompson Smith & Son, Toronto, or James Durham at Bradford Mills.
4l25 THOMPSON SMITH.

Department of Crown Lands,
TORONTO, 6th October, 1881.
NOTICE IS HEREBY GIVEN THAT, UNDER AN ORDER IN COUNCIL,
TIMBER BERTHS
In the undermentioned Townships in the
MUSKOKA and PARRY SOUND DISTRICTS,
Will be offered for Sale by Public Auction at the Department of Crown Lands at twelve o'clock noon,
On TUESDAY, the 6th day of December next,
viz. :—Townships of Mowat, Blair, McConkey, Hanly, Patterson, Mills, Sinclair, Bethune, Proudfoot, Gurd, Machar, Strong, Joly, Laurier, Pringle, Lount, Nipissing and Himsworth.
The area to be disposed of in the above Townships as Timber Berths is upwards of 1,400 square miles, and to suit all classes of purchasers each Township will, as nearly as practicable, be divided into four berths.
Sheets containing conditions and terms of Sale, with information as to Area and Lots and Concessions comprised in each Berth, will be furnished on application personally or by letter, to the woods and forests branch of the Department, or to the Crown Timber Offices at Ottawa, Belleville and Quebec, and the Office of T. B. Johnston, Esq., Parry Sound.

The Strength of Wood.

At the late fair of the Massachusetts Charitable Mechanics' Association, held at Boston, there were exhibited interesting tests of constructive material, among these, of pine columns, which had, in some instances, supported remarkable pressure. One of these columns, originally twelve feet long, yielded to a pressure of 190,000 pounds; the weak spot being a large knot, which acted as a wedge, and caused the destruction of the column at less than the proper figures for a sound piece. Another column was twelve feet long, and tapering from seven and three-fourths to six and a half inches in diameter. This stick showed its weakest point at the smaller end, the crumbling of the fibres taking place in that part. A seasoned hard pine girder, eleven inches square and ten feet long, bore the astonishing load of 751,000 pounds.—*Northwestern Lumberman.*

How to Use Oil Stones.

Instead of oil, which thickens and makes the stones dirty, a mixture of glycerine and alcohol is used by many. The proportions of the mixture vary according to the instrument operated upon. An article with a large surface—a razor, for instance—sharpens best with a limpid liquid, as three parts of glycerine to one of alcohol. For a graving tool, the cutting surface of which is very small, as is also the pressure exercised on the stone in sharpening, it is necessary to employ glycerine almost pure, with but two or three drops of alcohol.

A WORLD OF GOOD.—One of the most popular medicines now before the American public is Hop Bitters. You see it everywhere. People take it with good effect. It builds them up. It is not as pleasant to the taste as some other Bitters, as it is not a whiskey drink. It is more like the old fashioned bone set tea that has done a world of good, If you don't feel just right try Hop Bitters.—*Nunda News.*

A POPULAR REMEDY.—Hagyard's Pectoral Balsam is one of the most deservedly popular remedies for the cure of cough, croup, bronchitis, and all pulmonary complaints. For sale by all dealers.

People have no more right to become dyspeptic, and remain gloomy and miserable, than they have to take poison and commit suicide. If the stomach becomes weak and fails to perform its functions, Burdock Blood Bitters will speedily remedy the trouble.

WHAT EVERY ONE SAYS MUST BE TRUE.—And every one who has tested its merits speaks warmly in praise of Hagyard's Pectoral Balsam as a positive cure for all throat and lung complaints, coughs and colds, sore throat, bronchitis and incipient consumption.

A REAL NECESSITY.—No house should be without a bottle of Hagyard's Yellow Oil, in case of accident. There is no preparation offered to suffering humanity that has made so many permanent cures, or relieved so much pain and misery. It is called by some the Good Samaritan, by others the Cure-all, and by the afflicted an Angel of Mercy.

NO IMPOSSIBILITY.—People often say, when suffering in the first stages of Consumption, or suffering from lung disease, if their physician fails to effect a cure, "my case is a hopeless one, and my enjoyment of health again is an impossibility." The celebrated French Count Mirabeau's nasty temper is well known. "Monsieur le Comte" said his secretary to him one day, "the thing you require is impossible." "Impossible!" exclaimed Mirabeau, starting from his chair, "never again use that foolish word in my presence." It is well-known that N. H. Downs' Vegetable Balsamic Elixir has brought to health and strength thousands who were told by doctors that their recovery was impossible. Be not deceived by any apparent impossibilities; always use the Elixir.

CANADIAN PACIFIC RAILWAY.

Emory's Bar to Port Moody.

NOTICE TO CONTRACTORS.

Tender for Work in British Columbia.

SEALED TENDERS will be received by the undersigned up to NOON on WEDNESDAY, the 1st day of FEBRUARY next, in a lump sum, for the construction of that portion of the road between Port Moody and the West-end of Contract 60, near Emory's Bar, a distance of about 85 miles.

Specifications, conditions of contract and forms of tender may be obtained on application at the Canadian Pacific Railway Office, in New Westminister, and at the Chief Engineer's Office at Ottawa, after 1st January next, at which time plans and profiles will be open for inspection at the latter office.

This timely notice is given with a view to giving Contractors an opportunity of visiting and examining the grounds during the fine season and before the winter sets in.

Mr. Marcus Smith, who is in charge at the office at New Westminister, is instructed to give Contractors all the information in his power.

No tender will be entertained unless on one of the printed forms, addressed to F. Braun, Esq., Sec. Dept. of Railways and Canals, and marked "Tender for C. P. R."

F. BRAUN,
Secretary.

Dept. of Railways and Canals, Ottawa, Oct. 24th, 1881.

FIRES IN OUR PINE FOREST.

10,000,000 WORTH OR MORE OF PINE DESTROYED THIS YEAR IN ONTARIO.

Not for many years has fire made such havoc among the pine forests of the country. The extent of these fires is, however, not known, and cannot be approximately ascertained until the agents and bush rangers in the employ of the Ontario Government make reports upon the subject. It is known that thousands of square miles of territory have been burned over along the Ottawa, in the back townships north of Lake Ontario, and through Muskoka and Parry Sound. Much of this burnt land has consisted of farms, woods from which the pine has been stripped, and pine areas previously destroyed by fire.

THE LOSS BY LAST SEASON'S FIRES.

Of the very great destruction which must have occurred throughout the whole unsettled territory lying along the eastern borders of Parry Sound and Muskoka, and thence eastward to the townships along the Ottawa, little or nothing is known. Estimate has been made of the loss in the Ottawa Valley, and it is placed by some at $5,000,000. In Muskoka, and Parry Sound great belts, twenty miles or more in length, and from one mile to five or six miles wide, have been burned over; and according to one gentleman, well acquainted with the districts, the smoke of bush fires has ascended from almost every square mile of territory from Lake Nipissing to the Severn. The magnitude of the loss must therefore have been great, and not improbably quite equal to that along the Ottawa. Yet some almost place it as low as one million dollars. That figure may not be too small on the lowest calculation of the value of the uncut trees to the lumbering companies. But the actual value may be four or five times as much. Along the north shore of Lake Huron the damage from fire has not been so great as it was supposed to be during the prevalence of the fires, but this may apply only to the narrow strip of territory traversed in summer by lumbermen and others. The total loss over the whole Province may be variously estimated at from ten to fifteen million dollars.

CUTTING DEAD TREES.

Much may yet be saved by prompt cutting of the scorched timber, and most of the trees in the burned districts are merely scorched. If these trees be cut down this winter the borer, which invariably attacks dead trees in the summer season, can do no harm, and they will be suitable for lumber, but otherwise the timber will be rendered useless. The cutting of these trees, situated in many instances where access and removal are difficult, can not be expected, so that nearly every one of the few hundred thousand pine trees burned, more or less, last summer, may be considered a total loss.

THE ANNUAL LOSS BY FIRE.

The average annual loss by fire cannot well be estimated even approximately, and if one million dollars be roughly stated as an amount more probable than anything lower, the figures large as they are, can scarcely be considered too high. The surveys of the new townships of Bonfield and Boulter, of which notice has been taken in the *Globe*, reveal an aspect of the forest lands which is common almost everywhere from the Georgian Bay to the Ottawa. Two-thirds of Bonfield has been burned over at one time and another within recent years, while Boulton has suffered from the sweeping away of one-third of its forest. The same story is told of all other parts of the pine country by the surveyors who have traversed them. Much of this destruction has been done where the lumberman and the trapper were, till recently, the only human beings who traversed the wilds. When the pioneer settler entered the danger increasd, and the pine has only an even chance of survival till the lumbermen can turn it to commercial account.

EXTINCTION OF THE LUMBER TRADE THREATENED.

Settlements have now been formed in most parts of the pine country, and for twenty years at the present rate of progress there will scarcely be the area of a township left unpenetrated by the hardy pioneer. Twenty years later the lumber business may be a thing of the past, so far as Ontario is concerned, unless an efficient system be adopted of protecting the forests. Already only the limited tract along the west side of the Ottawa from Mattawan to Lake Temiscamingue, the wilderness, rapidly diminishing in area, that lies between the county of Peterborough and Lake Nipissing, and a portion of the north shore district are yet unbroken by settlement. Half, perhaps much less than half, of the area contains no pine of commercial value; so that under the present system of waste, not only may an important source of Government revenue be greatly diminished within a decade or two, but one of the leading industries of the country will be crippled in its competition with districts more favoured by abundance and easy access. The replanting of trees can do little to remedy the mischief, as one hundred and fifty years are required, so it is said, for a pine to reach maturity. That length of time being necessary to produce good marketable timber, it will be seen, if viewed in connection with the progress of settlement and the increasing demand for lumber, that less than one per cent. of our forest trees can be allowed to be cut down or burned if the province hopes to preserve a permanent lumber industry and a Government revenue therefrom.

PROTECTION AGAINST FIRE.

In 1878 the Ontario Legislature introduced better regulations than theretofore had been in use for the prevention of forest fires. The fire district of Ontario, as constituted by the Act, includes a large area; the boundary in the southern part extends from Bruce Mines along the north shore and the Georgian Bay to Midland, then across Lake Couchiching to thirty miles north of Kingston, where it turns northward to Allumette Island, and follows the course of the Ottawa to Lake Temiscamingue. In this district fires are placed under considerable legal restriction. No fire is to be kindled in or within half a mile from the woods, between the 1st of April and 1st of November, except for clearing land, cooking, obtaining warmth, or some industrial purpose. In building any such fires a locality is to be selected where there is the smallest quantity of vegetable matter, dead wood, branches, brushwood, dry leaves, or resinous trees. The place where the fire is to be lighted is then to be cleared of all dead vegetation for a space of ten feet around, and every care is to be taken to prevent the fire from spreading, and it must be extinguished by the parties kindling it before they leave the spot. The pains and penalties of the Act lie on the head and pocket of him who throws or drops a burning match, the ashes, of a pipe or a lighted cigar in this sixty thousand-square-mile-tinder-box. The wadding of a firearm must also be looked after or the law will pounce down on the neglectful sportsman.

CAMPING PARTIES.

One section of the Act bears severely on some of the parties who leave Toronto and other towns for an outing near the northern waters. Whether such parties consist of one or more persons they must have a recognized head, if for no other purpose than the purposes of this Act. Such head must carry a copy of the Act with him among his other baggage, and once a week must call his men together and read the Act aloud in their hearing, and also explain it to them. If a man go out alone, it is presumed that he will call himself together and read the Act aloud—a wise provision of the law for the evolution of lawyers, clergymen and stump orators. It would be interesting to know how many pleasure parties have observed this section and escaped liability to the penalty of $50 and costs, or three months in gaol imposed for its violation.

An important section refers to the locomotive engines passing through the fire district. Such engines must have all the most approved and efficient means of preventing the escape of fire from the furnace or ash-pan, and the smoke stack is to be provided with a bonnet or screen of iron or steel wire netting, containing in each square inch eleven wires each way at right angles to each other. The duty of seeing that these appliances are used is especially given to the driver of the locomotive. The penalty for contravention of the Act is fifty dollars and costs of prosecution, and in the case of railway companies one hundred dollars and costs for each offence; this latter penalty to be recovered by suit in any court of competent jurisdiction. Every suit for recovery of a penalty must be commenced within three months after the contravention complained of.

THE LAW A DEAD LETTER.

As every one acquainted with the forest territory knows, this Act is almost a dead letter. The reason is that practically no one is responsible for its reinforcement. Successful prosecution of a suit entitles the complainant or prosecutor to one-half of the fine and costs, and while any person can appear as prosecutor, the duty is said to attach specially to Crown Land Agents, Woods and Forest Agents, Free Grant Agents, and bush-rangers. These men are unlikely to incur the odium of instituting a prosecution which may bring them a direct pecuniary benefit. The same thing has been tried in the liquor law and found wanting. The difficulty is increased by another cause. In these sparsely settled districts it is not easy to discover the offender in one case out of a dozen, for the Government agents are not numerous, while the bush-rangers, whose duties are the measurement of the ties cut by the lumberers, neccssarily do their work in the winter, and in summer attend to private business.

A MORE EFFICIENT LAW REQUIRED.

The remedy may partly lie in investing Crown Land or Free Grant agents with power on dry seasons to prohibit the kindling of clearing fires, and at all times in the summer months to require every party about to start a fire to first obtain written permission. Bush rangers should be more numerous, and their special duty in summer should be to constantly scour their districts in search of fires. In this way every party camping out would be known to the rangers, and it would be comparatively easy to fix any contravention of the Act on the right parties.

The regulation regarding locomotives might be made to apply throughout the whole Province, for the past season's record shows that some of the most destructive fires occurred beyond the fire district, and were caused by sparks from passing engines.

The hope is expressed that the Government will instruct its agents to make full reports of the extent of the damage done by fires during the past season, and the causes, as far as can be ascertained, of each fire.—*Globe.*

THE GREAT FOREST FIRE.

A DISTRESSING TALE FROM THE BURNT MICHIGAN DISTRICT BY A FORMER PETERBOROUGH MAN.

The following letter appeared in the Peterborough REVIEW:—

DEAR SIR,—Having received a number of communications from old friends from Peterborough and other localities since the fire of September 5th, in regard to our welfare and the particulars in regard to the fire, and as the impression is quite general that we were burned up, allow me through the columns of your paper to state that such is not the case. Myself and family were all burnt more or less, but thanks to the Great Ruler of the Uuiverse, our lives were saved, while others all around us perished in the flames, every thing that we had was consumed, not one dollars worth was saved except what we had on our persons and even that was torn from our backs to save us from burning. We sought refuge in a corn-field and remained there from 1 until 6 o'clock p.m., with the air so heated and the smoke so dense that breathing was very difficult. Our only relief was lying with our faces on the ground and covering ourselves with the grain stocks. Let me here state that there are hundreds of people in the burned district to-day that are losing their hair by reason of the extreme heat. At times it was as dark as night, and the darkness was the cause of many deaths, as the people could not see the way to escape from the flames. The fire reached my place about 1 o'clock, and was one broad extended sheet of flame as far as the eye could reach, and as it was blowing a gale at the time, it travelled a distance of twenty one miles in less that one hour and swept everything before it, leaving death and destitution in its wake. There were thousands of acres of land upon which it did not leave a living thing of any kind, not even one splint of grass. Mr. editor, could you have travelled over that space of ground on the following day, you would have witnessed some of the most heartrending scenes that it is possible for the eye to behold. Whole families clustered together, some burned to a cinder and others partially burned, writhing and groaning in their agony, crying and begging for death, when death alone was the only relief possible for them. Such my friends were some of the scenes witnessed by those that were so fortunate as to save their lives, and which has left an impression upon their minds that time will never efface. As regards our present welfare I may say that we have "thanks to the good people of our land" enough to eat and clothes enough to wear at present. The great trouble will be to get feed for our horses, as there is not any in the country and it will have to be shipped from a distance and in all probability many will perish for want of it. By inserting the above you will confer a great favor.

I remain yours &c.

HENRY LAWSON.

Bad Axe, Michigan, Nov. 7th, 1881.

THE FORESTRY WORK OF THE TENTH CENSUS.

Up to the present time there has been but a vague conception of the extent and value of one of the most important sources of the prosperity of the United States. It seems the more strange when it is considered that this great item in the nation's assets is not buried in the earth, like its mineral wealth, but stands proudly on the surface, like a mighty host, seen of all men. The entire welfare of a country is more identified with the forests that cover it than with any other feature of the earth's surface. The trees are the kindest friends of the soil; they are the guardians of its fertility; they protect the fields from devastating floods, and cherish the springs that feed the streams. Without them the land becomes an arid desert, and its people are debased to barbarism and poverty. Great desolated tracts in Asia, Africa and along the eastern Mediterranean were once blooming and garden like, but when the trees were cut away the dryads avenged themselves. Therefore it is fitting that in the grand taking account of stock in the national storehouse that occurs every decade, the forest wealth of the country should at last be accorded its proper place.

Although the statistics concerning the forests of most of the European countries are generally full and accurate, the institution of the forestry division of the 10th census of the United States forms the first attempt to obtain such information by means of the census work of any country. In laying out the work of his bureau, Gen. Francis A. Walker, the superintendent of the census, decided to undertake an investigation into the extent of the forest covering of the country as related to agriculture; into the forest wealth as related to manufacture, to railway transportation, and to the domestic supply of fuel; and into the operations of the lumbering industry as pursued in the principal districts of cutting and export. The scope of the investigation comprises the chief characteristics of the forest flora of each section of the country, an account of the various woods in the adaption to industrial and domestic uses, and the methods in vogue in the various parts of the country for the protection or restoration of the forest growth.—*Sylvester Baxter in November Atlantic.*

A Long Trestle.

The Chattanooga *Times* says:—Fletcher Wessenberg & Co. have been awarded the contract for building a trestle across Lake Pontchartrain and approaches. The trestle will be twenty-five miles long, and the contractors bind themselves to finish it in one year.

The contract is the largest timber contract ever before awarded in the south. It will amount to at least 1,250,000. Thirty million feet of lumber and seventy-five car loads of bolts, 1,500,000 pounds will be used in building this trestle. All timbers which will go in water will be creosoted; creosote works will be erected at once near the lake at a cost of $75,000.

The works are on the line of the New Orleans and North-Eastern railway, the extension of the Vicksburg and Meridian railway to New Orleans. The rest of the work is now under contract, as well as the road from Monroe to Shreveport, and is to be finished within a year, at which time the Erlanger system, extending from Cincinnati to Shreveport and New Orleans will be intact.

SOME FAMOUS TREES.

A poplar tree in Waukesha, Wis., is attracting attention by its being completely covered with small insects resembling caterpillars. In some places they are two inches thick.

In the old Rogers burying ground near Chatham, N. C., an oak tree has grown on a grave in which a person was buried seventy-five years ago, and the tree is now five feet in diameter.

In Lewis County, Ky., a mammoth tree was recently cut that is believed to have been 300 years old. It was 16 feet in diameter, 190 feet high, and yield 33.452 feet of lumber and 25 cords of wood.

In the village of Noebditz, Saxony, is an oak whose aged and infirm branches are propped up all around by beams. Its trunk has been used many years as a burial vault. Its lower part, which measured 14 ells in circumference, is hollow, and the aperture to this great cave is closed by lattice work of iron bars. Through this sort of window the unsuspecting stranger who is first led to take a peep perceives with amazement the skeleton of a man seated in the middle of the hollow. It is the skeleton of the Lord of Wintersheim, who died about a century ago, and whose choice of this singular mode of sepulture is very minutely described by the inevitable guide who shows the place.

A correspondent of the San Francisco *Examinev*, in speaking of the big trees of Calaveras County, says :—"In the stump of one of these trees a ball-room thirty-three feet across is built, ane it requires a ladder eighteen steps to ascend to the top of the log, on which was built a ten-pin alley. It has been burned up, but the old, charred monarch of the forest still remains. Think of it—a hollow log, through which one can ride on horseback 100 feet and come out through a knot hole! There are some ninety of these big trees measuring from 50 to 100 feet in circumference, and reaching up the skies—from the rings that denote the annual growth of these trees, science has estimated some of them to be 4,000 years old, while they stand over the fallen bodies of much older growth, covered over with earth and large growing trees, as it is one of the peculiarities of this timber not to decay. It appears to be a species of redwood.

Mississippi River Reservoirs.

The plan of providing reservoirs near the headwaters of the Mississippi river, as a source of supply in seasons when the river is at a low stage, has for a long time been in contemplation. It is now likely to be practically tested. Congress in 1880 made an appropriation of $75,000 for a dam at Lake Winnebigoshish, and last spring made an additional appropriation of $150,000 for the same purpose. The enterprise for some months was halted because Congress failed to provide means for estimating the amount of damage to lands that the overflow would cause; but that matter has now been overcome by an ordinary appraisement, and the work is likely to go on, and the dam at Winnebigoshish will be constructed at an early day. It is not expected that this one structure will have any appreciable effect upon the water in the Mississippi river. But it will solve certain problems in practical engineering, and the extent to which it may be made to control the water passing through it, will be looked upon as a test of the efficiency of the general system. If the work about to be constructed prove a success, as there seems no good reason to doubt, a few more years will bring the extension of the system over enough of the territory near the river's source to graduate the amount of water in its channel, and with a corresponding improvement of the channel, assure the long-wished for navigation by large boats through the whole of the open season.—*Northwestern Lumberman*.

Belts.

Leather belts will last double the usual time if treated with castor oil; they will be rat proof, they will always remain flexible, and will not crack. A belt four inches wide will be equal to one six inches wide which has not been oiled. It requires twenty-four hours to penetrate the leather. If used sooner the greasiness will make the belt slip.

PARQUETRY FLOORING.

The demand for parquetry floors is continually on the increase. They take the place of carpets for covering the coarse boards of ordinary flooring, and are made by ingeniously mortising together different kinds of wood. Most of this flooring is made seven-eights of an inch thick, and what is known as "wood carpet" is made only about one-fourth of an inch in thickness. The principal body of parquetry work is oak, in different shades, but every kind of cabinet wood is used— mahogany, tulip, walnut, cherry—all furnishing a variety of shades, which when properly set, harmonize with agreeable effect, The entire mosaic, when mortised and joined, can be lifted without injury.

Nothing neater and more refined can be found for a floor covering to a room than a center rug or carpet, either in the shape of a square or parallelogram, and surrounded on all sides by a neat pattern in wood. If one wishes to practice closer economy he can cover the space occupied by the carpet, the piano, stages, or other large pieces, with plain wood the thickness of the parquetry wood. The surface polish of the wood must be maintained to retain the beauty and finish of the floor. Waxing is often sufficient, or a vigorous application of shellack varnish.

The origin of this style of flooring can be traced back to the early history of western Asia. The material used was usually marble. From those early days to the present changes have taken place. Wood has succeeded stone, and the jig-saw the chisel. For some time past, paraquet work has been successfully used in Germany, France and lately in England; and in this country, although new at present, we predict for it great popularity. In our American homes parquet flooring is particularly adapted for backgrounds to rugs or square carpets.

Next Winter's Operations.

A correspondent of the *Globe* gives the following estimate of the probable cut of logs in the Georgian Bay district, during the season upon which we are entering, viz. :—

	Square ft.
Penetanguishene Mills	26,000,000
British Canadian Lumber Co.	25,000,000
Other mills at Midland Bay	14,000,000
Georgian Bay Lumber Co.	35,000,000
Parry Sound Lumber Co.	20,000,000
Guelph Lumber Co., Parry Sound	15,000,000
Maganetawan Lumber Co.	30,000,000
Muskoka Lumber Co.	25,000,000
Victoria Harbour	15,000,000
Collingwood Lumber Co.	10,000,000
North Shore Mills	20,000,000
Mills along Victoria Railway, not included above	70,000,000
Mills along Midland Railway, not included	120,000,000
Other Mills	14,000,000
Total	434,000,000

Humbugged Again.—I saw so much said about the merits of Hop Bitters, and my wife who was always doctoring, and never well, teased me so urgently to get her some I concluded to be humbugged again; and I am glad I did, for in less than two months' use of the Bitters my wife was cured and has remained so for eighteen months since. I like such humbugging.—H. T., St. Paul.—*Pioneer Press.*

The Saddest of Sad Sights—the grey hairs of age being brought with sorrow to the grave is now, we are glad to think, becoming rarer every year as the use of Cingalese Hair Restorer becomes more general. By its use the scanty locks of age once more resume their former color, and the hair becomes thick and luxuriant as ever; with its aid we can now defy the change of years, resting assured that no Grey Hair at any rate will come to sadden us. 50 cents per bottle.

Honesty.—It is commonly said that you cannot make an honest man believe that white is black and *vice versa*, but those who have grey hair by using the "Cingalese Hair Renewer," will find that this apparent difficulty is easily overcome. 50 cents per bottle.

Dyspepsia, that all prevalent disease of civilized life, is always attended with a disordered sympathetic system and bag secretions, and no remedy is better adapted to its cure than Burdock Blood Bitters taken according to the special directions found on every bottle.

Gray spent seven years in perfecting his "Elegy," but the time required to get a box of Esterbrook's Steel Pens is just long enough to send to the nearest stationer. Wholesale by Brown Bros., Toronto.

Respect.—The Grey Hairs of old age demand and should receive respect—but the Grey Hairs of young people require attention—in the way of using Cingalese Hair Renewer. 50 cents per bottle.

Communications intended for insertion in the CANADA LUMBERMAN, must be accompanied by the name of the writer, not necessarily for publication, but as a guarantee of good faith. Communications to insure insertion (if accepted) in the following number, should be in the hands of the publishers a week before the date of the next issue.

PETERBOROUGH, Ont. DEC. 1, 1881.

A PROPOSITION has been made to establish a woodenware factory in Lindsay.

THE Medonte Lumber Company have made preparations for getting out 4,000,000 feet of pine this winter, in addition to a large quantity of oak, elm, basswood, and black birch.

WE would direct the attention of consumers of hardwood lumber to the advertisement of the Medonte Lumber Co., and the manufacturers of the same article to the advertisement of the Kingston Locomotive Works, both of which will be found in another column.

A LOG 30 feet long and 57 inches in diameter was sawed into inch planks at the Seattle Lumber and Commercial Co.'s mill. Some wide planks were needed for the Reinig-Voss building, and this log was used to fill the special order. The stick scaled 4,563 feet, and probably contained 5,000 feet of lumber.

THE Hon. Mr. Joly, in a recent election speech at Montreal, said:—"Mr. Chapleau endeavored to show that the Province was in a prosperous state, and as a means of establishing that position he spoke of the $700,000 received from Crown lands as legitimate revenue which they had a right to depend upon. This was not so. It took a pine tree 400 or 500 years to grow, and the money realized by the sale of timber from the Crown lands was their capital, and not a revenue upon which they could depend."

THE Toronto *Globe* says that the Kingston and Pembroke road will yet have a large lumber traffic, probably sooner than it would otherwise have enjoyed on account of the persistence of Mr. Peter McLaren in obstructing the log navigation of the Mississippi. The limits of the Messrs. Caldwell lie far up the river from the railway crossing, and it is, I believe, their intention to erect a mill near the latter point, thus saving many miles of stream driving, and getting rid of a portion of the disputed river. Mr. McLaren has a mill already in operation near the same place.

IT is stated from Alpena, Mich., that there will not probably be quite as many logs cut this year as last. There will be a large amount of last winter's cut left over. The mills have not cut as much as was intended in the spring. The breaking of Richardson's dam, in the beginning of the season, was a serious detriment to business, a full month's work in most of the mills being lost by it; besides, it disarranged the operations of the boom company to such an extent as to be an embarrassment the entire season, and mills have often been obliged to shut down temporarily because of it.

A SPECIAL telegram from Ottawa says that a well known forwarder, in speaking of matters pertaining to the forwarding business, says that while the same rates had been obtained during the season now practically closed, as in 1880, wages had advanced fully 20 per cent., and there was a decrease to fully that extent in the carrying capacity of the barges, owing to the low state of the water. He considered the outlook for 1882 very favorable, as more lumber will be cut, and as the construction of the dam at the Chute au Blondeau, the only really dangerous piece of navigation between here and Montreal, would greatly benefit the forwarders, doing away with the delays which have hitherto proved so serious. He thought the dam had proved a success beyond all question, and that now even the largest steamship could ascend the Chute without trouble or danger.

AN UNKNOWN FOREST.

MR. NIVEN' EXPLORATIONS OF THE TAMAGAMANGUE COUNTRY—LOTS OF GOOD PINE.

Mr. A. Niven, P. L. S., of Haliburton, has just returned from making a survey of the country between Lakes Nipissing and Tamagamangue. The survey was made under the direction of the Ontario Government, and is merely preliminary to the laying out of a large block of townships, the base lines for which were laid down in this survey. A *Globe* reporter called upon Mr. Niven and gleaned much interesting information respecting the district, which hitherto has been almost unknown. Mr. Niven, with a party of thirteen men, set out from Lake Nipissing in the middle of June. The party penetrated to the north-east corner of the Township of Field, where the survey was to commence.

Here four months of laborious journeying commenced, almost every step having to be

CUT THROUGH A DENSE FOREST.

The first line was cut from the northeast angle of Field due northward eighteen miles nearly to the southern shore of Lake Tamagamangue. Along this line the country is undulating, and rocky ridges with an occasional swamp appear. The swamps, however, are only of small extent, and the ridges are rarely sharp, or show exposures of bare rock. In fact they are more like plateaus, and are densely wooded with pine, birch, poplar, etc. The pine is abundant and of excellent quality, being quite equal to any Mr. Niven has seen elsewhere in Canada. The soil is a sandy loam except where it is rocky. Returning twelve miles southward, Mr. Niven struck twelve miles eastward, finding a comparatively level country, similar in vegetation to the country on the north line. Maple is also present. On this line the soil is in parts excellent, and fully a third of it good arable land. The pine is good. Returning to the north and south line, the party then cut their way due west twenty-five miles. For the first twelve miles the surface is much like that already described, and good timber abounds.

AT THE STURGEON RIVER,

which flows into Lake Nipissing, the soil is clayey and the timber good—very fine pine trees appearing. In this neighbourhood Mr. Niven saw the only great damage done by the fires of the past summer. This was a *brule* two miles wide and ten long. The trees were all, or nearly all killed, but were not burnt down. Burning down rarely occurs in the first fire which sweeps over a country. This fire took place in May, and originated in a fire kindled by a camping party at a portage. The roughness of the country gradually increases westward towards Sturgeon River, but good land and timber is found in large areas along the route. Westward of the Sturgeon the party entered a *brule*, or

TRACT OF BURNT FOREST.

The conflagration which swept over it occurred six years ago, and was extensive. At one time, Mr. Niven says, the *brule* was to be seen six miles on every side of him. The spectacle was a strange one. The tall pine trees still stood rearing their blackened forms over a hundred feet into the air, and stretching out their withered limbs in ghastly malediction over the foliage, which but for them would form a vast lake of verdure. Where the pine trunk was not, there the underbrush was. This dense underbrush consisted of a young growth of poplar, birch and cherry, ten or twelve feet high. Here and there over the top of the swarthy trees rose the bare cliffs or barren hillsides of the Laurentian formation, but down in the flats the surveyors travelled for hours without seeing more than a yard or two ahead. Beneath the tangle of underbrush, through which the axe had to cut a way, stretched in every direction the decaying forms of forest giants. In this desolation the twenty-five mile westerly line was completed, and the party turned northward for twelve miles, sketching the east shore of what is marked on the map as a fifteen mile long lake, but which is in reality a chain of three lakes, one of which—the smallest—bears the euphonious name Ahpetagekickagung, and the others Wahnapachicitegoganchanungue and Olopangishgamacookicongue, or some names equally unintelligible. Till within the last four miles of this northerly line the route was through a *brule*. Then came a fine piece of country, well timbered with maple, birch, balsam and spruce. From this point Mr. Niven, about the middle of September, turned eastward, on the sixty mile line leading to the Ottawa. The first four miles were like those just traversed, and much of it well adapted to agriculture. Then came

THE STURGEON RIVER.

This stream is a fine one. Its lower course is impeded by several falls, but the part lying in Mr. Niven's survey is obstructed only by rapids. It flows through a comparatively fertile valley, with a current two hundred to three hundred feet wide and fifteen to twenty feet deep. The banks are only ten or twelve feet high and are of quicksand and clay, which mingled, form a broad valley on either side. The banks of the stream are finely timbered with hardwood and pine. Leaving the river the line runs eastward over high plateaus broken by the chain of lakes leading from Lake Tamagamangue to the Sturgeon River. As the South Bay of the Tamagamangue is approached the maple becomes one of the most common of all the trees and the scenery is beautiful. A fine country extends from the South Bay a few miles eastward, where the land becomes high and rolling. Then on to the Tamagamangue River the soil is poor. From this river eastward the timber, soil, and appearance of the country are much like those north of the township of Field, and include, of course, some very good land and excellent pine. Then for fifteen miles the country is comparatively flat and is covered with a thick growth of white birch, spruce, balsaam, popular, and small pine. Swamps and rocky ridges are rather frequent. Good land appears here and there. Then comes a stretch of moderately good land near Ottertail Creek, and extending to within six or seven miles of the Ottawa River. This last stretch includes much excellent pine, but the soil is sandy with large areas of granite rock and *brule*.

LAKE TAMAGAMANGUE.

At South Bay the party stopped for a time to explore Lake Tamagamangue. The lake is of a very irregular form, consisting of a central part 30 miles long by 15 to 20 broad, and three arms. The greatest length of the lake is probably sixty miles. The water is remarkably pure, and abounds in fish. The shores are not high, nor are they on the other hand marshy. The number of islands dotting this lake and forming a labyrinth of channels is surprising. The islands are all wooded, and the scenery is beautiful, and may be compared to that of the Thousand Islands. On one of the islands is the Hudson Bay Post, around which sixteen Indian families are settled. The Indians here, and at Temiscamingue, and on the reserves at Lake Nipissing, are the only ones in this part of the country. Lake Tamagamangue has two outlets—one by a river of that name, flowing southward into the Sturgeon, and the other by a river which expanding into Rabbit Lake, flows north-easterly under the name of the Matabige wan River, a branch of the Ottawa. The Tamagamangue as it leaves the lake is 130 feet wide, and of a fair depth. The other outlet is equally large. It was explored to Montreal River by Mr. Galbraith, one of Mr. Niven's explorers.

SOIL, LUMBER AND MINERALS.

Mr. Niven cannot speak of the south-eastern part of the district, as the lateness of the season prevented the completion of the survey in that part. Along the Sturgeon River the soil is clayey, elsewhere it is sandy loam or rocky. The rock is not so much exposed, nor are the rocky ridges so common as in the country south of Lake Nipissing. About one-third of the surface consists of arable land. There is a large amount of fair-sized pine in the district, and of excellent quality. It is easily reached, streams of considerable volume abounding. There are unmistakable indications of iron in the territory, and Mr. Niven has brought specimens with him.

Mr. Niven visited McLaren's saw mill depot, about two miles south of Lake Temiscamingue. He says that if he hadn't seen it he would not have credited the existence of so fine a farm in this part of the country. There are 260 acres cleared and 100 acres without a stump. The buildings are good and splendid crops of oats and roots are raised. Indian corn is grown. Wheat would be grown, but there is no mill to grind it. The soil is first-class.

As the season was late when the party reached the Ottawa they took canoes to Matawan and thence returned home by road. The region traversed was not known to the white man, and Mr. Niven found that chains of lakes marked in the maps had no existence, and that rivers were marked away from their proper positions. His explorations are, therefore, important as making known for the first time a district almost as little known as Central Australia.

The Variability of Bricks.

A correspondent suggests that the market price of bricks should be rated according to their size, weight, and crushing strength. He instances two lots of brick, sold at the same price per thousand, One lot averaged 2¼ x 3⅜ x 7⅞ inches in size, 5 lbs. 2½ oz. in weight, and broke at 5,490 lb. per square inch. The second lot ran about 2¼ x 4 x 8⅛ inches in size, weighed only 4 lb. 8¼ oz., and broke at 3,610 lb. per square inch. The real values of these two lots of brick were obviously very unequal. As our correspondent says it makes a vast difference to the builder of an arch or pier if he calculates on bricks standing 500 tons to the square foot and gets them half as strong; or if he figures on 4,500 bricks per rod of 306 cubic feet, and if it takes 5,500. He thinks that every brick maker should guarantee a certain size, weight and crushing strength—which they will probably do when (and not before) builders refuse to purchase bricks which fall short of a stipulated standard of size and quality, or make their contracts with the brickmaker or dealer contingent as to price, upon the character of the material delivered.

Southern Woods at the Atlanta Exhibition.

One of the notable exhibits at the Cotton Fair is the fine display of Southern woods, both rough and polished. It includes the sweet gum, a light colored wood, often worked up for coffins; the tupello, a tree that cuts like cheese, but cannot be split, used by the negroes for corks; the famous (and infamous) palmetto; the Spanish bayonet, with stiff blades, sharp as needles, and serrated edges; the swamp cypress, with its pointed excrescences, three feet high, springing from the root; and the curled pine, which takes a grain polish like the curled maple, but infinitely more vivid and beautiful.

The Georgia saw mills—there are eight hundred of them in the State—have sent in some colossal pine logs, one of them a sylvan monarch, straight as a needle, seventy feet long, twenty inches in diameter at the smaller butt, and some four feet thick at the base.—*Scientific American.*

N. H. DOWNS'
Vegetable Balsamic

ELIXIR!

This valuable medicine is purely vegetable, the discovery of which was the result of many years' close study, in order to discover the cause, the symptoms and the cure—viz.:

Consumption, Coughs, Colds, Catarrh, Croup, Asthma, Influenza, Pleurisy, Hoarseness, Spitting Blood, Bronchitis,

and every species of oppression of the **Chest and Lungs.** In all cases where this Elixir has been duly administered its efficacy has been invariably manifested, convincing the most incredulous that

CONSUMPTION

is not incurable, if properly attended to.—Consumption, at its commencement, is but a slight irritation of the membrane which covers the lungs; then an inflammation, when the cough is more observable, but rather dry: then becomes local fever and the pulse more frequent, the cheeks flushed and chills more common. This Elixir in curing the above complaints, operates so as to remove all **morbid irritations and inflammation** from the lungs to the surface, and finally expel them from the system. It facilitates expectoration.

IT HEALS THE ULCERATED SURFACES

and relieves the cough and makes the breathing easy. It supports the strength and at the same time reduces the fever. It is free from strong opiate and astringent articles, which are of so drying a nature as to be in great danger of destroying the patient; whereas this medicine never dries or stops the cough, but, by removing the cause, generally destroys the hectic before the cough is entirely gone. Consequently, when the cough is cured the patient is well. Send address for pamphlet giving full directions for cure of pulmonary diseases. Price 25cts. and $1 per bottle. Sold everywhere.

HENRY, JOHNSONS & LORD, Props.
MONTREAL, P. Q.

N. H. DOWNS' ELIXIR

TIMBER REGULATIONS.

The Winnipeg *Times* says that the recent Order-in-Council regarding the timber regulations has been received at the Crown Timber office. The following are the regulations :—

HOMESTEADER'S FREE PERMIT.

Any occupant of a homestead quarter section having no timber of his own, may, upon application, obtain a permit to cut such quantity of building timber, fencing timber or fuel as he may require for use on his homestead, not exceeding the following :—

1,800 lineal feet of house timber, no log to be over 12 in. at the small end.

400 roof rails.

30 cords of dry wood.

2,000 fence rails.

Should the house timber be sawn at a saw mill, payment for sawing must not be made by way of toll, as the full quantity of lumber cut from the logs must be used on the permit-holder's homestead. In order that mill owners may be able to give satisfactory evidence that saw logs or lumber found in their possession have been lawfully cut, they should require from settlers bringing timber to be sawn, proof that the same has not been cut on Dominion Lands, or that it has been cut under a permit, which the settler should produce in order that its number, date and name of permittee may be noted by the mill owner ; the latter should also record the amount of such timber sawn by him, so that he may be in a position to duly protect himself should account or return thereof be demanded by agents of the Department.

The applicant will require to pay an office fee of 50 cents before he can obtain a permit, but no dues will be charged for the timber or wood cut under and in accordance with it.

Settlers whose farms may have thereon a supply of timber, or who are in possession of wood lots, or other timbered lands, will not be granted a free permit.

PERMITS SUBJECT TO DUES.

Permits under payment of dues may be granted to those applying for them to cut timber on available vacant Dominion Lands, on paying dues at the rates hereinafter specified :—

Cordwood, per cord	$ 25
Fence posts, 8 ft. 6 in. long each	1
Telegraph poles, 22 ft. long each	5
Each lineal foot over 22 ft	1
Railroad ties, 8 ft. long	3
Rails, 12 ft. long, per M	2 00
Stakes, 8 ft. long, per M	2 00
Shingles, per M	60
Square timber and saw logs of oak, elm, ash, or maple, per M B M	3 00
Pine, spruce, tamarac, cedar, and all other woods with the exception of poplar, per M B M	2 50
Poplar, per M B M	2 00

All other products of the forest not enumerated, 10 per cent. ad valorem.

An office fee of 50 cents to be charged for each permit.

Issuers of permits will be instructod by the Minister as to the limit of quantity that will be granted ; also what proportion of dues shall be deposited on issue of permit, as guarantee on the part of those obtaining the same.

Besides the dues above specified, grantees of permits may be called upon to pay such addition thereto as the Minister may judge necessary to meet their proportion of any expense that may be incurred by the Department in survey, or other demarcation, on the ground of the limits within which such permits are to be operative.

Permits shall set forth that those obtaining them must conform to the conditions, terms, and requirements specified in the same, and carefully restrict their cutting to the limits described therein ; and that any breach thereof will subject the offender to all the pains and penalties in that behalf as set forth in the Dominion Lands Act.

WOODEN ARCHITECTURE.

Mr. Chas. Hayward, F. S. A., in an article, Our Old Timber Work," which recently appeared in the *British Architect*, calls attention to the revival of visible timber work construction, after so many years of neglect. "The frequent design and construction of important buildings in timber work," he says, "and the tendency to a further extension of the same, is a remarkable feature of our times. It would seem as if it were a law in our profession, as well as elsewhere, that ideas of art should 'come as the waves come,' and ebb and flow as the tide. It appears more di nified to speak of our changes in taste and practice in this way than to talk of them as mere fashion, though fashion, no doubt, has in its most direct though capricious manner a great influence, not only on the forms of architecture in use at various times, but on the several kinds of materals also, attempts at a 'new style' or a 'new order,' the 'Victorian age,' 'nineteenth century Gothic,' and so on, all showing a healthy, thoughtful vigour existing in the old stock, and a hopefulness ever new for something great to be evolved in the future. When centuries have rolled by, and men begin to reckon up the works of the nineteenth century and twentieth century architects, perhaps they may find that 'something' which we are now unconsciously striving after, and haply helping to accomplish, though we cannot see it.

"Some years ago there was for a little while a fashion to talk of importing timber houses from Norway, designed and constructed all complete, and one or two were actually brought over in sections and set up. At the same time the writer was building, he says, a timber house in Norway, which was actually carried out in a modified form. Curiously it happened that a little later he was called upon to build a mansion of old ship timber in Cornwall, and a Swiss cottage, entirely of wood, elsewhere. The study of some foreign books, as well as of all such home and foreign timber constructions, becames specially interesting, and he would now recommend it to those who may be enabled by the present wave of fashion to evolve something out of the style in favour for the time."

The writer concludes as follows :—"We all know the glorious examples of Cheshire, Shropshire, Worcestershire, &c., besides the smaller excellent examples to be found nearly everywhere in the country about us. But I would point to one of our very earliest constructions in wood—well known, and yet, I dare say, seldom remembered—as the very fountain-head of that little stream which became eventually a great flood of art, and covered the whole land. I refer to the little church of Greenstead, in Essex, built in the early part of the eleventh century, of which the walls are composed merely of portions of trunks of trees—thick outside slabs—split or roughly hewn off, measuring 12 to 18 inches across, and 10 to 12 inches thick, roughly joined with tongues, but smoothed on the inside. These uprights, never more than 5 ft. to 6 ft. high, were originally tenoned into a head and cill ; but in restorations carefully carried out some yeass ago the cill had to be removed and the lower ends of the timbers cut off as far as they had rotted, and a new cill on brickwork substituted. Substantially, however, we see a wooden chapel of the eleventh century, and the timbers, sound and hearty, standing as they were then set up. One of them on the north side—where there was an original doorway—has a notch cut in it for the purpose of holding a holy water vessel. It seems pretty certain that this chapel was erected for the purpose of receiving as a temporary resting-place the body of St. Edmund the king, on its way (for the second time, date 1013) to 'Boedricesworth,' thenceforth to be called Bury St. Edmund's. So here is an open book on the earliest wooden construction in England, which any one may read."—*Timber Trade's Journal.*

A FOREST FESTIVAL.

A large number of the lovers of the forests assembled on Bear Hill, near Boston, October 22, to join in the Festival of the Forests, as the call poetically expressed it. It was really a meeting of a committee appointed by the officials of the town of Medford to consider what steps were advisable to preserve the Middlesex fells region in a natural state. The Honorable Elizur Wright was a member of the committee, and we extract the following from a report read by him :—

The committee is fully convinced by the stumps it has seen that there is not a single one of the multitude of rocky hills within this tract which has not at some time in the past been covered by large and flourishing white pine trees, and, of course, they may be again, and in a comparatively short time, if the proper and not very expensive conditions are supplied. These are, a little soil where the more or less horizontal rock surface has become extensively bare, seedlings planted, and exemption from fires. Fires are fatal to young pines and hemlocks, and that is the reason why the hills are now mostly covered with scrubby oak and other trees that sprout from the roots. These deciduous trees, even if exempted from fires, do not attain any considerable size, except in the valleys, which, in the fells, are comparatively narrow. Then, if fed with the muck, which is a nuisance in the reservoirs, ash, maple, oak, and black walnut would grow luxuriantly.

White pines ask almost nothing from the ground, except anchorage, and that they find for themselves in the cracks of the rocks. They take their food and rapidly build up their beautiful and perennial shades and venerable trunks, from the air, and no tree does more to adorn the winter landscape, to absorb and decompose the gases deleterious to lung and life, appropriating the carbon and restoring the oxygen. They are the most effective as well as the most delightful purifiers of the air, and the density of the summer shades does the most to prevent the evaporation of the water.

That all the land of this tract, not occupied by the reservoirs of water and the residences and gardens of the people charged with the care of it, should be covered with the densest forest possible, is too obvious to need proof. Otherwise the sun will drink more water from these fells than the people.

The progress, if not the perpetuity, of the human race on this good planet depends on the forests of the future. This is the teaching of history, as well as of chemistry and meteorology. Two hundred years ago men had a right to more fields and less wood on this continent, but the war has already been carried too far, and, if a healthy population is to increase, the tree population must increase, with equal pace, from what it now is.

The reasons why the propagation and care of forests should, to some extent, be a governmental function, and not be left wholly to private caprice, are :

1. Individual life is too short to have trees planted during its period, come to maturity. The individual proprietor of land, especially if not very wealthy, is prone to cut his crop of trees before it is ripe, and as clean as he does his rye, thus creating a desert.

2. A forest, in the absence of fire, never dies any more than a good government. Therefore a good government will take care that no forest, in a fit place, shall ever be killed.

3. Getting the best results from a forest requires a science and skill which but few individual proprietors can be expected to have. They all will best acquire such science and skill by seeing good examples on a large scale.

4. Pure air and pure water are common interests. Private caprice, ignorance or greed should not be allowed to injure them.

Preserving the purity of the air, especially, is not only a municipal, but a national and world question.

THE FUTURE MOTOR POWER.

The steam engine, which has been the means of revolutionizing manufacturing and transportation, was spoken of with a good deal of disparagement by several of the members of the British Association for the advancement of Science at the late meeting at Bath. Nearly every person who spoke on the subject gave it a bad name. It was stated that it was expensive to build, costly to run, difficult to keep in repair, dangerous to life and property, cumbersome, productive of dirt and noise, and not adapted to many purposes where a motor is required. In the opinion of some, the steam engine has had its day, and played its part, and was now ready to be put in a museum of curiosities. They think it is behind the times, and that it should give place to something better. These scientific men of Great Britain object to the steam engine because it does not meet the wants of the present age ; and for the additional reason that it is fast consuming the coal that will be wanted for heating purposes. They want a better force, more locomotion, quicker travel, less expense, and greater security. They want something that will propel canoes as well as ships ; that will run sewing machines as well as trip-hammers ; that will draw pleasure carriages as well as railway cars. They desire a motor that will not consume fuel, produce smoke, or cause noise; that can be managed by a child and run, if desired, in a parlor. They want something that will do all the steam engine does and many things beside.

In the opinion of most of the scientists of Great Britain, electricity is to take the place of steam in driving machinery and moving cars, and is to be generated by the action of tides, winds and falling water. They predict that wind-power will be utilized to a greater extent than any person in a previous age ever believed that it would. Wind will generate electricity for moving machinery, for lighting streets and warming dwellings in Ireland, Belgium, Denmark and other countries where there are few streams that afford water-power. The movements of the tide will produce the same effects in most countries that have an an extensive sea-coast, while the fall of water in rivers and streams will generate electricity in all mountain regions. The great electrical exhibition at Paris is doing much to draw attention to what is called the motor-power of the future. A picture called "The Queen of the Nineteeth Century" hangs in many of the shop windows. It is a female figure surrounded with a halo, and emitting rays of light from the hands, which are raised as if to enable the being to fly. The light gives the arms the appearance of wings. The artist is an enthusiast, and is regarded by many as a prophet. We all hope that his fair predictions may be realized. The steam-engine is a good thing, but we are ready for something better. It has done so well that till recently scientific men and inventors have not troubled themselves to make something better. Now that attention is drawn to electricity, great results may be expected.

LUMBERING AND FARMING.

There was a time when lumbermen scouted the idea of mixing their pursuit with farming. When they bought timber land they valued it for the logs and timber it would produce. For years the light, sandy soil on which pine grew in Michigan and Wisconsin, was considered nearly worthless for agricultural purposes. Lumbermen would strip this land of its forest growth, and then turn it over to the dominion of wilderness denizens, the wild beasts, and to the annual sweep of the devouring tempests of fire. But latterly a more economical spirit has aroused the owners of pine lands to make better use of their denuded real estate. Some of them have become awake to the conviction that it were cheaper to grow food supplies on their own soil, in the immediate vicinity of their logging camps, than to first pay for them in distant markets, and afterwards transport them, at a heavy cost, to the far-away camps. In the matter of grain and vegetables a great saving is thus made. Besides, their lands are thus converted from a dead waste of fallen limbs, and discarded timber, intermixed with growing briars, brambles and tangled undergrowth, to fruitful fields, and acquire a fair, saleable value as farm property. That heavy lumber concern, the Ludington, Wells & Van Schaick Company has adopted this thrifty scheme, and this year, on its own two farms, has raised 3,000 bushels of potatoes. Its other products this season consist of 400 bushels of onions, 500 bushels of beets, 300 bushels of carrots, and 5,000 heads of cabbage, besides peas, beans and other farm products. These will enter into the food supply of the logging camps this winter, wherein 600 men will be employed. In this connection it may be interesting to mention the other supplies that supplement those produced on the company's farms, and which mostly have to be purchased outside the lumber district. Among these are 800 barrels of flour, 300 barrels of beef thirty barrels of syrup, 35 barrels of peas, forty barrels of dried apples, and 300 bushels of beans. Its stock will consume 500 tons of hay, 20,000 bushels of oats, corn, bran, etc. Fifteen barrels of kerosene oil will be required to light its camps.—*Northwestern Lumberman.*

We understand that Mr. Thos. Deacon, Q. C., of Pembroke, has bought the old mill on the Tay, and that the machinery is being removed and the dam taken down. This will be the means of draining a large tract of land formerly drowned by the mill dam.—*Perth Expositor.*

Chips.

MESSRS. FLEWWELLING shipped from St. John, N. B., a large lot of matches to the West Indies per the *Rothesay*, which sailed on Saturday, November 12th.

MERRITT CHANDLER has sold to Thompson Smith, in the Cheboygan, Mich., district, the standing timber on 8,000 acres of land, the consideration being $33,000.

THE tow-boat *George Washington*, said to be the oldest on the Hudson River, has just been examined and licensed for another year. It was built in 1830 of live oak and cedar.

THE receipts at Albany, up to October 25, were 52,000,000 feet in excess of 1880, and it is expected that at least 70,000,000 feet more will arrive. The demand is reported firm.

EVERY dam owned by the Black River Flooding Association, Wis., was wrecked by the recent floods, and an assessment of $10,000 was lately levied on the stockholders to make the necessary repairs.

THERE will be a great deal of lumbering on the Restigouche and Metapedia rivers and their tributaries this winter. A great many more people are putting in teams than last year. Scows loaded with provisions and camp equipages are towed up stream daily.

THE *Mail* states that a vessel laden with lumber left Toronto on Nov. 10th, bound for Porto Rico, where she will get a return cargo of sugar. Hitherto lumber for the West Indies has been, with the exception of a few cargoes, from Montreal, shipped from New York.

THERE is a jam of 12 miles of logs at Sand Creek, and an 8 mile jam at Newaygo, with one mile more at the Flats. There are fully 100,000,000 feet of logs in the booms here. In order to cut all these floating giants of the forest this season it will be necessary for all the mills to run night and day.

MESSRS. R. P. & W. F. STARR are loading the brig *Sarah Wallace*, now at the railway wharf, at St. John, N.B., with a large assorted cargo for Bermuda. The cargo includes onion ends and slats, tomato ends and slats, a lot of boards and about 40 cords of soft wood for firewood—all from Messrs. Flewwelling, of Hampton.

THE Montreal *Gazette* says hemlock bark is quoted in this market at from $7 to $7.50 per cord, latest sales being reported by the car load at within that range of prices. Canadian bark has advanced one dollar per cord in the Boston market to $12.50. Freights have also advanced $9 per car from our bark districts to Salem, Mass., being now $52@53 per car. The farmers in Salem are manifesting considerable dissatisfaction over the advance.

AN improved machine for grinding wood for paper pulp has been patented by Mr. Nicolaus Kraiser, of Grellingen, Switzerland. The invention consists in a grinding stone mounted on a suitable shaft and surrounded by a casing, with a series of boxes on the sides for containing the blocks of wood, which are pressed against the sides of the stone by a rack and pinion actuated by a weight, or by springs or hydraulic pressure, whereby the block of wood is converted into a wood pulp.

THE North Hastings *Review* says that the rush to the shanties commenced on Monday. During the day a large number of waggon loads of men and outfits left this village, and the same evening five large loads of Rathbun's men aarived here on their way back. It is said that more men are going to the woods this season than for some years past. One reason is probably on account of the destructive fires which prevailed last fall, rendering it necessary to secure the timber on the burnt limits without delay.

THE Duluth *Lake Superior News* says J. S. Taylor & Sons are commencing preparations for logging on a large scale this winter. They have had a force all summer at their Stewart River camps, and will add to this crew enough men to get out some 3,000,000 feet, they hope, this winter. They have been at heavy expense in opening roads, building camps, etc., but now that such work is done, they can log to better advantage than last winter. Their logs now on Stewart River, some 500,000 to 700,000 feet, they will leave until next spring on account of the lateness of the season.

NORTHERN MINNESOTA'S PINE TIMBER.

Lumbermen are beginning to turn their attention to the splendid pine timber resources of Northern Minnesota, and it is safe to predict that it will not be many years before the northern portion of the North Star State—now almost a trackless forest—will be dotted with saw mills which will pour their products into the Red River Valley and Manitoba over the two lines of railway that are now certain to be constructed through the region referred to—one by the Northern Pacific Railway Company, from Brainerd, on the Mississippi River, to Emerson, and one from Duluth, also to terminate at this point. The splendid pine timber lands in the vicinity of Red Lake, being an Indian Reservation, still remain intact, but attention is being turned to the Government lands along Rainy River, the boundary line between Minnesota and Keewatin. A number of Duluth lumbermen have formed two companies, known respectively as "The Rainy River Log Running and Improvement Company," and the "Rainy River Boom Company." The incorporators are, in each case, John Maguire, S. R. Wentworth, D. E. Little, P. M. Graff, E. D. Graff, and J. R. Cook. The object of the first is to "improve for navigation and running of logs and timber the Little Fork, Big Fork and Rainy Rivers." The object of the second is to "construct, maintain, operate and keep in reasonable repair good and sufficient boom or booms at or near the mouth of Rainy River, for the purpose of collecting, receiving and securing any and all logs or timber that may be floated or driven down the Rainy River." The capital stock of the "Rainy River Log Running and Improvement Co." is fixed at $30,000, and of the "Rainy River Boom Co." at $25,000. There is the same board of directors in both companies, viz., John Maguire, D. E. Little and John R. Cook.—*Emerson International.*

The Fuel of the Future.

The *National Gazette* makes the following announcement in regard to the use of petroleum as fuel :—We shall soon be able to announce a wonderful stride in the mechanical appliances for using liquid fuel for generating steam in both marine and land boilers. The matter is in the hands of practical men, who will soon demonstrate they can make from twenty-eight to thirty gallons of crude petroleum, costing from eighty-five to ninety cents, do the work of a ton of coal, oosting from $4 to $4.25, without dirt or smoke, and when, as in the case of a large steamer carrying from forty to forty-five men in the fire room, one man in each will be abundantly able to keep up a uniform pressure of steam at all times. Liquid fuel is the intervening step between coal and electricity, which will, in due season, furnish motion for the world.

West Indian Trade.

The schooner *Guelph* is loading lumber at the N.R.R. wharf in Toronto, for the West Indies, where she will obtain return freights of sugar and molasses for Halifax or St. Lawrence ports during the winter. The shippers of the lumber, Messrs. Musson & Morrow, of Toronto, hope that by next summer she may return to Canadian lake ports with West Indian products. This experimental cargo of say 220,000 feet to Porto Rico is a venture the result of which will be looked for with interest. It exhibits enterprise, at least, and much may depend upon the successful or unsuccessful issue of this effort to introduce the islands of the Gulf of Mexico to the islands of the Western lakes direct, through the medium of their products.—*Monetary Times.*

Wooden Dishes.

The Wooden Dish factory is a new and extensive industry just started at Indianapolis, Ind. Not many years ago persons would have laughed at the idea of wooden dishes, but they have become a necessity. They are cut from the sycamore or the gum tree by most ingenious machinery, which will cut and trim 200,000 dishes a day ; other machines shape and fasten the cups together. Fifteen of these are employed, each of which can turn out 10,000 daily. The wood is, of course steamed, so as to be readily worked and moulded.—*N. Y. Observer.*

Market Reports.

MONTREAL.

From Our Own Correspondent.

Nov. 24th.—The shipping season is now over, and navigation from this port is closed, only a few market boats are still running, which are to go into winter quarters on Saturday. The total shipments of lumber from Montreal to the River Plate during the past season and for previous years were as follows :—

	Pine.	*Spruce.*	*Total ft.*	*Pick's.*
1881.....	11,806,152	1,023,644	12,829,796	35,145
1880.....	....	....	10,420,080	....
1879.....	....	....	12.476,150	....
1878.....	....	....	10,855,246	....
1877.....	....	....	8,787,928	....
1876.....	....	....	3,437,000	....
1875.....	....	....	10,123,000	....
1874.....	....	....	16,262,293	....
1873...	....	....	36,073,919	....
1872...	....	....	28,234,968	....
1871.....	...	....	16,005,935	....

It will be noticed from the above table that the shipments have been larger this year than any previous year since 1874. The total shipments of deals from Montreal to English ports during the season of 1881 were 18,236,849 feet, against 18,701,835 feet for the season of 1880, showing a decrease of 464,986 feet. There is a good deal of lumber lying on the wharfs yet, which has lately arrived, and dealers are busy getting it transported into yards. The demand lately has been light, and there is really so little done in this market that prices do not fluctuate much, if any, we therefore repeat our former quotations. For building lumber, ex yard, we continue to quote :—

Pine, 1st quality, ₱ M.....	$32 00@40 00
Pine, 2nd " ₱ M.....	18 00@24 00
Pine, shipping culls, ₱ M.....	12 00@15 00
Pine, cull deals, ₱ M.....	8 00@10 00
Pine, mill culls, ₱ M.....	5 00@ 6 50
Spruce, ₱ M.....	8 00@10 00
Hemlock, ₱ M.....	8 00@10 00
Ash, run of long culls out, ₱ M.....	16 00@18 00
Bass, " " ₱ M.....	14 00@16 00
Oak, ₱ M.....	35 00@45 00
Birch, ₱ M.....	17 00@20 00
Hard Maple, ₱ M.....	18 00@25 00
Lath, ₱ M.....	1 25@ 1 35
Shingles, 1st, ₱ M.....	3 00@ 0 00
Shingles, 2nd, ₱ M.....	2 00@ 0 00

CORDWOOD.—The cold weather for the past few days has stimulated the demand, but it is not very brisk, as yet; high prices seem to make people use coal instead. There are considerable quantities still on the wharves, for which holders would would probably shade prices rather than cart it into yards. The only change in prices is in tamarack, which is now quoted lower. Our figures are now on wharf, ex cartage :—

Long Maple.....	$6 50
Short "	6 00
Long Birch.....	6 00
Short "	5 50
Long Beech.....	5 50
Short "	5 00
Long Tamarack.....	4 50
Short "	4 40

LONDON, ONT.

From Our Own Correspondent.

Nov. 10th.—Less than twenty years ago it would have been considered a foolish undertaking to commence the erection of a huge block of buildings at this season of the year. I understand, however, that ere we are many days older the process of tearing down the Holman Opera House will begin, and on its site are to be built a handsome block of wholesale stores, and the building is to go on at once. Since we have had the Grand Opera House to go to, the Holman place has gone the way of all old and time worn institutions. The purchase of the property has been made by Messrs. Birrell, of the wholesale house of John Birrell & Co., and two other gentlemen, and it is the intention of the Birrel firm to occupy the largest portion of the new premises as their store, and no better site could be chosen, in fact this Holman property may be said to be about as valuable a one as there is in London, being situated, as it is, right in the heart of the city, on the principal street, and close to the G. W. R. depot. Well, all this description is only a prelude to informing you that the woodwork and lumber contract will be probably in the neighbourhood of $10,000, and it is expected that it will be given out to private contract, that is, no tenders will be publicly solicited.

In the past two weeks the lumber market has been brisk for the time of year. Though the sales have been small, they have been numerous, and it is simply a demand for the requirements to make things snug and secure for winter.

I am informed that a lumberman in this city is desirous of selling out an established business. It might be worth the notice of some of your readers.

Prices are about the same as in my last letter.

Later.

Nov. 24.—Since my last letter of two weeks ago nothing of particular note has transpired in this market. Lumber merchants seem all to be well occupied, and are sending out from their yards considerable stock for the purposes stated in my former letter, viz., making things snug and secure against the winter blasts.

Building, as may naturally be expected, is not now rushing, but mill men say they are busy notwithstanding. The large block of wholesale houses to be built on the Holman Opera House site, it has been said, will not be proceeded with this winter, but I have been informed in an authentic quarter that it will, and that the present building (Opera House) will be razed in a week or two. The contract for the lumber is not yet given out, but will be now in a few days.

Messrs. Green's mill is again rebuilt, and part of the machinery is at work.

I was informed the other day that the market here had advanced from one dollar to one dollar and a half, the result of a like advance in Sarnia, where the merchants have certainly put up their prices that much, but on making a very searching enquiry, I find prices here remain about the same, with an upward tendency, however, and the probability is that my next price list will have to undergo very material revising. Some parties in town are selling shingles at $2.90, but the bulk of the merchants, and in fact the merchants proper, are keeping their figures up at last quotations. Though Sarnia lumbermen have advanced, the Goderich men remain firm at former rates, and this is probably one reason why we have not advanced here. We do not take a great deal of lumber from Sarnia.

My report of the market at this date is,—very firm and steady, with indications of an advance.

Below are the prices at present :—

QUOTATIONS.

Mill cull boards and scantling.....	$10 00
Shipping cull boards, promiscuous widths.....	11 00
" " 10 and 12 in. stocks.....	11 50
Common boards, promiscuous widths.....	13 00
Scantling and joist, up to 16 ft.....	14 00
" " " 18 ft.....	14 50
" " " 20 ft.....	15 50
" " " 22 ft.....	16 50
" " " 24 ft.....	18 00
Common stocks	14 00
Common 2 in. plank.....	13 00
Cutting up plank and boards.....	18 00
Sound dressing stocks.....	17 00
Clear and picks	31 00
Three uppers, Am. inspection.....	35 00
½ inch dressed and matched flooring	20 00
¾ " " " "	20 00
1 " " " "	20 00
XXX sawn shingles, ₱ M.....	3 00
Lath per 1000 feet.....	4 00

TORONTO.

From Our Own Correspondent,

Nov. 22nd.—Lumber shipments from this port to the American market may be said to have virtually closed for this season. Some few cargoes may yet go forward, but the determination of all insurance companies not to insure deck loads makes it unprofitable for vessel owners, as few shippers care to run the risk themselves, and to stow good lumber in the hold is not desirable; so that both shippers and vessel owners must work at a disadvantage in any more shipments they may see fit to make this season.

The decrease in shipments for the American market has resulted in a marked increase of lumber for the local market, and it may not be amiss to give you a record of my observations as to the stocks carried by the various yards which I have visited :—

Bryce Bros., corner of Front and Frederick streets, hold perhaps the largest stock of heavy bill lumber to be found in any of the yards here, and their stock is only light compared with that held by that firm at other times in the past; the next yard, a little further west on the esplanade, is that of Reid & Co., their stock is a compact one, but deficient in various kinds of dimension stuff. Still a little further west we come to the yard owned by J. B. Smith, this gentleman being largely interested in the manufacture of all building material, does not at any time carry a large stock of dimension stuff, but is well up in all kinds of dressed lumber, and furnishes large bills for points as far east as Montreal, and is one of our oldest and most reliable dealers here. A little further east and on the corner of Queen and Sherbourne streets, we have the yard owned by De LaPlant & Co., who carry a compact little stock, and are also wood and coal dealers. One mile to the N. W. of the last mentioned we come to the yard owned by C. H. Edwards, whose stock is extremely light, and largely difficient in the various sizes of joisting. A compact trade is done by Mr. Edwards, he being also a dealer in coal and wood. A little farther north stands the yard of P. A. Scott, this yard has been circumscribed by the action of our City Council in forcing a street through it, and for which, it is claimed by the proprietor, he has not been adequately remunerated. However, considering the size of the yard, he carries a snug stock, but like all the other yards mentioned, short in dimension stuff. South-west of this yard we arrive at the premises kept by Messrs. Hillock & Kent, and, considering the size, they undoubtedly carry the best assorted and most compact stock to be found in the city, and although their stock may not be quite as varied as the dealer on whose sign read "Tar, Treacle, Gohly Books, Gimlets, etc., etc., sold here," still anything in the wood line from lignum vitæ, or boxwood, to clear pine lumber, can constantly be obtained here. To the south of this yard, and situated on the esplanade, we find the extensive shops and yards kept by John Oliver, and to give you anything like a full description of the stock held by this firm would take up more space than can at present be spared, suffice it to say that their stock is both a varied and costly one. They do not profess to carry a large stock of pine, but in hard woods and fancy woods, including veneers, they doubtless bear off the palm from all other yards of the kind in the Dominion, and the entire yard being covered over enables them to keep their stock in the best order possible. One mile to the northwest of this yard we come to the yard of Messrs. S. & S. J. Willcock, formerly Richardson & Willcock, the senior member having lately retired, the business is now conducted by the former partners. The stock carried by this firm in their yard is at all times light, and is at present quite small, but this firm manage to fill a large portion of their orders direct from the cars, and so save considerable cost for piling and teaming, and the business done by this firm in this way is quite large. Nearly a mile to the north-west of this yard and near the corner of College and Bathurst streets, stands the yard owned by Messrs. Davidson & Malcolm. The members of this firm are both young men and only started in business one year ago, and have already earned for themselves a good reputation for prudence and push. The stock carried by this firm is light in bill stuff, but well up in boards, shingles, and lath, and the business done by this firm is rapidly increasing. To the south-west of this yard, and near the corner of Queen and Bathurst streets, stands the yard owned by Wm. Latch. The stock on hand here is also light in bill lumber, and only a scant stock of good boards. The business done by this firm is more of a car load business than retail. Near the village of Parkdale stand two yards, divided only by a board fence, the first of which is owned by Messrs. McKinley & Son. This firm are exceedingly close and careful buyers, and carry at all times a snug stock, and having the city to the east of them, and the village of Parkdale to the west, and the railroads passing close to their yard, they have a good opportunity of filling up their yard with short hauling, and a brisk building trade immediately around them. The yard to the west of the last named is owned by Joseph Davidson, and is the largest yard in point of superficial area in the city, and is the only yard in which the writer found a good stock of bill lumber. The facilities enjoyed by Mr. Davidson for furnishing this class of lumber will account for the stock in his yard. In the better class of lumber he falls short of many others before named.

OTTAWA.

From Our Own Correspondent.

Nov. 23rd.—All indications in this vicinity show conclusive signs that lumbering operations for the season of 1881 have come to a close. The last fleet of barges for American ports left this week. All the mills, with the exception of one or two, have put on their winter's dress, and the small army of mill hands have left for the scene of their winter's work in the shanties of the different firms' limits on the Upper Ottawa. The closing this year is somewhat earlier than former seasons, owing to the supply of logs becoming short. Retrospectively speaking, the result of

THE SEASON'S OPERATIONS

cannot be said to have come up to general expectations formed at the commencement of the year. Various causes are adduced for this, the principal one being the impossibility of having the logs cut last winter driven to their destination, owing to the early and continued falling of the water on the tributaries of the Ottawa. It is estimated that between Chats Rapids (where there are about 200,000 logs) and Frost's Channel, there are between 350,000 and 400,000 saw logs. These will have to remain where they are until next spring. There are numerous other instances of

LOGS BEING STUCK,

and the quantity that will thus be held over will be very large. Notwithstanding this the lumber concerns have made preparations to take out an average number the coming winter, and it is anticipated, all things being favorable, that the cut next season will surpass that of any other season for years past, as a greater amount of logs will be brought down. Contracts entered into at the beginning of the season have been pretty well fulfilled.

FEW SALES

are reported lately. Yards hereabouts are fairly stocked now, but by the end of a few months they will present a rather barren appearance, as, besides the local trade, on an average seventy and eighty carloads of lumber leave the Chaudiere weekly for Boston during the winter months. Quotations rule firm, but there is a prospect of an advance, the supply being small and the demand on the American market on the increase. The average quarterly export of lumber and shingles from this port to the States is valued at about $550,000.

BUSH FIRES

in the Ottawa Valley during the past season have caused a great amount of damage, the loss on limits being estimated at $5,000,000. In the Gatineau district thousands of acres of mountain covered with pine and hemlock are burned every season by fires either started by settlers or parties prospecting for phosphates. In this connection it is gratifying to know that stringent measures are to be adopted by the Government of the Province of Quebec to prevent this great destruction of the forests. A Bill to this effect is being prepared and will be submitted at the next session of the Local House that will assure the needed protection in that Province, at least.

SAW LOG JOBBERS

are beginning their operations. Rates paid are $1.10 per standard for pine, and 50 cents for spruce logs. Owing to the prevailing scarcity

of shantymen, wages are on the increase. $15 to $18 is paid to common shanty hands, $20 to $22 to log-makers, and $35 to cullers,—fully twenty per cent. more than the wages paid last year.

ON THE LIEVERES,

a tributary of the Ottawa emptying at Buckingham, below this city, lumbering operations this winter will be carried out on a more extensive scale than ever before. The opening of the large phosphate mines in that district gives rise to a new market.

MISCELLANEOUS.

Ross Bros., Buckingham, will have no shanties next winter on Priest Creek, their limits in that locality having been destroyed by forest fires.

Mr. Martin, of this city, has erected a mill in the west part of Templeton.

In expectation of a large traffic in river navigation next summer, boat builders about here expect to put in a busy winter. Over sixty hands are now employed building lumber barges in the yards at Hull, opposite this city.

ST. JOHN, N. B.

From Our Own Correspondent.

Nov. 21st.—Although our harbour is open all winter, and shipments may be made any day in the year so far as the frost is concerned, still shipping operations from the present date till spring must necessarily be on a very limited scale, consequently we cannot expect much of general interest to report concerning our wood trade during that period.

DEALS.

As a consequence of the unusual scarcity of deals, prices have advanced somewhat since last report. Country sawn are worth $10, and sales of city manufacture have been made at $11 per M. superficial feet.

FREIGHTS.

Since our last the bottom appears to have dropped out of the freight market. Shippers are well supplied with tonnage, and the stock of deals for which tonnage has not been engaged is so very light that holders are disposed to wait their time, and take full advantage of their position. The last transaction reported was that of the *Arklow*, 728 tons, for east coast of Ireland or Bristol Channel, at 56s. 3d.

SHIPMENTS.

The shipments of deals and other sawn lumber are as follows :—

For Europe	6,852,000	Sup. feet.
" United States	1,661,000	"
" Africa	540,000	"
" West Indies	397,000	"

SHIPPING.

The following is a list of the vessels in port, with their tonnage and destinations :—

Paramatta, 925, Bristol Channel.
Latona, 945, Liverpool, London or Bristol Channel.
Bertie Bigelow, 1,142, Liverpool.
Andrew Johnson, 2,005, Liverpool.
Thos. N. Hart, 1,200, London.
Sea Bird, 333, Liverpool.
Avonmore, 1,398, London.
John Campbell, 729, London.
Maori, 700, Londonderry.
Annie Stafford, 1,200, London.
European (s), 1,774, Liverpool or London.
Arklow, 728, E. C. Ireland or Bristol Channel.
Abram Young, 756, waiting.
Atlantic, 412, discharging.

ALBANY.

Nov. 22.—We have had several very busy days in the district since our last report, receiving, storing and shipping lumber. Buyers from New York, the east, and New Jersey, have been pretty plenty, not purchasing by large lots, but taking hold freely to piece out, and in some instances taking lots of 100,000 to 300,000 feet, Prices are steadily maintained. Our official report of receipts by canal are to the 8th inst, only ; since then receipts have been large, blocking up the canal at several points. The demand for vessels is active ; all offerings are taken on arrival.

Coarse lumber is coming forward rapidly and is disposed of about as fast as it arrives, and at full prices ; from now to the close of navigation a large business will be done.

The receipts by canal at Albany from the opening of navigation to the 8th inst. were :—

	Bds. & Sctl.,ft.	Shingles,m.	Timber,ft.	Staves,lbs.
1881	409,764,000	9,380	1,000	6,555,000
1880	240,627,500	6,379	10,685	638,209

Freights.—From Tonawanda to Albany, $2.50. From Oswego to Albany, $2. From Port Hope to Oswego, $1.40. From Ottawa to Albany, by boats, $1.50 ℔ M. feet.

Quotations at the yards are as follows :—

CHICAGO.

Nov. 16.—During the past week the receipts of lumber have exceeded those of the corresponding week of last year by 6,000,000 feet, while the receipts of shingles have been less by about 2,000,000. The total receipts of lumber, as reported, were 50,043,000 feet, the bulk of which went at once to the yards, and on but one occasion has there been anything like a large fleet at the sales market. What was offered found a firm and advancing market, and contrary to the experience of the past two months, offerings were quickly taken at an advance of fully half a dollar over our former quotations. This advance was sharp, coming almost wholly in one day.

CARGO QUOTATIONS.

LIVERPOOL.

Nov. 1.—Farnworth & Jardine say "the arrivals from British North America during the past month have been 46 vessels, 31,356 tons, against 12 vessels, 6,122 tons, during the corresponding month last year. There has been a fair amount of business transacted during the month. The arrivals have been numerous, and the deliveries have been good. Stocks, with the exception of pitch pine, are very moderate, and as the import for the remainder of the year promises to be on a reduced scale, we may fairly anticipate that at the close of the season they will not exceed the requirements of the winter months." Of New Brunswick and Nova Scotia spruce and pine deals, and other woods, they say :—" The deliveries during the month have slightly exceeded the imports, leaving us with the very moderate stock of 16,921 standards, or little more than two-thirds of that held last year at the like time ; still the market is not at all buoyant, and prices are barely maintained ; however, as there is every prospect of the arrivals during the remainder of the season being on a moderate scale, we may soon expect to see some advance in prices. Pine deals are rarely asked for, and prices are low. The consumption of birch has been fair, and the stock is light, particularly of good quality ; prices have been fully maintained." The following quotations are given :—

Birch.—By auction, St. John, 19 inches and up, at from 21d. to 23d. per foot ; 17 to 18 inches, at 18d. per foot ; Lower Port, 15 to 20 inches, at 16½d. per foot, P. E. I., 15 inches at 13½d. per foot.

Quebec Pine Deals.—1st and 2nd quality no wholesale transactions to report ; 3rd quality at £9 per standard.

Spruce Deals.—By auction, St. John, at from £7 to £7 2s. per standard, and by private at £7 5s. per standard. Lower Ports at from £6 15s. to £7 per standard. Miramichi Pine Deals, 3rd quality, at from £6 to £6 15s. per standard ; 4th quality at £6 per standard.

Scantling and boards, 6 inches and under, at from £6 10s. to £6 15s. per standard, Boards at £6 per standard.

Palings, 5 feet 3 x 1 inch, at from 72s. 6d. to 75s. per mille ; 4½ feet x 1 inch, at 62s. 6d. per mille.

The imports of deals from New Brunswick from Jan. 28th to Oct. 31st. were 3,802,205 pieces this year as against 4,705,593 in 1880 and 3,457,145 in 1879.

Nov. 3.—Duncan, Ewing & Co. say "the consumption during the past month has shown a good increase over the previous one, and with moderate stocks on hand prices should improve. The better tone which has for some time past been making itself felt in the general trade of the country seems to have reached the wood trade at last, and prospects may be said to have a hopeful appearance." They quote ;—

Spruce deals continue firm at late rates, sellers not being inclined to give way. Sales of St. John, N.B., by private treaty, for cargoes of good specification, £7 5s. ex quay. By auction, a cargo of St. John, N.B., more than half 7 inch and under, realized £7 1s. per standard. Pipe and puncheon staves continue in request at advanced prices.

LONDON.

The following is an extract from Messrs. Churchill & Sim's circular, dated November 3rd :—Prices, which were steady during the first half of October, were depressed towards the end of the month by rumours, for which it is difficult to find any real foundation, that very heavy shipments were being made for London, and that the market would again be overstocked by the end of the year. So far as it is possible to ascertain there is no likelihood of this being the case. Deck accommodation is bespoken for 111 cargoes, against 92 at the same time last year, and although this may hardly represent the full difference in tonnage—a greater proportion being in steamers of large carrying capacity—the excess is trifling when compared with a stock many millions of pieces short, and increased dock deliveries of 600 to 800 P.S.H. a week. The arrivals of wood-laden tonnage in the first ten months of the year have been 100,000 tons less than last year, and the dock deliveries 26,000 P.S.H. of deal, battens, and boards more.

Seventy-five million feet of hemlock lumber have been cut at Williamsport, Pa., this year, as against 15,000,000 feet last year. Pennsylvania lumbermen are just beginning to see the value of this kind of timber.

Wrought Iron Shanty Cook Stoves

The Best Article ever offered to the Trade.

I have much pleasure in drawing attention to my **WROUGHT IRON COOKING STOVE, for Shanty, Hotel and Boarding House use.** These Stoves are made of **Heavy Sheet Iron**, the top and lining of the fire-box being of **Heavy Cast Metal** and all the connecting parts of substantial **Wrought Iron Work.** The dimensions of these Stoves are as follows:—

SINGLE OVEN STOVE

Top surface contains six 10-inch holes, with ample room between, and one oven 16 x 24 x 26.

DOUBLE OVEN STOVE

The Double Oven has a top surface containing twelve 10-inch pot holes, with two ovens, each 16 x 24 x 26. One fire-box of suitable size for area to be heated. Below will be found Testimonials from some of the leading Lumbermen, who have used my Wrought Iron Cook Stoves since I commenced manufacturing them. They are the names of gentlemen who are well known and reliable, and will carry more weight than any recommendation of my own could do.

The Best Stove I have ever Used.

PETERBOROUGH, May 31, 1880.

ADAM HALL, Esq., Peterborough. Dear Sir,—I have used your Wrought Iron Cooking Stove in our lumbering operations since its introduction here, and have no hesitation in saying that I prefer it to any other. For durability, economy and efficiency, where a large number of men are employed, it is the best stove I have ever used. You can, with confidence, offer it to hotels, boarding houses and lumbermen.

Yours truly, THOS. GEO. HAZLITT.

The Stove for Lumbermen.

PETERBOROUGH, June 1st, 1880.

ADAM HALL, Esq., Peterborough. My Dear Sir,—We have used your Wrought Iron Cooking Stove and find it is very satisfactory for lumber operations, especially so on drives. We can recommend it highly.

Yours truly, IRWIN & BOYD,

Gives the Greatest Satisfaction.

PETERBOROUGH, June 3rd, 1880.

A. HALL, Peterborough. Dear Sir,—I have had the Wrought Iron Cook Stove, purchased from you, in constant use ever since last fall, and it gives the greatest satisfaction in every respect. I can recommend them highly to any one who is in the lumber business. Very truly yours, GEO. HILLIARD, M.P.

The Crowning Triumph of the Bell Organ

The Bell Organs have just received the HIGHEST AWARD and SPECIAL PRIZE (Gold Medal) at the International Exhibition, Sydney, Australia, this year for their Organs over all the English and American makers. This, along with the unlimited awards, prove that

THE BELL ORGANS LEAD THE WORLD.

WE RECEIVED

Only Medal for Parlor Organ, Provincial Exhibition, 1878
Only Medal for Parlor Organ, Industrial Exhibition, 1879
And Gold Medal.....at Sydney, Australia, 1880

WE RECEIVED

Medal and Diploma..... .....Provincial Exhibition 1871
Medal and Diploma.....Centennial Exhibition, 1876
International Medal and Diploma, Sydney, Australia, 1877

The Bell Organ Manufactory is the Largest and Oldest in the British Empire, and the fact that we have sold nearly 15,000 proves that they are the best in the market. We GUARANTEE ALL OUR ORGANS for five years Correspondence invited. Illustrated Catologue mailed free.

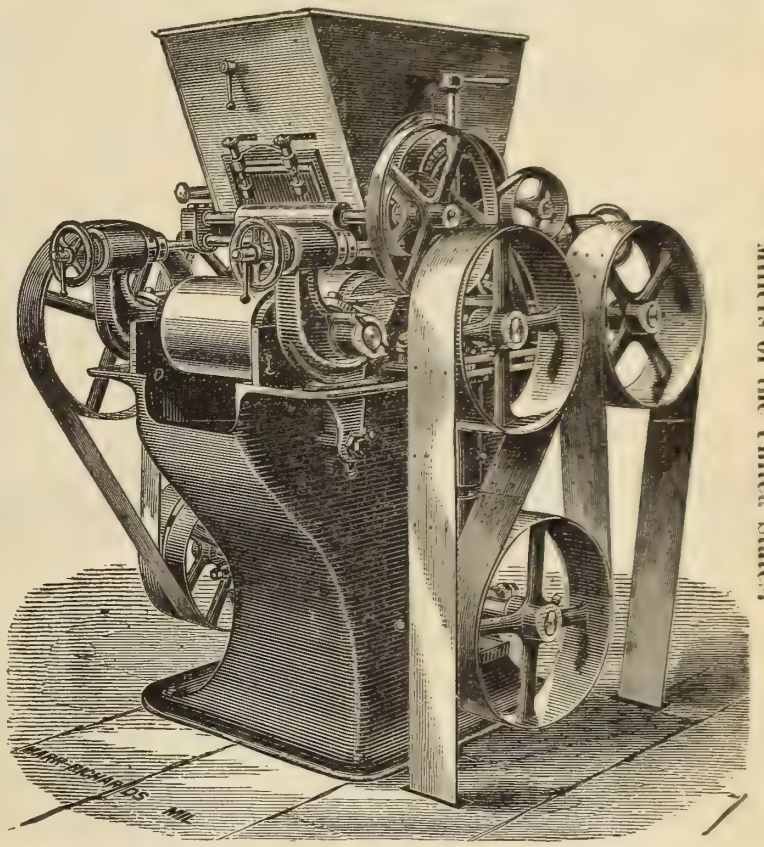
Flour Making by the New Process

GRAY'S PATENT

NOISELESS ROLLER MILL

A Model of Perfection!
Every Mill a Success!

CORRUGATIONS of all Descriptions.
Smooth Iron or Porcelain ROLLS.



These Roller Mills are used by all the Representative Millers of the United States.

The Machine is Perfect in all its adjustments, and RUNS WITHOUT NOISE.

It is doing Better Work than any other Machine in use.

Automatic Lubrication of Principal Bearings.

Driven entirely by BELTS.

Differential Speed always insured.

WEYMAN'S NEW IMPROVED PATENT

Porcelain Rolls

The BEST ROLL FOR MIDDLINGS in the world. Over 6000 in use in this country and Europe. Send for particulars.

MILLER BROS. & MITCHELL,

Nos. 110, 112, 114 and 116 KING STREET

MONTREAL.

SOLE LICENSEES FOR DOMINION.

Manufacturers of Improved Hoisting Machinery, MINING and CONTRACTORS' PLANT. Importers of BEST STEEL WIRE ROPE. Mention this Paper. 124-1y

EMERY WHEELS FOR SAW GUMMING!

Solid Emery Wheels are now almost in universal use for the purpose of gulletting and gumming saws. Statistics show from 25,000 to 30,000 saw-mills in the United States. Many of these run only a single saw each. A one-saw mill would use one or two wheels a year, costing $3 to $4 each, and when such small mills order single Emery Wheels from the factory, the express charges often equal the cost of the wheel. There was a time when the quality of Emery Wheels was so uncertain, and the demand so fickle, that storekeepers could not afford to carry them in stock. Now, however, Saw Gumming Wheels have become as staple an article as Files, and every dealer in saws, Hardware and Mill Supplies can afford to carry a few dozen standard sizes in stock. Large dealers order stocks of $500 to $750 worth at a time. Saw Gumming Wheels are used with the edge (or face) square, round or beveled. Probably seven-eigths of all in use are beveled.

The principal sizes are:

8x1/4, 8x3/8, 8x1/2 } 3/4 in. hole. 10x1/4, 10x3/8, 10x1/2, 10x5/8 } 3/4 in. hole. 12x1/4, 12x3/8, 12x1/2, 12x5/8, 12x3/4, 12x7/8 } Holes, 3/4, 7/8 and 1 inch.

Probably more wheels 12x3/8, 12x1/2 and 12x3/4 are used than all the other sizes together. Saw Gumming Wheels are used, however, of all sizes up to 24x1½. The most frequent complaint is that Emery Wheels harden the saw so that a file won't touch it. The answer is that you don't want a file to touch it. An expert workman will shape and sharpen the teeth with an Emery Wheel, leaving the teeth *case hardened*, in which condition the saw will cut about 33⅓ per cent. more lumber than a soft saw will. Those who want to use the file, however, have only to touch the saw *lightly* a second time (after going all over it once), and this second touch will cut through the case-hardened scale.

A QUESTION OF QUALITY.

Thirteen years of experience as makers of, dealers in, and actual users of Emery Wheels, have led us to a decided opinion as to what quality is the best. We prefer for almost every use an "Extra Soft" wheel like the "Pocono." We believe that money lost through the rapid wear of the wheel is more than made up by the money saved on wages. As we cannot get every one to adopt our views, we make several qualities, so as to meet their views. We say to those who think they can only be satisfied with some other make of wheels (not Tanite), that we can furnish qualities *to match* any and every other make. If you have got used to some special quality of wheel, let us know what it is, and we can send you *a Tanite Wheel of similar quality*. Our *regular* classification of Saw Gumming Wheels is as follows:

CLASS 2. MEDIUM—HARD.—This Wheel is THE STANDARD Saw Gumming Wheel all over the world. Probably seven-eighths of all the Saw Gumming Wheels used are "Class 2. It cuts fast and keeps its shape well. Some think it too hard, some too soft. We prefer the "Pocono."

CLASS 3. MEDIUM—SOFT.—The same as to coarseness and fineness as "Class 2," but a *softer*, and therefor freer cutting wheel.

CLASS "POCONO." EXTRA SOFT.—This Wheel we prefer to all others. It is both *finer* in grain and softer than either of the above. As a Saw Gumming Wheel, Class "Pocono" is specially suited to those practical and experienced Sawyers who know how to grind with a light touch, and who want a free cutting wheel that will not create much heat.

Illustrated Circulars and Catalogue, showing Cuts of Saw Gumming Machines, and Shapes, Sizes and Prices of Wheels, sent free on application.

The Tanite Co. Stroudsburg, Monroe Co. Pennsylvania

CANADIAN TRADE SPECIALLY SOLICITED.

M. Covel's Latest Improved Automatic Saw Sharpener!

Is the Most Perfect Machine that has ever been Introduced into Mills for that purpose.

CIRCULAR SAW STEAM FEED!

I would also call special attention to my

Heavy Circular Saw Mills

and for STEAM MILLS, would recommend the Steam Feed, having put in several which are giving the best of satisfaction, as will be seen by the following testimonials:—

GRAVENHURST, August 20th, 1880.

WM. HAMILTON, ESQ., Peterborough.

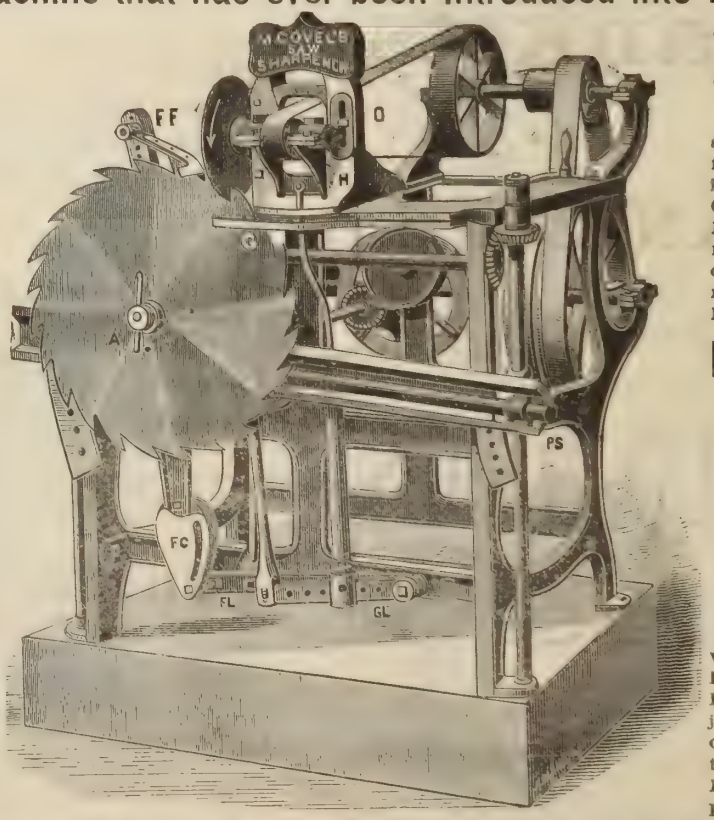
DEAR SIR—I have used your Steam Feed for near four months, and it has given me perfect satisfaction in every way; it is admitted by every person who has seen it work to be the best feed ever invented. Since I put it into my mill, I have not lost ten minutes time fixing anything belonging to it. I can cut 18 boards 13 ft. long in one minute. It can do much smoother and better work than the pinion feed. It is easily governed and reverses the carriages instantly. I am thoroughly satisfied with it and can recommend it to any person who has a Circular Saw Mill for cutting long or short logs. I consider I have cut more lumber than will pay for the Steam Feed since I got it than I would have cut had I not put it in.

Yours respectfully,
WILLIAM TAIT,
Lumberman, Gravenhurst.

TORONTO, August 11th, 1880.

WM. HAMILTON, Peterborough, Ont.

DEAR SIR—The Steam Feed you put in is working splendidly. Yours, &c.,
THOMPSON, SMITH & SON.

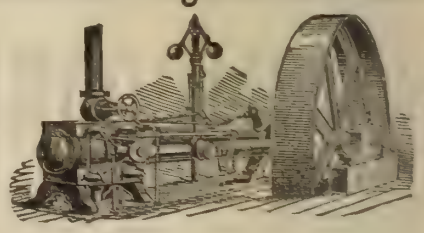


MILL MACHINERY!

I am also manufacturing Saw Mill Machinery, for all sizes of Gang or Circular Mills, Span or Double Circulars for Slabbing Small Logs. My Patent Jack Chain for drawing logs into Saw Mills, acknowledged by all to be the Cheapest and best ever got up; also, my Patent Lumber Markers, different sizes of Edgers, Gang Lath Mills, Trimmers, Power Gummers, and all Machinery used in a first class Gang or Circular Saw Mill; also, small Hand Gummers for use in the woods, for Cross-cut Saws. Rotary Pumps of different sizes, for Fire Protection in Mills, &c.

Horizontal Engines and Boilers

CORLISS ENGINES



Where economy of fuel is the great consideration, along with uniformity of speed, such as is required in Grist and Flouring Mills, Woollen and Cotton Factories, or large Factories of any kind, I supply the Corliss Engine. I feel justified in saying that our Style, Workmanship and Finish on this Engine will be no discredit to its renown, and certainly is not equalled in this country for economy of fuel. I have them working at 2½ pounds of coal per horse-power per hour.

WILLIAM HAMILTON,

PETERBOROUGH, ONT.

PUBLISHED SEMI-MONTHLY.

The only Newspaper devoted to the Lumber and Timber Industries published in Canada.

SUBSCRIPTION $2.00 PER ANNUM

VOL. 1. **PETERBOROUGH, ONT., DECEMBER 15, 1881.** **NO. 28.**

THE timber and wood manufactures exported from the United States to Australia is officially given in the consular reports as follows :—

Timber, dressed	$722,227
Other	54,831
Door, sash and shutters	88,409
Shooks and staves	2,979
Total	$868,446

ARKANSAS lumber is becoming a very prominent factor in the commerce of some of the western cities. The yellow pine attains great size there, and forests of it cover about 1-10th of the State. Among other valuable woods which grow plentifully and to large proportions are several varieties of oak, the black walnut, cherry, bois-d'arc, holly and maple. Besides these the cedar, beech, poplar, cypress, hickory and ash are common. Seventy different kinds of timber grow in this state.

A HEAVY deal in hemlock bark has been made by Hoyt Bros., who are now engaged in building the largest tannery in the world on Babb's Creek, near Wellsboro, Pennsylvania. The location chosen is right in the heart of an almost unbroken wilderness. The equipments of the establishment will be complete, including six bark mills, which will grind a hundred cords of bark a day, and a large saw mill. The firm, to carry on this immense establishment, have made contracts for all the hemlock bark on about forty thousand acres of land.

THE white birch manufacture is attracting considerabfe attention in Maine. The stock is used largely for the making of spools. New mills for sawing birch are to be erected at Salem, and Scott & Hopkins, at Madrid, are using a large amount of birch in their mills, besides poplar, their stock being worked up into spools and salt boxes. This industry enables the farmers in the vicinity to make sale of timber that would otherwise have no particular value. B. F. Bachelor, of Fayette, Kennebec county, is sawing large amounts of birch, and the use of both birch and poplar in Oxford county, and other sections of the state, is becoming an important source of wealth.

THE *American Ship* says that in the case of eighteen timber and lumber laden vessels reported at Lloyd's as lost between the nights of October 12 and 17, not a life was lost. Some were water-logged and abandoned at sea, but the crews were taken off or otherwise saved. Of those abandoned some were afterwards picked up near land and brought to port. A water-logged vessel, laden with timber or lumber, though it may become unmanageable in severe weather, cannot sink, and the people aboard can take to the rigging, and thus have some change for rescue. Often the vessel and cargo are saved by a passing steamer, that takes the distressed ship in tow and brings her into port.

AN IMPORTANT INVENTION.

On Saturday last, at the Alexandra Palace, London, the first public trial was made of "Wilson's Combined Low-water and Steam Safety Alarm." The operations of the apparatus are two-fold. Firstly, to give warning of the fall of water below the water line in a boiler ; and, secondly, to indicate any generation of steam pressure in excess of the registered pressure. The alarm is constructed with an inner and outer cylinder, containing a float and valve spindle, safety valve, loading spiral spring to safety valve, and an alarm whistle. Should the water in the boiler be allowed to recede below the determined minimum low water line, the float immediately descends with it, causing a vacuum through which the steam passes into the alarm whistle, and so giving notice of the condition of the water in the boiler. So sensitive is the regulation of the apparatus that if as small a quantity as one quart of water is injected into the boiler the alarm at once stops and safety is restored. Again, on the other hand, should there be the slightest (half lb.) generation of steam in excess of the Government register, the pressure immediately overcomes the loading spiral spring and allows the steam to escape through the outer cylinder into the alarm whistle, thereby giving notice that too much heat is being used and fuel wasted. Simply opening the furnace door, or setting the engine in motion, is sufficient to overcome this neglect. The experiments were carried out by the inventor, and in every particular were most successful. The apparatus can be regulated and fixed to any size of boiler, marine, locomotive, or otherwise—at a very low cost. It is impossible for the valve to be in any way tampered with, as the outer casting is melted down, pegged, and sealed.

TERRA COTTA LUMBER.

One of the most important of recent practical inventions is that of the manufacture of lumber from fire clay, patented by Mr. C. C. Gilman, of Eldora, Iowa.

The process is fully described by his letters patent, from which we extract the following :—The composition consists of kaolin clay, free from grit, one part ; resinous sawdust, from one to three parts, as porosity may be required ; water sufficient to thoroughly incorporate the above, by machinery, into a plastic mass.

Removed from the grinding tubs, where it has been ground, the spongy product is forced by plungers driven by steam through iron or steel cylinders to express the superfluous moisture therefrom, and issues forth in the shape of long blocks or logs, of length, form, and size best fitted for handling, usually eight to twelve inches in thickness, and four to six feet in length. When sufficiently dry to render handling safe, these logs are moved into kilns or clamps calculated for the purpose. After the steam and vapors are driven out by a slow, steadily increasing fire, the temperature is rapidly increased to nearly a white heat, which not only consumes the sawdust, but brings the clay itself into the first stages of vitrifaction. On cooling, the logs are removed to the mill and sawed into planks, boards, and dimension stuff, as lumber from wood is manufactured, and subsequently fashioned in the workshop into such forms and articles as are demanded by purchasers. This material, being free from grit and tough in texture, can be cut, sawed, bored, planed, and carved with edged tools, and before or after such treatment can, after slipping and glazing, be submitted to a second firing, with fine results in ornamentation obtained.

Kaolin is the upper stratum of fire or feldspathic clay beds, and owing to the absence of sand or free silica is unsuited to common pottery uses, as its warpage in drying and firing unfits it for moulding purposes.

Mr. Gilman's invention overcomes this trouble, inasmuch, as the material is reduced to form with edged tools *subsequent to firing.*

New York's greatest present want is a fireproofing, cheap and undoubted in its capacity for every emergency. Her stately ten-storied buildings can in a conflagration receive but little aid from the fire department, especially when Croton is as scarce as it is now.

Terra cotta lumber is indestructible by fire, gases or acids ; it is a poor conductor of heat, sound, and electricity ; and possesses molecular attraction to an extent which allows of plastering without first lathing.

Its weight is one-half less than common building brick, and it is erected with nails instead of cement and mortar, virtually rendering fireproofing a work of carpentry instead of masonry as heretofore. Mr. C. C. Gilman's present address is room 71, No. 71, Broadway, New York. —*Scientific American.*

THE TIMBER SUPPLY OF EUROPE.

From an approximate summary of the timber production and trade of Europe, as given by the *Journal of the Agricultural Society of France,* may be drawn some lessons, which may be of benefit in showing the dangers threatening our timber supply, and the advantages of an intelligent public policy of preservation. A man in business cannot be expected to sacrifice himself for the benefit of posterity, but the government should see to it that such great resources should not be sacrificed in one generation. The policy of Austria has also a counterpart in that of this country. Sweden and Norway have exhausted their oak as we have almost our walnut, and, according to the *Journal.* their pine is going the way of ours, The following are the figures given by the paper mentioned above :—Sweden and Norway, which still do a large export trade in deals, are now compelled to buy their oak in Poland ; and in Russia the forests along the shores of the Baltic, in Finland and in the southern provinces, are so rapidly thinning that the forest acreage of the empire is now only one in ten. There are about 34,000,000 acres of forest in Germany (of which 20,000,000 are in Prussia), estimated to be worth £500,000,000, and bringing in an income of £10,000,000 per annum. The state forests are taken great care of in all parts of Germany, in Prussia alone £100,000 being spent every year in replanting ; yet the imports of timber exceed the exports by over 2,000,000 tons. The oak and the beech are the kind of trees which do best in Denmark, but the timber trade of the country is very small. Austria and Hungary have upwards of 43,000,000 acres of forest ; but in Austria proper the state does not possess more than seven per cent. of the wooded area, as owing to the wasteful policy of the Ministry of Finance from 1855 to 1872 more than 5,000,000 acres were sold for sums so far below their value that there was a popular saying in Vienna, "If you want to become rich, buy state forests." The speculation came to an end in 1873, but Austria is now obliged to buy most of her timber in Bosnia and Montenegro. Servia and Roumania have some very fine forests ; but Italy, though her forest area extends over nearly 14,000,000 acres, does not do much in the way of a timber trade, as the roads leading to the forests are so bad that it is almost impossible to move the timber when cut. Much the same is the case with Spain, which has 8,500,000 acres of forest ; while Portugal, which has only 1,000,000 acres, finds a good market for her timber. Sweden and Norway export about £32,000,000 worth of timber every year, and at this rate their fine forests will soon be exhausted.—*Northwestern Lumberman.*

New Use of Buffalo Skins.

An inventor proposes to make machine gear wheels of raw buffalo hides by cementing and pressing together as many layers as are required for the breadth of the wheel. The blanks thus prepared are cut to form the teeth in the usual manner with suitable tools. The advantages claimed are smooth and noiseless action at high speeds and greater durability without lubrication.

River Improvement.

The Belleville *Intelligencer* says that at the forthcoming session of the Legislature application will be made—on behalf of the lumbermen, we presume—for power to erect dams on the streams in the townships of Tudor, Madoc and Marmora, for the purpose of storing water to facilitate the driving of saw logs, etc. Would it not be possible to form a company for the improvement of the river, with the object of furnishing water power continuously to manufactories here, to enter into this scheme with the lumbermen and so to attain the desirable object herein indicated ? We commend the matter to the attention of all who are interested.

SHARP PRACTICE.

As we published the sensational account of the asserted timber discoveries by Mr. W. Mercer, C.E., we now give the other side of the story. The *Northwestern Lumberman* says:—

It is not uncommon for scheming to pay. In fact it often pays better than business that is conducted openly, as is proved by every day transactions, and it is not unlikely that a piece of very adroit business that has for some time been going on in pine land circles has rewarded the men who were conducting it very handsomely.

About a month ago, as the readers of the *Lumberman* will remember, we published the statement of Mr. William Mercer, a civil engineer, of Bay City, Mich., who had recently returned from the Spanish River district, Ontario, to the effect that he had discovered in that region a genuine lumberman's paradise. There were seas of pine, stretching beyond any government surveys even, and, according to the stories of the Indians, hundreds of miles beyond them.

While we hoped that the story might prove true, we could not swallow it without a grain of allowance. Experience has educated us up to that point that we look with suspicion upon any report of an immense timber find. To ascertain about the timber supply of the country it is not necessary to go up in a balloon, or down into the bowels of the earth. It is easily enough gotten at by a man sufficiently interested to be at the pains. There are a great many men in this country with plenty of money in their pockets, and who understand all the conditions governing timber as regarding its value for lumber, who have hunted timbered land, particularly pine lands, pretty thoroughly. We have so much faith in their knowledge of the situation that when we hear a report of a prodigious discovery of pine, right at home, we suspect at once that there is a Munchausen element in it, a suspicion that, in these late days, has never proved unfounded.

Mr. Mercer gained the ears of some gullible newspaper men of this city, and a statement of the big find was given to the world. This, on the face of it, had a bad look. It is natural enough for a man who has made a great discovery to let it be known through the press, providing it would not be more profitable to keep it to himself; and the influence of the press is often the first thing desired by a person who has a scheme on hand. It helps him wonderfully, if he succeeds in gaining it.

Mr. Mercer is an old-time lumberman, and has a host of friends among the craft in Michigan. Those friends well know that the pine of their own state is rapidly disappearing. They were born and bred to the business of lumbering, and know no other. It seems a trifle out of the natural run of things that the Canadian explorer, instead of informing his friends of his valuable discovery, should come to Chicago and disclose it to newspaper men, when he knew all the time that they would go right off and tell of it. We wondered at the time that he did not whisper it in the ears of his friends who could profit by it. The region was the richest in pine the gentleman had ever seen, although he was conversant with the trees of the cork variety that once grew on Cass river, and yielded a fabulous per cent. of uppers. This pine could be bought cheap; no doubt of that. It belonged to the Ontario Government; the Government did not even know of its existence, and an individual or government that is not willing to sell cheap what it does not know it has, is a poor financier. This is one of the phases of the great pine find that begat suspicion.

It was somewhat strange that the Provincial Government had no knowledge of such Crœsus-like possessions, but we excused it on the ground that so many of its young men migrate to the United States that there are not enough active men—such as can stand a tramp through the forests—left behind to find out what there really is in their country, covering the vast territory that it does.

We went to work, however, and it did not take a great amount of it to learn that the Ontario Government knew more than Mr. Mercer gave it credit for knowing. It had run its surveys around promiscuously in the great pine country. Possibly there was a strip of land from 50 to 100 miles long from east to west, and very narrow, upon which the stakes of the surveyors had not been driven. The unsurveyed country is not more extensive than that indicated above, and the chances are against such dimensions. Then, again, somewhere away up in the unknown region, there is a settlement, and even a saw mill. The Indians had probably lied to Mr. Mercer.

Unless a leak is stopped it usually increases. This one grew larger and larger all the time. Every day, almost, brought evidence that Mr. Mercer, either knowingly or unknowingly, in giving a report of his discovery to the press, had favored the interests of parties who had land to sell in the Laurentian region. If he did not know it, it is likely to prove a happy stroke of luck to the men who owned the land.

It has transpired that a good while before Mr. Mercer discovered the bourne from whence no lumberman would ever wish to return, on account of the fine pine everywhere abundant, it was discovered by somebody else. Mr. George N. Fletcher and other parties, of Alpena, Mich., discovered it a year ago, and doubtless other parties discovered it several years before they did. At any rate somebody owned a half dozen or so limits up there, and wanted to sell them. The Alpena parties purchased them at a cost of something like $21,000. We do not assert that these limits were on the ground talked about by Mr. Mercer; but if there should happen to be, right adjoining those limits, other territory rich in the material of which lumber is made, those same limits might be more valuable than they would otherwise be. That is natural enough. A mine right by the Comstock lode would sell for more than though it were located in the Alleghanies. That is a business principle.

It furthermore seems that the Alpena gentlemen, for some reason, got sick of their bargain. In common parlance they had got "stuck." To start with, as it will be seen further on, they paid a pretty good price for their limits. We do not know what they intended to do with the timber upon their purchase, but as they own large mills at Alpena, it is supposable that they expected to float the logs home, and saw them there. They ought to have known it before, but come to think of it, they would be required to pay seventy-five cents per thousand, crown land dues, and this assessment, it is plain, would be an addition worth mentioning, to the original outlay.

A craze for buying Canadian forests must have struck that portion of Michigan, for other Alpena lumbermen got a scent in the same direction. One gentleman contracted for some limits over there that were guaranteed to produce 150,000,000 feet, running 15 per cent. to uppers. It was denominated a fine chance to do a lumber business, but on looking the ground over he found 10,000,000 or 12,000,000, instead of 150,000,000, and a country full of ranges of rocky, steep hills and lakes. As it would cost more to get the timber out than it was worth, he sensibly declared the contract off.

It might have been owing to some such reason that his neighboring lumbermen found out that they had bought a cat in a sack. Mr. Mercer asserts that the country is well adapted to lumbering, and the Spanish river a good driving stream, but in this respect maybe the Indians had lied to him again. However, it was for some reason that the owners of the limits desired to sell them, for they approached Mr. A. N. Spratt on the subject. Mr. Spratt is a shrewd pine land operator, and, of course, refused to take the bonanza upon hearsay, but said he would investigate, so last summer he made a trip to the unknown region, and discovered it again. He ascertained that the Spanish river region is a poor one to carry on logging operations in, as the country rises to high elevations as you go back, giving to the streams, of course, numerous heavy falls. This examination led Mr. Spratt to refuse to buy the white elephant that was on the hands of the Alpena lumbermen at any price. Nothing daunted, another effort was made. Judge Tuttle, of Alpena, and Mr. Croyer Davison, of Harrisville, were applied to, to make the sale of the limits, with a strong probability of being successful, as, at time of writing, negotiations are being made with New York parties, the consideration being $100,000

It is for the New York parties to rise and explain, providing they have a mind to, what they know about these limits. Of all men in the world, eastern men are the ones that land sharpers like best to get a hold of. A great many eastern men have money, and are on the alert to profitably invest it. To many of them pine land is pine land, which ends their knowledge of the subject. We are ready to wager a very small sum that these New York gentlemen know no more about the lands they propose to buy, if they have not already bought them, than an infant knows about the north pole. We make this statement, for it seems reasonable to us that if their knowledge was very extensive in that direction they would give more not to own the limits in that district than to own them. But if they have sinned in this regard they have company, and that is a consolation often. Not long since a land shark entered what he called pine lands, in the Lake Superior district, without having seen them, and immediately sold them to New York gentlemen, without them having set eye or foot upon them, so as to double his money. They will learn, if they have not already done so, that their "pine lands," purchased as an investment, could not be given to a practical lumberman in the Superior district.

In looking up the facts connected with Gulliver Mercer's great discovery, we learned that a Chicago pine land operator had been bit by the the same shark. The trap was intended this time to be sprung by Toronto men. They had discovered the unknown country, and had limits in it to sell. They represented them as rich beyond description, and when the Chicago men had obtained their price, and the estimated production, he figured up that the timber would represent fourteen cents per thousand feet. Such a rare chance could not be overlooked. It was veritably "a soft snap," and at an expense of $1,000, or thereabouts, experts were sent to the Spanish River district to investigate. The result, in the light of present events, is very amusing, and it may be proportionately profitable to people who are contemplating making their fortunes in the lumber business on the much talked of river.

The trip was made up the river in a light draft steamer, drawing from three to four feet of water. Canoes were then resorted to, and in the first three days only fourteen falls, from twenty to eighty feet high, had to be got around. It was a perilous attempt, and could not have been accomplished except that the exploring party had professional guides. There is some pine above the falls, and some years ago a daring spirit discovered the country and cut a lot of logs up there. There was no way to get them down but by water, and he set them afloat. They ran over one fall after another, but the strain was more than they could bear, and when the owner last saw them they were literally smashed up. Some were made brooms of, and the others were broken in two. To this day when a bluish mist surrounds the hills away up the Spanish River, it is believed it is due to an oath, that has just taken shape, ejected by the foolish lumberman.

Before starting, the guides told this pine land hunting party that their efforts would avail them naught, for there was no pine to speak of on the river, but the party, believing that the guides had been hired to tell such a story, went on their way, and found—pine, in limited quantities, but it must go, if it ever goes anywhere, to Hudson Bay. The same party also met the Canada Pacific railroad surveyors, also spoken of by Mr. Mercer, who gave the discouraging information that nowhere along the line of the projected road is there pine in great quantities. The experts were glad to return alive, and, used to roughing it as they are, pronounce it the most dangerous trip they had ever undertaken. There are Grand Rapids, Mich., landlookers who can give similar testimony, if needs be.

From a Bay City, Mich., paper we learn that one of the Alpena owners of the limits, of which we have been writing, called at the office of that paper and said that his land was not included in the Mercer find. Nobody has said it was; but one would suppose, taking Mr. Mercer's word for it, that a man would feel proud to have the great, recently discovered country include his pine lands. It is not often, under any circumstances, necessary for a denial to precede an assertion, and this effort to make a mouth-piece of the Bay City paper looks wonderfully like a hedge against the expose already made by the *Lumberman* of the Mercer discovery.

No one, after reading this history of the latest Canadian explorations, especially if it should be learned that the New York parties have passed over their $100,000, will doubt that there are pine land operators who have the ability to worm themselves out of an uncomfortable position when they find that they have put their foot in it.

SALE OF LIMITS.

The following are the details of the recent sale of timber limits in the Muskoka and Parry Sound districts:—

Berth.	Square miles.	Purchaser.	Price per mile.
MOWAT TOWNSHIP.			
No. 3	18¾	T. G. Blackstock	$50

WANTED.

Cherry, White Ash, Black Ash, and Dry White Pine Lumber.

Quote Price delivered, and Carefully Describe:—Quality, Widths, Length, Thickness, and how long Sawed.

ROBERT C. LOWRY,
Wholesale Lumber,
12Ly 55 Pine Street, New York.

Timber Limits & Sawmill FOR SALE.

The subscriber being anxious to concentrate and consolidate his business, on account of his age, will sell at very low prices—

1st. His Mills and Farm near the Bradford Station, Northern and North-Western Railway, together with Limits in Ridout and Sherbourne.

2nd. The Portage and Canal connecting Black River with Lake St. John, and Lake St. John with Lake Ouiatchiching, in the Township of Rama.

3rd. Eight million feet of saw-logs now in Black River.

4th. About 4,000 acres of land in different townships.

If not sold at private sale, the above will be offered to the highest bidder at some future time to be named, as I intend to close out and concentrate in Michigan, where I now have mills.

Further information can be had from Thompson Smith & Son, Toronto, or James Durham at Bradford Mills.

CEDAR AND HEMLOCK.

The value of the coarser products of the forest has not been well appreciated in the Northwest until quite recently, and even now not all of them are recognized, or their utility and commercial importance apprehended. It is but a few years since cedar was thought worth the labor of cutting; and a distant transportation, except for such trees as were suitable for telegraph poles, was considered out of the question. Now, however, a cedar swamp at all contiguous to avenues of commerce, is esteemed of a value fully proportioned to that of the coarser varieties of pine, and in place of this timber being monopolized by the telegraph companies, it is utilized for fence posts, and is found fully the equal of oak for durability. The Chicago market alone has handled this year 3,000,000 pieces. The railroad companies, also, have discovered that cedar ties, while light of carriage, and consequently comparatively cheap in the matter of transportation, make a valuable and durable tie, well suited for a prairie country, and over 4,000,000 pieces, enough to lay the iron for 1,500 miles of track, have been brought to the docks of Chicago, during the past season of navigation, for distribution throughout the country west of this point.

Thus, almost worthless, as it was considered, white cedar has contributed more than $2,000,000 to the business of Chicago during the season of 1881, and, doubtless, were the statistics of the entire Northwest available, it could be shown that the forests of the states of Michigan and Wisconsin, with perhaps a small quantity from that portion of Canada which borders on the great lakes, have aggregated, during the present year, a production of the value of fully $5,000,000 from this same source.

The value of the hemlock forests of the Northwest has not yet adequately dawned upon the minds of those who own large tracts of it, which a foolish and short-sighted lack of appreciation is permitted to go to destruction, while it yields but a tithe of the financial benefit which it is capable of affording. The hemlock forests of Maine, New York and Pennsylvania are made to yield a revenue somewhat commensurate with their actual value; but those of the Northwest are permitted to go to destruction, with scarcely an effort at obtaining a compensation for the labor of destroying them. In the former states the tree is made to yield a revenue from its bark, which forms one of the most valuable tanning commodities known the world, and its value has been fully recognized by the denizens of the old world, as shown in the fact that England, France and Germany export vast quantities of raw hides to the eastern states of America, to be treated with this valuable tanning property, and returned to the respective countries whence they came, when, after a further treatment, by a process peculiar to each nation, a no inconsiderable proportion of the leather again finds its way to the United States for final consumption.

But the hemlock tree of the East has not fully ended its mission when it has yielded up its bark to the tanner, and the trunk finds its way to the saw mill as a timber second in value only to white pine, for a large portion of the uses to which the coarser grades of pine are adapted. The silly prejudice which is exhibited in nearly every section of the western country against the use of hemlock as a building material, is in marked contrast with the high esteem in which it is held in all the eastern states for all the uses included in the category filled by dimension sizes. Eastern builders of large warehouses, having their choice between the use of white pine and hemlock, almost invariably choose the latter, from its greater stiffness and strength, knowing that its durability is unquestionable in all points in a building where it is free from visitations of wet and dry. A western builder, on the contrary, although able to obtain hemlock at a reduced price from the cost of pine, invariably rejects it, and refuses to have it placed in his building, simply because he does not know anything about it, and thinking that he does know all about pine, will permit quick rotting sap to be placed where sound hemlock would outlast it, two to one. The farmer of the West would pay one-third more for pine boards with which to build his granaries, notwithstanding that the advantages of hemlock in excluding rats and mice would often save the price of the building in waste alone, before it had been in use three years.

The forests of Michigan and Wisconsin, as well as those of Canada, abound in scattering hemlock, and at least 1,000,000,000 feet of good timber is in those localities stripped of its bark each year for local tanning purposes, while the trunks of the trees, which might be utilized in the manufacture of valuable lumber, and at an expense greater than would be incurred in bringing them to a saw mill, are tumbled into a log heap and burned to get them out of the way. It is but a few years in the future when hemlock timber will assume the position in the West which it already holds in the East, and those who now so ruthlessly destroy it will come to think of it as did many, regarding the pine, black walnut and oak, which a quarter of a century ago were cut down and burned to get them out of the way.

The forests of the old world are almost wholly denuded of their tanning materials, and what is left is guarded with jealous care. The hemlock resources of the eastern states are becoming so limited as to receive a marked measure of watchfulness; those of the Northwest are yet abundant, and it behooves their possessors, in view of the recent discoveries which enable the bulky bark to be compacted into economical shape for transportation even to Europe, to conserve and and protect this valuable timber, which in many respects is more available to the uses of man, and possesses an economic value of greater extent than the pine. The latter is of the greatest value, as a firm building material, in which it will always prove superior to hemlock or any other timber, but it is valueless as to its bark, or even as railroad ties. The hemlock, on the contrary, as a coarse building material, is in every respect equal to pine, its limbs, when of sufficient size, are available and valuable for the manufacture of ties, while its bark has no superior as a tannin. Let those who now control the hemlock forests of the Northwest learn the lessons of its value, as taught them by the denizens of the old world, and of the eastern states of our own country.—*Northwestern Lumberman.*

NEW BRUNSWICK EXPORTS OF WOOD.

The *Monetary Times* says the export of sawn lumber and square timber from the port of St. John forms at all times an interesting feature of our trans-Atlantic trade. This year's shipments continue to be principally made by the same parties as in former years. During October, however, a larger proportion appears to have gone to the Continent of Europe. The October statement shows that out of a total export of 18,489,000 feet of deals, battens and ends, 2,738,000 feet, or about 15 per cent. went direct to the Continent, forty per cent to Liverpool, and thirty-five per cent to London. The remaining tenth was shipped to Irish and other ports in the United Kingdom. The number of vessels despatched for the month was 25, of an aggregate tonnage of 11,437. These carried, in addition to the deals, &c., already mentioned, about 360 tons of birch timber and 967,000 feet of scantling, boards and palings. The leading shippers were, in order, Alex. Gibson, R. A. & J. Stewart, Guy, Bevan & Co., W. M. Mackay, and we perceive in the list the name of the Spool Manufacturing Co. of Peticodiac, as shippers of 110,000 feet, mainly deals and battens.

The lumber and timber shipment of the season from St. John to ports across the ocean, *i. e.*, for the ten months from the beginning of the year to the end of October amounts to 179,000,000 superficial feet of deals and boards, 3,969 tons of birch timber, and 806 tons of pine timber. These are classified as under:—

LUMBER.	
Deals, battens and deal ends, sp. ft.	172,974,735
Boards and scantlings sp. ft.	5,756,285
Palings, pieces	395,000
TIMBER.	
Pine timber, tons	806
Birch, tons	3,969

Of the timber, 2,938 tons of birch and 743 tons of pine went to Liverpool, 1,002 tons of birch to Carnarvon, and the remainder to Dundalk, Wexford, and Waterford. Of the lumber, about 26,000,000 feet went to Bristol Channel, nearly 20,000,000 feet to the Continent, 7,700,000 to Scotland, 1,200,000 to Australia. But 77,000,000 feet, or about 43 per cent. of the whole, was destined for Liverpool and London. The proportions shipped to various ports are shown by the following list:—

	Ft. deals, &c.	*Ft. boards, &c.*
Bristol Channel	24,985,096	1,180,217
Continent	19,683,334	206,281
Glasgow	7,082,239	296,576
Queenstown	1,232,549	37,674
Liverpool	59,494,763	3,096,621
London	14,523,905	597,496

THE LUMBER BUSINESS IN AUSTRIA.

The following interesting letter appears in the *Northwestern Lumberman*:—

MOKRE, POST SZCZAWNE, GALLICIE, AUSTRIA, October 26, 1881.

Doubtless this letter is written by one of your most distant readers, but coming, as it does, from the Carpathian mountains, now the most important forest region from which the middle European lumber markets receive their supply, it may contain some items of interest.

The greater part of the woodland in this country is fir and pine. There are also large quantities of oak and maple, and considerable beech. As the principal woods are fir and pine, all my remarks about the lumber business will have reference to those two kinds. The lumber in this country is counted by the cubic foot, but the following statements refer to English square feet, and the prices are reduced to your money standard.

The saw mill business in this country, as compared with that of America, is much behind the times. The wealth of wood is immense, although when timber is bought in large quantities it is very cheap, selling at from fifty to eighty cents per thousand feet. Wages in the Carpathian mountains are very small, ranging from fifteen to twenty cents per day. The saw mill man here does not generally make much money, but it is his own fault, and is owing to his old-fashioned, expensive way of operating.

There are some mills here with eight and nine gangs, although the majority of them have but three or four, and as many small circulars, with benches for edging boards or cutting lath. The maximum capacity of such a mill is from 15,000 to 20,000 feet in twelve hours; but as the gangs need a great deal of repair, from 12,000 to 15,000 is a good average. Such mills cost from $20,000 to $25,000.

The logs are mostly brought to the mills on waggons, and it is seldom one sees rollways, drives, etc. The reason for this may be that wagonage is very cheap, running at from fifty to eighty cents per day for a two-horse team, though the work is often so meanly and unsteadily done that half of that money is too much to pay for it. For cutting down the trees and working them up into logs the price is forty-five or fifty cents per thousand feet. The cost of bringing logs to the mill is from $1 to $2 per thousand feet. The cost of cutting the logs into boards is usually $2.50 per thousand feet, though it is sometimes $3 and $3.50.

The average price of first-class lumber is $8.20; for second class, $7, and for third-class $5.50. Most of the mills work, with small capital, and are obliged to buy the wood in small quantities and pay from $1 to $1.40 per thousand feet for it.

I am sure that the cost of production, as well as that of bringing the logs to the mills, by proper management, could be reduced one-half, and that an American saw mill man, with ample capital, and a well-arranged mill, could do a very good business here. There are enough American oil men in this country looking up business, but I believe that lumbermen would find a more profitable field for their business.

Should any of the readers of the *Lumberman* wish to learn more of the state of the lumber trade here, I will answer any enquiry with pleasure.

FRED BADER.

THE DULUTH LUMBER CO.

The Lake Superior *News* says this is the title of a new lumbering concern that proposes to take a large share in the development of Duluth's manufacturing industries. This company is organized under a charter from the State of Illinois, and will have an office in Chicago as well as in Duluth, though its main business will necessarily be transacted in the latter place. The officers are, S. K. Martin, President; R. L. Henry, Treasurer; Geo. Green, General Manager, and H. B. Moore, Secretary, the last two gentlemen having their office in Duluth. The capital stock of the company is $300,000, and a portion of this sum is already being invested in a saw mill, now well under way. The piles for the foundation are all driven, the mason work largely completed, and the framing also well advanced. The mill is to be 160x54, with a wing 31x64, and the engine room 64x50. Six boilers will run the huge engine, which will have 500 horse power.

The mill will be supplied with a circular saw and also a gang, with edgers, trimmers, steam feed, and all the latest improved machinery, and will have a capacity of 100,000 feet per day. The mill will be in readiness for business by the opening of navigation next spring, and already the proprietors have contracted for 25,000,000 feet of logs, part to be cut on the St. Louis river, and part on the South Shore.

Mr. H. B. Moore, the secretary of the new company, has been in Duluth for a year or more, and is reported to be thoroughly posted in all branches of the lumbering business. Mr. George Green, the general manager, is a new comer, but the fact that he holds such a position in this strong corporation is a guarantee that he is a competent business man. Duluth may consider herself fortunate in securing such an addition to her lumber firms as the Duluth Lumber Company.

A RESTIGOUCHE SPOOL FACTORY.

The Spool Factory of Messrs. C. G. Beckwith & Co., at Jacquet River, Restigouche County, which was destroyed by fire a short time ago, is being rebuilt and will be ready for operations in a few weeks. The new building will be a much more substantial structure than the former one, and better adapted for the purposes for which it is intended in many respects. The main building is 150 feet long by 36 feet wide, and has 14 feet posts, with rafters 36 feet, which gives it a very heavy, steep roof. This is to prevent snow from lodging on it, which caused a great deal of trouble to the former building last winter, often endangering the roof. Besides the building, the dimensions of which are given above, there are the boiler and engine house in connection with it on the north side, and another building 80 feet in length joined to it at the east end, which is intended for kilns, etc. On each side of the roof of the main building are two rows of windows, built dormer fashion, which light the upper story under the roof, so that the whole building is as convenient and well lighted as if it were really a two storey one. A blacksmith shop, a large cook house and several dwelling houses stand near it, forming the nucleus of a village. The site of the factory is on a branch of Armstrong's Brook, about two miles from the I.C.R. station at Jacquet River. Great quantities of spool birch, of excellent quality for spool making, grow in this district. Thirty or forty men are

at present employed in the work of construction; but the number of hands kept at work when the factory is in operation exceeds this considerably. A great deal of employment, too, is given to farmers in this neighbourhood hauling wood to it during the winter. The new settlement around the factory is to be called Beckettville. —*St. John, N.B., Sun.*

SHEER BOOMS.

During the past season the sheer booms introduced by Mr. L. W. Pond, of Wisconsin, on the Upper portion of the St. John River and its tributaries, have been subjected to a practical test, which has demonstrated their usefulness in a high degree; in fact, the sheer booms have revolutionized the running of logs down river to the rafting grounds of the Fredericton Boom Co. Till the introduction of Mr. Pond's invention, the logs, set afloat by the spring freshet, helplessly followed the course of the current down stream, and were, as the water fell, or through the action of the wind, deposited by thousands on bars and heads of islands, and, where the shores were low, were scattered in land over miles of intervale, from which their removal often cost more than the logs were worth, besides subjecting the company to damages for injuries done to the meadow lands. The work of following the drives down and sacking the shores was therefore one of the most expensive portions of the river operations. Pond's sheer booms have practically cut this down to a minimum, the *modus operandi* being as follows:—Sheer booms are placed at the heads of the islands and shoals, and wherever the set of the current would carry the logs over the low banks, at such angles that the logs striking against them are shot out again into current and so carried on successively past each old resting place in safety to Fredericton. In this way the main drive is kept moving while the water is high and all the logs are got to market; whereas, under the old method, a sudden fall of water would leave the shores and out of the way lodging places lined with thousands of logs. Full advantage can also be taken of a sudden rise of water in midsummer or fall, to rush through logs that had been hung up earlier in the season. The extraordinarily large run of logs during the past season proved, beyond doubt, the great benefit these booms are to the lumber operators along the upper St. John; and this test will doubtless have the effect of introducing them on other rivers in the Province. Mr. Pond is now arranging to put his sheer booms on the Restigouche next season, with every prospect of success; and it is not unlikely that, at no distant day, they must be working on the Miramichi.—*St. John, N.B., Sun.*

THE DURABILITY OF REDWOOD.

Mention was made in a recent issue of this paper of the suitability of redwood for wine casks. Messrs. Fulda Brothers, of San Francisco, tells us that redwood casks have been used in California for many years; indeed, two thirds of the vast wine crop of that State is fermented and stored in casks and tanks made of this timber. The casks simply require to be slightly steamed and well soaked to remove the color; after that the fermentation of the wine does not extract any color or taste.

The trade in redwood is becoming of considerable importance, a great deal being shipped eastward to Denver, Omaha, Kansas City, and the Atlantic coast as far as Rhode Island.

The wood is specially valuable in situations which occasion rapid decay in other timber. Seventy years ago the Russian Fur Company erected a redwood stockade at Fort Ross, Alaska. The posts were cut down level with the ground some years ago, but the buried parts remain perfectly sound, excepting the thin layer of sapwood near the bark, the alternate soaking and drying of seventy years having no injurious effect upon the heart wood. A piece of one of the posts, with a certified statement of its history, was sent to San Francisco a few weeks ago. The sender, Mr. G. W. Coll, of Fort Ross, states that he knows of shoots from old stumps which have grown to be three or four feet in diameter in forty years, indicating wonderful restorative power in redwood forests under favorable conditions.

The redwood in demand in California for underground uses is what is known by the lumbermen as "black-hearted redwood." It shows a dark color when cut with a knife, the the outer layer only becoming "seasoned." "Black-heart" is exceedingly heavy—too heavy to float. One who has observed schooner-loading at chutes along the coast tells the *Pacific Rural Press* that a post of this wood which plunges overboard never rises, and a board lingers on the surface a moment and then slowly slides down into the depths. This is the sort which is sought for in foundations, and under brick walls is believed to be imperishable.—*Scientific American.*

A New Species of Horses.

The *Annals and Magazine of Natural History* for July contains a translation of a Russian paper, in which M. Poliakof brings forward a mass of evidence in proof of the existance of a hitherto unknown species of horse, not far from Zaisan, in Central Asia. The animal appears to resemble a small domestic horse, of a dun color; its head is large in proportion to the size of the animal; and the root of its tail is destitute of long hairs for some distance. M. Polikof names his supposed new species *Equus Przewalskii*, in in honor of the traveler who brought the skin to Russia. He regards it as a true horse, and remarks that "if it were possible to prove that culture influenced the growth of the tail, and that this became more hairy, and the mane longer, under altered conditions of life," it might be affirmed that "it was indeed the animal whose ancestors were reclaimed by man in the stone period, the so-called domestic horse of our day.

Preserve the Forest.

The *Monetary Times* says the time has come for paying greater attention to the remains of our forest wealth, be it great or small. Each province has a Crown Lands Department; but the object of these departments has hitherto been rather to sell than to preserve the timber. Great attention is paid to forestry on the continent of Europe, where forest literature has reached extensive dimensions. Our forest literature has yet to be written; and apparently we shall begin seriously to study the subject about the time when we have cut down or burnt up our last forest. The United States is becoming alive to the daily increasing necessity for the preservation of its forest wealth. It is useless to regret the wholesale destruction that has been practised in the past; the one thing needful is to repair it so far as the future needs of the country may require. This work has been commenced in the States; we shall do doubt follow at a greater or less distance.

A Labor Saving Appliance.

Knapp, Stout & Co., with mills at Menominee, Wis., give the following description of the machinery with which the rafted lumber is taken from the water at its yards at St. Louis, Mo.:—We are now operating our pulling machine, and when completed we will be able to handle with it 500,000 feet daily. The track, with six rails, runs out into the river below the low water mark, and back about 200 feet from the shore. On top of the main car, which is 16x44 feet, is another car, 10x32 feet, on which the crib is floated, and then drawn out by machinery and pulled off at right angles from the main track, thus keeping the track into the river, for another top car can be run back to the river for another crib. Our cribs of lumber are 16x32 feet by 50x26 inches deep, and weigh 30 tons. We use a pair of 10x20 inch engines for pulling out the car, and a small engine for transferring. We use a large pump and hose for washing.

A Useful Cement.

When rubber rings are used for steam, gas, and other pipes, the following cement can be employed to prevent any escape:—Resin is pulverized and mixed with ten times its weight of strong ammonia. A viscous mass is obtained, which liquifies by itself after three or four weeks. This mass adheres very well to rubber, as also to iron or wood, and when the ammonia volatizes the cement hardens and becomes impermeable to gases and liquids.

Travelling Agent.

MR. A. L. W. BEGG has been appointed agent for the CANADA LUMBERMAN, and is authorized to collect subscriptions and grant receipts therefor and to make contracts for advertisements appearing in its columns.

DEVOTED TO THE LUMBER AND TIMBER INTERESTS OF THE DOMINION.

PUBLISHED SEMI-MONTHLY BY

TOKER & Co. PETERBOROUGH.

Terms of Subscription:

One copy, one year, in advance	$2 00
One copy, six months, in advance	1 00

Advertising Rates:

Per line, for one year	$0 90
Per line, for six months	50
Per line, for three months	30
Per line, for first insertion	10
Per line, for each subsequent insertion to 3 mo's.	05
Cards not occupying more than 12 lines (1 inch) per annum	8 00
Cards not occupying more than 12 lines (1 inch) for six months	5 00
Cards not occupying more than 6 lines per annum	5 00
Cards not occupying more than 6 lines, for 6 mo's	3 00

Special rates will be made for page, half page and column advertisements.

Advertisements intended for insertion in any particular issue should reach the office of publication at least three clear days before the day of publication, to insure insertion.

All communications, orders and remittances should be addressed and made payable to TOKER & Co., Peterborough, Ont.

Communications intended for insertion in the CANADA LUMBERMAN, must be accompanied by the name of the writer, not necessarily for publication, but as a guarantee of good faith. Communications to insure insertion (if accepted) in the following number, should be in the hands of the publishers a week before the date of the next issue.

PETERBOROUGH, Ont. DEC. 15, 1881.

ATTENTION.

With this issue we complete the first volume of the CANADA LUMBERMAN, as well as the year 1881. In doing so the publishers desire to return their thanks to all who have aided them by their countenance and support since they undertook its management. To render the CANADA LUMBERMAN the success which the publishers desire, and, what is of more consequence, of real benefit to the trade, they are of opinion that two things are absolutely necessary to this end, and these are,—a greater readiness on the part of those engaged in the trade to furnish us with information for publication, and generally a greater promptitude in the payment of subscriptions.

Just now, for instance, we conceive it would be very desirable, and very much in the interest of the trade, if we could place before them a tolerably reliable and full statement of the stocks of lumber, shingles, logs, and square timber in manufacturers' hands from the cut of the season of 1880-1, on the first of January, 1882. Of course in the present instance we would have no similar records for previous years with which to make comparisons, and to draw conclusions from, but it would still be of considerable value, and it would be the beginning of a record which would prove of great value in the future. Under existing circumstances such a statement, however, can only be obtained by each one engaged in the trade undertaking to forward us a brief memorandum of the stocks held by himself, and by his neighbours, where he can do so, from other information than mere guess work, as data from which we might make up district statements. As the labor involved in collating and comparing such returns will be considerable, we would suggest, as a matter of convenience, that the senders should state first the particulars with regard to their own holdings, or those firms in which they are interested, secondly the same particulars with regard to the holdings of others with which they are familiar, and thirdly their general opinion as to the relative stocks on hand now and a year ago, and the probabilities for the season upon which we have entered. If each one would only do this for himself, they would furnish us, and in that way obtain for themselves, an amount of information which could not fail to be of considerable value, without materially trespassing on their holidays. Will they try?

With regard to the second point, by reference to the labels on their papers, they can see just how they stand. For instance, when they find "2 Oct. 81" following their name it requires two dollars to pay their subscription up to the 1st Oct. last, and the same way whenever a figure precedes the month. If they have paid they will find, or should find, the figure "0" before the month on the label. In fact whenever they find a figure before the month on their label, they are indebted to us for that amount, and although the amount, of itself, is small, yet they amount to such a large sum in the aggregate that, if paid, it would send us on our way rejoicing.

In conclusion we beg to take this, the first opportunity we have had, of wishing a constituency extending from Nova Scotia to the Rocky Mountains a Merry Christmas and a Happy New Year, and to express the hope that it is only the first of many occasions upon which we will have the pleasure of doing so.

VALUABLE SUGGESTIONS.

We beg to call the especial attention of our readers to the article headed "Suggestions from Maine," which we have reproduced in this issue from the *Northwestern Lumberman*. It appears that in this neighbouring State they have in a measure solved the problem of perpetuating the supply of lumber from their forests. Our readers may well consider whether we in Canada may not learn something from this example. In some portions of our forest lands some such plan, properly modified, might well be adopted.

THE timber trade out of Hamilton increased considerably this year, and it seemed as if we had indeed returned to the good times of old to see the many cargoes and rafts of timber which left Hamilton during the past season. It is hoped they will still be more numerous next year.

THE timber limits, mill site, and dock at Batchewana Bay, on the North Shore of Lake Superior, which were offered for sale by public auction in Toronto on the 8th inst., failed to find a purchaser. Only one bid of $10,000 was offered, and, this being below the reserve bid, they were withdrawn.

THE Upper Ottawa Towing Company, which has recently been organized for the purpose of navigating the Upper Ottawa and its tributaries, have acquired four of the steamers of the Union Forwarding Company, and intends constructing three new boats which will be ready for the opening of navigation. The fleet will be principally engaged in towing timber and saw logs, but passenger boats will also be put on the route.

A RECENT telegram from St. John, N.B., says there is plenty of snow in the woods on the upper St. John and its branches, and the lumbermen are now fairly at work. The estimated total of the lumber to be cut on the upper St. John this winter is 65,500,000 feet. This, however, does not include the operations on the Aroostook and the Tobique, which will swell the aggregate to not less than 90,000,000 feet. This is about three-fourths of the amount usually obtained.

A GREAT forest of long leaf pines covers more than one-third of the area of Mississippi. This vast forest, taking into view the quality and use of the wood, the inexhaustible supply, the great height and size of the trees, is an enormous store of undeveloped wealth. There is no other such pine forest to be found in the world. As far back as 1753, France supplied her navy with masts and spars from this forest. It is penetrated by numerous water-courses, which are capable of floating the timber to the gulf coast for a distance of about 100 miles. It stands next to coal for fuel in factories and machine shops, and yields turpentine more abundantly than any other species of pine.—*Lumberman's Gazette.*

THE Quebec Timber Company intends to apply to Parliament for an Act of incorporation.

MR. B. YOUNG intends to have 100 men in the lumber woods, Halfway River, and head of River Hebert, during the coming season, in Cumberland County.

THE Bangor, Me., *Commercial* says the finishing up of the season's sawing, the sending of teams to the woods, purchasing of supplies, employing of laborers and preparing the mills, lumber goods and logs for winter, make this the busiest of all busy seasons for our lumbermen. The winter's operations will not be as heavy as last year, owing to the increased cost of labor and the low price of lumber.

Mr. William Mackey, of Ottawa, accompanied by his son and another gentleman paid a visit to Peterboro' last week, for the purpose of ispecting Messrs. Irwin & Boyd's mill, and gathering information about saw mill machinery, as Mr. Mackey is about erecting a new mill on the Ottawa. In the course of the day Mr. Mackey also visited the shops of Mr. William Hamilton, and was so well pleased with what he saw there and we have no doubt but that the visit will lead to business. We may add that this was Mr. Mackey's first visit to Peterborough and that he was induced to make it solely by what he had seen in the *Canada Lumberman* with reference to Messrs. Irwin & Boyd's mill and the manufactures of Mr. Hamilton.

THE *Northwestern Lumberman* says that Bond & Jenkins, some time since, had a quantity of lumber burned on the dock at Oswego, N.Y. The lumber was shipped from Canada, and the duties on it had not been paid. The firm informed Collector Fort, of that port, that they did not wish to pay customs duties on the burned lumber. The collector insisted that the payment must be made, and at length Bond & Jenkins appealed to the treasury department at Washington for a decision in the case. A reply was received from the department that duties on the burned lumber need not be paid; and there was where Bond & Jenkins had the advantage of Mr. Fort. This decision might be considered a test case.

THE *Timber Trades Journal* says that the trade in imported house joinery is assuming large proportions, judging from the steadily increasing supply coming forward both from the Baltic and America. The door trade especially is reported to be brisk, and it is becoming quite a department of the timber merchant's business to keep a stock of these goods. Consumers find it very convenient to buy doors, windows, &c., ready made, thereby saving the trouble and delay of manufacture, although it is questionable whether they could not be made cheaper at home, when heavy railway carriage has to be taken into account. In pine doors we are pleased to hear that Canadian goods appear to be finding great favor, being as a rule well finished off, and thoroughly well seasoned and glued together. The colonials now supply a good door, moulded on the solid, giving all the advantages in appearance and wear possessed by an ordinary moulded door at the same price as a square one of the same dimensions.

OUR FOREST WEALTH.

THE realization by the Ontario Government of over seven hundred thousand dollars, in a single day, for the privilege of cutting timber on the public domain, should of itself, be sufficient to induce the adoption of prompt and vigorous measures for the protecting of our forest wealth. Large however, as is the sum which has been obtained at the sale of the 6th inst., it is after all but a moderate portion of what the Province is likely to receive for the same, and but a very small portion of what it will undoubtedly receive, can the timber now on this twelve hundred odd square miles be protected from its great enemy—fire.

It is true that at the instance of the present commissioner of Crown Lands—Mr. Pardee—the Ontario Legislature some years ago placed on the statute book a measure designed to prevent the setting out of fires during the dangerous seasons of the year, but however good that act may be, it has remained practically a dead letter, owing to its being made the duty of no person or persons to see it enforced, and we believe it will continue so unless the Government appoint proper persons for that purpose. That the importance of the interests involved will justify any reasonable expenditure for such a purpose will not for a moment be disputed.

As matters are now going the day cannot be far distant when the valuable patrimony which we inherited from past ages in our forests will be a thing of the past.

Timber, like that for which we are just now receiving annually large sums, and which directly and indirectly is giving so much employment to our people, is not produced in two or three life times, it is therefore bound to decrease quite rapidly enough under the lumberman's axe, without adding to its depletion by wanton fires, which might be largely prevented by the adoption of proper measures to that end, and by excluding settlers from our pine lands. Of course we are aware that there are those who will cry out against this latter suggestion, but that does not compensate for the millions that have been lost, or prevent the country from being large losers in the way of revenue and employment, by the Government encouraging indiscriminate settlement. The high bonuses already paid and the dues still to be paid for some of the limits sold last week prove, that much of these lands is worth infinitely more to the country for the timber that now stands upon them than the settlers could be, even if a prosperous one could be placed on every hundred acres—a thing which is impossible, because it is notorious that the best pine lands are the least adapted to the wants of the settler—unless he be a timber shark.

Moreover, the encouragement of indiscriminate settlement and a failure to protect the timber from the fire fiend is a great injustice to the men who invest their money in these limits, as well as the Province. High as the prices realized at the recent sale were, they would undoubtedly have been higher, had the purchasers been guaranteed reasonable protection against the destruction of the timber they were purchasing. Indeed the great risk run from this cause every year that it is allowed to stand, compels its owner to cream it as quickly as possible in order to secure himself against loss, notwithstanding that such a course is wasteful of valuable timber, and calculated to depress the lumber market.

It is to be hoped that the importance of the subject will no longer be overlooked by the powers that be, but that speedy and efficient measures will be adopted whereby the most may be made out of our forests, and the evil day when they will cease to yield an income to the Provincial ex-chequer, and afford employment to our people be posponed as long as possible.

GOVERNMENT SALE OF TIMBER LIMITS IN MUSKOKA.

The Legislative Chamber in the old Parliament Buildings on Front street is a quasi-sacred place. When the legislature is in session woe be to the unlucky wight not wearing M.P.P. after his name who ventures therein! He is immediately pounced upon by the sergeant-at-arms and borne away no one knows whither, perhaps to the dungeon or the tomb. But on Tuesday, Dec. 6th, the gloomy old chamber wore a different aspect. If you had dropped in shortly after noon you would have seen the speaker's dias occupied, but not by the speaker, and the member's chairs filled, but not by the members. The occasion was the rarely-occurring one of a sale of timber limits by the Ontario Government, and the occupant of the dias was Mr. G. B. Cowper, of the Crown Lands department,

THE AUCTIONEER FOR THE NONCE,

who wielded an ebony ruler instead of the customary gavel, while filling the chairs and spreading over into the ladies' gallery were leading lumbermen from all parts of Ontario, or those who were acting in their behalf. At the side of Mr. Cowper sat Hon. Mr. Pardee, commissioner of crown lands, in general supervision of the sale. Among

THOSE PRESENT

connected with the lumber trade were Cook

Bros. and McArthur Bros., Toronto; J. R. Booth and R. Nagle, Ottawa; J. C. Miller, Parry Sound; E. W. Rathbun, Deseronto; J. Cockburn, Gravenhurst; J. Petrie, Guelph; T. Murray, Pembroke; J. Bonfield, Eganville, besides several American buyers from Bay City, Saginaw, Tonawanda, and other places. The gentlemen from the other side, however, did not invest to any great extent, the large majority of the berths going to Canadian firms. Besides those engaged in the lumber business were one or two Toronto lawyers, who bought largely in the interests of other parties.

HOW SALES ARE CONDUCTED.

A sale of timber limits is not an everyday affair. The law, with a wholesome fear of what might occur under the stress of "party exigencies," does not permit timber limits to be disposed of in the usual way as lands for settlement purposes. The latter may be bought at any time, but the former can only be obtained when the Crown Lands Department brings on a sale, which must be by public competition. Hence the crowd of lumbermen and others on Tuesday, anxious in the present prosperous state of the lumber trade to obtain limits, and knowing that this would probably be their last chance for years to come. The last sale of timber limits by the Ontario Government was in 1872, when over $500,000 was realized. On Tuesday timber berths in the townships of Mowat, Blair, McConkey, Hardy, Patterson, Mills, Sinclair, Bethune, Proudfoot, Gurd, Machar, Strong, Joly, Laurier, Pringle, Lount, Nipissing and Himsworth, all in the Muskoka and Parry Sound districts, were offered for sale. The limits aggregated

1,411 SQUARE MILES;

berths amounting to 130 square miles were withdrawn, the reserve bid not being reached, and the remainder sold for a total of $717,176, or an average per square mile, exclusive of ground rent, of $560. This is a most remarkable showing, and the significance of the figures will be realized when it is stated that at the last sale, which was held by the Quebec Government, the average was only $98, while the sale held by the Ontario Government in 1872 produced an average of only $199. The bidding on Tuesday afternoon was at the outset slow and backward, the first couple of berths being withdrawn, but it quickly grew rapid and lively, and in some instances very large figures were reached.

THE HIGHEST PRICE PAID

was for berth No. 2 in the township of McConkey, which was knocked down to Mr. J. M. Martin for $2,500 per square mile, or a total of $40,000; berth No. 1 in the township of Joly was sold to Mr. J. L. Burton for $42,550, or $2,300 per square mile; No. 4 in Nipissing to C. A. Brough for $28,875, or $1,540 per square mile; No. 3 in Mills to the same gentleman for $25,381, or $1,410 per square mile; No. 3 in Joly to J. Bonfield for $21,900, or $1,200 per square mile; No. 4 in Strong to McArthur Bros. for $11,000, or $1,100 per square mile; No. 3 in Himsworth to J. R. Booth for $17,760, or $1,110 per square mile; No. 3 in Sinclair and No. 1 in McConkey to Cook Bros. for $14,840 and $22,847, or $1,060 and $1,050 respectively per square mile. The lowest price reached was for No. 3 in Mowat, which was sold to T. G. Blackstock for $937, or $50 per square mile. The sale altogether was

A MOST SUCCESSFUL ONE,

fully realizing in the matter of prices the expectations of the Government. As the law formerly stood, limit holders had only five years in which to remove the pine from the lands which they had under license, any timber remaining after that time belonging to the settler, but at the last session of the legislature an Act was passed under which a licensee on payment of the ground rent ($2 per square mile) and dues may renew his license from year to year, the Government after a certain number of years paying to the settler a percentage of the dues collected upon the timber cut. The disparity between the prices paid for different berths is of course accounted for by the variety in the quality and quantity of pine, the facilities for floating down streams, acreage burnt, etc.

NO INFORMATION

respecting the quantity of pine on the various berths etc., was furnished by the Government, and intending purchasers had to make an examination for themselves of such limits as they wished to buy. As one facetious lumberman put it when the sale was drawing to a close and the auctioneer remarked on the growing darkness of the room, "We've been in the dark all the afternoon." Lumbermen, however, generally know what they are doing and buying, and those at the sale on Tuesday did not look as if they were exceptions to the rule. As a matter of fact all the firms sent out experts to examine the several berths, and of course the reports made thereon were kept a profound secret. As soon, however, as the berth was knocked down the lumbermen would tell one another what their report was. For instance, one berth over which there was considerable competition was reported to one firm as being good for three-quarters of a million feet per mile, and another firm had it rated at one million. One gentleman, however, nearly caught himself in the matter of a bid. One limit which was going up by $10 bids, and had reached the sum of $2,090, when the audience was suddenly surprised to hear him ejaculate "$3,000." This, of course, put a stop to all further competition, and the berth was knocked down to him for that sum. It turned out, however, that the too eager buyer had only intended to advance the usual $10 and say "$2,100." The limit was accordingly put up again and ultimately sold to another for $2,300.—*Toronto World.*

THE frame work of the knitting factory on Goderich street, Halifax, is fast approaching completion. The manufactory will give work to some forty or fifty hands.

M. LEGRU, the Paris capitalist, now in Quebec, says that fifty millions of francs have been subscribed in France for investment in local industries in Quebec Province.

ONE EXPERIENCE FROM MANY.—I had been sick and miserable so long and had caused my husband so much trouble and expense, no one seemed to know what ailed me, that I was completely disheartened and discouraged. In this frame of mind I got a bottle of Hop Bitters and used them unknown to my family. I soon began to improve and gained so fast that my husband and family thought it strange and unnatural, but when I told them what had helped me they said "Harrah for Hop Bitters! long may they prosper, for they have made mother well and us happy."—The Mother. — *Home Journal.*

A RELIABLE FACT.—It is an established fact that Hagyard's Pectoral Balsam is the best cure for coughs, colds, sore throat, asthma, croup, bronchitis, and all troubles arising from neglected colds. Price 25 cents.

DECLINE OF MAN.—Impotency of mind, limb or vital function, nervous weakness, sexual debility, and all diseases caused by indiscretions and abuse, are radically and promptly cured by the use of Mack's Magnetic Medicine, which is for sale by all responsible druggists. See advertisement in another column.

WEAK LUNGS AND HOW TO MAKE THEM STRONG.—Breathe with the mouth closed, have access at all times to pure air, exercise moderately, eat nourishing but sample food, and take that best of all cough remedies, Hagyard's Pectoral Balsam, it speedily cures all throat and lung troubles of adults or children. Price 25 cents per bottle.

WHEN DOCTORS DISAGREE, WHO SHALL DECIDE?—Nothing is more variable than the different opinions of medical men; but when they fail to agree, or perform a cure in a chronic disease, the patients often decide for themselves, and take Burdock Blood Bitters, and speedily recover. It is the grand key to health that unlocks all the secretions, and liberates the slave from the captivity of disease.

HAGYARD'S YELLOW OIL will be found invaluable for all purposes of a family medicine. Immediate relief will follow its use. It relieves pain, cures chilblains, frost bites, scalds, burns, corns, rheumatism, neuralgia, etc. For internal use it is none the less wonderful. One or two doses frequently cure sore throat. It will cure croup in a few minutes. A few bottles has often cured asthma. Colic has been cured by a a teaspoonful dose. It cures with the utmost rapidity, It is really a wonderful medicine.

NO IMPOSSIBILITY.—People often say, when suffering in the first stages of Consumption, or suffering from lung disease, if their physician fails to effect a cure, "my case is a hopeless one, and my enjoyment of health again is an impossibility." The celebrated French Count Mirabeau's nasty temper is well known. "Monsieur le Comte" said his secretary to him one day, "the thing you require is impossible." "Impossible" exclaimed Mirabeau, starting from his chair, "never again use that foolish word in my presence." It is well-known that N. H. Downs' Vegetable Balsamic Elixir has brought to health and strength thousands who were told by doctors that their recovery was impossible. Be not deceived by any apparent impossibilities; always use the Elixir.

MACK'S MAGNETIC MEDICINE.

Is a Sure, Prompt and Effectual Remedy for *Nervousness in ALL its stages, Weak Memory, Loss of Brain Power, Sexual Prostration, Night Sweats, Spermatorrhœa, Seminal Weakness, and General Loss of Power.* It repairs *Nervous Waste, Rejuvenates the Jaded Intellect, Strengthens the Enfeebled Brain and Restores Surprising Tone and Vigor to the Exhausted Generative Organs.* The experience of thousands proves it an INVALUABLE REMEDY. The medicine is pleasant to the taste, and each box contains sufficient for two week's medication, and is *the cheapest and best.* ☞ Full particulars in our pamphlet, which we desire to mail free to any address.

Mack's Magnetic Medicine is sold by Druggists at 50 cts, per box, or 12 for $5, or will be mailed free of postage, on receipt of the money, by addressing

MACK'S MAGNETIC MEDICINE CO.,
d13S-w49 Windsor, Ont., Canada.
Sold by all Druggists in Canada.

GRATEFUL—COMFORTING.

EPPS'S COCOA
BREAKFAST.

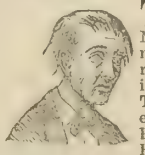
"By a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of well-selected Cocoa, Mr. Epps has provided our breakfast tables with a delicately flavored beverage which may save us many heavy doctors' bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—*Civil Service Gazette.*

Made simply with boiling water or milk. Sold in packets and tins only (½-lb. and lb.) labelled

JAMES EPPS & CO., Homœopathic Chemists, London England. L19-1y

"NIL DESPERANDUM."

TRADE MARK Important to Nervous Sufferers.



THE GREAT ENGLISH REMEDY for Nervous Debility and all Nervous Affections, including Spermatorrhea, Seminal Weakness, etc., result of Self-abuse, indiscretion, &c. is GRAY'S SPECIFIC MEDICINE. This is the only remedy which has ever been known to permanently cure Palpitation and other affections of the Heart, Consumption in its earlier stages, Rushing of blood to the head, Wind in the Stomach, Indigestion, Loss of Memory, Want of Energy, Bashfulness, Desire for Solitude, Low Spirits, Indisposition to labor on account of weakness, Universal Lassitude, Pain in the back, Dimness of Vision, Premature old age, etc. Full particulars in our pamphlet which we send securely sealed on receipt of a 3 cent stamp. The Specific is now sold by all Druggists at $1 per package, or 6 for $5, or will be sent free by mail on Receipt of money by addressing THE GREY MEDICINE CO., 3 Mechanics' Block, Detroit, Mich. 24L13

BEFORE TAKING

SUGGESTIONS FROM MAINE.

It was given out fifteen or twenty years ago that the lumber producing capacity of the state of Maine was nearly exhausted, and the time was fixed, by those learned in forest lore, when the last mill would be shut down, the occupation of the Maine lumberman would be gone, and the prestige of that political division of the republic known as the Pine Tree State would linger over it only as a memory. In truth a part of this prophecy has come to pass, for a large proportion of the pine of Maine has been exhausted, and spruce is now the great dependence of the manufacturers. Yet a good deal of pine is still cut in that state, and the supply is likely to be prolonged by a system of economy that is the genius of eastern industry, and is but little appreciated or practised in the West. This economy is habitual in all lumbering operations in Maine, and pertains to the cutting of spruce, hemlock, and other timbers, as well as to pine. Its peculiarity is that the largest timber is cut first, while the smaller is lett, and carefully preserved to grow for a future supply. In this way the timber lands of Maine have been repeatedly cut over, to a large extent, at least. Yet a stranger passing through these same forests would scarcely recognize the fact that they had supplied the eastern cities for years with millions of feet of lumber, for the growth of trees still thickly covers the land. It is only by observing the stumps that are here and there scattered amidst the standing timber that one would begin to realize that these silent and sombre woods once echoed with the ringing sound of the axe, the crash of falling trees, and the shouts of loud-voiced teamsters. So well have the economy of man and the forces of nature done their work, that the forests of Maine still maintain their primeval appearance, and promise to supply the sturdy woodsman with employment for an indefinite period to come. As a leading land owner recently put it to the writer, with a latitude of faith, "With the present system continuously practised, the timber supply in Maine will last to all eternity."

The advantages derived from this system of forest preservation are worthy of consideration in localities where a more careless method is pursued. One advantage is that timber becomes a source of repeated revenue, as crop after crop is taken from it. First the larger growth of pine is assorted out; then the larger growth of spruce, perhaps; then the hemlock can be cut. In a few years this process can be repeated, the growth of the timber constantly creating a supply of larger trees. This development of supply is peculiarly conserved and stimulated by itself. In other words, none of the land being wholly denuded of forest, the humidity and wealth of the soil is preserved, and fires do not sweep over the country, as in Michigan and Wisconsin, destroying the timber, root, trunk and branch. It is indeed stated that a devastating fire is impossible in the state of Maine, and certain it is that we have no knowledge of such wide-sweeping conflagrations as have devoured the forest wealth of Canada, Michigan and Wisconsin. Here is a practical example of that kind of forest preservation that the advocates of forestry laws would see generally adopted and enforced.

In Maine the individuals directly associated with the lumber and timber interests are grouped in three classes:—The owners of the lands; the operators, or those who get out and sell the logs, and the manufacturers. Of course these classes often intermingle their interests. The land owners, however, form the most distinct class, and are the autocrats of the situation, as the landlords usually are. They are men of capital, and are a long-headed community. They are the possessors of the foundation of the lumber interest, and are content to bide their time. They value their lands for the timber they will produce, and intend to make the most of it, as the system which they pursue, already indicated, abundantly shows. They found out, years since, that the farmer does not seek a settlement on their timber tracts, but prefers, instead, to emigrate to the West. The soil, though rich, is not abundant, a large portion of the surface being occupied by rocks. It is thought too, and probably with truth, that the prohibition legislation of Maine has acted as a deterrent to many foreign emigrants who would otherwise settle in the state. Certain it is that the hardy Scandinavians or Germans could make themselves comfortable homes in the Pine Tree State as quickly as anywhere else, and secure the benefits of nearness to profitable markets, as well as greater nearness to the Fatherland. A heavy land owner of Bangor, who was himself a temperance man, and not opposed to anti-liquor legislation, admitted to the writer that he had no doubt but that the "Maine law" had prevented many foreigners from settling in that state. He even said that, under the circumstances, he never expected to see the forest lands of Maine cleared and settled, for this prejudice against the sumptuary law of the state had got abroad, and it would be nearly impossible to destroy it; and the rugged lands of Maine must be settled by foreigners if at all. No doubt this fact of the unmarketableness of the wild lands of Maine has prompted the owners of it to make the most possible of its timber resources.

The general practice is for the owners of the land to sell permits to the operators to lumber on their property. It is usually owned by townships, and the boundary lines of these local divisions mark the disposal of limits. The choice of townships, both as to ownership and the granting of permits, is of course determined by their nearness to streams or lakes suitable for getting logs to the mills. The Maine lumberman is quite particular about this, and looks with disfavor upon lands that a Michigan or Wisconsin operator would think quite accessible—by means of a logging railroad if by no other. Some of the remoter sections in the northern part of Maine are regarded as of little value by both owners and operators, and they do not even make an effort to stretch their imaginations to the time when the demand for lumber and the building of railroads will make these far away districts available. It would seem that here the "Downeaster" is less sagacious than his Western compeer; for the latter is already ranging the mountains of Montana for timber prospects, or hunting pine half way from Lake Superior to Hudson Bay.

In selling permits to operators to cut timber it would seem at first blush as if they conferred upon the purchaser an unlimited privilege to cut and slash according to his own free will, to the most reckless destruction of timber, a result directly opposed to the preserving policy that has been heretofore indicated. But here profit steps in as a conservative element. The operators, in order to realize as much as possible on an operation, must cut all the largest timber, discarding the smaller growth. Though the permit grants them the privilege of cutting as much as they wish within certain specified boundaries, it does not require them to cut more than they desire; in fact, there is no amount stipulated. Economy, then, dictates that the operation shall be a profitable one, and to secure this result the larger trees only are selected, while the smaller ones are left to grow. This system causes a constant competition to secure eligible locations for logging, and deters men from going back into the remoter districts, as they would be more apt to do than if the operators owned the land. Spruce stumpage near streams, or where two logging streams join, sells at $4 and $4.50 per thousand, while that which is farther away from the water will bring but $2.50, more or less.

The mill men of Maine have got into the habit of competing with each other so sharply in the purchase of their log stock that they have narrowed the margins of their business down to a mere thread of selvage; and this mainly depends on the ups and downs of freight rates. This limited margin is said to be a folly on the part of the manufacturers; for if they would combine together for a regulation of prices they could secure them as well as not. Probably the mill men themselves would tell a different story. It is said that often, late in the season, when freight rates become so high as to sweep away all their margins, the manufacturers let their cargoes go to sea without insurance, alleging as an excuse that the margins were all gone anyway, and if the lumber goes to the bottom, or up in smoke, they will have saved their insurance money in either event; a not very consolatory reflection, in fact, after the cost of production has been annihilated, which might have been saved by insurance.

The hemlock of Maine is one of the principal sources of timber wealth in that state. There is a belt of this kind of timber, forty miles in width, and running entirely across the state, from New Brunswick to New Hampshire. The principal profit from hemlock is derived from the bark, which is worth at the tanneries $6.50 a cord. The heaviest of these latter are situated along the European & North American railway, which, in the eastern part of the state, traverses the hemlock belt. They are located with especial reference to the bark supply, and will exist as long, and no longer, as that supply lasts. Since the building of the European & North American Railway, and the rising of the tanning industry along the line, there has been a great scramble for hemlock lands, the leather companies securing all that was possible. At first it was thought that hemlock was only valuable for its bark, but the constantly increasing consumption of lumber has given value to hemlock timber, also, though it is not enormous. For several years after the bark industry arose, the stumpage of hemlock sold for $1.25, the bark being worth $1, while twenty-five cents was skimped out of the log. Latterly that figure has been considerably raised, and the prospect is that the value of hemlock will continue to increase.

Of late years a special feature of the lumber industry has sprung up in Maine, which consists of sawing second growth timber into box boards. This manufacture is mostly carried on in the winter season, by small mills, when the large ones are shut down. The demand for box boards is very brisk from the manufacturing towns in Massachusetts, Rhode Island and Connecticut, and the narrow stuff which is sawed out of small, second growth timber, is sufficient for the purpose, and at the same time can be afforded at a reasonable figure. This special demand has stimulated a special effort to supply it, and the sawing of box boards has become quite distinct from the general lumber manufacture. The logs are sawed up without being squared or slabbed, and the lumber brings in Boston from $14 to $16 per thousand.—*Northwestern Lumberman.*

A LUMBERMAN'S LIFE.

The Philadelphia *Times* says:—The post of danger in the duties of a lumberman is on the jams, and there the most skilful men are sent. Pitfalls will open in the midst of a solid mass of timber, and then close in a moment, after having dragged a man down beyond all help; a log will move a few inches slowly and unnoticed, and then with a movement like an arrow strike a man, crushing the life out of him in an instant. On every side dangers are lurking, and he is fortunate that passes a spring without injury. There is something attractive in the looks of a log jam, and if the fascination that danger has were taken from it, still he would rather work there than on the shore. The long, narrow sea of white timber, cracking and writhing with the current, the water roaring and foaming as it escapes from its prison under the logs, and the logs themselves moulded into fantastic shapes by the terrible pressure behind them, all have an attraction for men who are impressed by strength or picturesqueness.

Floods are made by large floating dams, and will raise the water several feet, lifting the jam up into the air as if it were a toy boat. If a specially large flood is needed, two and sometimes three are used at a time, the flood gates of the lower dam being opened just as the water from the dam above reaches it. In this way an immense "splash" is obtained that only the most refractory jams can successfully combat.

There are few grander sights to be seen anywhere than the moving of a large log jam. The grand strength with which they move, tearing out the largest trees and forcing everything before them, and the fierce motion of the logs, like the crazy shuttles of some giant machine, and the perfection of force compel enthusiasm from the most phlegmatic spectator. The wild hurrahs of the men on the logs add to the excitement, and the observer is quite sure to find himself running along by the side of the moving mass cheering as if he had won a battle. The men who are at work scarcely realize the danger, they are so carried away by the excitement, and they may be seen jumping from one log to another and cheering as though perfectly safe on solid ground, instead of a dangerous sea of moving logs that are continually rising and falling and dodging this way and that, driven by the flood of water furnished by the floating dams. The skill shown by experienced floaters in riding logs is wonderful, and it seems impossible for human dexterity to reach such perfection. A jam will sometimes form where precipitous rocks make it impossible for the men to escape on either side, and they must ride the logs for several rods. In such places the water is always swift, sometimes forming rapids, and watching the logs tumbling, jumping and rolling along with a deafening roar, one wonders how men can live among them for an instant. Behind the jam breakers come the sackers with their teams, drawing the logs that jams have forced far out on the banks and rolling in those on the shore. "Bringing up the rear," is the technical term given this work by the lumbermen, and it is no more desirable than occupying the same position in the army. It is terribly cold work too, wading in the snow water, ice freezing on the levers and on the clothing wherever exposed to the air, and makes the spectators shiver to watch them. But the hardy lumbermen do not mind it. They expect it, and their strength is equal to the demand.

At mealtime they all come with prodigious appetites for their rations, that are as hot as can be eaten. Hot biscuits, potatoes, eggs, meat, tea, coffee and everything else, solid and liquid, are smoking like the steam from a locomotive, while generous draughts from the cup that inebriates add their fuel to the general fire. No cold victuals are current in log-floating time, all the chill required is found in the ice water, and something has to be taken to counteract its influences.

The nights are spent in camps, where the roaring fires burn all night, partially to dry the wet clothes that must be put on in the morning. Coming into the room where the clothes are hung, a great cloud of steam is seen that rises to the ceiling, where it condenses, and either falls down in drops or evaporates on the warm boards, and the clothes are all smoking as if engaged in a contest. When the river is reached the life changes. There are few jams to break, less wading, and more riding in boats, and all the work is easier and less dangerous. If the logs stop on a rock that is out in the middle of a river, a boatman carries some men there who may roll them off and get into the boat again without danger and without getting wet. There are logs along the shore to be rolled in, but the water is not as swift as in the runs, and in the deep water a man can stand with comparative safety. Everything is easier, and the day the river is reached is almost a holiday among the lumbermen.

Talk About Timber.

The Kingston *Whig* says a gentleman, whose knowledge of the timber trade is well known, stated that the timber trade this year had been better than it had been for some years. He did not think that unchartered vessels lost anything, as they secured fully as high rates as those that had been engaged last winter. The freights paid fairly well, but nothing more than vessels ought to earn; in fact if the profits were less no person could afford to build vessels or keep them in repair. This winter, he thought, it would be difficult to obtain charters, as the owners of timber were likely to hold off until the spring. This was owing to the fact that last summer rates fell to lower figures than those for which vessels had been chartered. He thought this holding off would be a wrong policy, as when there was a demand for vessels the captains would be more independent. There will really be a larger amount of timber for moving next year than this. The method of chartering will be the very opposite to that which was adopted last winter. If there be good rates for grain, vessels will prefer to carry it. Grain freights this year were, however, far below the average, and not nearly so good as the year before. A 6c. freight from Toledo and a return cargo of iron ore to Ashtabula or Cleveland would be better than a $70 freight on timber from the same port.

Chips.

THE number of rafts that have passed through the draw of the bridge over the Mississippi, at Davenport, Iowa, the present season is 947.

A POPLAR tree in Etowah county, Alabama, measured twenty-five feet in circumference. One in Barren county, Ky., measured thirty-three feet.

MAJOR A. B. WATSON. of Grand Rapids, has recently bought pine lands in Louisiana which is estimated to cut 350,000,000 feet. He has unloaded all his pine lands in Michigan, the *Eagle* says.

THERE are 150,000,000 feet of logs in a solid jam above Croton piers, Muskegon River, Newaygo county, Mich. The drive is hung up for the season. It is thought that the logs below the Newaygo will last the mills at Muskegon till they are shut down.

THE Privy Council has just given a decision sustaining the "Act respecting uniform conditions in policies of fire insurance," passed by the Ontario Legislature as constitutional, and declaring that it does not interfere with the matter of "trade and commerce," as allotted to the Dominion Legislature.

THE black walnut timber of Arkansas will prove a mine of wealth. In fact there is not a more profitable crop that can be raised on southern soil than black walnut, and it is not wide of the mark to say that the growing of this valuable timber will be one of the greatest industries on the southwestern prairies at no distant day.

THE cold weather has compelled the Chaudiere mills to close down for the season. The cut this year, though not as large as anticipated, was an extensive one. The demand throughout the season for sawn lumber has been good, and prices have not been as high since 1872. Comparatively speaking very little stock will be wintered here.

IT is said that operations will shortly be commenced with a view to rendering the Lievere River navigable between Buckingham and High Falls, to the great advantage of the lumbermen and phosphate miners in that district. This is a much better way of spending the surplus than in making paltry reductions which nobody would feel.

A LARGE pine tree on the site of old Fort Herkimer, New York, which had escaped the axe of the woodman because it had given shelter to General Washington and party, while dining beneath its boughs, when on his way to visit Fort Stanwix, was blow down in a gale a short time since. It was over four feet in diameter at the butt and over one hundred and fifty feet in height.

IN a report on the forests of British Columbia, Prof. Dawson, of the Geological Survey of Canada, dwells upon the importance of the timber trade of the Dominion. The Douglas fir, or Oregon pine, is the most valuable tree he refers to. It is often more than eight feet in diameter, and from 200 to 300 feet high, forming dense forests, The Western hemlock and red cedar are next in importance, and grow to a great size.

THE *Nashville American* learns from a responsible lumberman that there is now on hand in that city 30,000,000 feet of sawed lumber, which could be delivered in a day, if that were necessary. Besides this amount, Nashville lumber dealers own 10,000,000 feet of lumber on the river and along the various railroads leading into the city, making a grand total of 40,000,000 feet of lumber now in the market. A large number of agents from the northwest are now in Tennessee seeking timbered lands.

THE *Lumberman's Gazette* says that the magnitude of the cedar business in Alpena county may be somewhat imagined by the fact that during the present season Bolton & McRae, who are the largest dealers in that kind of timber, have shipped 350,000 railroad ties, and 250,000 fence posts; and besides the above, there has been shipped large quantities of ties and posts by Bewick, Comstock & Co., Johnrowe & Donnelly, Morse & Dewey, Folkerts & McFhee, and others, the sum total of which would no doubt reach 600,000 ties and 500,000 posts.

THE EXPORT LUMBER TRADE.

The Montreal *Gazette* says the shipments of deals from that port to the United Kingdom during the season of 1881 just closed consisted of 38 cargoes, containing 21,838,287 feet, against 19,781,885 feet in 1880, showing an increase of 2,056,402 feet. The shipments of deals from from Pierreville during the past season were five cargoes, aggregating 2,697,562 feet. The total shipments of deals and lumber from Montrea to South America and the United Kingdom for the past season amount to 34,704,228 feet, against 28,250,919 feet for the season of 1880 which shows an increase of 6,453,309 feet. The following is a detailed statement of deal shipments from Montreal and Pierreville to the United Kingdom and the Continent for 1881, as furnished by Messrs. Anderson, McKenzie, & Co. :—

FROM MONTREAL.

Name of Vessel.	*No. feet.*
Thule	626,764
Carla	426,391
Haab	739,924
Lord Palmerston	514,085
Mallard	518,952
Alida	282,612
Lindola	314,967
St. Kilda	870,732
Lake Simcoe	211,860
Statsminster Stang	270,930
Falde	381,892
Adele	273,595
Arnim	240,432
Aeger	378,730
Memlo	836,715
Lake Nepigon	65,000
Port Royal	227,727
Prince Llewelyn	242,027
Elizabeth Mary	235,042
Hilda	663,300
Amal	394,671
Beaconsfield	595,580
Xenia	572,220
Texas	277,100
Mississippi	198,741
Texas	140,561
Fido	155,127
Dronning Louise	427,130
Montreal	39,600
Virgo	426,360
Glendonwyn	140,580

FROM PIERREVILLE.

General Birch	745,415
Indiana	476,255
Framines	638,495
Cap	520,167
Mary A. Wilson	318,230
Total	2,697,562

The total shipments of deals and lumber from Montreal were as follows in the years :—

	1881.	*1880.*
To U. K. and Continent	21,838,287	19,784,885
To South America	12,865,941	8,566,034
Total	34,704,228	28,250,919

FEEBLE LADIES.—Those languid, tiresome sensations, causing you to be scarcely able to be on your feet; that constant drain that is taking from your system all its elasticity; driving the bloom from your cheeks; that continual strain upon your vital forces, rendering you irritable and fretful, can easily be removed by the use of that marvelous remedy, Hop Bitters. Irregularities and obstructions of your system are relieved at once, while the special cause of periodical pain is permanently removed. Will you heed this?—*Cincinnati Saturday Night*

THE SADDEST OF SAD SIGHTS—the grey hairs of age being brought with sorrow to the grave is now, we are glad to think, becoming rarer every year as the use of Cingalese Hair Restorer becomes more general. By its use the scanty locks of age once more resume their former color, and the hair becomes thick and luxuriant as ever; with its aid we can now defy the change of years, resting assured that no Grey Hair at any rate will come to sadden us. 50 cents per bottle.

HONESTY.—It is commonly said that you cannot make an honest man believe that white is black and *vice versa*, but those who have grey hair by using the "CINGALESE HAIR RENEWER," will find that this apparent difficulty is easily overcome. 50 cents per bottle.

HAGYARD'S YELLOW OIL is at the head of the list for all purposes of a family medicine. It is used with unprecedented success, both internally and externally. It cures sore throat, burns, scalds, frost bites; relieves, and often cures asthma.

Petitions to Parliament should be written in a bold, round, open hand, for which purpose Esterbrook's blunt and broad pointed pens are the best. Address the Esterbrook Steel Pen Co., 26 John St, New York, for samples.

RESPECT.—The Grey Hairs of old age demand and should receive respect—but the Grey Hairs of young people require attention—in the way of using Cingalese Hair Renewer. 50 cents per bottle.

Market Reports.

MONTREAL.

From Our Own Correspondent.

DEC. 8th.—As usual at this season of the year the lumber trade has been very quiet, and confined to a small local demand. After the New Year, Americans generally come over to try and pick up some car lots, after which we hope to have a little more to say. Stocks of clear lumber in the city are small, but of the common kinds there is abundance to meet all the requirements. People in the trade are keeping down their stocks as much as possible till after stock taking. They prefer doing this and taking the chance of getting car lots as they are required. The extra winter freights by rail, which amount to about forty per cent. on the North Shore Railway, have prevented some pretty large contracts from being made. Prices generally are firm, but as yet we cannot make any change on our late list, which we again repeat :—

Pine, 1st quality, ₱ M	$32 00@40 00
Pine, 2nd " ₱ M	18 00@24 00
Pine, shipping culls, ₱ M	12 00@15 00
Pine, cull deals, ₱ M	8 00@10 00
Pine, mill culls, ₱ M	5 00@ 6 50
Spruce, ₱ M	8 00@10 00
Hemlock, ₱ M	8 00@10 00
Ash, run of long culls out, ₱ M	16 00@18 00
Bass, " " ₱ M	14 00@16 00
Oak, ₱ M	35 00@45 00
Birch, ₱ M	17 00@20 00
Hard Maple, ₱ M	18 00@25 00
Lath, ₱ M	1 25@ 1 35
Shingles, 1st, ₱ M	3 00@ 0 00
Shingles, 2nd, ₱ M	2 00@ 0 00

CORDWOOD.—The market is firm and likely to remain so, as stocks, both of coal and wood, are less this year than usual, and dealers seem confident of higher prices soon, unless the North Shore Railway brings in a very extra supply. All wood has been removed from the wharves, and supplies are now drawn from the railway depot. The weather has been so mild of late that the demand has been very quiet, but tonight the thermometer is nearly at zero, and there is every appearance of a cold spell, so that more activity is looked for from this out. Our quotations are now from the railway depot, ex cartage :—

Long Maple	$6 50
Short "	6 00
Long Birch	6 00
Short "	5 50
Long Beech	5 50
Short "	5 00
Long Tamarack	4 50
Short "	4 40

TORONTO.

From Our Own Correspondent.

DEC. 8th.—The last cargo of lumber for American markets, for the present season, has left this place, and lumber matters have assumed a quiet aspect. A considerable quantity is still coming forward for the local market, and shippers can now obtain all the cars they require ; but the trouble now is that there is not the lumber on hand at the mills to keep up the present supply for any considerable length of time, and the fine open weather of the past few weeks has enabled building operations to be prosecuted with as much vigor as at any time during the season. The clang of the bricklayer's trowel is still heard on every hand, and there is but little diminution in the number of buildings being erected observable. In the early part of December of last year teams were drawing lumber over our Bay upon the ice, and all building operations were at a complete standstill, whereas all the yards now seem to have all the trade they can do, and more yards are rising into existence. A new firm has just opened up on the western confines of the city, immediately adjoining the municipality of Brockton. Their shingle reads, "Baumhard & Marshall, Builders and Lumber Dealers," and their reputation as business men stands well.

Then the well known firm of John Oliver & Co. has leased the large yard formerly kept by J. R. Sillerman. Their intention is to stock this yard with pine, and also use it as a warehousing premises, so that any who wish to avail themselves of the privilege of doing so, can have their lumber piled off the cars and obtain a warehouse receipt for the same. These premises are especially adapted for this purpose, as cars from nearly all the railways can be run into the yard and unloaded promptly. This will be a boon to many persons who bring lumber to this market for sale, and in many cases incur demurrage for detention of the cars before they have been able to dispose of their lumber.

The supply of dimension stuff for this market is still extremely meagre, what little there is being fresh from the saw, and so few mills now being in operation, bills of any considerable quantity cannot be furnished at all promptly. The demand for shingles at present is quite limited, as a large number of the buildings now being erected have flat roofs, covered with felt and gravel, and the better class of houses are slated. Lath is scarce and will likely continue so for some time to come. The only kind of lumber that is at all like a drug on the market is the coarse grades of boards, but should the winter continue to be a mild one, there will not be any overstock of this or any other kind of lumber.

At this period of the year 1880 mill men had a large portion of their logs banked, and should they get favorable weather for logging purposes immediately, the season must necessarily be a short one ; so that the outlook for good prices for any lumber that may be placed on the market next year is a good one, and I think that when the retailer comes to foot up his profit and loss sheet for the present season, he will find it on the whole satisfactory, as the number of bad debts made in prosperous seasons like the present is not near so large as in years of depression.

OTTAWA.

From Our Own Correspondent.

Lumber yards in this vicinity, and especially at the Chaudiere, are daily being depleted on a small but noticeable scale, for, notwithstanding that navigation is closed, large quantities of lumber, for the fulfillment of contracts entered into early in the season, are being forwarded by rail to the States, the objective point principally being Boston. Shipping facilities are steadily increasing, consequently proving a great boon to the lumberman, affording them a better means of

EXPORTING THEIR PRODUCTS.

A few days ago the St. Lawrence & Ottawa Railway made connection with the Interprovincial Railway bridge at the Chaudiere. This will prove of great value to the general trade, and especially for the shipment of lumber. The proposed through route from Montreal to Chicago, touching at this point, is also another desirable move. The connections will be made shortly, negotiations for which are at present proceeding. The exact cut in this vicinity can as yet be but partially ascertained, but sufficient figures can be gathered to give

AN APPROXIMATE IDEA.

Stock taking is now progressing in many yards, and until the work is completed the total result cannot be known. So far as learned the total cut will be about 225,000,000 feet, considerably less than the cut for the previous season. The difference is accounted for by the scarcity of logs. If circumstances had proved anyway more favorable, there is no doubt but that operations would be carried on to

THEIR FULLEST EXTENT,

as mostly all that can be cut finds ready sale, orders being numerous and rates good. The exports of lumber from this port to the United States from January 1st to November 30th amounted to $2,069,159, being $87,602 more than during the same period last year. The quantity shipped was considerably less than last year, but the increase in value is due to the advanced rates obtained. Demand for shanty hands still keeps good, while the supply is nothing like what is desired.

WAGES

remain about the same, and an increase cannot well be expected, as all the concerns are now pretty well supplied. Operations on the limits this winter are being carried on as extensively as in past seasons, if not more so ; and it is expected that all next season will be,—in the history of lumbering operations in the Ottawa Valley,—a repetition of the great boom of 1869-70.

THE ELECTRIC LIGHT

is gradually coming into more extensive use by mill owners hereabouts. Eddy's large system of lights work admirably ; as also does that of Capt. Young. Its adoption by the remainder of the lumbermen is only a question of time. Messrs. Parley & Pattee intend to use it both in their large mill and on their shipping docks next season. The contract, it is said, has already been entered into.

MISCELLANEOUS.

The Quebec Lumber Co. has given notice of an application to Parliament for an Act of incorporation.

Messrs. McLaughlin Bros.' new steam mill at Arnprior has been tested and works to a charm. 200,000 feet were cut from 6 o'clock a. m. to 5 o'clock p.m. on the day of trial.

LONDON, ONT.

From Our Own Correspondent.

DEC. 10.—If it were not that Christmas is made evident by the display of prize beef and highly decorated Christmas birds, it would be almost possible to imagine ourselves in the midst of spring in this city. The season has been remarkably open, except a day now and again when we had a taste of winter, but the snow falls have been few and light.

The opinion expressed in my last letter that lumber would be higher in this market ere this letter appeared has not been verified. There seems to have been a back action at work, or the open season has effected the demand, for though it has not fallen off to any marked extent, prices are inclined downwards, and I believe some merchants have been selling at lower figures for cash, but booked accounts are charged full rates. The general tendency, however, at this date of writing, is easier, and there may be a lower list to record in my next, unless some thing not now in view turns up to stimulate the market.

The lumber contract for the new block of wholesale stores has not yet been placed, to my knowledge. The foot lights of the Holman Opera House have been finally extinguished, and the work of demolition will go on at once.

There continue to be complaints of want of proper car supply on the G.W.R. This matter should be remedied.

ST. JOHN, N. B.

From Our Own Correspondent.

DEC. 7th.—Since our last report the river has frozen over, closing the internal navigation for the season, which narrows down our lumber operations in the way of shipments to comparatively small dimensions.

DEALS.

Our only source of deal supply is now from the few city mills which have logs to cut, and as those are stocked only to a very limited extent, the termination of the season's manufacture of deals is not distant. Our largest shipper, Mr. A. Gibson, is reported to have recently bought up all the deals for sale in this market (some 7,000,000 sup. ft.) at $11 per M., so that the entire stock here is now in the hands of shippers.

FREIGHTS.

The freight market is very quiet. Very little tonnage has been offering of late, and rates have improved. The following charters are among the latest transactions reported :—*Rialto*, 1,530 tons, at 58s. 9d., and *Magdala*, 278 tons, at 60s., both for Liverpool ; *Abram Young*, 756, for Cuba, at 21c., for sugar box shooks.

SHIPMENTS.

The shipments of deals and other sawn lumber are as follows :—

For Europe	7,573,000 Sup. feet.
" United States	815,000 "
" West Indies	117,000 "
" South America	572,000 "

SHIPPING.

The following is a list of the vessels in port, with their tonnage and destinations :—

Bertie Biglow, 1,142, Liverpool.
Andrew Johnson, 2,005, Liverpool.
Annie Stafford, 1,200, London.
Abram Young, 756, Cuba.
Atlantic, 412, Liverpool, Fleetwood or Barrow.
Thalassa, 228, ——
Frank Stafford, 1,169, Liverpool.
Emily Lowther, 762, Fleetwood.
Rialto, 1,530, Liverpool.
Arbela, ——, London.
Henry, 1,095, Liverpool.
Magdala, 278, Liverpool,
Etta Stewart, 787, discharging.

THE ADVANTAGES OF MECHANICAL DRAWING.

To the Editor of the Canada Lumberman.

SIR,—Much that is taught in our schools and colleges is primarily with a view to mental training or mental discipline. Such is the case with a great part of an ordinary mathematical course or a course in the ancient classics. It is generally admitted that such studies have little or no practical bearing on any of the ordinary pursuits of life. Drawing of any kind, but particularly mechanical drawing, if viewed simply as a means of mental discipline should rank high. It incites to the habit of correct observation, gives exercise and strength to the powers of reason and reflection, matures the judgment, cultivates the taste, trains the eye, and makes the hand dexterous. A turn at good muscular exercise is about all that is wanting for the cultivation of the whole man. This is a good showing on the score of general training. But besides this by far its greatest value lies in the *practical* advantages it offers. It is a prime necessity in nearly all of the departments of art and manufacture. The economical construction of our modern high class work requires a carefully designed prearranged plan, which is usually embodied in the form of a drawing generally made to a scale—shewing the thing as a whole, with the several parts in their true position and proper relation; other drawings of portions and sectional views are also added as required. This is building up the thing on paper and has nearly all the advantages of genuine trial construction. The efficient draughtsmen then must understand the builder's art, and it follows, that to properly teach mechanical drawing is not alone to show how neat lines of geometric forms may be made on paper, but also to teach the principles of the science pertaining to some particular mechanical trade. And the workman, who learns, implants upon the basis of his already acquired manual skill a knowledge of the mechanical principles involved in the work he performs. Consequently ambitious, progressive young men, who have a very natural desire to master the theory as well as the practice of their trade, take up this study and art, for it is really both; not always with a view of becoming expert draughtsmen and following it as a life pursuit, but for the purpose of becoming better masters of their own situation. They know then not only *what* they are doing but *why* they do it. If a new drawing is placed before them to work by, they feel an acquaintanceship with that sort of thing, they not only see it but they see *through* it. They can begin the work at *once* and begin *right*, while to many engaged in the trades an average mechanical drawing is about as puzzling as a mass of Egyptian hieroglyphics.

Every man's work should contribute to his pleasure. Life at its best is dull enough, but it must be dreadfully dull to the man who for fully two thirds of his working hours has no greater interest in what he does than the pittance it gives him for daily support. He is under the curse of Adam to its full extent. I am aware that the employment of many is of such a nature that there is nothing in it to interest them. Their work is one perpetual treadmill—an endless routine soon learned and never to be forgotten.

This is all very well when the ability of the employee is just about equal to the situation, and he adds to it the grace of contentment. He needs no lessons in drawing. Such I think are somewhat excusable if with the monotonous web of their daily work a little diversion is interlaid. Active minds in such positions chafe and worry and soon leave them for others where there is scope for manual skill and mental effort. Such a man then enjoys his labor. It is to him a subject of study, and of course a matter of interest. He learns drawing to assist him in its prosecution, also for the pleasure of knowing the beautiful art.

A good knowledge of drawing is equal to a large amount of experience. Though experience is most always valuable yet it is often overestimated. Experience in doing work after clumsy old fashioned methods is a positive disadvantage, and experience even in some good methods often works a man into a rut and keeps him there. Experience is valuable when used as part of our stock of information on which we draw and apply to the matter in hand as each particular case may require.

The ability to do this—to turn things to account, to make the most of a given set of circumstances, depends most largely upon study, and the kind of study should be that which pertains to our own pursuit. Then with the knowledge of drawing we are enabled to readily give tangible form to our ideas. We express them in a universal language. Mechanics of every nation can read, understand and work by them.

Such, Mr. Editor, are some of the advantages obtainable from a study and practice of this interesting subject.

Yours, &c.,
W. H. TROUT.

The Australian Trade.

Messrs. Gemmell, Tuckett & Co.'s monthly report, dated Melbourne, Sept. 27th, states that the amount of business carried through at auction has been far in excess of the average, but prices for some lines have receded.

AMERICAN LUMBER.—The shipment ex *Haze* was placed at auction, realizing for white pine shelving £13 5s.; w. p. t. and g. ceiling, £11 2s. 6d.; clear pine, £18 7s. 6d. to £18 per M. super; the trade holding light stocks.

CANADIAN PACIFIC RAILWAY.

Emory's Bar to Port Moody.

NOTICE TO CONTRACTORS.

Tender for Work in British Columbia.

SEALED TENDERS will be received by the undersigned up to NOON on WEDNESDAY, the 1st day of FEBRUARY next, in a lump sum, for the construction of that portion of the road between Port Moody and the West-end of Contract 60, near Emory's Bar, a distance of about 85 miles.

Specifications, conditions of contract and forms of tender may be obtained on application at the Canadian Pacific Railway Office, in New Westminister, and at the Chief Engineer's Office at Ottawa, after 1st January next, at which time plans and profiles will be open for inspection at the latter office.

This timely notice is given with a view to giving Contractors an opportunity of visiting and examining the grounds during the fine season and before the winter sets in.

Mr. Marcus Smith, who is in charge at the office at New Westminister, is instructed to give Contractors all the information in his power.

No tender will be entertained unless on one of the printed forms, addressed to F. Braun, Esq., Sec. Dept. of Railways and Canals, and marked "Tender for C. P. R."

F. BRAUN,
Secretary.

Dept. of Railways and Canals, Ottawa, Oct. 24th, 1881.

Wrought Iron Shanty Cook Stoves

The Best Article ever offered to the Trade.

I have much pleasure in drawing attention to my **WROUGHT IRON COOKING STOVE, for Shanty, Hotel and Boarding House use.** These Stoves are made of **Heavy Sheet Iron**, the top and lining of the fire-box being of **Heauy Cast Metal** and all the connecting parts of substantial **Wrought Iron Work.** The dimensions of these Stoves are as follows:—

SINGLE OVEN STOVE

Top surface contains six 10-inch holes, with ample room between, and one oven 16 x 24 x 26.

DOUBLE OVEN STOVE

The Double Oven has a top surface containing twelve 10-inch pot holes, with two ovens, each 16 x 24 x 26. One fire-box of suitable size for area to be heated. Below will be found Testimonials from some of the leading Lumbermen, who have used my Wrought Iron Cook Stoves since I commenced manufacturing them. They are the names of gentlemen who are well known and reliable, and will carry more weight than any recommendation of my own could do.

The Best Stove I have ever Used.

PETERBOROUGH, May 31, 1880.

ADAM HALL, Esq., Peterborough. Dear Sir,—I have used your Wrought Iron Cooking Stove in our lumbering operations since its introduction here, and have no hesitation in saying that I prefer it to any other. For durability, economy and efficiency, where a large number of men are employed, it is the best stove I have ever used. You can, with confidence, offer it to hotels, boarding houses and lumbermen.

Yours truly, THOS. GEO. HAZLITT.

The Stove for Lumbermen.

PETERBOROUGH, June 1st, 1880.

ADAM HALL, Esq., Peterborough. My Dear Sir,—We have used your Wrought Iron Cooking Stove and find it is very satisfactory for lumber operations, especially so on drives. We can recommend it highly.

Yours truly, IRWIN & BOYD.

Gives the Greatest Satisfaction.

PETERBOROUGH, June 3rd, 1880.

A. HALL, Peterborough. Dear Sir,—I have had the Wrought Iron Cook Stove, purchased from you, in constant use ever since last fall, and it gives the greatest satisfaction in every respect. I can recommend them highly to any one who is in the lumber business. Very truly yours, GEO. HILLIARD, M.P.

EMERY WHEELS FOR SAW GUMMING!

Solid Emery Wheels are now almost in universal use for the purpose of gulletting and gumming saws. Statistics show from 25,000 to 30,000 saw-mills in the United States. Many of these run only a single saw each. A one-saw mill would use one or two wheels a year, costing $3 to $4 each, and when such small mills order single Emery Wheels from the factory, the express charges often equal the cost of the wheel. There was a time when the quality of Emery Wheels was so uncertain, and the demand so fickle, that storekeepers could not afford to carry them in stock. Now, however, Saw Gumming Wheels have become as staple an article as Files, and every dealer in saws, Hardware and Mill Supplies can afford to carry a few dozen standard sizes in stock. Large dealers order stocks of $500 to $750 worth at a time. Saw Gumming Wheels are used with the edge (or face) square, round or beveled. Probably seven-eigths of all in use are beveled.

The principal sizes are:

8x¼, 8x⅜, 8x½ — ⅜ in. hole.

10x¼, 10x⅜, 10x½, 10x⅝ — ⅜ in. hole.

12x¼, 12x⅜, 12x½, 12x⅝, 12x¾, 12x⅞ — ⅜, ⅞ and 1 inch. Holes,

Probably more wheels 12x⅜, 12x½ and 12x¾ are used than all the other sizes together. Saw Gumming Wheels are used, however, of all sizes up to 24x1½. The most frequent complaint is that Emery Wheels harden the saw so that a file won't touch it. The answer is that you don't want a file to touch it. An expert workman will shape and sharpen the teeth with an Emery Wheel, leaving the teeth *case hardened*, in which condition the saw will cut about 33⅓ per cent. more lumber than a soft saw will. Those who want to use the file, however, have only to touch the saw *lightly* a second time (after going all over it once), and this second touch will cut through the case-hardened scale.

A QUESTION OF QUALITY.

Thirteen years of experience as makers of, dealers in, and actual users of Emery Wheels, have led us to a decided opinion as to what quality is the best. We prefer for almost every use an "Extra Soft" wheel like the "Pocono." We believe that money lost through the rapid wear of the wheel is more than made up by the money saved on wages. As we cannot get every one to adopt our views, we make several qualities, so as to meet their views. We say to those who think they can only be satisfied with some other make of wheels (not Tanite), that we can furnish qualities *to match* any and every other make. If you have got used to some special quality of wheel, let us know what it is, and we can send you *a Tanite Wheel of similar quality*. Our *regular* classification of Saw Gumming Wheels is as follows:

CLASS 2. MEDIUM—HARD.—This Wheel is THE STANDARD Saw Gumming Wheel all over the world. Probably seven-eighths of all the Saw Gumming Wheels used are "Class 2. It cuts fast and keeps its shape well. Some think it too hard, some too soft. We prefer the "Pocono."

CLASS 3. MEDIUM—SOFT.—The same as to coarseness and fineness as "Class 2," but a *softer*, and therefor freer cutting wheel.

CLASS "POCONO." EXTRA SOFT.—This Wheel we prefer to all others. It is both *finer* in grain and softer than either of the above. As a Saw Gumming Wheel, Class "Pocono" is specially suited to those practical and experienced Sawyers who know how to grind with a light touch, and who want a free cutting wheel that will not create much heat.

Illustrated Circulars and Catalogue, showing Cuts of Saw Gumming Machines, and Shapes, Sizes and Prices of Wheels, sent free on application.

Is the Most Perfect Machine that has ever been Introduced into Mills for that purpose.

CIRCULAR SAW STEAM FEED!

I would also call special attention to my

Heavy Circular Saw Mills

and for STEAM MILLS, would recommend the Steam Feed, having put in several which are giving the best of satisfaction, as will be seen by the following testimonials:—

GRAVENHURST, August 20th, 1880.

WM. HAMILTON, ESQ., Peterborough.

DEAR SIR—I have used your Steam Feed for near four months, and it has given me perfect satisfaction in every way; it is admitted by every person who has seen it work to be the best feed ever invented. Since I put it into my mill, I have not lost ten minutes time fixing anything belonging to it. I can cut 18 boards 13 ft. long in one minute. It can do much smoother and better work than the pinion feed. It is easily governed and reverses the carriages instantly. I am thoroughly satisfied with it and can recommend it to any person who has a Circular Saw Mill for cutting long or short logs. I consider I have cut more lumber than will pay for the Steam Feed since I got it than I would have cut had I not put it in.

Yours respectfully,

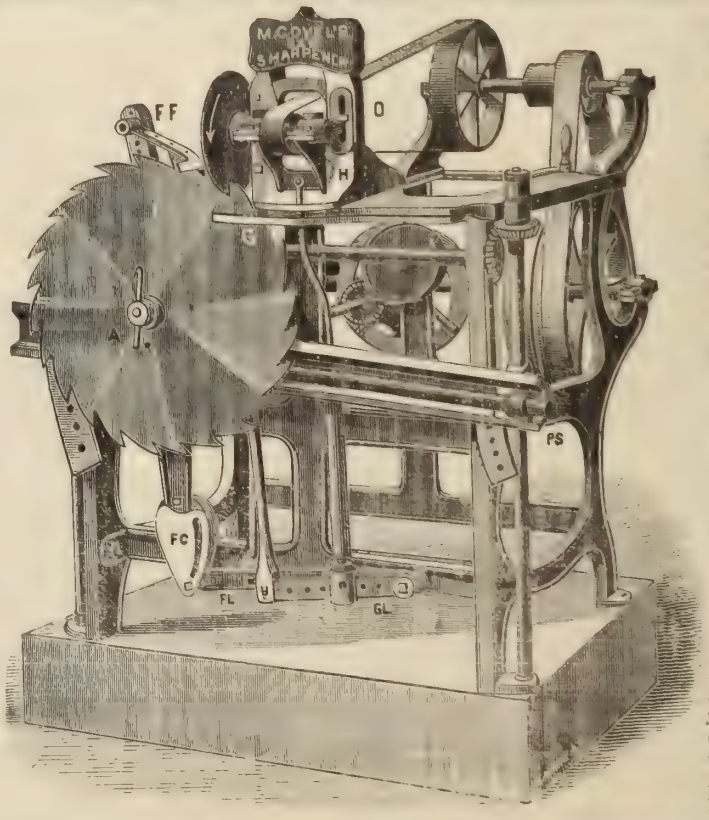
WILLIAM TAIT,
Lumberman, Gravenhurst.

TORONTO, August 11th, 1880.

WM. HAMILTON, Peterborough, Ont.

DEAR SIR—The Steam Feed you put in is working splendidly. Yours, &c.,

THOMPSON, SMITH & SON.

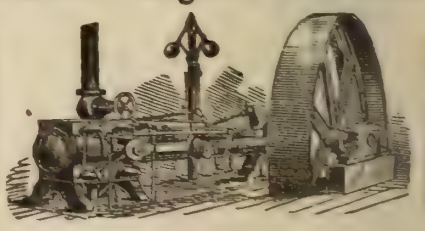


MILL MACHINERY!

I am also manufacturing Saw Mill Machinery, for all sizes of Gang or Circular Mills, Span or Double Circulars for Slabbing Small Logs. My Patent Jack Chain for drawing logs into Saw Mills, acknowledged by all to be the Cheapest and best ever got up; also, my Patent Lumber Markers, different sizes of Edgers, Gang Lath Mills, Trimmers, Power Gummers, and all Machinery used in a first class Gang or Circular Saw Mill; also, small Hand Gummers for use in the woods, for Cross-cut Saws. Rotary Pumps of different sizes, for Fire Protection in Mills, &c.

Horizontal Engines and Boilers

CORLISS ENGINES



Where economy of fuel is the great consideration, along with uniformity of speed, such as is required in Grist and Flouring Mills, Woollen and Cotton Factories, or large Factories of any kind, I supply the Corliss Engine. I feel justified in saying that our Style, Workmanship and Finish on this Engine will be no discredit to its renown, and certainly is not equalled in this country for economy of fuel. I have them working at 2½ pounds of coal per horse-power per hour.
